Infrastructure Interim Action Report

STATE OF WASHINGTON
DEPARTMENT OF ECOLOGY

PO Box 47775 • Olympia, Washington 98504-7775 • (360) 407-6300

June 18, 2010

Ms. Joanne Snarski,
Environmental Program & Project Manager
Port of Olympia
915 Washington Street NE
Olympia, WA 98501

Re: **Ecology approval of the *Infrastructure Interim Action Report for East Bay Redevelopment Site*, Prepared for the Port of Olympia by Pioneer Technologies Corporation, June 2010; East Bay Redevelopment, Olympia, Washington, Ecology Facility/Site No. 5785176, Agreed Order DE5471.**

Dear Ms. Snarski:

Thank you for submitting the revised Interim Action report for our review in response to our May 10 comment letter. We have no further comments on this report. **Therefore, we consider the above-referenced Interim Action Report to be approved.**

If you have any questions, please contact me at (360) 407-6247 or via e-mail at stee461@ecy.wa.gov.

Sincerely,

SS Teel

SECTION 1 – BACKGROUND

1.1. East Bay Redevelopment Project

The Port of Olympia (Port), in conjunction with a wide variety of public and private partners (e.g., State of Washington, City of Olympia, LOTT Alliance, Hands On Children's Museum, Tarragon) are redeveloping the downtown Olympia property known as the East Bay Redevelopment Project. Cleanup activities pursuant to Model Toxics Control Act (MTCA) regulations are being conducted in conjunction with redevelopment. This brownfield redevelopment project is very important to the Port, its partners, and the Olympia community due to the project's anticipated role in revitalizing downtown Olympia. The location of the project is shown on Figure 1.

The Port currently owns eight parcels within the East Bay Redevelopment Project property boundary (Parcels 1 through 7 and Parcel 9)¹. The Port, City of Olympia, and LOTT Alliance have entered into a purchase and sale agreement for Parcel 4 and Parcel 5, with a closing date expected in June 2010. The LOTT Alliance purchased the adjacent property known as Parcel 8 from the Port in 2009². The locations of the eight current Port parcels as well as the adjacent Parcel 8 are shown on Figure 2.

The Port currently finished installing utilities, roads, bike lanes, sidewalks, and other ancillary improvements related to the infrastructure in May 2010 in order to facilitate ongoing and pending redevelopment. The LOTT Alliance is currently constructing its Water Education and Technology Center on Parcel 8. Construction of the Hands On Children's Museum on Parcel 5 and a public plaza on Parcel 4 is scheduled to occur in 2010 and 2011. Construction of a variety of mixed-use, urban buildings (e.g., commercial office space, retail/restaurants, a hotel, parking, and urban housing such as condominiums above ground-level retail) on the other six parcels is scheduled to occur between 2010 and 2024.

1.2. Report Purpose

The purpose of this report is to document the Interim Action (IA) cleanup activities conducted during the installation of utilities, roads, bike lanes, sidewalks, and other ancillary improvements related to the infrastructure at the Port's East Bay Redevelopment site (site) in accordance with the IA Work Plan (IAWP) (PIONEER Technologies Corporation [PIONEER] 2009).

1.3. Site Description

The approximately 13-acre property is located in the southeast corner of the Port Peninsula adjacent to the East Bay of Budd Inlet, Olympia, Washington (see Figure 2). The site has been used for commercial and light industrial purposes from the late 1800s to 2008 (e.g., wood processing and milling operations from

¹ The addresses for Port properties in Parcels 1 through 7 are 715 Olympia Avenue NE/724 State Avenue NE, 625 Olympia Avenue NE, 510 State Avenue NE, 325 Marine Drive NE, 410 Jefferson Street NE, 427 Marine Drive NE, and 517 Marine Drive NE, respectively. The address for Parcel 9 is 323 Jefferson Street NE.

² The address for the LOTT Alliance property (Parcel 8) is 421 Jefferson Street NE.

the late 1800s to mid 1900s; warehouse and storage operations since circa 1970). More detailed information about site history, features, and land uses are presented in the Remedial Investigation (RI) Work Plan (RIWP) (GeoEngineers and PIONEER 2008).

1.4. Regulatory Context

The site originally entered into Washington State Department of Ecology's (Ecology's) Voluntary Cleanup Program per Washington Administrative Code (WAC) 173-340-515 in 2007. Subsequently, the Port and Ecology entered Agreed Order No. DE5471 (AO) for the site in October 2008. In the AO, the Port agreed to submit to Ecology a RIWP, IAWP, IA Report, RI Report, Supplemental RIWP (if necessary), and Supplemental RI Report (if necessary).

The IAWP (PIONEER 2009) was approved by Ecology on May 4, 2009 (Ecology 2009a). The IAWP defined the IA remedy, compliance monitoring plan, constituents of potential concern (COPCs), cleanup levels, and other components of the IA. For additional information on the IA design and implementation plan, the reader is referred to the IAWP (PIONEER 2009). This IA Report is designed to satisfy the requirements for the IA Report in the AO.

The RIWP (GeoEngineers and PIONEER 2008) was approved by Ecology on September 21, 2009 (Ecology 2009k). The RI phase is ongoing. A superseding regulatory agreement is expected in the future to address procedures for preparing an IAWP and IA Report for Parcels 4 and 5, as well as a site-wide Feasibility Study and draft Cleanup Action Plan. The adjacent Parcel 8 is owned by the LOTT Alliance and is being addressed separately by the LOTT Alliance as a Voluntary Cleanup Program site.

1.5. IA Objectives

The IA objectives defined in the IAWP (PIONEER 2009) were to:

- Protect human health and the environment,
- Comply with IA cleanup levels,
- Comply with applicable state and federal laws and regulations,
- Provide for compliance monitoring,
- Not preclude reasonable alternatives for a final cleanup action,
- Consider public concerns, and
- Be cost-effective.

1.6. Constituents of Potential Concern

The following COPCs were defined in the IAWP (PIONEER 2009) for the IA:

- Arsenic
- Cadmium
- Lead

- Total carcinogenic polycyclic aromatic hydrocarbons (cPAHs)³
- Total chlorinated dibenzo-p-dioxins and chlorinated dibenzofurans (dioxins/furans)
- Total naphthalenes
- Total petroleum hydrocarbons (TPH) in the diesel range (TPH-D)
- TPH in the heavy oil range (TPH-HO)
- TPH in the gasoline range (TPH-G)
- Benzene
- Toluene
- Ethylbenzene
- Total xylenes

1.7. IA Cleanup Levels and Reuse Under Pavement Levels

IA Cleanup Levels (IACLs) and IA Reuse Under Pavement Levels (IARUPLs) defined in the IAWP (PIONEER 2009) are presented in Table 1. IACLs are based on unrestricted land uses. IARUPLs are applicable to soil reused as subsurface fill underneath paved surfaces within the infrastructure corridor.

At the time the IAWP was prepared, it was assumed that there was sufficient reuse under pavement demand for all geotechnically suitable soil that had COPC concentrations less than IARUPLs. As a result, the IAWP did not address different reuse options for geotechnically-suitable soil that had COPC concentrations less than IACLs. Subsequent to preparation of the IAWP, it became apparent that the quantity of geotechnically-suitable soil would likely be significantly greater than the quantity of soil that could be reused under pavement. During a May 28, 2009 meeting between the Port, Ecology, and PIONEER, it was agreed that geotechnically-suitable soil with COPC concentrations less than IACLs could be reused without additional sampling and analysis on a case-by-case basis in on-site areas that would not be covered by pavement during the IA. Although this approach was acceptable for the first few stockpiles with COPC concentrations less than IACLs (Ecology 2009e, Ecology 2009f), the agreement was eventually rescinded for Zone 2 (Ecology 2009h, Ecology 2009j), and then for all zones (Ecology 2009l, Dragon 2009).

1.8. Airborne Dust Action Level

The Airborne Dust Action Level was defined in the IAWP (PIONEER 2009) to be protective for inhalation exposures by on-site workers without any additional dust-control measures. The Airborne Dust Action Level was defined in the IAWP (PIONEER 2009) as 18 mg/m³. It was later realized that the Permissible Exposure Limit for the respirable fraction of nuisance dust in WAC 296-841-20025 is 5 mg/m³. Thus, 5 mg/m³ was used as the Airborne Dust Action Level during implementation of the IA.

³ Total cPAHs and total dioxins/furans are based on toxicity equivalency quotients for benzo(a)pyrene and 2,3,7,8-dibenzo-p-dioxin, respectively.

1.9. Construction Plans, Specifications, and Contractor

This MTCA-driven IA was fully integrated with the civil engineering plans and specifications (Skillings Connolly 2009, Port of Olympia 2009) for the construction of the utilities, roads, bike lanes, sidewalks, and other ancillary improvements related to the infrastructure. All IAWP components required to be completed by the construction contractor were incorporated within the specifications, particularly Sections 00 73 19, 01 35 13, and 02 61 00 (Port of Olympia 2009). The Port solicited bids to complete the work described in the plans and specifications. As required by law, the Port awarded a public works contract to the lowest bidder whose proposal satisfied the plans and specifications. The Port awarded a contract to Stan Palmer Construction (SPC) on May 12, 2009.

SECTION 2 – FIELD AND ANALYTICAL ACTIVITIES

2.1. Airborne Dust Monitoring

Daily airborne dust monitoring began when SPC on-site construction activities began on June 8, 2009. In accordance with provisions in the IAWP (PIONEER 2009) and Ecology approval (Ecology 2009d), airborne dust monitoring was discontinued on July 24, 2009. Per Ecology's request (Ecology 2009d), additional airborne dust monitoring resumed on July 31, 2009 to coincide with the onset of concrete crushing operations. Airborne dust monitoring of concrete crushing operations was discontinued on August 7, 2009 with Ecology approval (Ecology 2009g).

PIONEER performed the airborne dust monitoring with a calibrated MIE personal DataRAM model pDR-1000 dust monitor⁴. At the start of each monitoring day, the dust monitor was turned on and placed by PIONEER on the SPC worker expected to receive the highest exposure to airborne dust. The dust monitor was turned off at the end of each SPC work day⁵ and PIONEER downloaded the data from the monitor. The airborne dust measurements were recorded on the monitor as one-minute averages, and then a time-weighted daily average was calculated based on the length of time the monitor was in operation for that particular day. Appendix A includes field notes associated with airborne dust monitoring. Table 2 presents a summary of daily airborne dust monitoring notes.

2.2. Stockpile Management

A primary objective of the IA and the Port's contract document was to reuse soil to the greatest extent practicable. SPC segregated excavated soil based on whether or not the soil was geotechnically suitable for on-site reuse. SPC made its own determinations regarding the geotechnical suitability of excavated soil (with support from Material Testing & Consulting), and the Port and its representatives did not object to the geotechnical determinations made. SPC further segregated excavated soil that was geotechnically suitable for on-site reuse according to the zone in which the soil was generated (i.e., the four zones identified in the IAWP [PIONEER 2009]). SPC further segregated excavated soil that was geotechnically unsuitable for on-site reuse based on whether or not the soil was generated from Zone 4⁶. The four zones are shown in Figure 2. Approximate excavation locations and depths are shown in Figure 3.

⁴ This model was used starting on June 10, 2009. A MIE MiniRam PDM-3 dust monitor was used on June 8 and June 9, 2009 but was returned to the rental company once it was determined that the monitor may not have been operating properly. The monitor was calibrated daily, with the exception of June 8, June 9, and July 2, 2009.

⁵ The monitor turned off prematurely on some work days, likely due to being accidentally bumped or a battery malfunction.

⁶ Since it was unknown at the time the IAWP was prepared where the solid waste generated during the IA would be disposed of, the IAWP conservatively assumed that all soil designated for disposal might need to be analyzed for arsenic, cadmium, and lead by the toxicity characteristic leaching procedure (TCLP) before the receiving landfill would accept the waste. SPC identified the Weyerhaeuser Regional Landfill in Castle Rock, Washington as the receiving landfill subsequent to preparation of the IAWP. After reviewing site soil data, the Weyerhaeuser Regional Landfill indicated that existing analytical results were sufficient for waste characterization of all soil generated at the

SPC handled and managed generated soil stockpiles by:

- Placing stockpiles on existing concrete or asphalt surfaces, or on a polyethylene liner with a thickness of at least 10-mils,
- Using signs to indicate the zone from which the stockpile was generated,
- Covering stockpiles with a polyethylene liner with a thickness of at least 10-mils and securing the cover with ropes and sandbags, and
- Uncovering the working face of a stockpile when adding or removing soil from the stockpile.

PIONEER implemented and maintained a stockpile sign management system to sign and track each generated stockpile. PIONEER placed and maintained a color-coded sign on a given stockpile once SPC notified PIONEER that SPC was finished adding soil to the stockpile. Once notified, PIONEER estimated the stockpile size, placed a white sign on the stockpile, and collected the appropriate stockpile sample(s) in accordance with Sections 2.3 and 2.4 of this report. The maximum stockpile size associated with each stockpile sample was 500 cubic yards (CY) per the IAWP (PIONEER 2009). Once analytical results were received and evaluated, the white sign was replaced with a green, yellow, or red sign, depending on the analytical results. The following sign colors and content were used to communicate stockpile status:

- White – Unclassified: No Use. A white sign indicated a stockpile sample had been collected in accordance with Section 2.3 and 2.4, but analytical results had not been received or evaluated.
- Green – Class A Soil: Reuse Under Pavement ONLY. Green signs were placed on stockpiles in which all COPC concentrations were less than IARUPLs.
- Yellow – Class B Soil: Reuse Anywhere: SUBJECT TO APPROVAL. Yellow signs were placed on stockpiles in which all COPC concentrations were less than IACLs⁷.
- Red – Class C Soil: NO USE: Disposal Only. Red signs were placed on stockpiles that were geotechnically unsuitable for on-site reuse, had a COPC concentration exceeding an IARUPL, or were leftover as excess material at the end of the IA.

Additional details on stockpile management expectations communicated to SPC are included in Appendix B. Appendix C contains PIONEER notes related to estimating soil stockpile volumes, stockpile sampling, stockpile tracking, and sign management. The photographic log in Appendix D includes photographs showing typical stockpiles and signage.

site, with the exception of lead in Zone 4. TCLP lead data from Zone 4 was required by the Weyerhaeuser Regional Landfill since there was one previous soil sample collected from Zone 4 of the infrastructure corridor in which the total lead concentration exceeded the “20 times rule.” The “20 times rule” refers to whether a maximum metal concentration in soil is 20 times the toxicity characteristic value in WAC 173-303-090(8). The “20 times rule” is often used by landfills to evaluate if TCLP metal data is needed to supplement total metal data for waste characterization purposes. As a result, geotechnically-unsuitable soil from Zone 4 was segregated separately since TCLP lead testing was required before the landfill would accept Zone 4 soils. Since the geotechnically-unsuitable soil from Zones 1 through 3 had already been accepted for disposal by the landfill based on existing data, this Zone 1 through Zone 3 soil was stockpiled into one revolving disposal stockpile.

⁷ Some stockpiles that could have been marked with yellow signs based on analytical results were marked with green signs (see Section 1.7 and Table 5).

2.3. Soil Sampling and Analysis for Stockpiles Designated for Possible Reuse

PIONEER collected soil samples from stockpiles designated for possible reuse using the following field procedures:

- Each sample was collected from a representative depth within the stockpile as a discrete and non-homogenized grab sample.
- Samples for TPH-G and benzene, toluene, ethylbenzene, and xylenes (BTEX) analyses were collected and prepared in accordance with United States Environmental Protection Agency (USEPA) Method SW846-5035A (e.g., Encore™ samplers). Samples for non-volatile constituents were collected with hand tools (e.g., stainless steel trowel, stainless steel mixing bowl).
- Before use, non-dedicated sampling equipment was decontaminated in accordance with the IAWP (PIONEER 2009).

All soil samples collected from stockpiles designated for possible reuse were analyzed for:

- Arsenic, cadmium, and lead by USEPA Method SW846-6020A,
- Polycyclic aromatic hydrocarbons (PAHs) by USEPA Method SW846-8270C,
- Dioxins/furans by USEPA Method SW846-8290,
- TPH-D and TPH-HO by Ecology Method NWTPH-Dx,
- TPH-G by Ecology Method NWTPH-G, and
- BTEX by USEPA Method SW846-8021B.

In addition, samples collected from stockpiles that were designated for possible reuse after September 25, 2009 (as well as yellow-signed stockpiles that were on site as of September 25) were analyzed for polychlorinated biphenyls (PCBs) by USEPA Method SW846-8082 in accordance with an email from Ecology to the Port (Ecology 2009i).

Dragon Analytical Laboratory performed all of the analyses, with the exception of dioxins/furans analyses, which were performed by PACE Analytical Services.

2.4. Additional Soil Sampling and Analysis for Zone 4 Stockpiles

In addition to the sampling and analysis procedures described in Section 2.3, PIONEER collected a soil sample from each Zone 4 stockpile (i.e., Zone 4 stockpiles designated for off-site disposal due to geotechnically-unsuitable soil, and Zone 4 stockpiles designated for possible on-site reuse) using the following field procedures.

- Each sample was a five-point composite sample of representative sub-sampling locations.
- Samples were collected with hand tools (e.g., stainless steel trowel, stainless steel mixing bowl).
- Before use, non-dedicated sampling equipment was decontaminated in accordance with the IAWP (PIONEER 2009).

Soil samples collected from Zone 4 stockpiles were analyzed for TCLP lead by USEPA Method SW846-1311.

2.5. Soil Reuse and Waste Disposal

Soil excavated during the IA was disposed of at the Weyerhaeuser Regional Landfill in Castle Rock, Washington if it met any of the following criteria.

- The soil was geotechnically-unsuitable for reuse.
- Soil stockpiles originally designated for possible reuse had a COPC concentration exceeding an IARUPL.
- Soil or soil stockpiles leftover as excess material at the end of the IA (i.e., the Port authorized the off-site disposal of some excess green-signed stockpiles by changing the applicable green sign to a red sign once SPC had substantially completed excavation work).

Soil excavated during the IA was reused in infrastructure-corridor locations that were paved during the IA⁸ if it met all of the following criteria.

- Soil stockpiles designated for possible reuse in which all COPC concentrations were less than IARUPLs.
- Soil stockpiles that were not left over as excess material at the end of the IA.

2.6. Paving

SPC has completed the paving of asphalt roadways, concrete roadways, concrete sidewalks, curbs, gutters, and driveway approaches within the infrastructure corridor as planned.

2.7. Gross Contamination Provisions

None of the gross contamination provisions included in the IAWP were implemented because gross contamination (e.g., free product, heavy sheen) was not encountered during the IA. It should be noted that on June 15, 2009, SPC requested that the Port and PIONEER inspect a small quantity of asphalt/road material that had been added to Stockpile SP02. Based on discussions with on-site personnel, visual/olfactory observations of SP02, and visual/olfactory observations in the excavation, the Port and PIONEER determined that any impact associated with the asphalt/road material was de minimus. PIONEER provided continuous excavation and segregation oversight of SPC for several weeks after June 15, 2009 as a precautionary measure. While providing continuous oversight, a de minimus petroleum sheen associated with an outfall from a Tom's Outboard oil/water separator was observed on June 22, 2009. No other potential contamination was noted while PIONEER provided continuous oversight.

2.8. Monitoring Well Protection

SPC and/or PIONEER placed traffic drums, cones, or barricades on top of each monitoring well (MW) prior to the start of the IA. PIONEER conducted periodic reconnaissance of MWs throughout the IA to check on the status of MWs. In general, MWs were adequately protected during the IA. However, minor

⁸ A relatively small amount of soil (from select soil stockpiles where all COPC concentrations were less than IACLs) was reused in on-site areas that were not paved during the IA (see Section 1.7 and Table 5).

repairs (e.g., repairing the MW surface seal) will be necessary for some MWs following the IA. Major changes made to the MW network during the IA were:

- MW05 was decommissioned on June 15, 2009 because it was located within a new roadway.
- SPC damaged MW02, which was located within a new roadway. A replacement MW designated as MW02R was installed on September 16, 2009.
- The casing for MW12, which is located in a new sidewalk, was extended and new surface seal was installed on September 16, 2009.

2.9. Other Engineering Controls

In addition to the engineering controls (ECs) described in previous sections, SPC appropriately implemented the following ECs specified in the IAWP (PIONEER 2009):

- SPC installed an appropriate, continuous perimeter fence, and maintained that fencing throughout the project.
- SPC implemented traffic and pedestrian control measures to restrict public access to the site, and maintained those measures throughout the project.
- SPC utilized trench boxes to minimize the width of utility excavations to the extent practical.
- SPC watered dry soil as necessary with water trucks to suppress dust.
- SPC prepared and implemented a Health and Safety Plan.

On-site oversight of SPC's implementation of the IAWP ECs was conducted at various times by the Port, PFK Construction Consulting, PIONEER, and Ecology. A photographic log, which includes photographs showing typical implementation of ECs, is included in Appendix D. PIONEER's field notes associated with oversight of the general ECs are included in Appendix E. It should be noted that minor issues were occasionally noted during oversight activities (e.g., MWs covered with soil, two of the initial stockpiles not placed on an impervious surface, stockpile covers needing repair) and were promptly corrected.

2.10. National Pollutant Discharge Elimination System Permit

Activities conducted pursuant to the National Pollutant Discharge Elimination System permit for East Bay (Ecology 2009c) are not discussed in this report since the technical and administrative requirements associated with the permit were addressed separately from the IAWP and IA Report.

2.11. Deviations from the IAWP

IA work related to soil cleanup was conducted pursuant to the IAWP (PIONEER 2009). Minor deviations from the IAWP are noted in Table 3 along with reasons for the deviations. These minor deviations do not have an impact on the implementation of the remedy. In fact, several of the deviations are associated with additional provisions beyond what was specified in the IAWP.

SECTION 3 – RESULTS

3.1. Airborne Dust Concentrations

Appendix F presents all logged airborne dust data on a minute-by-minute basis. Table 4 shows the daily time-weighted average dust concentrations. As shown in Table 4, time-weighted daily airborne dust concentrations ranged from 0.00 mg/m³ to 0.37 mg/m³. The maximum time-weighted average dust concentration was well below the Airborne Dust Action Level of 5 mg/m³.

3.2. Analytical Laboratory Data and Data Quality Review

The laboratory certificates of analyses and chain-of-custody documentation for the IA stockpile samples are presented in Appendix G. A summary of the data quality review process and results for the IA stockpile samples is also presented in Appendix G. The IA soil stockpile data is deemed acceptable for use and comparison with other site data as qualified.

3.3. Soil Stockpile Results

A total of 36 soil samples were collected from soil stockpiles designated for possible reuse and analyzed for COPCs⁹. The analytical results for these samples are summarized in Table 5. As shown in Table 5, COPC concentrations in all but one sample were less than IARUPLs. In addition, all COPC concentrations were less than IACLs in 18 of 36 samples. The only COPCs with IACL exceedances were total cPAHs and total dioxins/furans¹⁰. Figure 4 presents these analytical results by zone.

A total of 14 soil samples were collected from Zone 4 soil stockpiles and analyzed for TCLP lead. The analytical results for these TCLP lead samples are summarized in Table 6. As shown in Table 6, TCLP lead was not detected in any sample.

3.4. Soil Reuse and Waste Disposal

As shown in Table 5, approximately 12,000 CY¹¹ of soil excavated during the IA was reused on site during this IA. Appendix H contains the applicable waste disposal documentation. As shown in Appendix H, the total amount of soil disposed of at the off-site landfill during this IA was 17,623 tons. Assuming a soil density of 1.7 tons/CY, approximately 10,000 CY of soil was disposed of at the off-site landfill.

⁹ Stockpiles samples were analyzed from the following stockpiles designated for possible reuse: SP01 through SP18, SP20 through SP29, SP33, and SP34. Two samples were collected from Stockpiles SP08, SP16, SP24, and SP29 due to stockpile size. Three samples were collected from Stockpile SP25 due to stockpile size.

¹⁰ Total dioxins/furans and total cPAH concentrations were calculated using toxicity equivalency factors per WAC 173-340-708(8).

¹¹ Volume estimates in this section are presented with one significant figure.

SECTION 4 – DISCUSSION

4.1. Review of the Interim Action Remedy

The IA was performed in accordance with the procedures presented in the IAWP, except as noted in Section 2.11. The IA remedy effectively satisfied all of the IA objectives listed in Section 1.5, including protection of human health and the environment.

4.2. Considerations for Future Cleanup Actions

Lessons learned during the IA that should be considered during future cleanup actions at the site include:

- Airborne dust monitoring confirmed that typical on-site construction activities generate minimal dust, even during worst-case conditions.
- COPC concentrations in soil stockpile samples indicate a general absence of significant soil contamination within the infrastructure corridor (i.e., only one sample out of 36 had a COPC concentration exceeding an IARUPL). However, soil stockpile results support previous RI data in suggesting that relatively low concentrations of total cPAHs and total dioxins/furans are distributed heterogeneously across the site.
- As discussed in Section 1.7, the IAWP did not address reuse options for geotechnically-suitable soil that had COPC concentrations less than IACLs (which are protective for unrestricted land uses). More soil could have been reused on site if the IAWP defined an agreed upon sampling and analysis plan and additional reuse locations for soil with COPC concentrations less than IACLs. Future work plans should have a defined plan for on-site reuse for soil with COPC concentrations less than cleanup levels based on unrestricted land uses.
- The addition of TCLP lead data collected from Zone 4 (see Table 6) to the existing data record should enable future solid waste generated at the site to be characterized as non-hazardous waste without additional waste characterization testing.
- Stockpile management requirements were easy for SPC to implement. The color-coded sign system for stockpile designation was an effective, intuitive, and easy management and monitoring tool for the Port and SPC.
- SPC did a satisfactory job of complying with all ECs, with the exception of providing suitable and timely documentation.

TABLES

TABLE 1
INTERIM ACTION CLEANUP LEVELS AND REUSE UNDER PAVEMENT LEVELS

Constituent of Potential Concern	Interim Action Cleanup Level (mg/kg)	Interim Action Reuse Under Pavement Level (mg/kg)
Arsenic	20	20
Cadmium	2	2
Lead	250	250
Total cPAHs ⁽¹⁾	0.095	1.4
Total dioxins/furans ⁽¹⁾	9.8E-06	5.1E-04
Total naphthalenes	160	160
TPH-D	2,000	2,000
TPH-HO	2,000	2,000
TPH-G	100	100
Benzene	0.22	0.22
Toluene	240	240
Ethylbenzene	43	43
Total xylenes	23	23

Notes:

cPAHs = carcinogenic polycyclic aromatic hydrocarbons

Dioxins/furans = Chlorinated dibenzo-p-dioxins and chlorinated dibenzofurans

TPH-D = Total petroleum hydrocarbons in the diesel range

TPH-G = Total petroleum hydrocarbons in the gasoline range

TPH-HO = Total petroleum hydrocarbons in the heavy oil range

⁽¹⁾ Total cPAHs and total dioxins/furans and are based on toxicity equivalency quotients for benzo(a)pyrene and 2,3,7,8-tetrachlorodibenzo-p-dioxin, respectively. Total cPAHs and total dioxins/furans concentrations calculated using toxicity equivalency factors per Washington Administrative Code 173-340-708(8).

**TABLE 2
DAILY AIRBORNE DUST MONITORING NOTES**

Date	Start Time	End Time	Total Logged Time	Type of Worker Activity Being Monitored	Operation / Data Notes
06/08/09	07:07:15	11:01:15	03:54:00	Open cab excavator operator	Only two concentrations logged that were not 0. Possible faulty monitor.
06/09/09	07:02:40	18:01:40	10:59:00	Open cab excavator operator	No concentrations logged. Faulty monitor confirmed. Two new monitors ordered.
06/10/09	12:37:01	17:17:01	04:40:00	Open cab excavator operator	New monitor used. Only half day logged because of delivery time.
06/11/09	07:03:08	14:03:08	07:00:00	Open cab excavator operator	Operator noticed monitor turned off about an hour after he received it. Operator turned it back on but later in the day it was off again and he could not get it back on. PIONEER attempted to turn monitor on, but could not until monitor connected to computer.
06/12/09	07:10:29	11:11:29	04:01:00	Open cab excavator operator	Only half day logged. Assumed at the time that monitor was turned off accidentally and unknowingly by operator.
06/15/09	06:50:58	17:25:58	10:35:00	Open cab excavator operator	
06/16/09	06:59:50	15:32:24	04:29:00	Open cab excavator operator	Monitor turned off three times. Switched to other monitor midday.
06/17/09	07:02:30	15:34:30	8:32:00	Open cab excavator operator	
06/18/09	07:09:16	12:41:09	04:11:00	Open cab excavator operator	Only half day logged. Assumed at the time that monitor was turned off accidentally and unknowingly by operator.
06/19/09	06:50:21	08:25:21	1:35:00	Open cab excavator operator	PIONEER instructed worker being monitored to place monitor in cab so that monitor does not get accidentally turned off. Even with this change, monitor only logged about 1.5 hours.
06/22/09	07:49:33	15:07:33	07:18:00	Open cab excavator operator	Monitor worked as intended for entire day after batteries replaced around 0800.
06/22/09	07:48:45	12:59:45	05:11:00	Quality control check of backup dust monitor	PIONEER performed quality control check of backup monitor to determine cause of premature shutdowns. PIONEER determined premature shutdowns were likely caused by battery life and could be remedied by replacing batteries every day.
06/23/09	07:05:42	15:56:42	08:51:00	Open cab excavator operator	
06/24/09	07:14:26	15:28:26	08:14:00	Open cab excavator operator	
06/25/09	06:58:35	15:25:35	08:27:00	Open cab excavator operator	
06/26/09	-	-	-	Hauling material (no onsite dust-generating activities)	No monitoring
06/29/09	07:02:32	15:23:32	08:21:00	Water truck driver	
06/30/09	07:01:38	15:34:38	08:33:00	Well driller	
07/01/09	07:04:51	14:44:51	07:40	Water truck driver	
07/02/09	07:49:28	07:54:28	00:05:00	Open cab excavator operator	Monitor turned off after five minutes. Since new batteries were installed, it is assumed that monitor was turned off accidentally and unknowingly by operator. Monitor was not calibrated for this day.
07/06/09	07:05:55	16:27:55	09:22:00	Open cab excavator operator	
07/07/09	07:00:20	14:58:20	07:58:00	Open cab excavator operator	
07/08/09	07:10:10	15:40:10	08:30:00	Open cab excavator operator	
07/09/09	07:07:40	15:41:40	08:34:00	Open cab excavator operator	
07/10/09	07:03:15	15:30:15	08:27:00	Open cab excavator operator	Monitor was not turned off at the end of work day. It is estimated that work day ended at 1530.
07/13/09	07:09:50	17:25:50	10:16:00	Open cab excavator operator	
07/14/09	06:58:18	18:00:18	11:02:00	Open cab excavator operator	Monitor was not turned off at the end of work day. It is estimated that work day ended at 1800.
07/15/09	07:00:03	07:05:03	00:05:00	Open cab excavator operator	Monitor turned off after five minutes. Since new batteries were installed, it is assumed that monitor was turned off accidentally and unknowingly by operator.
07/16/09	06:54:23	16:57:23	10:03:00	Open cab excavator operator	

**TABLE 2
DAILY AIRBORNE DUST MONITORING NOTES**

Date	Start Time	End Time	Total Logged Time	Type of Worker Activity Being Monitored	Operation / Data Notes
07/17/09	07:02:24	13:11:24	06:09:00	Open cab excavator operator	
07/20/09	06:56:11	18:00:11	11:04:00	Open cab excavator operator	
07/21/09	07:06:16	17:30:16	10:24:00	Open cab concrete demolition operator	Monitor was not turned off at the end of work day. It is estimated that work day ended at 1730.
07/22/09	07:07:54	11:25:54	04:18:00	Open cab excavator operator	Monitored turned off after half day. Since new batteries were installed, it is assumed that monitor was turned off accidentally and unknowingly by operator.
07/23/09	07:01:07	17:07:07	10:06:00	Open cab excavator operator	
07/24/09	07:09:22	15:46:22	08:37:00	Open cab excavator operator	
07/31/09	08:59:34	12:35:03	1:56:00	Concrete crusher operator	Concrete crushing only conducted from about 0900 to 1230. Monitor turned off at about 1100 due to poor batteries that were believed to be new. Replacement batteries were installed about 1130.
08/03/09	10:20:38	17:00:38	07:20:00	Concrete crusher operator	Concrete crushing did not begin until about 1020.
08/04/09	07:01:00	16:34:00	09:33:00	Concrete crusher operator	
08/05/09	07:18:57	16:30:57	09:12:00	Concrete crusher operator	Monitor was not turned off at the end of work day. It is estimated that work day ended at 1630.
08/06/09	07:07:24	16:30:24	09:23:00	Concrete crusher operator	Monitor was not turned off at the end of work day. It is estimated that work day ended at 1630.
08/07/09	07:09:41	13:51:41	06:42:00	Concrete crusher operator	

**TABLE 3
DEVIATIONS FROM INTERIM ACTION WORK PLAN**

IAWP Section	Deviation	Rationale / Explanation
5.2	Not all excavated soil that was geotechnically suitable for reuse and had COPC concentrations less than IARUPLs was reused on site. Some reusable soil was leftover as excess material at the end of the IA, and was disposed of at the off-site landfill.	See Section 1.7 and Table 5.
5.2	Between July 31 and October 2, 2009, a small quantity of excavated soil with COPC concentrations less than IACLs was reused on site in areas not covered by pavement as approved by Ecology (Ecology 2009e, Ecology 2009f, Ecology 2009h, and Ecology 2009j).	See Section 1.7 and Table 5.
7.2	An environmental-specific kickoff meeting was not held.	Based on the general kickoff meeting, weekly site meetings, regular communication between the Port, Ecology, and PIONEER, and periodic site visits by the Port, Ecology, and PIONEER, it was determined that an environmental-specific kickoff meeting was not necessary.
7.3	The IA Report does not include SPC's daily reports, field notes, and photographs.	This documentation was not provided to PIONEER, and would likely be of limited value if provided.
8.2	Periodic reviews of SPC's daily reports and field notes were not performed.	This documentation was not provided to PIONEER, and would likely be of limited value if provided.
Table 7-2	The IA was not completed by January 2010 as indicated in the original schedule.	SPC's construction activities were delayed for reasons that are not related to IAWP or IA Report requirements.
Appendix D, Section 1.2	Additional airborne dust monitoring was conducted despite the provision to discontinue monitoring after four weeks of monitoring if the Airborne Dust Action Level was not exceeded.	Additional monitoring was conducted per Ecology request (Ecology 2009d).
Appendix D, Section 1.3	No stockpiles designated for off-site disposal were analyzed for TCLP arsenic or TCLP cadmium. Only stockpiles generated from Zone 4 were sampled for TCLP lead.	SPC identified the Weyerhaeuser Regional Landfill in Castle Rock, Washington as the receiving landfill subsequent to preparation of the IAWP. The receiving landfill indicated that existing analytical results were sufficient for waste designation of all soil generated at the site, with the possible exception of lead in Zone 4.
Appendix D, Section 1.3	PCB analyses were added for stockpiles designated for possible reuse after September 25, 2009 (as well as yellow-signed stockpiles that were on site as of September 25 th).	Analyses were added per Ecology request (Ecology 2009i).
Appendix D, Section 1.7	The sample identification scheme was slightly different than presented in the IAWP.	Zone information was added to each sample identification, and sample depth was deemed unnecessary for stockpile sample identification.
Appendix D, Table D-5	Some constituent PQL expectations were modified subsequent to preparation of the IAWP.	See data quality review at end of Appendix G.

Notes:

- COPC = Constituent of Potential Concern
- Ecology = Washington State Department of Ecology
- IA = Interim action
- IACL = Interim Action Cleanup Level
- IARUPL = Interim Action Reuse Under Pavement Level
- IAWP = Interim Action Work Plan
- PCB = Polychlorinated biphenyls
- PIONEER = PIONEER Technologies Corporation
- PQL = Practical quantitation limit
- Port = Port of Olympia
- SPC = Stan Palmer Construction
- TCLP = Toxicity characteristic leaching procedure

Actual Designation ⁽⁴⁾			No. of Yellow ⁽⁶⁾ = 4	No. of Green = 20	No. of Red = 3 No. of Green/Red = 9
Date Originally Designated			N/A		
Estimated Percentage Reused On Site			N/A		
Estimated Reuse Quantity (CY)			12,000 ⁽¹⁰⁾		

Notes:

Abbreviations: cPAHs = carcinogenic polycyclic aromatic hydrocarbons; Conc. = Concentration; CY = Cubic yards; Dioxins/Furans = Chlorinated dibenzo-p-dioxins and chlorinated dibenzofurans; IACL = Interim Action Cleanup Level; IARUPL = Interim Action Reuse Under Pavement Level; J = Estimated concentration; N/A = Not applicable; NS = Not sampled; TPH = Total petroleum hydrocarbons; U = Not detected at shown practical quantitation limit
Detected concentrations presented with two significant figures.

Bold typeface indicates exceedance of IACL. Gray shading indicates exceedance of IARUPL.

SP19 was sampled for disposal purposes since it was from Zone 4. SP30, SP31, SP32, SP35, and SP36 were leftover as excess material, and were disposed of off-site.

⁽¹⁾ Stockpile was from Zone 4. Sample identification indicating soil was from Zone 2 was incorrect.

⁽²⁾ Total cPAHs and total dioxins/furans concentrations calculated using toxicity equivalency factors per Washington Administrative Code 173-340-708(8).

⁽³⁾ Compound Totalling Rules: If all results are non-detects, used the reporting limit for each non-detect. If there are both detects and non-detects, used detected values only.

⁽⁴⁾ Stockpile designations: Green = Reuse Under Pavement ONLY. Yellow = Reuse Anywhere SUBJECT TO APPROVAL. Red = NO USE Disposal Only.

⁽⁵⁾ Stockpile was disposed of off site because the stockpile consisted mainly of sod material that was not geotechnically suitable for reuse under pavement.

⁽⁶⁾ Signed Yellow with Ecology approval (Ecology 2009e, Ecology 2009f, Ecology 2009h, Ecology 2009j). However, some or all of these piles were reused under pavement due to demand for Green-signed soil.

⁽⁷⁾ SP11, SP13, and SP16-1 were signed Green per Ecology recommendation since they were from Zone 2 (Ecology 2009h, Ecology 2009j). SP15 and SP20 were temporarily signed Yellow, but were signed Green prior to reuse as Yellow soil per Ecology and Port discussions (Ecology 2009i, Dragon 2009). Stockpiles that were designated on or after October 2, 2009 in which all constituent concentrations were below IACLs were signed Green (Ecology 2009i, Dragon 2009).

⁽⁸⁾ Some or all of this stockpile was leftover as excess material at the end of the Interim Action. The leftover soil was disposed of off site after being signed Red.

⁽⁹⁾ Calculated assuming non-detect equal to 1/2 of reporting limit. Average concentration not calculated for constituents in which 50% or more of values were non-detects.

⁽¹⁰⁾ Value presented to one significant figure.

TABLE 6
RESULTS OF TCLP TESTING FOR ZONE 4 STOCKPILES

Stockpile No.	Sample Identification	TCLP Lead Concentration (mg/L)
SP04	SP04_Zone4_062309	0.25 U
SP05	SP05_Zone4_062309	0.25 U
SP08	SP08_Zone4_072109_Comp	0.25 U
SP17	SP17_Zone4_Composite	0.25 U
SP19	SP19_Zone4_082709	0.25 U

SP29	SP29_Zone4_121409 Comp	0.25 U
SP30	SP30_Zone4_121409_Comp	0.25 U
SP35	SP35_Zone4_121409_Comp	0.25 U
SP36	SP36_Zone4_021210_Comp	0.25 U

Notes:

TCLP = Toxicity Characteristic Leaching Procedure

U = Not detected at shown practical quantitation limit

Toxicity characteristic for lead in Washington Administrative Code 173-303-090(8) is 5 mg/L.

Not all of these stockpiles were designated for disposal. TCLP lead samples were collected from some of these stockpiles just in case the stockpile was designated for disposal.

To: Joanne Snarski and Kevin Dragon

From: Troy Bussey (busseyt@uspioneer.com)

Date: June 2, 2009

Re: Soil Stockpile Management Procedures for East Bay Interim Action

Dear Joanne and Kevin:

Per your request, I have prepared this memorandum to summarize my understanding of how the Port of Olympia (Port) expects Stan Palmer Construction (Stan Palmer) to interact with PIONEER Technologies Corporation (PIONEER) on soil stockpile management issues during the Interim Action for the East Bay Site. These procedures and expectations supplement and clarify (but are not intended to replace or override in any way) the stockpile management requirements in the Interim Action Work Plan (IAWP) and the technical specifications.

- PIONEER Points-of-Contact:
 - Kara Roberts: 360-570-1700 office, [REDACTED]
 - Troy Bussey: 360-570-1700 office, [REDACTED]
- Soil Reuse: Stan Palmer is expected to maximize soil reuse to the extent practical. Stan Palmer is encouraged to amend, mix, recondition, or modify excavated soils to the extent practicable prior to stockpile sampling in order to produce reusable soils that are geotechnically suitable for a given use. Class B soil stockpiles should only be reused if no Class A soil stockpiles for a given geotechnical use are available.
- Soil Segregation: Stan Palmer is expected to segregate soils into stockpiles according to the anticipated geotechnical use for the soil (e.g., separate stockpiles for (1) gravel base, (2) general borrow, (3) pipe bedding, and (4) unsuitable for any use). In addition, Stan Palmer is expected to segregate stockpiles according to the zone in which the soil was generated (the locations of the four zones are identified in Figure 5-1 of the IAWP). Thus, there could be up to a total of 16 different classes of soil stockpiles (i.e., four zones and four types of geotechnical uses).
- Stockpile Size: 500 cubic yards (CY) is being used as the stockpile volume for soil sampling and decision-making purposes. Thus, Stan Palmer is expected to subdivide stockpiles larger than 500 CY into distinct 500 CY units prior to the stockpile being signed and sampled. Stockpiles smaller than 500 CY should be avoided if possible. Stan Palmer is encouraged to minimize stockpile footprints in order to save space at the job site. Stan Palmer is expected to estimate stockpile volumes (e.g., via truckloads) and provide written documentation of the stockpile volume basis, although PIONEER will review and verify the estimate.
- Stockpile Locations: It is expected that Stan Palmer will not windrow soils adjacent to excavations. It is expected that Stan Palmer will place and manage stockpiles in a central location (e.g., existing concrete pad) to the extent practicable. Stan Palmer should not place soil stockpiles on top of existing groundwater monitoring wells, nor any proposed soil borings or monitoring wells identified in the field by PIONEER or the Port. The locations of existing monitoring wells and proposed soil borings/monitoring wells have been marked in the field as of June 2nd.
- Signage Responsibilities: Color-coated stockpile signs (approximately 18 inches by 24 inches) have been purchased and will be placed on soil stockpiles by PIONEER. Stan Palmer is responsible for ensuring the signs are not damaged or moved once placed on a stockpile.

- **Sign Content:** Stockpile signs will utilize the color scheme and text shown in the table below to communicate stockpile status. In addition, each stockpile sign will identify the stockpile ID, corresponding soil sample number, date sampled, and date released for use. Copies of the sign designs are enclosed.

Soil Class	Sign Color	Sign Text
N/A	White	Unclassified: NO USE
A	Green	Class A Soil: Reuse Under Pavement ONLY
B	Yellow	Class B Soil: Reuse Anywhere - SUBJECT TO APPROVAL
C	Red	Class C Soil: NO USE – Disposal Only

- **Stockpile IDs:** PIONEER will assign all stockpile IDs using the following format: Sequential Stockpile #_Zone_Date ID Assigned (MMDDYY). Thus, an ID of 1_3_061509 would correspond to Stockpile #1, which was generated from Zone 3 and assigned an ID on June 15, 2009.
- **Stockpile Throughput:** Due to the delays associated with obtaining analytical results for soil stockpile samples as shown in the flowchart below, it is expected that Stan Palmer will generate significant quantities of stockpiled soil at the beginning of the project in order to ensure a near continuous supply of soil for reuse later in the project.

- **Active Generation of Stockpiles:** Stockpiles that Stan Palmer is actively generating or shaping will not be signed or sampled until Stan Palmer is completely done adding to or shaping the stockpile. Stan Palmer is responsible for maintaining a schematic identifying all stockpiles that have not been signed and capturing the following information:
 - What zone the soil came from
 - Type of pile: (1) gravel base, (2) general borrow, (3) pipe bedding, or (4) unsuitable for any use.
- **When To Call:** PIONEER will not be in the field full time. Stan Palmer is expected to consolidate sampling requests to one or two days per week. When Stan Palmer is done generating a 500 CY stockpile, Stan Palmer should notify a PIONEER point-of-contact, who is expected to respond within one working day.
- **Stockpile Movement:** Once a stockpile has been signed with a white sign, Stan Palmer should not move the stockpile until the sign has been changed to green, yellow, or red. Stan Palmer should take all necessary measures to prevent comingling of stockpiles of different soil classes.
- **Analytical Requirements:** PIONEER will collect and pay for all soil samples related to chemical testing, with the exception of any testing associated with import of soil from off-site. Stan Palmer is responsible for collecting and paying for all soil samples related to geotechnical testing.
- **Direct Loading:** It may be possible to load some soils directly to dump trucks for off-site disposal without stockpiling if: 1) the Port Engineer has already designated the soil as geotechnically unsuitable for any use, and 2) the receiving landfill does not require toxicity characteristic leaching procedure (TCLP) testing for that zone (e.g., the Weyerhaeuser Castle Rock Landfill has indicated that the only TCLP testing it would likely require is TCLP lead for stockpiles generated from Zone 4).
- **Construction Debris:** Stockpiles of construction debris should not be commingled with soil stockpiles, and will be managed separately in accordance with the specifications.

- Gross Contamination: If Stan Palmer encounters gross contamination (e.g., heavy fuel sheen, free petroleum product) during excavation, Stan Palmer is expected to stop excavation work at that location and notify the Port and PIONEER immediately. If excavators or other equipment are contaminated due to contact with gross contamination, Stan Palmer should decontaminate the equipment before resuming work elsewhere at the site.
- Documentation: Stan Palmer is responsible for preparing daily reports as well as detailed field notes and photographs to document all soil management activities (e.g., excavation, segregation, stockpiling, estimating stockpile volumes, reuse, and disposal). In addition, Stan Palmer is expected to provide the Port and PIONEER with a copy of the weigh ticket / waste manifest for all soil disposed of at the off-site landfill as soon as possible following transport.
- Other Requirements: Stan Palmer is expected to be intimately aware of the stockpile management requirements in Section 5.2 of the IAWP and Section 01 35 13 of the specifications as there are other stockpile management requirements (e.g., placement on impervious surface, cover with plastic liner) that are not repeated in this memo.

Respectfully,

Troy Bussey Jr., P.E., L.G., L.H.G.
Senior Professional Engineer

Enclosure – Sign Designs

It should be noted that Ecology commented on this memorandum in a June 4, 2009 email: "The only changes/clarifications that are needed to the memo concerns amending, reconditioning, mixing, or modifying soils (2nd bullet). We prefer that any amending, reconditioning, mixing, or modifying soils occur following soil sampling. We do not want any additives to 'dilute' or bias the concentration results. However, if the amending, reconditioning, mixing, or modifying soils only consists of mixing of soils excavated from the same zone to achieve the desired geotechnical properties – that is acceptable. As long as no "foreign" substances are added (such as offsite materials, cement, soils from other zones, concrete)."

As it turned out, Stan Palmer Construction did not end up amending, mixing, reconditioning, or modifying any of the soil stockpiles before or after soil sampling.

Subject: RE: East Bay IA - SP25

SP25 was a huge stockpile and originally was 1255cy. When we changed the sign to red the stockpile was about 350cys. 2/3rds of it was red for disposal and 1/3 of it was to be left green so....

Green = 1138
Red = 117

It totally slipped my mind, I should have recorded that. And I still need to send out the lead tcip samples. Melody stated that they started hauling it yesterday.

Subject: East Bay IA - SP25

Kara -

Since we have already scanned the IA field notes and included those in the draft IA Report which has already gone to the Port and Ecology, I would like to document the final disposition of SP25 via email. Over the past couple of days, SPC has moved SP25 from the SE corner of Parcel 2 to the northern part of Parcel 3. Melody told me that you and her signed part of SP25 red on 3/15, while keeping some green. When I looked at what was left of the green SP25 pile yesterday after it had been moved, I estimate that the Green SP25 was ~ 50 CY. SPC apparently disposed of everything else that was remaining in SP25 as of 3/15.

My question to you is: Do you think SPC had used some of SP25 as green before 3/15? If so, how much do you estimate they used as green before 3/15?

Respectfully,
Troy

PAM K	Self-employed	

NOTES ON WORK COMPLETED

- PART CALLED PTC TO SITE DURING SUPERFICIAL EXAMINATION OF OLYMPIA/THURSTON AVENUE (ZONE 2) DUE TO SMALL AMOUNT OF POTENTIALLY PETROLEUM IMPACTED MATERIAL IN SITUATION THAT HAD BEEN ADDED TO STOCKPILE SP02
- BASED ON DISCUSSIONS WITH ON-SITE PERSONNEL, VISUAL/ODM OBSERVATIONS IN EXCAVATION, AND VISUAL/ODM OBSERVATIONS OF SP02, TONY & PIONEER DETERMINED IT WAS OF MINIMUM IMPACT ASSOCIATED WITH ASPHALT/ROAD MATERIAL.
- PART DEMANDS TO HAVE PIONEER PROVIDE CONTINUOUS EXCAVATION OVERSIGHT FOR STAKE-OUT TO ASSIST WITH ANY SOIL SEGREGATION THAT MAY BE NECESSARY
- COLLECTED SP02-ZONE 2-061509 SAMPLE C 1400 FROM SP02 SINCE STOCKPILE WAS GENERATED - KARA TO GET TRUCK COUNTS
- KARA STAYED REST OF DAY TO PROVIDE EXCAVATION OVERSIGHT
- DIDN'T COMMENT STEVE TEEB SINCE HE IS OUT OF OFFICE THIS WEEK & DUE TO OF MINIMUM NATURE OF MATERIAL

NOTES ON WORK COMPLETED All Engineering controls in ramp appear to be implemented appropriately and permitting as designed

TALKED WITH PAUL K.

- STEVE YEEH HAD BEEN ONSITE FOR 1 HOUR EARLIER IN AM, BUT HAD NO COMMENTS
- SPL HAS HAD LOW PRODUCTIVE RATE DURING REGULINE ~ 50th/DAY
- SPL HAS BEEN HAULING SOIL TO LANDFILL FROM WED-FRI
- PAUL DOESN'T HAVE SCALE TICKETS OR MANIFESTS YET (ALTHOUGH HE HAS REQUESTED THEM), BUT ESTIMATES ~ 40 TRUCK LOADS @ ~ 20 CY/LOAD
- I REQUESTED COPY OF SCALE TICKETS/MANIFESTS WHEN PAUL RECEIVES
- ~ 800 CY TAKEN TO LF INCLUDES SOIL FROM SPO5, SPO6, and soil removed from utility excavations which is geotechnically unsuitable for any use
- SPL has been relying more on sump pump in trench than dewatering wells and some from utility excavations

I INSPECTED STOCKPILE OF SOIL THAT IS GEOTECHNICALLY UNSUITABLE → ~~LOW~~ LAND AND OTHER UNSUITABLE CONTENT IS CONSISTENT WITH WHAT WAS OBSERVED IN BORING LOG

I INSPECTED UTILITY EXCAVATION NEAR CORNER OF OLYMPIAN & JEFFERSON → GROUNDWATER LEVEL IS CONSISTENT WITH WHAT WAS OBSERVED IN BORING LOG

I INSPECTED UTILITY WATER EXCAVATION NEAR INTERSECTION OF JEFFERSON AND STATE WHERE PAUL THOUGHT HE MIGHT HAVE SEEN SHEEN IN GROUNDWATER SHEEN
 BY THERE WAS NO VISUAL OR OLFATORY EVIDENCE OF IMPACTED SOIL IN THIS EXCAVATION; THE POSSIBLE WATER SHEEN WAS VERY SLIGHT (IF EVEN PRESENT) AND SMALL → SIGNIFICANTLY LESS THAN ONE MIGHT SEE IN A PARKING LOT OF STORMWATER

Stockpiles:

NOTES ON WORK COMPLETED

- Check on Engineering Control implementation
- WALKED AROUND SITE TO INSPECT EC implementation
 - ↳ SPC primarily doing subsurface utilities on Southern end of Jefferson and Northern end of Jefferson
 - ↳ concrete crusher is in place, but not operating pending air permit
- * SPC site control measures (e.g., perimeter fence, traffic/pedestrian control) have been in place since first day and are functioning as desired
- * SPC is using shoring on deep excavations to minimize excavation widths as intended
- * SPC is using water trucks to wet soil for dust control and has been doing that since 1st week
- * SPC is segregating soil appropriately based on excavation zone and geotechnical analysis
- * SPC is storing soil on impervious surface and is covering stockpiles daily
 - ↳ stockpile framing system is operating as intended
 - ↳ SPC is only uncovering the outer face of a given stockpile
- * SPC is removing/disposing of soil stockpiles appropriately and as intended
- * No gross contamination was observed
- * All ECs appear to be functioning as designed and intended
- checked on mws +
 - ↳ placed ~~padding~~ warning cones over couple of mws as necessary
 - ↳ All interior mws have warning cones
 - ↳ mws appears to be in similar condition to last check in early July with couple of mws which is covered by part of sand bedding stockpile

16 June, 2009

pDR-1000
 User ID: EB-1 and EB-2
 Tag Number:
 Number of logged points: 269
 Start time and date: 06:59:50 16-Jun
 Elapsed time: 04:29:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 27.323 mg/m³
 Time at maximum: 15:17:01 Jun 16
 Max STEL Concentration: 1.907 mg/m³
 Time at max STEL: 15:20:24 Jun 16
 Overall Avg Conc: 0.236 mg/m³

22 June, 2009

pDR-1000 S/N: 05156
 User ID: EB-2
 Tag Number: 06
 Number of logged points: 311
 Start time and date: 07:48:45 22-Jun
 Elapsed time: 05:11:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 0.563 mg/m³
 Time at maximum: 12:06:54 Jun 22
 Max STEL Concentration: 0.047 mg/m³
 Time at max STEL: 12:07:16 Jun 22
 Overall Avg Conc: 0.019 mg/m³

23 June, 2009

pDR-1000 S/N: 05156
 User ID: EB-2
 Tag Number: 07
 Number of logged points: 531
 Start time and date: 07:05:42 23-Jun
 Elapsed time: 08:51:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 16.212 mg/m³
 Time at maximum: 13:17:40 Jun 23
 Max STEL Concentration: 0.971 mg/m³
 Time at max STEL: 13:31:13 Jun 23
 Overall Avg Conc: 0.162 mg/m³

29 June, 2009

pDR-1000 S/N: 04476
 User ID: EB-1
 Tag Number: 01
 Number of logged points: 501
 Start time and date: 07:02:32 29-Jun
 Elapsed time: 08:21:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 28.700 mg/m³
 Time at maximum: 11:10:12 Jun 29
 Max STEL Concentration: 1.311 mg/m³
 Time at max STEL: 11:24:03 Jun 29
 Overall Avg Conc: 0.366 mg/m³

20 July, 2009

pDR-1000 S/N: 05156
 User ID: EB-2
 Tag Number: 02
 Number of logged points: 664
 Start time and date: 06:56:11 20-Jul
 Elapsed time: 11:04:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 11.282 mg/m³
 Time at maximum: 10:02:00 Jul 20
 Max STEL Concentration: 0.239 mg/m³
 Time at max STEL: 10:04:42 Jul 20
 Overall Avg Conc: 0.096 mg/m³

3 August, 2009

pDR-1000 S/N: 05156
 User ID: EB-2
 Tag Number: 01
 Number of logged points: 401
 Start time and date: 10:20:38 03-Aug
 Elapsed time: 07:20:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 7.074 mg/m³
 Time at maximum: 10:27:57 Aug 03
 Max STEL Concentration: 0.395 mg/m³
 Time at max STEL: 10:42:39 Aug 03
 Overall Avg Conc: 0.078 mg/m³

7 August, 2009

pDR-1000 S/N: 05156
 User ID: EB-2
 Tag Number: 02
 Number of logged points: 402
 Start time and date: 07:09:41 07-Aug
 Elapsed time: 06:42:00
 Logging period (sec): 60
 Calibration Factor (%): 100
 Max Display Concentration: 6.947 mg/m³
 Time at maximum: 10:53:26 Aug 07
 Max STEL Concentration: 0.107 mg/m³
 Time at max STEL: 11:04:42 Aug 07
 Overall Avg Conc: 0.036 mg/m³

WA-DOE-Laboratory Certification No.: C2013

"nd" indicates the analyte was not detected at or above the listed Method Reporting Limit.

"n/a" indicates not applicable

Sample results based on dry weight.

**REPORT OF
LABORATORY
ANALYSIS FOR
PCDD/PCDF**

Report Prepared Date:

June 19, 2009

Report Information:

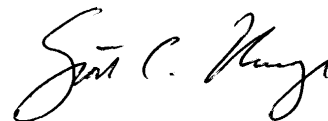

Pace Project #: 1097187
Sample Receipt Date: 06/13/2009
Client Project #: East Bay IA Stockpiles
Client Sub PO #: N/A
State Cert #: C218

Invoicing & Reporting Options:

The report provided has been invoiced as a Level 2 PCDD/PCDF Report. If an upgrade of this report package is requested, an additional charge may be applied.

Please review the attached invoice for accuracy and forward any questions to Scott Unze, your Pace Project Manager.

This report has been reviewed and prepared by:

Scott Unze, Project Manager

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on one sample submitted by a representative of Pioneer Technologies Corporation. The sample was analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extract ranged from 44-91%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Also, since the quantification of the native 2,3,7,8-substituted congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In one case, an interfering substance impacted the determination of a PCDD congener. The affected value was flagged "I" due to an incorrect isotope ratio.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show that PCDDs and PCDFs were not detected. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field sample.

A laboratory spike sample was also prepared with the sample batch using clean sand that had been fortified with native standard materials. The results show that the spiked native compounds were recovered at 90-109%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

**REPORT OF
LABORATORY
ANALYSIS FOR
PCDD/PCDF**

Report Prepared Date:

June 22, 2009

Report Information:

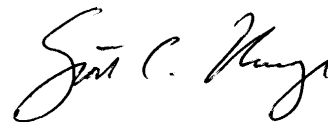

Pace Project #: 1097304
Sample Receipt Date: 06/16/2009
Client Project #: East Bay IA Stockpile
Client Sub PO #: N/A
State Cert #: C218

Invoicing & Reporting Options:

The report provided has been invoiced as a Level 2 PCDD/PCDF Report. If an upgrade of this report package is requested, an additional charge may be applied.

Please review the attached invoice for accuracy and forward any questions to Scott Unze, your Pace Project Manager.

This report has been reviewed and prepared by:

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on one sample submitted by a representative of Pioneer Technologies Corporation. The sample was analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations. The sample was received outside of the recommended temperature range of 0-6 degrees Celsius.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extract ranged from 47-123%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Also, since the quantification of the native 2,3,7,8-substituted congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to contain trace levels of selected congeners. These were below the calibration range of the method. The levels reported for the affected congeners in the field sample were higher than the corresponding blank levels by one or more orders of magnitude. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field sample.

Laboratory and matrix spike samples were also prepared with the sample batch using clean sand or sample matrix that had been fortified with native standard materials. The results show that the spiked native compounds were generally recovered at 88-130%, with relative percent differences of 0.1-7.6%. These results indicate generally high degrees of accuracy and precision for these determinations. Somewhat variable background-subtracted values were obtained for HpCDD, OCDF, and OCDD in the matrix spike samples, due to the levels of these compounds in the sample material.

**REPORT OF
LABORATORY
ANALYSIS FOR
PCDD/PCDF**

Report Prepared Date:

June 23, 2009

Report Information:

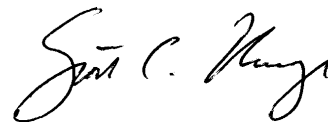

Pace Project #: 1097502
Sample Receipt Date: 06/18/2009
Client Project #: East Bay IA Stockpile
Client Sub PO #: N/A
State Cert #: C218

Invoicing & Reporting Options:

The report provided has been invoiced as a Level 2 PCDD/PCDF Report. If an upgrade of this report package is requested, an additional charge may be applied.

Please review the attached invoice for accuracy and forward any questions to Scott Unze, your Pace Project Manager.

This report has been reviewed and prepared by:

Scott Unze, Project Manager

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on one sample submitted by a representative of Pioneer Technologies Corporation. The sample was analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations. The sample was received outside of the recommended temperature range of 0-6 degrees Celsius.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extract ranged from 56-95%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Also, since the quantification of the native 2,3,7,8-substituted congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of PCDD or PCDF congeners. The affected values were flagged "I" where incorrect isotope ratios were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to contain trace levels of selected congeners. These were below the calibration range of the method. The levels reported for the affected congeners in the field sample were higher than the corresponding blank levels by two or more orders of magnitude. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field sample.

A laboratory spike sample was also prepared with the sample batch using clean sand that had been fortified with native standard materials. The results show that the spiked native compounds were recovered at 85-104%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on three samples submitted by a representative of Pioneer Technologies Corporation. The samples were analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise measurements.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extracts ranged from 36-96%. With the exceptions of three low values, which were flagged "P" on the results tables, the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Also, since the quantification of the native 2,3,7,8-substituted congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of PCDD or PCDF congeners. The affected values were flagged "I" where incorrect isotope ratios were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to contain trace levels of selected congeners. These were below the calibration range of the method. Sample levels similar to the corresponding blank levels were flagged "B" on the results table and may be, at least partially, attributed to the background. It should be noted that levels less than ten times the background are not generally considered to be statistically different from the background.

A laboratory spike sample was also prepared with the sample batch using clean sand that had been fortified with native standard materials. The results show that the spiked native compounds were recovered at 87-101%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on three samples submitted by a representative of Pioneer Technologies Corporation. The samples were analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise measurements.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extracts ranged from 47-102%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Also, since the quantification of the native 2,3,7,8-substituted congeners was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of native or labeled PCDD or PCDF congeners. The affected values were flagged "I" where incorrect isotope ratios were obtained, or "E" where polychlorinated diphenyl ethers were present.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to contain trace levels of selected congeners. These were below the calibration range of the method. Sample levels similar to the corresponding blank levels were flagged "B" on the results tables and may be, at least partially, attributed to the background. It should be noted that levels less than ten times the background are not generally considered to be statistically different from the background.

A laboratory spike sample was also prepared with the sample batch using clean sand that had been fortified with native standard materials. The results show that the spiked native compounds were recovered at 97-112%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

**REPORT OF
LABORATORY
ANALYSIS FOR
PCDD/PCDF**

Report Prepared Date:

August 4, 2009

Report Information:

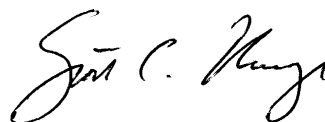

Pace Project #: 10100330
Sample Receipt Date: 07/30/2009
Client Project #: East Bay IA Stockpile
Client Sub PO #: N/A
State Cert #: C218

Invoicing & Reporting Options:

The report provided has been invoiced as a Level 2 PCDD/PCDF Report. If an upgrade of this report package is requested, an additional charge may be applied.

Please review the attached invoice for accuracy and forward any questions to Scott Unze, your Pace Project Manager.

This report has been reviewed and prepared by:

Scott Unze, Project Manager

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on two samples submitted by a representative of Pioneer Technologies Corporation. The samples were analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations. The samples were received within the recommended temperature range of 0-6 degrees Celsius.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extracts ranged from 65-119%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Since the quantification of the native 2,3,7,8-substituted isomers was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of PCDD or PCDF isomers. The affected values were flagged "I" where incorrect isotope ratios were obtained, or "E" where polychlorinated diphenyl ethers were present.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to contain trace levels of selected isomers. These levels were below the calibration range of the method. Sample levels similar to the corresponding blank levels were flagged "B" on the results tables and may be, at least partially, attributed to the background. It should be noted that levels less than ten times the background are not generally considered to be statistically different from the background.

A laboratory spike sample was also prepared with the sample batch using clean reference matrix that had been fortified with native standards. The results show that the spiked native compounds were recovered at 89-108%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared using a different sample in this extraction batch. Results are available upon request.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analysis performed on one sample submitted by a representative of Pioneer Technologies Corporation. The sample was analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extracts ranged from 60-92%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Since the quantification of the native 2,3,7,8-substituted isomers was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of PCDD or PCDF congeners. The affected values were flagged "I" where incorrect isotope ratios were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to contain trace levels of selected congeners. These levels were below the calibration range of the method. The levels reported for the affected congeners in the field sample were higher than the levels in the blank by an order of magnitude or more. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field sample.

A laboratory spike sample was also prepared with the sample batch using clean sand that had been fortified with native standard materials. The results show that the spiked native compounds were recovered at 91-114%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analysis performed on one sample submitted by a representative of Pioneer Technologies Corporation. The sample was analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extract ranged from 51-97%. With the exception of one low value, which was flagged "P" on the results table, the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Since the quantification of the native 2,3,7,8-substituted isomers was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCDDs and PCDFs at the reporting limits. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field sample.

A laboratory spike sample was also prepared with the sample batch using clean sand that had been fortified with native standard materials. The results show that the spiked native compounds were recovered at 93-114%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

**REPORT OF
LABORATORY
ANALYSIS FOR
PCDD/PCDF**

Report Prepared Date:

September 3, 2009

Report Information:

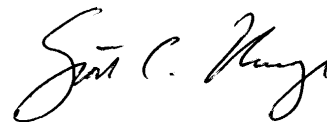

Pace Project #: 10110806
Sample Receipt Date: 08/21/2009
Client Project #: East Bay IA Stockpile
Client Sub PO #: N/A
State Cert #: C218

Invoicing & Reporting Options:

The report provided has been invoiced as a Level 2 PCDD/PCDF Report. If an upgrade of this report package is requested, an additional charge may be applied.

Please review the attached invoice for accuracy and forward any questions to Scott Unze, your Pace Project Manager.

This report has been reviewed and prepared by:

Scott Unze, Project Manager

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on three samples submitted by a representative of Pioneer Technologies Corporation. The samples were analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations. The samples were received within the recommended temperature range of 0-6 degrees Celsius.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extracts ranged from 34-114%. With the exception of one low value, which was flagged "P" on the results table, the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Since the quantification of the native 2,3,7,8-substituted isomers was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of PCDD or PCDF congeners. The affected values were flagged "I" where incorrect isotope ratios were obtained, or "E" where polychlorinated diphenyl ethers were present.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCDDs and PCDFs at the reporting limits. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field samples.

A laboratory spike sample was also prepared with the sample batch using clean sand that had been fortified with native standards. The results show that the spiked native compounds were recovered at 87-104%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on two samples submitted by a representative of Pioneer Technologies Corporation. The samples were analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations. The samples were received above the recommended temperature range of 0-6 degrees Celsius.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extracts ranged from 46-113%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Since the quantification of the native 2,3,7,8-substituted isomers was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of PCDD or PCDF congeners. The affected values were flagged "I" where incorrect isotope ratios were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCDDs and PCDFs at the reporting limits. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field samples.

A laboratory spike sample was also prepared with the sample batch using clean sand that had been fortified with native standards. The results show that the spiked native compounds were recovered at 87-104%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on two samples submitted by a representative of Pioneer Technologies Corporation. The samples were analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations. The samples were received above the recommended temperature range of 0-6 degrees Celsius.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extracts ranged from 55-110%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Since the quantification of the native 2,3,7,8-substituted isomers was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of PCDD or PCDF congeners. The affected values were flagged "I" where incorrect isotope ratios were obtained, or "E" where polychlorinated diphenyl ethers were present.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCDDs and PCDFs at the reporting limits, with the exception of a trace level of HpCDD. This was below the calibration range of the method. The HpCDD levels reported for the field samples were higher than the HpCDD level in the blank by three orders of magnitude. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field samples.

A laboratory spike sample was also prepared with the sample batch using clean sand that had been fortified with native standards. The results show that the spiked native compounds were recovered at 92-110%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analysis performed on one sample submitted by a representative of Pioneer Technologies Corporation. The sample was analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. The reporting limits were based on signal-to-noise calculations.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extract ranged from 57-88%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Since the quantification of the native 2,3,7,8-substituted isomers was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of PCDD or PCDF congeners. The affected values were flagged "I" where incorrect isotope ratios were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to contain trace levels of selected congeners. These were below the calibration range of the method. Sample levels similar to the corresponding blank levels were flagged "B" on the results table and may be, at least partially, attributed to the background. It should be noted that levels less than ten times the background are not generally considered to be statistically different from the background.

A laboratory spike sample was also prepared with the sample batch using clean sand that had been fortified with native standard materials. The results show that the spiked native compounds were recovered at 90-110%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on three samples submitted by a representative of Pioneer Technologies Corporation. The samples were analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extracts ranged from 37-116%. With the exception of one low value, which was flagged "P" on the results table, the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Since the quantification of the native 2,3,7,8-substituted isomers was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of PCDD or PCDF congeners. The affected values were flagged "I" where incorrect isotope ratios were obtained.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to contain trace levels of selected congeners. These were below the calibration range of the method. The levels reported for the affected congeners in the field samples were higher than the corresponding blank levels two or more orders of magnitude. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field samples.

Laboratory and matrix spike samples were also prepared with the sample batch using clean sand or sample matrix that had been fortified with native standards. The results show that the spiked native compounds were generally recovered at 75-135%, with relative percent differences of 0.4-24.7%. The recovery value obtained for OCDD in LCS-21464 was above the 70-130% target range and was flagged "P" on the results table; this may indicate a high bias for this congener in these determinations. Also, somewhat variable background-subtracted values were obtained for selected congeners in the matrix spike samples, due to the levels of these compounds in the sample material.

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on six samples submitted by a representative of Pioneer Technologies Corporation. The samples were analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations. The samples were received above the recommended temperature range of 0-6 degrees Celsius.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extracts ranged from 32-106%. With the exception of one low value, which was flagged "P" on the results table, the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Since the quantification of the native 2,3,7,8-substituted isomers was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of PCDD or PCDF congeners. The affected values were flagged "I" where incorrect isotope ratios were obtained, or "E" where polychlorinated diphenyl ethers were present.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to contain background levels of selected congeners. With the exception of the OCDD, these were below the calibration range of the method. The levels reported for the affected congeners in the field samples were higher than the corresponding blank levels by one or more orders of magnitude. These results indicate that the sample processing steps did not contribute significantly to the levels reported for the field samples.

Laboratory and matrix spike samples were also prepared with the sample batch using clean sand or sample matrix that had been fortified with native standards. The results show that the spiked native compounds were generally recovered at 87-127%, with relative percent differences generally from 0.3-19.0%. Somewhat variable results were obtained for HpCDD and OCDD in the matrix spike samples, due to the levels of these compounds in the sample material.

REPORT OF LABORATORY ANALYSIS

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on four samples submitted by a representative of Pioneer Technologies Corporation. The samples were analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extracts ranged from 57-94%. All of the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Since the quantification of the native 2,3,7,8-substituted isomers was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of PCDD or PCDF congeners; the affected values were flagged "I" where incorrect isotope ratios were obtained, or "P" where polychlorinated diphenyl ethers were present. Also, the OCDD concentration reported for sample "SP-28_ZONE2_101509" was above the calibration range; the value was flagged "E" and should be regarded as an estimate.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to contain trace levels of selected congeners. These were below the calibration range of the method. Sample levels similar to the corresponding blank levels were flagged "B" on the results tables and may be, at least partially, attributed to the background. It should be noted that levels less than ten times the background are not generally considered to be statistically different from the background.

A laboratory spike sample was also prepared with the sample batch using clean sand that had been fortified with native standard materials. The results show that the spiked native compounds were recovered at 89-106%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

**REPORT OF
LABORATORY
ANALYSIS FOR
PCDD/PCDF**

Report Prepared Date:

January 13, 2010

Report Information:

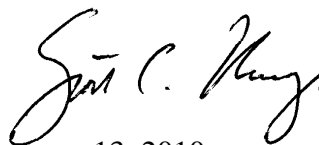

Pace Project #: 10118817
Sample Receipt Date: 12/15/2009
Client Project #: EAST BAY IA STOCKPILES
Client Sub PO #: N/A
State Cert #: C755

Invoicing & Reporting Options:

The report provided has been invoiced as a Level 2 PCDD/PCDF Report. If an upgrade of this report package is requested, an additional charge may be applied.

Please review the attached invoice for accuracy and forward any questions to Scott Unze, your Pace Project Manager.

This report has been reviewed by:

Report of Laboratory Analysis

This report should not be reproduced, except in full, without the written consent of Pace Analytical Services, Inc.

The results relate only to the samples included in this report.

DISCUSSION

This report presents the results from the analyses performed on two samples submitted by a representative of Pioneer Technologies Corporation. The samples were analyzed for the presence or absence of polychlorodibenzo-p-dioxins (PCDDs) and polychlorodibenzofurans (PCDFs) using a modified version of USEPA Method 8290. Reporting limits were based on signal-to-noise calculations.

The recoveries of the isotopically-labeled PCDD/PCDF internal standards in the sample extracts ranged from 38-102%. With the exceptions of three low values, which were flagged "R" on the results tables, the labeled standard recoveries obtained for this project were within the 40-135% target range specified in Method 8290. Since the quantification of the native 2,3,7,8-substituted isomers was based on isotope dilution, the data were automatically corrected for variation in recovery and accurate values were obtained.

In some cases, interfering substances impacted the determinations of PCDD or PCDF congeners. The affected values were flagged "I" where incorrect isotope ratios were obtained, or "P" where polychlorinated diphenyl ethers were present.

A laboratory method blank was prepared and analyzed with the sample batch as part of our routine quality control procedures. The results show the blank to be free of PCDDs and PCDFs at the reporting limits.

A laboratory spike sample was also prepared with the sample batch using clean sand that had been fortified with native standard materials. The results show that the spiked native compounds were recovered at 81-104%. These results indicate a high degree of accuracy for these determinations. Matrix spikes were prepared with the sample batch using sample material from a separate project; results from these analyses will be provided upon request.

REPORT OF LABORATORY ANALYSIS

Appendix A

Sample Management

Sample Condition Upon Receipt

Client Name: PTC Project # 10118817

Courier: Fed Ex UPS USPS Client Commercial Pace Other _____

Tracking #: 8392 2231 5286

Optional
Proj. Due Date
Proj. Name

Custody Seal on Cooler/Box Present: yes no Seals intact: yes no

Packing Material: Bubble Wrap Bubble Bags None Other _____ Temp Blank: Yes No

Thermometer Used 80344042 or 179425 Type of Ice: Wet Blue None Samples on Ice, cooling process has begun

Cooler Temperature 1.8° Biological Tissue is Frozen: Yes No

Date and Initials of person examining contents: 12-15-09 MS

Temp should be above freezing to 6°C

Comments:

Chain of Custody Present:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	1.
Chain of Custody Filled Out:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	2.
Chain of Custody Relinquished:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	3.
Sampler Name & Signature on COC:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	4.
Samples Arrived within Hold Time:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	5.
Short Hold Time Analysis (<72hr):	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	6.
Rush Turn Around Time Requested:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	7.
Sufficient Volume:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	8.
Correct Containers Used:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	9.
-Pace Containers Used:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	
Containers Intact:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	10.
Filtered volume received for Dissolved tests	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	11.
Sample Labels match COC:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	12.
-Includes date/time/ID/Analysis Matrix: <u>SL</u>		
All containers needing acid/base preservation have been checked. Noncompliance are noted in 13.	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	13.
All containers needing preservation are found to be in compliance with EPA recommendation.	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	
Exceptions: VOA, Coliform, TOC, Oil and Grease, WI-DRO (water)	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
		Initial when completed
		Lot # of added preservative
Samples checked for dechlorination:	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	14.
Headpace in VOA Vials (>6mm):	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	15.
Trip Blank Present:	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A	16.
Trip Blank Custody Seals Present	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> N/A

Reporting Flags

- A = Reporting Limit based on signal to noise
- B = Less than 10x higher than method blank level
- C = Result obtained from confirmation analysis
- D = Result obtained from analysis of diluted sample
- E = Exceeds calibration range
- I = Interference present
- J = Estimated value
- Nn = Value obtained from additional analysis
- P = PCDE Interference
- R = Recovery outside target range
- S = Peak saturated
- U = Analyte not detected
- V = Result verified by confirmation analysis
- X = %D Exceeds limits
- Y = Calculated using average of daily RFs
- * = See Discussion

Data Quality Review

East Bay Redevelopment Site – Interim Action (IA) Soil Stockpile Samples

1. Precision

Precision was assessed via the relative percent difference (RPD) for matrix spike duplicates. As shown in the analytical reports, all documented matrix spike duplicate RPDs were within acceptable ranges listed in the IA Work Plan (PIONEER 2009), with the following exceptions:

- Matrix spike duplicate RPDs for arsenic were either outside the acceptable range listed in the IAWP or were not reported (due to matrix interferences or other issues) for all samples except for the samples associated with SP07 through SP16_2. Matrix spike duplicate RPDs for lead were either outside the acceptable range listed in the IAWP or were not reported (due to matrix interferences or other issues) for all samples except for the samples associated with SP07 through SP08_2 and SP12 through SP16_2. Matrix spike duplicate RPDs for cadmium were either outside the acceptable range listed in the IAWP or were not reported (due to matrix interferences or other issues) for the samples associated with SP20 through SP29_2, SP33, and SP34. A J-flag was added to all of the affected sample results in which the target analyte was detected since the frequency and nature of unacceptable RPDs may be indicative of a larger laboratory issue.
- United States Environmental Protection Agency (USEPA) Method SW846-8021B matrix spike duplicate RPDs for o-xylene analyses associated with the SP09, SP10, SP17, SP18, and SP20 through SP23 samples were outside the acceptable range listed in the IAWP, but the target analyte was not detected in these samples.
- USEPA Method SW846-8290 matrix spike duplicate RPDs for 1,2,3,4,6,7,8,9-octachlorodibenzo-p-dioxin (OCDD) associated with the SP21 through SP26 samples were outside the acceptable range listed in the IAWP. In addition, the matrix spike duplicate RPDs for 1,2,3,4,7,8,9-heptachlorodibenzenofuran associated with the SP24_1 through SP26 samples were outside the acceptable range listed in the IAWP. The associated results were not qualified given the ubiquitous background presence of these congeners.

2. Accuracy

Accuracy was assessed by analysis of laboratory method blanks as well as recoveries in blank spikes, matrix spikes, and surrogates. As shown in the analytical reports, no analytes were detected in laboratory method blanks, and documented recoveries for blank spikes, matrix spikes, and primary sample surrogates were within acceptable ranges listed in the IAWP (PIONEER 2009), with the following exceptions:

- Matrix spike recoveries for arsenic were either outside the acceptable range listed in the IAWP or were not reported (due to matrix interferences or other issues) for all samples except for the samples associated with SP07 through SP08_2 and SP12 through SP16_2. Matrix spike recoveries for lead were either outside the acceptable range listed in the IAWP or were not reported (due to matrix interferences or other issues) for all samples except for the samples associated with SP12 through SP16_2. Matrix spike recoveries for cadmium were either outside the acceptable range listed in the IAWP or were not reported (due to matrix interferences or other issues) for the samples associated with SP07 through SP08_2, SP20 through SP29_2, SP33, and SP34. A J-flag was added to all of the affected sample results in which the target analyte was detected since the frequency and nature of unacceptable recoveries may be indicative of a larger laboratory issue.
- USEPA Method SW846-8021B matrix spike recoveries for ethylbenzene and/or xylenes analyses associated with the SP11, SP33, and SP34 samples were outside the acceptable range listed in the IAWP, but none of the target analytes were detected in these samples.
- USEPA Method SW846-8021B surrogate recoveries associated with the SP12 and SP17 samples were barely outside the acceptable range listed in the IAWP (but not the acceptable range for Washington State Department of Ecology [Ecology] Method NWTPH-G), but none of the target analytes were detected in these samples.

- The analyte 2-methylnaphthalene was detected in the method blank for USEPA Method SW846-8270 analyses associated with the SP33 and SP34 samples, but was not detected in these primary samples.
- The surrogate recovery for USEPA Method SW846-8270 associated with the SP18 sample was outside the acceptable range listed in the IAWP, and a J-flag was added to the detected SP18 results. The surrogate recovery for USEPA Method SW846-8270 associated with the SP20 sample was also outside the acceptable range listed in the IAWP, but none of the target analytes were detected in the SP20 sample.
- The surrogate recovery for Ecology Method NWTPH-Dx associated with the SP29_1 sample was outside the acceptable range listed in the IAWP, but none of the target analytes were detected in that sample.
- Trace levels of select congeners were detected in several dioxins/furans method blanks, but corresponding congener results associated with these method blanks were appropriately qualified by the laboratory.
- The matrix spike recoveries for OCDD associated with the USEPA Method SW846-8290 analyses of the SP21 through SP26 samples were outside the acceptable range listed in the IAWP. The associated results were not qualified given the ubiquitous background presence of OCDD.
- The surrogate recoveries for OCDD-carbon 13 associated with the USEPA Method SW846-8290 analyses of the SP13, SP22, SP25_3, SP33, and SP34 samples were outside the acceptable range listed in the IAWP. The associated results were not qualified since the OCDD-carbon 13 surrogates were barely outside the acceptable range and the recoveries for other USEPA Method SW846-8290 surrogates in these samples were acceptable.

3. Representativeness

Representativeness was assessed by evaluating the sample collection, preservation, handling, and analysis procedures. Samples were collected, preserved, handled, and analyzed in accordance with the IAWP (PIONEER 2009), which was designed to obtain representative samples. In addition, all samples were extracted and analyzed within appropriate holding times listed in the IAWP (PIONEER 2009).

4. Comparability

Comparability was assessed by comparing current sample collection and analysis procedures with historical procedures. The samples were collected and analyzed with standard procedures and are comparable with other site data as qualified.

5. Sensitivity

Sensitivity was assessed by comparing actual practical quantitation limits (PQLs) with project-specific PQL expectations. Because the laboratories selected to perform IA analyses were different than the presumptive laboratories at the time the IAWP was prepared, some of the PQL expectations needed to be adjusted from what is listed in the IAWP (PIONEER 2009). Based on personal correspondence with the Ecology Site Manager (Ecology 2009b), some of the IAWP PQL expectations were adjusted prior to the IA by considering Ecology's PQL expectations (Ecology 1995), laboratory capabilities, and IA cleanup levels. As shown in the following table, the laboratories were able to achieve actual PQLs that were equal to or lower than these revised PQL expectations, with the exception of a single dioxins/furans sample.

Constituent Type	IAWP PQL Expectations (PIONEER 2009) (mg/kg)	Revised PQL Expectations (Ecology 2009b) (mg/kg)	Actual PQLs During Interim Action (mg/kg)
Metals	2	0.25	0.25
PAHs ⁽¹⁾	0.1	0.01	0.01
Dioxins/furans ⁽²⁾	0.000003	0.000005	0.00000026 – 0.0000063 ⁽³⁾
TPH-D	50	50	25
TPH-HO	100	100	100
TPH-G	10	10	5
BTEX ⁽¹⁾	0.01	0.1	0.05 – 0.1
PCBs ⁽¹⁾	N/A	N/A	0.05

Notes:

BTEX = Benzene, toluene, ethylbenzene, and xylenes

Dioxins/furans = Chlorinated dibenzo-p-dioxins and chlorinated dibenzofurans

IAWP = Interim Action Work Plan (PIONEER 2009)

N/A = Not applicable

PAHs = Polycyclic aromatic hydrocarbons

PCBs = Polychlorinated biphenyls

PQL = Practical quantitation limit

TPH-D = Total petroleum hydrocarbons in the diesel range

TPH-G = Total petroleum hydrocarbons in the gasoline range

TPH-HO = Total petroleum hydrocarbons in the heavy oil range

⁽¹⁾ PQL values shown are for each constituent.

⁽²⁾ Total PQL calculated using toxicity equivalency factors in Washington Administrative Code 173-340-708(8).

⁽³⁾ Only one PQL out of 36 PQLs exceeded 0.000005 mg/kg.

6. Completeness

Completeness was assessed by calculating the percentage of useable results to all results. A total of 1,825 sample analyses were performed. All of the analyte results are useable as qualified. Thus, the completeness of the analytical data is 100 percent.

7. Conclusions

This data is deemed acceptable for use as presented by the laboratory, subject to the qualifications noted in this document. No corrective action or additional data qualification is necessary.

Weyerhaeuser Regional Landfill
Attn: Larry Fulcher
3434 S. Silver Lake Road
Castle Rock, WA 98611

RE: PORT OF OLYMPIA EAST BAY SITE TEMPORARY DIRECT HAUL APPROVAL

Dear Mr. Fulcher,

This letter is written approval for a temporary exemption to the Annual Operating Permit, Section 6.2 Waste Disposal Limitations. Stan Palmer Construction, contractor for the project, is approved to direct haul petroleum contaminated soils from the East Bay Redevelopment Site, MTCA facility site #5785176, to the Weyerhaeuser Regional Landfill for the duration of this phase of the project, or approximately twenty days. The exemption request, dated June 12, 2009, was received and evaluated by Cowlitz County Environmental Health. The waste stream is approved for direct haul disposal at the Weyerhaeuser Regional Landfill with the following conditions:

1. Prior to acceptance of any petroleum contaminated soils from the Olympia East Bay Redevelopment Site, the Cleanup Action Plan wording must be amended to read something to the effect of "transported to and disposed of at a facility permitted to accept this type of material" instead of "transported to and disposed of at an off-site RCRA Subtitle D facility."
2. Direct truck hauling for the East Bay Redevelopment Site is approved for an average of 35 trucks per day, not to exceed 200 trucks per week, based on a five day week (Monday thru Friday). Cowlitz County Environmental Health shall be notified if truck deliveries from the project exceed these temporary limitations.
3. Temporary exemption is for Annual Operating Permit Section 6.2(b)(ii), relating to the number of trucks deliveries allowed per day / week, only. All other conditions in Section 6.2(b), relating to truck deliveries to the landfill, still apply.
4. Cowlitz County Environmental Health must be notified of the commencement and conclusion of the direct haul within five (5) business days.

Thank you for your patience during the review process. We look forward to working with you in the future. If you have any questions feel free to contact us at (360) 577-3052.

Sincerely,

Katie Bohren

THANK YOU FOR WEIGHING ON CAT SCALE!

THE CAT SCALE GUARANTEE

The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
- 3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

THE CAT SCALE GUARANTEE

The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
- 3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR
WEIGHING
ON
CAT
SCALE!

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

THE CAT SCALE GUARANTEE

The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.®

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
- 3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

THE CAT SCALE GUARANTEE

The CAT Scale Company **GUARANTEES** that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.[®]

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
- 3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. **AXLE WEIGHTS CAN NOT BE CERTIFIED** and are **NOT LEGAL FOR TRADE**, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

THE CAT SCALE GUARANTEE
The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

THE CAT SCALE GUARANTEE
The CAT Scale Company **GUARANTEES** that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
- 3) **IMMEDIATELY** send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE

The four weights shown below are separate weights. The **TOTAL WEIGHT** was weighed on a full length platform scale. **AXLE WEIGHTS CAN NOT BE CERTIFIED** and are **NOT LEGAL FOR TRADE**, however, **CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.**

THE CAT SCALE GUARANTEE

The CAT Scale Company **GUARANTEES** that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.[®]

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
- 3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

THE CAT SCALE GUARANTEE

The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

Table with columns: DATE, STEER AXLE, DRIVE AXLE, TRAILER AXLE, TOTAL WEIGHT. Values include 8-19-2009, 14260, 43780, 50860, 108900, and handwritten 34.17T, 40560.

THE CAT SCALE GUARANTEE
The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

THE CAT SCALE GUARANTEE

The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

CERTIFIED AUTOMATED TRUCK SCALE

CAT SCALE COMPANY P.O. BOX 630 WALCOTT, IA 52773 (563) 284-6263 www.catscale.com

THE CAT SCALE GUARANTEE

The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

THE CAT SCALE GUARANTEE

The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

THE CAT SCALE GUARANTEE

The CAT Scale Company **GUARANTEES** that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.[®]

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
- 3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. **AXLE WEIGHTS CAN NOT BE CERTIFIED** and are **NOT LEGAL FOR TRADE**, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

THE CAT SCALE GUARANTEE

The CAT Scale Company **GUARANTEES** that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.SM

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
- 3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

Send this to: **Post Office Recovery**
P.O. Box 588
Longview, WA 98632
(206) 578-4416

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. **AXLE WEIGHTS CAN NOT BE CERTIFIED** and are **NOT LEGAL FOR TRADE**, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

THE CAT SCALE GUARANTEE

The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

Table with 4 columns: DATE, AXLE TYPE, WEIGHT, and UNIT. Includes rows for STEER AXLE (13360 lb), DRIVE AXLE (43840 lb), TRAILER AXLE (52040 lb), and TOTAL WEIGHT (109240 lb).

THE CAT SCALE GUARANTEE

The CAT Scale Company **GUARANTEES** that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.®

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
- 3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The **TOTAL WEIGHT** was weighed on a full length platform scale. **AXLE WEIGHTS CAN NOT BE CERTIFIED** and are **NOT LEGAL FOR TRADE**, however, **CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.**

THE CAT SCALE GUARANTEE

The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash!

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

THE CAT SCALE GUARANTEE
The CAT Scale Company **GUARANTEES** that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.¹⁾

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
- 3) **IMMEDIATELY** send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The **TOTAL WEIGHT** was weighed on a full length platform scale. **AXLE WEIGHTS CAN NOT BE CERTIFIED** and are **NOT LEGAL FOR TRADE**, however, **CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.**

THE CAT SCALE GUARANTEE
The CAT Scale Company **GUARANTEES** that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
- 3) **IMMEDIATELY** send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The **TOTAL WEIGHT** was weighed on a full length platform scale. **AXLE WEIGHTS CAN NOT BE CERTIFIED** and are **NOT LEGAL FOR TRADE**, however, **CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.**

THE CAT SCALE GUARANTEE

The CAT Scale Company **GUARANTEES** that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.®

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
- 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
- 3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. **AXLE WEIGHTS CAN NOT BE CERTIFIED** and are **NOT LEGAL FOR TRADE**, however, **CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.**

THE CAT SCALE GUARANTEE

The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

DATE: 12-17-2009 STEER AXLE 22100.00 1.0

THE CAT SCALE GUARANTEE
The CAT Scale Company GUARANTEES that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash.

IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:

- 1) Post bond and request a court date.
2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. AXLE WEIGHTS CAN NOT BE CERTIFIED and are NOT LEGAL FOR TRADE, however, CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.

DATE: 1-06-2010

THE CAT SCALE GUARANTEE
 The CAT Scale Company **GUARANTEES** that our scales will give an accurate weight. What makes us different from other scale companies is that we back up our guarantee with cash!¹
IF YOU SHOULD GET AN OVERWEIGHT FINE, YOU SHOULD DO THE FOLLOWING TO GET THE PROBLEM RESOLVED:
 1) Post bond and request a court date.
 2) Call CAT Scale Company direct 24 hours a day at 1-877-CAT-SCALE (toll free).
 3) IMMEDIATELY send a copy of the citation, CAT Scale ticket, your name, company, address, and phone number to CAT Scale Company Attn: Operations Manager.

THANK YOU FOR WEIGHING ON CAT SCALE!

The four weights shown below are separate weights. The TOTAL WEIGHT was weighed on a full length platform scale. **AXLE WEIGHTS CAN NOT BE CERTIFIED** and are **NOT LEGAL FOR TRADE**, however, **CAT SCALE COMPANY GUARANTEES THESE WEIGHTS TO BE CORRECT.**
