**Responsiveness Summary
Bowman Oil & Propane Site
FSID #1234**

Washington State Department of Ecology
Southwest Regional Office, Toxics Cleanup Program
300 Desmond Drive, Olympia, Washington 98504-7775

Site manager: Guy Barrett
Public Involvement: Hannah Aoyagi

Comment #1

Thanks for the opportunity to provide comments on this investigation/cleanup project. Tacoma Water has reviewed the site information and has the following comments:

Tacoma Water facilities at this location include a 1900 12-inch cast iron water main, several hydrants, and service lines and meters within the 'J' Street right-of-way. These facilities abut the site along the east property line. Water pressure in the area exceeds 100psi.

Should any Tacoma Water-owned facilities need to be adjusted, relocated, or removed as a result of this proposal, please contact the Tacoma Water Permit Counter at (253) 502-8247.

Thank you,

Corey Nelson, P.E.

Ecology Response

The Washington State Department of Ecology is working with Chevron USA under an agreed order to ensure that this site undergoes a remedial investigation and feasibility study, and that a draft cleanup action plan is written. Ecology will ensure that Chevron's consultant will make contact with the Tacoma Water Permit Counter should the need arise. Thank you for your comment.
