Limitation of Use: Leidos' project activities were restricted to collection and analysis of a limited number of environmental samples and visual observations obtained during the physical site visit, and from records made available by Ecology or third parties during the project. In preparing this report, Leidos has relied on verbal and written information provided by secondary sources and interviews, including information provided by the customer. Leidos has made no independent investigations concerning the accuracy or completeness of the information relied upon. Because the project activities consisted of collecting and evaluating a limited supply of information, Leidos may not have identified all potential items of concern and, therefore, Leidos warrants only that the project activities under this contract have been performed within the parameters and scope communicated by Ecology and reflected in the contract. Maps presented in this report were accurate based on the information available to Leidos at the time that the facility inspections were conducted.

This report is intended to be used in its entirety. Taking or using in any way excerpts from this report are not permitted and any party doing so does so at its own risk.

The Union Pacific Railroad (UPRR) – Argo Yard is located at 402 S Dawson Street, Seattle, Washington, at Milepost 180.1 of the Portland Service Unit of UPRR. The Argo Yard is a railcar switching and intermodal station, and a maintenance facility for the railroad. Activities conducted at this location include vehicle fueling (packer cranes, dray tractors, and trucks), locomotive maintenance and fueling, rail car maintenance (rip track), parts storage, and intermodal operations (CH2MHill 2011). A facility map is presented on Figures K-1a, K-1b, and K-1c.

K-1.1 Stormwater Conveyance and Treatment System

Stormwater drainage from UPRR – Argo Yard is generally routed to the Seattle Public Utilities (SPU) storm drain system, except for one combined (storm and sanitary) sewer discharge to the sanitary sewer system and one industrial process wastewater discharge to the sanitary sewer system. Stormwater and process discharges have alphabetic "system" designations associated with nine different drainage areas, Systems A, B, E, F, G, H, L, X, and Z (Figures K-1a, K-1b, K-1c). There are three specific areas at the Argo Yard where industrial activities are conducted

that are regulated under the Industrial Stormwater General Permit (ISGP). The One Spot Maintenance Area (System L), which is devoted to locomotive fueling and locomotive/railcar maintenance and subject to ISGP regulations, is instead regulated under a separate King County Major Discharge Authorization permit. Therefore, only two stormwater discharges, Systems F and B, are regulated under the ISGP for activities including vehicle and equipment maintenance and/or fueling operations within these drainage areas. No other stormwater discharges are associated with regulated industrial activities (CH2MHill 2011).

System F receives storm drainage from the areas around the Tractor Maintenance Structure and from intermodal ramps north, east, and southeast of the building. The Tractor Maintenance Structure is located near the intersection of Denver Avenue S and Second Avenue S. This area is entirely paved and is sloped to contain storm runoff (Figure K-1b) (CH2MHill 2011).

System B receives storm drainage from the areas around the Packer Maintenance Structure at S Lucile Street and from intermodal ramps north and northwest of the building (Figure K-1c). Stormwater runoff is collected in catch basins and conveyed to SD Vault B that gravity discharges to the SPU storm drain system. Regulated industrial activities for the Packer Maintenance Area include packer and equipment washing at a dedicated wash pad (washwater is collected separately and hauled offsite for disposal) and maintenance of packer cranes at the Packer Maintenance Structure. Maintenance fluids and a small quantity of diesel fuel are stored in above-ground storage tanks within a containment area inside the structure. Maintenance of packer cranes and other equipment generally occurs under roof, but some activities occur outdoors for cranes that cannot fit completely under the roof (CH2MHill 2011).

Both System F and System B discharge to the SPU storm drain main that runs along the Denver Avenue S alignment. The Denver Avenue S storm drain mainline increases from 18-inch to 36-inch diameter as it runs northwest to the intersection of Colorado Avenue S and Diagonal Avenue S where it connects to the 144-inch storm trunk sewer. This storm trunk drain continues west along the S Oregon Street alignment to where it discharges into the LDW at the Diagonal Avenue S CSO/SD Outfall (Figure K-1b and K-1c) (CH2MHill 2011).

During the June 2013 inspection, UPRR was in the final stages of completing the construction of StormwateRx sand filter systems for Systems A, B, and F (Ecology 2013b).

K-1.2 Recent Compliance History

Ecology previously inspected UPRR – Argo Yard on April 24, 2008. The inspection report was not available for review.

UPRR – Argo Yard triggered a Level Three Corrective Action for benchmark exceedances of turbidity, copper, and zinc during 2010 and 2011. Prior to implementing the Level Three Corrective Action, UPRR jet cleaned approximately 9,200 feet of drainage piping, performed monthly monitoring of solids accumulation in catch basins, increased frequency of vacuum sweeping in areas of high traffic and dust suspension, repaved approximately 6 acres of cracked pavement, replaced catch basins during installation of the Crane Wash Pad, and performed grain size distribution, copper, and zinc analysis to assist with the design of the Level Three Treatment best management practice (BMP) (UPRR 2011).

According to available discharge monitoring report (DMR) data, UPRR – Argo Yard exceeded benchmarks for turbidity and zinc during the 1st and 2nd quarters of 2012. UPRR observed oil and grease in discharge water during the 1st quarter of 2012 (Ecology 2013c).

K-2 Inspection and Sampling

K-2.1 June 2013 Stormwater Compliance Inspection

On June 26, 2013, Ecology conducted a stormwater compliance inspection at UPRR – Argo Yard. Leidos assisted Ecology with the inspection and sampling of the facility's stormwater conveyance system. The inspection included investigating influent and effluent points at each drainage structure, written and photo documentation, and assessing whether the drainage structures contained sufficient sampleable material. The coordinates of sample locations were measured with a survey-quality global positioning system and plotted on Figure K-2 using geographic information system software. An inspection photographic log and field documentation are presented in Attachments K-1 and K-2, respectively.

The field team inspected the following stormwater conveyance structures at the UPRR – Argo Yard (Figure K-2): catch basin B8 (CB-B8), stormwater treatment system B (UP-VT-B), stormwater treatment system F (UP-VT-F), manhole F165 (MH-F165), stormwater treatment system A (UP-VT-A), and catch basin A6 (CB-A6). Location CB-B8 contained sufficient water to collect a water grab sample. Locations CB-B8, CB-A6, and MH-F165 contained sufficient sampleable solids to collect grab samples.

K-2.2 Stormwater Conveyance System Sampling

Ecology collected one water sample and three solids samples from the stormwater conveyance system at UPRR – Argo Yard. Leidos provided split samples of all samples collected to the facility. Laboratory analyses for the water sample are listed on Table K-1 and analytical data for water sample are presented in Tables K-2 through K-5. Laboratory analyses for the solids samples are listed on Table K-6 and analytical data are presented in Table K-7. Chain of custody forms and the laboratory reports are provided as Attachments K-3 and K-4, respectively.

K-2.2.1 Water Sample

Water sample UP-CB-B8-20130626-W was collected from CB-B8, located upstream of SD Vault B (Figure K-2, Attachment K-1). CB-B8 receives stormwater from the southern portion of the facility. Stormwater is conveyed from the catch basin through a 90-degree elbow to the southwest towards SD Vault B. A low volume of flow was observed in CB-B8 during sample collection. The sample is representative of stormwater in the System B drainage area.

K-2.2.2 Solids Samples

Solids sample UP-CB-B8-20130626-S was collected from CB-B8 located upstream of the SD Vault B (Figure K-2, Attachment K-1) and is representative of storm drain solids in the System B drainage area. The sample was collected from the center of the catch basin. The sample consisted of black fine-grained sand, silt/clay, organic matter, and debris. A moderate petroleum odor was detected during sample collection. After multiple grab attempts, sufficient sample volume was obtained for all analyses. Per discussion with Ecology, dioxin/furan analysis was requested for this sample.

Solids sample UP-MHF-165-20130626-S was collected from MHF-165 located at the western portion of the facility (Figure K-2, Attachment K-1) and is representative of storm drain solids in the System F drainage area. MHF-165 receives stormwater from three influent pipes draining the central and eastern portion of the facility. Sampleable material was not present in the central or western portion of the manhole. The solids sample was collected from the northeast corner of the storm drain structure. The sample consisted of dark gray gravel, coarse- to medium-grained sand and silt, organic matter, and debris. A slight petroleum odor was detected during sample collection. After multiple grab attempts, sufficient sample volume was obtained for all analyses. Per discussion with Ecology, dioxin/furan analysis was not requested for this sample.

Solids sample UP-CB-A6-20130626-S was collected from CB-A6 located upstream of SD Vault A (Figure K-2, Attachment K-1) and is representative of storm drain solids in the System A drainage area. CB-A6 receives stormwater from the central portion of the facility. The sample was collected from the center of the catch basin and consisted of black fine-grained sand and silt, organic matter, and debris. A strong petroleum odor was detected during sample collection. After multiple grab attempts, sufficient sample volume was obtained for all analyses. Per discussion with Ecology, dioxin/furan analysis was not requested for this sample.

K-3 Results

K-3.1 Chemical Analysis

Ecology collected one water sample and three solids samples during the June 26, 2013 stormwater compliance inspection at the UPRR – Argo Yard. Analytical methods, chemical results and regulatory criteria are presented in Tables K-1 through K-7.

All chemical results were independently validated by EcoChem, Inc. of Seattle, WA. A summary-level, U.S. Environmental Protection Agency (EPA) Stage 2B data validation was performed on all chemistry results; a full-level, EPA Stage 4 data validation was performed on the dioxin/furan results. A compliance-level screening (EPA Stage 2A), including a comparison of detected results to sample concentrations, was performed on the rinse blank samples. Data validation was performed following EPA guidance (EPA 1994, 2008, 2009, 2010). The data validation report is available as Attachment 2 to the draft LDW NPDES Inspection Sampling Support Technical Memorandum (Leidos 2014).

K-3.2 Inspection Results and Permit Compliance Requirements

During the June 2013 inspection, Ecology determined UPRR – Argo Yard was out of compliance with permit requirements. The main areas of noncompliance consisted of deficiencies in the facility's Stormwater Pollution Prevention Plan (SWPPP). Ecology identified the following requirements during the inspection:

- Clearly label all sampling locations and include all 13 elements on the site map as required by the ISGP.
- Remove references to expired ISGP from the SWPPP.
- Resign and certify the official SWPPP.
- Clearly identify mandatory BMPs in the SWPPP.
- Include the Operations and Maintenance Manual for the new stormwater treatment system in the SWPPP.
- Store all chemical liquids, fluids, and petroleum products and wastes, on an impervious surface and provide proper secondary containment.

Additional information regarding compliance with corrective actions was not available for review.

On July 18, 2013, Ecology approved UPRR's *Stormwater Treatment System Design Engineering Report* describing the StorwmateRx treatment system (Ecology 2013a).

a - Total PCBs and total PCB homologs include only congeners that met identification criteria as required by EPA Method1668B.
b - Estimated total PCBs and estimated total PCB homologs include congeners that were "estimated maximum possible concentration" or EMPC. The EMPC values were qualified by EcoChem as "U" to indicate the analyte was not detected at an elevated reporting limit that met criteria required by EPA Method1668B. Estimated total PCBs and estimated total PCB homolog values were qualified as estimated (J) where EMPCs were included in the reported totals.

a - LDW RALs are presented for cPAHs and Dioxin/Furan TEQs. MTCA Method A cleanup levels for soil are presented for TPH.

b - This is a field duplicate of the sample directly preceding it.

Results in **bold** exceed the SQS/LAET/RAL.

Results in **bold and shaded gray** exceed the CSL/2LAET.

EFs are presented for detected concentrations that exceed the SMS/AET criteria, LDW RALs, or MTCA Method A cleanup levels for soil only.

The EFs are calculated (result/criterion) and have no regulatory relevance. They provide an indication of the general magnitude of the concentration relative to the SMS criteria or LDW RALs.

% - percent

< - not detected

2LAET - Second Lowest Apparent Effects Threshold

AET - Apparent Effects Threshold

cPAHs - carcinogenic polycyclic aromatic hydrocarbons

nd - non-detect

ng/kg - nanograms per kilogram

NPDES - National Pollutant Discharge Elimination System

OC - organic carbon

PCBs - polychlorinated biphenyls

Data Reporting Qualifiers

Effective 2/14/2011

Inorganic Data

U — Indicates that the target analyte was not detected at the reported concentration

* — Duplicate RPD is not within established control limits

B — Reported value is less than the CRDL but ≥ the Reporting Limit

N — Matrix Spike recovery not within established control limits

NA — Not Applicable, analyte not spiked

H — The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible

L — Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U — Indicates that the target analyte was not detected at the reported concentration

* — Flagged value is not within established control limits

B — Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.

J — Estimated concentration when the value is less than ARI's established reporting limits

D — The spiked compound was not detected due to sample extract dilution

E — Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

Q — Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20%Drift or minimum RRF).

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NR Spiked compound recovery is not reported due to chromatographic interference

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

M2 The sample contains PCB congeners that do not match any standard Aroclor pattern. The PCBs are identified and quantified as the Aroclor whose pattern most closely matches that of the sample. The reported value is an estimate.

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

EMPC Estimated Maximum Possible Concentration (EMPC) defined in EPA Statement of Work DLM02.2 as a value "calculated for 2,3,7,8-substituted isomers for which the quantitation and /or confirmation ion(s) has signal to noise in excess of 2.5, but does not meet identification criteria" **(Dioxin/Furan analysis only)**

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

X Analyte signal includes interference from polychlorinated diphenyl ethers. **(Dioxin/Furan analysis only)**

Z Analyte signal includes interference from the sample matrix or perfluorokerosene ions. **(Dioxin/Furan analysis only)**

Geotechnical Data

A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.

F Samples were frozen prior to particle size determination

SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations

SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis

(1) Detection Limit (DL), Limit of Detection (LOD) and Limit of Quantitation (LOQ) are defined in ARI SOP 1018S
(2) Control limits calculated using all data from 1/1/12 through 5/31/12.
(3) Relative Percent Difference between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then $RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$

(4) Highlighted control limits (**bold font**) are adjusted from the calculated values to reflect that:
a. ARI does not use control limits < 10 for the lower limit or < 100 for the upper limit or
b. Control limits for analyzes with no separate preparation procedure are adjusted to reflect the minimum uncertainty in the calibration of the instrument allowed by the referenced analytical method.

(2) Control limits calculated using data from all samples prepared between 4/1/11 through 3/31/12.

(3) Highlighted control limits (**bold font**) are adjusted from the calculated values to reflect that ARI does not use control limits < 10 for the lower limit or < 120 for the upper limit.

(4) Relative Percent Difference between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then $RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$

(5) Default limits pending generation of historic limits for Benzo(j)fluoranthene and Perylene

(1) Detection Limit (DL), Limit of Detection (LOD) and Limit of Quantitation (LOQ) as defined in ARI SOP 1018S.
(2) Highlighted control limits (bold font) are adjusted from the calculated values as follows:
a) Highlighted control limits (**bold font**) adjusted to demonstrate that ARI does not use control limits < 10 for the lower limit or < 100 for the upper limit.
b) Control limits for analytes with no separate preparation procedure are adjusted to reflect the minimum uncertainty in the calibration of the instrument allowed by the referenced analytical method.
(3) Acceptance criteria for the relative percent difference (RPD) between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then $RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$
(4) Default control limits pending sufficient data to calculate historic limits.

Sample Receipt

One water sample was removed from archive on June 28, 2013 and logged under ARI job WV95. The sample was analyzed for Pesticides. For details regarding sample receipt, please refer to the Cooler Receipt Form.

Pesticides by SW8081

The sample was extracted and analyzed within recommended holding times.

Initial and continuing calibrations were within method requirements. Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

The method blank was clean at the reporting limits.

The LCS and LCSD percent recoveries of delta-BHC fell outside the control limits low for **LCS-062813**. All other percent recoveries were within control limits. No corrective action was taken.

Data Reporting Qualifiers

Effective 2/14/2011

Inorganic Data

U — Indicates that the target analyte was not detected at the reported concentration

* — Duplicate RPD is not within established control limits

B — Reported value is less than the CRDL but ≥ the Reporting Limit

N — Matrix Spike recovery not within established control limits

NA — Not Applicable, analyte not spiked

H — The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible

L — Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U — Indicates that the target analyte was not detected at the reported concentration

* — Flagged value is not within established control limits

B — Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.

J — Estimated concentration when the value is less than ARI's established reporting limits

D — The spiked compound was not detected due to sample extract dilution

E — Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

Q — Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20%Drift or minimum RRF).

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NR Spiked compound recovery is not reported due to chromatographic interference

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

M2 The sample contains PCB congeners that do not match any standard Aroclor pattern. The PCBs are identified and quantified as the Aroclor whose pattern most closely matches that of the sample. The reported value is an estimate.

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

EMPC Estimated Maximum Possible Concentration (EMPC) defined in EPA Statement of Work DLM02.2 as a value "calculated for 2,3,7,8-substituted isomers for which the quantitation and /or confirmation ion(s) has signal to noise in excess of 2.5, but does not meet identification criteria" **(Dioxin/Furan analysis only)**

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

X Analyte signal includes interference from polychlorinated diphenyl ethers. **(Dioxin/Furan analysis only)**

Z Analyte signal includes interference from the sample matrix or perfluorokerosene ions. **(Dioxin/Furan analysis only)**

Geotechnical Data

A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.

F Samples were frozen prior to particle size determination

SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations

SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis

W Weight of sample in some pipette aliquots was below the level required for accurate weighting

Semivolatiles by SW8270D

The samples and associated laboratory QC were extracted and analyzed within recommended holding times for samples stored frozen.

Initial calibrations were within method requirements.

The continuing calibration (CCAL) on 8/2/13 was outside the 20% control limit high for Carbazole, and fell out low for Benzoic Acid, 2,4-Dinitrophenol, and 4,6-Dinitro-2-methylphenol. All detected results associated with this CCAL have been flagged with a "Q" qualifier. No further corrective action was taken.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

Phenol was present in **MB-072513** at a level that was greater than ½ the reporting limit. All detected results for this compound have been flagged with a "B" qualifier. No further corrective action was taken.

The LCS percent recoveries of 4-Chloroaniline, Carbazole, 3,3'-Dichlorobenzidine, and Aniline were outside control limits for **LCS-072513**. All other percent recoveries were within control limits. No corrective action was taken.

Several matrix spike and matrix spike duplicate percent recoveries were outside advisory control limits with wide RPDs for sample **UP-CB-B8-20130626-S**. No corrective action is required for matrix QC.

Specific results have been "EMPC"-flagged indicating a response not meeting requirements of positive identification. The EMPC values are treated as undetects under some programs and as hits under programs with more conservative protocols.

Select results have has been flagged with an "X" on the Form I's due to indication of a co-eluting PDBE.

The TEQ is presented with WHO2005 with ND=0 for undetects and ND=1/2 for undetects, with EMPCs included as hits.

Client: SAIC	**ARI Job No.:** WY32
Client Project: NPDES Sampling Support	**Client Project No.:** 209977

Case Narrative

1. Three samples were submitted for analysis on July 22, 2013.
2. The samples were submitted for grain size analysis by means of X-ray diffraction using a Sedigraph 5120. The values are calculated using Stokes' Law of sedimentation and Beer's law of extinction.
3. The samples were run in a single batch and one sample from another job was chosen for triplicate analysis.
4. The standard operating procedure calls for the sample to be measured on the #4 (4750 µm) sieve, down to the 1.0 µm particle size with the Sedigraph 5120. If there were no particles measured at these extremes, the data is not included in the report.
5. The samples contained organic material. Organic material does not absorb X-rays, and is not included in the fine portion of the analysis. This most likely contributed to the negative mass frequency (percent) values. The sample was rerun three times and no report could be generated without negative values.
6. The samples contained a black tar-like material that stuck to the tares and other particles when oven dried. This may have affected the grain size distribution.
7. The data is provided in summary tables and plots.
8. There were no other noted anomalies in the samples or methods on this project.

Data Reporting Qualifiers

Effective 2/14/2011

Inorganic Data

U — Indicates that the target analyte was not detected at the reported concentration

* — Duplicate RPD is not within established control limits

B — Reported value is less than the CRDL but ≥ the Reporting Limit

N — Matrix Spike recovery not within established control limits

NA — Not Applicable, analyte not spiked

H — The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible

L — Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U — Indicates that the target analyte was not detected at the reported concentration

* — Flagged value is not within established control limits

B — Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.

J — Estimated concentration when the value is less than ARI's established reporting limits

D — The spiked compound was not detected due to sample extract dilution

E — Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

Q — Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20%Drift or minimum RRF).

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NR Spiked compound recovery is not reported due to chromatographic interference

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

M2 The sample contains PCB congeners that do not match any standard Aroclor pattern. The PCBs are identified and quantified as the Aroclor whose pattern most closely matches that of the sample. The reported value is an estimate.

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

EMPC Estimated Maximum Possible Concentration (EMPC) defined in EPA Statement of Work DLM02.2 as a value "calculated for 2,3,7,8-substituted isomers for which the quantitation and /or confirmation ion(s) has signal to noise in excess of 2.5, but does not meet identification criteria" **(Dioxin/Furan analysis only)**

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

X Analyte signal includes interference from polychlorinated diphenyl ethers. **(Dioxin/Furan analysis only)**

Z Analyte signal includes interference from the sample matrix or perfluorokerosene ions. **(Dioxin/Furan analysis only)**

Geotechnical Data

A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.

F Samples were frozen prior to particle size determination

SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations

SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis

W Weight of sample in some pipette aliquots was below the level required for accurate weighting

(1) Detection Limit (DL), Limit of Detection (LOD) & Limit of Quantitation (LOQ) are defined in ARI SOP 1018S.
(2) Highlighted control limits (**bold font**) are adjusted from the calculated values to reflect that ARI does not use control limits < 10 for the lower limit or < 100 for the upper limit.
(3) 30 – 160 are default limits used when there is insufficient data to calculate historic control limits
(4) Acceptance criteria for the relative percent difference (RPD) between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then

$$RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$$

(5) Control Limits calculated usng all data generated between 6/1/12 and 12/31/12

SPECIAL INSTRUCTIONS: 1. Weigh into beakers-lightly dry with Sodium Sulfate. 2. Transfer to microwave vessel. Note: do not fill vessel more than 2/3rd full. Some samples may require two vessels). 3. Add 1:1 DCM/ACE to the vessels (until solvent is 3" above soil layer after homogenization). 4. Add surr/spike. 5. Microwave on appropriate power setting determined by # of samples. 6. After microwave-rehomogenize while hot then let cool 15 min in cold water. Re-homogenize while cool. 7. Decant 1:1 DCM/ACE into Erlenmeyer flask with sodium sulfate in the bottom and funnel containing pre-deactivated glasswool. 8. Rinse with DCM 9. Microwave a 2nd time using 80:20 DCM/ACE (until solvent is 3" above soil layer after homogenization). 10. Let cool and decant the solvent then empty the soil into the funnel and rinse with DCM. 11. KD (small ~~on large~~ drying column with pre-deactivated glasswool-Blanks=5g sulfate)) to 5mL at 80- 85°C. 12. GPC Req. 13. (After GPC): KD at 80-85°. 14. TurboVap. 15. Vial in DCM.

Detail problems, corrective actions and/or other pertinent information below

- Samples were run @ 5x dilution
- Samples were run on 07/31/13 and 08/01/13. Samples were re-run again on 8/14/13 with a new IS and new curve due to low spike recovery in LCS.
- All three times closing CCALs failed due to matrix effect.
- 08/14/13 run: — LCS: TCMX recovery ~~low~~ OK per spk - okay.
  — Samples B, C, Cms/Cmsd: BNB IS failed on CCF_2 column due to matrix effect. OK
  — Sample A: TCMX is ~~high~~ due to matrix interference.
  — Closing CCALs: OS - okay on both columns. Toxaphene - okay on CCF, BNB IS failed low on CCF_2.
  - Only Endosulfan I, Dieldrin and α-Chlordane failed on CCF. Almost all INDA analytes failed on CCF_2.

SPECIAL INSTRUCTIONS: 1. Weigh soil/sed into beakers-lightly dry with sodium sulfate.
2. Transfer to microwave vessel(s). Note: (do not fill vessels more than 2/3rd full. Some samples may require two vessels).
3. Add 1:1 Hexane/Acetone until the solvent layer is 3" inches above the soil layer after homogenization. 4. Add surr/spike.
5. Microwave on appropriate power setting determined by # of samples. 6. After microwave-Re-homogenize while hot then cool vessels in cold water 15 minutes. Re-homogenize while cool. 7. Decant 1:1 Hex/Ace into E. flask with sodium sulfate in bottom+ funnel with neutral glasswool plug. 8. Rinse with Hexane. 9. Add 8:2 Hexane/Acetone to the vessel 3"inches above the soil layer after homogenization. Microwave a 2nd time. 10. Let cool and decant solvent then empty the soil into the funnel and rinse with Hexane. 11. KD (Small ~~or Large~~ Drying Column) on 100° bath. (Blanks=only 5g Sodium Sulfate).
12. Exchange (2 X with 20mL) Hexane. 13. TurboVap. 14. Clean-ups. 15. TurboVap. 16. Vial with Hexane.

Section D: Summary of Findings/Comments

Background:

This compliance inspection was conducted as part of a Department of Ecology inspection program to control the potential sources of pollutants discharged to the Duwamish waterway through storm drainage systems. The previous Department of Ecology, Water Quality Program compliance inspection at this facility was April 24, 2008. As part of this inspection, storm drain lines and structures were reviewed and compared with existing site maps and source trace samples of catch basin solids and stormwater were collected. Ecology will review sample results and consider the need to monitor for additional parameters or conduct further source tracing.

The Argo Yard is a railcar switching and intermodal station, and a maintenance facility for the railroad. Activities conducted include vehicle fueling (packer cranes, tractors, and trucks), locomotive maintenance and fueling, rail car maintenance, parts storage, and intermodal operations. Argo Yard occupies approximately 60 acres and the topography is relatively flat. The Duwamish Waterway is located approximately one-half mile to the west of the property.

Site Inspection:

We arrived at the facility at approximately 9:00 am and met with Damon Larkin, Operations Superintendent and explained the purpose of the inspection and sampling. The site map was reviewed and the first step was to establish prospective sample locations. After the first sample location was selected and the sampling contractor was set-up, I conducted a paperwork review and then a site walk-through was conducted.

The Stormwater Pollution Prevention Plan (SWPPP) was reviewed and needs to be updated to include and/or address the following; the site map must clearly label all sampling locations and include all 13 elements as required by the permit. The SWPPP makes references to the expired Industrial Stormwater General Permit. The current permit requires 8 consecutive quarterly samples that meet benchmarks in order to qualify for "Consistent Attainment". The Permit applies to all areas of the entire facility, with the exception of those areas that flow to the combined or sanitary sewer. Official SWPPP certification form was used but signed and dated by Norm Siler in 2010. It needs to be resigned and recertified. Mandatory BMPs did not seem to be clearly indentified. The Operations and Maintenance Manual for the new stormwater treatment systems must be included in the SWPPP.

Industrial activities include the Packer Maintenance Area; packer and equipment washing at a dedicated wash pad (washwater collected separately and hauled offsite for disposal) and maintenance of packer cranes at the Packer Maintenance Structure. Maintenance fluids and diesel fuel are stored in above-ground storage tanks within a containment structure. Maintenance of packer cranes and other equipment generally occurs under roof, but some activities occur outdoors for cranes that cannot fit completely under the roof.

A nearby outdoor, above-ground diesel tank is enclosed in a concrete secondary containment berm. Drainage from the containment area is controlled manually by a valve that is normally capped and locked closed. Precipitation that collects within the containment area is released on occasion, as necessary, under supervision after ensuring that the water quality complies with applicable standards. The diesel tank is regularly filled by fuel trucks that connect at the adjacent fill port. The fill port also remains capped and locked when not in service. Tractors are refueled at the fueling station located adjacent to the diesel tank.

Locate spill kits within 25 feet of all stationary fueling stations, fuel transfer stations, and mobile fueling units. At a minimum, spill kits shall include:
i) Oil absorbents capable of absorbing 15 gallons of fuel.
ii) A storm drain plug or cover kit.
iii) A non-water containment boom, a minimum of 10 feet in length with a 12 gallon absorbent capacity.
iv) A non-metallic shovel.
v) Two five-gallon buckets with lids.

The SWPPP shall include BMPs to minimize the exposure of manufacturing, processing, and material storage areas (including loading and unloading, storage, disposal, cleaning, maintenance, and fueling operations) to rain, snow, snowmelt, and runoff by either locating these industrial materials and activities inside or protecting them with storm resistant coverings.

The SWPPP shall include BMPs to inspect and maintain the stormwater drainage, source controls, treatment systems, and plant equipment and systems that could fail and result in contamination of stormwater. The SWPPP shall include the schedule/frequency for completing each maintenance task. The Permittee must:
a) Clean catch basins when the depth of debris reaches 60% of the sump depth. In addition, the Permittee must keep the debris surface at least 6 inches below the outlet pipe.
b) Inspect all equipment and vehicles during monthly site inspections for leaking fluids such as oil, antifreeze, etc. Take leaking equipment and vehicles out of service or prevent leaks from spilling on the ground until repaired.
c) Immediately clean up spills and leaks (e.g., using absorbents, vacuuming, etc.) to prevent the discharge of pollutants.

The Permittee shall vacuum paved surfaces with a vacuum sweeper to remove accumulated pollutants a minimum of once per quarter. Clean up leaks and spills as they occur and employ the spill plan when necessary.

Prohibit any and all wash-waters from entering storms drains or surface waters.

Store all chemical liquids, fluids, and petroleum products, on an impervious surface that is surrounded with a containment berm or dike that is capable of containing 10% of the total enclosed tank volume or 110% of the volume contained in the largest tank, whichever is greater.

Issues & Requirements:

The Stormwater Pollution Prevention Plan (SWPPP) must be updated/revised to properly include or address:

- The site map must clearly label all sampling locations and include all 13 elements as required by the permit.
- The SWPPP makes references to the expired Industrial Stormwater General Permit.
- The current permit requires 8 consecutive quarterly samples that meet benchmarks in order to qualify for "Consistent Attainment".
- Official SWPPP certification form was used but signed and dated by Norm Siler in 2010. It needs to be resigned and recertified.
- Mandatory BMPs did not seem to be clearly indentified.
- The Operations and Maintenance Manual for the new stormwater treatment systems must be included in the SWPPP.
- Store all chemical liquids, fluids, and petroleum products and wastes, on an impervious surface that is surrounded with a containment berm or dike that is capable of containing 10% of the total enclosed tank volume or 110% of the volume contained in the largest tank, whichever is greater.

The revised SWPPP must be submitted to Ecology within 30 days upon receipt of this report.

UNANNOUNCED Inspection

June 26, 2013 **Permit # WAR001155**

Union Pacific Railroad - Argo Yard, Seattle

#1. DESCRIPTION: Union Pacific Railroad triggered Level 3 corrective actions for turbidity. They are in the final stages of completing the construction of Level 3 StormwateRx sand filter treatment systems.

#2. DESCRIPTION: At the south end of the facility is the packer maintenance shop. All catch basins have filter inserts in them.

#3. DESCRIPTION: Maintenance of packer cranes and other equipment generally occurs under a roof, but some activities take place outdoors for cranes that cannot fit completely under the roof.

#4. DESCRIPTION: The shop looked to be in good condition.

June 26, 2013 **Permit # WAR001155**

Union Pacific Railroad - Argo Yard, Seattle

#5. DESCRIPTION: The wash pad is for packer and equipment washing. Washwater is collected separately and hauled offsite for disposal.

#6. DESCRIPTION: The yellow tube contains storm drain inlet protection. This storm drain is located between the wastewater tank and the wash pad.

#7. DESCRIPTION: The diesel tank is too tall to be covered. Drainage from the containment area is controlled manually by a valve that is normally capped and locked closed. Precipitation that collects within the containment area is periodically released as necessary, after ensuring that the water quality complies with applicable standards.

#8. DESCRIPTION: A Spill Kit is located here as required.

June 26, 2013 **Permit # WAR001155**

Union Pacific Railroad - Argo Yard, Seattle

#9. DESCRIPTION: The stormwater in this area is tributary to surface waters. The stormwater permit applies to all areas of the facility.

#10. DESCRIPTION: The source control BMPs and inlet protections need to be improved here.

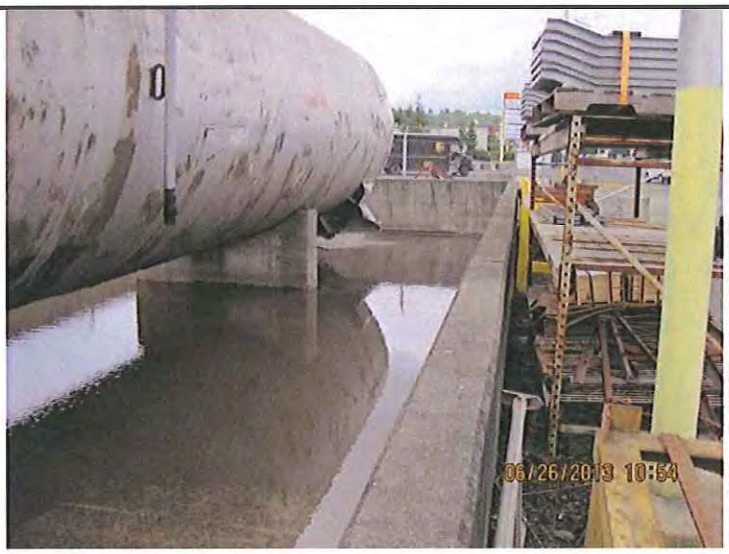
#11. DESCRIPTION: Fuel trucks transfer petroleum products and wastes at this location. The catch basin flows to the oil water separator seen in photo # 15.

#12. DESCRIPTION: The permit requires UPRR to minimize the exposure of material storage areas to rain, snow, snowmelt, and runoff by either locating these industrial materials and activities inside or protecting them with storm resistant coverings.

June 26, 2013 **Permit # WAR001155**

Union Pacific Railroad - Argo Yard, Seattle

#13. DESCRIPTION: The blue sump pump in the corner of the containment structure was being used to pump stormwater out of the structure but UPRR was not sure where to.



#14. DESCRIPTION: The SWPPP needs to include written procedures on how the accumulated stormwater within the containment structure is to be handled.

#15. DESCRIPTION: The oil/water separated is permitted by King County Industrial Waste to discharge to the sanitary sewer.

#16. DESCRIPTION: The stormwater runoff from this area needs to be properly included in the SWPPP.
