

# UNDERSTANDING THE TYPE AND EXTENT OF RADIOLOGICAL CONTAMINATION FOUND

## Where is the radiological contamination?

- PLANNED SOIL CLEANUP AREAS
- PLANNED BUILDING CLEANUP AREAS
- STORM DRAIN AND SINK DRAIN INVESTIGATION AREAS
- MANHOLE
- CATCH BASIN
- CONTRACTOR CONTROLLED AREA
- TRAFFIC ROUTING

## What will be done to protect the public during cleanup?

- Unauthorized access to all work areas will be restricted
- Work plans approved by state Departments of Health and Ecology will be followed to complete the cleanup
- Dust will be controlled to eliminate the spread of contamination
- Testing of the air, soil, buildings, equipment, and work boundaries will be conducted during and after the project
- Low-level radiological wastes will be packaged in water-tight bins and transported to a licensed radiological waste disposal site
- The Navy and the Washington State Department of Health will test the air continuously around the work areas and inside the Arena Sports Building to protect the public
