INTERIM ACTION CONSTRUCTION REPORT

WYPENN PROPERTY

TACOMA, WASHINGTON

INTRODUCTION

This report documents the completion of the shallow soil Interim Action completed on the Wypenn property located at 2920 Taylor Way, Tacoma, Washington (Figure 1). The purpose of the interim action was to remediate soil at the property to industrial cleanup levels, to 15 feet below ground surface for compliance with MTCA guidance for the soil point of compliance. This remedy supports future use of the site under industrial zoning, consistent with current zoning. Intended use of the property is inclusion in marine terminal development. This parcel can be developed in the future with paved areas, rail tracks, drainage facilities, and gate/office or warehouse facilities.

BACKGROUND

The Wypenn property is a relatively flat triangular shaped property approximately 3.2 acres in size located on a peninsula of land between the Hylebos and Blair Waterways (Figure 1). The approximate center of the Wypenn property is about 1,000 feet from the Hylebos Waterway and 2,000 feet from the Blair Waterway. Taylor Way defines the northeasternⁱ property boundary. Property (Blair Backup property) owned by the Puyallup Tribe of Indians (Tribe) is located along the southern and western property boundaries.

The Wypenn property was used from the 1950's until 1986 as a pesticide/herbicide research facility. Facilities on the Wypenn property included the Ag Chem Building, three large above-ground storage tanks (ASTs), and a greenhouse. Small amounts of insecticidal and herbicidal chemical compounds were used in on-site test plots and the greenhouse. The three large ASTs were originally used to store caustic soda and later used to store Bunker C fuel oil in 1974, and were removed in 1995.

Significant investigation and cleanup occurred prior to the Port's June 2007 acquisition of the Wypenn property (Boateng 1993). In July 2011 the Port entered into Agreed Order No. DE 5668 (Order) with the Washington State Department of Ecology (Ecology). The Order included provisions to remediate soil on the Wypenn property as an Interim Action in order to support the Port's desire to convey the property to the Tribe for redevelopment. The Interim Action described herein was conducted under the Order. It is not a Final Action, as groundwater concerns remain at the property. Groundwater concerns will be addressed as part of a Cleanup Action Plan that will be developed by the Port in future.

ⁱ Relative to true north.

The Port and Tribe entered into a Purchase and Sale Agreement (Agreement) in April 2008, governing a complicated multiple property transaction including the Wypenn property. The Port will provide notice to Ecology before the property is conveyed to the Tribe as required under the Order.

Several iterations of data gap identification and investigation have been completed under the Order (DOF 2009, DOF 2010, DOF 2012a, DOF 2013a, DOF 2013b and DOF 2014). This work concluded that arsenic is the only constituent of potential concern at the Wypenn property, and identified an industrial cleanup level of 88 mg/kg for soil based on WAC 173-340-740 (7) (d) and -740(7)(e). To meet the cleanup level, three criteria must be met as discussed in DOF (2013a) and summarized in the following table:

Criteria	Evaluation	Conclusion
Upper 95% confidence on the mean cannot exceed the CUL.	Statistical analysis indicated the UCL95% concentration to be 37 mg/kg.	The UCL95% concentration was below the CUL of 88 mg/kg so this condition was satisfied.
No more than 10% of the samples can exceed the CUL.	Nine of 99 samples exceeded the CUL or 9.1%	Less than 10% of the samples exceeded the CUL so this condition was satisfied
No single sample can exceed two times the CUL.	No single sample can exceed two times the CUL (2x 88 mg/kg=176 mg/kg)	Three samples exceeded 176 mg/kg so this criterion was not met.

The analysis described above indicated some cleanup for arsenic was necessary (i.e. remove soil with arsenic concentrations greater than 176 mg/kg). It should be noted that by removing such soil, both the UCL95% concentration and the percentage of samples exceeding 88 mg/kg would be further reduced. Based on these data an interim action area was proposed (DOF 2014). The interim action extent and excavation depths were approved by Ecology on May 5, 2014. The interim action area and depths are illustrated on Figure 2.

The Port prepared plans and specifications and public-works bid the remedial work in June 2014 based on the approved interim action. A remedial contractor was selected in July who mobilized to the site on August 13th. Remedial excavation began on September 16th. Substantial completion (excavation, off-site soil transport/disposal and backfilling) of the interim action was accomplished by the end of September. Site restoration (final grading, seeding and demobilization) was completed in October and early November.

PROJECT TEAM

The project team consisted of Port staff, staff from Dalton, Olmsted and Fuglevand, Inc. (technical consultant) and Clearcreek Contractors (remedial contractor):

Port Staff

- Carol Rhodes – Overall Project Manager
- Scott Hooton – Environmental Project Manager
- Lisa Ross – Construction Inspector

Dalton, Olmsted & Fuglevand, Inc. (DOF)

- Matt Dalton – DOF Project Manager
- Dave Cooper – Field Observation and Documentation

Clearcreek Contractors

- Darren Ness – Project Manager
- Jim Burke - Site Superintendent
- Mark Beyler (Beyler Consulting) – Surveyor contracted by Clearcreek

PERMITTING AND PROJECT APPROVALS

- **Wetlands** – The interim action area lies within an identified wetland. The U.S. Army Corps of Engineers (Reference No. NWS-2010-0817-WRD) approved coverage under Nationwide Permit (NWP) 38 to remove contaminated soil. Ecology determined that the project meets the requirements of Washington State 401 Water Quality Certification and Coastal Zone Management Act Consistency under NWP 38 and an Individual 401 certification was not required (Ecology 2013).
- **Storm Water** – The project was designated as a no-discharge site so a formal storm water construction permit was not required. A Temporary Erosion and Sediment Control (TESC) plan including requirements for a construction entrance, roadway ballasting, silt fencing, wheel wash, plugging of catch basins, dust control and pavement sweeping was prepared.
- **Soil Disposal** – Testing completed by DOF indicated that the excavated material did not designate as a dangerous waste (DW) and could be disposed in a Subtitle D Landfill. Clearcreek Contractors elected to dispose of excavated soil at the LRI Landfill located in Pierce County, Washington. Disposal was authorized by the Tacoma-Pierce County Health Department (see Appendix A).

CONSTRUCTION CHRONOLOGY

- **Site mobilization (August 12th to 15th)** – Staked wetland, wetland buffer and excavation areas, removed old fencing, brush and miscellaneous debrisⁱⁱ, installed entrance gate, imported and placed ballast (spalls - crushed rock) for haul road, established stockpile and support areas, and implemented Temporary Erosion and

ⁱⁱ These materials were disposed off-site at the LRI Landfill.

Sediment Controls (included plugging storm drains, and installing silt fencing, a construction entrance/exit and a truck wheel wash). Quarry spalls were also imported and stockpiled so that the excavation could be backfilled soon after the target excavation depth was reached.

- **Soil excavation, off-site disposal and backfilling (September 16th to 26th)** – Excavated soil from the area and depths outlined in the Ecology approved IAWP. Placed quarry spalls below the water table and pit-run sand and gravel above the water table to within approximately one-foot of the existing grade. Loaded target soils into trucks and disposed of the soils at the LRI Landfill.
- **Site restoration and demobilization (September 29th to November 12th)** – Completed site grading, and placed top-soil, seed and fertilizer/mulch in the remedial and other areas in accordance with the plans and specifications. Personal protective equipment (PPE) and miscellaneous trash were disposed off-site with the target soils. Wheel-wash water was disposed off-site.

REMEDIAL EXCAVATION AND OBSERVATIONS

- Record (as-built) drawings were prepared by the remedial contractor and are presented in Appendix B. The drawings include the following:
 - Drawing V1 – Pre-Construction Survey (August 14, 2014)
 - Drawing V2 – Progress Survey No. 1 (September 22, 2014)
 - Drawing V3 – Progress Survey No. 2 (September 25, 2014)
 - Drawing V4 – As-Built Extents of Final Excavation
 - Drawing C3.1A – As-Built Excavation and Backfill Plan
- Dave Cooper, Principal Geologist with DOF, observed and documented the remedial excavation activities. Photographs that illustrate the remedial activities are presented in Appendix C.
- The remedial excavation work was completed during a relatively dry period, where a total of 2.21-inches of precipitation occurred between August 19 and September 26. No precipitation run-off exited the interim action project area throughout the duration of the project.
- Excavation was completed in cells using several trench boxes and steel plates to maintain sidewall stability. Once the target excavation depth was reached (up to 12 feet), the depth was confirmed by DOF and quarry spalls were placed to above the water tableⁱⁱⁱ. Previous testing indicated that soil with the highest arsenic concentrations was present near the bottom of the target excavation. This soil was

ⁱⁱⁱ The water table was at an approximate depth of 5 feet below ground surface when the interim action was completed.

visually distinct. Field observations confirmed that soil with the highest arsenic concentrations was removed to achieve the objective of the IAWP.

- A small amount of groundwater seepage occurred into the excavation. Seepage was low enough so that pumping from the excavation was not required to complete the full excavation or to confirm that target depths had been reached. The small amount of water was mixed with soil disposed off-site.

OFF-SITE DISPOSAL QUANTITIES

- A total of 2,216.6 tons of material were disposed at the LRI Landfill located at 30919 Meridian/SR161, Graham, WA. Most of the disposed material was soil containing arsenic. The indicated quantity also includes a small amount of debris, brush, used PPE and trash. A summary and disposal trip tickets are included in Appendix D.
- Approximately 1,700 gallons of water from the wheel-wash was disposed off-site by Emerald Services Inc. as a non-regulated material. The Bill of Lading and Gallonage Ticket is included in Appendix D.

IMPORT MATERIAL TESTING AND QUANTITIES

Materials imported to the site were used to construct the construction entrance/exit and haul road (quarry spalls - crushed rock), back fill the remedial excavation (quarry spalls and pit-run sand and gravel) and restore the site (top-soil). Prior to delivery to the site the contractor was required to collect and chemically analyze representative samples. The analytical results for each material are presented in Appendix E. The quantities and sources of the materials are listed in the following table. Imported material quantities are presented in Appendix D (quarry spalls, clean rock^{iv}, pit run) and Appendix F (top soil).

Imported Material Sources and Quantities

Material Type	Source	Quantity
Quarry Spalls	Washington Rock Quarries - Kapowsin Pit	1042.3 tons
Clean Rock (Crushed Rock)	Washington Rock Quarries - Kapowsin Pit	979.3 tons
Pit Run	Washington Rock Quarries - Kapowsin Pit	392.2 tons
Top Soil	Federal Way Sand and Gravel	225 cubic yards

^{iv} "Clean rock" was a 2-inch minus version of the quarry spalls produced from the same material and during the same crusher run as the quarry spalls.

SITE RESTORATION

- Quarry spalls and pit-run sand and gravel were used to backfill the excavation to within approximately one-foot of surrounding grade. Top soil was placed to bring the excavated area up to grade.
- Final grading was completed prior to hydroseeding.
- Grass seed and fertilizer/mulch were hydroseeded in areas of the site disturbed by the remedial activities (see record drawing V4 in Appendix B). Seed was provided by SSA.
- Fencing along the western property line adjacent to the remedial excavation was replaced.

ENVIRONMENTAL OPINION AND CLOSING

It is our opinion that the Interim Action was accomplished in general accordance with the Ecology approved Interim Action Work Plan as described in the reports prepared by DOF (2012, 2013a, 2014). Available data indicate that soil throughout the Wypenn property does not contain constituents of potential concern at concentrations exceeding MTCA industrial cleanup levels.

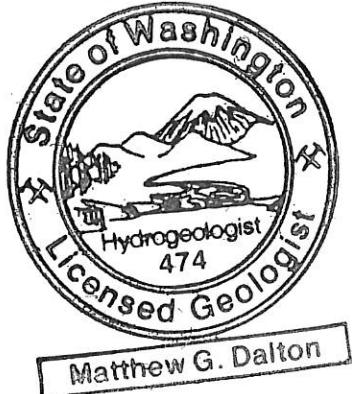

The services described in this construction report were performed consistent with generally accepted professional consulting principles and practices. No other warranty, expressed or implied, is made. These services were performed consistent with our agreement with our client. This report is solely for the use and information of our client unless otherwise noted. Any reliance on this report by a third party is at such party's sole risk.

Opinions and recommendations contained in this report apply to conditions existing when services were performed and are intended only for the client, purposes, locations, time frames, and project parameters indicated. We are not responsible for the impacts of any changes in environmental standards, practices or regulations subsequent to performance of services. We do not warrant the accuracy of information supplied by others, or the use of segregated portions of this report.

November 26, 2014

Photo 6, 7 – Excavation layout ,offset staking and vertical control with grading laser (Typical).

Photo 8 – Vertical control of excavation subgrade with preset grade laser and rod.

Upland Remedial Construction Report

Former Wypenn, Tacoma, WA

November 26, 2014

Photo 9-13 – Setting trench box sequence.

Upland Remedial Construction Report

Former Wypenn, Tacoma, WA

November 26, 2014

Photo 14 – Setting shoring sheets.

Photo 15– Excavation and direct loading trucks.

Upland Remedial Construction Report

Former Wypenn, Tacoma, WA

November 26, 2014

Photo 16-18 – Excavation sequence.

Photo 19 – Excavation subgrade.
Note native gray silt – distinct from
darker overlying soils.

Photo 20 – Close-up of
excavation sidewall.
Excavation generally
penetrated native silt 4-6
inches.

PIT RUN SAND AND GRAVEL
IMPORT MATERIAL ANALYTICAL DATA
WYPENN INTERIM ACTION

August 21, 2014

Mr. Darren Ness
Clearcreek Contractors
3919 - 88th St NE
Marysville, WA 98270

Dear Mr. Ness,

On August 11th, 4 samples were received by our laboratory and assigned our laboratory project number EV14080050. The project was identified as your 214093 - WYPENN. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

A handwritten signature in black ink, appearing to read "Rick Bagan".

WYPENN INTERIM ACTION**

September 24, 2014

Mr. Darren Ness
Clearcreek Contractors
3919 - 88th St NE
Marysville, WA 98270

Dear Mr. Ness,

On September 17th, 1 sample was received by our laboratory and assigned our laboratory project number EV14090102. The project was identified as your Wypenn Interim Action 214093. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

U - Analyte analyzed for but not detected at level above reporting limit.

GS1 - Surrogate outside of control limits due to matrix effect.

DS3 - Surrogate outside of control limits due to coeluting compounds.

Chromatogram indicates that it is likely that sample contains an unidentified diesel range product and an unidentified oil range product.

September 30, 2014

Mr. Darren Ness
Clearcreek Contractors
3919 - 88th St NE
Marysville, WA 98270

Dear Mr. Ness,

On September 25th, 1 sample was received by our laboratory and assigned our laboratory project number EV14090156. The project was identified as your WYPENN INTERIM ACTION. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

A handwritten signature in black ink, appearing to read "Rick Bagan".

Rick Bagan
Laboratory Director
