Re: Request for Contained-Out Determination, Former Custom Cherry Cleaners site located at 2510 East Cherry Street, Seattle, Washington

References: Letter, Megan Hill (ECC Horizon) to D. Yasuda (Ecology), dated May 12, 2014, Request for Contained Out Determination, Former Custom Cherry Cleaners site located at 2510 East Cherry Street, Seattle, Washington

Dear Ms. Benton:

The Washington State Department of Ecology (Ecology) received a contained-out determination request (reference a) from your environmental consultant, ECC Horizon on May 12, 2014, for soil contaminated with F002[1] listed waste constituents to be generated during site cleanup activities at the Former Custom Cherry Cleaners site located at 2510 East Cherry Street, Seattle, Washington.

Ecology received this information to determine if the contaminated soils, once excavated, may be exempt from management as dangerous wastes under the "Contained-In Policy." Based on the information provided and reviewed to date, Ecology's regulatory determination is two fold:

1. The following excavated soils shall be managed as F002 (PCE) listed dangerous wastes per the requirements of the Washington State Dangerous Waste Regulations (Chapter 173-303 WAC). Refer to attached Figure 1:

   a) Contaminated soils, within the 12 foot by 12 foot grids (to a depth of 10 feet or as deep as the planned excavation), near the presumed location of the former dry cleaning unit SB-17 through SB-19 (2014) and FB-4 (2008);
   b) Contaminated soils within the 12 foot by 12 foot grid (to a depth of 16 feet or as deep as the planned excavation), surrounding soil sample location SB-30; and
   c) Contaminated soils excavated further west of SB-30. Ecology notes that PCE soil contamination has not been adequately characterized to the west of or at depth at SB-30.

The volume of these F002 listed waste soils amount to approximately **200 cubic yards**. You or your environmental consultants shall submit copies of the signed dangerous waste manifests to Ecology within 15 calendar days of your receipt from the receiving

[1] Perchloroethylene (PCE)

permitted dangerous waste treatment, storage and disposal facility.

2. The remaining approximately **1400 cubic yards** of F002 (PCE) listed waste contaminated soils to be generated during site excavation activities at the Site (Figure 1), excavated to a depth of 10 feet below grade, do not require management as dangerous wastes and Ecology will not require disposal of these contaminated soils as F002 (PCE) listed wastes at a RCRA permitted dangerous waste treatment, storage and disposal (TSD) facility, provided all of the conditions below are implemented.

Ecology understands that these soils do not designate under federal characteristics (Washington Administrative Code [WAC] 173-303-090) or State-only criteria (WAC 173-303-100). For the **1400 cubic yards** of F002 listed waste contaminated soils, you or your consultant shall comply with the following requirements:

a. Ensure no standing water is present within any container holding the PCE contaminated soil. All water must be removed to the maximum extent possible from each of these containers and managed as F002 listed dangerous wastes without exception. The contaminated groundwater or infiltrated surface water should be removed from the contaminated soils prior to shipment to the landfill. Contaminated water cannot be disposed of into a RCRA Subtitle D (or C) landfill directly.

b. This Ecology approval letter does not pertain to any decontamination water or groundwater.

c. Deliver these contaminated soils directly to a permitted RCRA Subtitle D landfill (outside Washington State) such as the Columbia Ridge Solid Waste Landfill in Arlington, Oregon OR a Washington State solid waste landfill permitted under Chapter 173-351 WAC such as the Roosevelt Regional Landfill.

d. Do not consolidate these contaminated soils with other soils that do not pertain to this contained out determination.

e. Do not offload these contaminated soils at any temporary staging/transfer/reloading area.

f. These contaminated soils shall not be used as fill at the Site or any other Property.

g. Plastic line the containers or delivery trucks for direct delivery to the solid waste landfill.

h. Cover all excavated soils and take adequate measures to prevent spills and dispersion due to wind or rain erosion.

i. Take measures to prevent unauthorized contact with these soils at all times.

j. Provide instructions to the landfill operator that these soils are not to be used for daily, intermediate, or final cover.

k. Provide copies of all soil analytical data to the landfill operator, upon request.

l. Send copies of all signed solid waste landfill receipt records for these contaminated soils to Ecology, attention of Dean Yasuda, within 15 days of your receipt. Also indicate the total volume/weight of all contaminated soils disposed of under the Ecology approved contained-in determination, and indicate if this total amount is above, below or equal to the total amount approved by this Ecology letter. This is an important verification step for you and your environmental consultant to follow in order for this Ecology decision to be valid.

m. Do not send these contaminated soils to any incinerator, thermal desorption unit, or recycling facility unless that facility is a RCRA Subtitle C permitted hazardous waste TSD facility.

n. Dispose of the **1400 cubic yards** of PCE-contaminated soils by **August 30, 2014**. This contained-out determination for these contaminated soils is no longer valid after August 30, 2014. After this date, you are required to manage these contaminated soils as dangerous wastes.

o. This written decision for the contaminated soils does not apply to any other area or other media. Local agencies have the authority to impose additional requirements on this waste stream.

p. Notify Ecology immediately once you are aware that to-be-excavated soils under this letter will exceed the permitted amount. Ecology needs to make sure that the additional soil qualifies for this contained out determination.

This letter only addresses the procedures for disposal of the above described PCE contaminated soils generated at the former Custom Cherry Cleaners site in accordance with the Washington State Dangerous Waste Regulations (Chapter 173-303 WAC). This letter is not an Ecology approval for dangerous waste designation process or disposal of soils that may be generated in the future or already excavated outside the locations for which this contained out approval letter apply. Designation (as dangerous wastes or non-dangerous wastes) and proper disposal of those "outside" soils is a responsibility of the generator of excavated soils.

This letter is not a No Further Action (NFA) letter and not written approval for any cleanup action plan you may have submitted. Regulatory decisions regarding the cleanup action, applicable soil and groundwater cleanup levels and any other cleanup issues must comply with the requirements under Ecology Model Toxics Control Act (MTCA).

If you fail to comply with the terms of this letter, Ecology may issue an administrative order and/or penalty as provided by the Revised Code of Washington (RCW) Sections 70.105.080 and/or .095 (Hazardous Waste Management Act).

If you have any questions concerning this letter, please feel free to contact me at (425) 649-7264 or by email at dyas461@ecy.wa.gov.

Sincerely,

Dean Yasuda

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting

the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 03/11/2014 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent NPL

WA HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the WA HSL list, as provided by EDR, and dated 02/26/2014 has revealed that there are 4 WA HSL sites within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 01/21/2014 has revealed that there are 33 WA CSCSL sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

WA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the WA LUST list, as provided by EDR, and dated 02/18/2014 has revealed that there is 1 WA LUST site within approximately 0.5 miles of the target property.

State and tribal Brownfields sites

WA BROWNFIELDS: A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

A review of the WA BROWNFIELDS list, as provided by EDR, and dated 01/21/2014 has revealed that there are 2 WA BROWNFIELDS sites within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 01/21/2014 has revealed that there are 6 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 03/11/2014 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 22 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

SEATTLE SCHOOL DIST 1 GARFIELD HS (Continued) **1000696856**

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US BROWNFIELDS:

Recipient name:	R10 TBA (STAG Funded)
Grant type:	TBA
Property name:	COLMAN BUILDING
Property #:	7228500255
Parcel size:	.37
Property Description:	Colman Bldg on N portion of 2200 block of E. Union St. Bldg structurally damaged during 2001 earthquake & demo'd 09/2004. 24,141sf bldg constructed in '23 on 16,185sf lot. Occupants included variety of bus. & retail, heated w/ fuel-oil furnace until '81 when converted to natural gas; UST removed '89. Soil removal in '90, additional petro contaminated soils removed from UST excavation. Soil samples reported concentrations of petro compounds below WA State cleanup levels. Groundwater encountered at depth of 14 ft bgs. Groundwater not sampled or tested for petro. Additional investigation of area not recommended. AOC at Colman Bldg is former dry cleaners (1963-73), likely used PCE as dry cleaning solvent, prior to RCRA. Wastes discharged probably contaminated with PCE. Liquid wastes probably discharged to sanitary sewer system. Other potential liquid discharge destinations could have included the ground, & storm sewers. No evidence of blind drains at the Colman Bldg. Contaminated solid wastes likely included in regular municipal wastes from bldg. 2003 investigation of site revealed soils beneath former dry cleaners contaminated w/ dry cleaning related chemicals. Subsurface soils consisted of silty sand w/ gravel or silty clay w/ layers of organic debris & asphallt materials. Groundwater encountered at 7 ft bgs. G/W flow inferred to be northeasterly, consistent w/ topographic gradient. Samples collected from 6 subsurface soil borings reported elevated concentrations of TCE, PCE, and DCE in soil & g/w in selected locations. Elevated concentrations reported in soils collected from 3-6 feet bgs & in g/w collected at 7 bgs. BF assessment collected additional soil & groundwater samples in area of former drycleaner & reported elevated concentrations of TCE, PCE, and DCE in soil & groundwater at selected locations. Cleanup will be required for a limited area of soil & g/w. Presently, parcel is cleared & surface is unpaved. Lot is temporarily fenced with chain link.

Environmental Interest/Information System
SPCC

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance

SEATTLE CITY LIGHT - EAST PINE SUBSTATION (Continued) **1007064695**

information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Capacity Range:	5,000 to 9,999 Gallons
Tank Permit Expiration Date:	10/31/2011
Tank Upgrade Date:	11/29/1998
Tank Spill Prevention:	Spill Bucket/Spill Box
Tank Overfill Prevention:	Automatic Shutoff (fill pipe)
Tank Material:	Fiberglass Reinforced Plastic
Tank Construction:	Double Wall Tank
Tank Tightness Test:	Not Performed
Tank Corrosion Protection:	Corrosion Resistant
Tank Manifold:	Not reported
Tank Release Detection:	Interstitial Monitoring

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

WA MANIFEST:
Facility Site ID Number: 916588
SWC Desc: Not reported
FWC Desc: D028, D039, D040
Form Comm: This is a site where monitoring wells have been installed and are being tested on an annual basis. In the course of taking a sample, purge water containing low levels of chlorinated solvents (less than 100 ppb) were pumped out of the monitoring wells as a part of overall remediation activities.
Data Year: 2010
Permit by Rule: False
Treatment by Generator: False
Mixed radioactive waste: False
Importer of hazardous waste: False

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/25/2013

Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Data Release Frequency: Semi-Annually

State- and tribal - equivalent CERCLIS

CSCSL: Confirmed and Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

Date of Government Version: 01/21/2014

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing
A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

CSCSL NFA: Confirmed and Contaminated Sites - No Further Action

The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

COUNTY RECORDS

KING COUNTY:

Abandoned Landfill Study in King County

The King County Abandoned Landfill Survey was conducted from October through December 1984 by the Health Department's Environmental Health Division at the request of the King County Council. The primary objective of the survey was to determine if any public health problems existed at the predetermined 24 sites.

Date of Government Version: 04/30/1985
Date Data Arrived at EDR: 11/07/1994
Date Made Active in Reports: N/A
Number of Days to Update: 0

Data Release Frequency: No Update Planned

SEATTLE COUNTY:

Abandoned Landfill Study in the City of Seattle

The Seattle Abandoned Landfill Survey was conducted in June and July of 1984 by the Health Department's Environmental Health Division at the request of the Mayor's Office. The primary objective of the survey was to determine if any public health problems existed at the predetermined 12 sites.

Date of Government Version: 07/30/1984
Date Data Arrived at EDR: 11/07/1994
Date Made Active in Reports: N/A

TACOMA/PIERCE COUNTY:

Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013
Date Made Active in Reports: 10/03/2013

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Daycare Center Listing
Source: Department of Social & Health Services
Telephone: 253-383-1735

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Elevation:	275 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	47122-E3 SEATTLE SOUTH, WA
Most Recent Revision:	1983

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

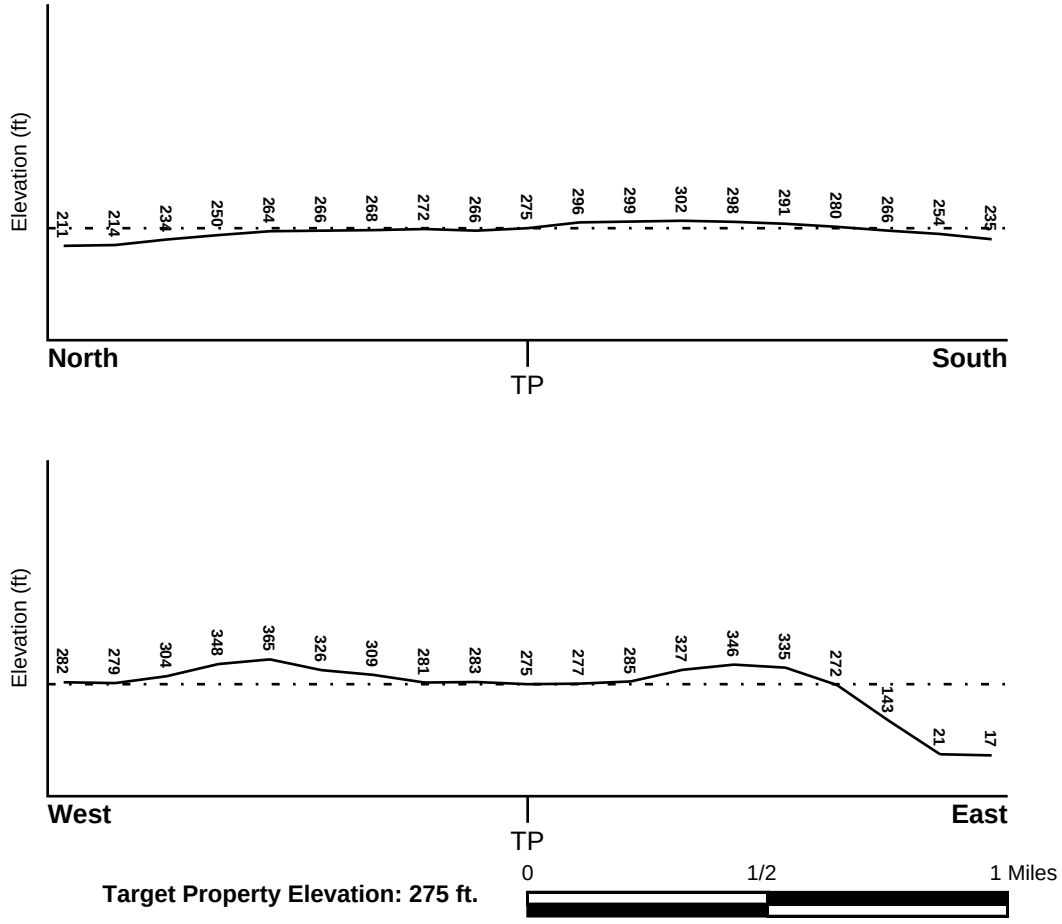
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Target Property Elevation: 275 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
KING, WA	YES - refer to the Overview Map and Detail Map

Flood Plain Panel at Target Property: 53033C0635F - FEMA Q3 Flood data

Additional Panels in search area: 53033C0630F - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SEATTLE SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile West
Site Name:	METAL LAUNDRY INC
Site EPA ID Number:	WAD009272741
Groundwater Flow Direction:	NOT AVAILABLE
Inferred Depth to Water:	10 feet to 15 feet
Hydraulic Connection:	The uppermost aquifer is situated in glacial drift composed of sand, gravel, silt, and clays (partially unconsolidated till).
Sole Source Aquifer:	A sole source aquifer is not persent at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
9	1/2 - 1 Mile NW	Flat
10	1/2 - 1 Mile West	SSE

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site--specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Quaternary
Series:	Quaternary
Code:	Q *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratifed Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name:	ALDERWOOD
Soil Surface Texture:	gravelly - sandy loam
Hydrologic Group:	Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.
Soil Drainage Class:	Moderately well drained. Soils have a layer of low hydraulic conductivity, wet state high in the profile. Depth to water table is 3 to 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel:	MODERATE
Depth to Bedrock Min:	> 60 inches
Depth to Bedrock Max:	> 60 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	7 inches	gravelly - sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 6.00 Min: 2.00	Max: 6.50 Min: 5.10
2	7 inches	35 inches	very gravelly - loam	Granular materials (35 pct. or less passing No. 200), Stone Fragments, Gravel and Sand.	COARSE-GRAINED SOILS, Gravels, Gravels with fines, Silty Gravel	Max: 6.00 Min: 2.00	Max: 6.50 Min: 5.10
3	35 inches	39 inches	cemented	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: silt loam
very gravelly - sandy loam

Surficial Soil Types: silt loam
very gravelly - sandy loam

Shallow Soil Types: very gravelly - loam

Deeper Soil Types: very gravelly - coarse sand
stratified
very gravelly - loamy sand
very gravelly - sand

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EXECUTIVE SUMMARY

East Cherry Properties LLC commissioned SoundEarth Strategies, Inc. to complete a Phase I Environmental Site Assessment of the Cherry Street Properties located at 2516, and 2518 East Cherry Street in Seattle, Washington (the Property). The purpose of this environmental site assessment is to identify, to the extent feasible, recognized environmental conditions that may have resulted from the use, manufacture, storage, and/or disposal of hazardous or toxic substances that could affect the future acquisition and/or development of the Property. The scope of work included a review of historical documents regarding the Property, review of current federal and state lists citing known and potentially contaminated sites, interviews with present owners and site managers, a Property reconnaissance, and preparation of this report.

Based on information reviewed in the course of this investigation and as discussed in appropriate sections of this report, it appears that the Property was initially developed in 1923 with a single-story retail building on the western portion of the Property (Building 1). In 1955 the eastern portion of the Property was developed with a single-story, retail building (Building 2). At the time of the Property visit, the western portion of the Property was included the original building occupied by a restaurant/lounge identified as Twilight Exit, and the eastern portion is operated as a grocery store identified as Tana Market. Adjoining properties include a mix of a school, residential and commercial development.

The following issues of potential environmental concern were identified during the course of our investigation:

- **Former dry cleaning facility on west-adjoining property.** Our historical review indicated that Custom Cherry Cleaners (a dry cleaning facility) was located across the alley, approximately 10 feet on the western-adjoining property in an inferred hydrologic upgradient direction. Known contamination of halogenated hydrocarbons exists in the soil and groundwater beneath the adjacent property. Groundwater flow direction and plume maps show that the tetrachloroethylene contamination in groundwater from the former Cherry Street Cleaners has migrated to the project Property, and groundwater on the Property is impacted above cleanup standards. This former adjoining dry cleaning facility is considered to represent a recognized environmental concern with a high risk due to the known contamination that has extended underneath the Property.
- **The historical use and storage of heating oil on the Property.** Tax records from 1955 indicate that heat was supplied to Building 1 on the Property by an oil-burner in 1955; however there is no indication to the location of the oil-burner. Building plans from 1969 depict the location of a gas furnace to be on the northwest portion of the Property; which is suspected to be proximate to the original oil-burner. The historical use and storage of heating oil on the Property constitutes a recognized environmental concern that presents a moderate risk of impacts to the Property.
- **Former use of heating oil on adjacent properties.** Tax records indicate the oil-burners as the source of heat to the residential houses and apartments buildings located on the north-, west-, and south-adjoining properties. The location of these oil-burners within the properties is unknown. The use of heating oil on adjacent properties is considered a recognized environmental concern; however this is considered a low risk of impact due to the cross-gradient location of all the residential buildings.

- **Former automobile service station on west-adjoining property.** Our historical review revealed a former service station located approximately 80 feet on the western-adjoining property in an upgradient hydrologic direction. However, the potential risk for impacts to soil and groundwater beneath and proximal to the former service station remain unassessed. This former service station is considered to represent a recognized environmental concern with moderate risk due to the lack of contamination evidence however it is in an upgradient location to the Property.
- **Former dry cleaning facility on east-adjoining property.** A former dry cleaning facility operated on the downgradient, east-adjoining property from approximately 1944 to 1960. Potential impacts to soil and groundwater beneath and in proximity to the former dry cleaner remain unassessed. However, due to the downgradient location this former dry cleaning facility is considered a recognized environmental concern that presents a low risk of impacts to the soil and groundwater beneath the Property because it is downgradient of the Property. This executive summary is presented solely for introductory purposes and the information contained in this section should be used only in conjunction with the full text of this report. A complete description of the project, Property conditions, investigative methods, and investigation results is contained within this report.

1.0 INTRODUCTION

1.1 PURPOSE OF ASSESSMENT

SoundEarth Strategies, Inc. (SoundEarth, formerly Sound Environmental Strategies [SES]) was commissioned by East Cherry Properties LLC to complete a Phase I Environmental Site Assessment (ESA) of the Cherry Street located at 2516, and 2518 East Cherry Street Properties in Seattle, Washington (the Property). The primary purpose of this ESA is to identify, to the extent feasible, recognized environmental conditions (RECs) resulting from the use, manufacture, storage, and/or disposal of hazardous or toxic substances that could affect the future acquisition and/or development of the Property.

This study is intended to satisfy the level of effort often referred to as "all appropriate inquiry" in the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), 42 USC § 9601, with the objective of allowing East Cherry Properties LLC to qualify for the landowner liability protections afforded by CERCLA.

1.2 METHODOLOGY/SCOPE OF WORK

This Phase I ESA was conducted in accordance with procedures outlined in American Society for Testing and Materials (ASTM) E1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. ASTM E1527-05 uses the term "recognized environmental conditions" to assess environmental risks associated with a property. The term is defined as "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property." The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The scope of work for this Phase I ESA included the following tasks:

- A review of various sources of historical information dating back to 1923 and identified in Section 4.0, including reverse city street directories such as those published by Polk, Inc., Sanborn Fire Insurance Maps (Sanborn Maps), Kroll Atlases, local planning and assessment records, and aerial photographs of the Property and vicinity.
- Review of current federal databases including the United States Environmental Protection Agency (EPA) Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) database, the EPA National Priority List (NPL), the EPA Resource Conservation and Recovery Act (RCRA) Notifiers, RCRA Corrective Action Report, Facility Index System, Emergency Response Notification System (ERNS), and other lists.
- Review of current state databases including the listing of underground storage tanks (USTs), Leaking Underground Storage Tanks (LUSTs), solid waste facilities (SWF), Voluntary Cleanup Program (VCP) sites, Confirmed and Suspected Contaminated Sites and other ASTM standard databases.

- Review of United States Geological Survey topographic maps to identify the physiographic setting of the Property.
- A reconnaissance of the Property and surrounding area to evaluate the current operations and look for visual and/or olfactory evidence of contamination such as stained soil, unusual odors, distressed vegetation, pipes, drums, oil sheens and/or discolored water, and improper manufacturing or waste disposal practices.
- Written inquiries were sent to East Cherry Properties LLC and Property owners. An inquiry was also made with Ms. Lauren Poole of the Seattle Fire Marshal's Office Records Division regarding information that they may have regarding the Property.
- Preparation of this report.

1.3 LIMITATIONS OF REPORT

This Phase I ESA report is for the exclusive use of East Cherry Properties LLC. The purpose of this report is to provide the client with an assessment of the potential for the presence of contamination on the Property. Phase I ESAs are non-comprehensive and may not identify all environmental risk associated with the Property. This study did not include an investigation for the presence of asbestos-containing materials, lead-based paint, radon gas, electro-magnetic fields from high-voltage power transmission lines, wetlands, endangered species, floodplains, or other issues not described in the aforementioned scope of work.

Within the limitations of scope, schedule, and budget, our services have been executed in general accordance with procedures specified in ASTM E1527-05. Because the SoundEarth report is based upon readily available and reasonably ascertainable information, the accuracy of which was not verified, and because SoundEarth observations made during the Property reconnaissance were limited, as stated above, SoundEarth cannot and does not guarantee that the Property is free of hazardous or potentially hazardous materials or conditions, or that latent or undiscovered conditions will not become evident in the future. Since Property activities beyond the control of SoundEarth could change at any time after the completion of this assessment, the observations, findings, and opinions can only be considered valid as of the date hereof. This report should not be relied upon after 180 days from the date it was issued.

2.0 PROPERTY DESCRIPTION

The following subsections provide a summary of the location, legal description, and current use of the Property, as well as a discussion of surrounding land use.

2.1 LOCATION AND LEGAL DESCRIPTION

The Property consists of two rectangular-shaped tax parcels (King County Parcel Nos. 684070-0210 [Parcel A], and 684070-0215 [Parcel B]) that cover approximately 7,990 square feet (0.18 acres) of land in Township 25/Range 4/Section 33. The Property is located at 2516 (Parcel A) and 2518 (Parcel B) East Cherry Street in Seattle, Washington, approximately 1.5 miles of downtown Seattle, Washington as shown in Figure 2. Figure 2 also depicts a plan view/layout of the Property. According to King County iMap application, the Property is located at an approximate elevation of 280 feet above mean sea level.

The legal description of the Property is provided in Appendix A, Current and Archived County Assessor Records.

2.2 STRUCTURES AND IMPROVEMENTS

The Property is currently occupied by a 1955-vintage, one-story building (Building 1) that encloses approximately 2,621 square feet of space. The building has concrete slab on grade, a gravel and tar roof and is heated by forced air. The Property is also occupied by a 1923-vintage one-story building (Building 2) that enclosed approximately 2,672 square feet of space. This structure has been remodeled multiple times since 1923 but has a concrete slab on grade and is heated by forced air. Photographs of the Property are included as attachments to this report.

Potable water and sewer service are provided to the Property by the City of Seattle. According to sewer cards on file with the City of Seattle Department of Permitting and Development, the sanitary sewer was connected to Parcel A in 1949, and to Building 2 in 1923. Puget Sound Energy provides natural gas, and Seattle City Lights provides electricity to the building. Solid waste disposal and recycling services are provided by Waste Management. No evidence of potable or process water supply wells on the Property was found.

2.3 CURRENT PROPERTY USE

The current Property use is a grocer and a lounge. The current tenant of Building 1 on Parcel A is the Twilight Exit. The current tenant of Building 2 on Parcel B is Tana Market. Exterior areas of the Property include a back patio for the Twilight Exit.

2.4 ADJOINING PROPERTIES

Development in the vicinity of the Property is a mix of residential and retail. Uses of nearby properties at the time of the SoundEarth site reconnaissance are summarized below, and are also shown in Figure 2.

- **North.** Two dual-family residences are located on the north-adjoining properties.
- **East.** A two-story, retail building listed as a hookah lounge and a single-family residential building are located on the east-adjoining property.
- **South.** The Barbecue Pit restaurant and two, multi-family apartments are located across Cherry Street.
- **West.** Former Custom Cherry cleaners and the parking lot for the Islamic School of Seattle are located across the alley.

2.5 GEOLOGIC CONDITIONS

Geologic conditions often influence the environmental conditions of a property. Underlying soil and bedrock formations may facilitate or impede the migration of chemical contaminants in groundwater and may be a source of contaminants such as radon and metals. This section of the report summarizes geologic factors that may impact the Property with regard to environmental concerns.

2.5.1 Geology

The U.S. Geological Survey (USGS) Preliminary Geologic Map of Seattle and Vicinity, Washington, dated 1962, indicates that the Property is underlain by Vashon till. These deposits consist of a dense mixture of silt, sand, gravel and clay, which typically are characterized by relatively low vertical hydraulic conductivity.

Boring logs on the west-adjacent property prepared by others describe the subsurface soil conditions as predominately to be dense, silty sand. Interbeds of sandy silt and sandy gravel were encountered to approximately 28 feet below ground surface (bgs), below which remains relatively uniform and saturated sand. A boring advanced to 60 feet bgs by SES encountered a three-foot silt layer at approximately 55 to 58 feet bgs. The extent of this silt layer is unknown.

2.5.2 Hydrologic and Hydrogeologic Environment

Both the King County iMap application and the USGS Topographic Map of the Seattle North, Washington Quadrangle, published in 1983, depict topography in the vicinity of the Property as sloping toward the northwest. The topographic map depicts the closest surface water body as Lake Washington, which is located approximately 0.8 miles to the east.

Based upon groundwater monitoring reports completed by Farallon Consulting, Environmental Claim Consulting (ECC) and SES from 2008 to 2009 it appears that groundwater in the vicinity of the Property flows in a general southeasterly direction as shown on Figure 2. Potential off-property sources of chemical contamination that might adversely affect the Property would, therefore, most likely be located to the northwest in an upgradient hydrologic position.

Review of the quarterly groundwater monitoring reports indicated that the groundwater elevation averaged at approximately 253 feet above sea level (asl) in the alley to the west of the Property and at 252 feet asl just east of the Property.

2.6 SUMMARY

No issues of potential environmental concern were identified during our review of current Property use conditions.

3.0 USER-PROVIDED INFORMATION

The following subsections summarize the information provided by the User of this Phase I ESA.

3.1 TITLE RECORDS

A preliminary title report or chain-of-title report was not provided to SoundEarth for review prior to production of this report. These documents may provide information about the Property, including ownership and other interests in the land, easement, and liens. Not all liens, defects, and encumbrances affecting title to the land may be included in the preliminary title report.

3.2 ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

A written inquiry was sent to the User (East Cherry Properties LLC) and key site managers. No environmental liens encumbering the Property or current limitations on either activity or use of the Property was provided to SoundEarth.

3.3 SPECIALIZED KNOWLEDGE

No specialized knowledge regarding the Property was provided by East Cherry Properties LLC.

3.4 VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

No Property valuation reduction relating to environmental concerns was reported by East Cherry Properties LLC.

3.5 OBVIOUS OR COMMONLY KNOWN PROPERTY INFORMATION

No information of environmental concerns regarding the Property, beyond what is presented in the prior reports (which are summarized in Section 3.8) was provided by East Cherry Properties LLC.

3.6 CURRENT OWNER, PROPERTY MANAGER, AND OCCUPANT

King County Assessor records list the owner of Parcels A and B as Cherry Street Grocers. The Property is currently developed with two retail buildings. Parcel A is operated as a restaurant/lounge identified as the Twilight Exit, and Parcel B is operated as a grocery store identified as Tana Market.

3.7 REASON FOR PERFORMING PHASE I ESA

SoundEarth prepared this Phase I ESA at the request of East Cherry Properties LLC for qualification for Landowner Liability Protection under CERCLA as part of a planned acquisition of the Property.

3.8 PREVIOUS ENVIRONMENTAL REPORTS

SoundEarth was provided with environmental reports from Farallon Consulting and Environmental Claim Consulting regarding contamination sourced from the west-adjacent property about known contamination that has spread underneath the Property. This is discussed further in section 4.2.

3.9 SUMMARY

The former presence of a dry cleaning facility on the west-adjoining property with known contamination. This potential concern is discussed further in Section 9.0.

4.0 HISTORICAL REVIEW

The history of land use for the Property and surrounding areas was evaluated to identify past uses that might have had adverse effects on the environmental conditions, primarily through the use of potentially hazardous materials. The following history of the Property and surrounding parcels is based on a compilation of information obtained from the following resources:

- King County Assessment records were reviewed online and at Puget Sound Regional Archives
- City of Seattle Department of Planning and Development building permit files
- City of Seattle Engineering Department sewer cards
- Heiden's and Polk City Directories
- Historical City Atlases and Maps – Sanborn Maps

- Aerial Photographs

Selected copies of the information sources described above are included in the Photographs and Appendix A of this report.

4.1 HISTORICAL USE OF THE PROPERTY

CHRONOLOGICAL DEVELOPMENT AND USE HISTORY FOR THE PROPERTY

Date(s)	Source	Description	Potential Issues of Environmental Concern
1923	Tax Records	A one-story, wood-framed, stove-heated, retail building with a concrete slab on grade is constructed as a grocery store in the center of Parcel B. Accompanying this store is a garage and a shed with dirt flooring. Parcel A is vacant.	None
1933	Tax Records	There is a remodel to the original building on the Property, however no further details were available.	None
1951	Tax Records	The original building is remodeled again. The garage and shed are demolished and the building is expanded with a concrete slab on grade.	None
1955	Tax Records	A wood-framed, one-story, retail building heated by an oil-burner is constructed on Parcel A, there is no indication of the location of the oil-burner.	The use and potential storage of heating oil on the Property.
1990	Building Plans	Both buildings on the Property are remodeled and joined together to be used as a restaurant.	None

The only REC for the Property is the historic use of heating oil in an oil burner in Building 1.

None of the identified or recorded historical activities and operations of past tenants are typically associated with the use of degreasing solvents like tetrachloroethylene (PCE). We did not identify any past tenants' operations that would likely be associated with significant use of gasoline other petroleum or chemical products, other than the use of heating oil as previously described.

4.2 HISTORICAL USE OF ADJOINING PROPERTIES

This section describes the findings of SoundEarth's research into the historical usage of the adjoining properties. These adjoining properties are depicted on Figure 2.

North-Adjoining Property

The northern-adjoining properties were vacant until 1931 when a dual-family, residence was constructed on the property. This building included a one-story a double garage. Heat to the residence was originally from an oil-burner; however it was converted to electric at some unrecorded time. In 2006 another dual-family residence was built on the western portion of the property.

East-Adjoining Property

The property to the east remained vacant until 1924. At this time a single-story, retail building was constructed on the southern portion of the property. In 1937 a single-family, residence was constructed on the northern portion of the property. From approximately 1944 to 1960 the retail building was occupied by a dry cleaner that was later identified as Neighborhood Cleaners in 1944 and Unique Cleaners from approximately 1951-1960. The original retail building was demolished in 1965 and replaced by another single-story, retail building that was occupied by a real estate office. Since the construction of the original building, another story was added to the retail building, however there is no record of when this construction occurred.

South-Adjoining Property

The south-adjoining property was vacant until 1924 when a one-story, apartment complex was constructed on the property. Heat to the building was supplied by an oil-burner.

In 1949 a single-family residence was constructed to the southeast. This building was heated by an oil-burner. Starting in 2001 it has been occupied by a real estate office.

To the southwest a one-story, retail building was constructed on the northeastern portion of the property in 1926. This building was then remodeled in 1933. Reverse city directories indicate that the building was occupied by Cherry Street Grocers in 1951. In 1926 a one-story, single-family residence was built on the southern portion of the property. Then in 1927 another building was constructed on the northwest portion of the property. This building was a two-story, apartment complex that was heated by an oil-burner.

West-Adjoining Property

The west-adjoining property was vacant until 1949 when a one-story, retail commercial building was constructed on the property. This building was occupied by Dry cleaning operations that have been conducted on the property from 1949 to 2007. Accurate Dry Cleaners occupied the building from 1951 to 1967 and Custom Cherry Cleaners from approximately 1973 to 2007. This operation is known to have released halogenated organic compounds into the soil and groundwater beneath the property that spreads along the groundwater flowpath to the southeast. The groundwater contamination is known to extend beneath the Property. A map of the soil and groundwater plume extents, drawn by Farallon Consulting in their 2008 Remedial Investigation/Feasibility Study, is available in Appendix A. The property is listed under the Washington State Department of Ecology Voluntary Clean-up Program (VCP), and a remediation system is in place. An unofficial investigation summary from ECC Horizons (ECC) on June 29, 2012 reported that the injection of Edible Oil Substrate has decreased the

concentrations of chlorinated solvents in the subsurface. Sub-slab soil gas samples collected by ECC beneath the floor slab at the Property contained chemical of concern concentrations above Ecology's Soil Gas screening levels; however indoor ambient air sample collected by ECC contained concentrations of chemicals of concern slightly below applicable indoor ambient air screening levels within Building 1; indoor ambient air samples were not collected in Building 2.

The property to the west of the dry cleaners was occupied by Ben's Service Station from approximately 1936 to 1951. There are no historical records of any investigation into possible contamination from the service station. Historical aerial maps depict that by 1961 the gas station had been demolished and replaced by paved asphalt slab. Tax records indicate that the asphalt was used as a playground for the school on the north-adjoining property.

4.3 HISTORICAL USE OF SURROUNDING PROPERTIES

The surrounding properties have historically been a mix of residential properties, schools, and retail use dating back to the 1920s. The original buildings still remain on majority of the adjacent properties and the use of surrounding properties has remained relatively constant.

4.4 SUMMARY

The adjoining property development, as detailed above, include the following potential environmental concerns: a west-adjoining laundry business that was later listed as Custom Cherry Cleaners, a west-adjoining service station listed as Ben's Service Station, an east-adjoining laundry business, identified as most recently Unique Cleaners, and the use of heating oil on the north-, east-, and south-adjacent properties. All of these potential environmental concerns are discussed further in Section 9.0.

5.0 REGULATORY REVIEW

A review of regulatory agency records was conducted in order to identify known or potential sources of contamination that could adversely impact the Property. Records were obtained using the commercial database search services of EDR, which queries EPA, state regulatory agency, and other similar databases within the approximate minimum search distances specified in ASTM E1527-05. The commercial database search report was reviewed for accuracy of Property locations and was modified appropriately. Orphan sites (sites that EDR was unable to map) were also reviewed in an effort to evaluate whether any of those sites were also located within the respective search distance. The complete EDR report is included in Appendix B and contains figures showing the locations of the reportable sites within the search distance for each database queried. The databases searched, the corresponding search distance, and the number of sites found within the search distance for each database, are summarized in the following table.

Source of Regulatory Information	Acronym	Search Distance	Sites within Search Distance
Federal Databases			
National Priorities List	NPL	1.0 mile	0
National Priorities List Deletions	Delisted NPL	1.0 mile	0
Comprehensive Environmental Response, Compensation, and Liability Information System; also CERCLIS No Further Remedial Action Planned	CERCLIS & CERCLIS-NFRAP	0.5 mile 0.5 mile	0 0
EPA-Listed Brownfields	Brownfields	0.5 mile	1
Resource Conservation and Recovery Act Information - Treatment, Storage, and Disposal Facilities; also RCRA Corrective Action Sites	RCRA TSDF and CORRACTS	0.5 mile 1.0 mile	0 0
Resource Conservation and Recovery Act Hazardous Waste Generators	RCRA GEN	Property & Adjacent Parcels Only	1
Emergency Response Notification System/National Response Center	ERNS/NRC	Property	0
State Databases			
Confirmed and Suspected Contaminated Sites List	CSCSL	1.0 mile	33
Confirmed and Suspected Contaminated Sites List – No Further Action	CSCSL NFA	0.5 mile	4
Solid Waste Facilities/Landfill Sites	SWF/LF	0.5 mile	0
Leaking Underground Storage Tanks	LUST	0.5 mile	2
Registered Underground Storage Tanks	UST	Property & Adjacent Parcels Only	0
State-listed Brownfields	Brownfields	0.5 mile	2
Voluntary Cleanup Program	VCP	0.5 mile	6
Independent Cleanup Reports	ICR	0.5 mile	5
Engineering & Institutional Controls	ENG/INST CONTROL	0.5 mile	0

The Property was not listed on any of the above databases.

According to the EDR report, numerous other sites within the applicable search distances appeared on at least one of the ASTM Standard databases listed above. However, most these regulated sites are not considered to represent a potential issue of environmental concern for the Property for the following reasons:

- Three listed only as having been RCRA notifiers are located at least 353 feet from the Property.
- Eight sites are listed on a database as having had a release to the environment, but are located over 0.4 miles away from the Property and have been reportedly cleaned up, issued a No Further Action designation, or involved soil impacts only.

- 1 site is listed on a database as having had a release to the environment where groundwater was either confirmed or suspected to have been impacted; however, the site is located over 0.2 miles cross-gradient of the Property.
- 1 site upgradient is listed on a database as having had a release to the environment where groundwater was either confirmed or suspected to have been impacted; however, the site is located over 0.5 miles of the Property.

The one remaining site is discussed below:

- Custom Cherry Cleaners, located at 2510 East Cherry Street and adjacent to the west of the Property, is listed on the RCRA-CESQG, CSCSL, ALLSITES, and VCP databases. The presence of halogenated organics has been confirmed in the soil and groundwater beneath the property. This site is part of the VCP and clean-up has started. The confirmed presence of contaminated soil and groundwater beneath the west-adjoining property presents a potential issue of environmental concern to the Property.

6.0 PROPERTY RECONNAISSANCE

Courtney Porter, a SoundEarth Staff Hydrogeologist, visited the Property on March 13, to review conditions and land use practices on the Property and on adjoining and nearby properties. SoundEarth was escorted by a Property manager during the Property reconnaissance. A visual survey of the entire exterior Property was conducted by SoundEarth. The purpose of the Property reconnaissance was to identify readily apparent indications of hazardous or potentially hazardous substances or petroleum products that were historically or are currently used, generated, stored, or disposed of on the Property. Selected photographs taken during the Property reconnaissance are included as an attachment to this report.

6.1 GROUNDS AND BUILDINGS

General observations and specific conditions that may or may not result in the presence of RECs to the Property are presented in the following table. Those conditions identified as being present are further discussed below.

Item	Observation/Comment
Current Property Land Use (zoning, more-specific use, construction dates)	The Property is currently developed with two retail buildings. The retail building on the western portion (Building 1) is a restaurant and lounge, and the building on the eastern parcel (Building 2) is a grocers.
General Description of Property and Area	The Property is located in a mixed residential, school. and commercial area just east of downtown Seattle, Washington.
Exterior Area Observations	Exterior portions of the Property are concrete slabs with seams.
Petroleum Products	None observed on the Property or adjoining properties.
Hazardous Substances	None observed on the Property or adjoining properties.
Hazardous Waste	No hazardous wastes were observed to be generated, stored, or disposed of at the Property.
Landfills, Dumps	No landfills or dumps were observed on the Property or adjoining properties.
Burial Sites or Solid Waste Disposal	No evidence of burial sites was observed on the Property or adjoining properties. No solid waste is generated at the Property.
Aboveground Storage Tanks (ASTs)	None observed on the Property or adjoining properties.
Underground Storage Tanks	None observed on the Property or adjoining properties.
Drums and Storage Areas	One oil/grease drum was located behind Building 1 most likely used to dispose of cooking grease generated in the kitchen.
Potential PCB (polychlorinated biphenyl)-Containing Equipment	None observed on the Property.
HVAC (heating, ventilation, and air-conditioning) System and Fuel Source	An HVAC system is located on the roof Building 2. This HVAC system uses natural gas to supply heat and electricity to supply air conditioning to both buildings on the Property.
Drains, Sumps, Pits, Cisterns, or Cesspools	Two drains in the bathrooms, and two sewer drains in the kitchen were observed within Building 1. One sewage drain was located on the northern end of the back patio of Building 1. One sewer drain was located just inside the entrance of Building 2.
Pits, Ponds, or Lagoons	None observed on the Property or adjoining properties.
Pavement or Soil Stains	None observed on the Property or adjoining properties.
Stains or Corrosion on walls	Not observed on the Property.
Stressed Vegetation	Not observed on the Property or adjoining properties.
Possible Fill or Grading	Not observed on the Property.
Chemical/TPH/Swamp-Gas Odors	None observed on the Property or adjoining properties.
Stormwater or Surface Erosion	Not observed on the Property.
Wells and Potable Water	Resource Protect wells were observed in the alley way and the right-of-way for the west-adjoining property. No wells observed on the Property.

Interior Observations

No tenant operations that involve the use or storage of degreasing solvents , like PCE; or the presence of gasoline or other petroleum products, were observed in the interiors of the 2 existing buildings on the Property.

An HVAC system supplies heat and air conditioning to Buildings 1 and 2 on the Property. Heat is forced into the building at about 60 cubic feet per minute. However, due to the exhaust fans in the kitchen, there is negative pressure within a portions of the buildings a majority of the time. The floors of Buildings 1 and 2 are tiled and appear to overlay concrete. Sewer drains were located within each of the two bathrooms in Building 1, two in the kitchen of Building 1, and near the entrance of Building 2. Sewer drains and sink piping appears well sealed and connected.

Exterior Observations

The Property is developed with two retail buildings. Building 1 is occupied by Twilight Exit, a restaurant/lounge, and Building 2 is occupied by Tana Market, a grocer. Stormwater appears to be diverted northward around the property to the stormwater catch basin located in the alley to the west and to the stormwater catch basin along 26th Avenue. Observations made at the Property indicate that the catch basins are plumbed into the municipal drain system. A grease drum was observed behind Building 1, which appears to be used to store used cooking grease from the kitchen. Building 1 has a back patio that consists of concrete slabs with seams. Stormwater from the slabs runoffs into a sewer drain located in the northern portion of the patio.

No hazardous waste generation was noted on the Property, nor did we observe any evidence of past illegal dumping. No above-ground storage tanks or evidence of underground storage tanks (fill ports, vent lines, etc.) were noted on the Property. At the time of the visit, no unusual odors, discolored water, sheens, or distressed vegetation, which might suggest the potential presence of hazardous materials, were noted on the Property. No PCB-containing equipment was observed on the Property.

6.2 ADJOINING PROPERTIES

Monitoring wells were located within the alleyway to the west of the Property, in Cherry Street, and in 26th Avenue. The apparent use of the adjoining properties and contamination was previously discussed in Section 2.4.

6.3 SUMMARY

The presence of monitoring wells in the adjacent alley, in 26th Avenue, and along Cherry Street that were observed during the course of our reconnaissance constitute an environmental concern. These monitoring wells are part of the remediation of the subsurface contamination from Custom Cherry Cleaners as discussed in section 4.4.

7.0 INTERVIEWS

Information gathered from interviews is summarized below and is included in the appropriate sections of this report.

7.1 INTERVIEW WITH SITE MANAGER/PROPERTY OWNER

The names of key site managers were provided to SoundEarth by East Cherry Properties LLC. Key site managers are contacted to obtain current and historical environment information concerning the Property. Key site managers were not present at the time of the Property visit. Written inquiries were sent to key site managers; however, no response was received by SoundEarth.

7.2 INTERVIEW(S) WITH OTHERS

SoundEarth made an inquiry with the City of Seattle Fire Marshal's Office pertaining to information that they may have regarding the Property. According to Ms. Lauren Poole of the Fire Marshal's Office Records Division, no department records were found indicating the presence of a UST at the Property. An on-line search of fire department responses to hazardous material release incidents (since 1996) was conducted on March 8, 2013. The search revealed no record of hazardous material response incidents involving the Property or adjoining properties.

7.3 SUMMARY

No issues of potential environmental concern were identified during the interviews conducted in the course of this investigation.

8.0 DATA GAPS

Although SoundEarth reviewed the standard historical resources that were reasonably ascertainable regarding the Property, the information reviewed failed to achieve two of the historical objectives as discussed below:

- Written inquiries were sent to key site managers and the User on March 13, 2013; however no responses were ever received by SoundEarth. Based on the consistency in the use of the Property, it is the opinion of SoundEarth that this data gap will not likely affect the conclusions of this report.

No other data gaps were encountered in the performance of this Phase I ESA.

9.0 FINDINGS AND OPINIONS

The following issues of potential environmental concern were identified during the course of our investigation:

- **Former dry cleaning facility on west-adjoining property.** Our historical review indicated that Custom Cherry Cleaners (a dry cleaning facility) was located across the alley, approximately 10 feet on the western-adjoining property in an inferred hydrologic upgradient direction. Known contamination of halogenated hydrocarbons exists in the soil and groundwater beneath the adjacent property. Groundwater flow direction and plume maps show that the PCE

contamination in groundwater from the former Cherry Street Cleaners has migrated to the project Property, and groundwater on the Property is impacted above cleanup standards. This former adjoining dry cleaning facility is considered to represent a recognized environmental concern with a high risk due to the known contamination that has extended underneath the Property.

- **The historical use and storage of heating oil on the Property.** Tax records from 1955 indicate that heat was supplied to Building 1 on the Property by an oil-burner in 1955; however there is no indication to the location of the oil-burner. Building plans from 1969 depict the location of a gas furnace to be on the northwest portion of the Property; which is suspected to be proximate to the original oil-burner. The historical use and storage of heating oil on the Property constitutes a recognized environmental concern that presents a moderate risk of impacts to the Property.
- **Former use of heating oil on adjacent properties.** Tax records indicate the oil-burners as the source of heat to the residential houses and apartments buildings located on the north-, west-, and south-adjoining properties. The location of these oil-burners within the properties is unknown. The use of heating oil on adjacent properties is considered a recognized environmental concern; however this is considered a low risk of impact due to the cross-gradient location of all the residential buildings.
- **Former automobile service station on west-adjoining property.** Our historical review revealed a former service station located approximately 80 feet on the western-adjoining property in an upgradient hydrologic direction. However, the potential risk for impacts to soil and groundwater beneath and proximal to the former service station remain unassessed. This former service station is considered to represent a recognized environmental concern with moderate risk due to the lack of contamination evidence however it is in an upgradient location to the Property.
- **Former dry cleaning facility on east-adjoining property.** A former dry cleaning facility operated on the downgradient, east-adjoining property from approximately 1944 to 1960. Potential impacts to soil and groundwater beneath and in proximity to the former dry cleaner remain unassessed. However, due to the downgradient location this former dry cleaning facility is considered a recognized environmental concern that presents a low risk of impacts to the soil and groundwater beneath the Property because it is downgradient of the Property. This executive summary is presented solely for introductory purposes and the information contained in this section should be used only in conjunction with the full text of this report. A complete description of the project, Property conditions, investigative methods, and investigation results is contained within this report.

10.0 CONCLUSIONS

SoundEarth performed a Phase I ESA, in conformance with the scope and limitations of ASTM Practice E1527-05, of the Cherry Street located at 2516, and 2518 East Cherry Street in Seattle, Washington (the Property). Any exceptions to, or deletions from, this practice are described in Section 12.0 of this report. This assessment has revealed no evidence of RECs in connection with the Property except for the following:

- The former presence of a dry cleaning facility on the west-adjoining property from 1949 to 2007.

- The former use and storage of heating oil on the Property from approximately 1955 to 1980.
- The former presence of heating oil on adjacent properties.
- The former presence of an automobile service and oil station on the west-adjoining property from approximately 1936 to 1951.
- The former presence of a dry cleaning facility on the downgradient east-adjoining property from approximately 1944 through at least 1960.

11.0 PREPARER'S CREDENTIALS

This Phase I ESA was researched and written by Ms. Courtney Porter who holds a Bachelor's degree in Geology-Chemistry from Whitman College, Walla Walla, and a Master's degree in Hydrology from the University of Arizona, Tucson. Mr. John R. Funderburk II, an environmental professional as defined in 312.10 of 40 CFR 312, reviewed and interpreted the information upon which this report is based. Mr. Funderburk has a Master's of Science in Public Health in Environmental Health (MSPH) from the University of Washington. Mr. Funderburk has been a professional environmental consultant for more than 25 years. During his career in the environmental field, he has completed more than 1,000 Phase I ESAs in Washington, Oregon, and California, and he has directed the completion of thousands more by corporate technical staff (Appendix C).

12.0 DEVIATIONS

No deviations from the scope of work were required by Property conditions.

13.0 ADDITIONAL SERVICES

No additional services beyond the scope of work described in Section 1.2 were requested by the client.

15.0 STATEMENT OF THE ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a Property of the nature, history, and setting of the Property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set for in 40 CFR Part 312.

John R. Funderburk, MSPH
Principal

COMMENTS: Jordano's Grocery & Liq. Store 2672 # GM - See Sales on 0205
Same size apply

6/90 - Maint - Interior remodel 100% complete - removed back previously existing storage/workspace and converted it to the retail operation which is added in this section. No new bldg SF but extensive walls taken out, new partitions, new fixtures, new tile floors, etc. 2 bldg returns. Overall condition of bldg unaffected - no AV change.

EXECUTIVE SUMMARY

A search of the environmental records was conducted by Environmental Data Resources, Inc. (EDR). SOUND EARTH STRATEGIES used the EDR FieldCheck System to review and/or revise the results of this search, based on independent data verification by SOUND EARTH STRATEGIES. The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

State and tribal Brownfields sites

BROWNFIELDS: A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

An online review and analysis by SOUND EARTH STRATEGIES of the BROWNFIELDS list, as provided by EDR, and dated 01/22/2013 has revealed that there are 2 BROWNFIELDS sites within approximately 0.5 miles of the target property.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: The EPA's listing of Brownfields properties from the Cleanups in My Community program, which provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

An online review and analysis by SOUND EARTH STRATEGIES of the US BROWNFIELDS list, as provided by EDR, and dated 12/10/2012 has revealed that there is 1 US BROWNFIELDS site within approximately 0.5 miles of the target property.

CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

An online review and analysis by SOUND EARTH STRATEGIES of the CSCSL NFA list, as provided by EDR, and dated 01/22/2013 has revealed that there are 4 CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

An online review and analysis by SOUND EARTH STRATEGIES of the RCRA NonGen / NLR list, as provided by EDR, and dated 02/12/2013 has revealed that there are 3 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR US Hist Auto Stat: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

An online review and analysis by SOUND EARTH STRATEGIES of the EDR US Hist Auto Stat list, as provided by EDR, has revealed that there are 22 EDR US Hist Auto Stat sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

SEATTLE SCHOOL DIST 1 GARFIELD HS (Continued) — 1000986856

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US Geographic Names Information System (GNIS) is the official vehicle for geographic names used by the federal government and the source for applying geographic names to federal maps and other printed and electronic documents.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Site 2 of 5 in cluster K

US BROWNFIELDS:

Recipient name:	King County Department of Natural Resources and Parks
Grant type:	Assessment
Property name:	COLMAN BUILDING
Property #:	7228500255
Parcel size:	0.37
Property Description:	Colman Bldg on N portion of 2200 block of E. Union St. Bldg structurally damaged during 2001 earthquake & demo'd 09/2004. 24,141sf bldg constructed in '23 on 16,185sf lot. Occupants included variety of bus. & retail, heated w/ fuel-oil furnace until '81 when converted to natural gas; UST removed '89. Soil removal in '90, additional petro contaminated soils removed from UST excavation. Soil samples reported concentrations of petro compounds below WA State cleanup levels. Groundwater encountered at depth of 14 ft bgs. Groundwater not sampled or tested for petro. Additional investigation of area not recommended. AOC at Colman Bldg is former dry cleaners (1963-73), likely used PCE as dry cleaning solvent, prior to RCRA. Wastes discharged probably contaminated with PCE. Liquid wastes probably discharged to sanitary sewer system. Other potential liquid discharge destinations could have included the ground, & storm sewers. No evidence of blind drains at the Colman Bldg. Contaminated solid wastes likely included in regular municipal wastes from bldg. 2003 investigation of site revealed soils beneath former dry cleaners contaminated w/ dry cleaning related chemicals. Subsurface soils consisted of silty sand w/ gravel or silty clay w/ layers of organic debris & asphalt materials. Groundwater encountered at 7 ft bgs. G/W flow inferred to be northeasterly, consistent w/ topographic gradient. Samples collected from 6 subsurface soil borings reported elevated concentrations of TCE, PCE, and DCE in soil & g/w in selected locations. Elevated concentrations reported in soils collected from 3-6 feet bgs & in g/w collected at 7 bgs. BF assessment collected additional soil & groundwater samples in area of former drycleaner & reported elevated concentrations of TCE, PCE, and DCE in soil & groundwater at selected locations. Cleanup will be required for a limited area of soil & g/w. Presently, parcel is cleared & surface is unpaved. Lot is temporarily fenced with chain link.

Environmental Interest/Information System

PJ MARKET (Continued) 1001490807

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

OLYMPIAN APARTMENT BLDG (Continued) 1000155009

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List
National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/01/2012
Date Data Arrived at EDR: 10/11/2012
Date Made Active in Reports: 12/20/2012
Number of Days to Update: 70

Proposed NPL: Proposed National Priority List Sites
A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 10/01/2012
Date Data Arrived at EDR: 10/11/2012
Date Made Active in Reports: 12/20/2012

Next Scheduled EDR Contact: 04/22/2013
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens
Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/01/2012

Data Release Frequency: Quarterly

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 11/02/2012
Date Data Arrived at EDR: 11/28/2012
Date Made Active in Reports: 01/07/2013
Number of Days to Update: 40

Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing
A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 07/31/2012
Date Data Arrived at EDR: 10/09/2012

Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 11/02/2012

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 02/12/2013

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 02/12/2013

RCRA-SQG: RCRA - Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing
A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

Date of Government Version: 01/22/2013

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 11/14/2012

CSCSL NFA: Confirmed and Contaminated Sites - No Further Action
The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead, a No Further Action code is entered based upon the type of NFA determination the site received.

Date of Government Version: 01/22/2013

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

RMP: Risk Management Plans
When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)
The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

USGS TOPOGRAPHIC MAP

Target Property Map:	47122-E3 SEATTLE SOUTH, WA
Most Recent Revision:	1983

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

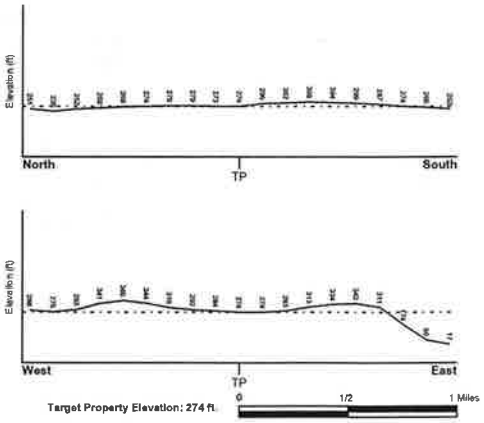
Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY
General Topographic Gradient: General NE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Target Property County	FEMA Flood Electronic Data
KING, WA	YES - refer to the Overview Map and Detail Map
Flood Plain Panel at Target Property:	53033C0635F - FEMA Q3 Flood data
Additional Panels in search area:	53033C0630F - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
SEATTLE SOUTH	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius:	1.25 miles
Location Relative to TP:	1/2 - 1 Mile West
Site Name:	METAL LAUNDRY INC
Site EPA ID Number:	WAD009272741
Groundwater Flow Direction:	NOT AVAILABLE
Inferred Depth to Water:	10 feet to 15 feet
Hydraulic Connection:	The uppermost aquifer is situated in glacial drift composed of sand, gravel, silt, and clays (partially unconsolidated till).
Sole Source Aquifer:	A sole source aquifer is not persent at or near the site
Data Quality:	Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
6	1/2 - 1 Mile NW	Flat
9	1/2 - 1 Mile West	SSE

For additional site information, refer to Physical Setting Source Map Findings.

*©1995 Site-specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented as a result of the cited EDR reports, which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Wells
Source: Department of Health
Telephone: 360-236-3148
Group A and B well locations.

Water Well Listing
Source: Public Utility District
Telephone: 206-779-7656
A listing of water well locations in Kitsap County.

OTHER STATE DATABASE INFORMATION

Oil and Gas Well Listing
Source: Department of Natural Resources
Telephone: 360-902-1450
Locations that represent oil and gas test well sites in Washington State from 1890 to present.

RADON

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

APPENDIX C
QUALIFICATIONS OF THE ENVIRONMENTAL PROFESSIONAL

SoundEarth Strategies

John R. Funderburk, MSPH

Principal

Mr. Funderburk has worked in the environmental consulting field for over 30 years, completing numerous projects in the Pacific Northwest and around the Western United States for development clients and industrial property owners. He is adept at all aspects of the remedial process and has a thorough understanding of environmental regulations.

PROJECT EXAMPLES

BROWNFIELD REDEVELOPMENT PROJECTS

- ***Combined Phase I and Phase II Environmental Site Assessments, Nationwide Work.*** Worked on hundreds of assessments of environmental pollution on existing operational facilities for properties that were under consideration for purchase by a national brownfield developer. These projects involved an evaluation of data related to site histories, regulatory compliance records, operational practices, and existing and generated environmental data on surface soils, subsurface soils, and groundwater. The data were interpreted with regard to regulations and policies related to hazardous waste designation and disposal, and to determine cleanup plans for contamination issues of soil and groundwater. Cost estimates and remediation methodologies were assessed and recommendations were presented to correct the identified problems.
- ***Confidential Large-Scale Solvent Remediation, Washington.*** Principal in charge of a $12 million solvent remediation project. Currently performing characterization and remediation design for one of the largest solvent contaminated sites in Washington State. Overseeing interpretation of models showing the contaminant distribution in groundwater and the preparation of a site conceptual model.
- ***2040 Madison, LLC Solvent Remediation, Seattle, Washington.*** Principal in charge responsible for overseeing the completion of the assessment, remediation, hazardous materials surveys, abatement, and subsequent demolition of a former dry cleaner and petroleum station consisting of four commercial and two residential buildings before redevelopment. Provided abatement oversight, contractor coordination, and demolition management services to present the client with a development-ready property. The redevelopment has been integrated with soil and groundwater remediation. This high-profile Madison Avenue property is the last area in a formerly blighted and drug-plagued area to be redeveloped.
- ***Former Dry Cleaner Facility, Confidential Real Estate Developer, Seattle, Washington.*** Principal in charge for a large 2.5-acre former laundry and industrial dry cleaning facility. Performed a Phase I Environmental Site Assessment (ESA), soil gas survey, and a Phase II ESA in support of due diligence efforts for property acquisition. Complex aspects of the property included an operational dry cleaner since 1928 until 1985, a 520-foot groundwater supply well in the center of the building, 7 additions to the historical building, 20 underground storage tanks (USTs) ranging in capacity from 350 gallons to 12,000 gallons, and complicated geology that resulted in widespread distribution of contaminants. Current historical building status will result in remediation and redevelopment requirements that must comply with Seattle landmark regulations.
- ***Retirement Community Development Solvent Remediation Agreed Order, Seattle, Washington.*** Managed the redevelopment of a solvent-contaminated site before development as a retirement home. Designed and conducted a remedial investigation/feasibility study (RI/FS) and is currently preparing a

Experience and Knowledge

- Performed and managed more than 2,000 Phase I Environmental Site Assessments and more than 1,000 Phase II Environmental Site Assessments.
- Managed numerous hazardous materials surveys and subsequent abatement in preparation of a planned building demolition.
- Performed over 250 underground storage tank removals and cleanups.
- Worked for over 50 major developer clients and hundreds of private industrial facility owners.
- Provided property transaction support to the Port of Seattle and Port of Tacoma.
- Completed EPA Early Responder Course for emergency response in Edison, New Jersey.

Education

BA, Biology, Wake Forest University, Winston Salem, NC.

MSPH, Environmental Health and Industrial Hygiene, University of Washington, Seattle, WA.

Licenses and Certifications

- TWIC Certification
- HAZWOPER - 40-Hour OSHA 29 CFR 1910.120
- Real Estate Certificate Program –UW School of Architecture

cleanup action plan to incorporate a barrier wall limiting solvent migration in groundwater. The project includes multiple stakeholders and is part of Washington State Department of Ecology's (Ecology) Agreed Order program.

- ***Ballard Dry Cleaner Remediation Project, Seattle, Washington.*** Principal in charge of the RI and cleanup action for a former dry cleaner operation in the Ballard neighborhood. Designed and supervised site characterization activities, including groundwater, soil, soil gas, and indoor air investigations and demarcation of the tetrachloroethene plume in groundwater. Assisted engineers with design and implementation of a soil vapor extraction system and in situ groundwater treatments at the site. Worked closely with clients, their insurance company, and Ecology to conduct a proficient and effective cleanup strategy.
- ***Superfund Site Landfill Redevelopment, Monterey Park, California.*** As the director of environmental programs at Greenfield Development, completed design and permitting for a development on the Superfund site landfill in Monterey Park, California named Operating Industries Inc. The 43-acre site contained a 7.6-acre landfill, which contained waste to depths of 47 feet. Worked with engineers to design the gas control, leachate control, and structural support for a Home Depot super store (140,000 square feet) and parking with utilities over the landfill section of the site. The site remedy and design was approved through Region 9 U.S. Environmental Protection Agency (EPA) Superfund Program and received a Record of Decision approval.
- ***Landfill Redevelopment Feasibility Study, Waste Management, California, Oregon, Washington.*** Assessed 32 landfills in California, Oregon, and Washington for redevelopment feasibility. These landfills were owned by Waste Management and were assessed for closure costs and had the potential for integrating redevelopment infrastructure into the closure process to enhance land value and reduce overall expenditures for landfill closure.
- ***Sylvan Ridge Townhomes, Former West Seattle Landfill, Seattle, Washington.*** Assessed extent of metal contamination on a 26-acre former landfill. The fill on the property was underlain by 4 to 5 feet of metal-laden cement kiln dust as a base monolith, and was also underlain with automobile battery chips. Addressed the approximately 70,000 cubic yards of hazardous material under Treatment by Generator, following approval by Ecology, saving the client $1.2 million in soil disposal costs. Additional soil removed as part of the remediation was excavated, processed to remove debris, and reused as clean fill on the site. The property was subsequently redeveloped as a multifamily residential neighborhood in West Seattle.
- ***Ballard Blocks I, Seattle, Washington.*** Principal in charge responsible for overseeing the screening of soil on the property during redevelopment excavation activities. Several thousand tons of metals and petroleum-contaminated soil associated with the activities of previous tenants on the Property, as well as fill material, were segregated from the construction excavation. The project has successfully been completed and a No Further Action (NFA) determination has been issued by Ecology.
- ***Ballard Blocks II, Former Wesmar Property, Seattle, Washington.*** Principal in charge responsible for overseeing the completion of a Hazardous Materials Assessment and subsequent demolition activities before property redevelopment. Identified areas of concern in the hazardous materials survey and prepared abatement specifications to remove the hazardous materials before demolition. Also provided abatement oversight, contractor coordination, and demolition management services to present the client with a development-ready property.
- ***Phase I and Phase II Environmental Site Assessments and Remediation, Former RAM Auto Wrecking Yard, Lucia Development LLC, Lacey, Washington.*** Principal in charge for a former automobile recycling and salvage yard with confirmed petroleum and metal impacts to shallow soil. Before the clients' purchase of the property, a Phase I ESA was completed on the property; the Phase I was followed by a Phase II ESA and preparation of a cleanup action plan that would address the contamination in coordination with the development plans for the property. The cleanup action plan involved demolishing the existing structure, removing two USTs, and removing contaminated soil from the property. While excavating test pits to determine extent of contamination, burial areas of old auto parts were found.
- ***Columbia Crossings Marina, Portland, Oregon.*** Principal in charge for the planning and development of project objectives for the large-scale sediment dredging for the Columbia Crossings Marina located on the Columbia River. Worked closely with the United States Army Corps of Engineers–Portland District and the Oregon Department of Environmental Quality to coordinate and expedite the permitting process. Also evaluated the environmental quality of previously dredged nearby sediments from the Columbia River in order to assess the subsequent chemical, physical, and ecological impacts to the riparian environments. Conducted intensive historical property research, prepared a field work plan for collecting and analyzing sediment, collected and processed sediment samples, and communicated regularly with the client.

PUBLIC CLIENT PROJECTS

- ***Port of Seattle Terminals 103, 104, 105, 107, 115, 117 Baseline Studies, Seattle, Washington.*** Principal in charge for the preparation of the baseline environmental conditions report, which included a comprehensive review of historical sources associated with current and former property use, evaluating the source and extent of known releases on the property and adjoining properties, and evaluating the potential pathways of chemicals of concern and source areas to the Lower Duwamish Waterway as part of the future contaminant source control program. Reviewed and evaluated sediment data associated with the adjoining Lower Duwamish Waterway and evaluated stormwater best management practices.
- ***Boeing Field, King County Airport, Seattle, Washington.*** Project manager for a Phase II ESA for King County to evaluate the impacts around the fueling facility at the north end of the airfield. Coordinated access and security issues for completing 10 soil borings and 4 groundwater monitoring wells to identify the source and extent of an aviation fuel release that was migrating across the north taxiway at the airfield.
- ***Mercer Street Expansion, Seattle Department of Transportation, Seattle, Washington.*** Principal in charge for review of contamination assessment and remedial cleanup plans. Provided costs for negotiating condemnation fees for Seattle Department of Transportation (SDOT). Also worked to develop a strategy for SDOT condemnation procedures, cost analysis for Mercer Street Expansion, and surplus property redevelopment. Advised SDOT on options for right-of-way purchase and assisted in technical issues associated with negotiations for liability assignment and management. Completed an environmental evaluation of a remedial plan implementing an in situ treatment system within the Mercer Street, Terry Avenue, Westlake Avenue, and Valley Street rights-of-way. Historical activities performed by various parties have contaminated the rights-of-way of this area with petroleum hydrocarbons. Completed a detailed analysis and approval of proposed remedial options for cleaning up the rights-of-way.
- ***McNeil Island Correctional Center Preliminary Assessment, Washington.*** Implemented evaluation of environmental pollution problems, which resulted from long-term practices of inappropriate waste management related to chemical waste handling and disposal on the island. Investigated polychlorinated biphenyl (PCB) transformer storage and disposal, furniture and marine repair shop solvent waste handling and disposal, motor maintenance activities, and land disposal practices. This Washington State Department of Corrections property is a penal institution with associated industrial and vocational facilities in addition to the requisite municipal services, such as landfill disposal, motor maintenance, and power generation.
- ***Hanford Facility, U.S. Department of Energy, Washington.*** Completed a RCRA facility assessment of RCRA corrective action measures at a waste disposal lagoon on the Hanford Reservation. Security clearance and controlled access were a condition of the performance of this work.

PCB INVESTIGATION AND REMEDIATION PROJECTS

- ***Bethlehem Steel Site in West Seattle—Acquisition, Seattle, Washington.*** Project manager for due diligence transactional work on this 100-year-old facility. Directed assessment work for lagoons, scrap yard, and hydraulic system for rebar manufacturing. Cleaned up heat treat area PCB spill from long-term hydraulic system leak including drainage discharge area impacts.
- ***Lake Washington Shipyard, Kirkland, Washington.*** Project manager for assessment and cleanup of World War II Liberty ship production facility in Kirkland on Lake Washington. Issues addressed included 2 landfill areas, 14 underground storage tanks, and PCB release to lake sediments from the brake system in railroad car lost over the dock and left submerged in sediments.
- ***McNeil Island Correctional Center Preliminary Assessment, Washington.*** This Washington State Department of Corrections property is a penal institution with associated industrial and vocational facilities in addition to the requisite municipal services, such as landfill disposal, motor maintenance, and power generation. Implemented evaluation of environmental pollution problems, which resulted from long-term practices of inappropriate waste management related to chemical waste handling and disposal on the island. Investigated PCB transformer storage and disposal area, furniture and marine repair shop solvent waste handling and disposal, motor maintenance activities, and land disposal practices.
- ***Portland General Electric Substation Contamination Evaluation, Portland, Oregon.*** This site is a 17-acre property in Portland that was used for handling and storage of PCB-filled electrical equipment for over 30 years. The associated contamination was evaluated for cleanup so the property could be converted into a public science museum for the city. Guided the site assessment and the consequential engineering of the cleanup of over 2,500 cubic yards of contaminated soil and

Willamette River sediments. Engineering methodologies were selected relative to appropriate technological application and to risk evaluations of resultant human and environmental health impacts.

- ***Whittier Rail Yard Transformer Station, Whittier, Alaska.*** This site is located in a remote area in Alaska where Alaska Railroad Corporation operates rail cargo and passenger service. Seven separate substations were operated in support of the yard. Each had PCB pollution release problems related to the physical layout and geologic topographic situation. Directed the assessment and remediation of the PCB pollution for this operation.
- ***PCB CERCLA Site, Chehalis, Washington.*** Performed field work for assessment and remedial cleanup of regional transformer scrapping operations including wire incineration, oil-storage USTs, and debris landfill. Work focused on assessment of source and mitigation of PCBs from storage and processing facilities. Work involved extensive sampling of land fill area with disposal of incinerator ash and debris from scrapping facility.

LITIGATION SUPPORT/EXPERT TESTIMONY

- ***Litigation Support and Expert Testimony, PCB Contaminated Site, Montana.*** Provided expert testimony through sworn depositions and reports and additional litigation support on behalf of an owner of a PCB-contaminated 170-acre former plywood and lumber mill located in Western Montana adjacent to a river. A man-made pond, constructed over the river, received PCB-contaminated process and surface water generated during mill operations. Remediation costs were incurred by the owner during the removal of PCB-contaminated pond sediment and riverbank restoration activities. Mr. Funderburk successfully identified the previous owner of the mill as the responsible party by identifying the sources and timeline for the release of the PCBs through a review of historical aerial photographs and documents, site reconnaissance, additional analytical testing, fate and transport evaluation, stratigraphic evaluation of sediments, and PCB mass balance calculations. Services included written expert reports and rebuttals, as well cost allocation estimates for the remediation activities. The results of Mr. Funderburk's expert testimony substantially increased the opposing party's share of remediation costs.
- ***Vulcan Industries vs. UNOCAL/Chevron.*** Provided expert opinion report after completing forensic investigation to confirm the extent of an 80,000 gallon leaded gasoline release that occurred in 1980 at the Mercer Avenue and Westlake block of South Lake Union. Mr. Funderburk identified the characteristic lead additive fingerprint to confirm the UNOCAL/Chevron source of the gasoline product plume floating on groundwater between Westlake, Valley, Terry, and Mercer. The defendants settled and agreed to fund a $13.5 million cleanup of soil and groundwater on the whole city block.
- ***Former Calvert Industries, 17-Acre Arsenic Contaminated Site, Maltby, Washington.*** Managed remedial investigation, cleanup action planning and design, regulatory coordination, cleanup implementation, site closure, and cost recovery. Delineated heavy metal-laden sandblast material at the facility and coordinated the regulatory process through Ecology's Volunteer Cleanup Program. The efficient and effective coordination effort enabled a $12 million property transaction to close before the expiration of an aggressive deadline; recovered nearly 70 percent of their overall investigation, remediation, reporting, and legal fees from the former property owner; and was instrumental in Ecology's decision to grant an NFA determination 3 years ahead of schedule.
- ***Confidential PCE Release, South Lake Union.*** Mr. Funderburk was the primary fact witness in technical support to attorneys and expert witnesses in an insurance claim for a commercial laundry/dry cleaner facility with releases of dry cleaner solvent between 1968 and 1982. Three of four insurance companies have settled for a total of $9.5 million in coverage for planned cleanup.

SoundEarth Strategies, Inc.
2811 Fairview Avenue East, Suite 2000
Seattle, Washington 98102

March 19, 2014

Mr. Charles R. Wolfe, Attorney at Law
1420 Fifth Avenue
Suite 2200
Seattle, Washington 98101

SUBJECT: RECOMMENDED ELEMENTS OF ENVIRONMENTAL MITIGATION
2516 and 2518 East Cherry Street
Seattle, Washington
Project Number: 0559-003-04

Dear Mr. Wolfe:

SoundEarth Strategies Inc. (SoundEarth) was retained by East Cherry Street LLC (ECS) to assess 2516 and 2518 East Cherry Street in Seattle, Washington (the Property) with regard to (1) present environmental contamination status, and (2) remediation requirements to enable redevelopment of the Property for a mixed-use, multi-unit residential over neighborhood retail project.

The Property exists in the immediate downgradient position next to the tetrachloroethylene (PCE) release at the former Custom Cherry Cleaners, the source of PCE-contaminated groundwater and soil vapors on the Property.

On March 12, 2014, SoundEarth installed monitoring well MW101 to evaluate PCE concentrations in groundwater beneath the northern portion of the Property (patio of the Twilight Bar; see attached ECC Horizon Figure 3d). The monitoring well was installed downgradient of the former Cherry Street Cleaners. The monitoring well was installed using a track-mounted, hollow-stem auger drill rig. The monitoring well was installed to a depth of approximately 30 feet below ground surface (bgs) and screened from 20 to 30 feet bgs. After installation, the monitoring well was purged and sampled. Concentrations of 400 micrograms per liter (μg/L) of PCE and 34 μg/L of trichloroethylene (TCE) were detected in the groundwater sample collected from monitoring well MW101. These data confirm that the plume from the Cherry Street Cleaners has migrated to the Property. The concentrations of PCE and TCE are consistent with site data previously presented by ECC Horizon in Figure 3d and Figure 5d. The concentrations of PCE and TCE in groundwater exceed their applicable Washington State Model Toxics Control Act (MTCA) Method A cleanup levels. The depth to groundwater in monitoring well MW101 was measured at approximately 27 feet bgs. Groundwater analytical results are depicted on the annotated ECC Horizon Figure 5d and presented in Attachment A. The monitoring well construction details are depicted on the attached boring log.

SoundEarth has reviewed the existing conditions of the Property and the Redevelopment Scenarios for the Property, presented recently by ECS. Based on our review, we present in the table on the next page our recommended elements of present and future cleanup actions to address the necessary requirements for mitigating exposure risks related to this PCE release. Specifically, based on our current understanding of the ECS planned land use at the Property as presented in attachments and on our understanding of current Property conditions, we prepared the table to present each likely remedial element, a schedule and estimated costs for these elements, and the associated priority for action.

Basis for Action	Schedule for Implementation	Estimated Cost	Status/Priority
Present legal and environmental consulting costs to evaluate and confirm contamination and risks of the Property.	Last 90 (+) days	$84,940	Accrued
Past indoor air monitoring events (two). Future indoor air monitoring events (two additional quarters), then yearly, or upon building modification.	Completed 2 events Next 90 days	$35,000 $13,000/yearly	Incurred Ongoing
Mitigation of indoor air conditions for present commercial uses under a 12-hour work day, 7 days a week (grocer).	Next 6 months until 2017, when redevelopment takes place	Approximately $180,000 to $200, 000	Urgent, but needs Design
Cleanup of the Site groundwater (GW) to achieve MTCA compliance for GW on the Property. Needs acceleration to reduce Property vapor risk.	EOS/ERD Injection Property GW Monitoring	$120,000 $160,000 (4 Wells – Quarterly over 5 years)	Urgent Next 5 Years
Vapor barrier installation/construction on future building construction to mitigate against vapor exceedances.	2017	$300,000	Needs Design, planning/funding
Additional environmental mitigation-based operating costs for development. In particular, “additional parking level ventilation” beyond standard development requirements.	2018	$500/month	Needs planning/funding
Additional monitoring costs for new building to show environmental mitigation measures are effective.	2018–2019	$15,000/year	Needs planning/funding
Consulting, administrative, and management costs to pursue a regulatory process with the Washington State Department of Ecology (Ecology) to obtain Property-specific No Further Action letter under the Ecology Voluntary Cleanup Program.	2013–2014	$40,000	Urgent

Please let me know if you need additional explanation, more detailed discussion on these issues, or more refined estimated costs.

Respectfully,

SoundEarth Strategies, Inc.

John R. Funderburk, MSPH
Principal

Dear Mr. Funderburk:

Included are the results from the testing of material submitted on March 13, 2014 from the SOU_0559-003_20140313, F&BI 403155 project. There are 10 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

ATTACHMENT B
BACKGROUND AND REDEVELOPMENT SCENARIOS

East Cherry Properties LLC
Development Scope
2516 & 2518 Cherry St., Seattle, WA
29 October 2013

Background and Redevelopment Scenarios

East Cherry Properties LLC currently has two parcels in the city of Seattle under contract for purchase: 2516 (parcel no. 684070-0210) and 2518 (parcel no. 684070-0215) E. Cherry St. The two properties are currently leased through March 31, 2017.

Upon expiration of current leases, East Cherry Properties LLC will redevelop these two properties as one project. Redevelopment plans include demolition of the existing structures and full, ground-up redevelopment to include 3 to 5 levels of residential apartment units over one level of neighborhood tailored retail and/or food and beverage. In addition, the redevelopment will include two levels of below-grade parking.

Two development scenarios are currently being considered, as the two parcels are currently zoned as NC1-40 (40 foot mixed-use development with neighborhood commercial at ground floor) with potential City re-zone to NC1-65 (65 foot tall mixed-use development with neighborhood commercial at ground floor). The additional height allowed under the potential re-zone would allow for two additional residential levels in the new development project. Sectional diagrams of the two redevelopment scenarios are attached (*2516 E Cherry St Redevelopment FAR Calculations, October 2013)*, and summarized below.

NC1-40 Redevelopment Scenario

Current zoning of the 2516/2518 E. Cherry St. properties would allow East Cherry Properties LLC to develop a mixed-use project including 3 levels of residential apartment units over one level of neighborhood tailored retail and two levels of below-grade parking. Specific characteristics of this redevelopment scenario would likely include:

- 42,868 gross square feet
- 22 apartment units (averaging 788 square feet)
- 6,468 square feet retail space
- 24 parking spaces

Note that this is an estimate of development scope based on a preliminary analysis of what is typically built given the zoning capacity of the property. The final permitted scope may vary. It is assumed that the new building would be constructed of wood frame (for the residential floors) over poured concrete walls and floor decks (parking and commercial floors), and that construction would take approximately 18 months.

NC1-65 Redevelopment Scenario

Potential re-zoning of the 2516/2518 E. Cherry St. properties, being advocated by the City of Seattle and currently going through a multi-year neighborhood review process, would allow

East Cherry Properties LLC to develop a mixed-use project including 5 levels of residential apartment units over one level of neighborhood tailored retail and two levels of below-grade parking. Specific characteristics of this redevelopment scenario would like include:

- 55,948 gross square feet
- 36 apartment units (averaging 791 square feet)
- 6,468 square feet retail space
- 24 parking spaces

Again, these are estimates based on preliminary zoning analysis. It is assumed that the new building would be constructed of wood frame (for the residential floors) over poured concrete walls and floor decks (parking and commercial floors), and that construction would take approximately 18 months.

March 17, 2014

John Funderburk, Project Manager
SoundEarth Strategies
2811 Fairview Ave. East, Suite 2000
Seattle, WA 98102

Dear Mr. Funderburk:

Included are the results from the testing of material submitted on March 13, 2014 from the SOU_0559-003_20140313, F&BI 403155 project. There are 10 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

Tetrachloroethene	ug/L (ppb)	50	102	102	70-130	0

Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

A1 – More than one compound of similar molecule structure was identified with equal probability.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for this range fell outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte indicated may be due to carryover from previous sample injections.

d - The sample was diluted. Detection limits may be raised due to dilution.

ds - The sample was diluted. Detection limits are raised due to dilution and surrogate recoveries may not be meaningful.

dv - Insufficient sample was available to achieve normal reporting limits and limits are raised accordingly.

fb - Analyte present in the blank and the sample.

fc – The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. The variability is attributed to sample inhomogeneity.

ht - Analysis performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of normal control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j – The result is below normal reporting limits. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The analyte result in the laboratory control sample is out of control limits. The reported concentration should be considered an estimate.

jr - The rpd result in laboratory control sample associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the compound indicated is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc – The sample was received in a container not approved by the method. The value reported should be considered an estimate.

pr – The sample was received with incorrect preservation. The value reported should be considered an estimate.

ve - Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

SUBJECT: INDOOR AIR SAMPLING RESULTS
2516 and 2518 East Cherry Street
Seattle, Washington
Project Number: 0559-003-04

Dear Ms. Dunn:

SoundEarth Strategies, Inc. (SoundEarth) has prepared this letter to present the results of the indoor air sampling events conducted at the property located at 2516 and 2518 East Cherry Street in Seattle, Washington (the Property). The purpose of the indoor air sampling events was to determine the concentrations of chlorinated solvents in the indoor air of the building located at 2516 East Cherry Street (Building 1) and 2518 East Cherry Street (Building 2). Samples were collected in accordance with the Washington State Department of Ecology's (Ecology) draft *Guidance for Evaluating Soil Vapor Intrusion in Washington State: Investigation and Remedial Action*.

On April 13 and May 30, 2013, SoundEarth collected four indoor air samples: two from Building 1 and two from Building 2. The samples were collected using 6-liter Summa canister and a flow controller placed in line with the canister. The flow controller controls the air flow rate into the canister. Samples were collected over a period of eight hours. Air samples were analyzed for tetrachloroethene (PCE) using U. S. Environmental Protection Agency Method TO-15.

Analytical results show that concentrations of PCE in three of the four indoor ambient air samples collected from Buildings 1 and 2 exceed the Washington State Model Toxics Control Act (MTCA) Method B indoor air cleanup level (9.6 micrograms per cubic meter of air) ranging from 12 to 25 micrograms per cubic meter of air.

If SoundEarth were representing the owner of the Property, SoundEarth would recommend reporting the indoor air sampling results that document the exposure to PCE in the buildings to Ecology. In accordance with "requirements in" MTCA, "monitoring results that demonstrate an exposure above allowed standards" should be reported within 90 days of a confirmed release. The concentrations of PCE "exceeding the indoor air cleanup level" in the buildings were discovered in April 2013 and confirmed on May of 2013.

If you have questions regarding the results from the indoor air sampling at the Property, please contact me at (206) 436-5940.

Respectfully,

SoundEarth Strategies, Inc.

Thomas Cammarata
Senior Environmental Geochemist

NOTES:

RED indicates concentration exceeds MTCA Method B Cleanup Level for Air.

Laboratory analyses conducted by Eurofins Air Toxics, Inc. of Folsom, California.

[1]Analyzed by U.S. Environmental Protection Agency Method Modified TO-15 Low Level Analysis.

[2]The adjusted concentration is the result of subtracting the reported concentration of the sample collected from the same building's roof intake from the original concentration of the indoor air sample.

[3]MTCA Method B Indoor Air Cleanup Level, Carcinogen, CLARC database.

[4]MTCA Method B Indoor Air Cleanup Level, Non-Carcinogen, CLARC database.

Laboratory Note:

[J]Estimated value due to bias in the continuing calibration verification sample.

-- = not applicable

< = not detected at a concentration exceeding laboratory reporting limit

CLARC = cleanup levels and risk calculations

DCE = dicholorethene

MTCA = Washington State Model Toxics Control Act

NE = not established

PCE = tetrachloroethene

TCE = trichloroethene

2. The type of fuel used: Natural Gas, Fuel Oil, Electric, Wood, Coal, Solar

   Other (specify) _____
3. Location of heating system: _____
4. Is there air-conditioning? yes / no Central Air or Window Units?

Specify the location _____

5. Are there air distribution ducts present? yes / no

6. Describe the supply and cold air return duct work including whether there is a cold air return and comment on the tightness of duct joints.

_____

7. Is there a whole house fan? yes / no _____
   What is the rated size of the fan? _____

8. Temperature settings inside during sampling. Note day and night temperatures.
   a. Daytime temperature(s) _____
   b. Nighttime temperature(s) _____
   (Note times if system cycles during non-occupied hours during the day)

9. Estimate the average time doors and windows are open to allow fresh outside air into the building. Note rooms that frequently have open windows or doors.

_____

D. Potential Indoor Sources of Pollution

1. Is the laundry room located inside the home? yes / no

2. Has the house ever had a fire? yes / no

2. Is there an attached garage? yes / no

3. Is a vehicle normally parked in the garage? yes / no

4. Is there a kerosene heater present? yes / no

5. Is there a workshop, hobby or craft area in the residence? yes / no

6. An inventory of all products used or stored in the home should be performed. Any products that contain volatile organic compounds or chemicals similar to the target compounds should be listed. The attached product inventory form should be used for this purpose.

7. Is there a kitchen exhaust fan? yes / no Where is it vented? _____

8. Is the stove gas or electric? _____ Is the oven gas or electric? _____

9. Is there an automatic dishwasher? yes / no TWO

10. Is smoking allowed in the building? yes / no

11. Has the house ever been fumigated or sprayed for pests? If yes, give date, type and location of treatment.

_____

E. Water and Sewage (Circle the appropriate response)

Source of Water

Appendix H
Terrestrial Ecological Evaluation

Table 749-1

Simplified Terrestrial Ecological Evaluation-Exposure Analysis Procedure

Estimate the area of contiguous (connected) undeveloped land on the site or within 500 feet of any area of the site to the nearest 1/2 acre (1/4 acre if the area is less than 0.5 acre).	
1) From the table below, find the number of points corresponding to the area and enter this number in the field to the right.	4
Area (acres) / Points 0.25 or less / 4 0.5 / 5 1.0 / 6 1.5 / 7 2.0 / 8 2.5 / 9 3.0 / 10 3.5 / 11 4.0 or more / 12	
2) Is this an industrial or commercial property? If yes, enter a score of 3. If no, enter a score of 1	3
3)[a] Enter a score in the box to the right for the habitat quality of the site, using the following rating system[b]. High=1, Intermediate=2, Low=3	1
4) Is the undeveloped land likely to attract wildlife? If yes, enter a score of 1 in the box to the right. If no, enter a score of 2.[c]	1
5) Are there any of the following soil contaminants present: Chlorinated dioxins/furans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, pentachlorobenzene? If yes, enter a score of 1 in the box to the right. If no, enter a score of 4.	4
6) Add the numbers in the boxes on lines 2-5 and enter this number in the box to the right. If this number is larger than the number in the box on line 1, the simplified evaluation may be ended.	9

Notes for Table 749-1

[a] It is expected that this habitat evaluation will be undertaken by an experienced field biologist. If this is not the case, enter a conservative score of (1) for questions 3 and 4.

[b] **Habitat rating system.** Rate the quality of the habitat as high, intermediate or low based on your professional judgment as a field biologist. The following are suggested factors to consider in making this evaluation:

> **Low:** Early successional vegetative stands; vegetation predominantly noxious, nonnative, exotic plant species or weeds. Areas severely disturbed by human activity, including intensively cultivated croplands. Areas isolated from other habitat used by wildlife.

High: Area is ecologically significant for one or more of the following reasons: Late-successional native plant communities present; relatively high species diversity; used by an uncommon or rare species; priority habitat (as defined by the Washington Department of fish and Wildlife); part of a larger area of habitat where size or fragmentation may be important for the retention of some species.

Intermediate: Area does not rate as either high or low.

[c] Indicate "yes" if the area attracts wildlife or is likely to do so. Examples: Birds frequently visit the area to feed; evidence of high use b mammals (tracks, scat, etc.); habitat "island" in an industrial area; unusual features of an area that make it important for feeding animals; heavy use during seasonal migrations.
