Limitation of Use: Leidos' project activities were restricted to collection and analysis of a limited number of environmental samples and visual observations obtained during the physical site visit, and from records made available by Ecology or third parties during the project. In preparing this report, Leidos has relied on verbal and written information provided by secondary sources and interviews, including information provided by the customer. Leidos has made no independent investigations concerning the accuracy or completeness of the information relied upon. Because the project activities consisted of collecting and evaluating a limited supply of information, Leidos may not have identified all potential items of concern and, therefore, Leidos warrants only that the project activities under this contract have been performed within the parameters and scope communicated by Ecology and reflected in the contract. Maps presented in this report were accurate based on the information available to Leidos at the time that the facility inspections were conducted.

This report is intended to be used in its entirety. Taking or using in any way excerpts from this report are not permitted and any party doing so does so at its own risk.

Shultz Distributing is a bulk oil storage and distributing facility. Petroleum products, solvents and antifreeze are delivered to the facility by truck and railcar and are either transferred to storage tanks or stored in the warehouse facility in 55-gallon drums (EMR 2003).

A-1.1 Stormwater Conveyance

Shultz Distributing operates two oil water separators. The oil water separator on the western portion of the property discharges to the Seattle Public Utilities (SPU) storm drain system. The oil water separator and roof drains on the eastern portion of the property discharge to the King County combined sewer. Shultz Distributing does not operate a stormwater treatment system (EMR 2003). A facility drainage map is presented in Figure A-1.

A-1.2 Recent Compliance History

Based on available discharge monitoring reports, Shultz Distributing exceeded benchmarks for copper and turbidity during the 1st quarter of 2011 and zinc during the 1st and 2nd quarter of 2011. The facility exceeded benchmarks for zinc during the 1st and 2nd quarter of 2012 (Ecology 2013).

A-2 Inspection and Sampling

A-2.1 March 2013 Stormwater Compliance Inspection

On March 26, 2013, Ecology conducted a stormwater compliance inspection at Shultz Distributing. Leidos assisted Ecology with the inspection and sampling of the facility's stormwater conveyance system. The inspection included investigating influent and effluent points at drainage structures, written and photographic documentation, and assessing whether the drainage structures contained sufficient sampleable material. The coordinates of sample locations were recorded with a survey-quality global positioning system and plotted on Figure A-2 using geographic information system software. An inspection photographic log and field documentation are presented in Attachments A-1 and A-2, respectively.

The field team inspected the following stormwater conveyance structures at Shultz Distributing (Figure A-2): catch basin 01 (CB-01), oil water separator 01 (WS-01), catch basin 02 (CB-02), catch basin 03 (CB-03), catch basin 04 (CB-04), sump pump 01 (SP-01), catch basin 05 (CB-05), catch basin 06 (CB-06), and oil water separator 02 (WS-02). Locations SP-01 and CB-01 contained sufficient sampleable material and were representative of storm drain solids at the facility. Location SP-01 contained sufficient water to collect a water grab sample. Storm drain structure inspection locations are presented in Figure A-2.

At the time of the March 2013 inspection, Shultz Distributing was out of permit compliance for failure to complete a Level Three Corrective Action (Treatment Best Management Practices) by September 30, 2011 (Ecology 2012).

A-2.2 Stormwater Conveyance System Sampling

Ecology collected one water sample and two solids samples from the stormwater conveyance system at Shultz Distributing. Laboratory analyses for the water samples are listed on Table A-1 and analytical data are presented in Tables A-2 through A-5. Laboratory analyses for the solids samples are listed on Table A-6 and analytical data are presented in Table A-7. Chain of custody forms and the laboratory reports are provided as Attachments A-3 and A-4, respectively.

A-2.2.1 Water Sample

Water sample SD-SP-01-20130326-W was collected from SP-01 (Figure A-2, Attachment A-1). The sump receives stormwater from the area of the facility that drains the shipping and receiving yard (western portion of the facility). The sample location is representative of stormwater discharge from Shultz Distributing to the SPU storm drain system. Discharge from the sump did not occur during sample collection. Oil droplets adhered to the stainless steel sampling pail and were observed suspended in the water column.

A-2.2.2 Solids Samples

Solids sample SD-SP-01-20130326-S was collected from SP-01 (Figure A-2, Attachment A-1). Solids in the sump are representative of storm drain solids at the site that may become suspended and discharge to the SPU storm drain system. The sample material was collected from the

western portion of the sump. The sample consisted of dark brown silty sand, organic matter and debris. A strong petroleum odor was detected during sample collection. After multiple grab attempts, sufficient sample volume was obtained for all analyses with the exception of volatile organic compounds. Per discussion with Ecology, dioxin/furan analysis was not requested for this sample.

Solids sample SD-CB-01-20130326-S was collected from CB-01, located at the southeast corner of the facility. CB-01 collects stormwater from the surrounding storage lot and parking area. Stormwater is conveyed from CB-01 to a connection on the SPU storm drain system. The sample consisted of dark brown medium- to fine-grained sand and silt, organic matter, and invertebrates. A strong hydrogen sulfide odor was detected during sample collection. Sufficient sample volume was obtained for all analyses. Per discussion with Ecology, dioxin/furan analysis was requested for this sample.

A-3 Results

A-3.1 Chemical Analysis

Ecology collected one water and two solids samples during the March 26, 2013 stormwater compliance inspection at Shultz Distributing. Analytical methods, chemical results and regulatory criteria are presented in Tables A-1 through A-7.

All chemical results were independently validated by EcoChem, Inc. of Seattle, WA. A summary-level, U.S. Environmental Protection Agency (EPA) Stage 2B data validation was performed on all chemistry results; a full-level, EPA Stage 4 data validation was performed on the dioxin/furan results. A compliance-level screening (EPA Stage 2A), including a comparison of detected results to sample concentrations, was performed on the rinse blank samples. Data validation was performed following EPA guidance (EPA 1994, 2008, 2009, 2010). The data validation report is available as Attachment 2 to the draft LDW NPDES Inspection Sampling Support Technical Memorandum (Leidos 2014).

A-3.2 Inspection Results and Permit Compliance Requirements

The Ecology inspection report was not available for review.

a - Total PCBs and total PCB homologs include only congeners that met identification criteria as required by EPA Method1668B.
b - Estimated total PCBs and estimated total PCB homologs include congeners that were identified by SGS Analytical as "estimated maximum possible concentration" or EMPC. The EMPC values were qualified by EcoChem as "U" to indicate the analyte was not detected at an elevated reporting limit that met criteria required by EPA Method1668B. Estimated total PCBs and estimated total PCB homolog values were qualified as estimated (J) where EMPCs were included in the reported totals.

a - LDW RALs are presented for cPAHs and Dioxin/Furan TEQs. MTCA Method A cleanup levels for soil are presented for TPH.

b - This is a field duplicate of the sample directly preceding it.

Results in **bold** exceed the SQS/LAET/RAL.

Results in **bold and shaded gray** exceed the CSL/2LAET.

EFs are presented for detected concentrations that exceed the SMS/AET criteria, LDW RALs, or MTCA Method A cleanup levels for soil only.

The EFs are calculated (result/criterion) and have no regulatory relevance. They provide an indication of the general magnitude of the concentration relative to the SMS criteria or LDW RALs.

Cheronne,

Per our discussion, we would like ARI to composite and homogenize material from the four jars with sample ID: **SD-SP-01-20130326-S**. Following homogenization, please proceed with analysis in priority as listed on the COC.

Thank you,

Corey

Good Morning,

Per our conversation this AM:

1. Please do not analyze SD-SP-01-20130326-W for TDS or PSD. The COC was in fact correct; the extra bottle was filled up inadvertently.

Thanks!
Christine

Case Narrative

1. Two samples were submitted for analysis on March 27, 2013, and were in good condition.
2. The samples were submitted for grain size analysis by means of X-ray diffraction using a Sedigraph 5120. The values are calculated using Stokes' Law of sedimentation and Beer's law of extinction.
3. The samples were run in a single batch and one sample from another job was chosen for triplicate analysis.
4. The standard operating procedure calls for the samples to be measured on the #4 (4750 µm) sieve, down to the 1.0 µm particle size with the Sedigraph 5120. If there were no particles measured at these extremes, the data is not included in the report.
5. The samples contained a percentage of organic material. Organic material does not absorb X-rays, and is not included in the fine portion of the analysis.
6. The data is provided in summary tables and plots.
7. There were no other noted anomalies in the samples or methods on this project.

Data Reporting Qualifiers

Effective 2/14/2011

Inorganic Data

U — Indicates that the target analyte was not detected at the reported concentration

* — Duplicate RPD is not within established control limits

B — Reported value is less than the CRDL but ≥ the Reporting Limit

N — Matrix Spike recovery not within established control limits

NA — Not Applicable, analyte not spiked

H — The natural concentration of the spiked element is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible

L — Analyte concentration is ≤5 times the Reporting Limit and the replicate control limit defaults to ±1 RL instead of the normal 20% RPD

Organic Data

U — Indicates that the target analyte was not detected at the reported concentration

* — Flagged value is not within established control limits

B — Analyte detected in an associated Method Blank at a concentration greater than one-half of ARI's Reporting Limit or 5% of the regulatory limit or 5% of the analyte concentration in the sample.

J — Estimated concentration when the value is less than ARI's established reporting limits

D — The spiked compound was not detected due to sample extract dilution

E — Estimated concentration calculated for an analyte response above the valid instrument calibration range. A dilution is required to obtain an accurate quantification of the analyte.

Q — Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20%Drift or minimum RRF).

S Indicates an analyte response that has saturated the detector. The calculated concentration is not valid; a dilution is required to obtain valid quantification of the analyte

NA The flagged analyte was not analyzed for

NR Spiked compound recovery is not reported due to chromatographic interference

NS The flagged analyte was not spiked into the sample

M Estimated value for an analyte detected and confirmed by an analyst but with low spectral match parameters. This flag is used only for GC-MS analyses

M2 The sample contains PCB congeners that do not match any standard Aroclor pattern. The PCBs are identified and quantified as the Aroclor whose pattern most closely matches that of the sample. The reported value is an estimate.

N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification"

Y The analyte is not detected at or above the reported concentration. The reporting limit is raised due to chromatographic interference. The Y flag is equivalent to the U flag with a raised reporting limit.

EMPC Estimated Maximum Possible Concentration (EMPC) defined in EPA Statement of Work DLM02.2 as a value "calculated for 2,3,7,8-substituted isomers for which the quantitation and /or confirmation ion(s) has signal to noise in excess of 2.5, but does not meet identification criteria" **(Dioxin/Furan analysis only)**

C The analyte was positively identified on only one of two chromatographic columns. Chromatographic interference prevented a positive identification on the second column

P The analyte was detected on both chromatographic columns but the quantified values differ by ≥40% RPD with no obvious chromatographic interference

X Analyte signal includes interference from polychlorinated diphenyl ethers. **(Dioxin/Furan analysis only)**

Z Analyte signal includes interference from the sample matrix or perfluorokerosene ions. **(Dioxin/Furan analysis only)**

Geotechnical Data

A The total of all fines fractions. This flag is used to report total fines when only sieve analysis is requested and balances total grain size with sample weight.

F Samples were frozen prior to particle size determination

SM Sample matrix was not appropriate for the requested analysis. This normally refers to samples contaminated with an organic product that interferes with the sieving process and/or moisture content, porosity and saturation calculations

SS Sample did not contain the proportion of "fines" required to perform the pipette portion of the grain size analysis

W Weight of sample in some pipette aliquots was below the level required for accurate weighting

(1) Detection Limit (DL), Limit of Detection (LOD) and Limit of Quantitation (LOQ) are defined in ARI SOP 1018S
(2) Control limits calculated using all data from 1/1/12 through 5/31/12.
(3) Relative Percent Difference between analytes in replicate analyzes. If C_O and C_D are the concentrations of the original and duplicate respectively then $RPD = \frac{|C_O - C_D|}{\frac{C_O + C_D}{2}} x100$

(4) Highlighted control limits (**bold font**) are adjusted from the calculated values to reflect that:
a. ARI does not use control limits < 10 for the lower limit or < 100 for the upper limit or
b. Control limits for analyzes with no separate preparation procedure are adjusted to reflect the minimum uncertainty in the calibration of the instrument allowed by the referenced analytical method.

a. ARI does not use control limits < 10 for the lower limit or < 100 for the upper limit or
b. Control limits for analyzes with no separate preparation procedure are adjusted to reflect the minimum uncertainty in the calibration of the instrument allowed by the referenced analytical method.

Detail problems, corrective actions and/or other pertinent information below

- C/Cmsd/Cmsd: were run @ 5x dilution due to dark color of the extracts
- Both samples: really bad matrix. Closing ccals: DDT breakdown - 16% Endrin - 32%, ccals failed very low for most of the analytes.
- Samples were re-run on 4/12/13. C/Cmsd/Cmsd @ 50x dilution, DBHx Opening ccals high for a-BHC, β-BHC, Dieldrin, DDE, HCBD, TCLP-meta, TCLP-para, caramin. Okay to use, analytes were not found in the samples.
  Closing ccals: DDT failed on CC#2, okay on CC#. Breakdown - okay.
  Both runs reported for sample "C", 10x dilution run for sample "D"

SPECIAL INSTRUCTIONS: 1. Weigh soil/sed into beakers-lightly dry with sodium sulfate. 2. Transfer to microwave vessel(s). Note: (do not fill vessels more than 2/3rd full. Some samples may require two vessels). 3. Add 1:1 Hexane/Acetone until the solvent layer is 3" inches above the soil layer after homogenization. 4. Add surr/spike. 5. Microwave on appropriate power setting determined by # of samples. 6. After microwave-Re-homogenize while hot then cool vessels in cold water 15 minutes. Re-homogenize while cool. 7. Decant 1:1 Hex/Ace into E. flask with sodium sulfate in bottom+ funnel with neutral glasswool plug. 8. Rinse with Hexane. 9. Add 8:2 Hexane/Acetone to the vessel 3"inches above the soil layer after homogenization. Microwave a 2nd time. 10. Let cool and decant solvent then empty the soil into the funnel and rinse with Hexane. 11. KD (~~Small or~~ Large Drying Column) on 100° bath. (Blanks=only 5g Sodium Sulfate). 12. Exchange (2 X with 20mL) Hexane. 13. TurboVap. 14. Clean-ups. 15. TurboVap. 16. Vial with Hexane.

Detail problems, corrective actions and/or other pertinent information below:
high points for o-terph/n-triac have RT's >0.05 min allowance. shifts could be due to saturation (o-terph shift +0.057 min n-triac. shif + 0.085 min) samples/qc not spike at that level. ok to report as is. sklmmed surr 01/25/13

Detail problems, corrective actions and/or other pertinent information below

Sample D appears to be weathered diesel, and contains motor oil. Note that there are misc peaks in both ranges as well, A/s cleanup may remove possible interferences.

C contains motor oil & DRO, if diesel is present it is masked by the motor oil, the early range pattern is not good match though for diesel.

n-Triacontane out low by 0.5% in mail # ccal, surr not requested & ccal meets, no corrective action needed.

Parameter: NO2 Client Project:

List problems, concerns, corrective actions and any other pertinent information
Sample was run as NO2 + NO3 on 3-28 on the Lachat after the IC needed dilution.
Sample was non-detect, dup at 0.0192 ppm.
Analyst misunderstood PM and thought that NO2+NO3 was requested but PM wanted NO2 run out of hold to be able to calculate NO3 only.
