Narrative

CASE NARRATIVE
Client: Environmental Compliance & Control Inc
Project: W-S2510EC-I
Report Number: 580-42942-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 3/26/2014 1:00 PM, 3/27/2014 12:30 PM, 3/28/2014 2:15 PM and 3/31/2014 3:35 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 7 coolers at receipt time were -33.0º C, -30.4º C, 1.5º C, 3.3º C, 4.6º C, 7.1º C and 19.3º C.

Except:

The container labels for the following samples did not match the information listed on the Chain-of-Custody (COC): FD1:S032814 (580-42977-13), SB32:S060080 (580-42977-5). The container labels list SB32:S and FD1:S032614, while the COC lists SB:32:S060080 and FD1:S032814, respectively. The samples have been logged in per the COC.

For 8260 TCLP analysis, the following samples were received at the laboratory outside the required temperature criteria at 19.3°C: FD2:S032914 (580-42990-22), FD3:S032914 (580-42990-23), FD4:S032914 (580-42990-24), SB18:S010010 (580-42990-1), SB18:S100124 (580-42990-2), SB19:S017031 (580-42990-18), SB19:S070084 (580-42990-19), SB19:S200222 (580-42990-20), SB19:S250264 (580-42990-21), SB20:S027027 (580-42990-3), SB20:S050050 (580-42990-4), SB20:S100120 (580-42990-5), SB25:S000019 (580-42990-6), SB25:S070070 (580-42990-7), SB25:S125150 (580-42990-8), SB25:S150200 (580-42990-9), SB25:S200216 (580-42990-10), SB30:S150158 (580-42990-15), SB30:S158189 (580-42990-16), SB30:S200216 (580-42990-17), SB37:S011024 (580-42990-11), SB37:S079100 (580-42990-12), SB37:S200233 (580-42990-13), SB37:S275297 (580-42990-14).

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

TCLP VOLATILE ORGANIC COMPOUNDS (GC-MS)

The continuing calibration verification (CCV) associated with analysis batch 156720 recovered above the upper control limit for 1,1-Dichloroethene. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been "^" qualified and reported.

No other difficulties were encountered during the TCLP volatiles analysis.

All other quality control parameters were within the acceptance limits.

VOLATILE ORGANIC COMPOUNDS (GC-MS) - Low Level

Job ID: 580-42942-1 (Continued)

Laboratory: TestAmerica Seattle (Continued)

Samples SB27:S000010 (580-42942-1), SB27:S118136 (580-42942-2), SB23:S010032 (580-42942-3), SB23:S103133 (580-42942-4), SB17:S005029 (580-42942-5), SB17:S100114 (580-42942-6), SB14:S005030 (580-42942-7), SB15:S005031 (580-42942-9), SB15:S119134 (580-42942-10), SB26:S134146 (580-42949-10), SB30:S100129 (580-42949-12), SB35:S080100 (580-42949-16), SB35:S107137 (580-42949-17), SB31:S128148 (580-42949-19), SB24:S000019 (580-42977-1), SB24:S115134 (580-42977-2), SB28:S017035 (580-42977-3), SB32:S060080 (580-42977-5), SB36:S000017 (580-42977-7), SB36:S100115 (580-42977-8), SB29:S000017 (580-42977-11), SB29:S105123 (580-42977-12), FD1:S032814 (580-42977-13), SB18:S010010 (580-42990-1), SB20:S027027 (580-42990-3), SB25:S000019 (580-42990-6), SB25:S125150 (580-42990-8), SB37:S011024 (580-42990-11), SB37:S275297 (580-42990-14), SB30:S150158 (580-42990-15), SB30:S158189 (580-42990-16), SB30:S200216 (580-42990-17), SB19:S017031 (580-42990-18), FD2:S032914 (580-42990-22) and FD3:S032914 (580-42990-23) contained Tetrachloroethene outside the upper calibration level for direct sparge soils 8260 method (low level). The analyte has been reported from this method with an “E” flag. The samples have been scheduled for reanalysis by 8260B MeOH extraction method. Both sets of data have been reported.

Sample SB30:S129149 (580-42949-13) is highly contaminated causing matrix interference and retention time shifts. The data has been reported from the MeOH analysis for all target compounds.

Internal standard (IS) 1,4-Dichlorobenzene-d4 responses were outside the lower acceptance limits for samples SB25:S000019 (580-42990-6) and SB37:S011024 (580-42990-11). The low recovery of this IS indicates a potential high bias for associated analytes in IS group 51. All associated compounds in IS group 51 were non-detects; therefore, the affected analytes have been “*” qualified and reported.

Internal standard (IS) 1,4-Dichlorobenzene-d4 response was outside the lower acceptance limits for sample SB19:S017031 (580-42990-18). The low recovery of this IS indicates a potential high bias for associated analytes in IS group 51. All associated compounds in IS group 51 were non-detects; except analyte 4-Isopropyltoluene. Due to the contamination levels seen in the sample, result for 4-Isopropyltoluene has been reported from the MeOH analysis.

Tetrachloroethene was detected in method blank MB 580-156514/1-A at a level exceeding the reporting limit. Associated samples were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank. The sample results have been “B” qualified and reported.

Tetrachloroethene was detected in method blank MB 580-156722/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been “J” flagged. The sample results have been “B” qualified and reported.

Tetrachloroethene was detected in method blank MB 580-156826/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been “J” flagged. The sample results have been “B” qualified and reported.

Tetrachloroethene was detected in method blank MB 580-156924/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been “J” flagged. The sample results have been “B” qualified and reported.

No other difficulties were encountered during the VOC analysis.

All other quality control parameters were within the acceptance limits.

VOLATILE ORGANIC COMPOUNDS (GC-MS) - MEOH Extraction

Due to the sample matrix and instrument’s capacity, samples SB26:S134146 (580-42949-10), SB24:S115134 (580-42977-2), SB28:S017035 (580-42977-3), SB36:S000017 (580-42977-7), SB36:S100115 (580-42977-8), SB29:S000017 (580-42977-11), SB29:S105123 (580-42977-12), FD1:S032814 (580-42977-13), SB18:S010010 (580-42990-1), SB20:S027027 (580-42990-3), SB25:S000019 (580-42990-6), SB25:S125150 (580-42990-8), SB37:S011024 (580-42990-11), SB37:S275297 (580-42990-14), SB30:S150158 (580-42990-15), SB30:S158189 (580-42990-16) and SB30:S200216 (580-42990-17) were reanalyzed for Tetrachloroethene outside of the holding time. The data have been “H” qualified and reported.

Due to the nature of sample matrix, sample SB30:S129149 (580-42949-13) required multiple dilutions to bring the concentration of Tetrachloroethene within the calibration range. The 1000X dilution was performed outside of holding time. Both sets of data have been

Job ID: 580-42942-1 (Continued)

Laboratory: TestAmerica Seattle (Continued)

reported.

Several analytes were detected in method blank MB 580-156550/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been “J” flagged.

The continuing calibration verification (CCV) associated with analysis batch 156533 recovered above the upper control limit for Methylene Chloride. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been “^” qualified and reported.

No other difficulties were encountered during the VOC analysis.

All other quality control parameters were within the acceptance limits.

PERCENT SOLIDS

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
E	Result exceeded calibration range.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.
H	Sample was prepped or analyzed beyond the specified holding time
F2	MS/MSD RPD exceeds control limits
*	ISTD response or retention time outside acceptable limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Receipt

The samples were received on 5/16/2014 4:15 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 6.0º C.

Except:

A trip blank was provided and recorded on the Chain of Custody (COC) with no analysis marked. The sample was activated by the client for 8260 analysis on 5/20/14.

GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Revised Report 5/30/14 - Sample MW-22D and the trip blank were originally logged in with incorrect collection dates. The login was updated and the report was revised.

Receipt

The samples were received on 5/16/2014 4:15 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 6.0º C.

Except:

A trip blank was provided and recorded on the Chain of Custody (COC) with no analysis marked. The sample was activated by the client for 8260 analysis on 5/20/14.

GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Receipt
The samples were received on 5/22/2014 11:43 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.9º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS VOA - Method(s) 8260B
Sample MW6:G051814 contained Tetrachloroethene above the upper calibration level in the initial analysis. The dilution was analyzed two hours outside the analytical holding time; therefore, the initial "E" flagged analysis is reported as the primary result and the dilution in analysis batch 160174 is reported as the secondary result.

The surrogate Trifluorotoluene recovery for sample MW1:G052114 (580-43706-22) was outside control limits. Evidence of matrix interference is present; therefore, the data has been "X" qualified and reported.

The method blank MB 580-159935/33 associated with analysis batch 159935 contained Tetrachloroethene and Methylene Chloride above the method detection limit. These target analyte concentrations were less than the reporting limit (RL); therefore, re-extraction and/or re-analysis was not performed. The associated sample results have been “B” qualified and reported.

The laboratory control sample (LCS) associated with analysis batch 159935 recovered outside control limits for 1,2,3-Trichlorobenzene. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been qualified and reported.

The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) associated with analysis batch 159935 recovered outside control limits for 1,1-Dichloroethene. The individual LCS/LCSD recoveries were in control; therefore, the data have been qualified and reported.

The method blank MB 580-159980/6 associated with analysis batch 159980 contained Methylene chloride above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed. This method blank also contained Tetrachloroethene above the method detection limit. This target analyte concentration was less than the reporting limit (RL). The associated sample results have been "B" qualified and reported.

The method blank MB 580-160145/13 associated with analysis batch 160145 contained Tetrachloroethene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed. The associated sample results have been "B" qualified and reported.

The method blank MB 580-160174/6 associated with analysis batch 160174 contained Tetrachloroethene and Methylene Chloride above the method detection limit. These target analyte concentrations were less than the reporting limit (RL); therefore, re-extraction and/or re-analysis was not performed. The associated sample results have been “B” qualified and reported.

The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for analysis batch 160174 recovered outside control limits for Trichlorofluoromethane. The individual LCS/LCSD recoveries were in control; therefore, the data have been qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	RPD of the LCS and LCSD exceeds the control limits
*	LCS or LCSD exceeds the control limits
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
E	Result exceeded calibration range.
H	Sample was prepped or analyzed beyond the specified holding time
X	Surrogate is outside control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Receipt
The sample was received on 5/22/2014 11:43 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.9º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS VOA - Method(s) 8260B
The method blank MB 580-159733/1-A for analysis batch 160311 contained Bromoform, Naphthalene and Sec-Butylbenzene above the method detection limit. These target analyte concentrations were less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed. The sample results have been "B" qualified and reported.

The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for analysis batch 160311 recovered outside control limits for Dichlorodifluoromethane. Individual LCS/LCSD recoveries were within the control limits; the data have been "*" qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	RPD of the LCS and LCSD exceeds the control limits
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Receipt
The sample was received on 5/22/2014 11:43 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.9º C.

GC/MS VOA
No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS VOA - Method(s) 8260B
The method blank MB 580-159733/1-A for analysis batch 160311 contained Bromoform, Naphthalene and Sec-Butylbenzene above the method detection limit. These target analyte concentrations were less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed. The sample results have been "B" qualified and reported.

The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for analysis batch 160311 recovered outside control limits for Dichlorodifluoromethane. Individual LCS/LCSD recoveries were within the control limits; the data have been "*" qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Definitions/Glossary

Client: Environmental Compliance & Control Inc
Project/Site: W-S251OEC-I

TestAmerica Job ID: 580-43707-1

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	RPD of the LCS and LCSD exceeds the control limits
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Receipt

The sample was received on 5/22/2014 11:43 AM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 4.9º C.

GC/MS VOA - Method(s) 8260B

The method blank MB 580-159980/6 for analysis batch 159980 contained Methylene chloride above the reporting limit (RL). None of the samples associated with this method blank contained the target compound; therefore, re-extraction and/or re-analysis of samples were not performed. In addition, the method blank contained Tetrachloroethene above the method detection limit. This target analyte concentration was less than the reporting limit (RL). The sample results have been "B" qualified and reported.

The method blank MB 580-160174/6 for analysis batch 160174 contained Methylene chloride and Tetrachloroethene above the method detection limit. These target analyte concentrations were less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples were not performed. The sample results have been "B" qualified and reported.

The %RPD of the laboratory control sample (LCS) and laboratory control standard duplicate (LCSD) for analysis batch 160174 recovered outside control limits for Trichlorofluoromethane. The individual LCS/LCSD recoveries were in control; therefore, the data have been "*" qualified and reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
*	RPD of the LCS and LCSD exceeds the control limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	Not present
Sample custody seals, if present, are intact.	N/A	Not present
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Receipt

The sample was received on 7/25/2014 2:30 PM; the sample arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.1º C.

GC/MS VOA - Method 8260B:

The method blank for batch 166098 contained Toluene, Hexachlorobutadiene, 1,2,4-Trimethylbenzene, m-Xylene & p-Xylene above the method detection limit. These target analyte concentration were less than the reporting limit (RL); therefore, re-extraction and/or re-analysis of samples was not performed.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
580-44638-1

Receipt
The samples were received on 7/24/2014 2:45 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 0.9º C.

Except:

Due to employee oversight, the one water sample EB:W072314 (580-44638-7), 3 HCl vials, received with this job was inadvertantly placed in the freezer along with the methanol and stir-bar vials. Consequently all of the vials ruptured.

GC/MS VOA
Method 8260B: The method blank for analysis batch 166015 contained Naphthalene above the method detection limit. The concentration in the blank was less than the reporting limit (RL). Therefore, re-analyses of samples were not required.

The Internal standard responses for Chlorobenzene-d5 and 1,4-Dichlorobenzene-d5 were outside of lower acceptance limits for sample MW23:S185190 (580-44638-2) in analytical batch 166015. The sample was reanalyzed in analytical batch 166118 with similarly failing low internal standard responses, confirming a sample matrix interference. The affected compounds were flagged with an asterisk(*). On the surface, the low internal standard responses may result in associated target compounds having a potential high bias. However, the only analyte detection was tetrachloroethene and the concentration value is below the reporting limit, so the overall impact is negligible.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	ISTD response or retention time outside acceptable limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	H2O vials inadvertantly placed in freezer in SC.
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

Narrative

Job Narrative
580-44661-1

Receipt
The samples were received on 7/25/2014 2:30 PM, arriving in good condition, properly preserved and, where required, on ice. The temperature of the cooler at receipt was 2.1º C.

GC/MS VOA
Method 8260B: The continuing calibration verification (CCV) associated with batch 166030 recovered above the upper control limit for Carbon tetrachloride and 1,1,1-Trichloroethane . The samples associated with this CCV were non-detects for the affected analytes; therefore, the data have been reported..

The method blank for batch 166030 contained Tetrachloroethene above the method detection limit. This target analyte concentration was less than the reporting limit (RL); therefore, re-analyses of samples were not performed.

The laboratory control sample (LCS) for batch 166030 recovered outside control limits for Carbon tetrachloride, Dichlorobromomethane, Chlorodibromomethane, Bromoform and 1,2-Dibromo-3-Chloropropane. These analytes were biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported. The laboratory control sample duplicate (LCSD) for batch 166030 recovered outside control limits for Chlorodibromomethane, Isopropylbenzene, Bromoform and 1,2-Dibromo-3-Chloropropane. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

Aanalytical Batch 166030: The surrogate Dibromofluoromethane recoveries for the QC samples MB 580-166030/6 and LCS 580-166030/7 and client sample 580-44661-B-3 were outside the upper control limit. The high bias in the QC samples effects the compounds associated with the failing surrogate. The client samples in analytcal batch 166030 were evaluated for these compounds and all detected target compounds associated with Dibromofluoromethane were reanalyzed. Only ND results for compounds associated with the failing surrogate are reported as the recoveries indicate a potential high bias. The data is reported in consultation with the QA department.

Samples FD:G072514 (580-44661-2) and MW23:G072514 (580-44661-1) were analyzed with the surrogate Dibromofluoromethane failing outside the upper QC limit in the associated method blank and LCS in analytical batch 166030. The high recovery suggests a possible high bias with the associated compounds which include Bromoform. The target analyte Bromoform is reported from this initial analysis because attempt at reanalysis within the holding time were not successful.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.
*	LCS or LCSD exceeds the control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
E	Result exceeded calibration range.
H	Sample was prepped or analyzed beyond the specified holding time
X	Surrogate is outside control limits
B	Compound was found in the blank and sample.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

VCP Contact:	Dale Meyers
Subject:	Request for *Contained-In* Determination

Dear Mr. Yasuda:

Site investigation activities have been undertaken at the former Custom Cherry Cleaners site located at 2510 East Cherry Street in Seattle, Washington (Figure 1). These activities have identified contaminated soil that contains halogenated volatile organic compounds (HVOCs). Based on previous soil test data, ECC Horizon requests that the Washington State Department of Ecology (Ecology) issue a *Contained-In* determination designating a certain portion of these soils as *non-hazardous* waste.

We previously requested this determination in a letter to you, dated 11/21/13. You responded by email on 11/21/13 and asked us to provide additional supporting information. We are now resubmitting our request in a format that conforms to the Ecology guidance you referenced. In addition, the following information supports this request and includes responses to your 11/21/13 comments. For your convenience, we included the original request and response in Attachment A.

Contained In-Determination Request

Please see the attached Contained-In Determination Request Form (Attachment B) for details regarding our request in accordance with the Ecology guidance, as you requested.

Response to Ecology's 11/21/13 Comments

Ecology Comment 1: The 1,600 cubic yards of yet-to-be excavated PCE/TCE soils are not approved for a contained out determination. Up to 440 mg/kg PCE was found in soil samples.

ECC Response 1: Noted. We now ask Ecology to re-consider this determination based on the additional information provided in this request.

Ecology Comment 2: Ecology has concerns that many of the yet-to-be excavated soils will fail the TCLP test for TCE, PC (and possibly VC) Hazardous Waste Designation. You and your client need to test the highly contaminated PCE/TCE soils with the TCLP test (PCE, TCE, VC) to determine if any of these soils fail dangerous waste characteristic tests: D039, D040, and D043. Only discrete soil samples (Sample Method 5035) are allowed for TCLP testing. Soil mixing or compositing is not allowed.

ECC Response 2: In March of 2014, ECC Horizon collected discrete soil samples from soil borings SB-12 through SB-20 and SB-22 through SB-37. Thereafter, ECC Horizon used a photoionization detector to field-screen the recovered soils and collect 62 soil samples. These samples were tested by Pace Analytical Services, Inc., in Seattle, Washington for VOCs and TCLP-VOCs using EPA Method 8260B. Of the 62 samples, 53 are located in the top 15 feet of soil, which is within the depth of the planned excavation.

The resulting test data from the 53 samples evidence a range of tetrachloroethylene (PCE) concentrations from 0.027 milligrams per kilogram (mg/kg) to 960 mg/kg and a range of trichloroethylene (TCE) concentrations from non-detect to 0.077 mg/kg in soil. We note detections of up to 4.5 mg/kg TCE in soil were previously found in soil borings FB-3, FB-4 and FB-5 installed in 2008. However, recent soil samples from soil borings SB-18, SB-20 and SB-25 advanced adjacent to the previous boring locations evidenced a maximum TCE detection of 0.0031 mg/kg. In each instance, the TCE concentrations in these locations have decreased by over an order of magnitude since 2008.

The resulting TCLP test data from the 53 samples evidenced a range of PCE concentrations from non-detect to 2,300 ug/L. No other HVOCs were detected in the TCLP analysis.

With the exception of a single sample from SB-30 (12.9-14.9 feet deep), all soil samples evidenced HVOCs below Ecology's *Model Toxics Control Act* (MTCA) Method B Closure Levels and TCLP results "passed" dangerous waste characteristic tests for PCE (D039), TCE (D040) and vinyl chloride (D043). The data are summarized and compared to the corresponding MTCA cleanup standards on the table in Attachment B.

Ecology Comment 3: It is not clear to Ecology where the line of demarcation is between highly contaminated soils that may likely fail the TCLP AND the less contaminated soils that may pass the TCLP. Additional horizontal and vertical delineation of the soil contamination would be required in order for Ecology to agree where that demarcation line is located.

ECC Response 3: Additional soil samples were collected and tested as requested and described above. With the exception of a single sample from SB-30 (12.9-14.9 feet deep), all soil samples evidenced TCLP HVOCs that "passed" the dangerous waste characteristic tests for PCE (D039), TCE (D040) and vinyl chloride (D043).

Soils excavated within 5 feet of SB-30 will be segregated from other excavated soils and will be disposed of as hazardous waste.

Ecology Comment 4: The soil analytical data show that there were releases of dry cleaner solvents into the soils. Groundwater data was not submitted to Ecology, however, it seems likely that groundwater would also be contaminated.

ECC Response 4: Groundwater impacts have been found at the site. However, groundwater has not been encountered in the top 15 feet of soil at this site and it is not expected that groundwater will be encountered or removed during the planned excavation activities. Therefore, we have not provided groundwater analytical information as part of this document.

Ecology Comment 5: The exact location of the planned excavation is not clear to Ecology. It is likely that the planned excavation extends well beyond the location of the 6 or 7 soil boring locations. If this is the case, there is insufficient data or information in order to adequately characterize the contamination in those yet-to-be excavated soils for contained out determination purposes.

ECC Response 5: The planned excavation boundaries are shown on Figure 1 in Attachment B. As described above, additional soil samples were collected in March of 2014. These soil borings were generally installed in a grid pattern on 10-foot centers throughout the planned excavation area and either 2 or 3 samples were tested from the top 15 feet of each boring. The planned excavation depth does not exceed 15 feet below ground surface. The resulting data from these 53 soil samples is representative of the to-be-excavated soils.

Should you have any questions or need for additional information, please contact our office at your convenience.

Very truly yours,
ECC Horizon

Subject:	Request for *Contained-In* Determination

Dear Mr. Yasuda:

Site investigation activities have been undertaken at the former Custom Cherry Cleaners site located at 2510 East Cherry Street in Seattle, Washington (Figure 1). These activities have identified contaminated soil that contains halogenated volatile organic compounds (HVOCs). Based on previous soil test data, ECC Horizon requests that the Washington State Department of Ecology (Ecology) issue a *Contained-In* determination designating a certain portion of these soils as *non-hazardous* waste. The following information supports this request.

Technical Background

The subject property is enrolled in the State of Washington's Voluntary Cleanup Program. Through November of 2013, ECC Horizon conducted a site investigation to advance regulatory compliance. In the course of its work, ECC Horizon advanced soil borings to 60 feet (ft) below grade surface (bgs) to assess the underlying conditions. These activities have identified HVOC-impacted soils located beneath the former Cherry Cleaners building. Of these impacted soils, approximately 1,600 cubic yards of contaminated soil, located from grade to a maximum depth of 15 ft bgs, have been targeted for excavation and disposal.

Chapter 173-303 of the Washington Administrative Code (WAC) requires that specific HVOC-containing wastes be managed as *hazardous waste.* However, the Resource Conservation and Recovery Act (RCRA) provides a basis for Ecology to issue a *Contained-In* determination when site-specific wastes do not present hazardous characteristics. The following information provides a basis for Ecology to issue a *Contained-In* determination for the above-referenced soils.

Soil Characteristics

To investigate subsurface conditions at the site, ECC Horizon collected discrete soil samples from soil borings FB-3 through FB-6, SVE-2, VP-2 and VP-3. Thereafter, ECC Horizon used a photoionization detector to field-screen the recovered soils and collect 12 soil samples. These samples were tested by Pace Analytical Services, Inc., in Seattle, Washington using EPA Method 8260/5035A. The boring locations are shown in Figure 2, attached.

The resulting test data evidence a range of tetrachloroethylene (PCE) concentrations from 0.295 milligrams per kilogram (mg/kg) to 440 mg/kg and a range of trichloroethylene (TCE) concentrations from non-detect to 4.5 mg/kg. All soil samples evidenced HVOCs below Ecology's *Model Toxics Control Act* (MTCA) Method B Closure Levels. The data are summarized and compared to the corresponding MTCA cleanup standards on the attached table. Copies of the laboratory analytical reports are also attached for your review.

Waste Designation

Chapter 173-303 WAC designates PCE- and TCE-containing wastes as *F002*, which are typically managed according to federal RCRA provisions for *hazardous wastes.* However, the above-referenced soil data show that the targeted soils meet Ecology's MTCA Method B soil cleanup levels. Based on ECC Horizon's understanding of Ecology policies, soil data that complies with Method B cleanup levels may be used to classify waste soils as *non-hazardous*. Consequently, ECC Horizon requests that Ecology issue a *Contained-In* determination letter designating all of the referenced waste as *non-hazardous* waste.

ECC Horizon has retained Clearcreek Contractors, Inc., of Everett, Washington to coordinate the transport and disposal of these materials. Following Ecology's designation of these soils as *non-hazardous* waste, the soils will be excavated and transported from the site directly to Republic Service's Roosevelt Regional Landfill in Roosevelt, WA for disposal.

Should you have any questions or need for additional information, please contact our office at your convenience.

Very truly yours,
ECC Horizon

Re: Analytical Data for Project 129-001
Laboratory Reference No. 0801-026

Dear Jeff:

Enclosed are the analytical results and associated quality control data for samples submitted on January 4, 2008.

The standard policy of OnSite Environmental Inc. is to store your samples for 30 days from the date of receipt. If you require longer storage, please contact the laboratory.

We appreciate the opportunity to be of service to you on this project. If you have any questions concerning the data, or need additional information, please feel free to call me.

Sincerely,

David Baumeister
Project Manager

Enclosures

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

Date of Report: January 16, 2008
Samples Submitted: January 4, 2008
Laboratory Reference: 0801-026
Project: 129-001

Case Narrative

Samples were collected on January 4, 2008 and received by the laboratory on January 4, 2008. They were maintained at the laboratory at a temperature of 2°C to 6°C except as noted below.

General QA/QC issues associated with the analytical data enclosed in this laboratory report will be indicated with a reference to a comment or explanation on the Data Qualifier page. More complex and involved QA/QC issues will be discussed in detail below.

Halogenated Volatiles EPA 8260B Analysis

Per EPA Method 5035A, samples were received by the laboratory in pre-weighed 40 mL VOA vials within 48 hours of sample collection. They were stored in a freezer at between -7°C and -20°C until extraction or analysis.

Internal Standards Chlorobenzene-d5 and 1,4-Dichlorobenzene-d4 do not meet acceptance criteria for sample FB1-7 possibly due to sample matrix effects. The sample was re-analyzed for confirmation and all four internal standards failed to meet acceptance criteria. (Leaks in the sealed VOA environment caused by grit between the VOA lip and VOA cap septum have been shown to cause low recovery for all internal standards.) Therefore, all results from the original data, including Practical Quantitation Limits, from (trans) 1,3-Dichloropropene onward should be considered estimates.

Internal Standard 1,4-Dichlorobenzene-d4 does not meet acceptance criteria for samples FB3-7 and FB5-1 due to sample matrix effects. Dilutions of the samples had acceptable internal standard recoveries. All results, including Practical Quantitation Limits, from Bromobenzene onward should be considered estimates.

Any other QA/QC issues associated with this extraction and analysis will be indicated with a footnote reference and discussed in detail on the Data Qualifier page.

This report pertains to the samples analyzed in accordance with the chain of custody, and is intended only for the use of the individual or company to whom it is addressed.

OnSite Environmental Inc.

Data Qualifiers and Abbreviations

A - Due to a high sample concentration, the amount spiked is insufficient for meaningful MS/MSD recovery data.

B - The analyte indicated was also found in the blank sample.

C - The duplicate RPD is outside control limits due to high result variability when analyte concentrations are within five times the quantitation limit.

E - The value reported exceeds the quantitation range and is an estimate.

F - Surrogate recovery data is not available due to the high concentration of coeluting target compounds.

H - The analyte indicated is a common laboratory solvent and may have been introduced during sample preparation, and be impacting the sample result.

I - Compound recovery is outside of the control limits.

J - The value reported was below the practical quantitation limit. The value is an estimate.

K - Sample duplicate RPD is outside control limits due to sample inhomogeneity. The sample was re-extracted and re-analyzed with similar results.

L - The RPD is outside of the control limits.

M - Hydrocarbons in the gasoline range are impacting the diesel range result.

M1 - Hydrocarbons in the gasoline range (toluene-napthalene) are present in the sample.

N - Hydrocarbons in the lube oil range are impacting the diesel range result.

O - Hydrocarbons indicative of heavier fuels are present in the sample and are impacting the gasoline result.

P - The RPD of the detected concentrations between the two columns is greater than 40.

Q - Surrogate recovery is outside of the control limits.

S - Surrogate recovery data is not available due to the necessary dilution of the sample.

T - The sample chromatogram is not similar to a typical _____.

U - The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U1 - The practical quantitation limit is elevated due to interferences present in the sample.

V - Matrix Spike/Matrix Spike Duplicate recoveries are outside control limits due to matrix effects.

W - Matrix Spike/Matrix Spike Duplicate RPD are outside control limits due to matrix effects.

X - Sample extract treated with a mercury cleanup procedure.

Y - Sample extract treated with an acid/silica gel cleanup procedure.

Z -

ND - Not Detected at PQL
PQL - Practical Quantitation Limit
RPD - Relative Percent Difference

RE: Project: Cherry Cleaners W-S25PEL
Pace Project No.: 254303

Dear John Meyer:
Enclosed are the analytical results for sample(s) received by the laboratory on July 19, 2010. The results relate only to the samples included in this report. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Regina SteMarie

QUALIFIERS

Project: Cherry Cleaners W-S25PEL
Pace Project No.: 254303

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is NELAP accredited. Contact your Pace PM for the current list of accredited analytes.

Subject: Ecology Response Contained-In Determination Request - Former Cherry Cleaners Ecology VCP No. NW2009

Hi Andrew,

Thank you for your submittal. Ecology has performed a preliminary review of your soil analytical data submitted on November 21, 2013 for the former Cherry Cleaners cleanup site at 2510 East Cherry St, Seattle, WA.

The following are Ecology's determinations based on the soil-only analytical data submitted:

1. The 1,600 cubic yards of yet-to-be excavated PCE/TCE soils are not approved for a contained out determination. Up to 440 mg/kg PCE was found in soil samples.
2. Ecology has concerns that many of the yet-to-be excavated soils will fail the TCLP test for TCE, PC (and possibly VC) Hazardous Waste Designation. You and your client need to test the highly contaminated PCE/TCE soils with the TCLP test (PCE, TCE, VC) to determine if any of these soils fail dangerous waste characteristic tests: D039, D040, and D043. Only discrete soil samples (Sample Method 5035) are allowed for TCLP testing. Soil mixing or compositing is not allowed.
3. It is not clear to Ecology where the line of demarcation is between highly contaminated soils that may likely fail the TCLP AND the less contaminated soils that may pass the TCLP. Additional horizontal and vertical delineation of the soil contamination would be required in order for Ecology to agree where that demarcation line is located.
4. The soil analytical data show that there were releases of dry cleaner solvents into the soils. Groundwater data was not submitted to Ecology, however, it seems likely that groundwater would also be contaminated.
5. The exact location of the planned excavation is not clear to Ecology. It is likely that the planned excavation extends well beyond the location of the 6 or 7 soil boring locations. If this is the case, there is insufficient data or information in order to adequately characterize the contamination in those yet-to-be excavated soils for contained out determination purposes.

Lastly, please refer to the following Ecology guidance for submitting future contained out determination proposals and allow for 2-3 weeks for Ecology to review and respond to any proposals.

http://www.ecy.wa.gov/programs/hwtr/determinations/request.html

Please call me if you have any questions.

Thank you

Sincerely,

Dean Yasuda, P.E.

Subject: Contained-In Determination Request - Former Cherry Cleaners (ECC Project No. W-S2510EC-I) (Ecology VCP No. NW2009)

Mr. Yasuda,

Attached please find a request for a *Contained-In* determination for waste soil that will be generated during excavation activities at the former Cherry Cleaners in Seattle, Washington. If you require any additional information, please contact me at your convenience.

Thank you,

Andrew D. Horwath, P.E.

Contained-In Determination Request Form

Contained-In Determination Request Form

(For Submittal to Washington Department of Ecology)

Site Information	
Site Name:	Former Cherry Cleaners
Site Address:	2510 E. Cherry Street Seattle, WA
EPA/RCRA Site ID #: (if applicable)	WAD048686489 (RCRA ID)
Ecology's Facility/Site Database #: (if applicable)	VCP No. NW2009
Source of Contaminants at Site:	incidental releases of dry cleaning chemicals from former operations
Types of businesses, products and wastes used or managed:	Former dry cleaning operation used tetrachloroethylene (PCE)
Dates when contaminants may have been released:	PCE was used from 1968 to June 2007.
Property Owner Information	
Name:	Vera Benton
Mailing Address:	PO Box 145 Grand Coulee, WA 99133
Phone #:	(509)633-1147
Email:	None
Environmental Consultant	
Company Name:	ECC Horizon
Mailing Address:	8383 Craig Street, Suite 110 Indianapolis, IN 46250
Contact Person:	James P. Hogan
Phone #:	317-595-4400
Email:	jhogan@ecchorizon.com
Ecology Site Manager Information	
Name:	Dale Myers
Mailing Address:	3190 160th Ave SE Bellevue, WA 98008-5452
Phone #:	(425) 649-4446
Email:	Damy461@ecy.wa.gov

Contained-In Determination Request Form

(For Submittal to Washington Department of Ecology)

Contaminated Media Information	
Type of Cleanup Activity Generating Contaminated Media: (independent, voluntary or ordered)	Voluntary excavation of impacted soils
Excavation/Waste Generation Schedule: (if already excavated, list amount of time elapsed since excavation)	The excavation will be scheduled following receipt of Ecology's response to this request.
Type of Contaminated Media:	PCE-impacted soil
Volume or Weight of Contaminated Media:	Approximately 2,550 cubic yards including soils to be excavated beyond former building footprint for sloping.
Listed Waste Codes:	F002
Is the Contaminated Media a Federal Characteristic Waste or State-Only Criteria Waste? Describe how determined.	With the exception of soils near SB-30, the soils that will be excavated are NOT Federal Characteristic or State-Only Criteria Wastes. (See Appendix A, *Washington Dangerous Waste Designation Tool*.) Soils near SB-30 are Federal Characteristic and State-Only Criteria Waste and will be disposed of at an approved Hazardous Waste Facility.
Sampling techniques used:	Discrete soil samples were collected using direct push soil boring technology.
Analytical methods used:	Samples collected from soil borings were analyzed for volatile organic compounds (VOCs) via EPA Method 8260B. Several of these soil samples were also analyzed for TCLP – VOCs via EPA Method 8260B.
Identify the number, locations and depths of samples:	See Table 1 and Figure 1, attached

Contained-In Determination Request Form

(For Submittal to Washington Department of Ecology)

Contaminated Media Information (continued)	
Describe how attached analytical data is representative of the level of contamination in contaminated media:	In early 2014, 26 soil borings were collected from the proposed excavation area as shown on Figure 1. At least 2 soil samples were collected from each boring to provide a vertical profile. These data are thus representative of the current soil conditions. Therefore, we recommend these data replace the data presented in our original request (11/21/13). The analytical report is included in Appendix B.
Proposed Management and Disposal of Contaminated Media	
Proposed procedure for managing and disposing of contaminated media:	Excavated soil will be transported off-site to a permitted landfill. Selected landfill will be chosen based on hazardous or contained-in (non-hazardous) determination.
Proposed Non Hazardous Soil Disposal Facility	
Name:	Republic Services Roosevelt Regional Landfill
Address:	500 Roosevelt Grade Road Roosevelt, WA 99356
Contact Person:

Notes:

1. Washington State Department of Ecology Model Toxics Control Act (MTCA) Standard Method B Cleanup Level

2. Federal Land Disposal Restrictions/Universal Treatment Standards from 40 CFR 268.40 and 40 CFR 268.48

3. Washington State TCLP Dangerous Waste Threshold from WAC 173-303-090

4. # denotes no Land Disposal Restriction/Universal Treatment Standard value exists for this compound

TCLP = Toxicity Characteristic Leaching Procedure

bgs = below ground surface

mg/kg = milligrams per kilogram

Chemical abbreviations are as follows: PCE = tetrachloroethylene; TCE = trichloroethylene; DCE = dichloroethylene; VC = vinyl chloride

APPENDIX A

Washington Dangerous Waste Designation Tool

(Excludes results from SB-30 since soils near SB-30 will be segregated and disposed of at an Approved Hazardous Waste Facility)

Washington Dangerous Waste Designation Tool

Start here and work your way down. Only enter text in yellow fields.
Only answer questions yes or no.

DEPARTMENT OF ECOLOGY
State of Washington

Exc. Waste <700ug/L TCLP PCE

..:: DESIGNATION COMPLETE ::..

Applicable Waste Codes		
Listed	*Characteristic*	*State-Only*
F002		

LISTED WASTE	Yes / No	Resource Links		
A Is the waste a solid waste?	yes	Table 1 in WAC 173-303-016		
B Is the waste excluded?	no	WAC 173-303-071		
1 Is the waste a product that has not been used or residue from cleaning up of a spill of an unused product?	no	WAC 173-303-081		
5 Is the waste or the process producing the waste listed in WAC 173-303-9904? Or is the waste a residual from a clean-up of a spill of these listed wastes? (F,K lists)	yes	WAC 173-303-9904	F002	Fill in appropriate waste code(s) to the left
6 **Go to the next step -- evaluate Characteristics**		---		

CHARACTERISTIC WASTE	Yes / No	Resource Links
7 Is the waste a liquid with a flashpoint less than 140°F (60°C)? -or- Is the waste an ignitable solid? -or- Is the waste an ignitable gas? -or- Is the waste an oxidizer per 49 CFR 173.127 and 173.128?	no	WAC 173-303-090 (5) 49 CFR 173.127 49 CFR 173.128
8 Is the waste a water based liquid with a pH less than or equal to 2.0 or greater than or equal to 12.5? -or- Does the waste liquid corrode steel more than 0.25 in (6.35 mm)/yr?	no	WAC 173-303-090 (6)
9 Is the waste a solid and when mixed with 50% water has a pH less than or equal to 2.0 or greater than or equal to 12.5?	no	WAC 173-303-090 (6)
10 Does the waste have cyanide or sulfide in it? -or- Is the waste water reactive? -or- Is the waste unstable? -or- Is the waste explosive?	no	WAC 173-303-090 (7)
11 Does the waste contain Toxicity Characteristic (TC) constituents from the TC List at a concentration above that listed in the standard? (D list)	no	WAC 173-303-090 (8)
15 **Go to the next step -- evaluating for State-Only Toxic Criteria**		---

STATE -- TOXIC CRITERIA	Yes / No	Resource Links
16 Do you know the toxicity of the entire waste, or some of the components?	yes	WAC 173-303-110 (3) (a) and (b)
STARTING POINTS: ❒**Obtain all relevant MSDS of the products that make up the waste**		
❒ **Research toxicity data on the following databases: RTECS, ECOTOX, and TOXNET**		RTECS ECOTOX TOXNET
17 ❒ **Check in with your regional designation contact if you have questions**		Regional Contacts
18 ❒ **Have an analytical laboratory run a fish bioassay if you cannot acquire data anywhere else**		Chemical Test Methods for Designating Dangerous Waste
Complete the table below by entering only the CAS number and percentage by weight of each chemical component in the waste. **If designating gasoline or diesel products, please use the CAS numbers of the dominant constituents in your waste. Gasoline and diesel products often have varying chemical make-ups and wastes containing them cannot have a singular CAS number assigned for designation purposes.**		

19 **When finished with toxicity...**
Go the to next step
-- evaluate for Persistent Criteria

Chemical	CAS No.	Concentration Weight %	Reference	Fish LC_{50} mg/L	Rat Oral LD_{50} mg/kg	Rat Inhalation LC_{50} mg/L	Rabbit Dermal LD_{50} mg/kg	Toxic Category	Halogenated Organic Compound (HOC)?
	Input CAS number must include dashes, e.g., 108-88-3	Input as a percent. Include the % sign, e.g., 15.5%. To convert mg/kg to percentage, divide mg/kg by 10,000 (input with % sign).	Toxicity database information is from, e.g., RTECS or EcoTox	< 0.01	< 0.5	< 0.02	< 2	X	
				0.01 - < 0.1	0.5 - < 5	0.02 - < 0.2	2 - < 20	A

				1 - < 10	50 - < 500	2 - < 20	200 - < 2,000	C	
				10 - 100	500 - 5,000	20 - 200	2,000 - 20,000	D	
Tetrachloroethylene (Perchloroethylene, PERC)	127-18-4	0.004700%	RTECS and	5.00	2,629.0			C	O,F,P,U,WP,HOC
TRICHLOROETHYLENE	79-01-6	0.000450%	RTECS and	42.00	4,920.0		20,000.00	D	O,F,P,U,WP,HOC
Dichloroethene, 1,2-cis-	156-59-2	0.000066%	RTECS, HSDB, Ecotox	135.00		16.47		C	HOC
		0.005216%							

Equivalent Concentration

	0.00% / 1	X
+	0.00% / 10	A
+	0.00% / 100	B
+	0.00% / 1,000	C
+	0.00% / 10,000	D

0.0000%
Waste Code: NA
Designation: Non-toxic

Waste Code	Designation	Min %
WT01	EHW	1%
WT02	DW	0.01%
WT02	DW or Special Waste	0.001%

STATE -- PERSISTANT CRITERIA	Yes / No	Resource Links
20 Does your waste contain halogenated organic compounds as defined in WAC 173-303-040? Halogenated polymers with >5000 molecular weight are exempt from state persistence criteria. See section 3.8.7.2 of the Chemical Test Methods for Designating Dangerous Waste for more details on halogenated polymers. HOC additives not bound to the polymer (e.g., brominated flame retardents), are not exempt. See section 3.8.8.3 of the Chemical Test Methods for Designating Dangerous Waste for more details on additives.	**yes**	WAC 173-303-100 (6) Tip: A halogenated organic compound (HOC) is a chemical with a halide--chlorine (Cl), bromine (Br), fluorine (F), or iodine (I)-- bonded directly to a carbon atom.
21 Is the total concentration of halogenated organic compounds in your waste greater than 10,000 ppm or 1%?	**no**	Chemical Test Methods for Designating Dangerous Waste
22 Is the total concentration of halogenated organic compounds in your waste greater than 100 ppm or 0.01%?	**no**	
20 Is the total concentration of polycyclicaromatic hydrocarbons (as defined in WAC 173-303-040) in your waste greater than 10,000 ppm or 1% ? (WP-- List)	**no**	WAC 173-303-100 (6) WAC 173-303-040 Chemical Test Methods for Designating Dangerous Waste
23 **Go to the next step** **-- evaluating for PCBs**		---

STATE -- POLYCHLORINATED BIPHENYL (PCB)	Yes / No	Resource Links
24 Does your waste contain any PCB?	**no**	WAC 173-303-9904

27 **No further designation is necessary.** ---

Narrative

CASE NARRATIVE
Client: Environmental Compliance & Control Inc
Project: W-S2510EC-I
Report Number: 580-42942-1

This case narrative is in the form of an exception report, where only the anomalies related to this report, method specific performance and/or QA/QC issues are discussed. If there are no issues to report, this narrative will include a statement that documents that there are no relevant data issues.

It should be noted that samples with elevated Reporting Limits (RLs) resulting from a dilution may not be able to satisfy customer reporting limits in some cases. Such increases in the RLs are an unavoidable but acceptable consequence of sample dilution that enables quantification of target analytes within the calibration range of the instrument or that reduces the interferences thereby enabling the quantification of target analytes.

Calculations are performed before rounding to avoid round-off errors in calculated results.

All holding times were met and proper preservation noted for the methods performed on these samples, unless otherwise detailed in the individual sections below.

RECEIPT

The samples were received on 3/26/2014 1:00 PM, 3/27/2014 12:30 PM, 3/28/2014 2:15 PM and 3/31/2014 3:35 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 7 coolers at receipt time were -33.0º C, -30.4º C, 1.5º C, 3.3º C, 4.6º C, 7.1º C and 19.3º C.

Except:

The container labels for the following samples did not match the information listed on the Chain-of-Custody (COC): FD1:S032814 (580-42977-13), SB32:S060080 (580-42977-5). The container labels list SB32:S and FD1:S032614, while the COC lists SB:32:S060080 and FD1:S032814, respectively. The samples have been logged in per the COC.

For 8260 TCLP analysis, the following samples were received at the laboratory outside the required temperature criteria at 19.3°C: FD2:S032914 (580-42990-22), FD3:S032914 (580-42990-23), FD4:S032914 (580-42990-24), SB18:S010010 (580-42990-1), SB18:S100124 (580-42990-2), SB19:S017031 (580-42990-18), SB19:S070084 (580-42990-19), SB19:S200222 (580-42990-20), SB19:S250264 (580-42990-21), SB20:S027027 (580-42990-3), SB20:S050050 (580-42990-4), SB20:S100120 (580-42990-5), SB25:S000019 (580-42990-6), SB25:S070070 (580-42990-7), SB25:S125150 (580-42990-8), SB25:S150200 (580-42990-9), SB25:S200216 (580-42990-10), SB30:S150158 (580-42990-15), SB30:S158189 (580-42990-16), SB30:S200216 (580-42990-17), SB37:S011024 (580-42990-11), SB37:S079100 (580-42990-12), SB37:S200233 (580-42990-13), SB37:S275297 (580-42990-14).

Note: All samples which require thermal preservation are considered acceptable if the arrival temperature is within 2C of the required temperature or method specified range. For samples with a specified temperature of 4C, samples with a temperature ranging from just above freezing temperature of water to 6C shall be acceptable. Samples that are hand delivered immediately following collection may not meet these criteria, however they will be deemed acceptable according to NELAC standards, if there is evidence that the chilling process has begun, such as arrival on ice, etc.

TCLP VOLATILE ORGANIC COMPOUNDS (GC-MS)

The continuing calibration verification (CCV) associated with analysis batch 156720 recovered above the upper control limit for 1,1-Dichloroethene. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been "^" qualified and reported.

No other difficulties were encountered during the TCLP volatiles analysis.

All other quality control parameters were within the acceptance limits.

VOLATILE ORGANIC COMPOUNDS (GC-MS) - Low Level

Job ID: 580-42942-1 (Continued)

Laboratory: TestAmerica Seattle (Continued)

Samples SB27:S000010 (580-42942-1), SB27:S118136 (580-42942-2), SB23:S010032 (580-42942-3), SB23:S103133 (580-42942-4), SB17:S005029 (580-42942-5), SB17:S100114 (580-42942-6), SB14:S005030 (580-42942-7), SB15:S005031 (580-42942-9), SB15:S119134 (580-42942-10), SB26:S134146 (580-42949-10), SB30:S100129 (580-42949-12), SB35:S080100 (580-42949-16), SB35:S107137 (580-42949-17), SB31:S128148 (580-42949-19), SB24:S000019 (580-42977-1), SB24:S115134 (580-42977-2), SB28:S017035 (580-42977-3), SB32:S060080 (580-42977-5), SB36:S000017 (580-42977-7), SB36:S100115 (580-42977-8), SB29:S000017 (580-42977-11), SB29:S105123 (580-42977-12), FD1:S032814 (580-42977-13), SB18:S010010 (580-42990-1), SB20:S027027 (580-42990-3), SB25:S000019 (580-42990-6), SB25:S125150 (580-42990-8), SB37:S011024 (580-42990-11), SB37:S275297 (580-42990-14), SB30:S150158 (580-42990-15), SB30:S158189 (580-42990-16), SB30:S200216 (580-42990-17), SB19:S017031 (580-42990-18), FD2:S032914 (580-42990-22) and FD3:S032914 (580-42990-23) contained Tetrachloroethene outside the upper calibration level for direct sparge soils 8260 method (low level). The analyte has been reported from this method with an “E” flag. The samples have been scheduled for reanalysis by 8260B MeOH extraction method. Both sets of data have been reported.

Sample SB30:S129149 (580-42949-13) is highly contaminated causing matrix interference and retention time shifts. The data has been reported from the MeOH analysis for all target compounds.

Internal standard (IS) 1,4-Dichlorobenzene-d4 responses were outside the lower acceptance limits for samples SB25:S000019 (580-42990-6) and SB37:S011024 (580-42990-11). The low recovery of this IS indicates a potential high bias for associated analytes in IS group 51. All associated compounds in IS group 51 were non-detects; therefore, the affected analytes have been “*” qualified and reported.

Internal standard (IS) 1,4-Dichlorobenzene-d4 response was outside the lower acceptance limits for sample SB19:S017031 (580-42990-18). The low recovery of this IS indicates a potential high bias for associated analytes in IS group 51. All associated compounds in IS group 51 were non-detects; except analyte 4-Isopropyltoluene. Due to the contamination levels seen in the sample, result for 4-Isopropyltoluene has been reported from the MeOH analysis.

Tetrachloroethene was detected in method blank MB 580-156514/1-A at a level exceeding the reporting limit. Associated samples were not re-extracted and/or re-analyzed because results were greater than 10X the value found in the method blank. The sample results have been “B” qualified and reported.

Tetrachloroethene was detected in method blank MB 580-156722/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been “J” flagged. The sample results have been “B” qualified and reported.

Tetrachloroethene was detected in method blank MB 580-156826/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been “J” flagged. The sample results have been “B” qualified and reported.

Tetrachloroethene was detected in method blank MB 580-156924/1-A at a level that was above the method detection limit but below the reporting limit. The value should be considered an estimate, and has been “J” flagged. The sample results have been “B” qualified and reported.

No other difficulties were encountered during the VOC analysis.

All other quality control parameters were within the acceptance limits.

VOLATILE ORGANIC COMPOUNDS (GC-MS) - MEOH Extraction

Due to the sample matrix and instrument’s capacity, samples SB26:S134146 (580-42949-10), SB24:S115134 (580-42977-2), SB28:S017035 (580-42977-3), SB36:S000017 (580-42977-7), SB36:S100115 (580-42977-8), SB29:S000017 (580-42977-11), SB29:S105123 (580-42977-12), FD1:S032814 (580-42977-13), SB18:S010010 (580-42990-1), SB20:S027027 (580-42990-3), SB25:S000019 (580-42990-6), SB25:S125150 (580-42990-8), SB37:S011024 (580-42990-11), SB37:S275297 (580-42990-14), SB30:S150158 (580-42990-15), SB30:S158189 (580-42990-16) and SB30:S200216 (580-42990-17) were reanalyzed for Tetrachloroethene outside of the holding time. The data have been “H” qualified and reported.

Due to the nature of sample matrix, sample SB30:S129149 (580-42949-13) required multiple dilutions to bring the concentration of Tetrachloroethene within the calibration range. The 1000X dilution was performed outside of holding time. Both sets of data have been

Job ID: 580-42942-1 (Continued)

Laboratory: TestAmerica Seattle (Continued)

reported.

Several analytes were detected in method blank MB 580-156550/1-A at levels that were above the method detection limit but below the reporting limit. The values should be considered estimates, and have been “J” flagged.

The continuing calibration verification (CCV) associated with analysis batch 156533 recovered above the upper control limit for Methylene Chloride. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been “^” qualified and reported.

No other difficulties were encountered during the VOC analysis.

All other quality control parameters were within the acceptance limits.

PERCENT SOLIDS

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
E	Result exceeded calibration range.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC exceeds the control limits.
H	Sample was prepped or analyzed beyond the specified holding time
F2	MS/MSD RPD exceeds control limits
*	ISTD response or retention time outside acceptable limits

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
¤	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
