### EXECUTIVE SUMMARY

The Whitehead Company and Reliable Transfer and Storage Company commissioned SoundEarth Strategies, Inc. to complete a Phase I Environmental Site Assessment of the Whitehead Property located at 730 South Myrtle Street in Seattle, Washington (the Property). The purpose of this environmental site assessment is to identify, to the extent feasible, recognized environmental conditions that may have resulted from the use, manufacture, storage, and/or disposal of hazardous or toxic substances that could affect the future acquisition and/or development of the Property. The scope of work included a review of historical documents regarding the Property, review of current federal and state lists citing known and potentially contaminated sites, interviews with present owners and site managers, a Property reconnaissance, and preparation of this report.

Based on information reviewed in the course of this investigation and as discussed in appropriate sections of this report, it appears that the Property was initially developed by 1917 with three residences and several sheds. The residences were removed by 1936 and an automotive and truck repair shop was constructed on the southeastern portion of the Property by 1949. The repair shop was removed from the Property by 1966 when this area was in use as a lumber sorting yard.

Corson Avenue historically passed from northeast to southwest through the eastern portion of the Property. The portion of the Property west of Corson Avenue was initially developed with a 1918-vintage sawmill that initially included a 17,010-square foot mill building, a 13,973-square foot lumber warehouse, and a lumber shed. The sawmill was expanded by 1929 to include a boiler house, a dry kiln, and a lunch room. The boiler was fueled by a sawdust/refuse burner. Another dry kiln was added in 1947. These kilns were heated by steam from the boiler house on the Property. The 1918-vintage sawmill buildings were also expanded in size over the years. Williams Fir Finish Company operated the mill on the Property in 1929. Tye Lumber and Manufacturing Company began operating the sawmill on the Property after 1929 until the late 1980s when operations were scaled-back. The Whitehead Co., Inc. and Reliable Transfer and Storage Co., Inc. acquired the Property (land only) on May 12, 1986. The Property was leased to Tye Dry Kilns, Inc. who continued limited operations of dry kilns from 1986 until 1989. The sawmill buildings were demolished beginning in 1989 and the Property was subsequently leased to a trucking company. A pre-1985-vintage metal-frame storage shed remains on the far eastern portion of the Property. The Property has been leased to Seattle Iron and Metals since 1999 for truck parking and container storage purposes.

During Tye Lumber and Manufacturing Company's operations, lumber was treated with preservatives, including pentachlorophenol, in a top-loading dip tank. The dip tank was approximately 10 to 15 feet long, 5 feet wide, and 5 to 6 feet deep. Additionally, a 300-gallon pentachlorophenol underground storage tank located adjacent to the dip tank shed was decommissioned in 1986 when the Whitehead Co., Inc. and Reliable Transfer and Storage Co., Inc. acquired the Property. Wood treatment/preservation operations occurred to the south of the Property within the South Myrtle Street right-of-way.

Adjoining properties include a mix of industrial and commercial uses.

## EXECUTIVE SUMMARY (CONTINUED)

The following potential issues of environmental concern were identified during the course of our investigation:

- **Confirmed soil and groundwater contamination beneath and adjacent to the Property and north-adjointing property related to the Fox Avenue Site.** A source of pentachlorophenol in soil has been identified by others beneath the north-adjointing property and the northwestern portion of the Property with groundwater concentrations exceeding the Washington State Model Toxics Control Act Method C carcinogen standard formula value extending southwest across the Property and beneath the Fox Avenue South right-of-way. Pentachlorophenol handling at the former Great Western International Chemical Company facility on the north-adjointing property (the Fox Avenue Site) reportedly began in 1966 and ceased in the early 1980s. Current and historical soil contamination in this area is also the reported cause of a plume of predominately chlorinated solvent-contaminated groundwater that extends southwest across the western portion of the Property and continues toward the South Myrtle Street Embayment, where local shallow groundwater discharges into the Lower Duwamish Waterway (FSI 2011). The confirmed subsurface contamination by pentachlorophenol and solvents originating from the Fox Avenue Site and extending southwest across the western portion of the Property constitutes a recognized environmental condition with a high risk of impacts to the Property.
- **Former use of a lumber dip tank and associated underground storage tank used to store pentachlorophenol adjacent to the south of the Property in the South Myrtle Street right-of-way.** The lumber dip tank and underground storage tank was associated with Tye Lumber and Manufacturing Company's operations, which ceased when the Whitehead Co. Inc. and Reliable Transfer and Storage Co. Inc. purchased the Property in 1986 and the tanks were removed. Data developed by others indicate that pentachlorophenol concentrations in soil beneath the Property are below the Model Toxics Control Act Method C carcinogen standard formula value at the locations and depths tested. However, concentrations of pentachlorophenol in groundwater in excess of the Washington State Model Toxics Control Act Method C carcinogen standard formula value have been confirmed adjacent to the dip tank and underground storage tank. The confirmed groundwater contamination by pentachlorophenol proximal to the former lumber dip tank, which is located adjacent to the Property within the South Myrtle Street right-of-way, constitutes a recognized environmental condition with a high risk of impacts to the Property.
- **Historical operation of a sawmill/lumber manufacturing facility on the Property from 1918 to 1986.** Former sawmilling operations pose a risk for contamination from potential leaks and spills from heavy machinery. Most of the operations included lumber cutting, planing, and jointing within the main facility buildings. The historical operation of a sawmill/lumber manufacturing facility on the Property over a period of approximately 68 years constitutes a recognized environmental condition with a moderate risk of impacts to the Property.
- **Confirmed concentrations of stoddard solvent and oil-range petroleum hydrocarbons in soil above their respective Washington State Model Toxics Control Act Method A cleanup levels at two separate locations on the Property (boring GP-2 at 12 to 13 feet below ground surface and boring GP-10 at 0 to 5 feet below ground surface, respectively) in the former lumber manufacturing area.** The full extent of stoddard solvent- and oil-range petroleum hydrocarbon-impacted soil has not been evaluated. Potential source areas include former lumber

## EXECUTIVE SUMMARY (CONTINUED)

milling/repair shop activities and/or subsequent possible surficial releases related to trucking activities at the Property. The confirmed impacts to soil by stoddard solvents and oil-range petroleum hydrocarbons constitute a recognized environmental condition with a low risk of widespread impacts to the Property.

- **Former operation of auto and truck repair shops on the southeastern portion of the Property during the 1940s and 1960s.** The 1949 Certified Sanborn Map depicts an automotive and truck repair shop on the southeastern portion of the Property (Figure 2; Appendix A). This repair shop was removed from the Property by 1966 when this area was in use as a lumber sorting yard. Auto repairing activities are depicted in a small building on the southern portion of the Property nearby to the east of the boiler house in the 1966 Certified Sanborn Map. No previous subsurface investigation work has apparently been performed within or immediately proximal to the former on-Property auto/truck repair shops. The former operation of auto/truck repair shops on the Property constitutes a recognized environmental condition with a moderate risk of impacts to the Property.
- **Former storage tanks with unknown contents at the Property.** Archived tax records indicate that two 2,000-gallon tanks were associated with a former building located proximal to the historical refuse burner, addressed at 600 South Myrtle Street. No further details regarding these tanks (such as substances stored and whether the tanks were above or below ground) were found in archived tax records. The former presence of two storage tanks on the Property with unknown contents constitutes a recognized environmental condition with a moderate risk of impacts to the Property.
- **Reports of former storage tanks within the address range of the Property.** The Washington State Department of Ecology's underground storage tank (UST) database indicates that two USTs with capacity ranges of 111 to 1,100-gallons and unlisted substances stored have both been removed. Ecology headquarter's file records for this facility, identified as site #009634, indicate that two 1,000-gallon diesel USTs were removed from this facility on November 22, 1989 by Lee Morse General Contractor, Inc. and the excavation was backfilled with pit run. In addition, a Washington State UST notification form indicates that two leaded gasoline USTs were associated with this facility in 1986. No evidence was found in Ecology records to suggest that these tanks were physically located on the Property, other than the tanks being listed within the historical Property address range. The address of 600 South Myrtle Street shown in the UST database for these tanks may have been a former mailing address for the Whitehead Company offices rather than a physical address of the UST locations. Considering that the Property does not appear on the LUST database, and relying upon the institutional knowledge of the current Property ownership that there are no known current or past USTs located on the Property, these tanks listed in Ecology's UST database and Ecology headquarter's file constitute a potential issue of environmental concern for the Property.
- **General industrial use of the Property from approximately 1991 to current, including truck and freight container storage.** The Washington State Department of Ecology issued a Warning Letter to Seattle Iron and Metals Corporation on April 26, 2012, for noncompliance with National Pollution Discharge Elimination System Industrial Stormwater General Permit No. WAR 125002 for 730 South Myrtle Street. The letter states that the facility must comply with several corrective actions to come into compliance with National Pollution Discharge Elimination System general permit requirements. According to the Whitehead Company, Seattle Iron and

## EXECUTIVE SUMMARY (CONTINUED)

Metals is currently in the process of implementing compliance solutions. The past Property operations that resulted in Washington State Department of Ecology's issuance of a Warning Letter regarding industrial stormwater general permit compliance are considered a recognized environmental condition with a moderate risk of impacts to the Property.

- **Historical operation of a gasoline service station on the east-adjointing property.** Washington State Department of Ecology's underground storage tank database indicates that closure was in process for two underground storage tanks of unlisted substances stored at this site as of December 1999. No further details regarding the tank closures and status was found in the database information and no additional information was available from Washington State Department of Ecology at the time of this writing. A gasoline service station was constructed on this property in 1918 and operated until approximately 1964. This former gasoline service station is located in an inferred upgradient hydrologic position and constitutes a recognized environmental condition with a moderate risk of impacts to the Property.

This executive summary is presented solely for introductory purposes and the information contained in this section should be used only in conjunction with the full text of this report. A complete description of the project, Property conditions, investigative methods, and investigation results is contained within this report.

### 1.0 INTRODUCTION

#### 1.1 PURPOSE OF ASSESSMENT

SoundEarth Strategies, Inc. (SoundEarth) was commissioned by The Whitehead Company and Reliable Transfer and Storage Company to complete a Phase I Environmental Site Assessment (ESA) of the Whitehead Property located at 730 South Myrtle Street in Seattle, Washington (the Property). The primary purpose of this ESA is to identify, to the extent feasible, recognized environmental conditions (RECs) resulting from the use, manufacture, storage, and/or disposal of hazardous or toxic substances that could affect the future acquisition and/or development of the Property.

This study is intended to satisfy the level of effort often referred to as "all appropriate inquiry" in the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 42 USC § 9601.

#### 1.2 METHODOLOGY/SCOPE OF WORK

This Phase I ESA was conducted in accordance with procedures outlined in American Society for Testing and Materials (ASTM) E1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. ASTM E1527-05 uses the term "recognized environmental conditions" to assess environmental risks associated with a property. The term is defined as "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property." The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The scope of work for this Phase I ESA included the following tasks:

- A review of various sources of historical information dating back to 1918 and identified in Section 4.0, including reverse city street directories such as those published by Polk, Inc., Sanborn Fire Insurance Maps (Sanborn Maps), Kroll Atlases, local planning and assessment records, and aerial photographs of the Property and vicinity.
- Review of current federal databases including the United States Environmental Protection Agency (EPA) Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) database, the EPA National Priority List (NPL), the EPA Resource Conservation and Recovery Act (RCRA) Notifiers, RCRA Corrective Action Report, Facility Index System (FINDS), Emergency Response Notification System (ERNS), and other lists.
- Review of current state databases including the listing of underground storage tanks (USTs), Leaking Underground Storage Tanks (LUSTs), solid waste facilities (SWF), Voluntary Cleanup Program (VCP) sites, Confirmed and Suspected Contaminated Sites (CSCS) and other ASTM standard databases.
- Review of United States Geological Survey topographic maps to identify the physiographic setting of the Property.

- A reconnaissance of the Property and surrounding area to evaluate the current operations and look for visual and/or olfactory evidence of contamination such as stained soil, unusual odors, distressed vegetation, pipes, drums, oil sheens and/or discolored water, and improper manufacturing or waste disposal practices.
- An interview with Ms. Beth Giske of The Whitehead Company (User and Property ownership representative). An inquiry was also made with the Seattle Fire Marshal's Office Records Division regarding information that they may have regarding the Property.
- Preparation of this report.

### **1.3 LIMITATIONS OF REPORT**

This Phase I ESA report is for the exclusive use of The Whitehead Co. Inc. and Reliable Transfer and Storage Co. Inc. The purpose of this report is to provide the client with an assessment of the potential for the presence of contamination on the Property. Phase I ESAs are non-comprehensive and may not identify all environmental risk associated with the Property. This study did not include an investigation for the presence of asbestos-containing materials, lead-based paint, radon gas, electro-magnetic fields from high-voltage power transmission lines, wetlands, endangered species, floodplains, or other issues not described in the aforementioned scope of work.

Within the limitations of scope, schedule, and budget, our services have been executed in general accordance with procedures specified in ASTM E1527-05. Because the SoundEarth report is based upon readily available and reasonably ascertainable information, the accuracy of which was not verified, SoundEarth cannot and does not guarantee that the Property is free of hazardous or potentially hazardous materials or conditions, or that latent or undiscovered conditions will not become evident in the future. Since Property activities beyond the control of SoundEarth could change at any time after the completion of this assessment, the observations, findings, and opinions can only be considered valid as of the date hereof. This report should not be relied upon after 180 days from the date it was issued.

## **2.0 PROPERTY DESCRIPTION**

The following subsections provide a summary of the location, legal description, and current use of the Property, as well as a discussion of surrounding land use.

### **2.1 LOCATION AND LEGAL DESCRIPTION**

The Property consists of an irregularly shaped tax parcel (King County Parcel No. 273410-0270) that covers approximately 140,465 square feet (3.22 acres) of land. The Property is located at 730 South Myrtle Street, approximately 4 miles south of downtown Seattle, Washington, as shown in Figure 1. Figure 2 depicts a plan view/layout of the Property. According to the King County iMap application, the Property is located at an approximate elevation of 15 feet above mean sea level.

A legal description of the Property is included in Appendix A—Current Assessor Records.

### **2.2 STRUCTURES AND IMPROVEMENTS**

The Property is currently occupied by a pre-1985-vintage, metal-framed storage shed and a truck and freight container storage yard, as shown on Figure 2. The storage shed is unheated. Photographs of the Property are included as attachments to this report.

Potable water and sewer service are provided to the Property by Seattle Public Utilities. According to Seattle Engineering Department side sewer card records, the sanitary sewer was initially connected to the Property in 1950. Seattle City Light provides electricity to the Property. Solid waste disposal and recycling services are provided by Waste Management. No evidence of potable or process water supply wells on the Property was found.

### **2.3 CURRENT PROPERTY USE**

The Property is currently used for freight and truck storage by Seattle Iron and Metals.

### **2.4 ADJOINING PROPERTIES**

Development in the vicinity of the Property is a mix of industrial and commercial. Uses of nearby properties at the time of the SoundEarth site reconnaissance are summarized below, and are also shown in Figure 2.

- **North.** Cascade Columbia Distribution, which is a large chemical storage and distribution facility, is located on the north-adjointing property. Several aboveground storage tanks and numerous drums containing various industrial chemicals are located on the property.
- **East.** A 1928-vintage commercial building currently occupied by El Reventon (a night club, 7047 East Marginal Way South) is located on the east-adjointing property. The adjoining property to the northeast, beyond the railroad tracks and East Marginal Way South, is occupied by a 1962-vintage concrete utility building presently used by CenturyLink.
- **South.** South Myrtle Street is adjacent to the south. Properties farther to the south include (from west to east): Seattle Iron and Metals Corporation scrap metal sorting facility, 7<sup>th</sup> Avenue South, Commercial Welding (711 South Myrtle Street), Caffe D'Arte Roasting Plant (719 South Myrtle Street), Sea Native USA WA (seafood processing), and United Rentals Trench Safety (7135 South Myrtle Street).
- **West.** Fox Avenue South is adjacent to the west. The west-adjointing property beyond Fox Avenue South is currently occupied by Seattle Boiler Works, a manufacturing facility.

### **2.5 GEOLOGIC CONDITIONS**

Geologic conditions often influence the environmental conditions of a property. Underlying soil and bedrock formations may facilitate or impede the migration of chemical contaminants in groundwater and may be a source of contaminants such as radon and metals. This section of the report summarizes geologic factors that may impact the Property with regard to environmental concerns.

#### **2.5.1 Geology**

A geologic map of the Seattle area dated 2005 (Troost, et. al 2005), indicates that the Property is underlain by alluvium. These deposits generally consist of sand, silt, gravel, and cobbles with localized lenses of soft peat and are characterized by highly variable vertical hydraulic conductivity that depends on the coarseness of the material.

#### **2.5.2 Hydrologic and Hydrogeologic Environment**

Both the King County iMap application and the USGS Topographic Map of the Seattle South, Washington Quadrangle, published in 1983, depict topography in the vicinity of the Property as

generally level. The topographic map depicts the closest surface water body as the Duwamish Waterway, which is located approximately 500 feet to the west.

Studies performed by others indicate that depth to water in the immediate Property vicinity typically ranges from approximately 7 to 13 feet below ground surface (bgs; Floyd Snider 2011). A deeper, semi-confined estuarine/deltaic aquifer is located approximately 15 to 80 feet bgs (Floyd Snider 2011).

Groundwater data developed by others indicates that the general groundwater flow direction for both the shallow and deeper water-bearing zones is toward the southwest during both low and high tides (Floyd Snider 2011). Potential off-Property sources of chemical contamination that might adversely affect the Property would, therefore, most likely be located to the northeast in an inferred upgradient hydrologic position.

Tidal influences on groundwater flow direction were reported west of Fox Avenue South (Floyd Snider 2011).

## **2.6 SUMMARY**

No issues of potential environmental concern were identified during our review of current Property use conditions with exception of the general industrial use of the Property.

## **3.0 USER-PROVIDED INFORMATION**

The following subsections summarize the information provided by the User of this Phase I ESA.

### **3.1 TITLE RECORDS**

These documents may provide information about the Property, including ownership and other interests in the land, easement, and liens. Not all liens, defects, and encumbrances affecting title to the land may be included in the preliminary title report. According to the title report, the title to the estate or interest in the Property is currently vested in The Whitehead Company, Inc. a Washington corporation, and Reliable Transfer & Storage Co., a Washington corporation.

### **3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS**

According to an interview with the User and Property ownership representative (Ms. Beth Giske and Mr. Howard Giske of The Whitehead Company), there are no environmental liens encumbering the Property or current limitations on either activity or use of the Property aside from Seattle Iron and Metal's interim and planned compliance solutions regarding their ISGP. No environmental liens or activity use limitations were listed in the provided title report.

### **3.3 SPECIALIZED KNOWLEDGE**

Specialized knowledge regarding the Property was provided by The Whitehead Co. Inc. and Reliable Transfer and Storage Co. Inc. According to Ms. Giske, The Whitehead Co. and Reliable Transfer and Storage Co. Inc. purchased the Property on May 12, 1986 and the lumber dip tank and associated pentachlorophenol (PCP) storage tank formerly operated by Tye Lumber and Manufacturing Co., were removed from the South Myrtle Street right-of-way (ROW) prior to acquisition of the Property. The former lumber dip tank and PCP storage tank are discussed in greater detail in Sections 4.0, 5.0, and 9.0 of this report.

### **3.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES**

No Property valuation reduction relating to environmental concerns was reported by The Whitehead Company.

### **3.5 OBVIOUS OR COMMONLY KNOWN PROPERTY INFORMATION**

The Whitehead Company was unaware of environmental concerns regarding the Property, beyond what is presented in the prior reports (which are summarized in Section 5.0).

### **3.6 CURRENT OWNER, PROPERTY MANAGER, AND OCCUPANT**

King County Assessor records indicate that the Property is currently owned by Whitehead Co., Inc. and Reliable Transfer and Storage Co., Inc. The Property is currently used by Seattle Iron and Metals Corp. for truck parking and container storage.

### **3.7 REASON FOR PERFORMING PHASE I ESA**

SoundEarth prepared this Phase I ESA at the request of the Whitehead Company.

### **3.8 PREVIOUS ENVIRONMENTAL REPORTS**

Previous environmental reports related to this investigation are summarized in Section 5.0. The User provided SoundEarth with copies of an April 26, 2012, Warning Letter issued by the Washington State Department of Ecology (Ecology) for Noncompliance with NPDES ISGP #125002, and an April 24, 2013, Early Notice Letter issued by Ecology regarding the Property. These letters are discussed further in Section 5.0.

### **3.9 SUMMARY**

No issues of potential environmental concern were identified during our review of User-provided information, except for Tye Lumber and Manufacturing Company's former operation of a lumber dip tank and associated PCP tank located in the South Myrtle Street right-of-way. The former lumber dip tank and PCP storage tank are discussed further in Sections 4.0, 5.0, and 9.0.

## **4.0 HISTORICAL REVIEW**

The history of land use for the Property and surrounding areas was evaluated to identify past uses that might have had adverse effects on the environmental conditions, primarily through the use of potentially hazardous materials. The following history of the Property and surrounding parcels is based on a compilation of information obtained from the following resources:

- King County Assessment records were reviewed online and at Puget Sound Regional Archives.
- City of Seattle Department of Planning and Development building permit files.
- City of Seattle Engineering Department sewer cards.
- City Directories.
- Historical City Atlases and Maps – Sanborn Maps and Kroll Atlases of Seattle.
- Aerial Photographs.

- Remedial Investigation/Feasibility Study of the Fox Avenue Site presented by Floyd Snider, Inc. (FSI) in June 2011 and available online from Ecology.

Selected copies of the information sources described above are included in the Photographs and Appendix A of this report.

#### **4.1 HISTORICAL USE OF THE PROPERTY**

Based on information reviewed in the course of this investigation and as discussed in appropriate sections of this report, it appears that the Property was initially developed by 1917 with three residences and several sheds. The residences were removed by 1936 and an automotive and truck repair shop was constructed on the southeastern portion of the Property by 1949. The repair shop was removed from the Property by 1966 when the area was used as a lumber sorting yard. Corson Avenue historically passed from northeast to southwest through the Property prior to the 1980s (Figure 2). The portion of the Property that was located to the west of Corson Avenue was initially developed with a sawmill facility in 1918 that initially included a 17,010-square-foot mill building, a 13,973-square-foot lumber warehouse, and a lumber shed. The sawmill was expanded by 1929 to include a boiler house, a dry kiln, and a lunch room. The boiler was fueled by a sawdust/refuse burner. Another dry kiln was added in 1947. These kilns were heated by steam from the boiler house on the Property. The 1918-vintage sawmill buildings were also expanded in size over the years. Williams Fir Finish Company operated the mill on the Property in 1929. Tye Lumber and Manufacturing Co. began operating the sawmill on the Property after 1929 until 1986. A small building on the southern portion of the Property to the east of the boiler house was used for auto repairing activities in the 1960s. The Whitehead Co., Inc. and Reliable Transfer and Storage Co., Inc. acquired the Property on May 12, 1986. The Property was leased to Tye Dry Kilns, Inc. who continued limited operations of the dry kilns on the Property from 1986 to 1989. The sawmill buildings were demolished starting in 1989. The Property was subsequently leased to a trucking company. A pre-1985-vintage metal-frame storage shed remains on the eastern portion of the Property. The Property has been leased to Seattle Iron and Metals since 1999 for truck parking and container storage purposes.

Archived tax records indicate that the Property was historically addressed at 600 to 760 South Myrtle Street. Archived tax records listed two 2,000-gallon tanks associated with a former building located proximal to the historical refuse burner, addressed at 600 South Myrtle Street. No further details regarding these tanks (such as substances stored and whether the tanks were above or below ground) were found in archived tax records. Further discussion of tanks is included in Section 5.0.

During the time period of Tye Lumber and Manufacturing Company's operations, lumber was treated with preservatives, including PCP, in a top-loading dip tank. The dip tank was approximately 10 to 15 feet long, 5 feet wide, and 5 to 6 feet deep. Additionally, a 300-gallon PCP underground storage tank located adjacent to the dip tank shed was reportedly decommissioned by Northwest Enviroservice prior to March 25, 1986, and also prior to when Whitehead Co., Inc. and Reliable Transfer and Storage Co., Inc. acquired the Property. Wood treatment/preservation operations occurred to the south of the Property, within the City of Seattle South Myrtle Street ROW, and not within the Property boundaries.

#### **4.2 HISTORICAL USE OF ADJOINING PROPERTIES**

The following subsections provide summaries of the land-use history of the adjoining properties.

### **North-Adjoining**

The north-adjoining property was initially developed in the early 1900s with a manufacturing facility identified as Seattle Chain and Manufacturing Company. Great Western Chemical Co., Campbell Chain Co., and Tye Lumber Sash and Door Factory began operating on the north-adjoining property by 1966. A 1929-vintage warehouse structure on the property was heated by an oil-burner system and later by natural gas. A 1959-vintage warehouse on the property was heated by a hot water system. Many of the earlier structures on the north-adjoining property were replaced with the current warehouse and storage structures between the 1960s and 1980s. Great Western International Chemical Company began operating at the property by 1960 as a chemical storage and distribution facility until approximately 2001 when they filed for bankruptcy. Cascade Columbia Distribution began operating at the property after 2003 when Fox LLC purchased the Property (Floyd Snider 2011).

### **East-Adjoining**

The east-adjoining property was occupied by a black smith shop by 1917. An existing commercial structure (current El Reventon night club) was added to the property in 1928. A gasoline service station with an automotive service shop was constructed on the property in 1918 and operated until it was demolished in approximately 1964. Ecology's UST database indicates that closure was in process for two USTs of unlisted substances stored at this site as of December 1999. This former gasoline service station (Richard Dondero UST site – 7047 East Marginal Way South) is further discussed in Section 5.0. A residence was constructed on the property in 1930 and was heated by an oil-burner system. The black smith shop was demolished by 1966 and the commercial structure was expanded southeastward.

### **South-Adjoining**

The south-adjoining properties were occupied by Washington Excelsior & Manufacturing Company's box and shoo factory, Fox River Butter Company, and Astoria Iron Works by 1929. Astoria Iron Works included machine shops and offices. South-adjoining properties were primarily occupied by The Borden Co. (a chemical division powdered glue factory; the buildings are currently used by Commercial Welding, Caffe D'arte Roasting Plant, and Sea Native USA WA) and Continental Can Co., Inc. (machine shops; current Seattle Iron and Metals sorting yard) by 1949. Most of the buildings on the south-adjoining properties were used as machine shops during the 1960s, and some of the buildings were heated by oil-burning systems.

### **West-Adjoining**

Several warehouse and office structures associated with Seattle Boiler Works on the west-adjoining property were constructed between approximately 1918 and 1970. A 1918-vintage office structure and an office building of unknown vintage were heated by oil-burner systems. A boiler shop on the property was also heated by an oil-burner system. Archived tax records indicate that several of the buildings on the property were formerly used by National Steel Company during the 1930s and 1940s.

### **4.3 HISTORICAL USE OF SURROUNDING PROPERTIES**

Land use of the surrounding properties has generally been a mix of heavy industrial and commercial uses since the early 1900s.

### **4.4 SUMMARY**

The former operation of a sawmill, lumber treatment and storage facility, and automotive and truck repair shops on the Property are potential issues of environmental concern identified during our review of historical information. These potential issues of environmental concern are discussed further in Section 9.0.

The adjoining property development, as detailed above, included the following potential issues of environmental concern: the former lumber dip tank and PCP UST in the south-adjoining South Myrtle Street ROW, a former retail gasoline service station on the east-adjoining property, and the use of north-adjoining, south-adjoining, and west-adjoining properties for various industrial uses including chemical storage and machine shops for nearly 100 years. These potential issues of environmental concern are discussed further in Section 9.0.

### **5.0 REGULATORY REVIEW**

A review of regulatory agency records was conducted in order to identify known or potential sources of contamination that could adversely impact the Property. Records were obtained using the commercial database search services of EDR, which queries EPA, state regulatory agency, and other similar databases within the approximate minimum search distances specified in ASTM E1527-05. The commercial database search report was reviewed for accuracy of Property locations and was modified appropriately. Orphan sites (sites that EDR was unable to map) were also reviewed in an effort to evaluate whether any of those sites were also located within the respective search distance; no orphan sites were located within the applicable search distance. The complete EDR report is included in Appendix B and contains figures showing the locations of the reportable sites within the search distance for each database queried. The databases searched, the corresponding search distance, and the number of sites found within the search distance for each database, are summarized in the following table.

Source of Regulatory Information	Acronym	Search Distance	Sites within Search Distance
<b>Federal Databases</b>			
National Priorities List	NPL	1.0 mile	1
National Priorities List Deletions	Delisted NPL	1.0 mile	0
Comprehensive Environmental Response, Compensation, and Liability Information System; also CERCLIS No Further Remedial Action Planned	CERCLIS & CERCLIS-NFRAP	0.5 mile 0.5 mile	1 6
EPA-Listed Brownfields	Brownfields	0.5 mile	1
Resource Conservation and Recovery Act Information - Treatment, Storage, and Disposal Facilities; also RCRA Corrective Action Sites	RCRA TSDf and CORRACTS	0.5 mile 1.0 mile	0 3
Resource Conservation and Recovery Act Hazardous Waste Generators	RCRA GEN	Property & Adjacent Parcels Only	0
Emergency Response Notification System/National Response Center	ERNS/NRC	Property	0
<b>State Databases</b>			
Confirmed and Suspected Contaminated Sites List	CSCSL	1.0 mile	71
Confirmed and Suspected Contaminated Sites List – No Further Action	CSCSL NFA	0.5 mile	14
Solid Waste Facilities/Landfill Sites	SWF/LF	0.5 mile	2
Leaking Underground Storage Tanks	LUST	0.5 mile	18
Registered Underground Storage Tanks	UST	Property & Adjacent Parcels Only	22
State-listed Brownfields	Brownfields	0.5 mile	1
Voluntary Cleanup Program	VCP	0.5 mile	13
Independent Cleanup Reports	ICR	0.5 mile	44
Engineering & Institutional Controls	ENG/INST CONTROL	0.5 mile	1

The Property (i.e., Seattle Iron & Metals Corp Truck Parking, Myrtle Street Property, Whitehead Tye Property, and Whitehead Company Corp), 730 South Myrtle Street, was listed on several of the above databases, including CSCSL, CSCSL-NFA, VCP, and UST, as well as Allsites, FINDS, and NPDES.

The CSCSL database indicates that groundwater contamination by chlorinated solvents and other chlorinated organics has been confirmed at the Property. The site status is listed as Awaiting Cleanup. Ecology issued an Early Notice letter pertaining to the Property on April 24, 2013, related to the release of solvents (Appendix A). In March 2013, Floyd Snider, Inc. (FSI) performed sampling and laboratory analysis of soil samples collected from eight push-probe borings conducted on the Property. Results of the investigation revealed PCP detections in four of the eight soil borings (GP-2 at 10-13 feet bgs, GP-3 at 10-13 feet bgs, GP-4 at 10-13 feet bgs, and GP-10 at 0-5 feet bgs; Figure 2). Reported PCP concentrations ranged from 0.19 to 9.76 milligrams per kilogram (mg/kg), below the Model Toxics Control Act (MTCA) Method C carcinogen standard formula value of 328 mg/kg.

A stoddard solvent concentration of 5,290 mg/kg, which exceeds the MTCA Method A cleanup levels for both gasoline- and diesel-range petroleum hydrocarbons, was reported in the sample collected from 12 to 13 feet bgs in boring GP-2 on the southern portion of the Property. An oil-range petroleum hydrocarbon (ORPH) concentration of 7,850 mg/kg, above the MTCA Method A cleanup level of 2,000 mg/kg, was reported in the sample collected from 0 to 5 feet bgs in boring GP-10 on the southern portion of the Property.

Records obtained from Ecology's Northwest Regional Office indicate that Northwest Enviroservices removed a 300-gallon UST containing PCP by March 25, 1986 at the Tye Lumber and Manufacturing Co. facility (Appendix A). Ecology records indicate that Tye Lumber and Manufacturing Co. was in the process of closing its Seattle operation and moving to Lacey, Washington in June 1986. An Ecology record from June 11, 1986 further indicate that the "PCP tank has been removed as well as soils where discharge occurred" (Ecology 2013a). Soil samples were reportedly collected during the tank removal activities; however, analytical results were not available in Ecology files. A March 25, 1986-dated Ecology record indicates that the 300-gallon UST containing PCP had been removed by Northwest Enviroservice by that time. This former PCP UST and associated lumber dip tank are discussed further in Section 9.0.

Ecology file records further indicate that a discharge of white liquid from the back of the Tye Lumber facility at 765 South Myrtle Street was flowing into a storm drain on January 31, 1986. Ecology reportedly revisited the Tye Lumber site prior to April 1986 and informed the owners to cease discharge. The discharge was determined by laboratory analysis to be polyvinyl acetate (a resin commonly used in wood glue). Tye Lumber Company was reportedly in the process of closing down their Seattle operations to move out. No records of on-going releases of polyvinyl acetate associated with the Tye Lumber site were found in Ecology files following Ecology's instruction to the owners to cease discharge.

The Property address range appears on the Allsites and UST database as Whitehead Company Corp., listed at 600 South Myrtle Street. The UST database indicates that two USTs with capacities ranging from 111 to 1,100 gallons and containing unlisted substances have been removed. Ms. Carol Dorn of Ecology provided SoundEarth with a copy of the UST file information for this facility on August 21, 2013. Ecology file records for this facility, identified as site #009634 in Ecology file records, indicate that two 1,000-gallon diesel USTs were removed from this facility on November 22, 1989, by Lee Morse General Contractor, Inc. and the excavation was backfilled with pit run. The UST closure notice indicates that a site assessment was completed and no contamination was found. No copies of the UST site assessment were found in Ecology's UST file. A Washington State UST notification form on file at Ecology indicates that two leaded gasoline USTs were associated with this facility in 1986. Ms. Beth Giske of The Whitehead Company was not aware of these USTs. According to the Whitehead Company, there are no known current or past USTs located on the Property. No information regarding the physical locations of these Ecology-listed USTs were found in Ecology file records or in records provided by the User. A Washington State UST notification form indicates that two leaded gasoline USTs were associated with this facility in 1986. No evidence was found in Ecology records to suggest that these tanks were physically located on the Property, other than the tanks being listed within the historical Property address range. The address of 600 South Myrtle Street shown in the UST database for these tanks may have been a former mailing address for the Whitehead Company offices rather than a physical address of the UST locations. The listing of the former Property address range on Ecology's UST database and in Ecology headquarter's file records is further discussed in Section 9.0.

The Allsites and NPDES database indicate that an industrial stormwater general permit (ISGP) was issued for Seattle Iron and Metals Corp. Truck Parking (the Property tenant) on October 21, 2009. The permit expires on January 1, 2015. Ecology issued a Warning Letter to Seattle Iron and Metals Corporation on April 26, 2012, for noncompliance with NPDES ISGP No. WAR 125002 for the Property. The letter states that the facility must comply with the following corrective actions to meet the NPDES ISGP requirements:

- Submit to Ecology with 30 days upon request of the notice, a revised Stormwater Pollution Prevention Plan (SWPPP) that meets Permit Condition S3.
- Provide proper cover and containment for all liquid chemical and petroleum products and wastes stored outside at the facility.
- Keep all dumpsters, scrap metal bins, and drums under cover or fit with a lid that must remain closed when not in use.
- Immediately clean up all petroleum leaks and spills.
- Immediately improve the operational source control practices at the facility.
- Develop a plan for collecting and conveying stormwater at the facility that will allow for stormwater treatment and discharges that meet permit benchmarks.

According to the Whitehead Company, Inc., Seattle Iron and Metals is currently implementing compliance solutions. According to the EDR report, most of the sites within the applicable ASTM search distances are not considered to represent an issue of potential environmental concern for the Property because they are located either over 500 feet away and/or in inferred crossgradient, downgradient, or separated (beyond the East Waterway of the Duwamish River) hydrologic positions relative to the Property. The remaining sites are discussed below:

- Cascade Columbia/Great Western Chemical (i.e., the Fox Avenue Site), 6900 Fox Avenue, is listed in the CSCSL, ICR, VCP, CORRACTS, CERCLIS-NFRAP, UST, LUST, and RCRA NonGen databases. This facility is located on the north-adjointing property in an inferred upgradient hydrologic position. Since 1991, numerous subsurface investigations and cleanup activities related to past releases of solvents and other chemicals from past operations by Great Western International Chemical Company (GWCC) have been conducted at the site. Data developed by others indicates that a plume of solvent-contaminated groundwater from the GWCC property extends beneath the western portion of the Property. Impacts to soil at the Fox Avenue Site were initially discovered in 1990 in the main tank farm area following the removal of USTs in that area. GWCC, a former operator of the Fox Avenue Site, entered into an Agreed Order with Ecology in September 1991 to perform a remedial investigation (RI) to evaluate the nature and extent of contamination at the site and a feasibility study (FS) to evaluate remedial options. The initial RI was presented to Ecology by Hart Crowser, Inc. (HC) in 1993. HC designed and implemented an interim cleanup action for shallow groundwater and soil, but it was determined to be ineffective and was shut down in 1997. A supplemental RI/FS was prepared by Terra Vac and Floyd Snider, Inc. (FSI) in 2000. The report recommended implementing a dual-phase extraction system combined with monitored natural attenuation (MNA) and biosparging of downgradient groundwater. GWCC filed for bankruptcy in 2001 and the recommended remediation alternative was never implemented. Fox LLC purchased the former GWCC property in 2003 and assumed responsibility for the existing 1991 Agreed Order with a 2003 amendment.

FSI presented a final Remedial Investigation/Feasibility Study for the Fox Avenue Site on June 10, 2011. Primary chemicals of concern identified at the Fox Avenue Site included tetrachloroethylene (PCE), trichloroethylene (TCE), and their degradation products, as well as PCP, total petroleum hydrocarbons (TPH), benzene, bis (2-ethylhexyl) phthalate, copper, and nickel. Soil contamination extends from the southern portion of the former GWCC property beneath the railroad tracks on the southern portion of that property, and under a small northern section of the Property (Figure 2). Current and historical soil contamination in this area is the reported cause of a plume of solvent-contaminated groundwater that extends southwest across the western portion of the Property and continues toward the South Myrtle Street Embayment where it discharges into the Lower Duwamish Waterway (FSI 2011). Concentrations of PCP in groundwater are generally less than or equal to the Method C standard formula value cleanup level of 2.2 micrograms per liter ( $\mu\text{g/L}$ ) at the Fox Avenue right-of-way, with cleanup level exceedances occurring upgradient from Fox Avenue South on the Property and the former GWCC property. PCP handling at the former GWCC facility reportedly began in 1966 and ceased in the early 1980s. PCP concentrations up to 29 mg/kg were reported in soil near the warehouse area on the former GWCC property, where PCP mixing likely occurred (FSI 2011). FSI identified a second potential source area of PCP outside the GWCC property, proximal to Tye Lumber and Manufacturing Company's former lumber dip tank situated in the South Myrtle Street right of way (adjacent to the south of the Property). PCP was documented in soil at elevated concentrations proximal to Tye Lumber and Manufacturing Company's former lumber dip tank with a maximum concentration of 71 mg/kg in boring B-38 (FSI 2011; Figure 2). None of the reported PCP concentrations in soil exceeded the current MTCA Method C carcinogen standard formula value of 328 mg/kg.

Confirmed soil and groundwater contamination beneath the Fox Avenue Site and the Property is considered to be a potential issue of environmental concern and is further discussed in Section 9.0.

- Richard Dondero, 7047 East Marginal Way South, is listed in the UST database. The UST database indicates that closure was in process for two USTs of unlisted substances stored at this site as of December 1999. The Richard Dondero site is a former retail gasoline station that is located adjacent to the east of the Property in an inferred upgradient hydrologic position. UST information indicates that Ecology received a handwritten notification from Richard Dondero in 1990 indicating that two diesel USTs were planned to be closed (UST site #498231). No further information regarding the closure of the USTs or the environmental condition of soil and/or groundwater at the site was found in the UST file or in files at Ecology's Northwest Regional Office. The east-adjointing former gasoline service station/UST site is considered to be a potential issue of environmental concern and is further discussed in Section 9.0.
- Seattle Iron Metals Corp/Manson Construction Co., the southwest-adjointing property at 601 South Myrtle Street, appears on the UST, RCRA NonGen, Allsites, SWLF, MANIFEST, and SPILLS listings. The SPILLS database indicates that a 100-gallon spill of hydraulic oil occurred at this site on approximately April 27, 2000. A second spill of unlisted material and quantity was reported on July 21, 2008. No additional information regarding these spills was available in the database. The RCRA Generator database indicates that this facility no longer generates potentially hazardous waste and that no RCRA Generator violations were reported. The UST database indicates that one UST that was installed at this site (listed as Manson Construction Co.) in 1996 is exempt and that a second UST has been closed in place. This facility does not appear on the

current LUST database. This site is also identified in Ecology database records as the Myrtle Street Property, and listed at 606 South Myrtle Street. Review of file records at the Northwest Regional Office of the Department of Ecology confirmed that the Myrtle Street Property is the parcel currently occupied by Seattle Iron and Metals Sorting Facility, across South Myrtle Street to the southwest of the Property. Subsurface investigations performed at this site by others in 1996 and 1997 revealed the presence of total petroleum hydrocarbons in soil and groundwater at several locations. Following paving at the site and four rounds of groundwater monitoring, along with cleanup levels determined using the total petroleum hydrocarbon interim policy, Hart Crowser, Inc. requested a no further action determination for this site from Ecology in 1998. The Washington State Department of Ecology issued a No Further Action (NFA) determination pertaining to these past reported releases on June 4, 1998. Off-site sources of chlorinated solvents and PCP reportedly detected in groundwater were attributed by Hart Crowser, Inc. to the GWCC property (chlorinated solvents) and to potential lumber treatment activities by Tye Lumber and Manufacturing Company (PCP), both located hydrologically upgradient of the Myrtle Street Property. Following the completion of required semi-annual groundwater compliance monitoring over a period of two years, Ecology issued a second NFA determination on June 12, 2000, advising that no further groundwater compliance monitoring was necessary for this site. The NFA determinations for this site are reportedly bound by a Restrictive Covenant dated May 1, 1998. Considering the inferred downgradient hydrologic position of the southwest-adjointing Seattle Iron and Metals/Myrtle Street Property site, this listed facility is not considered to represent an issue of environmental concern for the Property.

- Commercial Welding and Fabrication, Inc., located at 711 South Myrtle Street on the south-adjointing property beyond South Myrtle Street, appears on the RCRA NonGen, FINDS, and Allsites databases. This facility does not presently generate hazardous waste. Considering the inferred downgradient hydrologic position of the Commercial Welding and Fabrication, Inc. facility relative to the Property, this site is not considered to present an issue of potential environmental concern for the Property.
- Perkins Lot/Nelson Trucking Co. Leaseway Corporation, the south-adjointing property at 719 South Myrtle Street (current Caffè D'Arte Roasting Plant), appears on the UST and CSCSL-NFA databases. Additional information obtained from Ecology's Northwest Regional Office revealed that the Seattle-King County Health (SKCHD) Department performed a site hazard assessment (SHA) at the Perkins Lot in 2006, following reports of soil staining and several wrecked vehicles stored at this site in October 2005. Analytical results for three soil samples collected at this site from 6 to 8 inches below ground surface by SKCHD revealed concentrations of diesel/heavy oil range petroleum hydrocarbons and lead below their MTCA Method A cleanup levels. Following the SHA, this site received a NFA determination from Ecology in July 2006. In addition, three USTs were reportedly removed from the site. Additional information found on-file at Ecology's Northwest Regional Office indicates that three diesel USTs associated with Nelson Trucking, Inc. (719/700 South Myrtle Street) were removed by Lee Morse General Contractors, Inc. in 1989. The notice of permanent closure of USTs for this site indicates that a site assessment was completed and that no contamination was found. A copy of the UST site assessment was not found in available Ecology files. Considering the inferred downgradient hydrologic position of the 719 South Myrtle Street site relative to the Property, this site is not considered to represent an issue of potential environmental concern for the Property.

- USWCOM Seattle, located approximately 150 feet northeast of the property at 7000 East Marginal Way South (current CenturyLink utility building) appears on the UST, RCRA Non-Gen, FINDS, and Allsites databases. The UST database indicates that two USTs were removed from the property in 1996 and one UST that was installed in 1992 is currently operational. No information regarding the contents of the USTs was available. The RCRA Non-Gen database indicates that no violations were reported. Considering that no releases from the USTs have apparently been reported, along with the separation distance from the property, this site is not considered to represent an issue of potential environmental concern for the Property.

## 6.0 PROPERTY RECONNAISSANCE

Mr. Chris G. Cass, a SoundEarth project geologist, visited the Property on August 6, 2013, to review conditions and land use practices on the Property and on adjoining and nearby properties. SoundEarth was unescorted during the Property reconnaissance. A visual survey of the Property and the pre-1985 vintage open storage structure was conducted by SoundEarth. The presence of numerous stored freight containers obscured portions of the Property's ground surface. This access limitation is not anticipated to significantly affect the findings or conclusions of this report.

The purpose of the Property reconnaissance was to identify readily apparent indications of hazardous or potentially hazardous substances or petroleum products that were historically or are currently used, generated, stored, or disposed of on the Property. Selected photographs taken during the Property reconnaissance are included as an attachment to this report.

### 6.1 GROUNDS AND BUILDINGS

Below is a description of general observations made during the Property reconnaissance.

The Property is used primarily for freight container and truck storage by Seattle Iron and Metals. No evidence of existing USTs (e.g., vent lines and/or fill ports) was found on the Property. Numerous groundwater monitoring wells were identified on the western portion of the Property and within the Fox Avenue South ROW (Figure 2).

Specific conditions that may or may not result in the presence of RECs to the Property are presented in the following table. Those conditions identified are further discussed below.

Item	Item Present		Description (if present)	Issue of Potential Concern	
	Yes	No		Yes	No
Petroleum Products		X	None were observed on the Property.		X
Hazardous Substances	X		None were observed on the Property. Numerous drums labeled as corrosive along with numerous aboveground storage tanks were stored on the north-adjoining property (Fox Avenue Site).	X	
Hazardous Waste		X	No hazardous wastes were observed to be generated, stored, or disposed of at the Property.		X

Item	Item Present		Description (if present)	Issue of Potential Concern	
	Yes	No		Yes	No
Landfills, Dumps		X	No landfills or dumps were observed on the Property or adjoining properties.		X
Burial Sites or Solid Waste Disposal		X	No evidence of burial sites was observed on the Property or adjoining properties. Solid waste disposal services are provided by Waste Management.		X
Aboveground Storage Tanks (ASTs)	X		None were observed on the Property. Numerous ASTs were observed on the north-adjoining property.	X	
Underground Storage Tanks		X	None were observed on the Property or adjoining properties.		X
Drums and Storage Areas	X		Much of the Property is used for storage. Numerous freight containers were observed on the Property. Drums containing residual metal shavings were stored within a covered freight container. Scrap concrete piles and a pile of treated lumber were located on the western portion of the Property. Several piles of tires were located on the Property.		X
Potential PCB-Containing Equipment		X	None were observed on the Property.		X
HVAC System and Fuel Source		X	No heating system is present on the Property.		X
Drains, Sumps, Pits, Cisterns, or Cesspools		X	None were observed on the Property or adjoining properties.		X
Pits, Ponds, or Lagoons		X	None were observed on the Property or adjoining properties.		X
Pavement or Soil Stains		X	None were observed on the Property or adjoining properties.		X
Stains or Corrosion on walls		X	None were observed on the Property.		X
Stressed Vegetation		X	None was observed on the Property or adjoining properties.		X
Possible Fill or Grading		X	None observed on the Property.		X
Chemical/TPH/Swamp-Gas Odors		X	None were observed on the Property or adjoining properties.		X
Stormwater or Surface Erosion		X	Stormwater appears to be collected and controlled by the municipal stormwater drainage system.		X
Wells and Potable Water	X		Numerous groundwater monitoring wells were noted on the Property and the west-adjoining Fox Avenue South ROW.	X	

### 6.1.1 Issues of Potential Concern

Numerous ASTs and chemical container storage areas were noted on the north-adjoining property (Fox Avenue Site). Several groundwater monitoring wells were observed on the western portion of the Property and in the Fox Avenue South ROW. The Fox Avenue Site is further discussed in Section 9.0.

### 6.2 **ADJOINING PROPERTIES**

Numerous drums of corrosive chemicals along with several ASTs were noted on the north-adjoining property. Groundwater monitoring wells were noted in the west-adjoining Fox Avenue South ROW. No

other readily apparent environmental issues were noted on the adjoining properties. The apparent use of the adjoining properties was previously discussed in Section 2.4.

### **6.3 SUMMARY**

No issues of potential environmental concern were observed during the course of our reconnaissance, except for the general industrial use of the Property and the monitoring wells and chemical storage ASTs/containers related to the Fox Avenue Site. The Fox Avenue Site is further discussed in Section 9.0.

### **7.0 INTERVIEWS**

Information gathered from interviews is summarized below and is included in the appropriate sections of this report.

#### **7.1 INTERVIEW WITH SITE MANAGER/PROPERTY OWNER**

SoundEarth submitted an interview questionnaire and document request record to the Property ownership. The Property ownership indicated that they are not aware of any environmental liens pertaining to the Property or of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the Property. Pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products at the Property include the Great Western Agreed Order (Fox Avenue Site), Seattle Iron and Metals documented ISGP violations (discussed in Section 5.0), and historical (pre-1986) notices regarding Tye Lumber and Manufacturing Company's air pollution control to Puget Sound Air Pollution Control Agency. According to a Tye Lumber and Manufacturing Company letter dated October 31, 1980, the air pollution control notices resulted from a shut-down that was necessary on October 17, 1980, to clean the heating surfaces of the fire-tube boiler.

SoundEarth interviewed a Property ownership representative (Ms. Beth Giske) by telephone on August 22, 2013. According to Ms. Giske, The Whitehead Co., Inc. and Reliable Transfer and Storage Co., Inc. purchased the Property in 1986. The lumber dip tank and associated PCP storage tank located in the South Myrtle Street right-of-way, formerly operated by Tye Lumber and Manufacturing Co., were removed prior to acquisition of the Property. Ms. Giske was unaware of any other storage tanks at the Property besides water tanks associated with the former steam kilns.

Ms. Giske advised that the Property has been readdressed since acquisition of the Property by The Whitehead Company, with address numbers for the Property formerly listed in the 600-block of South Myrtle Street to the current address of 730 South Myrtle Street.

#### **7.2 INTERVIEW(S) WITH OTHERS**

SoundEarth made telephone and email inquiries with the City of Seattle Fire Marshal's Office records division pertaining to information that they may have regarding the Property. According to Ms. Sherry Madison of the Seattle Fire Marshal's Office records division, no records for UST decommissioning were found for the Property. Seattle Fire Marshal's Office records for UST decommissioning go back to 1996 and USTs decommissioned prior to 1996 were not required to be permitted by the Seattle Fire Marshal's Office.

### 7.3 SUMMARY

No issues of potential environmental concern were identified during the interviews conducted in the course of this investigation, except for Tyee Lumber and Manufacturing Company's former operation of a lumber dip tank and associated PCP storage tank located in the South Myrtle Street ROW. The former lumber dip tank and PCP storage tank are further discussed in Section 9.0.

### 8.0 DATA GAPS

No data gaps were encountered in the performance of this Phase I ESA.

### 9.0 FINDINGS AND OPINIONS

The following issues of potential environmental concern were identified during the course of our investigation:

- **Confirmed soil and groundwater contamination beneath and near the Property and north-adjointing property related to the Fox Avenue Site.** A source of PCP in soil was identified by others beneath the north-adjointing property (the Fox Avenue Site) and the northwestern portion of the Property with groundwater impacts above the MTCA Method C carcinogen standard formula value extending southwest across the Property and into the Fox Avenue South ROW. PCP handling at the former GWCC facility on the Fox Avenue Site reportedly began in 1966 and ceased in the early 1980s. Current and historical soil contamination in this area is the reported cause of a plume of solvent-contaminated groundwater that extends southwest across the western portion of the Property and continues toward the South Myrtle Street Embayment, where local shallow groundwater discharges into the Lower Duwamish Waterway (FSI 2011). The confirmed subsurface contamination by PCP and solvents originating from the Fox Avenue Site and extending southwest across the western portion of the Property constitutes a REC with a high risk for impacts to the Property.
- **Former use of a lumber dip tank and associated UST used to store PCP adjacent to the south of the Property in the South Myrtle Street ROW.** Others have suggested that a source of PCP in groundwater may exist near the former lumber dip tank historically located adjacent to the south of the Property (FSI 2011). The lumber dip tank and UST was associated with Tyee Lumber and Manufacturing Company's operations, which ceased when the Whitehead Co., Inc. and Reliable Transfer and Storage Co., Inc. purchased the Property in 1986 and the tanks were removed. Data developed by others to date indicates that PCP concentrations in soil beneath the Property are below the MTCA Method C carcinogen standard formula value at the locations and depths tested. However, concentrations of PCP in groundwater in excess of the Washington State MTCA Method C carcinogen standard formula value have been confirmed adjacent to the dip tank and associated UST. The confirmed groundwater contamination by PCP proximal to the former lumber dip tank, which is located adjacent to the Property within the South Myrtle Street ROW, constitutes a REC with a high risk of impacts to the Property.
- **Historical operation of a sawmill/lumber manufacturing facility on the Property from 1918 to 1986.** Former sawmilling operations pose a risk for contamination from potential leaks and spills from heavy machinery. Most of the operations included lumber cutting, planing, and jointing within the main facility buildings. The historical operation of a sawmill/lumber manufacturing

facility on the Property over a period of approximately 68 years constitutes a REC with a moderate risk of impacts to the Property.

- **Confirmed concentrations of stoddard solvent and ORPH in soil above their respective MTCA Method A cleanup levels at two separate locations on the Property (boring GP-2 at 12-13 feet bgs and boring GP-10 at 0-5 feet bgs, respectively) in the former lumber manufacturing area.** The full extent of stoddard solvent- and ORPH-impacted soil has not been evaluated. Potential source areas include former lumber milling/repair shop activities and/or subsequent possible surficial releases related to trucking activities at the Property. The confirmed impacts to soil by stoddard solvents and ORPH constitute a REC with a high risk of impacts to the Property.
- **Former operation of an auto and truck repair shops on the southeastern portion of the Property during the 1940s and 1960s.** The 1949 Certified Sanborn Map depicts an automotive and truck repair shop on the southeastern portion of the Property (Figure 2; Appendix A). This repair shop was removed from the Property by 1966 when this area was in use as a lumber sorting yard. Auto repairing activities are depicted in a small building on the southern portion of the Property nearby to the east of the boiler house in the 1966 Certified Sanborn Map. No previous subsurface investigation work has apparently been performed within or immediately proximal to the former on-Property auto/truck repair shops. The former operation of auto/truck repair shops on the Property constitutes a REC with a moderate risk of impacts to the Property.
- **Former storage tanks with unknown contents at the Property.** Archived tax records indicate that two 2,000-gallon tanks were associated with a former building located proximal to the historical refuse burner, addressed at 600 South Myrtle Street. No further details regarding these tanks (such as substances stored and whether the tanks were above or below ground) were found in archived tax records. The former presence of two storage tanks on the Property with unknown contents constitutes a REC with a moderate risk of impacts to the Property.
- **Reports of former storage tanks within the address range of the Property.** The Department of Ecology's UST database indicates that two USTs with capacity ranges of 111 to 1,100-gallons and unlisted substances stored have both been removed. Department of Ecology headquarter's file records for this facility, identified as site #009634, indicate that two 1,000-gallon diesel USTs were removed from this facility on November 22, 1989 by Lee Morse General Contractor, Inc. and the excavation was backfilled with pit run. In addition, a Washington State UST notification form indicates that two leaded gasoline USTs were associated with this facility in 1986. No evidence was found in Department of Ecology records to suggest that these tanks were physically located on the Property, other than the tanks being listed within the historical Property address range at 600 South Myrtle Street. The address of 600 South Myrtle Street shown in the UST database for these tanks may have been a former mailing address for the Whitehead Company offices rather than a physical address of the UST locations. Considering that the Property does not appear on the Leaking Underground Storage Tank database, and relying upon the institutional knowledge of the Property ownership that there are no known current or past USTs located on the Property, these tanks listed in Ecology's Underground Storage Tank database and Department of Ecology headquarter's file records are not considered REC for the Property.
- **General industrial use of the Property from approximately 1991 to current, including truck and freight container storage.** Ecology issued a Warning Letter to Seattle Iron and Metals Corporation on April 26, 2012 for noncompliance with NPDES Industrial Stormwater General

Permit No. WAR 125002 for the facility on the Property at 730 South Myrtle Street. The letter states that the facility must comply with several corrective actions to come into compliance with NPDES general permit requirements. According to the Whitehead Company, Inc., Seattle Iron and Metals is currently in the process of implementing compliance solutions. The past Property operations that resulted in Ecology's issuance of a Warning Letter regarding industrial stormwater general permit compliance are considered a REC with a moderate risk of impacts to the Property.

- **Historical operation of a gasoline service station on the east-adjointing property.** Ecology's UST database indicates that closure was in process for two USTs of unlisted substances stored at this site as of December 1999. No further details regarding the tank closures and status was found in the database information and no additional information was available from Ecology at the time of this writing. A gasoline service station was constructed on this property in 1918 and operated until approximately 1964 when it was demolished. This former gasoline service station is located in an inferred upgradient hydrologic position and constitutes a REC with a moderate risk of impacts to the Property.

## 10.0 CONCLUSIONS

SoundEarth performed a Phase I ESA, in conformance with the scope and limitations of ASTM Practice E1527-05, of the Whitehead Property located at 730 South Myrtle Street in Seattle, Washington (the Property). Any exceptions to, or deletions from, this practice are described in Section 12.0 of this report. This assessment has revealed no evidence of RECs in connection with the Property except for the following:

- Confirmed soil and/or groundwater contamination beneath and near the Property and north-adjointing property related to the Fox Avenue Site.
- Former use of a lumber dip tank and associated UST used to store PCP adjacent to the south of the Property in the South Myrtle Street right-of-way.
- Historical operation of a sawmill/lumber manufacturing facility on the Property from 1918 to approximately 1989.
- Confirmed concentrations of stoddard solvent and ORPH in soil above their respective MTCA Method A cleanup levels at two separate locations on the Property (boring GP-2 at 12-13 feet bgs and boring GP-10 at 0-5 feet bgs, respectively).
- Former operation of auto and truck repair shops on the southeastern portion of the Property during the 1940s and 1960s.
- Former storage tanks with unknown contents at the Property.
- General industrial use of the Property from approximately 1991 to current, including truck and freight container storage.
- Historical operation of a gasoline service station on the east-adjointing property.

## 11.0 PREPARER'S CREDENTIALS

This Phase I ESA was researched and written by Mr. Chris G. Cass, an environmental professional as defined in 312.10 of 40 CFR 312. Mr. Cass holds a bachelor's degree in Geology and has been a

professional environmental consultant for more than 10 years (Appendix C). During his career in the environmental field, he has completed more than 500 Phase I ESAs in Washington, Oregon, and Alaska. In addition, Mr. Cass has completed and managed numerous Phase II ESAs and has provided technical field support services for the remediation of several contaminated properties. Mr. Chris M. Carter, an environmental professional as defined in 312.10 of 40 CFR 312, supervised the preparation of this Phase I ESA and reviewed and interpreted the information upon which this report is based.

## **12.0 DEVIATIONS**

No deviations from the scope of work were required by Property conditions.

## **13.0 ADDITIONAL SERVICES**

No additional services beyond the scope of work described in Section 1.2 were requested by the client.

## 15.0 STATEMENT OF THE ENVIRONMENTAL PROFESSIONAL

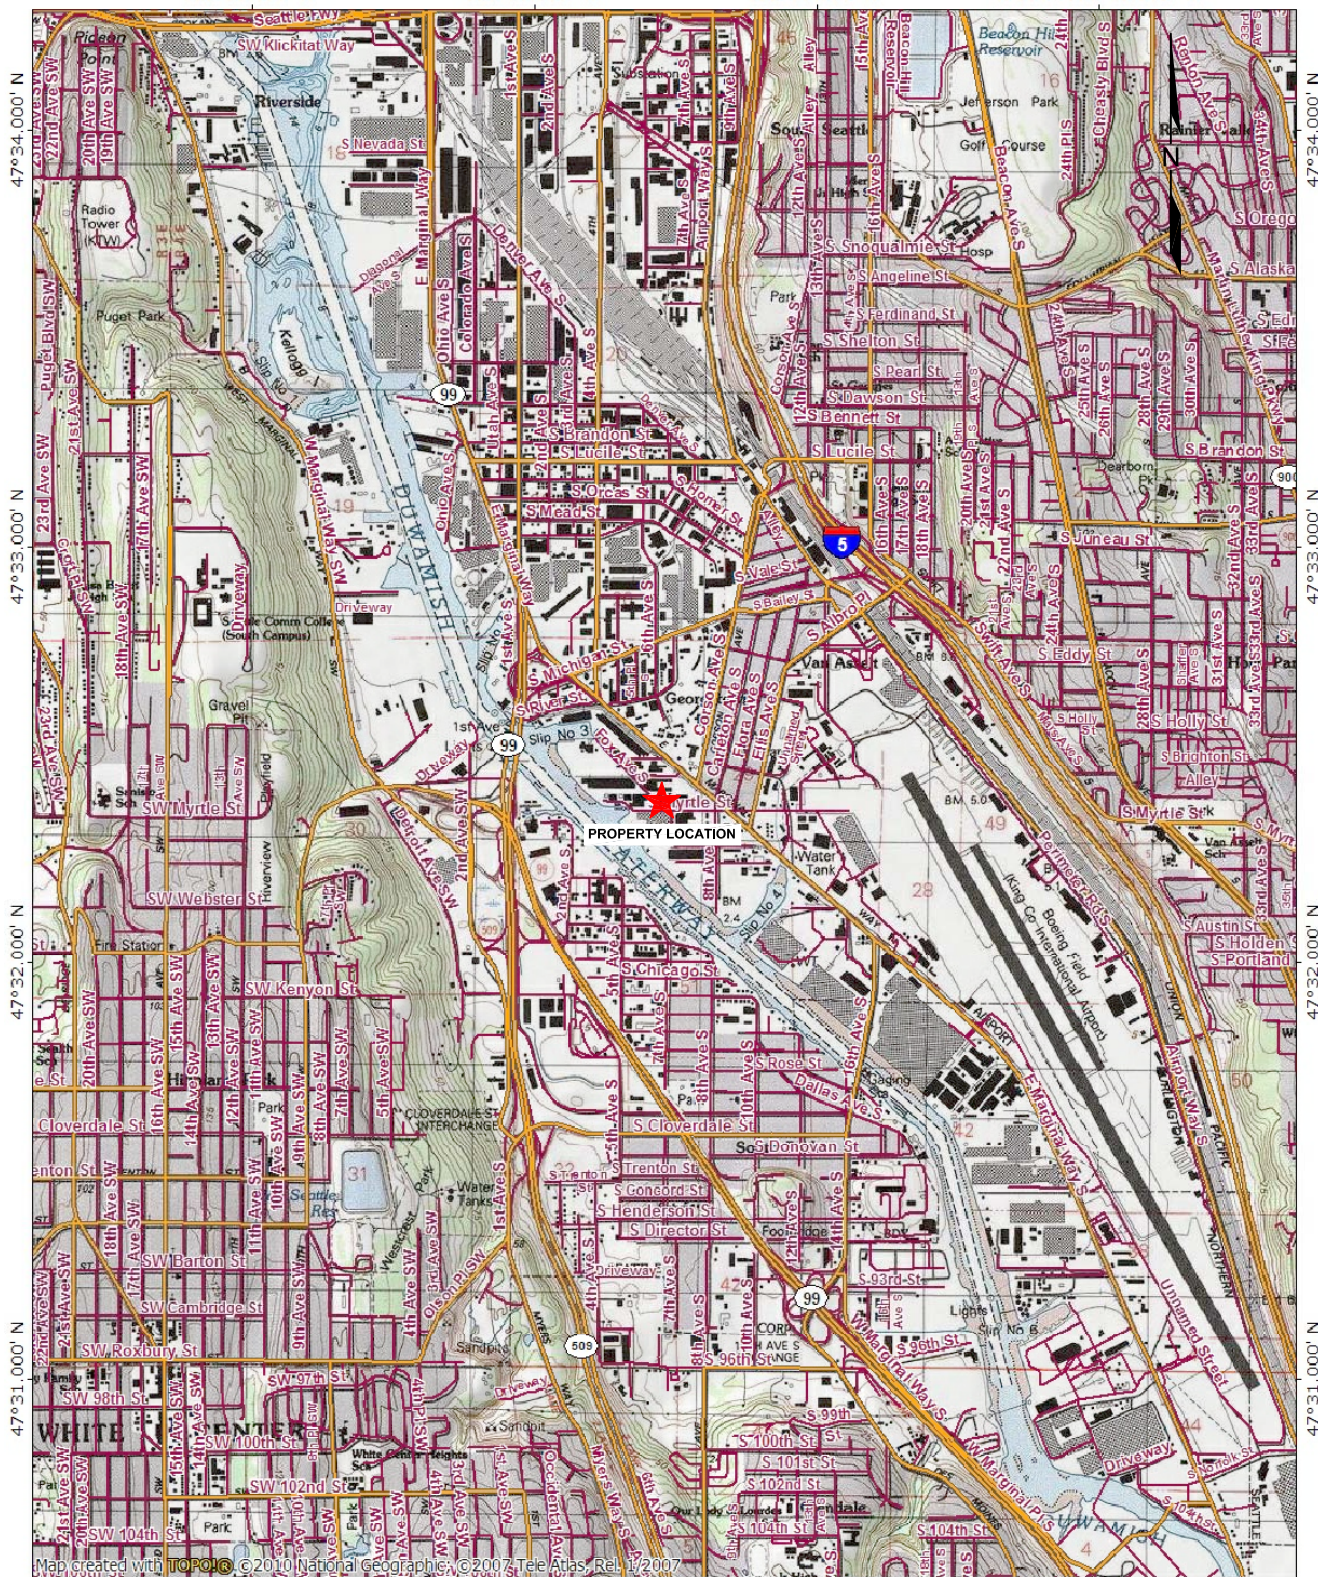

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a Property of the nature, history, and setting of the Property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set for in 40 CFR Part 312.

Chris G. Cass, LG #2628  
Project Geologist

Re: **EARLY NOTICE LETTER:** Facility Site # 9809  
Whitehead Tyee Property  
730 S Myrtle St  
Seattle, WA 98108  
Tax Parcel Id: 2734100270  
Cleanup Site # 12115

Dear Mr. Whitehead:

This letter is sent to you concerning information that the Department of Ecology (Ecology) has gathered regarding the above referenced property. As part of the process under the Model Toxics Control Act (MTCA), Ecology maintains a list of known or suspected contaminated sites. Based on available information in the department's files, it is Ecology's decision to add this property to the list as a site known to be contaminated by hazardous substances.

Enclosed is a data summary report containing information we believe reflects the current site status. Please note that inclusion on the list **does not** mean that Ecology has determined you to be a potentially liable person responsible for cleanup under MTCA. However, this letter is a notification that an area(s) of contamination exists on this property. Further investigation or cleanup action will need to be done to comply with Washington State laws and regulations.

Because of considerable potential liability, please be advised to carefully consider any investigation or cleanup actions and to carefully document steps taken independent of Ecology's involvement. Guidance documents to help conduct an independent cleanup are available if you are interested in this option. In proceeding with an independent cleanup, please be aware there are requirements in State law which must be met. Some of these requirements are addressed in WAC 173-340-120(8)(B) and -300(4). Ecology will use the appropriate requirements contained throughout MTCA in its evaluation of the adequacy of any independent remedial (cleanup) actions performed.

Ecology has a strong commitment to work cooperatively with individuals to accomplish prompt and effective investigations and site cleanups. However, due to limited resources and requirements in State law, we are not able to provide all the assistance requested. Your cooperation in planning or conducting a cleanup action is not an admission of guilt or liability.

Mr. Whitehead

4/24/2013

Page 2 of 2

If an independent cleanup action is undertaken, and a formal review of the work is desired, a report may be submitted to Ecology through the Voluntary Cleanup Program. This program was established in response to the public's need for Ecology to more rapidly review cleanup actions. A fee has been established to support this review process. Guidance documents to help conduct an independent cleanup are available on our website (<http://www.ecy.wa.gov/programs/tcp/vcp/vcpmain.htm>) if you are interested in this option.

If a cleanup action is undertaken and a formal review of the work is not desired at this time, then the information should be submitted to Ecology in order to document any assessment or cleanup activities. If no report is available, but work is in progress or anticipated, a letter describing these plans would be helpful in updating the site record.

If an independent cleanup action does not occur on this property, Ecology will conduct a more detailed inspection at a future time that may include testing for contamination. After that, Ecology will assess what action is needed and establish a priority for that work under the formal MTCA cleanup process. At that time, the potentially liable person(s) would be determined and would be responsible for cleanup costs, including State oversight.

Should you have any questions regarding this letter or if you would like a copy of Chapter 70.105D RCW (The Model Toxics Control Act), the implementing regulations, Chapter 173-340 WAC, that detail these requirements, or a guidance document, please contact Donna Musa at (425) 649-7136 or [donna.musa@ecy.wa.gov](mailto:donna.musa@ecy.wa.gov). Thank you in advance for your cooperation.

Sincerely,

Russell E Olsen, MPA  
Voluntary Cleanup Unit Supervisor  
Toxics Cleanup Program

Mr. Ed Armstrong  
Seattle Iron & Metals Corp  
601 S Myrtle St  
Seattle, WA 98108

RE: Warning Letter - Noncompliance with NPDES Industrial Stormwater General Permit No. WAR 125002, terms and conditions and RCW 90.48.

Dear Mr. Armstrong:

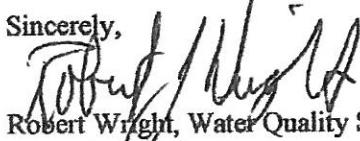

On January 5 and March 14, 2012, Ecology conducted inspections at Seattle Iron & Metals Truck Parking facility located at 730 S. Myrtle Street, Seattle. The purpose of these inspections was to determine compliance with NPDES Industrial Stormwater General Permit #WAR125002.

**In order to come into compliance with NPDES Industrial Stormwater General Permit #WAR125002 requirements and RCW 90.48, the facility must comply with the following correctives actions:**

- **Submit to Ecology within 30 days upon receipt of this notice, a revised Stormwater Pollution Prevention Plan (SWPPP) that meets Permit Condition S3,**
- **Provide proper cover and containment for all liquid chemical and petroleum products and wastes stored outside at the facility,**
- **Keep all dumpsters, scrap metal bins and drums under cover or fit with a lid that must remain closed when not in use,**
- **Immediately clean up all petroleum leaks and spills.**
- **Immediately improve the operational source control practices at the facility.**
- **Develop a plan for collecting and conveying stormwater at the facility that will allow for stormwater treatment and discharges that meet permit benchmarks.**

The enclosed inspection report provides additional information. The violations described above are subject to formal enforcement actions and may result in the issuance of formal enforcement actions including civil penalties of up to \$10,000 per day per violation.

Sincerely,

  
Robert Wright, Water Quality Specialist  
Water Quality Program

Section D: Summary of Findings/Comments

**Background:**

This compliance inspection was conducted as part of a Department of Ecology inspection program to control the potential sources of pollutants discharged to the Duwamish Waterway through storm drainage systems. Megan Wisdom, Stormwater Inspector with Seattle Public Utilities also participated in this inspection.

Seattle Iron & Metals (SIM) operates a large scrap metal recycling and processing facility at 601 S. Myrtle Street. The operation is covered under Individual NPDES Industrial Stormwater Permit # WA031968. SIM leases property on the north side of S. Myrtle Street for the storage of trucks, drop-boxes, dumpsters, bins and miscellaneous equipment and materials associated with their scrap metal operation. SIM obtained coverage for this facility under NPDES Industrial Stormwater General Permit # WAR125002 in early 2011.

**Inspection/Observations:**

On January 5, 2012, I stopped by the SIM Truck Parking Facility (Annex) located across the street from the main scrap metal plant. The street was flowing with a lot of highly turbid stormwater. I documented that much of the stormwater flowing from the SIM Annex facility was turbid and had a visible sheen on it (see Photos # 1, 4, 5). I took photos and decided to consult with Ecology and Seattle Public Utilities (SPU) staff before contacting SIM on that day. I returned to the facility on January 26 with Ed Abbasi the permit manager for the SIM individual stormwater permitted facility and met with Ed Armstrong and John Franklin. We discussed the fact that the facility was more than just a truck parking operation and that they would need to

include monitoring for lead and TPH as a scrap metal facility. The two main discharge locations were enhanced to facilitate easier sample collection. The Discharge Monitoring Reports submitted reveal discharge levels for copper and zinc are more than 10 times the benchmark levels and more than 100 times more than the permit benchmark levels for turbidity.

I returned to facility on March 14, 2012 with Megan Wisdom from SPU in an effort to better understand the drainage system in the vicinity. I contacted Ed Armstrong and John Franklin with SIM who assisted with the site inspection. I conducted a compliance inspection but was not able review the Stormwater Pollution Prevention Plan at that time. A copy of the site map for the facility was provided. SIM installed the discharge enhancement that was discussed with SIM on January 26, at the two discharge locations to aid in sample collection (see Photos # 9, 10). The sausage booms and straw wattles were not providing adequate treatment of the oily turbid stormwater run-off.

Stormwater discharges from the SIM Annex facility and flows across the unpaved shoulder of S. Myrtle Street (see photos # 1, 4, 5, 6, & 7). The stormwater likely picks up petroleum and turbidity as it flows across this unpaved shoulder. Stormwater from the SIM Annex flows into several storm drain catch basins on S. Myrtle Street.

Most of the stormwater within the facility had a significant sheen on it (see Photos # 11, 12, 15 & 16). The permit requires them to immediately clean up spills and leaks to prevent the discharge of pollutants. The permit also requires "empty" scrap metal bins and dumpsters (unless they are clean) to be stored under cover or be provided with a lid that remains closed when not in use (see Photos # 13, 14).

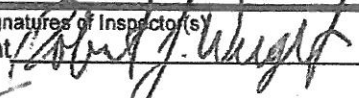

The facility was also storing "empty" drums that were damaged and waiting for repair or scrapping. These drums all had residual metals and fluids in them. The permit requires that all scrap metals bins (or drums) we stored under cover or be fitted with a tight fitting lid. The permit also requires that scrap metal chips, grindings and/or turnings not be allowed to remain on the ground and exposed to stormwater. It is a permit violation to store drums with liquid chemical or petroleum products or wastes without proper cover and containment (see Photos # 17-21). Formal enforcement is being considered for permit noncompliance.

**Issues & Requirements:**

The following must be completed in order to come into compliance with NPDES Industrial Stormwater General Permit # WAR125002 and RCW 90.48 (Water Pollution Control Law):

- Update the Stormwater Pollution Prevention Plan in accordance with permit condition # S3. Include the last 6 monthly inspection report forms and the spill log.
- The facility must also monitor in accordance with the requirements for scrap metal recycling (Table 3 # 2), Total Lead and TPH.
- Include the cleaning practice and procedures for all scrap metal dumpsters and/or containers in the SWPPP.
- Provide proper cover and containment for all liquid chemical or petroleum products or wastes stored outside at the facility.
- Immediately clean up petroleum spills and leaks and log into spill log as appropriate.
- Develop and submit a plan for complying with the permit.
- **The updated SWPPP will be reviewed for compliance with permit requirements and must be submitted to Ecology within 30 days.**

NOTICE OF OVERDUE PAYMENT

You were previously billed for the underground storage tank(s) located at the site noted above. Payment is now more than 30 days delinquent. This billing was mandated by the Underground Storage Tank Law, Chapter 346, Laws of 1989. Each tank is subject to the fee if it was not permanently closed by October 31, 1989. There is potentially a substantial fine for non-payment of the fee.

Please send your payment to The Department of Ecology, P.O. Box 5128, Lacey, WA 98503-5128. It is very important to include both the invoice number and site number with your remittance. If you wish to discuss this billing, please call: Karen Backman (206) 459-6622; John Bails (206) 459-6288; or Joyce Smith (206) 438-7764. Any disputes of this billing need to be in writing.

If payment has already been sent, or if this is a duplicate billing, we apologize. Please contact one of the above staff so that we can correct our records.

**More Information**

The Whitehead Property is unpaved property and lies immediately south of the Cascade Columbia Facility. The property is currently leased to Seattle Iron and Metals for storage of various materials. Formerly, it was the site of a Tyee Lumber's sawmill and finishing operations from the 1920s to the late 1960s. At the former sawmill, lumber was treated with preservatives, including Penta, in a top-loading dip tank. The dip tank shed was situated adjacent to S. Myrtle Street, in the approximate location depicted on Figure 2.2. The dip tank was approximately 10 to 15 feet long, 5 feet wide and 5 to 6 feet deep, and partially below grade. Dipped lumber was processed and kiln-dried or, in some cases, air-dried and stored outside or in wooden sheds near the drying kilns. Penta dipping operations continued until 1982. A 300-gallon Penta UST, located adjacent to the dip tank shed, was removed by Northwest Enviroservices in 1986. Tyee Lumber's operations terminated in 1969, and the building was demolished. After demolition and degrading, the site was leased in the 1970s and early 1980s by Western Salvage Co., a truck and heavy equipment recycler. This parcel was subsequently leased to Nelson Trucking for container storage, and then leased to Seattle Iron and Metals. As discussed in Section 5.0, the solvent plume from the Site crosses the western third of the Whitehead Property.

**Subject:** FW: Whitehead property - Former Tyee lumber

The Tyee/Whitehead property that SIM uses for their containers is not a listed MTCA site. The only listing is for their property in Kent.

Based on the location of the plume, and the hit of penta in groundwater on Myrtle, it looks like there is groundwater contamination on the property and likely soil contamination as well.

No sampling has been done on the property except for the Fox Ave site RI, and they looked at volatiles mostly.

The need to sample and characterize the soils before they do any digging or removal.

**To:** Cargill, Dan (ECY)  
**Subject:** RE: Whitehead property - Former Tyee lumber

Hi Dan,

The owner of Whitehead is not a PLP at Fox Ave site.

Since Fox Ave is a solvent site, only solvent soil data was collected at Whitehead. No solvent exceedances in the soil at Whitehead. Fox also collected groundwater data for solvent and penta at Whitehead. The solvent plume did cover about a 3<sup>rd</sup> of Whitehead property, penta also in the groundwater. However, the highest penta concentration (11,500 ppb) in the groundwater is located down gradient from Whitehead in the city ROW near Whitehead (former Tyee) dipping tank area. I do not believe Whitehead has collected any soil or groundwater data.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### **STANDARD ENVIRONMENTAL RECORDS**

#### ***Federal NPL site list***

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 04/26/2013 has revealed that there is 1 NPL site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
<b><i>LOWER DUWAMISH WATERWAY</i></b>	<b><i>RK 2.5 TO RK 10.8</i></b>	<b><i>W 1/8 - 1/4 (0.146 mi.)</i></b>	<b><i>N92</i></b>	<b><i>312</i></b>

#### ***Federal CERCLIS list***

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 02/04/2013 has revealed that there is 1 CERCLIS site within approximately 0.5 miles of the target property.

#### ***Federal CERCLIS NFRAP site List***

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 02/05/2013 has revealed that there are

## EXECUTIVE SUMMARY

6 CERC-NFRAP sites within approximately 0.5 miles of the target property.

### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 02/12/2013 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 02/12/2013 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 02/12/2013 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 04/24/2013 has revealed that there are 70 WA CSCSL sites within approximately 1 mile of the target property.

### **State and tribal landfill and/or solid waste disposal site lists**

WA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Ecology's Solid Waste Facilities Handbook.

A review of the WA SWF/LF list, as provided by EDR, and dated 09/06/2012 has revealed that there are 2 WA SWF/LF sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### **State and tribal registered storage tank lists**

WA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Ecology's Statewide UST Site/Tank Report.

A review of the WA UST list, as provided by EDR, and dated 02/08/2013 has revealed that there are 22 WA UST sites within approximately 0.25 miles of the target property.

### **State and tribal Brownfields sites**

WA BROWNFIELDS: A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

A review of the WA BROWNFIELDS list, as provided by EDR, and dated 04/24/2013 has revealed that there is 1 WA BROWNFIELDS site within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

## EXECUTIVE SUMMARY

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 04/24/2013 has revealed that there are 14 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

### Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 35 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

# EXECUTIVE SUMMARY

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>
SEATTLE LIGHTING CO	18TH AVE S	NE 1/2 - 1 (0.835 mi.)	310	2002

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 25 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

**HAZARDOUS WASTE BIENNIAL REPORTER**

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

EPA Region: 10  
Classification: Non-Generator  
Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: WA ECY W  
Owner/operator address: 3190 160TH AVE SE  
BELLEVUE, WA 98008  
Owner/operator country: US  
Owner/operator telephone: (000)000-0000  
Legal status: Private  
Owner/Operator Type: Owner  
Owner/Op start date: 05/02/1996  
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Violation Status: No violations found

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110039547345

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

**FINDS:**

Registry ID: 110005381540

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System  
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Summary Details:

Conditions at Proposal December 1, 2000): Sediments in the lower Duwamish River are contaminated with semivolatile organic compounds, PCBs, inorganics, and organotins. In order to address the long-term threat to the human food chain and sensitive environments in the river, the EPA is adding this site to

the NPL. The Duwamish River originates at the confluence of the Green and Black Rivers near Tukwila, Washington, then flows northeast for approximately 21 river kilometers, dividing at the southern end of Harbor Island to form the East and West waterways prior to discharging into Elliot Bay at Seattle, Washington. A segment of the river is maintained by the US Army Corps of Engineers as a federal navigation channel i.e., the reachdownchannel of Turning Basin 3). The shorelines along the majority of the Duwamish Waterway have been developed for industrial and commercial operations. Much of the upland areas are heavily industrialized. In addition, this reach of the river is the receiving water body for discharges from over 100 storm drains, combined sewer overflows (CSOs), and other outfalls. Historical or current commercial and industrial operations include cargo handling and storage; marine construction; boat manufacturing; marina operations; paper and metals fabrication; food processing; and airplane parts manufacturing. Contaminants may have entered the river via several transport mechanisms, including spillage during product shipping and handling, direct disposal or discharge, contaminated ground water discharge, surface water runoff, storm water discharge, or contaminated soil erosion. The presence of polychlorinated terphenyl (PCT), polychlorinated biphenyl (PCB), inorganic, semivolatile organic compound, and organotin contamination to surface sediments has been documented in the lower Duwamish River. In addition, subsurface sample results indicate that semivolatile organic compound, inorganic, and organotin contamination exists up to a depth of 1.2 meters i.e., 4 feet) at some locations within the river. Numerous investigations performed by USEPA, the Boeing Company, King County Department of Natural Resources, and the National Oceanographic and Atmospheric Administration (NOAA) have been conducted with varying scopes and have led to the documentation of the contamination in the lower Duwamish River. The lower Duwamish River is fished for recreational, commercial, and subsistence purposes. Three salmon hatcheries within the Green-Duwamish River system release approximately 10 million juvenile salmon each year. The Duwamish River is part of the traditional fishing grounds for the Muckleshoot and Suquamish Indian tribes. The National Marine Fisheries Service, has conducted numerous studies on the effects of contaminated sediments on biotic resources in the Duwamish River and elsewhere in Puget Sound. This research has shown that juvenile salmon from the Duwamish River exhibit reduced growth and immune system function relative to salmon from uncontaminated areas. The lower Duwamish River serves as a migratory route, nursery, and osmoregulatory transition one for several species of Pacific salmon. Puget Sound Chinook salmon are federally listed as threatened and utilize the lower Duwamish River during a critical stage of their migration from a fresh water to a salt water environment. The federal candidate species Coho salmon also occurs in this area as does a nesting territory for the federal listed threatened Bald eagle and a wetland. Status September 2001): EPA is considering various alternatives for this site. The description of the site release) is based on information available at the time the site was evaluated with the HRS. The description may change as additional information is gathered on the sources and extent of contamination. See 56 FR 5600, February 11, 1991, or subsequent FR notices. For more information about the hazardous substances identified in this narrative summary, including general information regarding the effects of exposure to these substances on human health, please see the Agency for Toxic Substances and Disease Registry (ATSDR) ToxFAQs. ATSDR ToxFAQs can be found on the Internet at <http://www.atsdr.cdc.gov/toxfaq.html> or by telephone at 1-888-42-ATSDR or 1-888-422-8737.

Environmental Interest/Information System

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities,

and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

**HAZARDOUS WASTE BIENNIAL REPORTER**

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Description: Handler: Non-Generators do not presently generate hazardous waste

Owner/Operator Summary:

Owner/operator name: BENS TRUCK PART B  
Owner/operator address: 6655 CORSON AVE S  
SEATTLE, WA 98108  
Owner/operator country: US  
Owner/operator telephone: (000)000-0000  
Legal status: Private  
Owner/Operator Type: Owner  
Owner/Op start date: 05/02/1996  
Owner/Op end date: Not reported

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Historical Generators:

Date form received by agency: 03/31/1994  
Facility name: BENS TRUCK PARTS INC SEATTLE  
Site name: BEN'S TRUCK PARTS, INC.  
Classification: Large Quantity Generator

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that

these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Historical Generators:

Classification: Not a generator, verified

**Hazardous Waste Summary:**

Waste code: WSQG  
Waste name: A placeholder to allow BR submission to validate. In WA State, Conditionally Exempt Small Quantity Generators (Called SQG in WA) are not required to report waste streams, so no valid State or Fed codes are available for reporting to BR.

Violation Status: No violations found

**Evaluation Action Summary:**

Evaluation date: 01/15/2013  
Evaluation: FOCUSED COMPLIANCE INSPECTION  
Area of violation: Not reported  
Date achieved compliance: Not reported  
Evaluation lead agency: State

**FINDS:**

Registry ID: 110005395367

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

**HAZARDOUS WASTE BIENNIAL REPORTER**

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**HAZARDOUS WASTE BIENNIAL REPORTER**

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Form Comm: THIS WASTE STREAM IN THE PAST YEARS WAS TREATED AS NON HAZ NON REGULATED USED OIL. OUR CONTAINER BEFORE ONE OF THE PICKUPS AT THE BEGINING OF 2008 WAS CONTAMINATED AND AT THAT TIME EMERALD RECYCLING DID A TEST AND REPROFILED IT AS HAZARDOUS WASTE. THEY DID NOT NOTIFY US OF THE CHANGE IN PROFILE UNTIL LATE 2008. WE BELIEVE THAT ONLY ONE PU WAS CONTAMINATED AND THAT MOST OF THE PICKUPS WERE NON HAZ NON REGULATED WASTE. SENCE THE CHANGE IN PROFILE WAS NOT CAUGHT UNTIL THE END OF 2008 WE HAVE TO REPORT AS HAZARDOUS WASTE. WE HAVE SENCE RETESTED AND REPROFILED THE WASTE STREAM AS NON HAZ NON REGULATED

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

**Handler Activities Summary:**

U.S. importer of hazardous waste: No  
Mixed waste (haz. and radioactive): No  
Recycler of hazardous waste: No  
Transporter of hazardous waste: No  
Treater, storer or disposer of HW: No  
Underground injection activity: No  
On-site burner exemption: No  
Furnace exemption: No  
Used oil fuel burner: No  
Used oil processor: No  
User oil refiner: No  
Used oil fuel marketer to burner: No  
Used oil Specification marketer: No  
Used oil transfer facility: No  
Used oil transporter: No

Violation Status: No violations found

**FINDS:**

Registry ID: 110005336083

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002  
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003  
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D005

SPENT SOLVENT MIXTURES.

Waste code: F003  
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005  
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F007  
Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS

Waste code: F009  
Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS WHERE CYANIDES ARE USED IN THE PROCESS.

Waste code: U002  
Waste name: ACETONE (I)

Waste code: U006  
Waste name: ACETYL CHLORIDE (C,R,T)

Waste code: U019  
Waste name: BENZENE (I,T)

Waste code: U020  
Waste name: BENZENESULFONIC ACID CHLORIDE (C,R)

Waste code: U028  
Waste name: 1,2-BENZENEDICARBOXYLIC ACID, BIS(2-ETHYLHEXYL) ESTER

Waste code: U122  
Waste name: FORMALDEHYDE

Waste code: U123  
Waste name: FORMIC ACID (C,T)

Waste code: U125  
Waste name: 2-FURANCARBOXALDEHYDE (I)

Waste code: U131  
Waste name: ETHANE, HEXACHLORO-

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**HAZARDOUS WASTE BIENNIAL REPORTER**

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Registry ID: 110005313749

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Evaluation Action Summary:

Evaluation date: 09/21/2010  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Used Oil - Applicability  
Date achieved compliance: 12/20/2010  
Evaluation lead agency: State

Evaluation date: 09/22/2009  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Generators - General  
Date achieved compliance: 09/01/2010  
Evaluation lead agency: State

Evaluation date: 02/28/2003  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Not reported  
Date achieved compliance: Not reported  
Evaluation lead agency: EPA-Initiated Oversight/Observation/Training Actions

Evaluation date: 02/10/2003  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Not reported  
Date achieved compliance: Not reported  
Evaluation lead agency: EPA

Evaluation date: 04/10/2002  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Generators - General  
Date achieved compliance: 05/29/2002  
Evaluation lead agency: State

Evaluation date: 04/10/2002  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Generators - General  
Date achieved compliance: 05/03/2002  
Evaluation lead agency: State

Evaluation date: 12/15/1992  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Generators - General  
Date achieved compliance: 08/30/1993  
Evaluation lead agency: State

Evaluation date: 04/06/1988  
Evaluation: COMPLIANCE EVALUATION INSPECTION ON-SITE  
Area of violation: Generators - Manifest  
Date achieved compliance: 06/06/1988  
Evaluation lead agency: EPA Contractor/Grantee

**Environmental Interest/Information System**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

ALLSITES:

Hazardous Waste Summary:

Waste code: D001  
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE

1000390835

MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D018

Waste name: BENZENE

Waste code: F003

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005

Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: WT02

Waste name: Washington State Dangerous Toxic Waste with a toxic constituents concentration greater than or equal to 0.001% and less than 1.0%, determined by biological testing methods or a book designation procedure.

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA Air Quality System (AQS) contains ambient air pollution data collected by EPA, State, Local, and Tribal air pollution control agencies from thousands of monitoring stations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
