# SUMMARY OF EXISTING INFORMATION REPORT PUGET SOUND TRUCK LINES SITE

#### INTRODUCTION/PURPOSE

The Lower Duwamish Waterway (LDW) is the 5.5-mile portion of the Duwamish River south of Harbor Island in Seattle, Washington. The Duwamish River is fed mainly by the Green River and smaller tributaries, and flows into Elliott Bay. The LDW was added to the US Environmental Protection Agency's (EPA) National Priorities List in 2001. Ecology added the site to the Washington State Hazardous Sites List in 2002. The Washington State Department of Ecology (Ecology) and the EPA are working together to clean up contaminated sediments and control sources of recontamination in the LDW. The EPA is leading the efforts on the sediment Remedial Investigation (RI) and Feasibility Study (FS).

Ecology is the lead agency responsible for source control in the LDW. Source control for the LDW is the process of finding and stopping or reducing, to the maximum extent practicable, releases of pollution to waterway sediments. The goal of source control is to stop ongoing sources and prevent post-remediation recontamination. In January 2004, Ecology issued the final Lower Duwamish Waterway Source Control Strategy (Ecology 2004).

A number of Summary of Existing Information and Identification of Data Gaps Reports were prepared for areas along the LDW in an effort to identify areas requiring further investigation. Information about Puget Sound Truck Lines (PSTL) was initially summarized in the Lower Duwamish Waterway RM 2.3-2.8 East Seattle Boiler Works to Slip 4 Summary of Existing Information and Identification of Data Gaps Report (SAIC 2008).

Ecology subsequently identified the PSTL site for further evaluation and characterization because past uses at the site suggest there may have been releases of hazardous substances to soil and/or groundwater. The purpose of this additional work is to determine if there have been releases of hazardous substances to soil, groundwater, or other media or pathways at this site that may impact sediment in the LDW.

This report builds on the 2008 SAIC report and further evaluates and describes the current and historical land uses and the potential for contaminant releases to soil and/or groundwater. It also discusses the environmental regulatory status of the site and its contamination history.

Based on the information presented within this report, a reconnaissance plan will be developed and an upland investigation will likely be conducted at the site to

determine if the Puget Sound Truck Lines site is a potential source of sediment recontamination.

#### **SCOPE OF WORK**

The scope of work for this task was defined in our November 5, 2010, proposal and consists of the following tasks:

- Review and summarize available existing site-specific information on historical and current land uses and the potential for contaminant releases to soil or groundwater;
- Review the environmental condition of the property, including fill history, use history, and contamination history to the extent that this information is available;
- Review regulatory agency database lists and available files; and
- Prepare this report presenting our findings.

#### INFORMATION SOURCES

For this report, we reviewed information from the following sources:

- Records provided by the Washington State Department of Ecology;
- Ecology Underground Storage Tank (UST) and Leaking Underground Storage Tank (LUST) lists;
- Ecology Facility/Site Database (FSD);
- Ecology Integrated Site Information System (ISIS) Database;
- EPA MyPropertyInfo Database;
- EPA Enforcement and Compliance History Online (ECHO);
- Seattle Department of Planning and Development (DPD) side sewer cards;
- Sanborn Fire Insurance Maps (from EDR);

Page 2 Hart Crowser

- Aerial Photographs (from EDR, King County iMap);
- City Directories (from EDR);
- King County Tax Records (King County Online Property Report and Puget Sound Regional Archives);
- Seattle DPD building plans and permits;
- National Archives; and
- GeoMap Northwest.

#### SITE DESCRIPTION

The Puget Sound Truck Lines site occupies two adjacent parcels in Seattle, Washington (Figure 1). The northern parcel is 3.83 acres and the southern parcel is 2.50 acres. The King County Tax Parcel Numbers are 2136200681 (north parcel) and 2136200670 (south parcel)

The northern parcel address is 7303 8th Avenue South, and the southern parcel address is 7401 8th Avenue South (Figure 2). Both parcels are currently owned by Cleanscapes, Inc. Three buildings are present on the PSTL site. A 12,440square-foot office and garage is located on the northern parcel and an 11,280square-foot warehouse and a 2,000-square-foot warehouse are both located on the southern parcel.

The two parcels form a triangle that is bordered to the north by South Othello Street and Seattle Iron & Metals, to the west by the LDW, to the south by Seattle City Light, and to the east by 8th Avenue South.

Five private stormwater outfalls, identified in the LDW Phase 2 RI as Outfalls 2036, 2037, 2038, 2039, and 2040, are located on the PSTL site, which discharge to the LDW. Outfall 2036 may also drain the adjacent street surfaces (Windward 2007).

City of Seattle side sewer cards indicate that there are two catch basins located near the building on the northern parcel. These catch basins are shown to be connected to an oil/water separator. The oil/water separator is shown as connecting to the sanitary sewer line extending from the building. To the northwest of the building, water from a wash rack sump also passes through an oil/water separator before discharging to the sanitary sewer. Both of these lines

Page 3 Hart Crowser

connect to the sanitary sewer located in South Othello Street. However, the files contained no record that the oil/water separator connections to the sanitary sewer have been verified. Side sewer cards indicate that runoff from the building on the southern property connects to the sanitary sewer on 8th Avenue South.

#### **FILL HISTORY**

In the early 1900s, the LDW was straightened and dredged. It does not appear that the PSTL site was filled as part of the construction of the waterway. Prior to dredging in 1918, the shoreline extended further southwest (Harper-Owes 1985).

On behalf of Cleanscapes Inc., Aspect Consulting completed a geotechnical study to design the appropriate foundation for a proposed compressed natural gas fueling station at the PSTL site in 2008. Aspect completed one boring in the northeastern corner of the PSTL site to a depth of 50 feet below ground surface (bgs). According to the boring log, the upper 5 feet of soil is fill. The fill is underlain by tideflat sediments to a depth of about 13 feet, which consist of soft silt and loose silty sand. Alluvium deposits, which consist of sand with varying amounts of silt, were encountered below the tideflat sediments to the depth of the exploration. Groundwater is tidally influenced and was encountered at approximately 5 to 6 feet bgs during the Aspect drilling activities. An excerpt from the Aspect report describing the subsurface conditions, including a boring log, was obtained through GeoMap Northwest and is provided in Appendix A.

#### LAND USE

#### Current and Recent Use

The PSTL site is currently used by CleanScapes, Inc. CleanScapes provides municipal solid waste collection, recycling, and street maintenance services. The paved area in the northern parcel is used to store the CleanScapes vehicle fleet. The southern parcel is currently being used to store dumpsters.

Before CleanScapes, the site was occupied by PSTL and Phil's Finishing Touch. PSTL is carrier of general freight commodities and bulk wood residuals. PSTL is also referred to as Puget Sound Freight Lines in some historical documents. PSTL occupied the northern two buildings. Phil's Finishing Touch occupied the southern most building. Phil's Finishing Touch is a vehicle paint and auto body repair shop.

Hart Crowser Page 4

#### Historical Use

The historical characterization of the PSTL site was compiled from the sources identified below:

### **Sanborn Fire Insurance Maps**

Sanborn Fire Insurance (Sanborn) maps from 1929, 1949, and 1966 are provided in Appendix B. The 1929 Sanborn map shows several structures on the PSTL site. The northern parcel was occupied by structures identified as fertilizer mixing and storage, blacksmith and oil house, and a paint factory that included a varnish cooker. Other structures are identified on the map as an apartment, dwelling, Boys Scouts of America, storage, and sheds.

The 1949 Sanborn map shows several more buildings near the paint factory, including paint warehouse and varnish manufacturing structures. The fertilizer mixing and storage, the blacksmith, and oil house structures are still present. A cross-shaped building in the center of the northern parcel, shown on Figure 2 and labeled "Historical Drum Reconditioning," was identified as a used machinery warehouse. Small structures associated with the warehouse were identified as a pump house, water pit, and boiler house. A few of the small structures are noted as vacant. The southern parcel was occupied by a concrete product manufacturing building. A boiler room was located on the north side of the building and an oil house was located south of the building.

On the 1966 Sanborn map, the only structures remaining on the northern parcel are associated with the paint manufacturing operation. The structure previously identified as varnish manufacturing is identified as storage. The northern parcel is identified as a pipe yard. Four structures were present on the southern parcel: the two currently existing structures, the oil house, and a small unlabeled structure.

### **Aerial Photographs**

Historical aerial photographs from 1936, 1956, 1965, 1977, 1985, 1990, and 2006 are provided in Appendix C. The 1936 aerial photograph appears to show several small structures or buildings located around the perimeter of the PSTL site and along a former street that separated the two parcels. The structure locations correspond to those identified on the 1929 Sanborn map.

The 1956 aerial photograph shows a similar layout with the addition of the cross-shaped structure on the eastern part of the northern parcel. A few more

Hart Crowser Page 5 17330-32 February 15, 2011

buildings appear on the southern parcel. The site layout is similar to the one presented on the 1949 Sanborn map.

In the aerial photograph from 1965, most of the small buildings no longer exist. The cluster of buildings in the southeast corner of the northern parcel are the only remaining structures that were observed in the 1936 and 1956 photographs. These structures are identified as the historical paint manufacturing structures on Figure 2. The two existing structures on the southern parcel are first observed in this photograph.

In the 1977 aerial photograph, the paint manufacturing structures have been removed and the existing structure on the western part of the northern parcel is first observed. It appears that the PSTL site was being used to store shipping containers.

The aerial photograph from 1980 has very low resolution; therefore, it was difficult to determine the site layout. The site layout in the 1985 to 2006 aerial photographs appears similar to the 1977 photograph.

## **City Directories**

A City Directory Abstract prepared by EDR shows directory listings for the PSTL site and nearby properties from 1920 through 2005 at approximately 5-year intervals. The City Directory abstract is provided in Appendix D.

During this time, numerous buildings and business were located on these two parcels, resulting in many addresses associated with the PSTL site. Based on addresses provided on Sanborn maps, we interpreted that that odd-numbered listings from 7303 8th Avenue South to 7401 8th Avenue South belonged to businesses that were present on the PSTL site. These business listings include:

- SeaProducts poultry feed at 7321 8th Avenue South from 1930 through 1940.
- Various paint companies at 7321 and 7315 8th Avenue South from 1930 through 1970 including Thompson Paint Manufacturing, Cowman Campbell Paint, Nati Paint Co and Protective Paint Products Manufacturing.
- Seattle Concrete Pipe Company at 7401 8th Avenue South from 1951 to 1960.
- Puget Sound Truck Lines at 7308 8th Avenue South in 1970 and 1975 and at 7303 8th Avenue South from 1980 to 2005.

Page 6 Hart Crowser

Phil's Finishing Touch at 7401 8th Avenue South in 1996.

## **King County Tax Records**

The King County Online Property Report and Puget Sound Regional Archives tax records indicate that the existing building on the northern parcel was constructed in 1966 (Appendix E). The building is approximately 12,400 square feet. Tax records indicate there are electric hoists, one 10,000-gallon tank, and one 5,000-gallon tank. Records indicate that there was a pump island and three additional tanks: a 2,000-gallon tank and 10,000-gallon tank both installed in 1966, and a 30,000-gallon tank installed in 1974.

Earlier records for the northern parcel indicate a 550-square-foot building and a 2080-square-foot building built in 1925 at the rear of 7321 8th Avenue South, owned by Sea Products Company. An undated photograph of the 2080-squarefoot building shows rows of uncovered drums on the property. The exact locations of these buildings and when they were demolished is unknown.

Tax records indicate that the existing 11,280-square-foot building was built in 1955 and the 2,000-square-foot building built in 1956. One 1,000-gallon gas tank, installed in 1954, is associated with the 11,280-square-foot building. The original owner was Seattle Concrete Pipe Company.

Tax records for the property directly to the south listed under King County Tax Parcel Number 2136200066, indicate that a portion of the southern parcel of the PSTL site was originally part of the City Light property. It was deeded to Seattle Concrete Pipe Company in 1947.

## **Seattle Department of Planning and Development (DPD)**

Key building plans and permits submitted to the Seattle DPD or its predecessor agencies and environmental issues associated with the plans are summarized below. These are planning documents and, in some cases, it is unknown whether all planned development activities were actually completed. Copies of selected relevant plans are provided in Appendix F.

The following plans were available for the PSTL site at 7303 8th Avenue South:

■ 1966 plans to construct a building for Puget Sound Freight Lines. These plans show a 1,000-gallon oil drain tank and a 2,000-gallon furnace oil tank on the southwest side of the building. A wash slab and sump are located on the northwest side of the building. A fuel island is located northeast of the

Page 7 Hart Crowser

building. The existing paint company, located on the eastern portion of the PSTL site, is also noted on the plans.

- 1966 plans to construct a building foundation for Puget Sound Freight Lines. These plans show a 10,000-gallon tank and a 2,000-gallon tank adjacent to the fuel island.
- 1973 plans to install a 30,000-gallon diesel UST for Puget Sound Freight Lines. These plans show that the pump island was extended and a 30,000gallon diesel tank was added to the west of the 10,000-gallon and 2,000gallon tanks. The plans indicate that these tanks were also used for diesel.
- 1990 plans to install an aboveground storage tank (AST) for PSTL. These plans indicate the three USTs by the pump island were to be removed and a 20,000-gallon AST was to be installed in the same vicinity.

The following plans were available for a drum reconditioning plant for the Seattle Drum Company at 7321 8th Avenue South:

- 1944 plans to construct a reconditioning plant. The plans indicate that drum processing, testing, washing, and sandblasting occurred at the plant. Several sumps are located throughout the plant. A 500-gallon septic tank was located to the south of the plant.
- 1945 plans to construct a new boiler house. The boiler house was located southwest of the plant.

The following plans and permits were available for 7401 8th Avenue South:

- 1955 plans to construct an office building for Seattle Concrete Company. Plans indicate a machinery pit was located to the north of the building.
- 1958 permit to install a 1,000-gallon tank.
- 1966 plans identify a dip kettle building to the southwest of the buildings. The largest building is labeled as a corrugated pipe manufacturer. A concrete rubble bulkhead is identified on the western edge of the property.
- 1981 permit to establish a building used as a spray paint facility for PSTL.

Page 8 Hart Crowser

#### **National Archives**

Two reports on file at the Pacific Alaska Regional office at the National Archives provided information on drum recycling that was conducted on behalf of the Seattle General Depot in Seattle in the early to mid-1940s. Excerpts from the Office of the Quartermaster General Interim Report No. VIII – The Reclamation of Fifty-Five Gallon Drums and the Supplement No. I – Drum Reclamation June 1944 – March 1946 are included in Appendix G.

In the early 1940s, there was a shortage of new 55-gallon drums to ship petroleum and petroleum products to Alaska. In 1944, the Army contracted with several private drum recycling facilities. Seattle Drum Company was located on the PSTL site at 7321 8th Avenue South. Seattle Drum Company was organized by the owners of the Areweld Manufacturing Company (Areweld). Areweld was a similar drum recycler located in the Seattle area.

A news paper article included in the report indicated that the Army had stored a significant collection of drums at 7321 8th Avenue South and instead of transporting the drums to another recycler, a new plant was built on site. In May of 1944, Seattle Drum Company was given a contract to recondition 500,000 drums. Because of delays constructing the plant, Seattle Drum Company did not start reconditioning drums until October 1944. Seattle Drum Company subcontracted some of the drum recycling to its parent company, Areweld. Seattle Drum Company's contract was extended from June 1945 to August 1945 to finish reconditioning the 500,000 drums. The Army drum reconditioning contracts related to this site were terminated in September 1945.

The reconditioning process was similar at all drum reconditioning plants at the time. Water pressure was used to remove dents. Originally, sandblasting had been used to clean the drums; however, by August 1944, Areweld had developed a method involving acid treatment and caustic bath. After cleaning, the drums were dried with hot air and painted.

A site plan included with the Supplemental Report indicates that drums were conveyed from a barge located northwest of Othello Street to the PSTL site to the west of the cross-shaped building for the initial phases of the reconditioning process which included sorting and dent removal. The site plan shows a "caustic stripper" located within the cross-shaped building. A caustic tank was located to the southwest of the building. Two approximately 450-gallons acid tanks were also located within the building. A boiler house and oil tank were located south of the caustic tank. The site plan also indicates that "junk storage" and "miscellaneous discharge storage" occurred outside the building. An annotated copy of the site plan is included in Appendix G.

Hart Crowser Page 9

### **History Use Summary**

PSTL site has been used for several different businesses since it was first developed. The earliest records indicate that wooden structures were built on the northern parcel in 1925. Earlier businesses appear to have included a fertilizer manufacturer and blacksmith (with associated oil house).

A paint manufacturing plant was located on the northern parcel along the border with 8th Avenue south from the 1920s through the 1970s.

A drum reconditioning plant, operated by Seattle Drum Company, was located on the northern parcel by the early-1940s. The plant was built in 1944 and operated from October 1944 to August 1945. Although building plans indicate that a sandblast machine was on site, it is more likely a combination of a caustic bath and acid treatment was used to clean the drums as indicated on the plans from the National Archives. A caustic tank, boiler house, and oil tank were identified southwest of the plant. The plant building is identified as a used machinery warehouse on the 1949 Sanborn map. The 1949 Sanborn map identifies the caustic tank as a water pit.

The current building on the northern parcel was built in 1966 for PSTL. At least five USTs were installed in association with this building. A 1,000-gallon oil drain tank and a 2,000-gallon furnace oil tank, likely installed in 1966, are located on the west of the building. Three diesel tanks, a 10,000-gallon tank and a 2,000-gallon tank installed in 1966, and a 30,000-gallon tank installed in 1974, were located on the east side of the building. The diesel tanks were removed in 1990 and a 20,000-gallon AST was installed. The approximate locations of the tanks are shown on Figure 2. Tax records indicate that one 10,000-gallon tank and one 5,000-gallon tank were also associated with the building. The locations and status of these tanks are unknown.

The current buildings on the southern parcel were built in 1955 and 1956 for the Seattle Concrete Pipe Company. Seattle Concrete Pipe Company likely occupied the southern parcel from the late 1940s through the late 1960s. A 1945 report on the sources of pollution along the Duwamish indicated that Seattle Concrete Pipe Company dumped waste concrete along the riverbank (Foster 1945). A 1,000-gallon tank was installed in the late 1950s. Although the location is unknown, the tank may be associated with the oil house noted on the 1949 Sanborn Map. A dip kettle was identified on 1966 plans, associated with corrugated pipe manufacturing. The dip kettle likely contained molten zinc to galvanize pipes. The dip kettle location is shown on Figure 2. It is unknown the years of operation the dip kettle was in use and if it was associated with Seattle Concrete Pipe Company.

Hart Crowser Page 10

#### CONTAMINATION AND ENVIRONMENTAL REGULATORY HISTORY

CleanScapes Inc is listed under Ecology Facility/Site ID: 41684823 at 7303 8th Avenue South. Under this Facility/Site ID, Puget Sound Truck Lines is listed as a conditionally exempt small quantity hazardous waste generator (WAD173274499).

The PSTL site is also listed has having an Industrial Stormwater General Permit under permit number \$O3000949. According to a 2005 inspection report, Puget Sound Truck Lines was out of compliance with the permit because they had not collected the requisite stormwater samples. The catch basins needed to be cleaned, and some additional housekeeping issues were noted during the inspection (SAIC 2008).

Puget Sound Truck Lines is also listed on the Underground Storage Tank (UST) and Leaking Underground Storage Tank (LUST) lists under UST Site ID 7820. According to the UST database, there were four USTs located at the PSTL site that have been removed. One UST was reported to contain waste oil and one contained leaded gasoline. The contents of the other two tanks are not listed. According to the LUST Report, cleanup started in 1991 and was completed in 1995.

No records of environmental investigations or cleanups for the Puget Sound Truck Lines parcels were found in the reviewed files.

Phil's Finishing Touch is listed under Ecology Facility/Site ID: 2648911 at 7401 8th Avenue South as a hazardous waste generator. No violations were reported.

Sediment samples have been collected from the LDW between river miles 2.3 to 2.8 as part of several investigations on the LDW. Mercury, polycyclic aromatic hydrocarbons (PAHs), and polychlorinated biphenyls (PCBs) were detected above sediment quality standards (SQS) in samples adjacent to the PSTL site. Organo-tin compounds were also detected in sediment samples adjacent to the PSTL site (SAIC 2008).

## POTENTIAL FOR SEDIMENT RECONTAMINATION

Based on our file review and current understanding of the PSTL site, there are three areas that may require additional investigation:

Potential contamination associated with past industrial uses;

Page 11 Hart Crowser

- Potential contamination associated with past and current housekeeping and material management; and
- Potential contamination associated with the underground and aboveground storage tanks.

The potential for sediment contamination associated with the PSTL site is summarized below by transport pathway.

#### **Stormwater**

A stormwater compliance inspection in 2005 indicated that PSTL was not in compliance with discharge sampling and monitoring requirements. Ecology inspectors noted housekeeping deficiencies, including that the catch basins needed to be cleaned. Stormwater from this facility discharges to the LDW and is considered to be a potential source of sediment recontamination.

There are five private stormwater outfalls on the PSTL site. Four of the outfalls likely discharge runoff from the PSTL site while one likely includes runoff from the adjacent street as well. The quality of the stormwater for these outfalls is unknown and may be a potential source of sediment recontamination. The side sewer card indicates the oil/water separator is connected to the sanitary sewer, however, this has not been verified.

#### **Soil and Groundwater**

Past practices at the many buildings may have caused contamination to the PSTL site including paint manufacturing, drum reconditioning, and concrete pipe manufacturing. There is a potential for soil and groundwater contamination from past releases from these activities. There is no information available to determine if soil or groundwater contamination is present at this property.

At least six USTs were identified on the PSTL site. Four tanks were listed as removed in the UST database; however, it is unclear which tanks these records are referring to. All the tanks contained petroleum products including waste oil, diesel, and at least one contained leaded gasoline. There are no records that indicate if there was residual contamination when the tanks were removed. There is a potential for soil and groundwater contamination from past releases related to these storage tanks.

There are two oil/water separators identified on the City of Seattle side sewer cards. One oil/water separator treats wash water from a vehicle washing pad and the other treats water from the vicinity of the AST. Oil/water separators are

Page 12 Hart Crowser

often poorly maintained and although the wastewater is directed to the sanitary sewer and not discharged to the LDW, it is possible that the surrounding area may have been impacted from overflow.

A paint manufacturing plant was present on the PSTL site from the 1920s to the 1970s. There was little information about the practices of the paint manufacturers that occupied the PSTL site during this time. Solvents, mineral spirits, and other volatile organic compounds (VOCs) may have been associated with the manufacturing activities. It is also possible that lead-based paint was manufactured at the facility. Paint manufacturing and handling may have resulted in impacts to the site soil and groundwater.

A drum reconditioning plant operated on the PSTL site in the early-1940s. The drums contained petroleum and petroleum products that were shipped to and from Alaska. Acid and caustic were likely used to clean the drums, however there is a potential that sand blasting was used as well. The caustic tank was later identified as a water pit. It is unknown in what capacity the water pit was used but it may have been a collection point of potential contaminants. An investigation of a similar drum recycler from the same era found soil, groundwater, and sediment contaminants including metals, PCBs, pesticides, petroleum hydrocarbons, and PAHs (SAIC 2009).

Seattle Concrete Pipe Company occupied the southern parcel from the late 1940s through the late 1960s. It was reported that concrete waste was deposited along the bank (Foster 1945). A dip kettle (Figure 2) was likely used to galvanize corrugated pipe in molten zinc. Soil and groundwater in the area of the dip kettle may be impacted by zinc and other metals.

## Introduction

This report presents the results of a geotechnical study to evaluate the subsurface conditions of the northeastern corner of the property located at 7303 8th Avenue South, in Scattle, Washington. The site location and an image showing its current layout is provided on Figure 1. CleanScapes' objective is to determine an appropriate foundation system for components of a proposed Compressed Natural Gas (CNG) fueling station. To aid in this objective, we have characterized subsurface conditions, performed engineering evaluations, and provide geotechnical recommendations for building a stable foundation pad in this environment.

The proposed facility will include three main pieces of equipment within a 32- by 64-foot fenced area. These include an approximately 45,000-pound compressor on an approximately 10- by 40-foot concrete pad, an 8,000-pound dryer on a 9- by 8-foot concrete pad and a 7,000-pound pressure vessel on two concrete pedestals. Relatively light electrical switchgear and a transformer will be located outside of the fenced area. A preliminary mechanical site plan is attached after Figure 1, which shows the layout of the proposed facility.

## Scope of Services

Our scope of services for this study was described in our August 7, 2008 proposal. Services included researching geologic and geotechnical information on surface and subsurface characteristics in the vicinity, drilling one 50-foot deep boring to collect detailed subsurface data at the site, and conducting sufficient analyses to identify and evaluate geotechnical challenges related to building a stable foundation pad that will accommodate the weight of the necessary equipment, as well as the vibrations associated with their operation.

## **Site Conditions**

## General Geology and Seismic Setting

The project site is located in an industrial area along the eastern bank of the Duwamish River in the Georgetown area of south Seattle. The property presents geotechnical challenges in that it is underlain by weak and water-saturated river deposits. This type of geologic environment is often prone to seismic hazards such as liquefaction, lateral spreading and amplified seismic response. Based on our review of readily available subsurface data from nearby sites, it is likely that the relatively weak river deposits extend to depths exceeding 150 feet.

The site is located on the historic Duwamish flood plain, which includes the old channel of the Duwamish River. Review of a geologic map for the area (Troost et al, 2005) indicates that the surficial deposits of the surrounding area are recent alluvium. The alluvium was deposited by the Duwamish River under moderate- to low-energy conditions and is typically composed of interbedded sand and silt with organics. These soils were deposited after the most recent glacial activity in the Puget Sound area, termed the Vashon stade of the Fraser Glaciation, which ended 13,000 to 14,000 years ago. Because it was not overridden by glacial ice during the last glaciation, it tends to be relatively soft/loose. In many locations, the alluvium has since been overlain with fill to support development of the area.

The alluvial deposits are underlain by Vashon-aged glacial deposits, older glacial deposits, and Tertiary-aged bedrock. The Tertiary bedrock is locally composed of the Blakely Formation (sandstone, siltstone and other fine-grained nearshore marine deposits) and is located east of the site, with some small outcrops to the south. Beyond the bedrock to the east, Vashon glacial till and other glacially derived deposits outcrop along the east wall of the Duwamish River valley.

The Puget Sound area is known to be seismically active. The seismic hazard in the area comes primarily from three sources: subduction zone, intraslab or Benioff zone, and shallow crustal earthquakes. Subduction zone earthquakes occur when the interface between the North American tectonic plate and the subducting Juan de Fuca plate ruptures. These events are likely to have magnitudes of up to 9, but the distance to the rupture zone would reduce the intensity of shaking at the project site, although shaking could last up to several minutes in duration. Intraslab events occur due to tensional rupture within the subducting Juan de Fuca plate at depths of 45 to 60 kilometers. This is the source of our largest recent earthquakes and has the potential for magnitude 7.5 events. Although these earthquakes occur every few decades, the depth to the epicenter protects us from more significant shaking and damage.

Shallow crustal earthquakes occur on shallow faults within the Scattle area due to tectonic stresses. Several minor earthquakes occur in the area each year, most of which are not even felt. However, some of the shallow faults are capable of producing significant, damaging earthquakes. Perhaps the most notable of these faults is the Scattle

Fault. Recent research indicates that this fault is capable of producing an earthquake with a magnitude 7 or higher, which, given the shallow depth and proximity to the Scattle urban area, could produce intense shaking at the project site. Current understanding of the Scattle Fault indicates that it is a blind thrust fault with an upper roof riding atop a lower wedge. Back thrust faults traverse the roof and comprise several parallel splays within the fault zone. Movement on the main thrust faults at depth is believed to cause movement of the back thrust faults. Where the back thrusts extend to the ground surface, surficial ground rupture may occur.

The site is located within the Scattle Fault Zone. The recurrence interval of movement along this fault system is still unknown, although it is hypothesized to be in excess of several thousand years. Due to the suspected long recurrence interval, surficial ground rupture is considered to be low during the expected life of the project.

## Surface Conditions and Topography

The project site is currently being used as a parking area for Puget Sound Truck Lines. The topography is flat and the area of the proposed CNG station is currently paved with asphaltic concrete pavement (ACP). The ground surface elevation in the exploration area is approximately 15 feet (North American Vertical Datum of 1988[NAVD88]), as determined based on LIDAR topography. Overhead utility lines are located outside of the property boundary along the street. Based on a utility locate check performed for the boring, there does not appear to be underground utilities within the footprint of the proposed station.

## Field Exploration

Our field exploration program consisted of geologic reconnaissance and drilling of one exploratory boring, located as shown on Figure 1, Site Plan and Boring Location. Descriptions of the sediments encountered in our boring, as well as the depths where characteristics of the sediments changed, are indicated on the exploration log presented in Appendix A of this report. Appendix A also describes the field exploration methodology in greater detail.

## **Exploration Borings**

On August 25, 2008, we performed a site reconnaissance and completed a geotechnical boring (B-1) within the footprint of the proposed foundation pad. The location of boring B-1 is shown on Figure 1. Mud-rotary drilling techniques were used due to the shallow water table and loose nature of the soil deposits in this area.

Boring B-1 was located approximately 25 feet south and 25 feet west of the northeast corner of the property, and was advanced a total of 51.5 feet in depth in order to provide information necessary for soil liquefaction analyses and possible deep foundation design.

## **Subsurface Conditions**

Subsurface conditions at the project site were inferred from the field exploration accomplished for this study, visual reconnaissance of the site, and review of applicable

geologic literature. As shown on the log, the surface was made up of six inches of ACP. Below this depth, the boring encountered a surficial fill layer to an approximate depth of 4.5 feet, which is underlain by natural tide flat sediments to a depth of about 13 feet. Recent Duwamish River alluvial sands were encountered beneath the tide flat sediments to the total depth explored. The following section presents more detailed subsurface information organized from the upper to the lower soil types.

## Stratigraphy

Several explorations have been completed in the project area for other projects. In general, these observations are consistent with our own subsurface exploration. Nearby boring logs along 8th Avenue to the south of the field site indicate that alluvial sands likely extend to a depth of 80 to 100 feet or more. The explorations performed in the area agree with the mapped geology consisting of fill overlying alluvial silts and sands.

### Asphalt-Concrete Pavement (ACP)

Asphalt-Concrete Pavement, (ACP), was encountered to a depth of approximately 6 inches below ground surface. The proposed CNG pad location is currently paved with ACP, which will need to be removed prior to construction.

#### **Artificial Fill**

Fill was encountered in the exploration from to a depth of 6 inches to about 4.5 feet below ground surface. The fill composition consists of moist, fine to coarse, angular sand. In general, fills can be expected to have variable engineering properties, but are generally characterized as having moderate strength and permeability, low to moderate compressibility, and low to moderate sensitivity. Soils with high moisture sensitivity tend to degrade easily upon exposure to weather and disturbance and are difficult to compact when the moisture content exceeds the optimum.

## **Recent Tide Flat Deposits**

Silt, sand, and organic matter was deposited post-glacially when marine waters extended up the Duwamish valley into what is now Georgetown. This unit was present in our boring from approximately 4 to 13 feet in depth, and consists of soft to very soft silt, interbedded with very loose to loose silty sand. Root traces and black organic matter were also present in various stages of decomposition, giving the unit an organic odor. Silty layers are generally grayish-brown to pinkish-brown and contain thin black organic-rich laminae. Sandy layers are gray and contain pinkish-brown silty laminae. The soft organic silt within this unit is relatively weak, highly compressible and has low to moderate permeability.

#### **Duwamish Alluvium**

Duwamish alluvium in this location consists of very loose to medium dense, fine to medium sand with variable silt content. The sand was generally dark gray overall, and contained feldspar and mica grains. This unit was likely recently deposited by the Duwamish River and is consistent with the unit shown on the geologic map. The material can be expected to have low to moderate strength, moderate compressibility, high permeability, and low to moderate moisture sensitivity.

## Hydrology

Groundwater was encountered at approximately 5 to 6 feet below ground surface in the exploration boring. Iron staining, which indicates fluctuations in the water table, was observed in a soil sample taken from approximately 5 to 6.5 feet. It should be noted that observations of groundwater levels during drilling can be misleading, as the actual groundwater level is often somewhat higher than observed while boring. Due to the drilling technique being used, we were not able to obtain a more accurate measurement of the water table. Groundwater table for this location is likely primarily controlled by river elevation and is not highly subject to seasonal fluctuations. Minor changes in groundwater levels should be expected due to twice daily tidal cycles.

## **Laboratory Analysis**

Laboratory testing was conducted to characterize certain physical properties of the on-site soils collected during our investigation. Details of the laboratory testing program and the results of the grain-size distribution testing are presented in Appendix B. Testing included determination of natural moisture content and grain size distribution. Testing of soil samples was conducted in general accordance with appropriate ASTM standards. Moisture content tests were performed on thirteen soil samples representing each depth sampled. Results of moisture content analysis are displayed on the summary boring logs in Appendix A. Laboratory grain size distribution testing was conducted on six soil samples from the borings. The results of the grain-size distribution testing are presented as Figure B-1.

## **Conclusions and Recommendations**

## General

Based on the results of our engineering evaluations and analyses, the project is feasible assuming our recommendations are properly followed. The key challenges relate to the relatively weak soil beneath the site, and its vulnerability to seismic hazards.

## **Seismic Considerations**

The site seismic setting is described in an earlier section of this report. Potential seismic impacts to the project include site response, soil liquefaction and fault rupture.

## Site Response

Ground motion response of structures planned for the project may be considered in design by following International Building Code (IBC) with applicable local amendments.

The IBC requires that structures be designed for inertial forces induced by a "Maximum Considered Earthquake (MCE)" with a 2 percent probability of exceedance (PE) in 50 years (2,475-year return period). The IBC expresses the effects of site-specific subsurface conditions on the ground motion response in terms of the "site class" for the site. The "site class" represents the density and stiffness of the soil profile underlying the site and is used to account for the seismic response of the soil profile. The "site class" can be correlated to the average standard penetration resistance (NSPT) in the upper 100 feet of the soil profile. Based on our characterization of the subsurface conditions, IBC Site Class F should be assumed for the site. However when mitigated to the level of liquefaction resistance as proposed in the recommendations later in this report, it is reasonable to assume a Site Class E.

IBC Chapter 18 allows that in –lieu of using a site specific study, the peak ground acceleration used for design can be set as the five-percent damped design spectral acceleration at short periods,  $S_{DS}$  divided by 2.5. ( $S_{DS}/2.5$ ) for the purposes of evaluating liquefaction consequences.

The mapped, maximum considered earthquake spectral response accelerations for short period ( $S_s$ ) = 1.55g; and for 1-second period ( $S_1$ ) = 0.54g. Site coefficients for this site are  $F_a$  = 0.9,  $F_v$  = 2.4, based on the site soil conditions, and the maximum considered earthquake spectral response accelerations adjusted for site class effects are  $S_{DS}$  = 0.931g,  $S_{DI}$  = 0.856g. Values for the structural design should meet the appropriate code values as determined to meet the level of service this structure is intended. As provided in Chapter 18 of the Seattle Building Code (SBC), a non-site-specific value of peak ground acceleration of 0.372g ( $S_{DS}/2.5$ ) can be used for the site evaluations.

## Soil Liquefaction

The project site is within a mapped liquefaction-prone area, according to the Scattle Department of Planning and Development (DPD) sensitive area folios. Liquefaction occurs when loose, saturated and relatively cohesionless soil deposits temporarily lose strength as a result of earthquake shaking. Potential effects of soil liquefaction include temporary loss of bearing capacity and lateral soil resistance, and liquefaction-induced settlement, any of which could result in significant structural damage. Primary factors controlling the development of liquefaction include intensity and duration of strong ground motion, characteristics of subsurface soil, in-situ stress conditions and the depth to groundwater.

We performed soil liquefaction analyses using the computer program Liquefy Pro® version 5.5 (Civil Tech, 2008), based on subsurface data from the current study.

We evaluated liquefaction potential based on three design events as summarized in Table 1. The design level events are based on the United States Geological Survey National Seismic Hazard Map data.

Seismic Event Return Period (years)	Peak Ground Acceleration	Earthquake Magnitude
108	0.154	6.45
475	0.310	6.53
. 2,475	0.548	6.53

TABLE 1 - Design Level Earthquake Parameters

The liquefaction analyses performed indicate that significant liquefaction could occur for all of the seismic events considered. In general, the potential for liquefaction is expected to decrease with depth. As a practical matter, effects of soil liquefaction occurring deeper than about 40 to 45 feet are not likely to manifest at the ground surface.

The primary consequences of liquefaction include seismic-induced settlement and sand boils, which could possibly impact the planned improvements. Seismic-induced settlements resulting from the design level earthquakes considered were estimated using the Liquefy Pro® program. The results of our total settlement analyses are summarized in Table 2. Total settlement would be widespread and would occur more or less uniformly over an area much larger than the project site. Therefore, differential settlement caused by liquefaction is expected to be minimal, on the order of about 1/8 of total settlement over 50 feet.

Liquefaction could also result in lateral spreading. Lateral spreading is the movement toward the shoreline of the "crust" of soil above the liquefiable layer. Our lateral spreading analyses were based on methods suggested by Youd et al (2002) assuming the three considered seismic events, the location of the site relative to the Duwamish River, site topography, and our characterization of subsurface conditions. The results of our lateral spreading analyses are summarized in Table 2.

TABLE 2 – Estimates of Seismic-Induced Se	ettlements and Lateral Spreading
---	----------------------------------

Seismic Event Return Period (years)	Estimated Post- Liquefaction Total Settlement (inches)	Estimated Lateral Spreading in SW Direction (inches)
108	91/2	1/2
475	101/2	11/2
2,475	20	2

Sand boils are liquefaction-related features that result from subsurface porewater pressure relief via the path of least resistance. They manifest themselves as small mounds on the surface of ejected soil slurry, and have the appearance of a mini volcano. They are typically on the order of about 10 to 20 feet in diameter and cause a mound on the order of 1 to 1½ feet high. Up to several cubic yards of material can be ejected. Sand boil locations appear to be fairly random, and the prediction of their occurrence is not considered practical.

## Seismic Foundation Performance, Mitigation and Costs

As discussed earlier in this report, seismic ground deformations are anticipated for the design level earthquakes considered. Discussions with the design team indicate that it is desirable for the facility to remain operational after a relatively low level earthquake. This is defined as the Operational Design Event (ODE) and has a 108-year recurrence interval. It is also desired that the facility remains safe after a Maximum Design Event (MDE), defined as having a 2,475-year return period.

The design criteria established by the design team is less than ¾ inches of differential settlement over 50 feet for the ODE, and less than 8 or 9 inches over 50 feet for the MDE. Based on our analyses, the settlement criteria for the ODE will be exceeded. Therefore, the facility will have to incorporate added design measures to increase the settlement tolerances of the equipment, or ground improvement will be necessary to mitigate liquefaction-induced settlement. Ground improvement would also reduce the magnitude of lateral spreading.

#### Mitigation Methods and Costs

Ground improvement for liquefaction mitigation typically involves providing relief of excess pore pressures that tend to develop during seismic shaking, and/or densifying the soil beneath the site to reduce its susceptibility to liquefaction. Other options involve stabilizing the liquefiable soil mass with grouting methods. Most measures would be cost prohibitive for a project of this size. Two potential methods that could be considered for this project are Earthquake Drains and Impact Piers.

Earthquake Drains provide a drainage path to relieve excess pore water pressures that develop during seismic shaking, but do not densify the soil. Earthquake Drains consist of prefabricated, three-dimensional, composite drains that are driven vertically into the ground on a relatively close spacing throughout the area of the CNG facility (assumed 40- by 70-foot area). This area of treatment encompasses the foundation supporting the

compressors as well as a dryer, pressure vessel, and switch gear. The depth of the drains would be designed to mitigate liquefaction such that settlement would be reduced to within the established tolerance.

Based on preliminary analyses, we estimate that drains would be required on 3-foot spacing and would be about 30 feet deep. In addition, a 2-foot thick aggregate reservoir layer would be required above the treated area to store excess water that is transmitted through the drains during an earthquake. Based on the above assumptions, we estimate the construction cost for earthquake drains to be on the order of \$85,000. This estimate is conceptual and should not be considered an engineers estimate. They are also a relatively new technology that has not been widely used in the Seattle area. Therefore, there is some uncertainty that they would performance as designed under local conditions.

Impact piers are rammed aggregate piers that are installed by augering boreholes in a relatively closely spaced pattern throughout the site and to a selected depth, inserting gravel into the borehole, and tamping the gravel in the borehole to create dense gravel piers. These actions also densify the soil between the boreholes and provide a drainage path to relieve excess pore water pressures that develop during seismic shaking. The use of impact piers has been more widespread in the industry and their performance is better known.

Based on preliminary analyses, we estimate that mitigation with impact piers would require piers on 5½-foot spacing and about 30 feet deep. An aggregate reservoir layer similar to that required for earthquake drains would be needed. Based on the above assumptions, we estimate the construction cost for earthquake drains to be on the order of \$150,000. This estimate is conceptual and should not be considered an engineers estimate.

## Static Foundation Considerations

Based on the anticipated loads and facility configuration, the average applied foundation loadings are anticipated to be low, below 500 pounds per square foot (psf). Therefore, settlement, not bearing capacity, will control the foundation design.

We analyzed foundation settlement under both static and operational conditions, taking vibration into consideration. The compressor foundation was considered critical, due to its weight and the potential to generate vibration. For the purposes of our analyses, the dynamic load of the compressor was assumed to be four times the static load.

Total static settlement of the compressor and pad, due to its weight and the consolidation of the soft floodplain sediments beneath the site, is anticipated to be on the order of 1 inch. Total vibration settlement, caused by the operation of the equipment, is anticipated to be an additional 0.4 inches. It is expected that this the static settlement will occur over the course of several months after construction. Vibration settlement would occur within a few weeks of operation.

To reduce differential settlement attributed to compression of the loose to medium dense surficial fill soils, we recommend excavating to a depth of 8 inches below the bottom of the planned base rock level, compacting the exposed subgrade in place to a firm and unyielding condition, and replacing the overexcavated material with crushed rock

#### ASPECT CONSULTING

meeting the requirements of City of Scattle Type 2 Mineral Aggregate, compacted to 95 percent relative density as measured by ASTM D1557 (Modified Proctor Test). The overexcavation should extend one-foot beyond the edge of the slab in all directions.

1

## **Closure and Limitations**

Work for this project was performed and this report prepared in accordance with generally accepted professional practices for the nature and conditions of work completed in the same or similar localities at the time the work was performed. Our scope of work did not include environmental assessments or evaluations regarding the presence or absence of hazardous or toxic substances in the soil, surface water, or groundwater at this site. It is intended for the exclusive use of CleanScapes, Inc. for specific application to the referenced project. This report does not represent a legal opinion. No other warranty, expressed or implied, is made.

This report should be provided in its entirety as a reference to prospective Contractors for bidding and estimating purposes; however, the conclusions and interpretations presented in this report should not be construed as a warranty of the subsurface conditions. This report is issued with the understanding that the information and recommendations contained herein will be incorporated into the final plans and specifications, and necessary steps will be taken to see that the Contractor and subcontractors carry out such recommendations in the field.

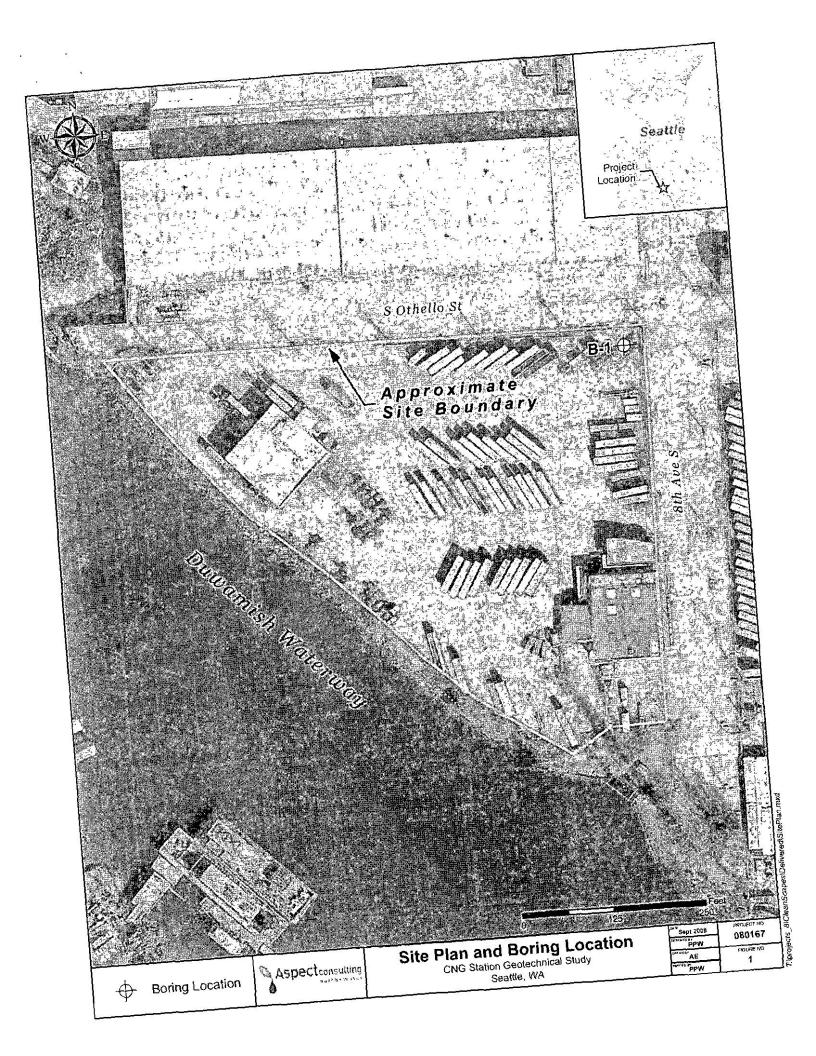

Sufficient geotechnical monitoring, testing and consultation should be provided during construction to confirm that the conditions encountered are consistent with those assumed for our analyses, and to verify that the geotechnical aspects of construction comply with the plans and specifications. If conditions are revealed during construction that differs from those anticipated from this study, Aspect Consulting should be contacted to provide recommendations for appropriate design changes, if necessary.

## **APPENDIX A**

**Field Exploration Program** 

## **Field Exploration Program**

## **Geotechnical Borings**

On September 25, 2008, we performed a site reconnaissance and completed a geotechnical boring (B-1) within the footprint of the proposed facility. The location of Boring B-1 is shown on Figure 1, Site Plan and Boring Location. Mud-rotary drilling techniques were used due to the loose nature of the soil deposits in this area. The approximate ground surface elevation at the exploration location was determined based on LIDAR surveying. The location and elevation of the exploration should be considered accurate only to the degree implied by the methods used.

Boring B-1 was located approximately 25 feet south and 25 feet west of the northeast corner of the property, and was advanced a total of 51.5 feet in total depth in order to provide information necessary for soil liquefaction analyses and possible deep foundation design, if necessary. The boring was completed by advancing a truck-mounted, Mobile B-59 truck-mounted 4-inch tri-cone drill bit operated by Holocene Drilling, under subcontract to Aspect Consulting. The results of the exploration are summarized on the individual summary boring log, which is included in this Appendix as Figure A-2. A key to the symbols and terms used on the summary logs is presented as Figure A-1.

Samples were obtained using the Standard Penetration Test (SPT) in general accordance with American Society of Testing and Materials (ASTM) method D1586. This involves driving a 2-inch outside-diameter split-barrel sampler a distance of 18 inches into the soil with a 140-pound hammer free-falling from a distance of 30 inches. The hammer was operated using an automated system. The number of blows for each 6-inch interval is recorded and the number of blows required to drive the sampler the final 12 inches is known as the Standard Penetration Resistance ("N") or blow count. The resistance, or N-value, provides a measure of the relative density of granular soils or the relative consistency of cohesive soils. N-values for each sample depth are shown on the summary log in this appendix.

Sampling was completed on 2.5-foot depth intervals in the upper 15 feet of the subsurface to provide us with a detailed understanding of the near-surface geological and geotechnical soil properties, and on 5-foot depth intervals at greater depths. Representative portions of all recovered samples were placed in scaled containers and transported back to our office. After reviewing drilling notes, the boring log, and soils, samples were selected for analysis and transported to the laboratory at HayreMcElroy and Associates, LLC, for further observation and testing.

An Aspect Consulting representative was present throughout the field exploration program to observe the drilling procedure, assist in sampling, and to prepare descriptive logs of the exploration. Soils were classified in general accordance with ASTM D-2488 Standard Practice for Description and Identification of Soils (Visual-Manual Procedure). The summary exploration log represents our interpretation of the contents of the field logs and the results of laboratory testing. The stratigraphic contacts shown on the

#### ASPECT CONSULTING

individual summary logs represent the approximate boundaries between soil types; actual transitions may be more gradual. The subsurface conditions depicted are only for the specific date and locations reported, and therefore, are not necessarily representative of other locations and times.

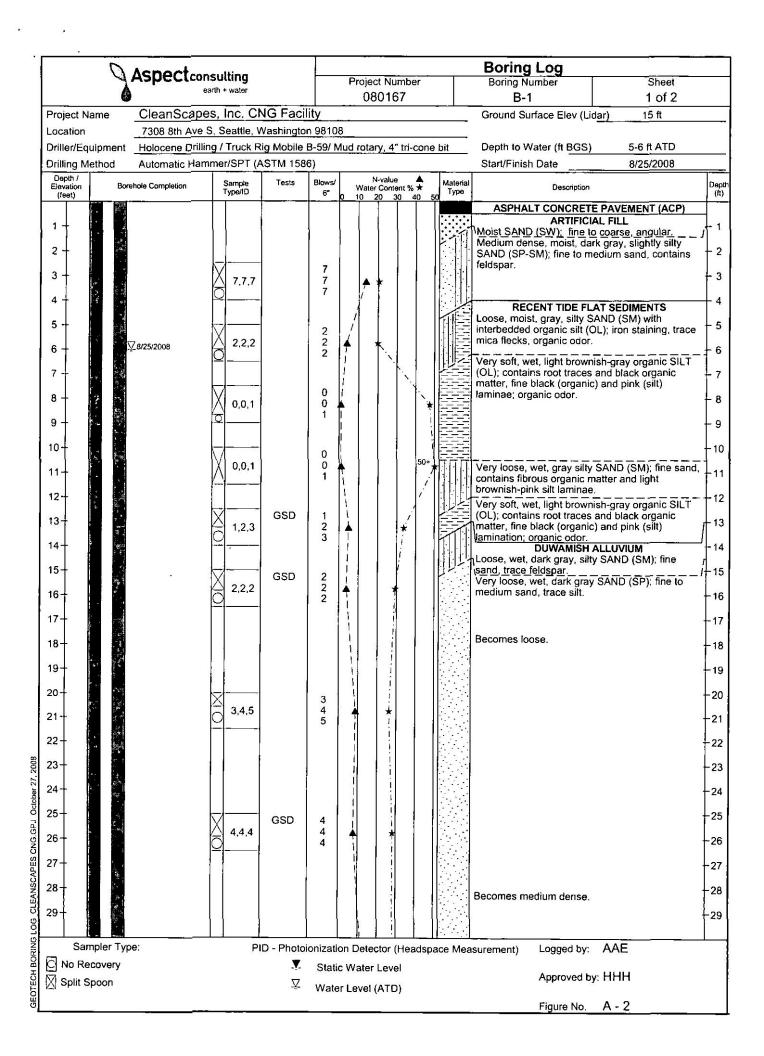

Classifications of soils in this report are based on visual field and/or laboratory observations, which include density/consistency, moisture condition, grain size, and plasticity estimates and should not be construed to imply field or laboratory testing unless presented herein. Visual-manual and/or laboratory classification methods of ASTM D-2487 and D-2488 were used as an identification guide for the Unified Soil Classification System.

## **APPENDIX B**

**Laboratory Testing** 

## **Laboratory Testing**

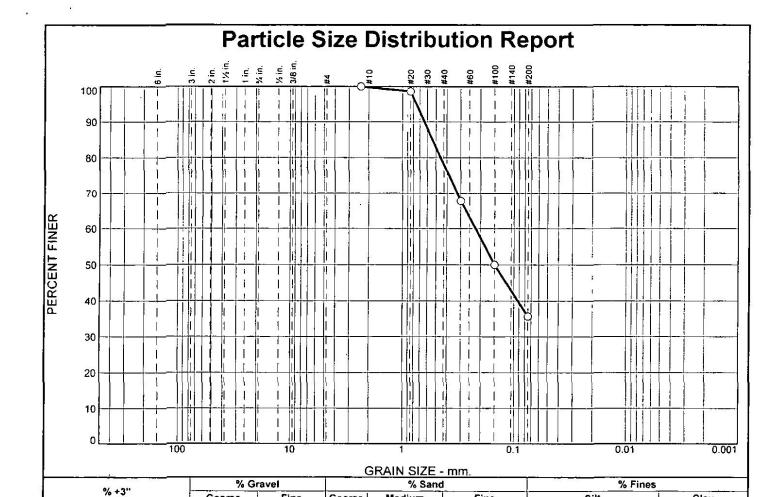

The laboratory tests were conducted in general accordance with appropriate ASTM test methods. Test procedures and results are discussed below.

#### **Natural Water Content**

Natural water content determinations were made on all soil samples in general accordance with ASTM D-2216, Standard Test Method for Laboratory Determination of Water (Moisture) Content of Soil and Rock by Mass. Test results are graphically indicated at the appropriate sample depth on the boring summary log for Appendix A.

### **Grain Size Distribution**

The grain size distribution of selected samples was analyzed in general accordance with ASTM D-422, *Standard Test Method for Particle-Size Analysis of Soils*. Results of grain size analyses are plotted on the attached figure in this appendix. The soil samples tested for grain size distribution are indicated on the boring summary log in Appendix A.

# The EDR Aerial Photo Decade Package

## **EDR Aerial Photo Decade Package**

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

#### **EXECUTIVE SUMMARY**

#### **DESCRIPTION**

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2005. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

#### **RECORD SOURCES**

EDR is licensed to reproduce certain City Directory works. Reproduction of City Directories without permission of the publisher may be a violation of copyright.

#### RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

5-67. This is a single comet shop some offices our 1st floor and some offices our may - fortafingy is just afen storage - office here is the track shop area has a forcedais furnaces - no floor cover ist from them. He had a permit for an for a litel of 65000, Talked to one of the office men and he said they had 97000 in building but parts fines much for the fact have been some for broke and gloundwork for the building

OFFICE OF HISTORIAN
SEATTLE ARMY SURVICE FORCES DEPOT
SEATTLE, MASHINGTON

Interim Report No. VIII

THE RECLAMATION OF FIFTY-FIVE GALLON DRUMS

the decision Mr. Melson pointed out that the entire project would be of no "... use or value whatsoever to ourselves or anyone else at the expiration of our contract," and he appealed to the Depot Contracting Officer and Congressman Warren G. Magnuson for assistance in getting the Board to reconsider its decisions. 78

78 Idem.

What action Congressman Magnuson took is not shown by the records of this office but the Quartermaster Supply Officer wrote to The Quartermaster General enclosing a copy of the protest of the Seattle Drum Company. He explained the existing contract, declared that the facilities would be worthless upon the termination of the war and asked that assistance be given by that office to get the War Production Board to reconsider the matter. 79 In the meantime

the Seattle Drum Company has gone forward with construction of the new plant.

The new plant of the Northwest Drum Company began operations on a small scale on July 24, 1944. This company was the first to purchase and install sand blasting equipment as desired by the representatives of the West Coast Petroleum Sub-Office. The Ketchum-Peabody and Seattle Drum Companies had also made arrangements to secure similar equipment. Naturally the

<sup>79</sup>Col. Chauncey A. Bennett to the OMG, 6 Sept. 1944, "Seattle Drum Company, Contract W.45-043 qm 766, O.I. No. 134-44."

effectiveness of the new equipment was a matter of interest to all centractors. It was soon discovered that, although sand blasting was effective in cleaning the exterior of the drums, it was neither as quick or as cheap as had been anticipated. It was claimed that the machine installed at the Northwest Drum Company was capable of cleaning three drums a minute. 80 Frequent break-

downs of the machine kept production from attaining this speed for any sustained period of time. By the same token, expenses were increased whenever the sand blasting equipment had to be stopped during a shift for repairs.

Meanwhile the freweld Manufacturing Company had been experimenting with an acid treatment as a means of removing rust from the interior of the drum and rust and paint from the exterior. By August 1944 their experiments had reached the point where it appeared they had developed a method of cleaning which, when used in conjunction with the caustic bath, was more satisfactory than sand blasting for cleaning the exterior of the drum. Loreover, use of the acid of the interior eliminated the necessity for chaining. 61

<sup>80</sup> See Appendix D for a copy of the standard operating procedure adopted by Northwest Drum Company when it began operations. It has probably been modified since.

<sup>81</sup> From an interview with Mr. A. H. Lord, Chief Petroleum Inspector, 14 Sept. 1944.

Appendix C

SPQDS 161 FD-CMP

AMP:EMS

5 May 1944

SUBJECT: Transmittal of Forms GA-861 and GA-862

TO: Army Representative, Seattle Area Production Urgency Committee and Manpower Pricrities Committee, 350 Henry Building, Seattle 1, Washington. Attn: Andrew J. Wynne, Colonel, Q.W.C.

- 1. In accordance with existing policy, there are forwarded herewith for review and clearance by the Seattle Area Production Urgency Committee Forms GA-861 and GA-862, in quadruplicate, covering the case of Seattle Drum Company, 620 Othello Street, Seattle 8, Washington, with whom the Quartermaster Supply Section of this Depot proposes to place a contract for the reclamation of 55-gallon Government-owned used steel petroleum containers urgently needed for overseas shipment of petroleum products.
- 2. The Office of The Quartermaster General has directed this office to contract for facilities in the Seattle area to reclaim a minimum of 10,000 drums per day. At the present time, the following facilities are in existence, the figures being based upon maximum capacity:

Arcweld Manufacturing Company
Ketcham Wire & Manufacturing Co.
Pacific Drum Company
Total

1,000 per day (approx.)
2,000 per day (approx.)
5,000

In addition the Northwest Drum Company has recently been awarded a contract, approved by the SAPUC, under which it is estimated maximum production will be 2,500 per day. Thus, all existing and approved facilities fail to meet the requirements of The Quartermaster General by approximately 2,500 drums.

3. The proposed contract with the Seattle Drum Company contemplates additional facilities for approximately 2,500 drums per day for which the company will require approximately 70 additional employees, 30 of whom will be women. This proposed contract is essential to the prosecution of the war as evidenced by the fact that approximately 1,250,000 drums will require processing in the next six months. After that time there is every indication that the requirements will be as great or greater than for the current period.

(-1-)

#### Appendix D

# STANDARD OPERATION PROCEDURE OF NORTHWEST DRUM CC.

Cutlined below is a complete descriptive operation by steps of the reconditioning of 55-gallon steel drums for the Army Quartermaster Corps.

- l. The drums are brought into our yard, comprised of nine acres, by scow or ocean-going vessel, are unloaded with the assistance of a 10-ton crane and automatic conveyers to stock piles in our storage yard. We have storage facilities for handling in excess of 500,000 drums.
- 2. The drums are taken from various stock piles, or direct from the scows, by automatic cable-hoist conveyors to the plant where they are dedented under hydrostatic pressure by 6 dedenter machines. The water is forced under pressure to 170 lbs. by centrifugal pumps into the drums to remove all dents. The water is blown out of the drums by air pressure and returned to a tank from which it is used over again.
- 3. They are then conveyed by automatic lift which places them in water testing tank where they are tested by air pressure up to 15 lbs. to determine leaks.
- 4. Next the barrels are washed on the inside by inverting over floor nozzles. There are four separate washing tanks with five nozzles in each one, making a capacity of 20 drums at one operation. First boiling water and then steam is forced thru the nozzles under pressure of 125 lbs. removing all foreign matter with the exception of tar, cement, and heavy rust.
- 5. They proceed next to the retort drying furnace. This furnace is a specially designed machine using diesel oil for fuel which is atomized by steam or air thru a specially built spray nezzle. This machine burns up all the gases or fumes that may result from the burning of oil. The blast furnace has a tremendous heat radius up to 400 degrees F. The hot air is forced thru large pipes by high-speed blower into the inside of the drums. We have two such retert furnaces each having a production capacity at one time of 10 drums, and drying the drums in approximately 2 minutes. The drums are at this time classified as to condition by inserting a specially constructed electric light into the drums.
- 6. The drums that are heavy on the inside with rust are placed on a scaling machine where a specially designed diamond chain is inserted. This scaling machine rotates and oscillates at the same time removing any rust scale which may be on the inside. After descaling the drums are replaced on either one of the assembly lines and rewashed on the inside and dried over again.

- 7. The drums are next conveyed over two lines to the assembly department where they are buffed on the bung seats with electric buffers, sprayed on the inside with special rust inhibitive oil, and new gaskets and new bungs are installed when necessary.
- 8. They proceed then to the sand blasting machine where they are blasted on the outside only to remove all rust, paint, or other foreign matter. The blaster has a capacity of 10 tons of steel grit or other abrasive. The grit is put in the blaster pit and is conveyed from there by an elevator to the pressure tank from which it is blown thru 4 oscillating nozzles, resulting in the covering of every part of the drum with the abrasive as it is sprayed thru the nozzles.

This machine also has a dust collector into which the dust is drawn off by an electrically-driven fan. The dust is then disposed of. This blaster is built of very heavy material to insure a longer life owing to the fact that the abrasive damages very extensively the metal in the blaster.

This machine uses 5 electric motors for operating the elevators, the fans, the mozzles and the agitators for the screens and blowers.

The abrasive going into this machine must be thoroughly dried and screened to prevent clogging of the nozzles. The air action in the nozzles is supplied by an 800 cu. ft. air compressor and this air is thoroughly dried and heated before used in this machine.

This sand blaster is equipped with an electrical time clock which operates a time kickout ejecting the drums at the rate of 3 per minute.

9. The drums then go over a short conveyor to the painting booth which is a specially designed De Vilibiss booth equipped with a device which sprays water down the inside of the booth for fire prevention and to prevent collection or adherence of paint to the inside of the walls.

The booth has a 3 h.p. totally enclosed electric potor to drive a fan which withdraws any fumes which may arise from the painting operation.

In connection with this booth there is a 60-gallon De Vilibiss paint receptacle with an air driven agitator to keep the paint thoroughly mixed at all times. This receptacle has a regulator on it which keeps the air pressure uniform at all times resulting in an even distribution of paint on the drums. The receptacle is capable of supplying four paint guns at one time and has sufficient paint for approximately 900 drums without refilling.

The drums are on automatic rollers when painted and are automatically kicked out by air pressure at the rate of four per minute. The rollers are driven by electric power.

10. The drums after being automatically kicked out are conveyed automatically thru a 50-foot cement enclosed tunnel and dried by hot air supplied from the retort furnaces. Cutside of the tunnel they are then classified or stamped as to condition while still on the conveyor. The conveyor which carries the barrels from the drying tunnel is approximately 300 feet in length and ends at a loading platform which is truck-bed height to facilitate the loading of drums. We also can extend this conveyor to the spur track for the loading of box cars when necessary.

When this plant was set up it was built on a production line basis so that the draws would require the least amount of handling. This permits operation with at least 70 per cent of the personnel being women. We are planning to operate this plant on a 24-hour basis and will have a capacity of 1500 drums per shift or 4500 drums every 24 hours.

# SETABLISHMENT OF MAN DRIM NECLAMATION PLANTS AND INCREASE OF PRODUCTION, JUNE 1945 - MAY 1946

By the first of Jum 1944, the Seattle Depot had already built and successfully carried out a drum reclamation program of considerable proportions. Three drum reclamation plants and several Oil Companies had reclaimed or serviced some 961,611 used drum between Jumery 1945 and Jume 1944. During the first five months

of 1944, moreover, the Depot had carried on negotiations with camers of two of the drum plants, then in operation, which called for the construction of two additional drum reclamation plants. These two new plants were to be built on sites near which large stock-piles of used drums had been accumulated emaiting reclamation.

See Interim Report VIII, pp. 41-42; and Appendix, p. 58 this Supplement, for Statistics Chart,

<sup>62</sup> Interim Report VIII. pp. 54-41.

See also, Appendiz.pp. 64-5 for photosof drum stock-piles
near Northwest Drum Co. Plant.

on the first of Ame 1944, therefore, the Depot had five contracts in force which provided for the reclamation of a total of

in operation, the Arcweld Hanufacturing Company, the Pacific Drum Company, and the Ketcham-Peabody Company, held contracts for reclaiming 75,000; 125,000, and 500,000 drums, respectively. The

two plants to be constructed after 1 Ame of 1944, were those of the Northwest Drum Company and the Seattle Drum Company. These Companies held contracts for reclaiming half a million drums aplece.

The Northwest Drum Company Plant, which managed to get into operation on a small scale in July of 1944, met full production schedules in August. But the Seattle Drum Company, organized by

<sup>63</sup> See Appendix, p. 66 for plan of the Ketcham-Peabody Plant, as sketched by Mr. W. R. Lewis, Chief Civilian Inspector, Liquid Fuels Section, on May 21, 1945. No plans of Arcweld or Pacific Drum Plants are available.

See Appendix, p. 67 for Plan of Northwest Drum Company Plant. See also, Appendix, pp. 64-65 for photos of stock piles of used drums awaiting reclamation in August, 1944, at H. W. Drum Plant.

the owners of the Arcweld Manufacturing Company, met with set-backs of various kinds, and did not begin reclamation operations until about the first of October 1044.

<sup>65</sup> See Interim Report VIII, pp. 42-48, for discussion of problems incident to construction of the plants and their operation.

Mr. Carstenson's Interim Report VIII was written in September, 1944, hence did not include information as to date of completion of this Flent.

DECLASSIFIED
E.O. 12356 Sec. 3.3

Project. W.VO 967694

By KH NARA Data 1/2 = /2016

pany had lost a good deal of time getting into production and, of course, by December 1944, was decidedly behind on its contract schedules. 66 In December, therefore, the Seattle Drum Company re-

66 See Appendix, p. 68 for Plan of Seattle Drum Company.

ceived permission to let a sub-contract to its parent company, Arcweld Manufacturing Company, in order to finish its half million drums by 31 May 1946.67

During the six months' period, June to December, 1944, the five Drum Reclamation Plants reclaimed a total of some 848,331 used drums—approximately one-half the number contracted for on 1 June 1944. In fact, by the first of December, so many reclaimed drums

June - 121,253 September - 151,636 July - 114,299 October - 177,734 August - 135,670 November - 147,731

had accumulated that there was urgent need for additional storage space. Therefore, the Seattle Field Petroleum Officer requested allocation of space at the Auburn Holding and Reconsignment Point

Maj. A. M. Prothro, Ass't Chf. Proc. Div., to Seattle Drum Co., 15 December 1945.

The cost of transferring drums from Seattle Drum Co. to Aroweld Plant was to be met by the contractors, not by the Government.

<sup>68</sup> Production by months was as follows:

for storage of approximately 250,000 reclaimed drums. Permission was also requested for the shipment of fifteen carloads (4,000 drums) per day to Auburn at once, beginning on 12 December. It was believed that after the 250,000 drums had been transferred to Auburn, the balance of the daily production—2,000 drums—could be adequately stored at the drum plants and the Oil Companies' fill-lines.

The Guarternaster General's office arranged with the Transportation Corps for allocation of storage space for eight hundred carloads of reclaimed draws at Auburn, with the provise that no more than ten care per day would be shipped from Seattle. 70

<sup>69</sup>Saj. R. T. Bratt, F.P.O., SEASED, to OIC, ECPSO, Cakland,
Calif., 5 December 1944, "Space for Storage of Reclaimed Druss."

According to a memo received by Maj. Bratt on 18 September
1944, the daily peak production of the four plants then operating was:
5,000 druss. This was before Scattle Drum added its 2,000 per day
production in November 1944.

Maj. H. R. Pellegrino, OQEO, to QEO, SEASTD, 21 December 1944, "Storage of 55-Jallon Drame."

The arrangement was on a 90-day basis and, honce, required renexal every 3 months.

By December 1944, still another problem, affecting storage of drums and efficiency of plant operations, came into paramount importance—that of disposal of non-standard and salvage petrolems containers. Late in September, the Depot received orders to reclaim no more galvanised-coated drums; and to dispose of those on hand, reclaimed

DECLASSIFIED
E.D. 12356 Sec. 3.3
Project. W.V.O. 96763 4
By. K.H. NARA Date 1/26/2016

or unrealized, according to procedures for disposal of nonstandard equipment. 71 Standard gauge draws with chims or flange

71 Lt. Col. R. Linden, ONE, to ONE, SEASED, 26 September 1944. This meant placing such drums in storage until notification was received from the West Coast Petroleum Sub-Office (ONE) to declare them as Surplus to the Treasury Department. See letter, West Coast Petroleum Sub-Office dated 2 October 1944, "Standing Operating Procedure-Disposal Galvanized 55-Gallon Drums."

leaks, were not to be reclaimed, but to be set aside for disposal through necessary action by the Petroleum Section (Storage Division) and the local Salvage officer at the Depot. The Director of Precurement called the attention of the Director of Supply to the fact that local oil companies would probably pay more for salvage draws than would juck dealers. The Procurement Officer also requested removal of both non-standard and salvage draws from Dram Plant storage areas as soon as possible so that valuable storage space at Dram Plants could be cleared, and so that Dram Plant production would not be imposed by huge stocks of these non-serviceable draws. 72

<sup>72</sup> Name, Parmer to Director of Supply, 25 Howember 1944, "Disposal of Non-Standard and Salvage Petroleum Containers."

As a matter of fact, a very large number of salvage and nonstandard druss were reported to the Scattle Treasury Procurement office on 18 Hovember, but it was not until 11 December that their removal was communed by the Treasury Department's purchaser. Complete removal of

E.O. 12356 Sec. 3.3

Project. MIVO 967634

By KH NARA Deta 1/25/2016

the drums sold on that occasion was not possible until 1 January 1945. Experience proved that thirty days were normally required to consummte a Treasury Sale of the dress, and furthermore, no time limit was imposed upon the Treasury Procurement Division. Since removal of salvage drums from drum plants had to be put on a continuous basis to avoid interruption of drum repair work, the Depot requested permission from the Minth Service Command Headquarters to return to the procedure it had employed before the establishment of the Treasury Procurement's progress of surplus and salvage disposal. This procedure entailed the letting of indefimite quantity sales contracts between the Depot Salvage Officer and the purchasers providing for continuous removal of salvage drums. Both invitations to bid and contracts were to be issued by the Salvage Officer without reference to the Treasury Department. Binth Service Command Headquarters approved the procedure on the basis of an interpretation which involved the definition of salvage drums as not serviceable property, nor property which could be made serviceable by minor repairs only. W

Col. C. E. Pease, Executive Officer, Hq., SEASYD, to CG, MSC, Attn: Property Disposal Division, 20 December 1944, "Salvage of Drums, 55-Callon, Mon-repairable, and Bags, Sleeping, in Extreme Disposair"; and 1st Ind., Maj. C. W. Espe, Director Property Disposal Division, Eq., MSC, 27 December 1944.

Hence after 1 January 1945, the Seattle Depot arranged for sales of salvage druss by means of indefinite quantity contracts over

DECLASSIFIED
E.O. 12356 Sec. 3.3
Project. W/VO 907634

By KH NARA Data 1/26/2010

three months' periods without reference to the Seattle Office of the Treasury Procurement Division. 74 The Depot had sold salvage druss

in June and September of 1944 in this same manner before the Treasury Division took charge of surplus and of salvage valued at more than three hundred dollars. But for some reason or other, no salvage drums were advertised to bidders in Pebruary 1945. By the first week in March, drum reclamation contractors were again complaining about the Depot's failure to remove these drums from their premises. The Proourement Division warned the Quartermaster Supply Officer that such delays were costing drum plants as much as five hundred to a thousand dollars a day and that if immediate remedial action were not taken, the Government might very well become liable for claims covering such costs.

Documents showing number of salvage drums disposed of through the Treasury Proc. Div. in November are no longer available here.

<sup>75</sup> Penno, Prothro to QMSO, 6 March 1945, "Removal of Salvage from Drum Reclamation Flants."

Maj. Prothro pointed out that removal of salvage drums was continuously complicated by the fact that some runs of used drums yielded only 10% salvage, while other runs yielded as high as 60% salvage if the drums had been badly rusted from salt water erosion. He acknowledged the attempt made by the Petroleum Section (Storage Division) to remove salvage drums from plants to a storage lot secured from King County free of charge. But this plan had failed to solve the problem because Depot labor and equipment were, it seemed, too often unavailable for this purpose.

Salvage drams were advertised in April but no awards were made because some of the bids received were satisfactory as to price. It was not until May and June that large numbers of salvage drams were sold. After V-E Day in May the prices offered dropped to half the amount secured in the January 1944 sales, and after V-J Day, the price received was but six cents per dram. During the entire period, 1944-1946, approximately 168,266 salvage drams were sold by the Seattle Depot, notting a total return of some \$13,867.00.

The ff. statistics on Salvage Dram Salvage Sales were secured from the Procurement Division, Contracting Branch. The number of drams actually sold has been estimated by the author, by dividing the dollar value of sales by the unit price received for the drams.

Invitation to Bid,	Date of Sale	Unit Price	Value of Sale	Drums Sold
	June 1944	\$ .15	\$1,223.25	8,155

The number of Government-owned reclaimed drums on hand became to exceed current needs about October of 1944. Many of the reclaimed drums not immediately needed for potroleum shipments, were therefore used to cancel outstanding invoices for rental charges on drums previously furnished the Government by the Oil Companies. 77 A month

Interview on 25 April 1946 with Er. Bay Bauer, Chf Clk, Procurement Division. Er. Bauer stated that, at one time, he had on his deak a stack of such rental invoices nearly a foot and a half high.

later the Dopot furnished the Seattle Port of Ambarkation with enough reclaimed draws to cancel its rental obligations on draws to the local Oil Companies, also. An arrangement was made, at the same time, to have the Port requisition a sufficient stock of empty reclaimed draws each month, to enable the Port to exchange these draws for Oil Company draws on a current basis. 78

This arrangement covered only drums used in supplying petroleum for the local needs of the Port's operations. Lt. Gol. A. E. Wissler, SPOE, to SEASPD, Attn: Capt. Burks, 21 October 1944, "Cil Drums," and 1st and End Indorsements, (from the Depot) dated 9 November and 14 November 1944.

Late in Movember, 1944, Mr. A. H. Lord, who had been civilian in charge of the Liquid Fuel Inspection Section, left the Depot to take employment with the Morthwest Drum Company, then known as the Dealers' Sales Company. The Mr. N. R. Lewis succeeded Mr. Lord as chief civilian

See Interim Report VIII for detailed description of Mr. Lord's excellent services in connection with securing priorities for materials and for labor on behalf of the Drum Reclamation Companies. According to Mr. W. R. Lewis, his successor, Mr. Lord literally did "... everything for the Drum Companies except manage the Plants themselves . . . . "

inspector and carried on the supervision of Liquid Fuel and Drum Reclamation inspection until the Drum Reclaration program was terminated in

September 1945.

100 ldr. Lewis is still employed at the Depot as Liquid Fuels Inspector (May 1946).

The operating procedures of the Liquid Fuel and Drum Reclamation Inspection Section in use during the period December 1944 to September 1945 are nicely summarized in two documents written by Mr. Lewis in November 1944 (one revised in Pebruary 1945). The procedure on Drum Reclamation Inspection is inserted here in lieu of a detailed summary of the operation. (See following two pages).

The operating procedures in connection with Liquid Fuel Inspection included, also, a description of functions of liquid fuel inspectors with relation to the handling of reclaimed draws at oil company plants and fill-lines: Fuel inspectors supervised the storage of reclaimed draws at all plants and their movements to fill-lines—first draws in to be the first used. They also made final check on reclaimed draws at fill-lines, and periodic checks of all filled draws in storage. 81

<sup>&</sup>quot;Summary of Operating Procedures-Liquid Fuel Inspection," by W. R. Lewis, dated 27 Movember 1944. (This document will be included in a supplementary report on Interim Report VII, "Procurement and Issue of Petroleum Products," by Vernon Carstenson.)

It will be noted from Mr. Lewis' summary (page 43 ), that but four companies were engaged in reclaiming drums in November 1944; and that production rates had been accelerated to 4,000 drums per day.

# QUARTEDUASTER SUPPLY SECTION SEATTLE ARMY SERVICE FORCES DERVI PROGUNERENT DIFISION

Inspection Branch Liquid Fuels Sub-Section Fuel Section

DESCRIPTION - STREAM OF OFFICE TWO PROCEDURES - 27 NOVEMBER 1914

preliminary inspection of reclaimed 55-gallon steel draws is made at Contractor's plants by Zone Inspectors under SIP-17C. Final inspection and acceptance is made at Fill-Lines by Fuel Section Inspectors.

The in-process and end-product method of inspection is employed at all drum reclamation plants. Daily reports covering production and acceptance of completed products from each shift are submitted to this office, and a recapitulation of these reports plus monthly report of Fill-Line rejections (segregated by contractor) are maintained in this office.

Shipments from Contractor's plants on basis of first completed product and first shipped are accomplished on Covernment Bills of Lading and War Department Shipping Documents executed by contractor under supervision of Government Inspector. Invoices for services are certified by this office when supported by No. 6 copy of WESD (Inspector's Copy).

Inspectors maintain close contact with Plant Superintendent and Foreman making periodic check of step by step operations, guarding the efficiency of key operators, checking amount and temperature of chemicals and acids used in the different processes and making complete check of all machinery and plant equipment weekly to assure thorough and efficient reclamation of drams.

Inspectors have all been thoroughly schooled in applying intelligently the terms of contract specifications and proper execution and distribution of Government documents. Close contact and a willingness to cooperate with contractors in arranging, unlosting and storage of Government drums has generally resulted in the reclamation of those drums first in storage - first reclaimed.

The method of rotating the men at the different plants and changing shifts is in effect eliminating, as far as possible, too familiar association with individual contractors and staleness from routine operations.

There are three prime contractors and one sub-contractor at present reclaiming approximately 5,000 Class B, 55-gallon steel draws daily. One plant operates three 3-hour shifts.

Project. <u>N.V.O. 96763 Y</u>

By <u>K.H.</u> NARA Data <u>1/26/2011</u>

Ten lone (Sentile Inspection Lone) inspectors are exployed in inspecting drum reclamation operations (and drums). One of these inspectors is exployed at a contractor's plant which reclaims approximately 600 fivecallon case daily.

Reclaimed drame may be rejected at Fill-Lines by Fuels Inspectors. Buch "rejects" are returned to plants for further reclamation and are charged back to the contractor originally reclaiming those drams.

Periodic esetings of all Inspectors (None and Fuel) are held to encourage the exchange of ideas and correct any improper practices that come to light through open discussion of each problem.

> H. R. LEWIS Inspector, CM

> > 7 February 1915

On 7 February 1925, the Sampling Flam of inspection was installed at all plants; however, the in-process and end-product inspection, which has always been employed at this Depot, is still in effect.

By <u>KH</u> NARA Date 1/26/2011

The Pacific Drum Company had completed its contract and closed. Its owner, Mr. Mitsell, built the new Northwest Drum Co. Flant, which in November 1944 came to be called the Dealers' Sales Co. The three other plants were: Aroweld; Ketcham-Feabody; and Seattle Drum.

By 5 January of 1945, reclaimed drums in large quantities were being sent, each day, to the Auburn Holding and Reconsignment Point for storage. From the stock pile of reclaimed drums at Scattle and Auburn, thousands of these drums were shipped to inland refineries for use at fill-lines under Navy orders and supervision. Reclaimed drums were also requisitioned by the Army Air Corps, and by several other quartermaster Depots—mainly those located near the California refineries. By March of 1945, however, the Scattle Depot found it necessary to ship many thousand drums to the Umatilla, Oregon, Ordenance Depot as well as to Auburn for storage.

Early in April 1945, the Scattle Depot requested an additional open-storage space allocation of 50,000 square feet to bring the total area for storage of drums at Auburn to 300,000 square feet.

Letter: Maj. A. H. Prothro, Ass't Proc. Officer, QMSS, SEASPD, to Ketcham-Peabody Co., 20 March 1946, suspending shipments to Auburn and Umatilla pending the taking of a complete inventory of empty Government-comed 55-Callon drums.

Waugnan, Director of Storage, GMSS, SBASFD, to QMSO, Attn: Fed. Petroleum Officer, 9 April 1945, "Storage Space for Empty 55-Gallon Drums."

Project. NIVO 907634

By KH NARA Date 1/20/2016

This request for additional storage was made necessary by the fact that on 20 March, the three prime contractors had already succeeded in reclaiming more than two-thirds of the total number of drums on contracts dress to expire on 51 May 1948.

ir. N. R. Lewis' records disclose the ff. figures on production as of 20 Merch 1945. Note that Seattle Drum Co. which did not get into operation until October 1946, had sub-contracted to Aroueld. Seattle Drum completed its contract in Aug. 1946.

liams of Co	ntrector	Arm. Combracted I Jump 1944	l Completed 20 March 1945
Seattle Dr Horthmost Kotohem-Pe	Drug Co.	500,000 500,000 500,000 Total	215,047 431,079 406,548 - 1,085,474

It was apparent by the first of May 1945 that the need for a draw reclamation program had reached its highest peak during the preceding twelve months, and that any future contracts would have to be written on a monthly basis, and for a greatly reduced number of drams. In fact, although the Depot ambidipated the reclamation of but 100,000 need draws per month during June, July, and August it could not definitely premise either that total, or an even enough flow of used draws to guarantee full daily production in each Plant. On S May, these facts were disclosed to the four Companies in identical letters inviting them to bid for new contracts to be issued on I June, 36 Three

South Dram, Dealers' Sales, and Aroveld Mig. Companies, dated 3 May 1945. See Appendix, pp. for domestic.

DECLASSIFIED E.O. 12356 Sec. 3.3 Project. <u>私パの タカフミヨリ</u> By <u>长戸</u> MARA Date リスピメンバ

of the Companies signified their intention to bid regardless of these qualifications, but the Ketcham-Peabody Company indicated that its Plant would be closed down about May twenty-first when it had completed its contract dated 1 June 1944.

87 Ermset J. Ketcham to Maj. A. M. Prothro, 14 May 1945. See Appendix, pp. 72-73 for this document.

By the end of May 1945, some 1,624,072 used drums had been reclaimed against the total of 1,700,000 contracted for on 1 June 1944. This brought the number of used drums reclaimed or serviced since January of 1943 to the grand total of 2,659,708.

Sefore new contracts were awarded to three of the Drum Reclamation Companies on Aune first, however, the Seattle Depot had purchased one drum reclamation plant for one dollar on behalf of the Government. The details of this unusual purchase will be discussed in the next Section.

<sup>88</sup> See Appendix, p. 58 for Chart on "Drum Statistics."

# FURCHASE OF THE RESCHAM-FEARODY DRIVE RECLAMATION PLANT, MAY 1945.

The contracts for drum reclamation issued in Ame 1944 were due to expire at the end of May 1945. Therefore on 2 May the Depot invited the four drum reclamation companies to submit bids for the menths of Ame, July, and August. Since the Depot sould not quarantee may specific number of drums, and since it could not quarantee an even daily flow of drums to reclamation plants, the Retchar-Foulody Company declined to bid. Instead, the Company signified its intention to liquidate its Plant, and felt that the Army properly should have first opportunity to acquire the Plant and the use of its premises.

After several preliminary telephone convertations regarding the matter, the Company proposed in writing that the Covernment
acquire the Plant under one of two conditions: First, in the event
the Depot wished to retain the Plant for stand-by purposes or to
have it used at its location, the Company would sell it for one dellar, assigning as well, the rights comed by the Company under a lease
for the land and a permit from the City of Seattle. Second, if the
Army wished to remove the Plant to another location, the Company
would sell it for its salvage value. In either case, the proposals
seemed attractive enough considering the fact that the original value
of the investment in the Plant was estimated by Mr. E. J. Retchan at
\$50,000.00.

A. H. Prothro to Ketcham-Peabody Co., 2 May 1945, "Invitation to Bid," and Mr. B. J. Ketcham to Maj. A. H. Prothro, M May 1945, (offering the Plant for sale).

On the sixteenth of May, the Quartermaster Supply Officer forwarded Mr. Metchan's two proposals to Mashington, D. C., adding that he believed either one would be very desirable. He memblemed the fact that the Metchan-Peabody Plant was the best of the five plants operated in Scattle, and that the Depot favored the first proposal. If the dellar sale offer were taken up, then empty used draws could be accumulated on the Plant premises until such time as a sufficient stock pile were on hand to justify contracting for a definite number of draws. So

About two wooks later, Mr. Estaban decided to sell the Plant outright with no strings attached: For one dollar the Covernment might have the Flant (excepting the inventory of small and use attached equipment), the lease, and the City permit, and subsequently move the Plant if it shows. The lease and the City permit, and subsequently

Appendix, P. 74 . Col. C. A. Bennett, QASO, SEASFD, to QASO, 16 May 1945, "Acquisition of Drum Reclamation Pacilities."

The land was leased from the Union Pacific R.R. Co., and the lease was due to expire in November 1945. The rent of \$155.00 per month was paid up to expiration date by Mr. Ketcham prior to the sale. The City Fermit allowing free use of part of a street for storing druss, was revocable at the City's pleasure.

West Coast Petroleum Sub-office, Cakland, California) after discussing the offer with Mr. Esteham and with officers at the Depot, recommended that the San Francisco Office advise the Quartermaster General's Office to make the purchase at once. Major Prothre of the Depot, mentioned the need of such Plants in Overseas Theatres, and indicated that the Plant could be shipped to some Theatre (Pacific) if necessary. However, if not needed overseas, the Plant could none-the-less be maintained (and guarded) on a stand-by basis at its Seattle location. Major Lomergen also advised acceptance of Major Prothro's offer to conclude the deal by means of an amendment to the Depot's contract with Esteham-Feabody in force until 51 May. 92

See Appendix, pp. 49-50 for transcript of Recorded Telephone Conversation, Major Lonergan to Mr. Keller, 28 May 1945.

Note that Maj. Lonergan suggested that Mr. Ketcham decided to sell for \$1.00 with no strings attached in order to escape tax liability. This conclusion is entirely true but in all justice to Mr. Ketcham it must be noted that his Company had never asked for, nor received any permission from the Government (Tax Americation Branch, War Production Board) to deduct, for tax purposes, the costs of the construction of their Drum Plant. This fact has been confirmed by Mr. Hollister, General Mgr. of the Ketcham Wire-Rope and Mfg. Co., in a telephone conversation, 25 May 1946.

The Seattle Drum Company applied for permission of War Necessity and, at first, was allowed but 50% deduction. (See Interim Report VIII, p. 46). The author of this supplement, in a telephone conversation with Mr. L. Helson (president of Seattle Drum) on 17 April 1946, ascertained that Seattle Drum was subsequently allowed 100% deduction.

Therefore it seems only fair to conclude that the Metcham-Peabody Company was perfectly justified in making the sale to the Government for \$1.00 in order to secure the same consideration as has been given to other "War Baby" Drum Plant Companies. (See Appendix, P. 72 for letter, deted May 14, from Mr. Metcham. Note that paragraph one of this letter states that the Plant would be of no use after the War).

E.O. 12356 Sec. 3.3

Project. <u>X/VO 927634</u>

By <u>KP!</u> NARA Date <u>1/24/</u>20/1

On May twenty-minth, Major Prothro was directed to accept the Ketcham-Peabody Plant for one dollar with no strings attached.

93 See Appendix, p. 77 for Transcript of telephone conversation, Maj. Prothro with Col. Sills, OQMG, 29 May 1945.
Col. Sills suggested that the deal with "no strings attached" would preclude any trouble arising in case the Government decided to renegotiate the drum reclamation contract itself.

The deal was concluded the following day by means of a Modification

Change Order to the original contract for reclamation of half a million

drums drawn in June 1944. The Company's Bill of Sale was returned

See Appendix, pp. 78-79 for copy of this Modification K" dated 30 May 1945.

for some necessary deletions on 12 June 1945, along with an expression of appreciation by Major Prothro for the Company's performance of its drum reclamation contract. 95

95 See Appendix, p. 80 for document.

As it happened, the end of the war with Japan came much more quickly than had been enticipated, and as a result, the Ketcham-Peabody Plant was needed neither for additional service at Seattle nor for shipment overseas. Late in October, it became necessary for the Depot to dismantle and move the Plant to the Depot for storage because the lease on the land was due to expire on 9 November 1945. The Quarter-

master Supply Officer notified the Quartermaster General's Office on 31 October that the original valuation of the major items of equipment was about \$28,103.51, and suggested their disposal through regular Army channels (Surplus).

96 Appendix, p. 81 Col. C. A. Valverde, CLEO, SEASFD, to CAE, 31 October 1945.

The Depot had requested disposition instructions from OGES on 6 August 1945, since security and utility services had to be maintained at the Plant until disposition was made (See Col. F.B.L. Myer to OES, 6 August 1945, "Disposition of Drum Reclamation Plant"). There is no indication that this August request was ever answered until October.

The Estcham-Peabody Plant as dismantled was ultimately declared (on 26 December 1945), to the War Assets Corporation at a value of \$25,000. It was sold for \$8,000.00 to a War Veteran, residing in Permsylvania.

Telephone Conversation, on 16 May 1946, with Mr. R. H. Cashman, of the Capital Goods Div., War Assets Corpn, Seattle Office. Mr. Cashman stated that the representative of the buyer arrived in Seattle on 16 May 1946 to arrange for shipment of the Plant.

of the total cost to the Government of maintaining the Plant on a stand-by basis for five months. Nor is it possible to estimate accurately, the cost of dismantling the Plant and removing it to the Depot for storage purposes. Nevertheless, it seems reasonable to conclude

DECLASSIFIED
E.O. 12356 Sec 3.3
Project. N.V.O 96763 Y
BY KH NARA Date 1/25/2011

that since \$8,000.00 was received for the Plant as against a one dollar purchase price, the Government did not suffer any monetary loss on the deal. In fact, perhaps, some profit was probably gained. At any rate, the Plant was available for possible need at Seattle, or for shipment overseas as long as the War lasted.

The contract for drum reclamation was subsequently renegotiated by the Government to the apparent satisfaction of Mr. Ketcham and his Company. 98

Interview with Capt. P. R. Hendricks, Chf. Proc. Divn., CMSS, SEASFD, on March 26, 1945. Capt. Hendricks stated that the renegotiation was not parried out by the Depot but that Mr. Metcham had told him that the renegotiation had been a fair one.

Project. N/VO 907634

By KH NARA Date 1/20/2011

# COMPLETION OF THE DRUM RECLAMATION PROGRAM.

On June first, two new contracts for drum reclamation were written: one with Dealers Sales Company (formerly Northwest Drum) and one with the Arcweld Manufacturing Company. These contracts were to run for not more than three months and no specific number of drums for reclamation were guaranteed.

The Seattle Drum Company

had not yet completed its contract for reclaiming the 500,000 drums it had contracted for in May 1944, because of the delays encountered in building its plant. Therefore this contract was continued, by a modification order, until August of 1945.

<sup>99</sup> Contracts: Procurement Division Files, QMSS, SEASFD: Dealers Sales, No. W 45-043 qm 1882 - 1 June-31 Aug., 1945. Arcweld Mfg Co., No. W 45-043 qm 1883 - 1 June-31 Aug., 1945.

Contract No. W 45-043 qm 766-May 19, 1944 to August 31, 1945. (QMSS, SEASFD, with Seattle Drum Co.).

Three contracts written for September (1945), however, were drawn to provide for a maximum production of but 18,500 drums by each company, and with the tacit understanding that the contracts might possibly be cancelled at any time during that month. Meantime during August, the Seattle Drum Company completed the reclamation of its five

101 hundred thousandth drum and the occasion was noted with some ceremony. 101 See Appendix, p. 82 for journalistic report of the occasion in the "Depot Transmitter," dated August 1945. Comments are added by the author to correct the report. On the thirteenth of September, the Depot was directed to discontinue all drum reclamation activities in its area at the earliest practicable date. 102 Notices of contract terminations were sent to 102 TT, from QMG, to QMSO, SEASFD, dated 13 September 1945. Dealers Sales Company, Aroweld Manufacturing Company, and to the Seattle Drum Company on September fifteenth. On that date, a total of 18,764 drums had been reclaimed by the three companies during September. 103 103 See Appendix, p. 85 for Summary of Cancellations in dollar values. Drums reclaimed during June: 86,550; July, 77,748; August, 96,478.

Toward the end of September, the Depot received instructions to stock pile all Class B, 16 and 18 Gauge 55-Gallon Drums within the Depot's area pending future requirements. All Class C drums, however, were ordered disposed of as surplus or salvage as soon as possible. 104

<sup>104</sup> Maj. A. J. Yonkers, OQMS, to QMSO, SEASFD, 28 September 1945, "Disposition of 16 and 18 Gauge 55-Gallon Drums, Class B and C."

In October 1945, the Quartermaster Supply Section declared 165,477

Class C drums as surplus to the Treasury Procurement Division. These
were subsequently sold on bids at prices ranging from eighteen to
sixty-eight cents aplece for a total sum of \$37,015.00. In February.

Data secured from Surplus Section, Inventory Control Branch, QLESS, SEASFD.

The used drums were located at the four drum plants as follows: Ketcham-Peabedy, 51,477; Dealers Sales, 15,000; Seattle Drum, 100,000; Aroweld, 20,000. They had not been reconditioned.

1946, another 157,036 Class C drums were declared surplus and later sold to various bidders at about the same price ranges. 106

The author has been unable to secure complete data on this sale.

In March 1946, some 194,154 Class B drums were declared surplus, and sales have been accomplished by the War Assets Corporation. Of this number 72,542 were "asphalt" drums which sold at a fixed price of sixty-five cents to War Veterans. The rest, numbering 121,612, were gasoline drums which sold at a fixed price of one dollar-also to War Veterans. Ten thousand empty drums, Class B, were retained by

Data secured by telephone from Mr. Morrow, Seattle office, War Assets Corporation. These drums were in storage at locations as ff: 141,399 at Auburn; 55,666 at Time Oil Co., Seattle; 16,356 at Umatilia.

Total amount of sales was \$178,764.30.

the Depot for shipments of solvent to Alaska during March 1946.

The record discloses that during the years 1945-1945, about 2,919,028 used drums were reclaimed for service by the Oil Companies and the Drum Reclamation Plants in the Seattle Area, under supervision of the Seattle Depot. In addition several hundred thousand used drums were handled by the Depot which were not reclaimed either because they were not needed (Class C) or because they were not suitable for reclamation (Class D and galvanized drums). Altogether the grand total of used drums received and disposed of in one way or another amounted to about three and a half million.

The total amount paid to drum reclamation plants was \$3,451,809.90, some of which amount has no doubt been returned to the Government through renegotiation of contracts. 108 Ho figures are now

See Appendix, pp. 84-86, for documents indicating total amounts paid on Contracts, and letter concerning remegatiation. See also, above, p. 52, note 98.

available here covering amounts paid to Oil Companies in 1945 (to 1 July) for cleaning and servicing drums, but it is probable that such amounts would not exceed a total of \$50,000.00.

A very "rough"estimate of the amount paid to 0il Companies and Drum Plants, per drum reclaimed would probably be about one dollar and twenty-five cents. 109 It is absolutely impossible to estimate the

Such a "rough" estimate takes into consideration only the total cost of three and a half million dollars paid to 0il Companies and Drum Plants for reclaiming 2,919,028 (estimated by Petroleum Section, Storage Division) drums: It does not take into account the following factors:

1. Returns from sales of salvage and surplus drums.

2. Returns from remegetiation.

3. Profit on Ketcham-Peabody deal.

4. Labor costs borne by the Depot for officer and civilian personnel of the Storage Division; Inspection (Fuel) Section; Procurement Division; Stock Control and Accounting Section; Transportation Division, etc.

5. Truck, ship, and railroad transportation charges for

transporting druss.

6. Costs of storing surplus and salvage drums at various locations: Auburn, Umatilla, Oil Company plants.

7. Costs of disposing of salvage and surplus drums.

total cost to the Government (see note 109 above) of the Seattle Depot's drum reclamation program. Yet it seems reasonably certain that a goodly amount of money was probably saved by the program. Had sufficient new drums been available, these would have cost from two dollars and fifty cents to eight dollars apiece.

of course, did not lie in the realm of dollar economy. Wars are not fought nor won by saving money! Rather, the paramount consideration was providing the indispensable containers in which to ship the very "life blood" of a modern mechanised Army and Air Corps to the Theatres of War-Petroleum and Petroleum Products! The Seattle Depot accomplished its part of that task and probably did it at a saving to the Government as well.

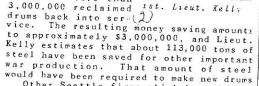

# Petroleum Sect. Directs Oil Drum Reclamation

On the ocassion of the reclamation of the 500,000th petroleum drum by the Seattle Drum Co. this month, attention is drawn to the activities of the Petroleum Section of the QM StorageDivision at SEASFD, a hard working depot unit that directs distribution of used 55-gallon drums to various Seattle reclamation plants. The petroleum section also directs shipment of reclaimed drums to storage areas or to points where the drums are filled to start their overseas journey all over again.

Officer-in-charge

Officer-in-charge of the Petroleum Section is busy Ist. Lieut. Daniel P. Kelly who was assigned to SEASFD in April of 1944, after a year of duty with a QM truck company on the Alcan highway.

Since oil drum reclamation began in the early part of 1942, Seattle firms have sent more than 3,000,000 reclaimed

Other Seattle firms which have done a large share of the work in reclaiming oil drums for the Quartermaster Section include Northwest Drum Company, Dealers Sales Co. (formerly Pacific Drum Co.), and Arcweld Manufacturing Co.

Arcweld Manufacturing Co.

Processes used by these firms vary but little. Dents in the drum are buldged out by water pressure. A tumbling machine then revolves the petroleum drum as cutting chains and a carbolic acid solution clean the inside. After the tumbling process and a final washing, drums are completely dried inside and out by hot air and suction hoses. Bungs and gaskets are, replaced and the drum getsa quick spray of paint as it spins on an automatic turn table, after it passes through a paint drying oven it comes off the line good as new.

new set Drum reclamation work was begun by the Seattle Drum Co. in 1942. The army had stored a hugh mountain of drums at 7321

Autographing the 500,000 oil drum to be reclaimed by the Seattle Drum Co. are Seattle Drum Workers (left to right) Betty Dowling, Marie Felkins, and Earle Mandel. Col. Charlie A. Valterde, DN Supply Officer approves.

Eighth Ave. S. and rather than move all the drums to a new location the plant was built on that site. Taking the plant to the mountain resulted in a hugh transportation and man hour saving.

Right hand man to Lt. Kelly in the Petroleum Section of QM Storage Division is Don Belosha. Like Lt. Kelly, Belosha spends two-thirds of his time outside the depot co-ordinating work spread out all over the waterfront. Mary Schultz helps to keep records of drums on hand, and those being reclaimed, filled and shipped.

Elisha Brooks is foreman of a labor crew composed of Jim Richardson, Dougherty Smith, Earl E. Bushe, Charles Carrington, and William C. Wilson.

T/5 Roy White, T/5 Rudolph Schiffman, and T/5 Daniel Selmark are in charge of approximately 30 Italian Service Unit men generally detailed to the section.

for data reported by Petroleum Section to Depot Statistician which total 2,972,878.

Note 3. The Ketcham-Peabody Plant which closed 31 May 1945 is omitted here. It reclaimed between 500,000-600,000 drums.

Note 4. Seattle Drum Co. Plant was not built until the fall of 1944. Its owners were Arcweed Mfg. Co. which in their original plant, reclaimed drums June 1943 - June 1945. Only major oil companies serviced drums before June 1943. See IR VIII, pp. 1-15.

# AREY SERVICE PORCES OFFICE OF THE QUARTERMASTER DESIGNAL WASHINGTON, 25, D.C.

SFQBR 164 Seattle 26 September 1945

SUBJECT: Renerotiation of Drum Reclaimers

TO : Quartermater Supply Officer Scattle Army Service Forces Depot 4735 E. Marginal Way Scattle 4, Washington

- 1. Reference is made to your teletype dated 22 September 1945, relating to the possible renegotiation of contractors engaged in the reclamation of drams.
- 2. The Renegotiation Acts of 1942 and 1945 provide for renegotiation on all over-all basis, rather than of individual contracts. This permits the contractor's profits on his entire war business to be examined for a specific fiscal period in order to reach an agreement for eliminating excessive profits on such contracts as a group, and for that period.
- 3. The Remogetiation Act of 1943 requires every contractor or sub-contractor not specifically exempted from remogetiation, to file with the War Contracts Price Adjustment Board on or before the first day of the fourth month following the close of the fiscal year, or after the date of exactment of the Revenue Act of 1943, whichever is the later, a statement containing information with respect to the government business transacted by contractor during such fiscal year. Any person who wilfully fails or refuses to furnish such information or any other information that may be required by the Board, is subject to severe penalties.
- 4. All contractors with fiscal years ended on or before 30 Jame 1943 whose volume of renegotiable business totaled at least \$100,000, and those contractors with fiscal years ended after 30 June 1943 with renegotiable business in the amount of \$500,000 or more, are subject to renegotiation. This office does not have information sufficient to identify those drum reclaimers awarded contracts by your Depot who thus may be liable to the recomment of excessive profits through renegotiation.
- 5. Therefore, it is requested that you submit to this office a list of those drum reclaimers who, in your opinion, had total renegotiable sales, either directly with the government or with government end-use, equal to or in excess of the above-mentioned minima.
- 6. Upon receipt of such list this office will institute those steps as may be necessary to determine whether or not the contractors are subject to renegotiation.

FOR THE QUARTERESTER GENERAL:

E. D. ELLIS Colonel, QED Assistant
