Re: Satisfaction of Agreed Order No. 9510 and No Further Action at the following Site:

- **Site Name:** Sunnyside Dryke Shooting Range
- **Site Address:** 292 Dryke Road
- **Cleanup Site Number:** 3572
- **Facility/Site No.:** 1283666

Dear Ms. Dryke:

Thank you for working with the Washington State Department of Ecology (Ecology) on Sunnyside Dryke Shooting Range (Site). This letter provides written notification that no further remedial action is necessary to clean up contamination at the Site under the Model Toxics Control Act (MTCA), Chapter 70.105D RCW, and Agreed Order No. 9510 (Order). However, further remedial action is still necessary under MTCA and required under the Order to control and monitor the remaining contamination and periodically review the conditions at the Site. This letter also describes the removal of the Site from Ecology's Hazardous Sites List and the status of the Order. The Order became effective on June 27, 2013.

Completion of Cleanup Required by Order

The remedial actions required by the Order are specified in Section VII (Work to Be Performed) and detailed in the Cleanup Action Plan (Exhibit E). Ms. Dryke was required to perform a series of tasks including: preparing a Remedial Action Work Plan to manage future site activities and implement best management practices; perform groundwater monitoring initially and every five years as part of a five-year review; excavate lead and cPAH contaminated soils from the area of the lower pond and deposit these soils into the active shooting areas, and; record an environmental covenant for the site documenting the active shooting areas from the non-active shooting areas. After inspecting the Site and reviewing the supporting documentation, Ecology has determined that the cleanup required at the Site under the Order has been satisfactorily completed.

Post-Cleanup Remedial Actions Required by Order

Although the cleanup of contamination at the Site has been completed, further remedial action is still necessary under MTCA and required under the Order to control and monitor the remaining contamination at the Site. Ms. Dryke's responsibilities are specified in Section VII (Work to Be Performed) and detailed in the Cleanup Action Plan, Remedial Action Work Plan, and Environmental Covenant.

Periodic Reviews of Post-Cleanup Conditions Required by Order

Ecology will conduct periodic reviews of post-cleanup conditions at the Site to ensure they remain protective of human health and the environment. This requires continued access to the Site, as provided in Section VIII(F) (Access) of the Order. Ms. Dryke's responsibilities are specified in Section VIII(R) (Periodic Review) of the Order. Any costs incurred by Ecology in conducting periodic reviews may be recovered from Ms. Dryke.

Status of Order

Although the cleanup of contamination at the Site has been completed, further remedial action is still necessary under MTCA and required by the Order to control and monitor the remaining contamination and periodically review the conditions at the Site. The Order will remain in effect until the required post-cleanup remedial actions are completed or are no longer necessary under MTCA.

This letter summarizes Ms. Dryke's remaining responsibilities under the Order; it does not alter or expand Ms. Dryke's responsibilities under the Order.

No Further Action Determination

Ecology has determined that no further remedial action is necessary to clean up contamination at the Site under MTCA. However, as explained above, further remedial action is still necessary under MTCA to control and monitor the remaining contamination and periodically review the conditions at the Site.

Delisting of the Site

Based on the no further action determination, Ecology proposed removing the Site from the Hazardous Sites List (HSL). Ecology published notice of the proposal in the Site Register on March 30, 2017 and provided a 30-day public comment period, from March 30, 2017 to May 1, 2017. Seven comments were received. After review and consideration of the comments, Ecology will remove the Site from the HSL. The removal will be reflected in the next publication of the HSL in the Site Register.

Thank You

Thank you for cleaning up the Site. Should you have any questions, please do not hesitate to contact Ecology's cleanup project manager, Andrew Smith at 360-407-6316 or Andrew.Smith@ecy.wa.gov.

Sincerely,

Rebecca Lawson, P.E., LHG
