1.0 INTRODUCTION

On behalf of the Estate of Don Oline (Estate), Environmental Partners, Inc. (EPI) is pleased to present this *PCB Remedial Action Report* (PRAR) documenting the excavation and disposal of soil and concrete impacted by polychlorinated biphenyls (PCBs) from the Storage Yard site located at 1915 Marine View Drive in Tacoma, Washington (Property). The PRAR was prepared in compliance with Agreed Order Number DE 8796 (Order) between the Washington State Department of Ecology (Ecology) and Mr. Don Oline, now the Estate of Don Oline. The effective date of the Order is January 3, 2012.

The Order was issued pursuant to the authority of the Model Toxics Control Act (MTCA), Revised Code of Washington (RCW), Chapter 70.105D.050(1). The Order identified Mr. Don Oline as an “Operator” and Mr. Ron Oline as an “Owner” as defined in RCW Chapter 70.105D.020(17)(a). Mr. Ron Oline is not a signatory to the Order, but does serve as the Personal Representative of the Estate.

The Order requires the identification and disposal of wastes located at the Property, which was completed in March 2013, performance of a Remedial Investigation / Feasibility Study (RI/FS) of the Property, and if necessary, development of a draft Cleanup Action Plan (CAP) based on the outcome of the RI/FS.

In accordance with the *Final Remedial Investigation Report* (Final RIR), prepared by EPI and dated December 10, 2013, two areas of PCB impacts to soil and concrete were identified at the Property. The Estate worked with Ecology to develop a *Final Cleanup Action Plan*, which was issued by Ecology in May 2014. Following the 30-day public comment period, which began remedial activities commenced on July 14, 2014.

1.1 Location

The Property is located in Tacoma, Washington, as presented on Figure 1 General Vicinity Map. The Pierce County Assessor’s Office describes the Property as parcel number 0321362052 measuring approximately 6.6 acres with a land use code of 8505-Quarry Sand Rock and the current owner is Mr. Ronald S. Oline. Vehicle access to the Property is from the south through a locked gate located on the north side of Marine View Drive (see Figure 2 Site Representation).

1.2 History

Mr. Don Oline purchased the Property on July 13, 1999 from Woodworth & Company, Inc. Mr. Don Oline titled the Property in his son’s name, Mr. Ronald S. Oline (Mr. Ron Oline). Soon after purchase, Mr. Don Oline began a heavy equipment dismantling operation at the Property with the objective of recovering recyclable materials for off-site sale. In June 2002, inspectors from the Tacoma-Pierce County Health Department (TPCHD) conducted an inspection of the Property and collected samples of stained surface soils. The analytical results indicated that “...concentrations of diesel and heavy motor oil petroleum hydrocarbons were present at levels above MTCA cleanup standards.” (Section V of the Order).

Ecology began an investigation of the Property in May 2004. According to the Order, analysis of soil samples collected during this investigation indicated concentrations of polycyclic aromatic hydrocarbons (PAHs), phthalates, 2-4-dinitrotoluene, 2-nitroaniline, and petroleum hydrocarbons at concentrations greater than potentially applicable soil cleanup levels. Using data gathered from the 2002 TPCHD and 2004 Ecology inspections, the Property underwent a Site Hazard Assessment (SHA) and in February 2008 Ecology calculated a Washington Ranking Method (WARM) score of 1 out of 5, which corresponds to Ecology's highest priority ranking while 5 is the lowest.

The U.S. Environmental Protection Agency (EPA) began an investigation at the subject property in November 2008. EPA's investigation was documented in the *TSCA/PCB Inspection Report*, dated January 20, 2010. During its investigation, the EPA collected samples of both oil and soil at Property. Analysis of the oil sample indicated the presence of PCBs at a concentration greater than the applicable Federal Toxic Substances Control Act (TSCA) action level. PCBs were also detected in several soil samples at concentrations greater than the TSCA soil cleanup level of 1 milligram per kilogram (mg/kg).

EPA's investigation appears to have originated as a result of a complaint from a used oil recycler (Petroleum Reclaiming Services, Inc. [PRS]) who had reported the presence of PCBs in oil that they had allegedly collected at the Property. It is important to note that the Estate denies the claim that PCB-containing materials were located at the Property. A previous lawsuit initiated by PRS against the Estate claimed damages due to PRS's alleged receipt of PCB-contaminated oil from the Property. In a summary judgment, all but one of PRS' claims were ruled in favor of the Estate. The final claim was then dropped by PRS.

Mr. Don Oline contracted with EPI in October 2010 to review available information, conduct an initial Property inspection, and to meet with the EPA, Ecology, and TPCHD concerning the reported discovery of PCBs. Initial communications indicated that both Ecology and TPCHD had additional concerns regarding contaminants other than PCBs at the Property. During subsequent meetings, it was agreed that Ecology would be the lead agency for the investigation and potential remediation of the Property, and that the mechanism for enforcement would be an Agreed Order.

In early 2011, Ecology indicated that although PCBs were a concern at the Property, they were equally concerned with the potential of releases of apparent hazardous liquids (i.e., petroleum fuels, lubricating oils, and hydraulic oil) inadequately stored at the Property. Prior to commencing any assessment, characterization, or remediation of PCBs, Ecology required a waste inventory be performed at the Property and, if necessary, waste characterization of any identified liquids for ultimate off-site disposal or recycling.

The waste inventory was conducted on May 26 and 27, 2011 and results were reported to Ecology in June 2011. Upon review of the waste inventory, Ecology stated in a letter dated June 9, 2011 that Mr. Don Oline would be required to prepare a *Waste Analysis Plan* (WAP) to be submitted for Ecology approval before characterizing and disposing/recycling materials stored at the Property.

Ecology proceeded with preparation of the Order naming Mr. Don Oline (as Operator under RCW 70.105D.020(5)) and Mr. Ron Oline (as Owner under RCW 70.105D.020(17)(a)) as Potentially Liable Persons (PLPs). Only Mr. Don Oline is a signatory to the Order. The effective date of the Order is January 3, 2012.

Mr. Don Oline died on February 22, 2012. After his death, the Estate contracted with EPI to prepare the WAP in compliance with the Order. The WAP was submitted to Ecology on July 25, 2012 and approved on August 8, 2012. Representative samples of potential waste materials were collected between September 17 and 19, 2012. Upon receipt of final analytical results, waste removal for disposal and recycling was conducted between January and March 2013. PCBs were not detected in any of the waste characterization samples.

Mr. Jerry Boyd of EPI met with Mr. Ron Oline and Mr. Marv Coleman (Ecology) on January 29, 2013 to establish the necessary scope of actions to prepare the *Remedial Investigation Work Plan* (RI WP). During this meeting, Mr. Coleman expressed two concerns for the subject property:

1. Lime-sludge documented to have been improperly disposed on the east-adjacent property (1913 Marine View Drive Site) could have been placed in the central area of the Property. Mr. Coleman's concerns were based on review of historical aerial photographs that appear to depict mounded, light-colored material in the central portion of the Property. No other potential evidence of lime sludge placement on the Property is available.
2. The lateral and vertical extent of PCB concentrations in soil, as presented in EPA's *TSCA/PCB Inspection Report*, had not been characterized.

During this meeting, it was agreed that the RI WP would assess surface and shallow subsurface soils in the vicinity of the EPA-reported PCB impacts. Soil samples would be collected using direct-push technology (DPT) soil borings with several borings advanced to terminal depths of 12 feet below ground surface (bgs) to assess the potential presence of lime sludge. If suspected lime sludge was observed, representative samples would be collected and analyzed for VOCs and SVOCs. If groundwater was encountered during soil boring activities, reconnaissance samples would be collected from the borings where encountered.

It was agreed during that meeting that if no lime sludge or related contaminants of concern were identified in soil at the Property, investigation beyond what is necessary to fully characterize the extent of PCBs would not be necessary and, pending full characterization of the extent of PCBs, the RI would be complete. The final RI WP was submitted on May 8, 2013.

On May 21, 2014, soil, concrete, and groundwater samples were collected at the Property in accordance with the methods and procedures described in the final RI WP. Due to the presence of PCB concentrations greater than 1 mg/kg, additional soil samples were collected at the Property on July 15, 2014 to fully characterize the lateral extent of PCB impacts to soil and concrete. The horizontal and vertical extent of PCB impacts to soil and concrete were documented in the *Final Remedial Action Report* (Final RIR), dated December 10, 2013. The Final RIR also documented that PCBs were not detected in groundwater at concentrations greater than the method detection limit.

Between December 2013 and May 2014, the Estate worked with Ecology to develop a *Final Cleanup Action Plan*, which was issued by Ecology in May 2014. In addition to the two areas of PCB impacts to soil and concrete, Ecology ultimately required that areas of visible surface stains from vehicle leaks and/or equipment dismantling be excavated and disposed off-site. Upon completion of excavation activities, performance samples were to be collected and analyzed for PCBs in the two areas previously characterized in the Final RIR and for petroleum hydrocarbons in surface stain excavation areas. Following a 30-day public comment period, remedial activities commenced on July 14, 2014. The following section documents the methods, procedures, and results of the remedial actions at the Property.

2.0 REMEDIAL EXCAVATIONS

Along with the two PCB-impacted areas documented in the Final RIR (i.e., Areas of Concern 1 and 2, referred to as AOC 1 and AOC 2, respectively), three areas of surface stains were identified for excavation. The excavation activities are described below.

2.1 AOC 1

AOC 1 was the former location of an oil aboveground storage tank (AST) where EPA collected an oil sample and a surface soil sample with reported PCB concentrations of 22,800 mg/kg and 59 mg/kg, respectively. The oil AST was located on a concrete pad bordered by soil to the north and east.

In compliance with the Final CAP, approximately 4.5 cubic yards of PCB-impacted concrete was demolished and transported off-site to LRI Landfill for disposal. Following the removal of the concrete, 11 samples (10 performance samples and 1 blind duplicate sample) were collected from the underlying soil to determine if the remedial action was sufficient to remove materials with PCB concentrations greater than 1 mg/kg. The performance soil sample locations are presented on Figure 3.

2.2 AOC 2

AOC 2 was centered on EPA's reported geographical coordinates for a soil sample with a reported PCB concentration of 540 mg/kg. The reported coordinates corresponded to an area where equipment had previously been located on bare soil and gravel.

In compliance with the Final CAP, approximately 10 cubic yards of PCB-impacted soil was excavated and transported off-site to LRI Landfill for disposal. Following the removal of the concrete, eight performance samples were collected to determine if the remedial action was sufficient to remove materials with PCB concentrations greater than 1 mg/kg. The performance soil sample locations are presented on Figure 4.

2.3 Petroleum-Stained Areas

A total of three petroleum stain areas were observed at the Property. Each area measured between 2 and 3 feet in diameter. Remedial excavation depths ranged from 9 to 12 inches bgs. A total of

approximately 2 cubic yards of soil were excavated. The location of each petroleum-stained area is depicted on Figure 5.

2.4 Waste Disposal

All excavated materials were transported to LRI Landfill in Pierce County, Washington, for disposal. Copies of weight tickets are included as Attachment A.

3.0 PERFORMANCE SAMPLING AND ANALYSIS

A total of 21 performance samples and one blind duplicate sample were collected from remedial excavations described in Sections 2.1 to 2.3. All samples were submitted to ALS Environmental Laboratory in Everett, Washington, which is a Washington State accredited analytical laboratory. Samples collected from AOC1 and AOC 2 were submitted for determination of the presence and concentration of PCBs using EPA Method 8082. Samples collected from the three petroleum-stained areas were submitted for the determination of the presence and concentrations of diesel-range organic compounds (DRO) using Northwest Total Petroleum Hydrocarbons Diesel-Range method (NWTPH-Dx). It should be noted that NWTPH-Dx method also detects oil-range organic compounds (ORO).

Table 1 presents a summary of analytical results. Copies of laboratory analytical reports are included as Attachment B.

3.1 AOC 1

Six sidewall and four floor samples were collected from the remedial excavation at AOC 1. In addition, one Blind Duplicate (BD-1) was collected at location VO-295. Of the 11 samples analyzed, PCBs were detected in only one sample, VOA-298:9. The concentration at location VOA-298:9 was 0.14 mg/kg, which is less than the MTCA Method A Soil Cleanup Level for Unrestricted Land Use of 1 mg/kg. Figure 3 presents the soil analytical results for AOC 1.

3.2 AOC 2

Six sidewall and two floor samples were collected from the remedial excavation at AOC 2. No PCBs were detected at a concentration greater than the method detection limit. Figure 4 presents the soil analytical results for AOC 2.

3.3 Petroleum-Stained Areas

One performance sample was collected from the floor of each of the three petroleum-stained area excavations. DRO compounds were not detected at concentrations greater than the method detection limit in petroleum-stained areas 1 and 2 (identified as PC-1 and PC-2 on Figure 5). In the third petroleum-stained area (PC-3), ORO compounds were detected at a concentration of 290 mg/kg, which is less than the MTCA Method A Cleanup Level for Unrestricted Land Use of 2,000 mg/kg.

4.0 CONCLUSIONS

Analytical results for post-remedial excavation performance samples indicate that PCB and DRO/ORO concentrations remaining at the Property are less than the MTCA Method A Cleanup Levels of 1 and 2,000 mg/kg, respectively. Performance sample analytical results indicate that the remedial action was successful and the Estate has demonstrated that it has fully complied with the Order.

Attachment B
Laboratory Analytical Reports

July 25, 2014

Mr. Jerry Boyd
Environmental Partners, Inc.
1180 NW Maple St, Suite 310
Issaquah, WA 98027

Dear Mr. Boyd,

On July 15th, 19 samples were received by our laboratory and assigned our laboratory project number EV14070081. The project was identified as your Oline Storage Yard. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Rick Bagan
Laboratory Director

July 22, 2014

Mr. Jerry Boyd
Environmental Partners, Inc.
1180 NW Maple St, Suite 310
Issaquah, WA 98027

Dear Mr. Boyd,

On July 15th, 3 samples were received by our laboratory and assigned our laboratory project number EV14070080. The project was identified as your Oline Storage Yard. The sample identification and requested analyses are outlined on the attached chain of custody record.

No abnormalities or nonconformances were observed during the analyses of the project samples.

Please do not hesitate to call me if you have any questions or if I can be of further assistance.

Sincerely,

ALS Laboratory Group

Rick Bagan
Laboratory Director
