## WORKSHEET 1 SUMMARY SCORE SHEET

Note: This document currently has no provision for sediment route scoring.

Site Name/Location (City, County, Section/Township/Range):

New City Cleaners 747 Stevens drive Richland

Township 9 North, Range 28 East Willamette Meridian, Section 11

Site Description (Include management areas, compounds of concern, and quantities):

This site is an operating dry cleaning facility. Tetrachloroethene (synonym perchloroethylene) was discovered during the site assessment of a neighboring property. During the removal of underground storage tanks (USTs) from the New City Cleaners site, samples taken revealed contamination of the soils and groundwater with tetrachloroethene, trichloroethene, 1,2-dichloroethane, benzene, toluene, ethylbenzene, xylenes and total petroleum hydrocarbons. The four USTs had reported contents of stoddard solvent, bunker oil and unknown. Tetrachloroethene had been stored behind the building in drums. Management areas include the contaminated soils piled on site and the drum storage area.

Special Considerations (Include limitations in site file data or data which cannot be accommodated in the model, but which are important in evaluating the risk associated with the site, or any other factor(s) over-riding a decision of no further action for the site):

### WORKSHEET 2 ROUTE DOCUMENTATION

#### 1. SURFACE WATER ROUTE

List substances to be <a href="considered">considered</a> for scoring:

Source: 7

- 1. Trichloroethene (TCE)
- 4. Toluene
- 7. Xylenes

- 2. Tetrachloroethene (PCE)
- 5. Benzene
- 3. 1,2-dichloroethane
- 6. Ethylbenzene

Explain basis for choice of substance(s) to be used in scoring.

Trichloroethene, Toluene, Xylenes, Tetrachloroethene, Benzene, 1,2-dichloroethane and Ethylbenzene were used in scoring due to their presence in the ground water analysis. Due to proximity of a drainage ditch to the site these same contaminants may be available to the surface water route through an overland route or a release from groundwater.

List management units to be considered in scoring:

Source: 6,11

- 1. containers (drums) of solvents containing tetrachloroethene.
- 2. piles of contaminated soils on site

Explain basis for choice of unit used in scoring.

Source: 6,11

The piles of contaminated soil remaining on site were selected as the management unit due to the availability of contaminant to the pathway.

## WORKSHEET 2 (CONTINUED) ROUTE DOCUMENTATION

#### 2. AIR ROUTE

List substances to be	considered for scoring:	•	Source: 7
1. Trichloroethene	<ol><li>1,2-dichloroethane</li></ol>	5. Toluene	
2. Tetrachloroethene	4 Renzene	6 Yulenes	

Explain basis for choice of substance(s) to be used in scoring.

All six substances were used in scoring due to their availability to the air route from the soil piles

List management units to be <u>considered</u> in scoring: Source: 11

1. piles of contaminated soils

Explain basis for choice of unit used in scoring. Source: 11

The contaminated soils above the ground water were excavated at the time of the underground storage tank removals and piled on site. This action, coupled with the absence of cover or vapor recovery system increased the amount of contaminant available to the air pathway.

## WORKSHEET 2 (CONTINUED) ROUTE DOCUMENTATION

#### 3. GROUND WATER ROUTE

List substances to be considered for scoring:

Source: 7

- 1. Trichloroethene (TCE)
- 4. Toluene
- 7. Xylenes

- 2. Tetrachloroethene (PCE)
- 5. Benzene
- 3. 1,2-dichloroethane
- 6. Ethylbenzene

Explain basis for choice of substance(s) to be used in scoring.

Trichloroethene, Toluene, Xylenes, Tetrachloroethene, Benzene, 1,2-dichloroethane and Ethylbenzene were used in scoring due to their presence in the ground water analysis. Due to proximity of a drainage ditch to the site these same contaminants may be available to the surface water route through an overland route or a release from groundwater.

List management units to be considered in scoring:

Source: 6,11

- 1. containers (drums) of solvents containing tetrachloroethene.
- 2. piles of contaminated soils on site

Explain basis for choice of unit used in scoring.

Source: 6,11

The piles of contaminated soil remaining on site were selected as the management unit due to the availability of contaminant to the pathway.
