Limitation of Use: Leidos' project activities were restricted to collection and analysis of a limited number of environmental samples and visual observations obtained during the physical site visit, and from records made available by Ecology or third parties during the project. In preparing this report, Leidos has relied on verbal and written information provided by secondary sources and interviews, including information provided by the customer. Leidos has made no independent investigations concerning the accuracy or completeness of the information relied upon. Because the project activities consisted of collecting and evaluating a limited supply of information, Leidos may not have identified all potential items of concern and, therefore, Leidos warrants only that the project activities under this contract have been performed within the parameters and scope communicated by Ecology and reflected in the contract. Maps presented in this report were accurate based on the information available to Leidos at the time that the facility inspections were conducted.

This report is intended to be used in its entirety. Taking or using in any way excerpts from this report are not permitted and any party doing so does so at its own risk.

The Emerald Services corporate office and main yard are located at 7343 East Marginal Way S, adjacent to Slip 4 of the Lower Duwamish Waterway (LDW). Emerald Services is a transporter and transfer facility for both non-regulated wastes such as oil and oily water, as well as dangerous/hazardous wastes. Vehicles, equipment, and food waste containers are washed regularly and washwater is discharged to the King County sanitary sewer. The facility's warehouse is used to store equipment, recycled antifreeze, and solvents prior to distribution to customers (Emerald Services 2010).

F-1.1 Stormwater Conveyance and Treatment System

The facility's stormwater conveyance system consists of 14 catch basins, drain pipes, and vaults. Stormwater is conveyed by gravity flow to the below ground stormwater treatment system located at the northwestern portion of the site. Roof drainage is collected separately from around the perimeter of the main building and is conveyed directly to the manhole immediately downstream of the treatment system. The treatment system can process up to 315 gallons per minute of stormwater and consists of 21 passive filtration cartridges installed in a baffled vault. The treatment system is designed to remove total suspended solids (TSS), selected heavy metals, nutrients, and organic compounds. In the event the storm flow exceeds treatment system

capacity, stormwater bypasses the treatment system through an overflow weir and discharges directly to LDW Slip 4 (Emerald Services 2010).

A stormwater gate valve is in place above the overflow weir. The stormwater gate valve remains closed during normal operation and non-rain events. The stormwater gate valve is designed to provide suitable secondary containment in the event of spills to the parking areas. If ponding occurs, the accumulated stormwater is inspected for clarity and sheen prior to being conveyed to the stormwater treatment system and discharge to the LDW (Emerald Services 2010). A facility map is presented in Figure F-1.

F-1.2 Recent Compliance History

Ecology previously conducted a compliance inspection at Emerald Services on October 2, 2010. Ecology identified corrective actions that included an update of the facility's site map and Stormwater Pollution Prevention Plan (SWPPP), secondary containment and cover for liquid, chemical products, and wastes stored outside, and development of a source control plan for the wash pad area (Ecology 2010).

Emerald Services exceeded the biochemical oxygen demand (BOD) benchmark during the 2nd quarter of 2012, triggering a Level One Corrective Action. In response, the facility implemented operational best management practices (BMPs) including increased cleaning frequency of the food waste bin storage area and wash shack. The facility did not exceed the BOD benchmark during the 3rd and 4th quarters of 2012 (Emerald Services 2013).

F-2 Inspection and Sampling

F-2.1 April 2013 Stormwater Compliance Inspection

On April 24, 2013, Ecology conducted a stormwater compliance inspection at Emerald Services. Leidos assisted Ecology with the inspection and sampling of the facility's stormwater conveyance system. The inspection included investigating influent and effluent points at drainage structures, written and photographic documentation, and assessing whether the drainage structures contained sufficient sampleable material. The coordinates of sample locations were measured with a survey-quality global positioning system and plotted on Figure F-2 using geographic information system software. An inspection photographic log and field documentation are presented in Attachments F-1 and F-2, respectively.

The field team inspected the following stormwater conveyance structures at Emerald Services (Figure F-2): catch basin 1 (CB-1), catch basin 2 (CB-2), catch basin 4 (CB-4), catch basin 5 (CB-5), manhole 1 (MH-1), and the stormwater treatment system (TS). Catch basin filters were installed at locations CB-2, CB-1, CB-4, and CB-5. The catch basins did not contain sufficient sampleable material. The solids buildup on top of the stormwater filter cartridges located in the facility's treatment system vault contained sufficient sampleable material to collect a grab sample. The water sample was collected from MH-1, located downstream of the treatment system.

F-2.2 Stormwater Conveyance System Sampling

Ecology collected one water sample and one solids sample from the stormwater conveyance system at Emerald Services. Leidos provided split samples of all samples collected to Emerald Services. Laboratory analyses for the water samples are listed on Table F-1. Analytical data for water samples are presented in Tables F-2 through F-5. Laboratory analyses for the solids sample are listed on Table F-6. Analytical data are presented in Table F-7. Chain of custody forms and the laboratory reports are provided as Attachments F-3 and F-4, respectively.

F-2.2.1 Water Sample

Water sample ES-MH-001-20130424-W was collected from MH-1 located directly downstream of the facility's stormwater treatment system (Figure F-2, Attachment F-1). MH-1 is located at the northern portion of the facility and also receives discharge from the facility's roof drains. The discharge from the roof drains is untreated. The sample location is representative of stormwater discharge from Emerald Services to LDW Slip 4. Discharge from the treatment system did not occur during sample collection.

F-2.2.2 Solids Sample

Solids sample ES-TS-INF-20130424-S was collected from the top of the filter cartridges located in the facility's stormwater treatment vault (Figure F-2, Attachment F-1). The treatment vault is located at the northwestern corner of the facility and receives discharge from the majority of the property, with the exception of the facility's roof drains. Stormwater is discharged to the LDW following treatment. The sample is representative of storm drain solids at Emerald Services. The

sample consisted of dark brown silt, fine-grained sand, and organic matter. A strong hydrogen sulfide odor was detected during sample collection. After multiple grab attempts, sufficient sample volume was obtained for all analyses. Per discussion with Ecology, dioxin/furan analysis was requested for this sample.

F-3 Results

F-3.1 Chemical Analysis

Ecology collected one water sample and one solids sample during the April 24, 2013 stormwater compliance inspection at Emerald Services. Analytical methods, chemical results and regulatory criteria are presented in Tables F-1 through F-7.

All chemical results were independently validated by EcoChem, Inc. of Seattle, WA. A summary-level, U.S. Environmental Protection Agency (EPA) Stage 2B data validation was performed on all chemistry results; a full-level, EPA Stage 4 data validation was performed on the dioxin/furan results. A compliance-level screening (EPA Stage 2A), including a comparison of detected results to sample concentrations, was performed on the rinse blank samples. Data validation was performed following EPA guidance (EPA 1994, 2008, 2009, 2010). The data validation report is available as Attachment 2 to the draft LDW NPDES Inspection Sampling Support Technical Memorandum (Leidos 2014).

F-3.2 Inspection Results and Permit Compliance Requirements

Ecology made the following observations and recommendations during the April 2013 inspection (Ecology 2013a):

- Update the facility SWPPP to include the operation and maintenance information for the truck wash pad.
- Develop a better system to prevent birds from spreading food wastes from trucks parked at the facility.
- Sample and analyze roof run-off to confirm that pollutants are not transported to the river without treatment.

In order to maintain permit compliance, Ecology required the facility to update the site map in the SWPPP to meet permit condition S3 (Ecology 2013a).

Based on available DMR data, Emerald Services exceeded the benchmark for total nitrate and nitrite during the 1st and 2nd quarter of 2013. The facility exceeded the benchmark for turbidity in the 1st quarter of 2013 and for copper in the 2nd quarter 2013 (Ecology 2013b).

a - Total PCBs and total PCB homologs include only congeners that met identification criteria as required by EPA Method1668B.
b - Estimated total PCBs and estimated total PCB homologs include congeners that were identified by SGS Analytical as "estimated maximum possible concentration" or EMPC. The EMPC values were qualified by EcoChem as "U" to indicate the analyte was not detected at an elevated reporting limit that met criteria required by EPA Method1668B. Estimated total PCBs and estimated total PCB homolog values were qualified as estimated (J) where EMPCs were included in the reported totals.
c - This is a field duplicate of the sample directly preceding it.

Marina and Christine,

It was noted that one of the samples from ARI job WN31 references the year 2014 in the sample ID instead of 2013.

Should sample ES-MH-001-20140424-W really be ES-MH-001-**2013**0424?

Case Narrative

1. One sample was submitted for analysis on April 24, 2013.
2. The sample was submitted for grain size analysis by means of X-ray diffraction using a Sedigraph 5120. The values are calculated using Stokes' Law of sedimentation and Beer's law of extinction.
3. The sample was run in a single batch and one sample from another job was chosen for triplicate analysis.
4. The standard operating procedure calls for the sample to be measured on the #4 (4750 µm) sieve, down to the 1.0 µm particle size with the Sedigraph 5120. If there were no particles measured at these extremes, the data is not included in the report.
5. The sample contained a large percentage of organic material. Organic material does not absorb X-rays, and is not included in the fine portion of the analysis.
6. The sample appeared to be highly contaminated. The sample contained a fuel/oil-like sheen, residue and foul odor. The sample immediately flocculated after homogenization. This most likely contributed to the negative value reported. The sample was rerun three times and no report could be generated without negative values.
7. The data is provided in summary tables and plots.
8. There were no other noted anomalies in the sample or methods on this project.

Data Reporting Qualifiers

Effective 2/14/2011

Inorganic Data

U — Indicates that the target analyte was not detected at the reported concentration

* — Duplicate RPD is not within established control limits

B — Reported value is less than the CRDL but ≥ the Reporting Limit

N — Matrix Spike recovery not within established control limits

NA — Not Applicable, analyte not spiked

H — The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible

L — Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U — Indicates that the target analyte was not detected at the reported concentration

* — Flagged value is not within established control limits

B — Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.

J — Estimated concentration when the value is less than ARI's established reporting limits

D — The spiked compound was not detected due to sample extract dilution

E — Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

Q — Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20%Drift or minimum RRF).

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NR Spiked compound recovery is not reported due to chromatographic interference

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

M2 The sample contains PCB congeners that do not match any standard Aroclor pattern. The PCBs are identified and quantified as the Aroclor whose pattern most closely matches that of the sample. The reported value is an estimate.

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

EMPC Estimated Maximum Possible Concentration (EMPC) defined in EPA Statement of Work DLM02.2 as a value "calculated for 2,3,7,8-substituted isomers for which the quantitation and /or confirmation ion(s) has signal to noise in excess of 2.5, but does not meet identification criteria" **(Dioxin/Furan analysis only)**

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

X Analyte signal includes interference from polychlorinated diphenyl ethers. **(Dioxin/Furan analysis only)**

Z Analyte signal includes interference from the sample matrix or perfluorokerosene ions. **(Dioxin/Furan analysis only)**

Geotechnical Data

A	The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.
F	Samples were frozen prior to particle size determination
SM	Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations
SS	Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis
W	Weight of sample in some pipette aliquots was below the level required for accurate weighting

(1) Detection Limit (DL), Limit of Detection (LOD) and Limit of Quantitation (LOQ) are defined in ARI SOP 1018S
(2) Control limits calculated using all data from 1/1/12 through 5/31/12.
(3) Relative Percent Difference between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then $RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$

(4) Highlighted control limits (**bold font**) are adjusted from the calculated values to reflect that:
a. ARI does not use control limits < 10 for the lower limit or < 100 for the upper limit or
b. Control limits for analyzes with no separate preparation procedure are adjusted to reflect the minimum uncertainty in the calibration of the instrument allowed by the referenced analytical method.

(1) Detection Limit (DL), Limit of Detection (LOD) and Limit of Quantitation (LOQ) are defined in ARI SOP 1018S
(2) Control limits calculated using all data from 1/1/12 through 5/31/12.
(3) Relative Percent Difference between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then

$$RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$$

(4) Highlighted control limits (**bold font**) are adjusted from the calculated values to reflect that:
a. ARI does not use control limits < 10 for the lower limit or < 100 for the upper limit or
b. Control limits for analyzes with no separate preparation procedure are adjusted to reflect the minimum uncertainty in the calibration of the instrument allowed by the referenced analytical method.
(5) MDL study QD19 – 3/8/10

(1) Detection Limit (DL), Limit of Detection (LOD) & Limit of Quantitation (LOQ) are defined in ARI SOP 1018S.
(2) Highlighted control limits (**bold font**) are adjusted from the calculated values to reflect that ARI does not use control limits < 10 for the lower limit or < 100 for the upper limit.
(3) 30 – 160 are default limits used when there is insufficient data to calculate historic control limits
(4) Acceptance criteria for the relative percent difference (RPD) between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then

$$RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$$

(5) Control Limits calculated usng all data generated between 6/1/12 and 12/31/12

b) Control limits for analytes with no separate preparation procedure are adjusted to reflect the minimum uncertainty in the calibration of the instrument allowed by the referenced analytical method.
(3) Acceptance criteria for the relative percent difference (RPD) between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then $RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$

(5) Relative Percent Difference between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then $RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$

SPECIAL INSTRUCTIONS: 1. Weigh into beakers-lightly dry with Sodium Sulfate. 2. Transfer to microwave vessel. Note: do not fill vessel more than 2/3rd full. Some samples may require two vessels). 3. Add 1:1 DCM/ACE to the vessels (until solvent is 3" above soil layer after homogenization). 4. Add surr/spike. 5. Microwave on appropriate power setting determined by # of samples. 6. After microwave-rehomogenize while hot then let cool 15 min in cold water. Re-homogenize while cool. 7. Decant 1:1 DCM/ACE into Erlenmeyer flask with sodium sulfate in the bottom and funnel containing pre-deactivated glasswool. 8. Rinse with DCM 9. Microwave a 2nd time using DCM only (until solvent is 3" above soil layer after homogenization). 10. Let cool and decant the solvent then empty the soil into the funnel and rinse with DCM. 11. KD (~~small~~ or large drying column with pre-deactivated glasswool-Blanks=5g sulfate)) to 5mL at 80- 85°C. 12. GPC Req. 13. (After GPC): KD at 80-85°. 14. TurboVap. 15. Vial in DCM.

SPECIAL INSTRUCTIONS: 1 . Weigh into beakers-lightly dry with Sodium Sulfate. 2. Transfer to microwave vessel. Note: do not fill vessel more than 2/3rd full. Some samples may require two vessels). 3. Add 1:1 DCM/ACE to the vessels (until solvent is 3" above soil layer after homogenization). 4. Add surr/spike. 5. Microwave on appropriate power setting determined by # of samples. 6. After microwave-rehomogenize while hot then let cool 15 min in cold water. Re-homogenize while cool. 7. Decant 1:1 DCM/ACE into Erlenmeyer flask with sodium sulfate in the bottom and funnel containing pre-deactivated glasswool. 8. Rinse with DCM 9. Microwave a 2nd time using DCM only (until solvent is 3" above soil layer after homogenization). 10. Let cool and decant the solvent then empty the soil into the funnel and rinse with DCM. 11. KD (~~small~~ or large drying column with pre-deactivated glasswool-Blanks=5g sulfate)) to 5mL at 80- 85°C. 12. GPC Req. 13. (After GPC): KD at 80-85°. 14. TurboVap. 15. Vial in DCM.

Detail problems, corrective actions and/or other pertinent information below

- All samples were run @10x dilution due to very bad matrix.
- Opening CCALs: Methoxychlor failed on CCP_2, okay on CCP, CCP, values reported. Toxaphene is high on CCP, okay on CCP_2, not found in the samples.
- Closing CCALs: DDT breakdown - 72%, CCALs failed, closing Toxaphene were not run due to injection failure.
- Samples were re-run @200x dilution. Breakdown is okay. Some analytes failed on CCP_2 column okay on CCP.

SPECIAL INSTRUCTIONS: 1. Weigh soil/sed into beakers-lightly dry with sodium sulfate.
. Transfer to microwave vessel(s). Note: (do not fill vessels more than 2/3rd full. Some samples may require two vessels).
. Add 1:1 Hexane/Acetone until the solvent layer is 3" inches above the soil layer after homogenization. 4. Add surr/spike.
Microwave on appropriate power setting determined by # of samples. 6. After microwave-Re-homogenize while hot then
ool vessels in cold water 15 minutes. Re-homogenize while cool. 7. Decant 1:1 Hex/Ace into E. flask with sodium sulfate in
ottom+ funnel with neutral glasswool plug. 8. Rinse with Hexane. 9. Add 8:2 Hexane/Acetone to the vessel 3"inches
ove the soil layer after homogenization. Microwave a 2nd time. 10. Let cool and decant solvent then empty the soil into the
nnel and rinse with Hexane. 11. KD (Smaller Large Drying Column) on 100° bath. (Blanks=only 5g Sodium Sulfate).
. Exchange (2 X with 20mL) Hexane. 13. TurboVap. 14. Clean-ups. 15. TurboVap. 16. Vial with Hexane.

Section D: Summary of Findings/Comments

Background:

This compliance inspection was conducted as part of a Department of Ecology inspection program to control the potential sources of pollutants discharged to the Duwamish Waterway through storm drainage systems. The previous Department of Ecology, Water Quality Program compliance inspection at this facility was October 2, 2010. As part of this inspection, storm drain lines and structures were reviewed and compared with existing site maps and source trace samples of catch basin solids and stormwater were collected. Ecology will review sample results and consider the need to monitor for additional parameters or conduct further source tracing.

Inspection/Observations:

I met with Sheila Smith, Environmental Coordinator, Michele Riggs, Biodegradable Technical Specialist and Jerry Bartlett, Chief Environmental & Sustainability Officer to go over the permit paperwork and explain the sampling. Ms. Smith is the responsible official for NPDES permit compliance. The current Stormwater Pollution Prevention Plan (SWPPP) was reviewed and looked thorough. The SWPPP certification form was signed and dated in March 2013. The monthly inspection reports looked complete and well done.

The site is approximately 5 acres. Main warehouse is used to store wastes waiting to be transferred to another facility. Other industrial activities include; truck repair and maintenance, mobile fueling, truck staging, equipment storage, truck and food waste container washing and the transfer of hazardous/dangerous wastes. Rubber mats are used to cover the strip drain at the loading dock during transfers.

The truck wash pad is covered (see Photo # 5) and wastewater is directed to the sanitary sewer with King County Industrial Waste approval. The operation and maintenance of this system needs to be included as a section of the SWPPP and depicted on the site map. The site map looked good but it did not include the green tank parked next to the covered truck wash pad (see Photo #6). The site map also needs to be reviewed to make sure it includes all 12 elements required by the permit (condition # S3.B.1 (a-l)).

Wastes are transferred between trucks and the warehouse. Truck maintenance takes place in the north 3 bays of the main building. There are no known connections between the interior floor drains and the storm drain system.

Some trucks are staged at the facility with enough food wastes in the rear hopper that birds are attracted. Birds spread food wastes and droppings onto the pavement (see Photo # 2). Hoppers are covered with plastic tarps in an effort to minimize bird problem. The facility should develop a better system to prevent birds from spreading food wastes from trucks parked there.

The storm filter treatment vault is used to treat all facility stormwater run-off except the roof. The facility should sample and analyze roof run-off to confirm that pollutants are not going to the river without treatment.

The storm filter treatment vault was sampled for solids. Ecology will review sample results and consider the need to monitor for additional parameters or conduct further source tracing. All samples results will be shared with Emerald Services once available.

The storm drain catch basins nearest the truck wash pad need to be provided with robust inlet protection.

All drums and totes at the facility must be determined to be empty or be provided with cover and containment.

Issues & Requirements:

The following must be completed in order to come into compliance with your Industrial Stormwater Permit:

- The Site Map in the Stormwater Pollution Prevention Plan (SWPPP) must be updated to meet permit condition S3.

ANNOUNCED Inspection

Emerald Services-Corporate, Seattle WAR-002641
April 24, 2013

#1. DESCRIPTION: Wastes are transferred between trucks and the warehouse. Truck maintenance takes place in the north 3 bays of the main building. There are no known connections between the interior floor drains and the storm drain system.

#2. DESCRIPTION: Some trucks are staged at the facility with enough food wastes in the rear hopper that birds are attracted. Birds spread food wastes and droppings on to the pavement. Hoppers are covered with plastic tarps in an effort to minimize bird problem. The facility should develop a better system to prevent birds from spreading truck hopper food wastes from trucks parked here.

#3. DESCRIPTION: The storm filter treatment vault is located in the ground near orange cones. All stormwater from the site flows to the storm filter treatment system except what comes off the roof. The facility should sample and analyze roof run-off to confirm that pollutants are not going to the river without treatment.

#4. DESCRIPTION: The storm filter treatment vault was sampled for solids. Ecology will review sample results and consider the need to monitor for additional parameters or conduct further source tracing. All samples results will be shared with Emerald Services once available.

Emerald Services-Corporate, Seattle **WAR-002641**
April 24, 2013

#5. DESCRIPTION: This covered wash bay has drains that tie into the sanitary sewer. The facility must be diligent to prevent overspray or drag-out of wastewater into the area tributary to the storm drainage system. Wastewater is not permitted to be discharged to surface waters or storm drains.

#6. DESCRIPTION: This portable tank is used to store washwater from the covered truck wash pad. Washwater is reused and/or discharged to the sanitary sewer. The operation and maintenance of this system needs included as a section of the SWPPP and depicted on the site map.

#7. DESCRIPTION: The storm drain catch basins nearest the truck wash pad need to be provided with robust inlet protection.

#8. DESCRIPTION: All drums and totes at the facility must be determined to be empty or be provided with cover and containment
