CERTIFIED MAIL

June 26, 2006

Michael S. Chun
General Manager/Principal
1728 State Avenue NE, Suite 101
Olympia, WA 98506-4557

Dear Mr. Chun:

RE: Site Characterization Work Plan, John's Auto Wrecking, 411 93rd Avenue SE, Olympia, Washington, prepared by Associated Environmental Group, LLC, dated June 15, 2006.

We received the above work plan via e-mail on June 23, 2006. **However, this work plan is incomplete because it still does not address all of the comments that were provided to you in our February 23, 2006 Opinion Letter.** The Opinion Letter requested summary tables that details the area of concern (AOC), sample number, constituents of concern, analyses methods selected for each sample, sample depths, and sample collection method (e.g. hand auger, direct-push, etc.). The Opinion Letter also requested that the rationale for the proposed sample depths be explained. Also requested was a defined grid system that will be used within each AOC. Also requested was a map showing soil sample, groundwater sample, and monitoring well locations. Sample locations within buildings should also be shown on detail maps. Detail also needs to be added discussing how wash/decontamination water will be disposed of. Merely stating that "disposal will be the responsibility of the client" is not acceptable. The Opinion Letter also requested that rationale for determining the location and number of monitoring wells be explained. Glycol compounds need to also be added to the constituent list at any location suspected to contain radiator or brake fluids.

Once Ecology receives a revised work plan that includes all of the above previously requested information, an Opinion Letter will be provided to you. Working with Ecology throughout the remediation process will help ensure the issuance of a No Further Action (NFA) Opinion Letter.

Michael S. Chun
