Proposed Removal from Hazardous Sites List

The Washington State Department of Ecology (Ecology) invites you to comment on the proposal to remove the Restover Truck Stop Site (Site) from the Confirmed and Suspected Contaminated Sites List, a statewide list of contaminated sites that are ranked by their level of potential hazard and cleanup status. The Site is located at 2725 93rd Ave SW, Tumwater, WA 98512.

Site background and cleanup

The former Restover Truck Stop Site included a vehicle fueling area, retail sales, a convenience store, a restaurant and a motel from 1969 to April 2014. Several investigations at the Site resulted in enforcement actions to halt the release of petroleum hydrocarbons underground. Ecology estimated that about 65,000 gallons of gasoline and about 2,000 gallons of leaded gasoline and diesel/oil were lost between 1974 and 1981.

Groundwater monitoring and cleanup actions were conducted through the Voluntary Cleanup Program between 1992 and 2016. About 357,000 gallons of contaminated groundwater was pumped out of the ground, treated and disposed as stormwater. About 19,000 cubic yards of contaminated soil was removed and disposed off Site. Clean soil filled in excavated areas.

Ecology has determined the cleanup meets the state's environmental cleanup standards established for groundwater and soil, and that the Site no longer poses a threat to human health or the environment.

What happens next?

The proposed Determination of No Further Action details Ecology's decision to remove the Site from the Confirmed and Suspected Contaminated Sites List.

- The public is invited to comment on the proposal to delist the Site. Comments should be submitted to Ecology by December 23, 2016.
- Ecology will review and respond to all comments received. The proposed delisting may be modified based on your comments.
- If future documents on the Site are developed, you will be notified of additional public comment periods.
