

# **Pope & Talbot Mill Site and Leased Area Port Gamble Bay**

**Open House and Public Meeting**

**March 9, 2011**

WASHINGTON STATE  
Department of Ecology

# Tonight's Agenda for Public Meeting

|        |   |  |
|--------|---|--|
| 4:30pm | Open House  |  |
| 5:30pm | Welcome and Introduction  |  |
|        | <ol style="list-style-type: none"><li>1. Introductory Remarks</li><li>2. Site Background</li><li>3. Pope &amp; Talbot, Inc. Sawmill Site</li><li>4. Leased Area</li><li>5. Next Steps</li></ol> |  |
| 6:30pm | Questions and Discussions   |  |
| 7:30pm | Adjourn   |  |

# Remedial Investigation Feasibility Studies for Public Review

- Draft Remedial Investigation (Mill Site & Leased Area)
- Draft Feasibility Study (Mill Site & Leased Area)
- These documents can be found and downloaded on the Ecology website
  - [http://www.ecy.wa.gov/programs/tcp/sites/psi/portGamble/psi\\_portGamble.html](http://www.ecy.wa.gov/programs/tcp/sites/psi/portGamble/psi_portGamble.html)

# Parallel Remedial Investigation and Feasibility Studies

- Manage Mill Site and Lease Area together to streamline efforts
- Build on same methods for evaluation of risks to Human Health and Environment
- Address Cleanup and Restoration opportunities collectively across the entire bay

# Project Team

- **Kevin MacLachlan – Site Manager**
- **Russ McMillan – Sediment Technical Lead**
- **Panjini Balaraju – Upland Technical Lead**
- **Clay Patmont – OPG**
- **Joel Breems – WA DNR**

# The Puget Sound Initiative

## ■ Background

- Began in 2005 and 2006
- Includes a lot of people, organizations and governments
- Cleanup Program focuses on contaminated site cleanup & restoration
- 2020 goal to have most work done

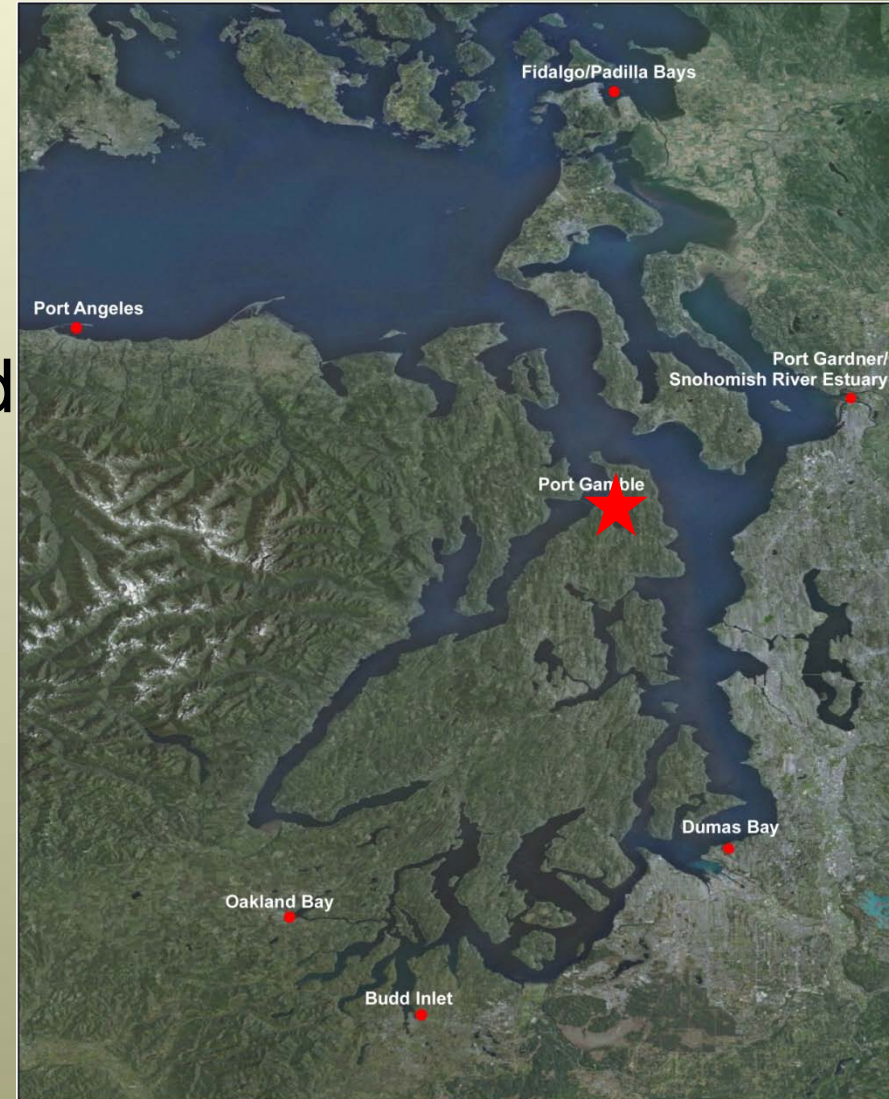

# The Puget Sound Initiative

*We identified seven priority bays where:*

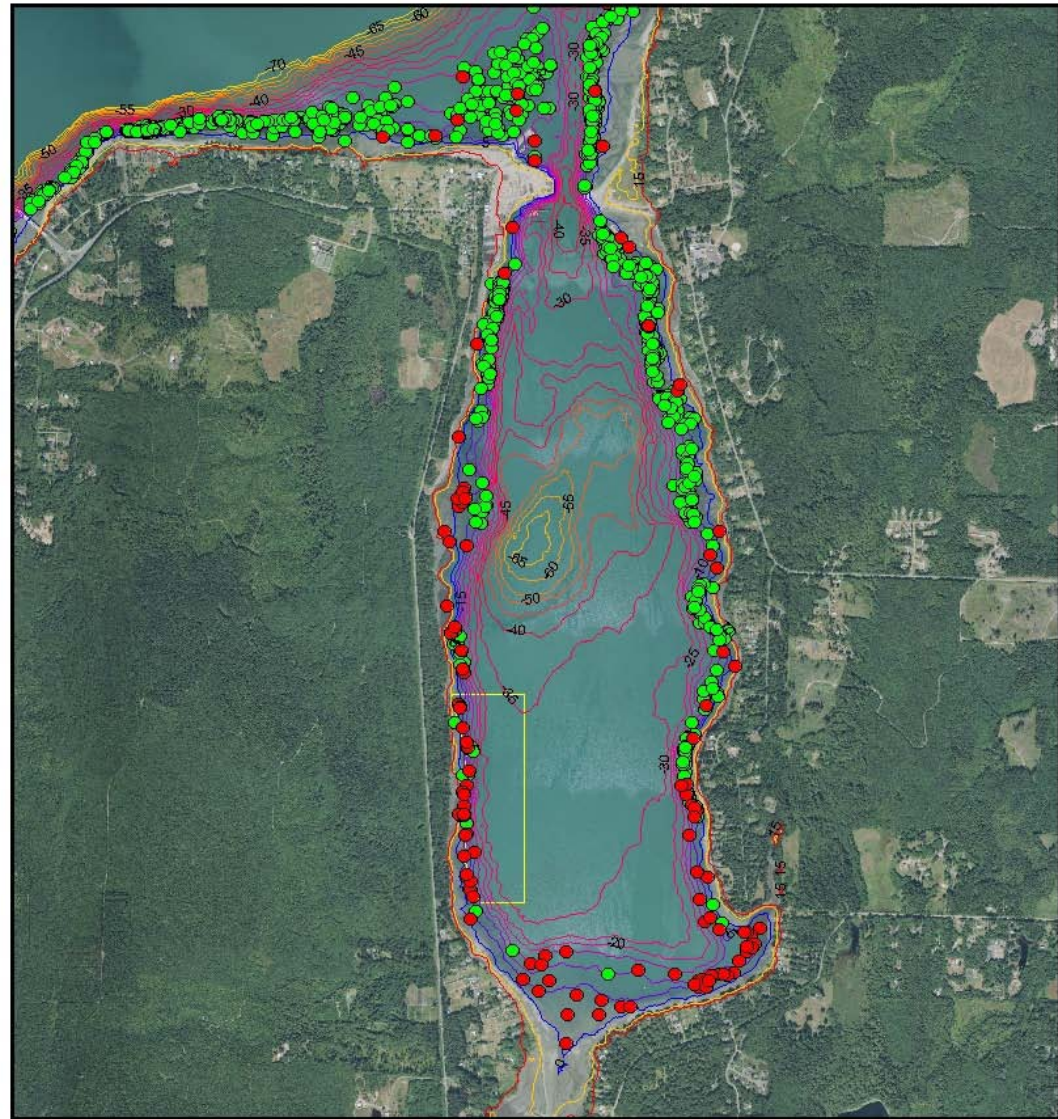

- Critical habitat exists.
- Important natural resources were supported.
- We had active paired upland & sediment cleanups.
- We conducted baywide sediment studies.
- Overall, there are over 30 cleanup actions on-going in these Priority Bays

# Why is Port Gamble a PSI Bay?

Natural Resources:  
Fish and Shellfish

Critical Habitat:  
Forage Fish  
Eelgrass

Port Gamble 2005 - 2009  
Eelgrass & No Veg  
Bathymetry

0 840 1,680 2,520 3,360  
Feet

# Dialogue Group

# **Background on Mill Site and Leased Area**

# History of Mill Site Operations

- Saw mill operated from 1853 – 1995

# History of Mill Site Operations

- Northern Chip Mill active 1928 – 1995
- Southern Chip Mill active 1974 – 1995

# History of Mill Site Operations

- Area Leased for non mill operations
  - Wood Chipping & Log Sorting
  - Marine Construction
  - Marine Laboratory

# History of Leased Area

- This area of Port Gamble Bay was used by Pope & Talbot for a long time...

# Previous Cleanup Work

- 27,000 tons of soil removed.
- 30,000 cubic yards of wood waste dredged 2003/2007
- Off Site 4 landfills along the west shore.

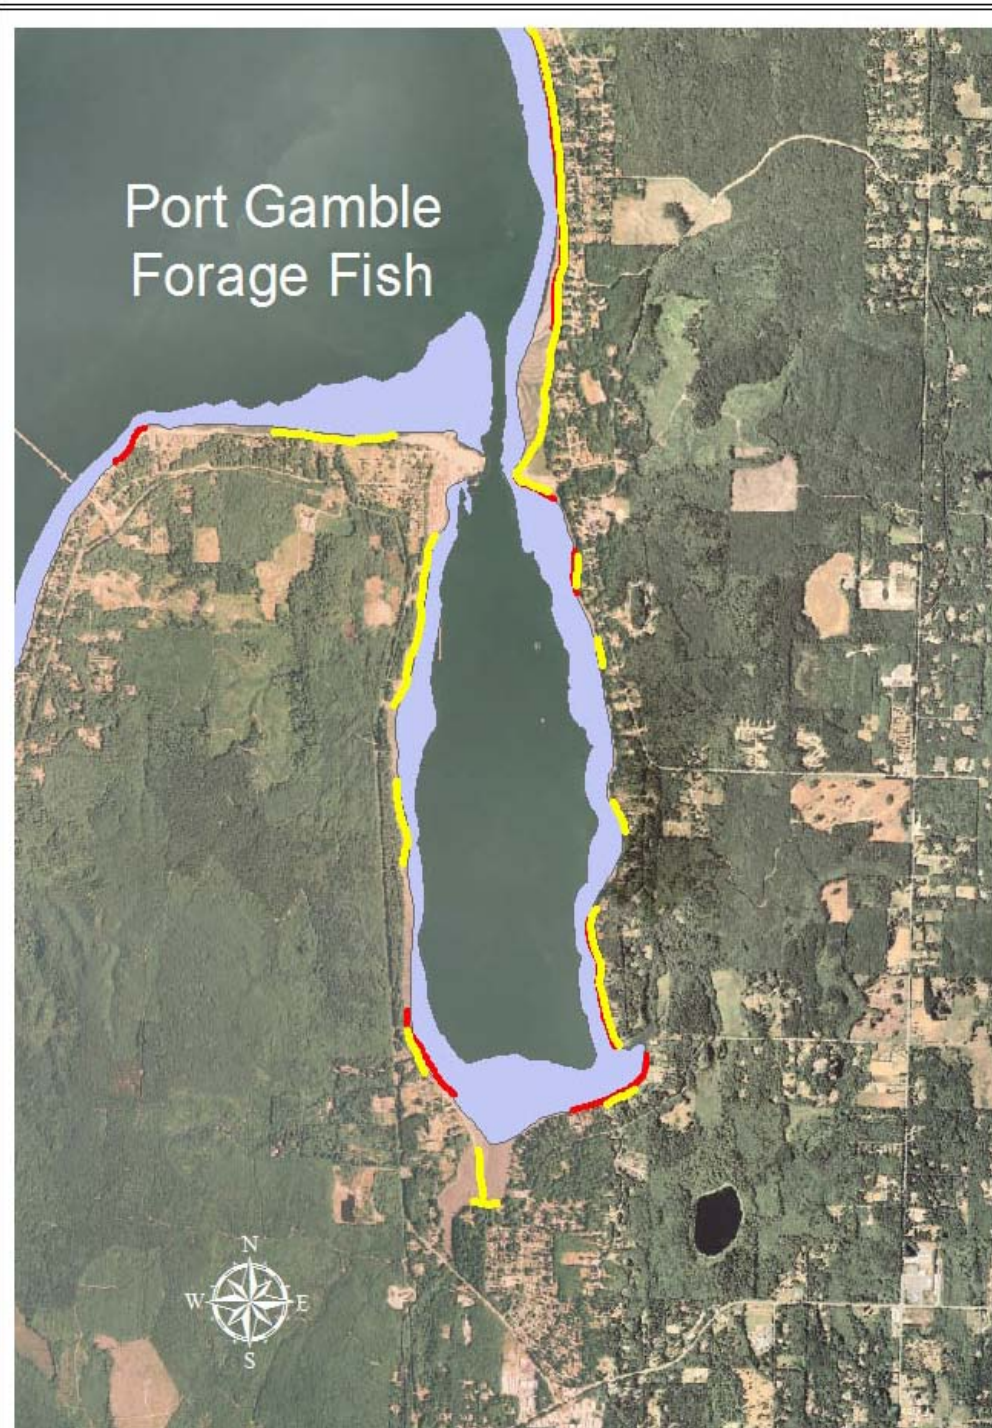

\* Landfills are not part of the Mill Site

# Cleanup Considerations

Natural resource  
and habitat data  
researched:

- Eelgrass
- Forage Fish
- Shellfish

# Cleanup Considerations

- Cultural Resources both past and present were considered in the selection of alternatives.

Photo courtesy Kitsap Herald.

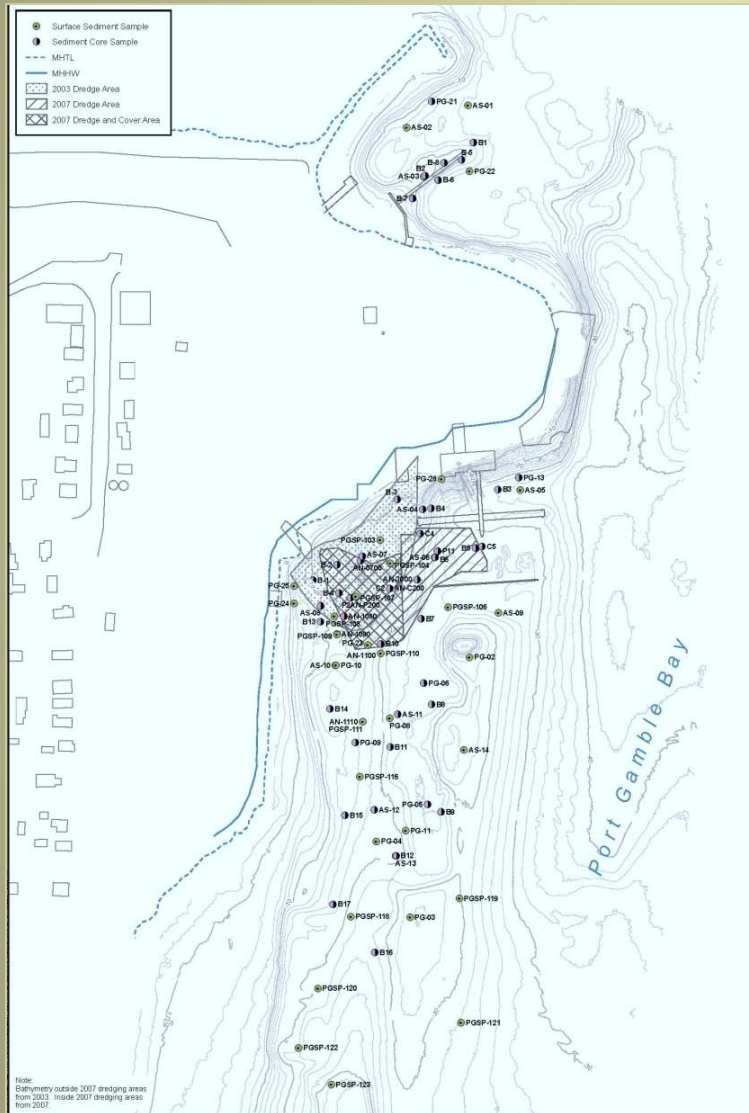

# What is Ecology proposing for the Mill Site cleanup?

# Mill Site Cleanup Investigations

- Extensive soil, groundwater, and sediment sampling (1998 to 2006)
- Interim cleanup (2007)
- Final sampling in remaining areas of potential concern (2008)
- Remedial investigation/feasibility study reports (2010)

# Mill Site Divided into Sediment Management Areas (SMAs)

- Based on evidence of sediment toxicity
  - Multiple bioassays using sensitive organisms
  - Relative concentrations of wood waste
  - Different statistical interpretations of data
  - Evidence combined to make an overall evaluation

# How did we evaluate cleanup methods?

## **SMA-1: Northern Mill Site**

- Highest evidence of sediment toxicity
- Dredging and residuals cover
- Dredge and cap

## **SMA-2: Southern Mill Site chip loading area**

- 30,000 cy dredged in 2003/2007
- Dredging and residuals cover
- Dredge and cap
- Engineered cap

# How did we evaluate cleanup methods?

## SMA-3: Southern Mill Site log rafting area

- Evidence for recent reductions in sediment toxicity
- Engineered cap
- Sand cover to enhance biological recovery
- Monitor natural biological recovery

## SMA-4a and 4b: Lower evidence of toxicity areas

- Evidence for recent reductions in sediment toxicity
- Sand cover to enhance biological recovery
- Monitor natural biological recovery

# Criteria we must use to decide on cleanup options

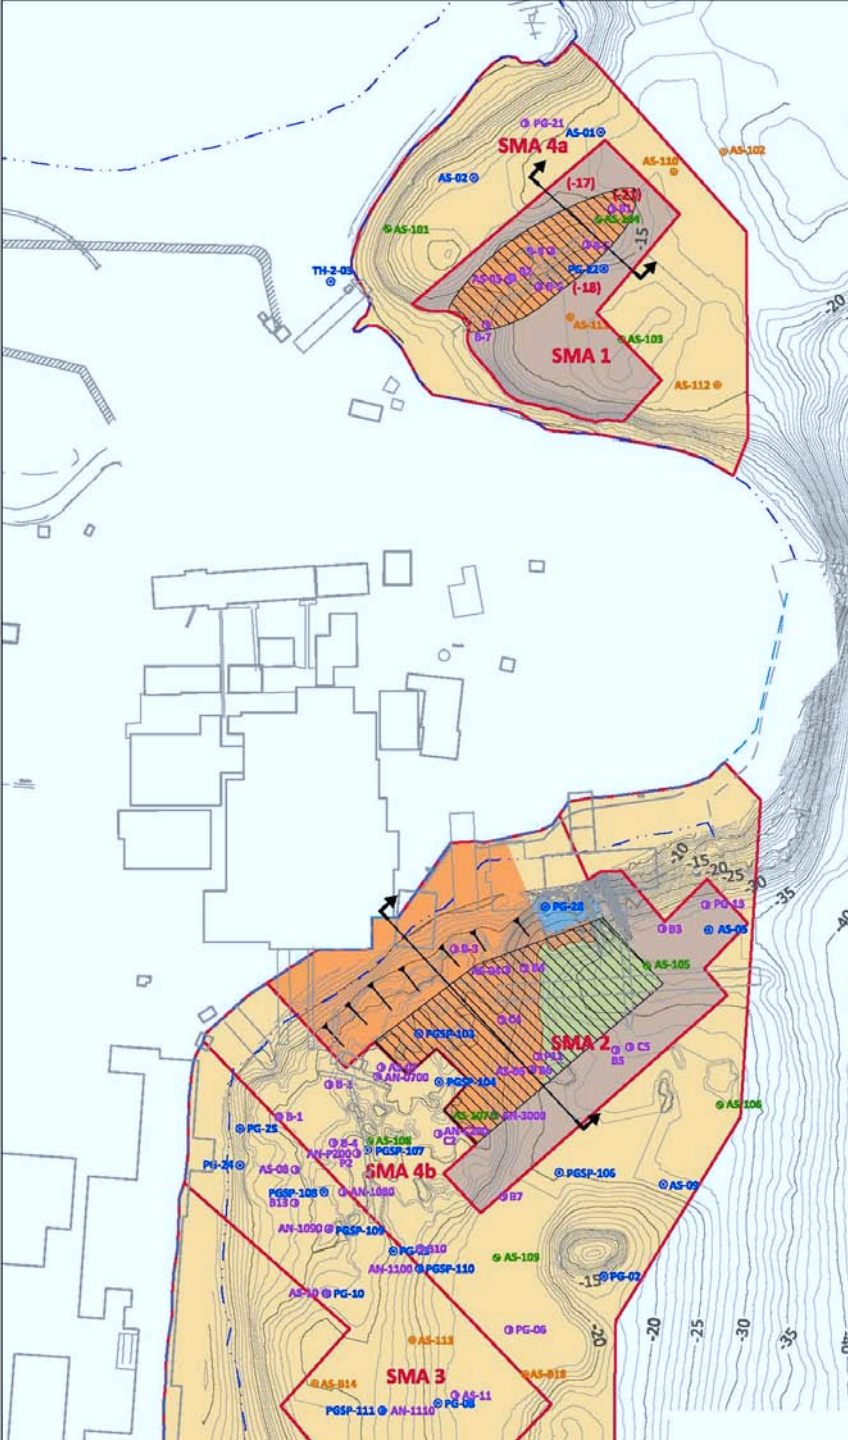

- Comply with cleanup standards and applicable state & federal laws
- Protect human health and the environment
  - Evidence of toxicity evaluation of environmental protection
  - Human health protection included expansion of SMAs to address creosote piling/sediment areas
- Reasonable restoration timeframe and compliance monitoring
- Use permanent solutions to maximum extent
  - Disproportionate cost analysis
- All public input will be considered by Ecology

# Additional criteria used to determine cleanup options

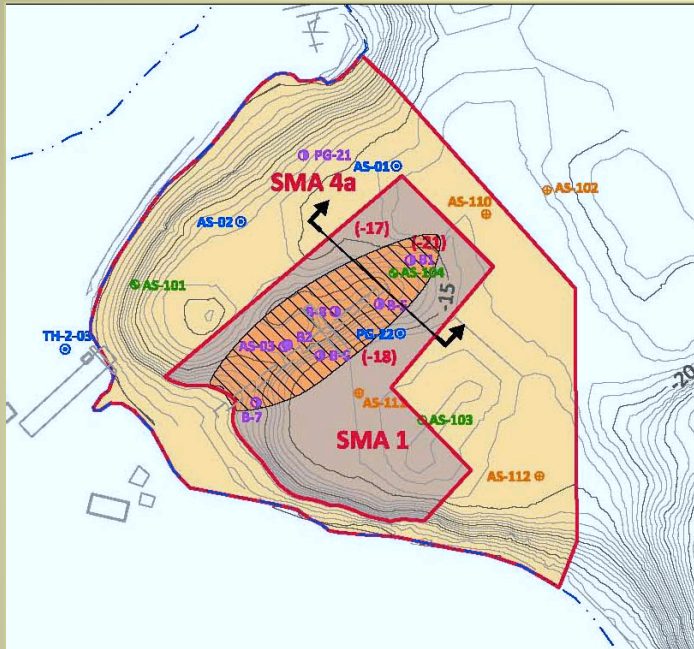

- Protection of cultural resources, consistent with regulatory requirements
  - Cultural resource assessment performed in 2010
  - Monitoring and contingency responses during dredging (similar to 2007 action)
- Habitat restoration opportunities
  - Removal of creosote piling in SMAs
  - Other shoreline restoration opportunities
- Compatibility with future land use
  - Timing considerations

# Proposed Mill Site Cleanup Options

- Uplands
  - No further cleanup needed
  - Restrictive covenants
- Sediments
  - Dredge 18,000 cy of the most concentrated, shallow wood waste deposits
  - Remove 640 piling
  - Cap/cover low risk areas
  - Monitor biological recovery

# SMA-1: Dredge 8,000 cy of wood waste; sand cover adjacent lower risk areas

## LEGEND:

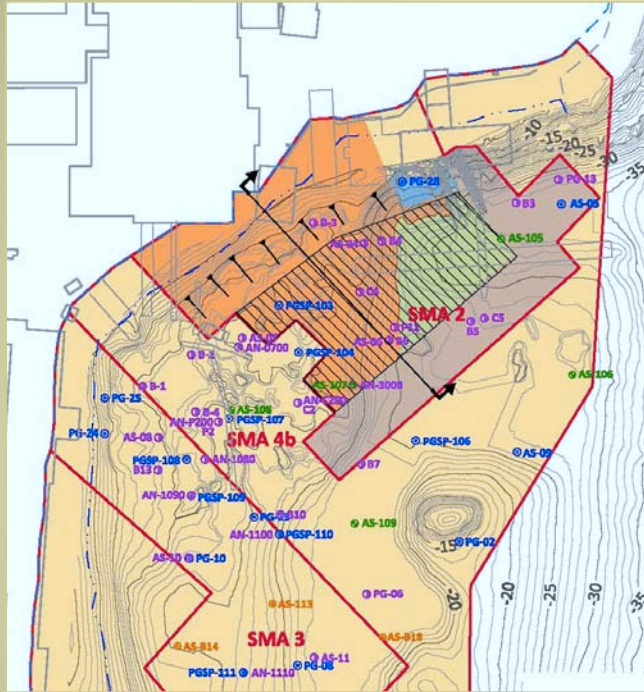

- AS-103 ● 2008 Core Sample
- AS-B14 ● 2008 Surface Sediment Sample
- PG-06 ● Existing Sediment Core Sample
- PGSP-116 ● Existing Surface Sediment Sample
- Approximate MHHW (Mean Higher High Water)
- Approximate MLLW (Mean Lower Low Water)
- SMA Boundary
- 10 Bathymetric Contour in Feet
- Proposed Dredge Footprint Daylight Line
- 3-Foot-Thick Armored Cap (Type I)
- 18-Inch-Thick Sand Cap (Type II)
- 6-Inch-Thick Sand Cover (Type III)
- Dredge Area
- Monitored Natural Recovery Area
- Approximate Area Exceeding CSL Criteria Based on 2006 and 2008 Sampling Data; Boundary to be Refined During Remedial Design

SMA 1 Cross Section Schematic  
Not to Scale

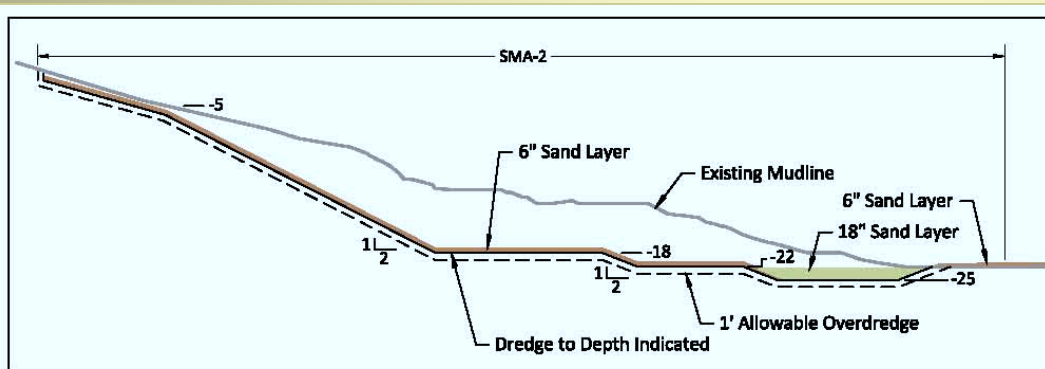

# SMA-2: Dredge 10,000 cy of wood waste; cap and sand cover adjacent lower risk areas

## LEGEND:

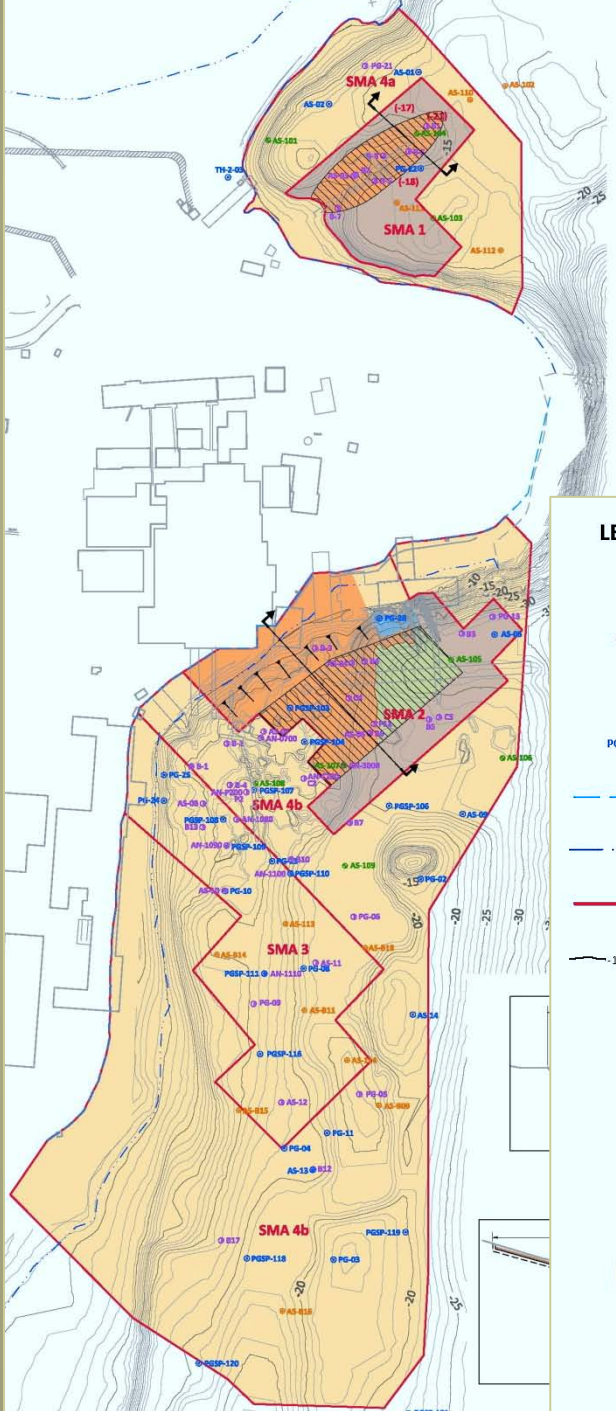

- AS-103 ● 2008 Core Sample
- AS-B14 ● 2008 Surface Sediment Sample
- PG-06 ● Existing Sediment Core Sample
- PGSP-116 ● Existing Surface Sediment Sample
- Approximate MHHW (Mean Higher High Water)
- Approximate MLLW (Mean Lower Low Water)
- SMA Boundary
- Bathymetric Contour in Feet
- Proposed Dredge Footprint Daylight Line
- 3-Foot-Thick Armored Cap (Type I)
- 18-Inch-Thick Sand Cap (Type II)
- 6-Inch-Thick Sand Cover (Type III)
- Dredge Area
- Monitored Natural Recovery Area
- Approximate Area Exceeding CSL Criteria Based on 2006 and 2008 Sampling Data; Boundary to be Refined During Remedial Design

SMA 2 Cross Section Schematic  
Not to Scale

# SMA-3 and SMA-4: Monitor natural recovery of lower risk areas

**LEGEND:**

- AS-103 ● 2008 Core Sample
- AS-B14 ● 2008 Surface Sediment Sample
- PG-06 ● Existing Sediment Core Sample
- PGSP-116 ● Existing Surface Sediment Sample
- Approximate MHHW (Mean Higher High Water)
- - - Approximate MLLW (Mean Lower Low Water)
- SMA Boundary
- Bathymetric Contour in Feet
- Proposed Dredge Footprint Daylight Line
- 3-Foot-Thick Armored Cap (Type I)
- 18-Inch-Thick Sand Cap (Type II)
- 6-Inch-Thick Sand Cover (Type III)
- Dredge Area
- Monitored Natural Recovery Area
- ▨ Approximate Area Exceeding CSL Criteria Based on 2006 and 2008 Sampling Data; Boundary to be Refined During Remedial Design

- Substantial recovery occurred from 2002 to 2008
- Full recovery anticipated within the next 10 years

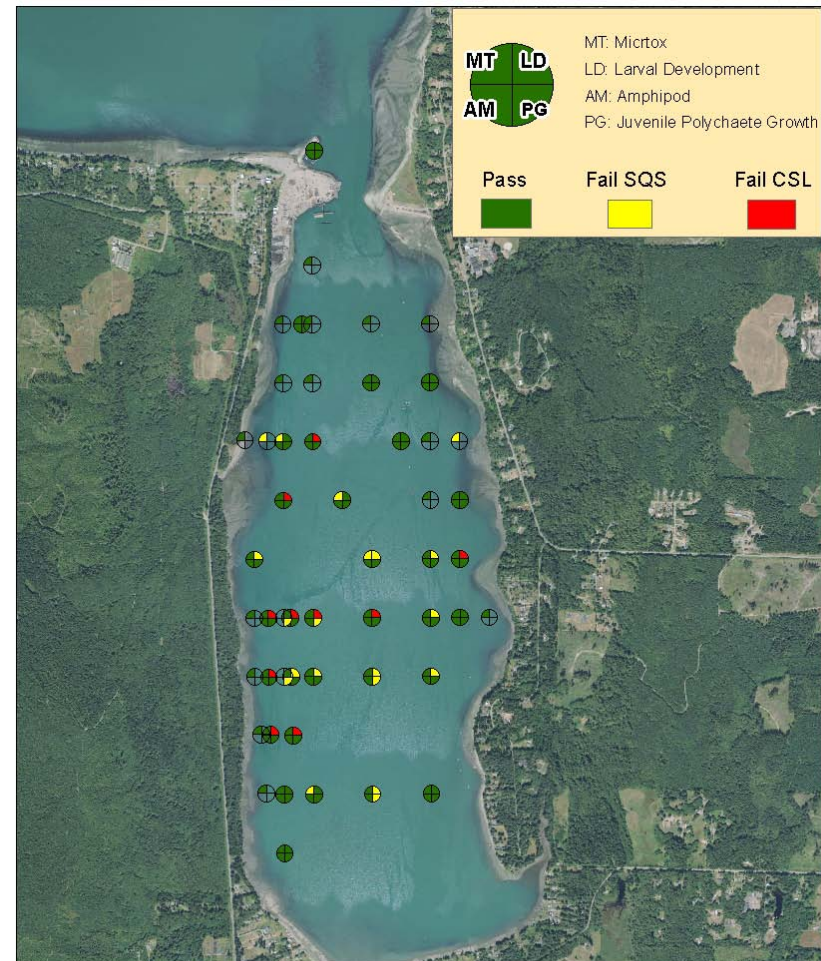

# Leased Area

# Baywide Sediment Investigation

- Comprehensive baywide sampling in 2008 which included 120 stations:
- Analysis of sediment for chemicals.
- Analysis of sediment for toxicity to animals.
- Evaluated tissue chemistry for risks to humans.

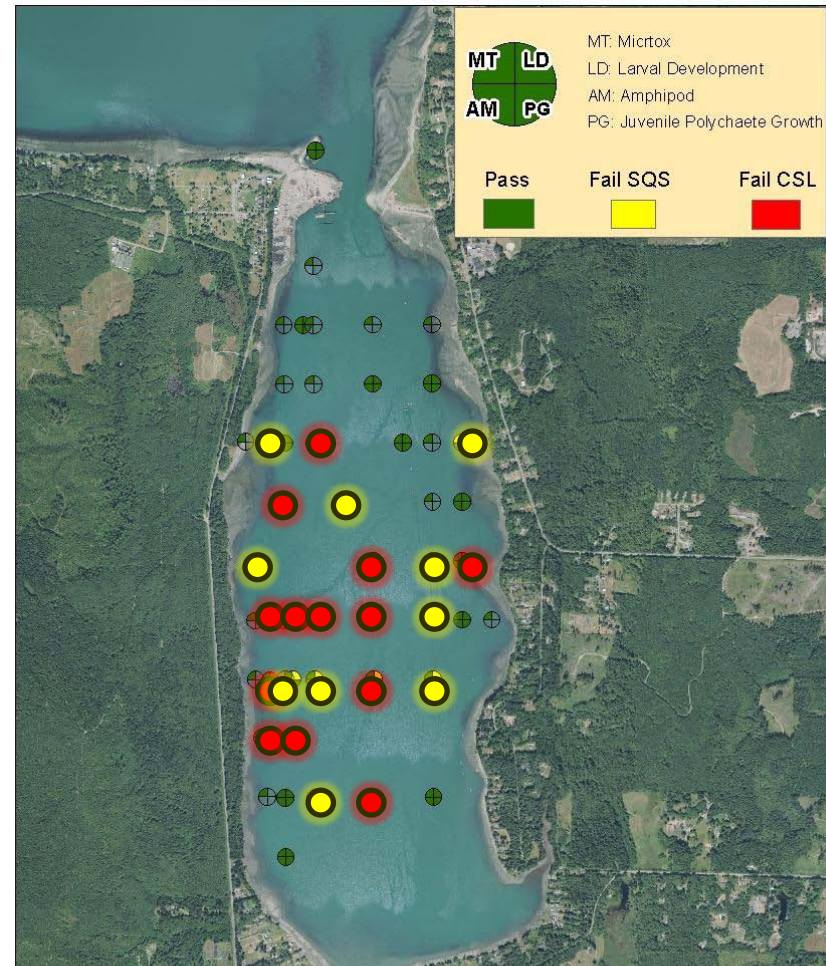

Bioassay Baywide

0 420840 1,680 2,520 3,360 Feet

# Baywide Sediment Investigation

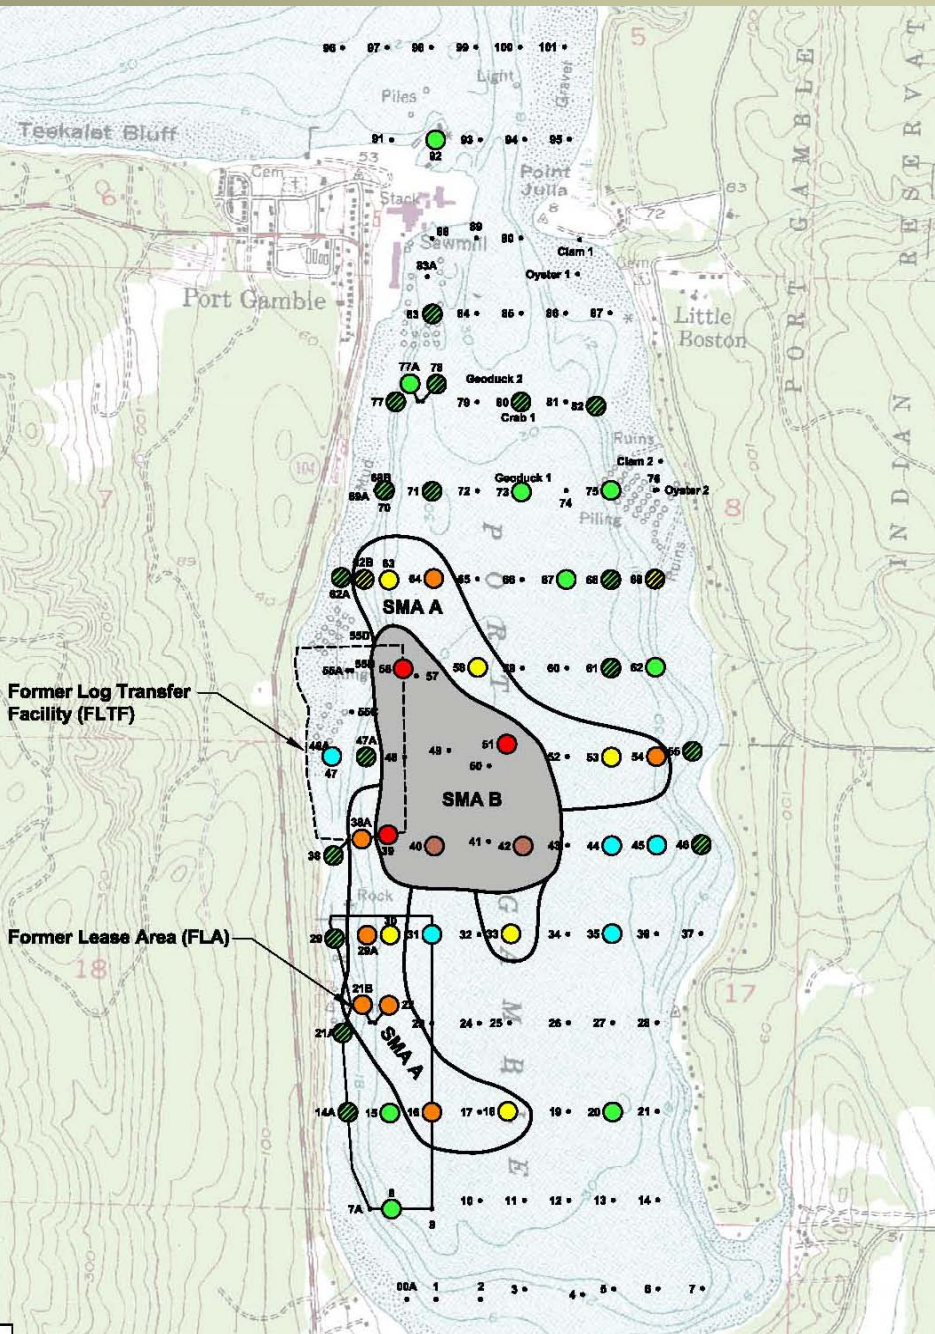

- Biological toxicity to animals:
  - 24 stations exceeded criteria

Bioassay Baywide

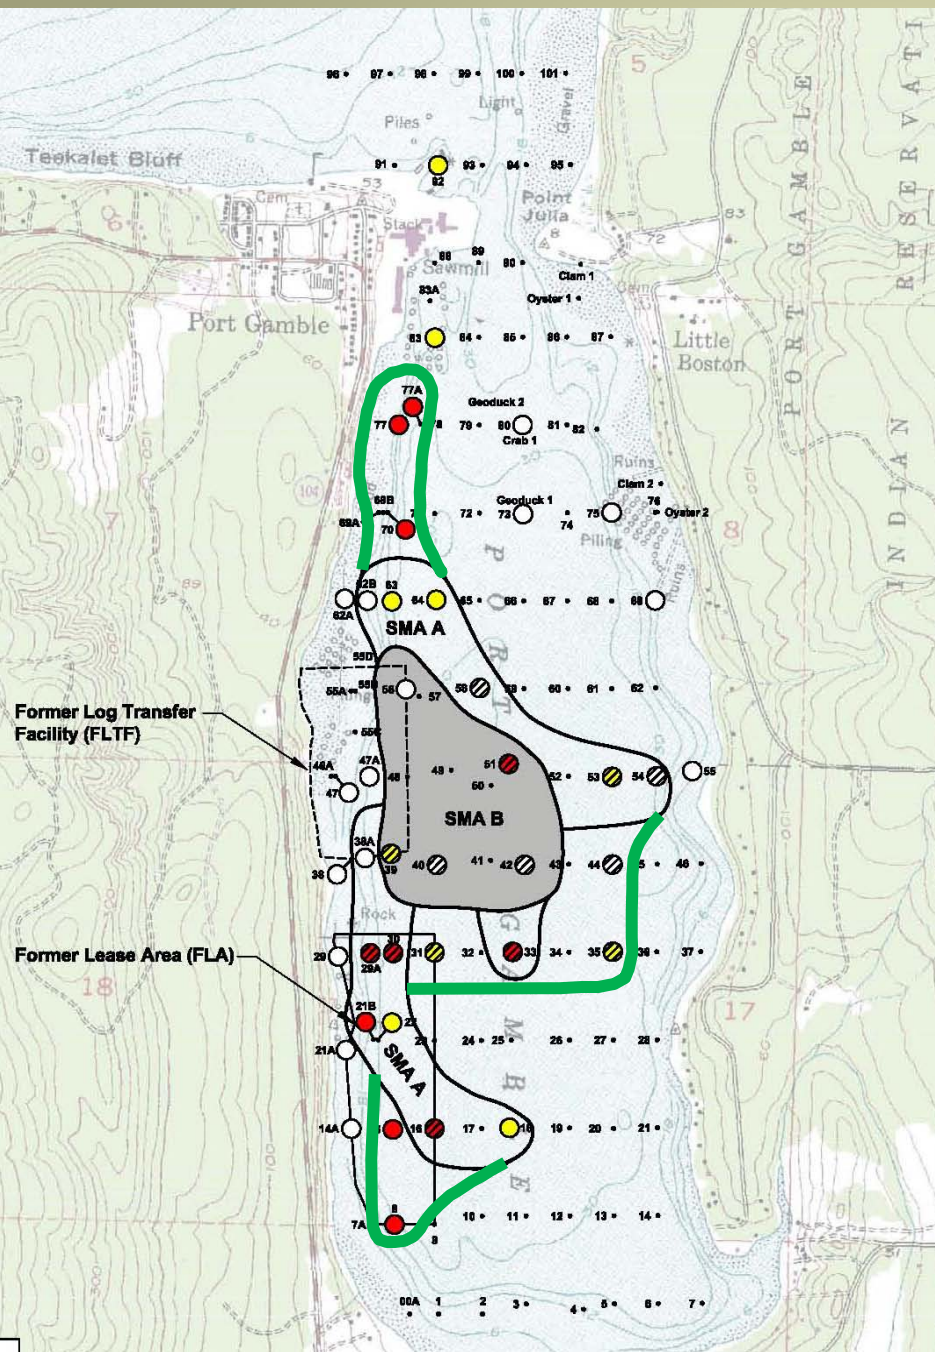

# Leased Area Sediment Management Areas (SMAs)

- Main environmental concern:
  - Wood waste toxicity.
  - Several items combined to make an overall evaluation.

# Leased Area Sediment Management Areas (SMAs)

- Based on assessing risks to human health and the environment.
- Main human health concerns:
  - Carcinogenic PAHs
  - Cadmium

# How did we evaluate the range of cleanup options?

- Dredge
- Dredge and Cap
- Engineered Cap
- Thin-layer sand cover/Enhanced Natural Recovery
- Monitored Natural Recovery
- No Action

# Proposed Cleanup Option: Monitored Natural Recovery

Monitored Natural Recovery includes:

- Allowing the environment to recover by burial by clean sediment over time and decomposition of wood waste.
- Recovery goals must be met by a certain time period.
- Certain actions must be taken if recovery goals are not met.
- Extensive long term monitoring of:
  - Chemicals of concern
  - Biological recovery of animals living in sediment

# What's Next?

| Port Gamble Mill & Lease Site                              | Date                 |
|--|----------------------|
| Public Comment: Draft RI/FS Report                         | Feb ~ March 2011     |
| Develop Clean up Action Plan (CAP) and Consent Degree (CD) | Spring ~ Summer 2011 |
| Public Comment: CAP and CD                                 | Late 2011            |
| Engineering Design Report (EDR) and Permits                | Late 2012            |
| Cleanup Begins   | 2012 - 2014          |
|  |                      |
|  |                      |

# Questions?

# Why is woodwaste a problem?

# Why is woodwaste a problem?

# Monitored Natural Recovery Framework for Monitoring Plan

- Develop specific objectives and metrics to track – (e.g., chemical or biological)
- Specify sampling intervals and triggers for determining success or failure
- Identify Data Gaps to be filled at engineering design phase
- Higher impacts observed based upon toxicity to critters and Human Health
