Subject: Addendum to Soil Management Plan, Former Standard Oil Bulk Plant #1001157, West 15th Avenue and North Water Street, Ellensburg, Washington

Dear Mr. Bassett:

This is a follow up letter to your March 15, 2011, email regarding the February 3, 2011, *Soil Management Plan* submitted by SAIC on behalf of Chevron Environmental Management Company. You noted an omission of language pertaining to petroleum impacted soils encountered at the site during ground disturbing activities and requested that language be added to the *Soil Management Plan* which discusses the disposal of waste in an appropriate manner or to an accepting facility. Please find attached to this letter, an updated page 4 from the *Soil Management Plan*, **Section 7.1.2 Residual Petroleum Impacted Soil Disposal** which addresses this omission. Please update your copy of the *Soil Management Plan* accordingly.

If you have any questions or comments please contact Don Wyll at (425) 482-3315 or wylld@saic.com.

Sincerely,
SAIC Energy, Environment, and Infrastructure, LLC

A handwritten signature in black ink, appearing to read "Don Wyll", is written over a horizontal line.

Don Wyll
Senior Project Manager

Enclosures:

Attachment A- Page 4 from Soil Management Plan

cc: Mrs. Carol Wondrack, PO Box 2775, Pasco, Washington 99302
Mr. Dan Carrier, CEMC

Attachment A: Page 4 from Soil Management Plan

For grading, excavation, drilling/test pitting or any subsurface site activities, the contractor/utility worker will provide the following information:

- Start date and time
- Anticipated duration of subsurface activities
- Nature of subsurface activities
- Location, size, and depth of excavation/borehole

The information provided by the contractor/utility worker will be forwarded on to CEMC, Washington State Department of Ecology and any permitting agency. Point of contact names and addresses are listed in Section 8.

7.1.2 Residual Petroleum Impacted Soil Disposal

Ground disturbing activities in the area of potential soil impacts shown in Figure 1 should be analyzed for petroleum constituents prior to disposal or reuse. Soils that exceed Model Toxics Control Act (MTCA) Method A Residential cleanup levels for petroleum constituents must be transported offsite for disposal to an accredited landfill or soil treatment facility. Soil that contains concentrations of petroleum constituents less than the MTCA Method A Residential cleanup levels can be reused on site as backfill, if appropriate.
