SPECIAL INSTRUCTIONS: 1. Weigh into beakers-lightly dry with Sodium Sulfate. 2. Transfer to microwave vessel. Note: do not fill vessel more than 2/3rd full. Some samples may require two vessels). 3. Add 1:1 DCM/ACE to the vessels (until solvent is 3" above soil layer after homogenization). 4. Add surr/spike. 5. Microwave on appropriate power setting determined by # of samples. 6. After microwave-rehomogenize while hot then let cool 15 min in cold water. Re-homogenize while cool. 7. Decant 1:1 DCM/ACE into Erlenmeyer flask with sodium sulfate in the bottom and funnel containing pre-deactivated glasswool. 8. Rinse with DCM 9. Microwave a 2nd time using DCM only (until solvent is 3" above soil layer after homogenization). 10. Let cool and decant the solvent then empty the soil into the funnel and rinse with DCM. 11. KD (small ~~or large~~ drying column with pre-deactivated glasswool-Blanks=5g sulfate)) to 5mL at 80- 85°C. 12. GPC Req. 13. (After GPC): KD at 80-85°. 14. TurboVap. 15. Vial in DCM.

Some samples may require two vessels). 3. Add 1:1 Hexane/Acetone until the solvent layer is 3" inches above the soil layer after homogenization. 4. Add surr/spike. 5. Microwave on appropriate power setting determined by # of samples. 6. After microwave-Re-homogenize while hot then cool vessels in cold water 15 minutes. Re-homogenize while cool. 7. Decant 1:1 Hex/Ace into E. flask with sodium sulfate in bottom+ funnel with neutral glasswool plug. 8. Rinse with Hexane. 9. Add 8:2 Hexane/Acetone to the vessel 3"inches above the soil layer after homogenization. Microwave a 2nd time. 10. Let cool and decant solvent then empty the soil into the funnel and rinse with Hexane. 11. KD (Small ~~or large~~ Drying Column) on 100° bath. (Blanks=only 5g Sodium Sulfate). 12. Exchange (2 X with 20mL) Hexane. 13. TurboVap. 14. Clean-ups. 15. TurboVap. 16. Vial with Hexane.

Section D: Summary of Findings/Comments

Background:

This compliance inspection was conducted as part of a Department of Ecology inspection program to control the potential sources of pollutants discharged to the Duwamish Waterway through storm drainage systems. As part of this inspection, storm drain lines and structures were reviewed and compared with existing site maps and source trace samples of catch basin solids and stormwater were collected. Ecology will review sample results and consider the need to monitor for additional parameters and/or conduct further source tracing.

Inspection/Observations:

Ken Waldo, Ecology Stormwater Inspector and I arrived at the facility at 8:00 and met with Peter Dumaliang. Mahbub Alam Ecology Toxics Cleanup Program and the contract samplers with SAIC also participated in the review of the site stormwater map. The first task was to find adequate locations to collect solids from the storm drainage system for analysis. Most of the first day was dedicated to sample collection.

The current Stormwater Pollution Prevention Plan (SWPPP) was reviewed and looked thorough. The SWPPP was recently updated in May 2012. The monthly inspection reports looked complete and well done except that October 2012 and May 2013 were only partially completed. Monthly inspection reports must be completed each month and included in the SWPPP. The NPDES Industrial Stormwater General Permit (ISGP) included in the SWPPP is not the current ISGP which was modified on May 6, 2012 and became effective on July 1, 2012.

Sample location for Outfall # 2 was changed to a point further upstream because the previous location was tidally influenced. An Industrial Stormwater General Permit Discharge/Sample Point Update form must be completed and submitted.

Stormwater run-off from Boeing Military Flight Center (MFC) onto KCIA needs to be addressed. Sources of PCBs are present at the MFC and are not currently be adequately monitored. PCB soil contamination on KCIA near the MFC gate is likely due to long term stormwater sheet flow from MFC onto KCIA. KCIA must have clear plans and procedures and/or agreements for the operation and maintenance of the asphalt swale and oil/water separator at the southwest corner of the facility which receives MFC run-off.

The StormTech Infiltration system (see Photo # 2) needs to be referenced in the SWPPP and include inspection and maintenance procedures. The aircraft wash/deicing pads need to have clear Standard Operating Procedures detailed in the SWPPP.

KCIA needs to have and maintain maintenance logs for all catch basin and storm line cleaning, and oil/water separator maintenance, as part of the SWPPP.

The maintenance shop has a small equipment and vehicle wash pad that does not prevent washwater from escaping (see Photo # 5). The totes of chemical products stored outside near the equipment wash-pad (see Photo # 6) must be provided with cover and containment.

Totes and drums of liquid chemical and/or petroleum products or wastes that are stored indoors but which may leak into storm drains outside, need to be provided with a containment strategy (see Photos # 8, 10). All liquid products and wastes stored outside at the facility must be provided with adequate cover and containment (see Photo # 9). If totes or drums are "empty" they need to be labeled as such. The new AFFF tank was properly located within a containment structure (see Photos # 11, 12) but the drain valve was in the open position (see Photo # 12). The containment structure drain valve must be kept closed at all times except when temporarily draining uncontaminated stormwater. There needs to a written procedure for handling the stormwater that accumulates within the uncovered AFFF containment structure.

The permit requires monthly inspections of all equipment and vehicles for leaking fluids, and taking leaking equipment and vehicles out of service or prevent leaks from spilling on the ground until repaired. Also, immediately clean up spills and leaks (e.g., using absorbents, vacuuming, etc.) to prevent the discharge of pollutants (see Photos # 4, 7).

Store all chemical liquids, fluids, and petroleum products, on an impervious surface that is surrounded with a containment berm or dike that is capable of containing 10% of the total enclosed tank volume or 110% of the volume contained in the largest tank, whichever is greater.

Locate spill kits within 25 feet of all stationary fueling stations, fuel transfer stations, and mobile fueling units. At a minimum, spill kits shall include:
i) Oil absorbents capable of absorbing 15 gallons of fuel.
ii) A storm drain plug or cover kit.
iii) A non-water containment boom, a minimum of 10 feet in length
with a 12 gallon absorbent capacity.
iv) A non-metallic shovel.
v) Two five-gallon buckets with lids.

Use drip pans or equivalent containment measures during all petroleum transfer operations and cover storm drain catch basin inlets during fuel transfer activities (see Photos # 15, 16).

The facility must update the SWPPP to meet permit requirements.

Issues & Requirements:

- KCIA must clean up petroleum leaks and spills immediately.
- KCIA must use drip pans or equivalent containment measures and cover storm drain catch basin inlets during all petroleum transfer operations.
-KCIA must store all chemical liquids, fluids, and petroleum products, on an impervious surface that is surrounded with a containment berm or dike that is capable of containing 10% of the total enclosed tank volume or 110% of the volume contained in the largest tank, whichever is greater.
-KCIA must keep all containment structure drain valves in the closed position.

-KCIA must develop and implement written procedures for proper handling and disposal of accumulated stormwater from within uncovered containment structures.
-KCIA must develop and maintain a spill log that includes the following information for chemical and petroleum spills: date, time, amount, location, and reason for spill; date/time clean-up completed, notifications made and staff involved.
- KCIA must locate spill kits within 25 feet of all stationary fueling stations, fuel transfer stations, and mobile fueling units

ANNOUNCED Inspection

King County International Airport, Seattle

May 31, 2013 **Permit # WAR000343**

#1. DESCRIPTION: The open manhole is sample location # SP1. This drainage area is upstream of the North Boeing Field storm drainage system.

#2. DESCRIPTION: StormTech infiltration system infiltrates stormwater in the vicinity of the arrow. An O & M manual for this system should be included as a section in the SWPPP.

#3. DESCRIPTION: The maintenance shop is located at the northwest corner of the airport. Equipment and vehicles are parked here. The leaking grader (see Photo # 4) is parked on the far side of the white boom truck.

#4. DESCRIPTION: The permit requires monthly inspections of all equipment and vehicles for leaking fluids, and taking leaking equipment and vehicles out of service or prevent leaks from spilling on the ground until repaired. Also, immediately clean up spills and leaks (e.g., using absorbents, vacuuming, etc.) to prevent the discharge of pollutants.

King County International Airport, Seattle

May 31, 2013 **Permit # WAR000343**

#5. DESCRIPTION: The facility uses this small white concrete pad to wash equipment. Wash water has been observed escaping the wash pad and flowing to the storm drain seen in photo # 12, located beyond the red Jeep. Wastewater cannot be allowed to discharge to surface waters or storm drains.

#6. DESCRIPTION: These totes must be provided with proper cover and containment.

#7. DESCRIPTION: Fuel spills and/or leaks from equipment must be cleaned up immediately upon discovery.

#8. DESCRIPTION: These totes, although under cover, do not have containment. In the event of a leak or spill, chemicals will flow out of the building and into the storm drainage system.

King County International Airport, Seattle

May 31, 2013 **Permit # WAR000343**

#9. DESCRIPTION: The permit requires that all liquid chemical and petroleum products and wastes stored outside at the facility be provided with proper cover and containment.

#10. DESCRIPTION: A containment strategy must be implemented for all drums and totes that can leak or spill and flow to storm drains.

#11. DESCRIPTION: This containment structure cannot be covered due to height of tanks. The permit requires that written procedures be developed for proper handling and disposal of stormwater that accumulates within.

#12. DESCRIPTION: The containment structure has a drain valve on it (see arrow and Photo # 13). If stormwater from within the structure is uncontaminated it may be O.K. to open drain temporarily.

King County International Airport, Seattle

May 31, 2013 **Permit # WAR000343**

#13. DESCRIPTION: At the time is inspection the containment drain valve was in the open position. This valve needs to be closed at all times unless being used to temporarily drain out uncontaminated stormwater.

#14. DESCRIPTION: The permit requires that spill kits be located within 25 feet of all stationary fueling stations, fuel transfer stations, and mobile fueling units. They must contain; oil absorbents capable of absorbing 15 gallons of fuel, a storm drain plug or cover kit, a non-water containment boom, a minimum of 10 feet in length with a 12 gallon absorbent capacity, a non-metallic shovel and two five-gallon buckets with lids.

#15. DESCRIPTION: This fuel manifold is operated by a tenant, but the storm drains in the vicinity are owned and operated by King County. The storm drains in this area flow through a large spill control oil/water separator and then to the discharge point.

#16. DESCRIPTION: The arrows note storm drain catch basin inlets. The permit requires these to be blocked, plugged or otherwise covered during fueling or fuel transfers and use drip pans or equivalent containment measures during all petroleum transfer operations.

King County International Airport, Seattle

May 31, 2013 **Permit # WAR000343**

#17. DESCRIPTION: There are several tenants at KCIA with their own NPDES Industrial Stormwater General Permits. The wash pad and deicing stations are owned by KCIA but only the one at Gate 6 is operated by King County.

#18. DESCRIPTION: KCIA should consider clearly delineating the wash pad/ deicing areas. This is in the vicinity of Gate 6 or 7.

#19. DESCRIPTION: This wash pad area is Gate 8 and is primarily used by UPS.

#20. DESCRIPTION: The area around Gates 6, 7 and generate a lot of tire dust. KCIA has an aggressive Foreign Object Debris (FOD) control plan and the area is swept frequently.
