

WORKSHEET 1
SUMMARY SCORE SHEET

DRAFT

Site Name/Location (City, County, Section/Township/Range):

Railroad Roundhouse Site
6 East Arlington
Yakima Yakima county

NE $\frac{1}{4}$, NW $\frac{1}{4}$, Township 13 North, Range 19 E.W.M.

Site Description (Include management areas, compounds of concern, and quantities):

The Railroad Roundhouse site has been the location of railroad engine repair and maintenance for many years, probably as far back as the late 1800's. Soil borings and monitoring well installation have revealed contamination in the soils and ground water at the site.

Special Considerations (Include limitations in site file data or data which cannot be accommodated in the model, but which are important in evaluating the risk associated with the site, or any other factor(s) over-riding a decision of no further action for the site):

ROUTE SCORES:

Surface Water/Human Health: 24.7 (4) Surface Water/Environ.: 6.2 (1)

Air/Human Health: 26.0 (4) Air/Environmental: n/s (0)

Ground Water/Human Health: 66.1 (5)

$$HH = \frac{5^2 + 2(4) + 4}{8} = 4.62 \text{ -----} (5)$$

$$\text{Environmental} = \frac{1^2 + 2(0)}{7} = 0.14 \text{ ----} (1)$$

OVERALL RANK: 1

Rev. 5/31/91

WORKSHEET 2
ROUTE DOCUMENTATION

DRAFT

1. SURFACE WATER ROUTE

List substances to be considered for scoring: Source: 1,3

- | | |
|---------------------|----------------------------------|
| 1. chromium (total) | 5. tetrachloroethylene (PCE) |
| 2. lead | 6. toluene |
| 3. nickel | 7. xylene (total) |
| 4. zinc | 8. 1,1,2-trichlorotriflourethane |

Explain basis for choice of substance(s) to be used in scoring.

the metals were all used due to the high concentrations in the soils, also tetrachloroethylene, due to its presence in the soils and ground water

List management units to be considered in scoring: Source: 3

contaminated (a spill to) soils.

Explain basis for choice of unit used in scoring. Source: 3

With little history as to the operations of the facility, spills to the ground surface is the most likely source of contamination.

2. AIR ROUTE

List substances to be considered for scoring: Source: 1,3

- | | |
|---------------------|---|
| 1. chromium (total) | 5. tetrachloroethylene (PCE) |
| 2. lead | 6. toluene |
| 3. nickel | 7. xylene (total) |
| 4. zinc | 8. 1,1,2-trichlorotriflourethane |

Explain basis for choice of substance(s) to be used in scoring.

the metals were all used due to the high concentrations in the soils, also tetrachloroethylene and toluene, due to their volatility.

List management units to be considered in scoring: Source: 3

contaminated (a spill to) soils.

Explain basis for choice of unit used in scoring.

The spill to soils is the management unit being used for scoring. The contaminated soils would provide an uncontrolled, wide surface area for mobilization into the air.

WORKSHEET 2 (CONTINUED)

ROUTE DOCUMENTATION

DRAFT

3. GROUND WATER ROUTE

List substances to be considered for scoring:

Source: 1,3

- | | |
|----------------------------|-----------------------------------|
| 1. chromium (total) | 8. tetrachloroethylene (PCE) |
| 2. lead | 9. toluene |
| 3. nickel | 10. xylene (total) |
| 4. zinc | 11. 1,1,2-trichlorotrifluorethane |
| 5. vinyl chloride | 12. 1,1-dichloroethane |
| 6. cis-1,2,-dichloroethene | 13. 1,1,1-trichloroethane |
| 7. trichloroethene | 14. Benzene |

Explain basis for choice of substance(s) to be used in scoring.

Tetrachloroethylene (PCE); vinyl chloride; 1,1-dichloroethane; cis-1,2,-dichloroethene; trichloroethene (TCE); and Benzene were all detected in the ground water analysis.

List management units to be considered in scoring:

Source: 3

contaminated (a spill to) soils.

Explain basis for choice of unit used in scoring.

Due to the unknown nature of how the release of contamination occurred, the spill to soils is the management unit being used for scoring.
