RE: On site remediation of 410 yds. of petroleum contaminated soil-
Lucky's Service 14579 Alt Highway 97, Entiat, WA.

To whom it may concern:

On Sept. 3, 1993, Chen Northern Inc. sampled approximately 410 yds. of gasoline contaminated soil. Laboratory results indicated 100 yds. of soil were still contaminated and needed additional remediation.

Samples were again taken on June 10, 1994 and sent to Lauck's Testing Laboratories in Seattle by Walkenhauer and Assoc. of Yakima, WA. Lab results indicated that the samples are below action levels of WDOE. The soil will now be used for lar .1. This project is closed.

Sincerely,

Don Geck
