ACRONYMS AND ABBREVIATIONS

Acronym	Explanation
AO	Agreed Order No. DE5471
BTEX	Benzene, Toluene, Ethylbenzene, and Xylenes
COPC	Constituent of Potential Concern
cPAHs	Carcinogenic Polycyclic Aromatic Hydrocarbons
CY	Cubic Yards
Dioxins/Furans	Chlorinated Dibenzo-p-dioxins and Chlorinated Dibenzofurans
Ecology	Washington State Department of Ecology
ECs	Engineering Controls
IA	Interim Action
IACL	Interim Action Cleanup Level
IARUPL	Interim Action Reuse Under Pavement Level
IAWP	Interim Action Work Plan
MTCA	Model Toxics Control Act
MW	Monitoring Well
PAHs	Polycyclic Aromatic Hydrocarbons
PCBs	Polychlorinated Biphenyls
PIONEER	PIONEER Technologies Corporation
Port	Port of Olympia
PQL	Practical Quantitation Limit
RI	Remedial Investigation
RIWP	Remedial Investigation Work Plan
site	East Bay Redevelopment Site
SPC	Stan Palmer Construction
TCLP	Toxicity Characteristic Leaching Procedure
TPH	Total Petroleum Hydrocarbons
TPH-D	Total Petroleum Hydrocarbons in the Diesel Range
TPH-G	Total Petroleum Hydrocarbons in the Gasoline Range
TPH-HO	Total Petroleum Hydrocarbons in the Heavy Oil Range
USEPA	United States Environmental Protection Agency
WAC	Washington Administrative Code

SECTION 1 – BACKGROUND

1.1. East Bay Redevelopment Project

The Port of Olympia (Port), in conjunction with a wide variety of public and private partners (e.g., State of Washington, City of Olympia, LOTT Alliance, Hands On Children's Museum, Tarragon) are redeveloping the downtown Olympia property known as the East Bay Redevelopment Project. Cleanup activities pursuant to Model Toxics Control Act (MTCA) regulations are being conducted in conjunction with redevelopment. This brownfield redevelopment project is very important to the Port, its partners, and the Olympia community due to the project's anticipated role in revitalizing downtown Olympia. The location of the project is shown on Figure 1.

The Port currently owns eight parcels within the East Bay Redevelopment Project property boundary (Parcels 1 through 7 and Parcel 9)¹. The Port, City of Olympia, and LOTT Alliance have entered into a purchase and sale agreement for Parcel 4 and Parcel 5, with a closing date expected in June 2010. The LOTT Alliance purchased the adjacent property known as Parcel 8 from the Port in 2009². The locations of the eight current Port parcels as well as the adjacent Parcel 8 are shown on Figure 2.

The Port currently finished installing utilities, roads, bike lanes, sidewalks, and other ancillary improvements related to the infrastructure in May 2010 in order to facilitate ongoing and pending redevelopment. The LOTT Alliance is currently constructing its Water Education and Technology Center on Parcel 8. Construction of the Hands On Children's Museum on Parcel 5 and a public plaza on Parcel 4 is scheduled to occur in 2010 and 2011. Construction of a variety of mixed-use, urban buildings (e.g., commercial office space, retail/restaurants, a hotel, parking, and urban housing such as condominiums above ground-level retail) on the other six parcels is scheduled to occur between 2010 and 2024.

1.2. Report Purpose

The purpose of this report is to document the Interim Action (IA) cleanup activities conducted during the installation of utilities, roads, bike lanes, sidewalks, and other ancillary improvements related to the infrastructure at the Port's East Bay Redevelopment site (site) in accordance with the IA Work Plan (IAWP) (PIONEER Technologies Corporation [PIONEER] 2009).

1.3. Site Description

The approximately 13-acre property is located in the southeast corner of the Port Peninsula adjacent to the East Bay of Budd Inlet, Olympia, Washington (see Figure 2). The site has been used for commercial and light industrial purposes from the late 1800s to 2008 (e.g., wood processing and milling operations from

¹ The addresses for Port properties in Parcels 1 through 7 are 715 Olympia Avenue NE/724 State Avenue NE, 625 Olympia Avenue NE, 510 State Avenue NE, 325 Marine Drive NE, 410 Jefferson Street NE, 427 Marine Drive NE, and 517 Marine Drive NE, respectively. The address for Parcel 9 is 323 Jefferson Street NE.

² The address for the LOTT Alliance property (Parcel 8) is 421 Jefferson Street NE.

the late 1800s to mid 1900s; warehouse and storage operations since circa 1970). More detailed information about site history, features, and land uses are presented in the Remedial Investigation (RI) Work Plan (RIWP) (GeoEngineers and PIONEER 2008).

1.4. Regulatory Context

The site originally entered into Washington State Department of Ecology's (Ecology's) Voluntary Cleanup Program per Washington Administrative Code (WAC) 173-340-515 in 2007. Subsequently, the Port and Ecology entered Agreed Order No. DE5471 (AO) for the site in October 2008. In the AO, the Port agreed to submit to Ecology a RIWP, IAWP, IA Report, RI Report, Supplemental RIWP (if necessary), and Supplemental RI Report (if necessary).

The IAWP (PIONEER 2009) was approved by Ecology on May 4, 2009 (Ecology 2009a). The IAWP defined the IA remedy, compliance monitoring plan, constituents of potential concern (COPCs), cleanup levels, and other components of the IA. For additional information on the IA design and implementation plan, the reader is referred to the IAWP (PIONEER 2009). This IA Report is designed to satisfy the requirements for the IA Report in the AO.

The RIWP (GeoEngineers and PIONEER 2008) was approved by Ecology on September 21, 2009 (Ecology 2009k). The RI phase is ongoing. A superseding regulatory agreement is expected in the future to address procedures for preparing an IAWP and IA Report for Parcels 4 and 5, as well as a site-wide Feasibility Study and draft Cleanup Action Plan. The adjacent Parcel 8 is owned by the LOTT Alliance and is being addressed separately by the LOTT Alliance as a Voluntary Cleanup Program site.

1.5. IA Objectives

The IA objectives defined in the IAWP (PIONEER 2009) were to:

- Protect human health and the environment,
- Comply with IA cleanup levels,
- Comply with applicable state and federal laws and regulations,
- Provide for compliance monitoring,
- Not preclude reasonable alternatives for a final cleanup action,
- Consider public concerns, and
- Be cost-effective.

1.6. Constituents of Potential Concern

The following COPCs were defined in the IAWP (PIONEER 2009) for the IA:

- Arsenic
- Cadmium
- Lead

- Total carcinogenic polycyclic aromatic hydrocarbons (cPAHs)³
- Total chlorinated dibenzo-p-dioxins and chlorinated dibenzofurans (dioxins/furans)
- Total naphthalenes
- Total petroleum hydrocarbons (TPH) in the diesel range (TPH-D)
- TPH in the heavy oil range (TPH-HO)
- TPH in the gasoline range (TPH-G)
- Benzene
- Toluene
- Ethylbenzene
- Total xylenes

1.7. IA Cleanup Levels and Reuse Under Pavement Levels

IA Cleanup Levels (IACLs) and IA Reuse Under Pavement Levels (IARUPLs) defined in the IAWP (PIONEER 2009) are presented in Table 1. IACLs are based on unrestricted land uses. IARUPLs are applicable to soil reused as subsurface fill underneath paved surfaces within the infrastructure corridor.

At the time the IAWP was prepared, it was assumed that there was sufficient reuse under pavement demand for all geotechnically suitable soil that had COPC concentrations less than IARUPLs. As a result, the IAWP did not address different reuse options for geotechnically-suitable soil that had COPC concentrations less than IACLs. Subsequent to preparation of the IAWP, it became apparent that the quantity of geotechnically-suitable soil would likely be significantly greater than the quantity of soil that could be reused under pavement. During a May 28, 2009 meeting between the Port, Ecology, and PIONEER, it was agreed that geotechnically-suitable soil with COPC concentrations less than IACLs could be reused without additional sampling and analysis on a case-by-case basis in on-site areas that would not be covered by pavement during the IA. Although this approach was acceptable for the first few stockpiles with COPC concentrations less than IACLs (Ecology 2009e, Ecology 2009f), the agreement was eventually rescinded for Zone 2 (Ecology 2009h, Ecology 2009j), and then for all zones (Ecology 2009l, Dragon 2009).

1.8. Airborne Dust Action Level

The Airborne Dust Action Level was defined in the IAWP (PIONEER 2009) to be protective for inhalation exposures by on-site workers without any additional dust-control measures. The Airborne Dust Action Level was defined in the IAWP (PIONEER 2009) as 18 mg/m³. It was later realized that the Permissible Exposure Limit for the respirable fraction of nuisance dust in WAC 296-841-20025 is 5 mg/m³. Thus, 5 mg/m³ was used as the Airborne Dust Action Level during implementation of the IA.

³ Total cPAHs and total dioxins/furans are based on toxicity equivalency quotients for benzo(a)pyrene and 2,3,7,8-dibenzo-p-dioxin, respectively.

1.9. Construction Plans, Specifications, and Contractor

This MTCA-driven IA was fully integrated with the civil engineering plans and specifications (Skillings Connolly 2009, Port of Olympia 2009) for the construction of the utilities, roads, bike lanes, sidewalks, and other ancillary improvements related to the infrastructure. All IAWP components required to be completed by the construction contractor were incorporated within the specifications, particularly Sections 00 73 19, 01 35 13, and 02 61 00 (Port of Olympia 2009). The Port solicited bids to complete the work described in the plans and specifications. As required by law, the Port awarded a public works contract to the lowest bidder whose proposal satisfied the plans and specifications. The Port awarded a contract to Stan Palmer Construction (SPC) on May 12, 2009.

SECTION 2 – FIELD AND ANALYTICAL ACTIVITIES

2.1. Airborne Dust Monitoring

Daily airborne dust monitoring began when SPC on-site construction activities began on June 8, 2009. In accordance with provisions in the IAWP (PIONEER 2009) and Ecology approval (Ecology 2009d), airborne dust monitoring was discontinued on July 24, 2009. Per Ecology's request (Ecology 2009d), additional airborne dust monitoring resumed on July 31, 2009 to coincide with the onset of concrete crushing operations. Airborne dust monitoring of concrete crushing operations was discontinued on August 7, 2009 with Ecology approval (Ecology 2009g).

PIONEER performed the airborne dust monitoring with a calibrated MIE personal DataRAM model pDR-1000 dust monitor⁴. At the start of each monitoring day, the dust monitor was turned on and placed by PIONEER on the SPC worker expected to receive the highest exposure to airborne dust. The dust monitor was turned off at the end of each SPC work day⁵ and PIONEER downloaded the data from the monitor. The airborne dust measurements were recorded on the monitor as one-minute averages, and then a time-weighted daily average was calculated based on the length of time the monitor was in operation for that particular day. Appendix A includes field notes associated with airborne dust monitoring. Table 2 presents a summary of daily airborne dust monitoring notes.

2.2. Stockpile Management

A primary objective of the IA and the Port's contract document was to reuse soil to the greatest extent practicable. SPC segregated excavated soil based on whether or not the soil was geotechnically suitable for on-site reuse. SPC made its own determinations regarding the geotechnical suitability of excavated soil (with support from Material Testing & Consulting), and the Port and its representatives did not object to the geotechnical determinations made. SPC further segregated excavated soil that was geotechnically suitable for on-site reuse according to the zone in which the soil was generated (i.e., the four zones identified in the IAWP [PIONEER 2009]). SPC further segregated excavated soil that was geotechnically unsuitable for on-site reuse based on whether or not the soil was generated from Zone 4⁶. The four zones are shown in Figure 2. Approximate excavation locations and depths are shown in Figure 3.

⁴ This model was used starting on June 10, 2009. A MIE MiniRam PDM-3 dust monitor was used on June 8 and June 9, 2009 but was returned to the rental company once it was determined that the monitor may not have been operating properly. The monitor was calibrated daily, with the exception of June 8, June 9, and July 2, 2009.

⁵ The monitor turned off prematurely on some work days, likely due to being accidentally bumped or a battery malfunction.

⁶ Since it was unknown at the time the IAWP was prepared where the solid waste generated during the IA would be disposed of, the IAWP conservatively assumed that all soil designated for disposal might need to be analyzed for arsenic, cadmium, and lead by the toxicity characteristic leaching procedure (TCLP) before the receiving landfill would accept the waste. SPC identified the Weyerhaeuser Regional Landfill in Castle Rock, Washington as the receiving landfill subsequent to preparation of the IAWP. After reviewing site soil data, the Weyerhaeuser Regional Landfill indicated that existing analytical results were sufficient for waste characterization of all soil generated at the

SPC handled and managed generated soil stockpiles by:

- Placing stockpiles on existing concrete or asphalt surfaces, or on a polyethylene liner with a thickness of at least 10-mils,
- Using signs to indicate the zone from which the stockpile was generated,
- Covering stockpiles with a polyethylene liner with a thickness of at least 10-mils and securing the cover with ropes and sandbags, and
- Uncovering the working face of a stockpile when adding or removing soil from the stockpile.

PIONEER implemented and maintained a stockpile sign management system to sign and track each generated stockpile. PIONEER placed and maintained a color-coded sign on a given stockpile once SPC notified PIONEER that SPC was finished adding soil to the stockpile. Once notified, PIONEER estimated the stockpile size, placed a white sign on the stockpile, and collected the appropriate stockpile sample(s) in accordance with Sections 2.3 and 2.4 of this report. The maximum stockpile size associated with each stockpile sample was 500 cubic yards (CY) per the IAWP (PIONEER 2009). Once analytical results were received and evaluated, the white sign was replaced with a green, yellow, or red sign, depending on the analytical results. The following sign colors and content were used to communicate stockpile status:

- White – Unclassified: No Use. A white sign indicated a stockpile sample had been collected in accordance with Section 2.3 and 2.4, but analytical results had not been received or evaluated.
- Green – Class A Soil: Reuse Under Pavement ONLY. Green signs were placed on stockpiles in which all COPC concentrations were less than IARUPLs.
- Yellow – Class B Soil: Reuse Anywhere: SUBJECT TO APPROVAL. Yellow signs were placed on stockpiles in which all COPC concentrations were less than IACLs⁷.
- Red – Class C Soil: NO USE: Disposal Only. Red signs were placed on stockpiles that were geotechnically unsuitable for on-site reuse, had a COPC concentration exceeding an IARUPL, or were leftover as excess material at the end of the IA.

Additional details on stockpile management expectations communicated to SPC are included in Appendix B. Appendix C contains PIONEER notes related to estimating soil stockpile volumes, stockpile sampling, stockpile tracking, and sign management. The photographic log in Appendix D includes photographs showing typical stockpiles and signage.

site, with the exception of lead in Zone 4. TCLP lead data from Zone 4 was required by the Weyerhaeuser Regional Landfill since there was one previous soil sample collected from Zone 4 of the infrastructure corridor in which the total lead concentration exceeded the “20 times rule.” The “20 times rule” refers to whether a maximum metal concentration in soil is 20 times the toxicity characteristic value in WAC 173-303-090(8). The “20 times rule” is often used by landfills to evaluate if TCLP metal data is needed to supplement total metal data for waste characterization purposes. As a result, geotechnically-unsuitable soil from Zone 4 was segregated separately since TCLP lead testing was required before the landfill would accept Zone 4 soils. Since the geotechnically-unsuitable soil from Zones 1 through 3 had already been accepted for disposal by the landfill based on existing data, this Zone 1 through Zone 3 soil was stockpiled into one revolving disposal stockpile.

⁷ Some stockpiles that could have been marked with yellow signs based on analytical results were marked with green signs (see Section 1.7 and Table 5).

2.3. Soil Sampling and Analysis for Stockpiles Designated for Possible Reuse

PIONEER collected soil samples from stockpiles designated for possible reuse using the following field procedures:

- Each sample was collected from a representative depth within the stockpile as a discrete and non-homogenized grab sample.
- Samples for TPH-G and benzene, toluene, ethylbenzene, and xylenes (BTEX) analyses were collected and prepared in accordance with United States Environmental Protection Agency (USEPA) Method SW846-5035A (e.g., Encore™ samplers). Samples for non-volatile constituents were collected with hand tools (e.g., stainless steel trowel, stainless steel mixing bowl).
- Before use, non-dedicated sampling equipment was decontaminated in accordance with the IAWP (PIONEER 2009).

All soil samples collected from stockpiles designated for possible reuse were analyzed for:

- Arsenic, cadmium, and lead by USEPA Method SW846-6020A,
- Polycyclic aromatic hydrocarbons (PAHs) by USEPA Method SW846-8270C,
- Dioxins/furans by USEPA Method SW846-8290,
- TPH-D and TPH-HO by Ecology Method NWTPH-Dx,
- TPH-G by Ecology Method NWTPH-G, and
- BTEX by USEPA Method SW846-8021B.

In addition, samples collected from stockpiles that were designated for possible reuse after September 25, 2009 (as well as yellow-signed stockpiles that were on site as of September 25) were analyzed for polychlorinated biphenyls (PCBs) by USEPA Method SW846-8082 in accordance with an email from Ecology to the Port (Ecology 2009i).

Dragon Analytical Laboratory performed all of the analyses, with the exception of dioxins/furans analyses, which were performed by PACE Analytical Services.

2.4. Additional Soil Sampling and Analysis for Zone 4 Stockpiles

In addition to the sampling and analysis procedures described in Section 2.3, PIONEER collected a soil sample from each Zone 4 stockpile (i.e., Zone 4 stockpiles designated for off-site disposal due to geotechnically-unsuitable soil, and Zone 4 stockpiles designated for possible on-site reuse) using the following field procedures.

- Each sample was a five-point composite sample of representative sub-sampling locations.
- Samples were collected with hand tools (e.g., stainless steel trowel, stainless steel mixing bowl).
- Before use, non-dedicated sampling equipment was decontaminated in accordance with the IAWP (PIONEER 2009).

Soil samples collected from Zone 4 stockpiles were analyzed for TCLP lead by USEPA Method SW846-1311.

2.5. Soil Reuse and Waste Disposal

Soil excavated during the IA was disposed of at the Weyerhaeuser Regional Landfill in Castle Rock, Washington if it met any of the following criteria.

- The soil was geotechnically-unsuitable for reuse.
- Soil stockpiles originally designated for possible reuse had a COPC concentration exceeding an IARUPL.
- Soil or soil stockpiles leftover as excess material at the end of the IA (i.e., the Port authorized the off-site disposal of some excess green-signed stockpiles by changing the applicable green sign to a red sign once SPC had substantially completed excavation work).

Soil excavated during the IA was reused in infrastructure-corridor locations that were paved during the IA⁸ if it met all of the following criteria.

- Soil stockpiles designated for possible reuse in which all COPC concentrations were less than IARUPLs.
- Soil stockpiles that were not left over as excess material at the end of the IA.

2.6. Paving

SPC has completed the paving of asphalt roadways, concrete roadways, concrete sidewalks, curbs, gutters, and driveway approaches within the infrastructure corridor as planned.

2.7. Gross Contamination Provisions

None of the gross contamination provisions included in the IAWP were implemented because gross contamination (e.g., free product, heavy sheen) was not encountered during the IA. It should be noted that on June 15, 2009, SPC requested that the Port and PIONEER inspect a small quantity of asphalt/road material that had been added to Stockpile SP02. Based on discussions with on-site personnel, visual/olfactory observations of SP02, and visual/olfactory observations in the excavation, the Port and PIONEER determined that any impact associated with the asphalt/road material was de minimus. PIONEER provided continuous excavation and segregation oversight of SPC for several weeks after June 15, 2009 as a precautionary measure. While providing continuous oversight, a de minimus petroleum sheen associated with an outfall from a Tom's Outboard oil/water separator was observed on June 22, 2009. No other potential contamination was noted while PIONEER provided continuous oversight.

2.8. Monitoring Well Protection

SPC and/or PIONEER placed traffic drums, cones, or barricades on top of each monitoring well (MW) prior to the start of the IA. PIONEER conducted periodic reconnaissance of MWs throughout the IA to check on the status of MWs. In general, MWs were adequately protected during the IA. However, minor

⁸ A relatively small amount of soil (from select soil stockpiles where all COPC concentrations were less than IACLs) was reused in on-site areas that were not paved during the IA (see Section 1.7 and Table 5).

repairs (e.g., repairing the MW surface seal) will be necessary for some MWs following the IA. Major changes made to the MW network during the IA were:

- MW05 was decommissioned on June 15, 2009 because it was located within a new roadway.
- SPC damaged MW02, which was located within a new roadway. A replacement MW designated as MW02R was installed on September 16, 2009.
- The casing for MW12, which is located in a new sidewalk, was extended and new surface seal was installed on September 16, 2009.

2.9. Other Engineering Controls

In addition to the engineering controls (ECs) described in previous sections, SPC appropriately implemented the following ECs specified in the IAWP (PIONEER 2009):

- SPC installed an appropriate, continuous perimeter fence, and maintained that fencing throughout the project.
- SPC implemented traffic and pedestrian control measures to restrict public access to the site, and maintained those measures throughout the project.
- SPC utilized trench boxes to minimize the width of utility excavations to the extent practical.
- SPC watered dry soil as necessary with water trucks to suppress dust.
- SPC prepared and implemented a Health and Safety Plan.

On-site oversight of SPC's implementation of the IAWP ECs was conducted at various times by the Port, PFK Construction Consulting, PIONEER, and Ecology. A photographic log, which includes photographs showing typical implementation of ECs, is included in Appendix D. PIONEER's field notes associated with oversight of the general ECs are included in Appendix E. It should be noted that minor issues were occasionally noted during oversight activities (e.g., MWs covered with soil, two of the initial stockpiles not placed on an impervious surface, stockpile covers needing repair) and were promptly corrected.

2.10. National Pollutant Discharge Elimination System Permit

Activities conducted pursuant to the National Pollutant Discharge Elimination System permit for East Bay (Ecology 2009c) are not discussed in this report since the technical and administrative requirements associated with the permit were addressed separately from the IAWP and IA Report.

2.11. Deviations from the IAWP

IA work related to soil cleanup was conducted pursuant to the IAWP (PIONEER 2009). Minor deviations from the IAWP are noted in Table 3 along with reasons for the deviations. These minor deviations do not have an impact on the implementation of the remedy. In fact, several of the deviations are associated with additional provisions beyond what was specified in the IAWP.

SECTION 3 – RESULTS

3.1. Airborne Dust Concentrations

Appendix F presents all logged airborne dust data on a minute-by-minute basis. Table 4 shows the daily time-weighted average dust concentrations. As shown in Table 4, time-weighted daily airborne dust concentrations ranged from 0.00 mg/m³ to 0.37 mg/m³. The maximum time-weighted average dust concentration was well below the Airborne Dust Action Level of 5 mg/m³.

3.2. Analytical Laboratory Data and Data Quality Review

The laboratory certificates of analyses and chain-of-custody documentation for the IA stockpile samples are presented in Appendix G. A summary of the data quality review process and results for the IA stockpile samples is also presented in Appendix G. The IA soil stockpile data is deemed acceptable for use and comparison with other site data as qualified.

3.3. Soil Stockpile Results

A total of 36 soil samples were collected from soil stockpiles designated for possible reuse and analyzed for COPCs⁹. The analytical results for these samples are summarized in Table 5. As shown in Table 5, COPC concentrations in all but one sample were less than IARUPLs. In addition, all COPC concentrations were less than IACLs in 18 of 36 samples. The only COPCs with IACL exceedances were total cPAHs and total dioxins/furans¹⁰. Figure 4 presents these analytical results by zone.

A total of 14 soil samples were collected from Zone 4 soil stockpiles and analyzed for TCLP lead. The analytical results for these TCLP lead samples are summarized in Table 6. As shown in Table 6, TCLP lead was not detected in any sample.

3.4. Soil Reuse and Waste Disposal

As shown in Table 5, approximately 12,000 CY¹¹ of soil excavated during the IA was reused on site during this IA. Appendix H contains the applicable waste disposal documentation. As shown in Appendix H, the total amount of soil disposed of at the off-site landfill during this IA was 17,623 tons. Assuming a soil density of 1.7 tons/CY, approximately 10,000 CY of soil was disposed of at the off-site landfill.

⁹ Stockpiles samples were analyzed from the following stockpiles designated for possible reuse: SP01 through SP18, SP20 through SP29, SP33, and SP34. Two samples were collected from Stockpiles SP08, SP16, SP24, and SP29 due to stockpile size. Three samples were collected from Stockpile SP25 due to stockpile size.

¹⁰ Total dioxins/furans and total cPAH concentrations were calculated using toxicity equivalency factors per WAC 173-340-708(8).

¹¹ Volume estimates in this section are presented with one significant figure.

SECTION 4 – DISCUSSION

4.1. Review of the Interim Action Remedy

The IA was performed in accordance with the procedures presented in the IAWP, except as noted in Section 2.11. The IA remedy effectively satisfied all of the IA objectives listed in Section 1.5, including protection of human health and the environment.

4.2. Considerations for Future Cleanup Actions

Lessons learned during the IA that should be considered during future cleanup actions at the site include:

- Airborne dust monitoring confirmed that typical on-site construction activities generate minimal dust, even during worst-case conditions.
- COPC concentrations in soil stockpile samples indicate a general absence of significant soil contamination within the infrastructure corridor (i.e., only one sample out of 36 had a COPC concentration exceeding an IARUPL). However, soil stockpile results support previous RI data in suggesting that relatively low concentrations of total cPAHs and total dioxins/furans are distributed heterogeneously across the site.
- As discussed in Section 1.7, the IAWP did not address reuse options for geotechnically-suitable soil that had COPC concentrations less than IACLs (which are protective for unrestricted land uses). More soil could have been reused on site if the IAWP defined an agreed upon sampling and analysis plan and additional reuse locations for soil with COPC concentrations less than IACLs. Future work plans should have a defined plan for on-site reuse for soil with COPC concentrations less than cleanup levels based on unrestricted land uses.
- The addition of TCLP lead data collected from Zone 4 (see Table 6) to the existing data record should enable future solid waste generated at the site to be characterized as non-hazardous waste without additional waste characterization testing.
- Stockpile management requirements were easy for SPC to implement. The color-coded sign system for stockpile designation was an effective, intuitive, and easy management and monitoring tool for the Port and SPC.
- SPC did a satisfactory job of complying with all ECs, with the exception of providing suitable and timely documentation.

TABLES

**TABLE 1
INTERIM ACTION CLEANUP LEVELS AND REUSE UNDER PAVEMENT LEVELS**

Constituent of Potential Concern	Interim Action Cleanup Level (mg/kg)	Interim Action Reuse Under Pavement Level (mg/kg)
Arsenic	20	20
Cadmium	2	2
Lead	250	250
Total cPAHs ⁽¹⁾	0.095	1.4
Total dioxins/furans ⁽¹⁾	9.8E-06	5.1E-04
Total naphthalenes	160	160
TPH-D	2,000	2,000
TPH-HO	2,000	2,000
TPH-G	100	100
Benzene	0.22	0.22
Toluene	240	240
Ethylbenzene	43	43
Total xylenes	23	23

Notes:

cPAHs = carcinogenic polycyclic aromatic hydrocarbons

Dioxins/furans = Chlorinated dibenzo-p-dioxins and chlorinated dibenzofurans

TPH-D = Total petroleum hydrocarbons in the diesel range

TPH-G = Total petroleum hydrocarbons in the gasoline range

TPH-HO = Total petroleum hydrocarbons in the heavy oil range

⁽¹⁾ Total cPAHs and total dioxins/furans are based on toxicity equivalency quotients for benzo(a)pyrene and 2,3,7,8-tetrachlorodibenzo-p-dioxin, respectively. Total cPAHs and total dioxins/furans concentrations calculated using toxicity equivalency factors per Washington Administrative Code 173-340-708(8).

**TABLE 2
DAILY AIRBORNE DUST MONITORING NOTES**

Date	Start Time	End Time	Total Logged Time	Type of Worker Activity Being Monitored	Operation / Data Notes
06/08/09	07:07:15	11:01:15	03:54:00	Open cab excavator operator	Only two concentrations logged that were not 0. Possible faulty monitor.
06/09/09	07:02:40	18:01:40	10:59:00	Open cab excavator operator	No concentrations logged. Faulty monitor confirmed. Two new monitors ordered.
06/10/09	12:37:01	17:17:01	04:40:00	Open cab excavator operator	New monitor used. Only half day logged because of delivery time.
06/11/09	07:03:08	14:03:08	07:00:00	Open cab excavator operator	Operator noticed monitor turned off about an hour after he received it. Operator turned it back on but later in the day it was off again and he could not get it back on. PIONEER attempted to turn monitor on, but could not until monitor connected to computer.
06/12/09	07:10:29	11:11:29	04:01:00	Open cab excavator operator	Only half day logged. Assumed at the time that monitor was turned off accidentally and unknowingly by operator.
06/15/09	06:50:58	17:25:58	10:35:00	Open cab excavator operator	
06/16/09	06:59:50	15:32:24	04:29:00	Open cab excavator operator	Monitor turned off three times. Switched to other monitor midday.
06/17/09	07:02:30	15:34:30	8:32:00	Open cab excavator operator	
06/18/09	07:09:16	12:41:09	04:11:00	Open cab excavator operator	Only half day logged. Assumed at the time that monitor was turned off accidentally and unknowingly by operator.
06/19/09	06:50:21	08:25:21	1:35:00	Open cab excavator operator	PIONEER instructed worker being monitored to place monitor in cab so that monitor does not get accidentally turned off. Even with this change, monitor only logged about 1.5 hours.
06/22/09	07:49:33	15:07:33	07:18:00	Open cab excavator operator	Monitor worked as intended for entire day after batteries replaced around 0800.
06/22/09	07:48:45	12:59:45	05:11:00	Quality control check of backup dust monitor	PIONEER performed quality control check of backup monitor to determine cause of premature shutdowns. PIONEER determined premature shutdowns were likely caused by battery life and could be remedied by replacing batteries every day.
06/23/09	07:05:42	15:56:42	08:51:00	Open cab excavator operator	
06/24/09	07:14:26	15:28:26	08:14:00	Open cab excavator operator	
06/25/09	06:58:35	15:25:35	08:27:00	Open cab excavator operator	
06/26/09	-	-	-	Hauling material (no onsite dust-generating activities)	No monitoring
06/29/09	07:02:32	15:23:32	08:21:00	Water truck driver	
06/30/09	07:01:38	15:34:38	08:33:00	Well driller	
07/01/09	07:04:51	14:44:51	07:40	Water truck driver	
07/02/09	07:49:28	07:54:28	00:05:00	Open cab excavator operator	Monitor turned off after five minutes. Since new batteries were installed, it is assumed that monitor was turned off accidentally and unknowingly by operator. Monitor was not calibrated for this day.
07/06/09	07:05:55	16:27:55	09:22:00	Open cab excavator operator	
07/07/09	07:00:20	14:58:20	07:58:00	Open cab excavator operator	
07/08/09	07:10:10	15:40:10	08:30:00	Open cab excavator operator	
07/09/09	07:07:40	15:41:40	08:34:00	Open cab excavator operator	
07/10/09	07:03:15	15:30:15	08:27:00	Open cab excavator operator	Monitor was not turned off at the end of work day. It is estimated that work day ended at 1530.
07/13/09	07:09:50	17:25:50	10:16:00	Open cab excavator operator	
07/14/09	06:58:18	18:00:18	11:02:00	Open cab excavator operator	Monitor was not turned off at the end of work day. It is estimated that work day ended at 1800.
07/15/09	07:00:03	07:05:03	00:05:00	Open cab excavator operator	Monitor turned off after five minutes. Since new batteries were installed, it is assumed that monitor was turned off accidentally and unknowingly by operator.
07/16/09	06:54:23	16:57:23	10:03:00	Open cab excavator operator	

**TABLE 2
DAILY AIRBORNE DUST MONITORING NOTES**

Date	Start Time	End Time	Total Logged Time	Type of Worker Activity Being Monitored	Operation / Data Notes
07/17/09	07:02:24	13:11:24	06:09:00	Open cab excavator operator	
07/20/09	06:56:11	18:00:11	11:04:00	Open cab excavator operator	
07/21/09	07:06:16	17:30:16	10:24:00	Open cab concrete demolition operator	Monitor was not turned off at the end of work day. It is estimated that work day ended at 1730.
07/22/09	07:07:54	11:25:54	04:18:00	Open cab excavator operator	Monitored turned off after half day. Since new batteries were installed, it is assumed that monitor was turned off accidentally and unknowingly by operator.
07/23/09	07:01:07	17:07:07	10:06:00	Open cab excavator operator	
07/24/09	07:09:22	15:46:22	08:37:00	Open cab excavator operator	
07/31/09	08:59:34	12:35:03	1:56:00	Concrete crusher operator	Concrete crushing only conducted from about 0900 to 1230. Monitor turned off at about 1100 due to poor batteries that were believed to be new. Replacement batteries were installed about 1130.
08/03/09	10:20:38	17:00:38	07:20:00	Concrete crusher operator	Concrete crushing did not begin until about 1020.
08/04/09	07:01:00	16:34:00	09:33:00	Concrete crusher operator	
08/05/09	07:18:57	16:30:57	09:12:00	Concrete crusher operator	Monitor was not turned off at the end of work day. It is estimated that work day ended at 1630.
08/06/09	07:07:24	16:30:24	09:23:00	Concrete crusher operator	Monitor was not turned off at the end of work day. It is estimated that work day ended at 1630.
08/07/09	07:09:41	13:51:41	06:42:00	Concrete crusher operator	

TABLE 3
DEVIATIONS FROM INTERIM ACTION WORK PLAN

IAWP Section	Deviation	Rationale / Explanation
5.2	Not all excavated soil that was geotechnically suitable for reuse and had COPC concentrations less than IARUPLs was reused on site. Some reusable soil was leftover as excess material at the end of the IA, and was disposed of at the off-site landfill.	See Section 1.7 and Table 5.
5.2	Between July 31 and October 2, 2009, a small quantity of excavated soil with COPC concentrations less than IACLs was reused on site in areas not covered by pavement as approved by Ecology (Ecology 2009e, Ecology 2009f, Ecology 2009h, and Ecology 2009j).	See Section 1.7 and Table 5.
7.2	An environmental-specific kickoff meeting was not held.	Based on the general kickoff meeting, weekly site meetings, regular communication between the Port, Ecology, and PIONEER, and periodic site visits by the Port, Ecology, and PIONEER, it was determined that an environmental-specific kickoff meeting was not necessary.
7.3	The IA Report does not include SPC's daily reports, field notes, and photographs.	This documentation was not provided to PIONEER, and would likely be of limited value if provided.
8.2	Periodic reviews of SPC's daily reports and field notes were not performed.	This documentation was not provided to PIONEER, and would likely be of limited value if provided.
Table 7-2	The IA was not completed by January 2010 as indicated in the original schedule.	SPC's construction activities were delayed for reasons that are not related to IAWP or IA Report requirements.
Appendix D, Section 1.2	Additional airborne dust monitoring was conducted despite the provision to discontinue monitoring after four weeks of monitoring if the Airborne Dust Action Level was not exceeded.	Additional monitoring was conducted per Ecology request (Ecology 2009d).
Appendix D, Section 1.3	No stockpiles designated for off-site disposal were analyzed for TCLP arsenic or TCLP cadmium. Only stockpiles generated from Zone 4 were sampled for TCLP lead.	SPC identified the Weyerhaeuser Regional Landfill in Castle Rock, Washington as the receiving landfill subsequent to preparation of the IAWP. The receiving landfill indicated that existing analytical results were sufficient for waste designation of all soil generated at the site, with the possible exception of lead in Zone 4.
Appendix D, Section 1.3	PCB analyses were added for stockpiles designated for possible reuse after September 25, 2009 (as well as yellow-signed stockpiles that were on site as of September 25 th).	Analyses were added per Ecology request (Ecology 2009i).
Appendix D, Section 1.7	The sample identification scheme was slightly different than presented in the IAWP.	Zone information was added to each sample identification, and sample depth was deemed unnecessary for stockpile sample identification.
Appendix D, Table D-5	Some constituent PQL expectations were modified subsequent to preparation of the IAWP.	See data quality review at end of Appendix G.

Notes:

COPC = Constituent of Potential Concern
 Ecology = Washington State Department of Ecology
 IA = Interim action
 IACL = Interim Action Cleanup Level
 IARUPL = Interim Action Reuse Under Pavement Level
 IAWP = Interim Action Work Plan
 PCB = Polychlorinated biphenyls
 PIONEER = PIONEER Technologies Corporation
 PQL = Practical quantitation limit
 Port = Port of Olympia
 SPC = Stan Palmer Construction
 TCLP = Toxicity characteristic leaching procedure

Actual Designation ⁽⁴⁾			No. of Yellow ⁽⁶⁾ = 4	No. of Green = 20	No. of Red = 3 No. of Green/Red = 9
Date Originally Designated			N/A		
Estimated Percentage Reused On Site			N/A		
Estimated Reuse Quantity (CY)			12,000 ⁽¹⁰⁾		

Notes:

- Abbreviations: cPAHs = carcinogenic polycyclic aromatic hydrocarbons; Conc. = Concentration; CY = Cubic yards; Dioxins/Furans = Chlorinated dibenzo-p-dioxins and chlorinated dibenzofurans; IACL = Interim Action Cleanup Level; IARUPL = Interim Action Reuse Under Pavement Level; J = Estimated concentration; N/A = Not applicable; NS = Not sampled; TPH = Total petroleum hydrocarbons; U = Not detected at shown practical quantitation limit
- Detected concentrations presented with two significant figures.
- Bold typeface indicates exceedance of IACL. Gray shading indicates exceedance of IARUPL.
- SP19 was sampled for disposal purposes since it was from Zone 4. SP30, SP31, SP32, SP35, and SP36 were leftover as excess material, and were disposed of off-site.
- ⁽¹⁾ Stockpile was from Zone 4. Sample identification indicating soil was from Zone 2 was incorrect.
- ⁽²⁾ Total cPAHs and total dioxins/furans concentrations calculated using toxicity equivalency factors per Washington Administrative Code 173-340-708(8).
- ⁽³⁾ Compound Totalling Rules: If all results are non-detects, used the reporting limit for each non-detect. If there are both detects and non-detects, used detected values only.
- ⁽⁴⁾ Stockpile designations: Green = Reuse Under Pavement ONLY. Yellow = Reuse Anywhere SUBJECT TO APPROVAL. Red = NO USE Disposal Only.
- ⁽⁵⁾ Stockpile was disposed of off site because the stockpile consisted mainly of sod material that was not geotechnically suitable for reuse under pavement.
- ⁽⁶⁾ Signed Yellow with Ecology approval (Ecology 2009e, Ecology 2009f, Ecology 2009h, Ecology 2009j). However, some or all of these piles were reused under pavement due to demand for Green-signed soil.
- ⁽⁷⁾ SP11, SP13, and SP16-1 were signed Green per Ecology recommendation since they were from Zone 2 (Ecology 2009h, Ecology 2009j). SP15 and SP20 were temporarily signed Yellow, but were signed Green prior to reuse as Yellow soil per Ecology and Port discussions (Ecology 2009i, Dragon 2009). Stockpiles that were designated on or after October 2, 2009 in which all constituent concentrations were below IACLs were signed Green (Ecology 2009i, Dragon 2009).
- ⁽⁸⁾ Some or all of this stockpile was leftover as excess material at the end of the Interim Action. The leftover soil was disposed of off site after being signed Red.
- ⁽⁹⁾ Calculated assuming non-detect equal to 1/2 of reporting limit. Average concentration not calculated for constituents in which 50% or more of values were non-detects.
- ⁽¹⁰⁾ Value presented to one significant figure.

**TABLE 6
RESULTS OF TCLP TESTING FOR ZONE 4 STOCKPILES**

SP30	SP30_Zone4_121409_Comp	0.25 U
SP35	SP35_Zone4_121409_Comp	0.25 U
SP36	SP36_Zone4_021210_Comp	0.25 U

Notes:

TCLP = Toxicity Characteristic Leaching Procedure

U = Not detected at shown practical quantitation limit

Toxicity characteristic for lead in Washington Administrative Code 173-303-090(8) is 5 mg/L.

Not all of these stockpiles were designated for disposal. TCLP lead samples were collected from some of these stockpiles just in case the stockpile was designated for disposal.

From: Troy Bussey (busseyt@uspioneer.com)

Date: June 2, 2009

Re: Soil Stockpile Management Procedures for East Bay Interim Action

Dear Joanne and Kevin:

Per your request, I have prepared this memorandum to summarize my understanding of how the Port of Olympia (Port) expects Stan Palmer Construction (Stan Palmer) to interact with PIONEER Technologies Corporation (PIONEER) on soil stockpile management issues during the Interim Action for the East Bay Site. These procedures and expectations supplement and clarify (but are not intended to replace or override in any way) the stockpile management requirements in the Interim Action Work Plan (IAWP) and the technical specifications.

- PIONEER Points-of-Contact:
 - Kara Roberts: 360-570-1700 office, [REDACTED]
 - Troy Bussey: 360-570-1700 office, [REDACTED]
- Soil Reuse: Stan Palmer is expected to maximize soil reuse to the extent practical. Stan Palmer is encouraged to amend, mix, recondition, or modify excavated soils to the extent practicable prior to stockpile sampling in order to produce reusable soils that are geotechnically suitable for a given use. Class B soil stockpiles should only be reused if no Class A soil stockpiles for a given geotechnical use are available.
- Soil Segregation: Stan Palmer is expected to segregate soils into stockpiles according to the anticipated geotechnical use for the soil (e.g., separate stockpiles for (1) gravel base, (2) general borrow, (3) pipe bedding, and (4) unsuitable for any use). In addition, Stan Palmer is expected to segregate stockpiles according to the zone in which the soil was generated (the locations of the four zones are identified in Figure 5-1 of the IAWP). Thus, there could be up to a total of 16 different classes of soil stockpiles (i.e., four zones and four types of geotechnical uses).
- Stockpile Size: 500 cubic yards (CY) is being used as the stockpile volume for soil sampling and decision-making purposes. Thus, Stan Palmer is expected to subdivide stockpiles larger than 500 CY into distinct 500 CY units prior to the stockpile being signed and sampled. Stockpiles smaller than 500 CY should be avoided if possible. Stan Palmer is encouraged to minimize stockpile footprints in order to save space at the job site. Stan Palmer is expected to estimate stockpile volumes (e.g., via truckloads) and provide written documentation of the stockpile volume basis, although PIONEER will review and verify the estimate.
- Stockpile Locations: It is expected that Stan Palmer will not windrow soils adjacent to excavations. It is expected that Stan Palmer will place and manage stockpiles in a central location (e.g., existing concrete pad) to the extent practicable. Stan Palmer should not place soil stockpiles on top of existing groundwater monitoring wells, nor any proposed soil borings or monitoring wells identified in the field by PIONEER or the Port. The locations of existing monitoring wells and proposed soil borings/monitoring wells have been marked in the field as of June 2nd.
- Signage Responsibilities: Color-coated stockpile signs (approximately 18 inches by 24 inches) have been purchased and will be placed on soil stockpiles by PIONEER. Stan Palmer is responsible for ensuring the signs are not damaged or moved once placed on a stockpile.

- **Sign Content:** Stockpile signs will utilize the color scheme and text shown in the table below to communicate stockpile status. In addition, each stockpile sign will identify the stockpile ID, corresponding soil sample number, date sampled, and date released for use. Copies of the sign designs are enclosed.

Soil Class	Sign Color	Sign Text
N/A	White	Unclassified: NO USE
A	Green	Class A Soil: Reuse Under Pavement ONLY
B	Yellow	Class B Soil: Reuse Anywhere - SUBJECT TO APPROVAL
C	Red	Class C Soil: NO USE – Disposal Only

- **Stockpile IDs:** PIONEER will assign all stockpile IDs using the following format: Sequential Stockpile #_Zone_Date ID Assigned (MMDDYY). Thus, an ID of 1_3_061509 would correspond to Stockpile #1, which was generated from Zone 3 and assigned an ID on June 15, 2009.
- **Stockpile Throughput:** Due to the delays associated with obtaining analytical results for soil stockpile samples as shown in the flowchart below, it is expected that Stan Palmer will generate significant quantities of stockpiled soil at the beginning of the project in order to ensure a near continuous supply of soil for reuse later in the project.

- **Active Generation of Stockpiles:** Stockpiles that Stan Palmer is actively generating or shaping will not be signed or sampled until Stan Palmer is completely done adding to or shaping the stockpile. Stan Palmer is responsible for maintaining a schematic identifying all stockpiles that have not been signed and capturing the following information:
 - What zone the soil came from
 - Type of pile: (1) gravel base, (2) general borrow, (3) pipe bedding, or (4) unsuitable for any use.
- **When To Call:** PIONEER will not be in the field full time. Stan Palmer is expected to consolidate sampling requests to one or two days per week. When Stan Palmer is done generating a 500 CY stockpile, Stan Palmer should notify a PIONEER point-of-contact, who is expected to respond within one working day.
- **Stockpile Movement:** Once a stockpile has been signed with a white sign, Stan Palmer should not move the stockpile until the sign has been changed to green, yellow, or red. Stan Palmer should take all necessary measures to prevent comingling of stockpiles of different soil classes.
- **Analytical Requirements:** PIONEER will collect and pay for all soil samples related to chemical testing, with the exception of any testing associated with import of soil from off-site. Stan Palmer is responsible for collecting and paying for all soil samples related to geotechnical testing.
- **Direct Loading:** It may be possible to load some soils directly to dump trucks for off-site disposal without stockpiling if: 1) the Port Engineer has already designated the soil as geotechnically unsuitable for any use, and 2) the receiving landfill does not require toxicity characteristic leaching procedure (TCLP) testing for that zone (e.g., the Weyerhaeuser Castle Rock Landfill has indicated that the only TCLP testing it would likely require is TCLP lead for stockpiles generated from Zone 4).
- **Construction Debris:** Stockpiles of construction debris should not be commingled with soil stockpiles, and will be managed separately in accordance with the specifications.

- Gross Contamination: If Stan Palmer encounters gross contamination (e.g., heavy fuel sheen, free petroleum product) during excavation, Stan Palmer is expected to stop excavation work at that location and notify the Port and PIONEER immediately. If excavators or other equipment are contaminated due to contact with gross contamination, Stan Palmer should decontaminate the equipment before resuming work elsewhere at the site.
- Documentation: Stan Palmer is responsible for preparing daily reports as well as detailed field notes and photographs to document all soil management activities (e.g., excavation, segregation, stockpiling, estimating stockpile volumes, reuse, and disposal). In addition, Stan Palmer is expected to provide the Port and PIONEER with a copy of the weigh ticket / waste manifest for all soil disposed of at the off-site landfill as soon as possible following transport.
- Other Requirements: Stan Palmer is expected to be intimately aware of the stockpile management requirements in Section 5.2 of the IAWP and Section 01 35 13 of the specifications as there are other stockpile management requirements (e.g., placement on impervious surface, cover with plastic liner) that are not repeated in this memo.

Respectfully,

Troy Bussey Jr., P.E., L.G., L.H.G.
Senior Professional Engineer

Enclosure – Sign Designs

It should be noted that Ecology commented on this memorandum in a June 4, 2009 email: "The only changes/clarifications that are needed to the memo concerns amending, reconditioning, mixing, or modifying soils (2nd bullet). We prefer that any amending, reconditioning, mixing, or modifying soils occur following soil sampling. We do not want any additives to 'dilute' or bias the concentration results. However, if the amending, reconditioning, mixing, or modifying soils only consists of mixing of soils excavated from the same zone to achieve the desired geotechnical properties – that is acceptable. As long as no "foreign" substances are added (such as offsite materials, cement, soils from other zones, concrete)."

As it turned out, Stan Palmer Construction did not end up amending, mixing, reconditioning, or modifying any of the soil stockpiles before or after soil sampling.

Cc: Melody Feden
Subject: RE: East Bay IA - SP25

SP25 was a huge stockpile and originally was 1255cy. When we changed the sign to red the stockpile was about 350cys. 2/3rds of it was red for disposal and 1/3 of it was to be left green so....

Green = 1138
Red = 117

It totally slipped my mind, I should have recorded that. And I still need to send out the lead tcip samples. Melody stated that they started hauling it yesterday.

Subject: East Bay IA - SP25

Kara -

Since we have already scanned the IA field notes and included those in the draft IA Report which has already gone to the Port and Ecology, I would like to document the final disposition of SP25 via email. Over the past couple of days, SPC has moved SP25 from the SE corner of Parcel 2 to the northern part of Parcel 3. Melody told me that you and her signed part of SP25 red on 3/15, while keeping some green. When I looked at what was left of the green SP25 pile yesterday after it had been moved, I estimate that the Green SP25 was ~ 50 CY. SPC apparently disposed of everything else that was remaining in SP25 as of 3/15.

My question to you is: Do you think SPC had used some of SP25 as green before 3/15? If so, how much do you estimate they used as green before 3/15?

Respectfully,
Troy

PAUL K	Self-employed	

NOTES ON WORK COMPLETED

- PAUL CALLED PTC TO SITE DURING SUPERFICIAL EXAMINATION OF OLYMPIA/THURSTON AVENUE (ZONE 2) DUE TO SMALL AMOUNTS OF POTENTIALLY PETROLEUM IMPACTED MATERIAL IN SHALLOW SOIL THAT HAD BEEN ADDED TO STOCKPILE SPOZ
- BASED ON DISCUSSIONS WITH ON-SITE PERSONNEL, VISUAL/ODM OBSERVATIONS IN EXCAVATION, AND VISUAL/ODM OBSERVATIONS OF SPOZ, TONY & PIONEER DETERMINED IT WAS OF MINIMUM IMPACT ASSOCIATED WITH ASPHALT/ROAD MATERIAL.
- PAUL DECIDED TO HAVE PIONEER PROVIDE CONTINUOUS EXCAVATION OVERSIGHT FOR SHORT PERIOD TO ASSIST WITH ANY SOIL SEGREGATION THAT MAY BE NECESSARY
- COLLECTED SPOZ-ZONE 2-061509 SAMPLE C 1400 FEW SPOZ SINCE STOCKPILE WAS GENERATED - AREA TO GET TRUCK COUNTS
- KARA STAYED REST OF DAY TO PROVIDE EXCAVATION OVERSIGHT
- DIDN'T COMMENT STEVE TEEB SINCE HE IS OUT OF OFFICE THIS WEEK & DUE TO OF MINIMUM NATURE OF MATERIAL

NOTES ON WORK COMPLETED All Engineering controls in EAP appear to be implemented appropriately and functioning as designed
TALKED WITH PAUL K.

- STEVE YEEH HAD BEEN ON-SITE FOR 1 HOUR EARLIER IN AM, BUT HAD NO COMMENTS
- SPL HAS HAD LOW PRODUCTIVITY RATE DURING REGULATING ~ 50th/DAY
- SPL HAS BEEN HAULING SOIL TO LANDFILL FROM WED-FRI
- PAUL DOESN'T HAVE SCALE TICKETS OR MANIFESTS YET (ALTHOUGH HE HAS REQUESTED THEM), BUT ESTIMATES ~ 40 TRUCK LOADS @ ~ 20 CY/LOAD
- I REQUESTED COPY OF SCALE TICKETS/MANIFESTS WHEN PAUL RECEIVES
- ~ 800 CY TAKEN TO LF INCLUDES SOIL FROM SPO5, SPO6, and soil removed from utility excavations which is geotechnically unsuitable for any use
- SPL has been relying more on sump pump in trench than dewatering wells

I INSPECTED STOCKPILE OF SOIL THAT IS GEOTECHNICALLY UNSUITABLE → ~~WAS~~ WOOD AND OTHER UNSUITABLE CONTENT IS CONSISTENT WITH WHAT WAS OBSERVED IN BORING LOG

I INSPECTED UTILITY EXCAVATION NEAR CORNER OF OLYMPIAN & JEFFERSON → GROUNDWATER LEVEL IS CONSISTENT WITH WHAT WAS OBSERVED IN BORING LOG

I INSPECTED UTILITY EXCAVATION NEAR INTERSECTION OF JEFFERSON AND STATE WHERE PAUL THOUGHT HE MIGHT HAVE SEEN SHEEN IN GROUNDWATER SHEEN
↳ THERE WAS NO VISUAL OR OLFATORY EVIDENCE OF IMPACTED SOIL IN THIS EXCAVATION; THE POSSIBLE WATER SHEEN WAS VERY SLIGHT (IF EVEN PRESENT) AND SMALL → SIGNIFICANTLY LESS THAN ONE MIGHT SEE IN A PARENT LOT OF GROUNDWATER

STOCKPILES: PILE STILL BEING GENERATED FROM ZONE 4 → ALTHOUGH IT MAY BE 7500 CY

SMALL PILE OF WOOD DEBRIS FOR DISPOSAL
PILE STILL BEING GENERATED FROM ZONE 2
2 piles of impacted soil

NOTES ON WORK COMPLETED

Check on Engineering Control implementation
 WALKED AROUND SITE TO INSPECT EC implementation
 ↳ SPC primarily doing subsurface utilities on Southern end of Jefferson and northern end of Jefferson
 ↳ concrete crusher is in place, but not operating pending air permit

* SPC site control measures (e.g., perimeter fence, traffic/pedestrian control) have been in place since first day and are functioning as desired

* SPC is using shoring on deep excavations to minimize excavation widths as intended

* SPC is using water trucks to wet soil for dust control and has been doing that since 1st week

* SPC is segregating soil appropriately based on excavation zone and geotechnical analysis

* SPC is storing soil on impervious surface and is covering stockpiles daily
 ↳ SPC is using tracking system as intended
 ↳ SPC is only breaking the outer face of a given stockpile

* SPC is removing/disposing of soil stockpiles appropriately and as intended

* No gross contamination was observed

• All ECs appear to be functioning as desired and intended

Checked on mms +
 ↳ placed ~~protective~~ warning cones over couple of mms as necessary
 ↳ All interior mms have warning cones
 ↳ mms appear to be in similar condition to last check in early July with except of mms 14 which is covered by part of sand bedding stockpile

10 June, 2009

pDR-1000 S/N: 04476
 User ID: EB-1
 Tag Number: 01
 Number of logged points: 280
 Start time and date: 12:37:01 10-Jun
 Elapsed time: 04:40:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 19.877 mg/m³
 Time at maximum: 14:00:07 Jun 10
 Max STEL Concentration: 1.028 mg/m³
 Time at max STEL: 14:07:31 Jun 10
 Overall Avg Conc: 0.294 mg/m³

15 June, 2009

pDR-1000 S/N: 05156
 User ID: EB-2
 Tag Number: 01
 Number of logged points: 635
 Start time and date: 06:50:58 15-Jun
 Elapsed time: 10:35:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 13.390 mg/m³
 Time at maximum: 07:08:39 Jun 15
 Max STEL Concentration: 0.550 mg/m³
 Time at max STEL: 07:13:28 Jun 15
 Overall Avg Conc: 0.100 mg/m³

30 June, 2009

pDR-1000 S/N: 05156
 User ID: EB-2
 Tag Number: 01
 Number of logged points: 513
 Start time and date: 07:01:38 30-Jun
 Elapsed time: 08:33:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 8.519 mg/m³
 Time at maximum: 08:30:10 Jun 30
 Max STEL Concentration: 0.441 mg/m³
 Time at max STEL: 07:54:08 Jun 30
 Overall Avg Conc: 0.123 mg/m³

7 July, 2009

pDR-1000 S/N: 04476
 User ID: EB-1
 Tag Number: 01
 Number of logged points: 478
 Start time and date: 07:00:20 07-Jul
 Elapsed time: 07:58:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 14.503 mg/m³
 Time at maximum: 14:03:39 Jul 07
 Max STEL Concentration: 0.523 mg/m³
 Time at max STEL: 09:30:21 Jul 07
 Overall Avg Conc: 0.079 mg/m³

14 July, 2009

pDR-1000 S/N: 05156
 User ID: EB-2
 Tag Number: 01
 Number of logged points: 662
 Start time and date: 06:58:18 14-Jul
 Elapsed time: 11:02:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 3.496 mg/m³
 Time at maximum: 12:45:41 Jul 14
 Max STEL Concentration: 0.319 mg/m³
 Time at max STEL: 10:03:49 Jul 14
 Overall Avg Conc: 0.089 mg/m³

20 July, 2009

pDR-1000 S/N: 05156
 User ID: EB-2
 Tag Number: 02
 Number of logged points: 664
 Start time and date: 06:56:11 20-Jul
 Elapsed time: 11:04:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 11.282 mg/m³
 Time at maximum: 10:02:00 Jul 20
 Max STEL Concentration: 0.239 mg/m³
 Time at max STEL: 10:04:42 Jul 20
 Overall Avg Conc: 0.096 mg/m³

22 July, 2009

pDR-1000 S/N: 05156
 User ID: EB-2
 Tag Number: 03
 Number of logged points: 258
 Start time and date: 07:07:54 22-Jul
 Elapsed time: 04:18:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 43.036 mg/m³
 Time at maximum: 11:24:06 Jul 22
 Max STEL Concentration: 1.403 mg/m³
 Time at max STEL: 08:01:54 Jul 22
 Overall Avg Conc: 0.360 mg/m³

23 July, 2009

pDR-1000 S/N: 04476
 User ID: EB-1
 Tag Number: 01
 Number of logged points: 606
 Start time and date: 07:01:07 23-Jul
 Elapsed time: 10:06:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 9.304 mg/m³
 Time at maximum: 11:18:47 Jul 23
 Max STEL Concentration: 0.341 mg/m³
 Time at max STEL: 11:24:38 Jul 23
 Overall Avg Conc: 0.091 mg/m³

4 August, 2009

pDR-1000 S/N: 04476
 User ID: EB-1
 Tag Number: 01
 Number of logged points: 573
 Start time and date: 07:01:00 04-Aug
 Elapsed time: 09:33:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 17.624 mg/m³
 Time at maximum: 13:11:10 Aug 04
 Max STEL Concentration: 0.707 mg/m³
 Time at max STEL: 13:14:01 Aug 04
 Overall Avg Conc: 0.156 mg/m³

7 August, 2009

pDR-1000 S/N: 05156
 User ID: EB-2
 Tag Number: 02
 Number of logged points: 402
 Start time and date: 07:09:41 07-Aug
 Elapsed time: 06:42:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 6.947 mg/m³
 Time at maximum: 10:53:26 Aug 07
 Max STEL Concentration: 0.107 mg/m³
 Time at max STEL: 11:04:42 Aug 07
 Overall Avg Conc: 0.036 mg/m³
