

Goose Lake and C Street Landfill

Rebecca Lawson, P.E., LHG, Section Manager TCP-SWRO
Connie Groven, EIT, Goose Lake Project Manager
Cris Matthews, LHG, Shelton C Street Landfill Project Manager
Natalie Graves, Public Involvement
March 17, 2014

Presentation Overview

- Overview
- Goose Lake Cleanup Site
 - History
 - Cleanup Process
 - Cleanup Progress
 - Next Steps
- Shelton C Street Landfill
 - History
 - Site Hazard Assessment Process
 - Next Steps

Toxics Cleanup

- Important to be thorough and follow all of the steps of state cleanup regulations.
- Each site is unique and many factors can impact cleanup time frames.
- Public input is very important along the way.

Area Map

Goose Lake Cleanup Site

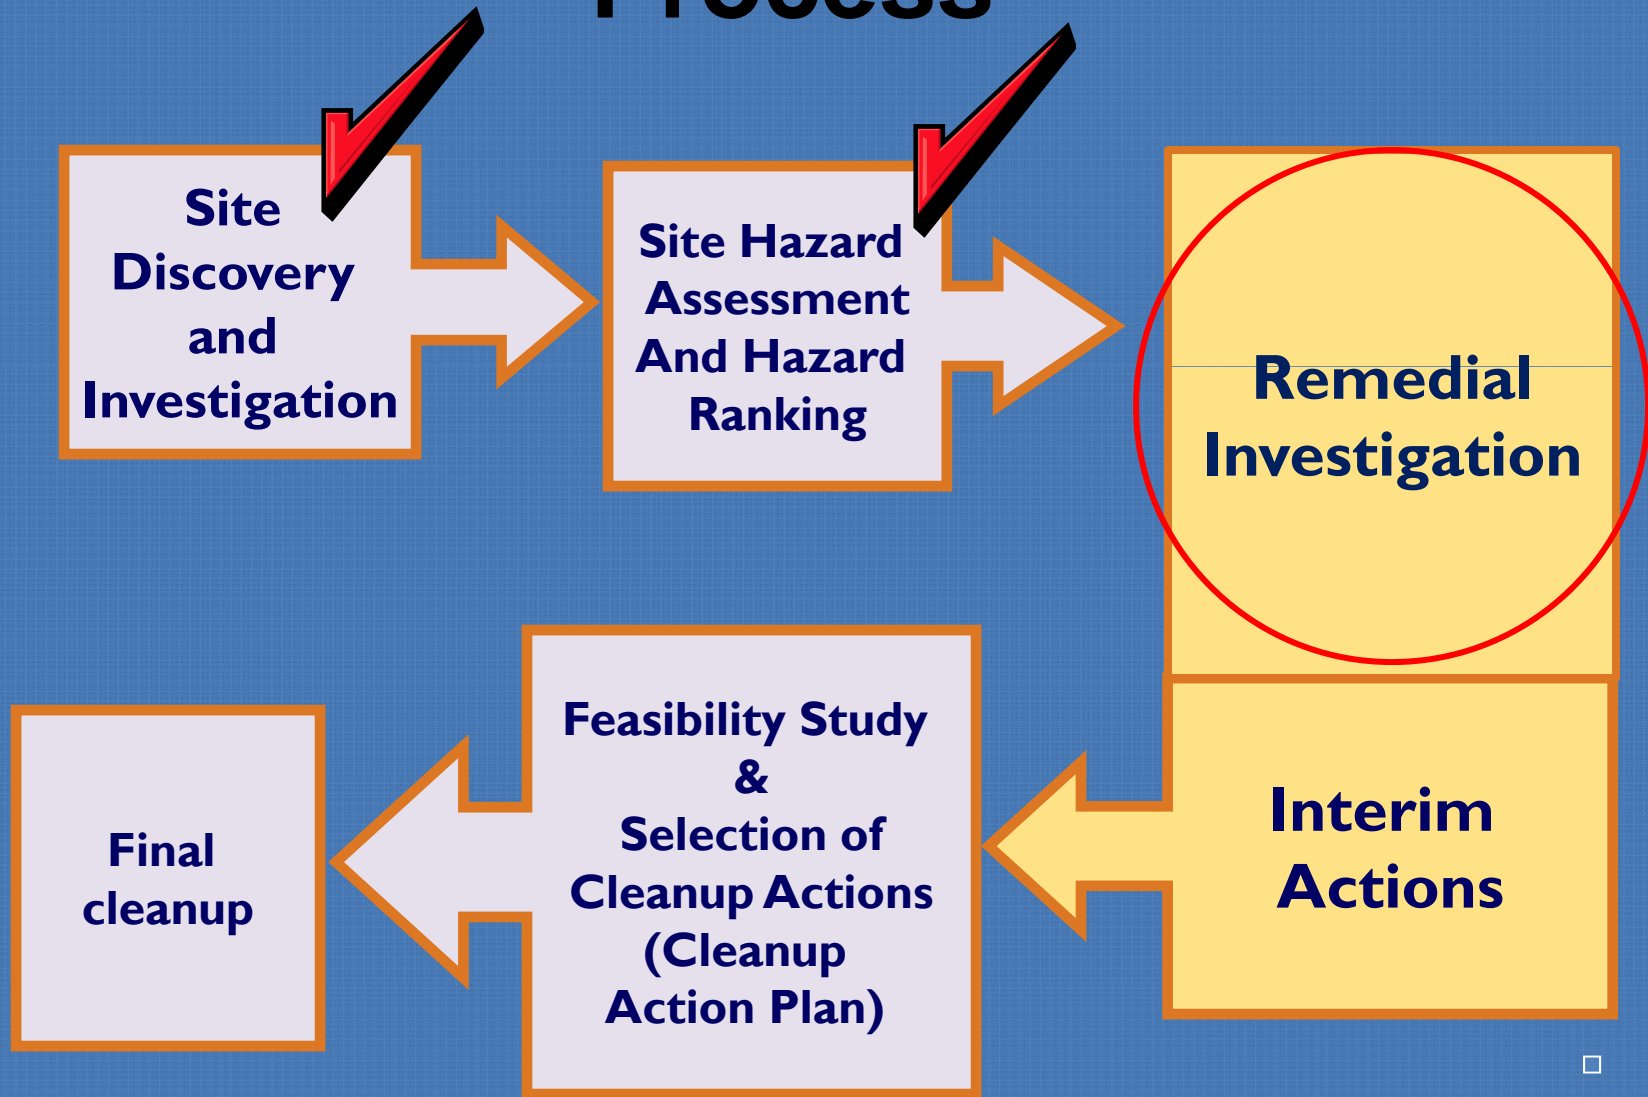

Site History

- Lake received liquid waste from the former Rayonier pulp mill in Shelton from 1931 to 1943.
- Waste was pumped into Goose Lake from May 1931 until September 1934 through a wood pipeline.
- Discharge was moved to disposal lagoons west of the lake from 1934 through August 1943.
- The landfill received solid waste from 1936 to 1974. Some unauthorized domestic refuse was also placed in the landfill.

Site Map

Model Toxics Control Act Cleanup Process

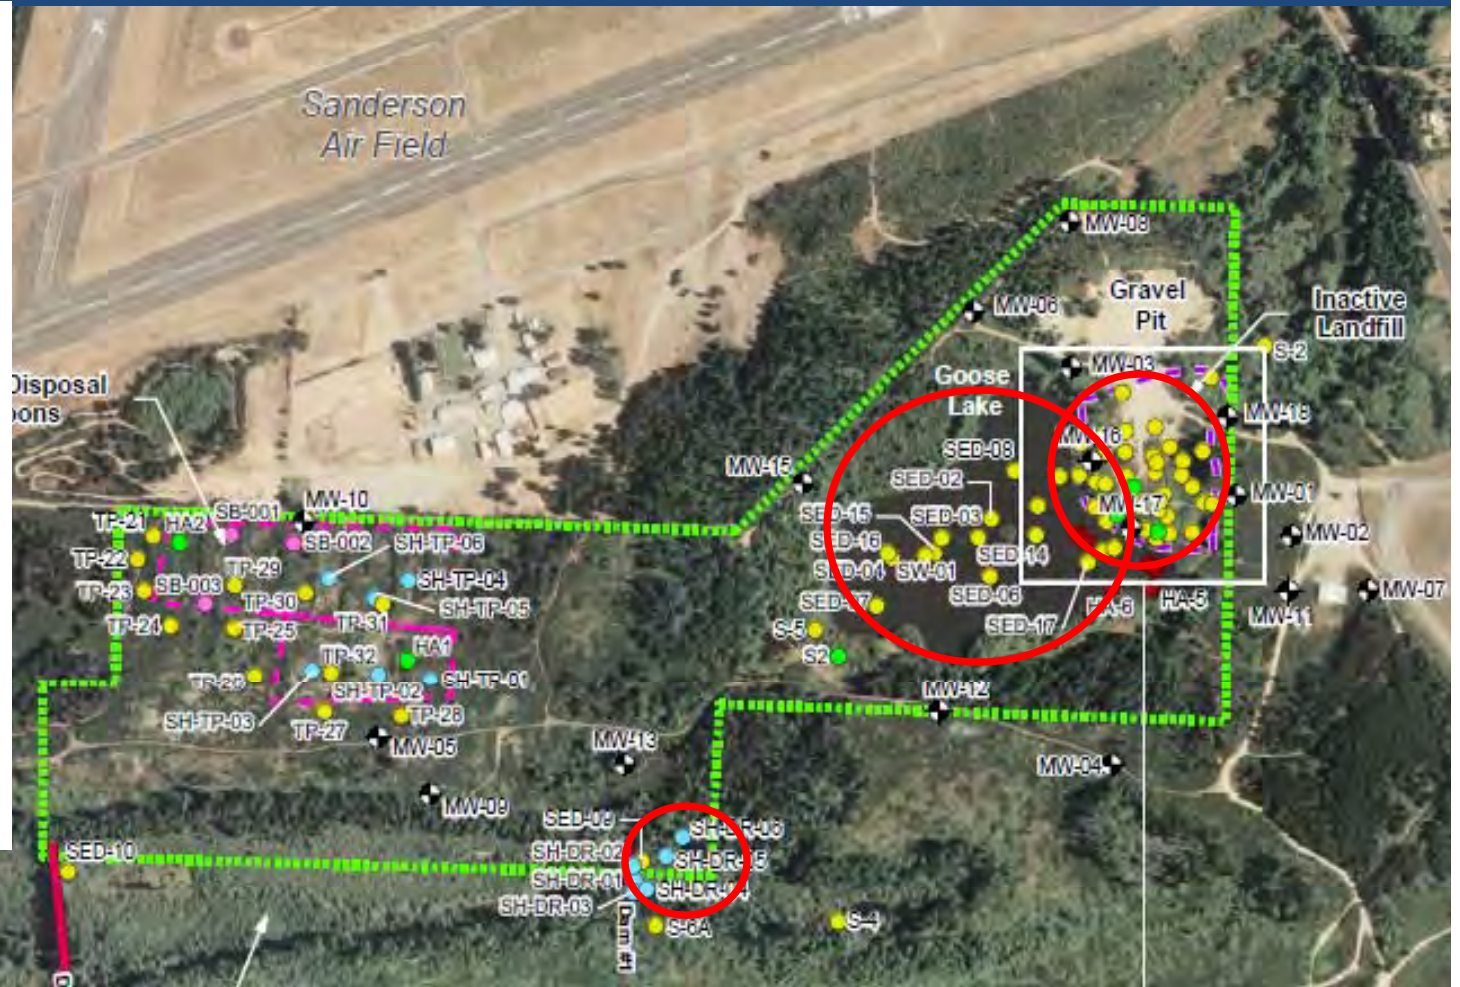

Cleanup History

- Investigations began in 1997.
- Rayonier was named potentially liable person in 1997.
- The site is ranked 2 (Washington Ranking Method).
- Agreed order signed in 2001.
- Multiple investigations between 1997 and the present.
- Shelton Hills named potentially liable person in 2013.

Investigation Results

Legend

-  Monitoring Well
-  PEG, 1998
-  SAIC, 1997
-  GeoEngineers, 2002-2010
-  Floyd Snider, 2009
-  PRSW, 2009
-  Dams
-  Estimated Inactive Landfill Boundary (Upland Portion)
-  Study area boundary
-  Estimated Former Disposal Lagoons Boundary

Next Steps

- Working with Rayonier to complete remedial investigation – Summer 2014
- Feasibility Study (Fall 2014) and draft cleanup action plan (Spring 2015) will follow
- Public comment periods on these documents

Shelton C Street Landfill

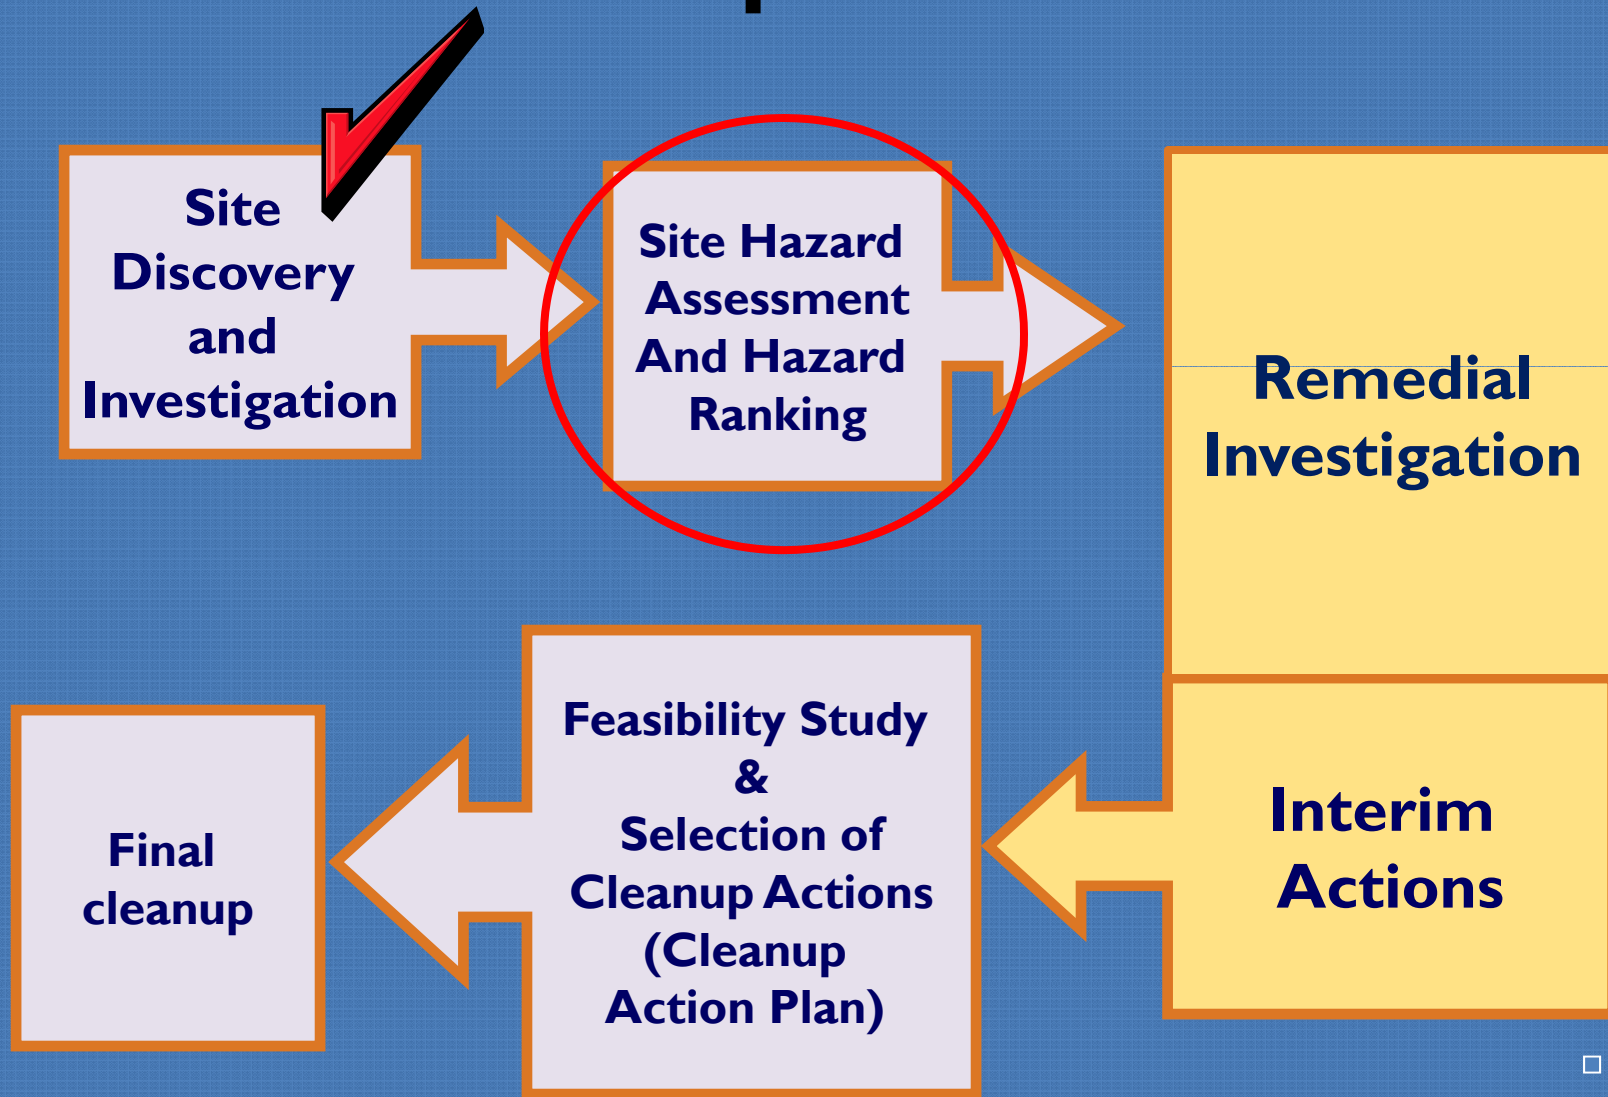

Approximate C Street Landfill Area

History

- City's municipal landfill in 1950s and 1960s.
- Disposal of municipal waste stopped in the 1970s.
- 1976 – 1981: wastewater treatment sludge containing ash from Simpson Shelton mill placed in site.
- Ash sampled by US Environmental Protection Agency in 1980s.
- Based on standards in place at the time, a 1986 report concluding work determined dioxin risk low.

Model Toxics Control Act Cleanup Process

Site Hazard Assessment Process

- The Site Hazard Assessment (SHA) process evaluates potential risk and assigns priority for site cleanup.
- Ecology is evaluating the cost to collect current data. Work is contingent on funding.
- SHA results in a ranking used by Ecology to assign priority for cleanup under the state cleanup regulations.
- Sites are ranked 1 – 5, with one representing the highest relative importance for cleanup.

Next Steps

- Complete SHA and rank the site.
- Evaluate priority for cleanup.
- If selected for formal cleanup:
 - Complete a draft Remedial Investigation/Feasibility Study.
 - Complete a draft Cleanup Action Plan.

Public Involvement

Public Involvement Opportunities

- **Opportunities for involvement**
 - Comment periods (Agreed order, RI/FS, draft CAP)
 - Public meetings when needed
 - Ecology website

**Natalie Graves, Public Involvement Coordinator:
360-407-0067 or Natalie.Graves@ecy.wa.gov to be
added to mailing lists.**

Integrated Planning Grant

Integrated Planning Grant

- **Purpose:** To help local governments develop integrated project plans for cleanup and reuse of a contaminated site.
- **Eligibility:** Local governments
- **Available funding:** Eligible costs usually up to \$200,000.
- **City of Shelton granted \$200,000 in 2008.**
- **Renewed in 2013 with \$170,000 remaining.**

Thank you
