

Cleanup in Port Gamble Bay

Begins July 2015

Public meeting May 27

Online open house May 25 – June 3

Cleanup Process

Cleanup in Port Gamble Bay is expected to begin July 2015. Work will continue for the next two construction seasons (July through January of each year). Pope Resources, LP/OPG Properties, LLC will remove approximately 70,000 cubic yards of contaminated sediment and wood waste, as well as approximately 6,000 creosote pilings and overwater structures. Wood waste located close to shore will be dredged, and all areas contaminated by wood waste will be capped with clean material to enhance environmental recovery. The cleanup process aims to eliminate threats to human health and the environment while minimizing impacts of cleanup.

History

The Port Gamble sawmill operated from 1853 to 1995. During that time, pollutants from wood waste and creosote pilings were released into the bay. These pollutants include petroleum hydrocarbons, carcinogenic polycyclic aromatic hydrocarbons, and dioxins/furans. The mill closed in 1995 and has since been used for log sorting/chipping, materials handling and a marine research facility.
