QC Code: D = field duplicate sample; DP = assoicated field sample (the duplicate pair); ASC - sample preserved with ascorbic acid.
Water Quality Zones: USA = Unconsolidated Sedimentary Aquifer; TGA = Troutdale Gravel Aquifer
ft bgs - feet below ground surface
U - Constituent not detected above reported sample detection limit.
UB - Result qualified as undetected due to a concentration less than 5 times the concentration detected in a QC blank.
Table includes constituents present above detection limits in at least one well.

Data Qualifiers

U = Not detected at or above the method reporting limit).

UJ = Not detected at or above the method reporting limit. However, the method reporting limit value is uncertain.

J = The analyte was positively identified but the associated value is approximate.

N = Indicates an analyte has been tentatively identified but not all required identification criteria were met.
The associated result is both qualitatively and quantitatively uncertain.

R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet
quality control criteria. The presence or absence of the analyte cannot be verified.

Sample IDs

ZZ = Site (e.g. CM = Cascade Manufacturing, POV = Port of Vancouver)

SG = Soil Gas

= Monitoring Well

Units

µg/m^3 = micrograms per cubic meter

ppbv = parts per billion volume (compound concentrations converted from µg/m^3 to ppbv using ideal gas constant at 20ºC and compound molecular weight)

Miscellaneous

(Dup) = Field Duplicate

Data Qualifiers

U = Not detected at or above the method reporting limit).

UJ = Not detected at or above the method reporting limit. However, the method reporting limit value is uncertain.

J = The analyte was positively identified but the associated value is approximate.

N = Indicates an analyte has been tentatively identified but not all required identification criteria were met. The associated result is both qualitatively and quantitatively uncertain.

R = The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

Bold items indicate results above detection limits.
Shaded items indicate results above 10,000 ug/L.
U - result not detected above detection limit.
J - result is estimated.
B - result may be due to cross-contamination or lab contamination
Table includes only analytes for which at least one result was above detection limits.
-- = Not sampled or analyzed.
