RE: Listing of Associated Lab Samples in Quality Control Data Section

Dear Mr. Munson:

I am writing to you in response to the listing of associated lab samples in the quality control data header section of our report(s).

It was brought to our attention that in our QC Batch header for Method 6010 we were missing samples that should be listed. Upon further investigation by our Corporate IT Department, it was determined this was an issue relating to source data queries and has been corrected.

The Associated Lab Samples between these two sections should be the same. Please place a copy of this letter with each report for documentation purposes.

I apologize for any confusion or inconvenience this may have caused. If you have additional questions or concerns, please feel free to contact me at the address/number listed above.

RE: Project: Western Area
Pace Project No.: 2510017

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on November 15, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Mariah Peronto for

QUALIFIERS

Project: Western Area

Pace Project No.: 2510017

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

ANALYTE QUALIFIERS

- B+ Analyte was detected in the associated method blank as well as in the sample.
- D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.
- D4 Sample was diluted due to the presence of high levels of target analytes.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- R1 RPD value was outside control limits.
- S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).
- S3 Surrogate recovery exceeded laboratory control limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.
- S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

To: Pacific Environmental and Redevelopment Corporation (PERC)
From: Kara Roberts
Date: February 21, 2012
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 2510387
Sample Date(s): December 19, 2011 through December 20, 2011

This review summarizes the data quality of analytical results generated in support of the December 19, 2011 through December 20, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 2510387.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 2510387

Delivery Group Summary

Seven groundwater samples and one groundwater trip blank were collected by Pacific Environmental Redevelopment Corporation on December 19, 2011 and December 20, 2011. Samples were hand delivered to Pace Analytical Services in Seattle, Washington on December 20, 2011. Samples were analyzed for total and dissolved metals (arsenic, cadmium, lead), total and dissolved metals (mercury), diesel range organics, gasoline range organics, semivolatile organic compounds (pentachlorophenol only), and volatile organic compounds (VOCs) by methods 6010, 7470, NWTPH-Dx, NWTPH-Gx, 8270, and 8260, respectively.

The key data evaluation findings include the following:

- Total and dissolved metal results by method 6010 are of acceptable quality. None of the results were qualified.
- Total and dissolved mercury results by method 7470 have 100% of the results qualified.
- Pentachlorophenol results by method 8270 have 71.4% of the results qualified.
- VOC results by method 8260 have 4.1% of the results qualified.
- Diesel range organic results by method NWTPH-Dx have 71.4% of the results qualified.
- Gasoline range organic results by method NWTPH-Gx are of acceptable quality. None of the results were qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 0 Samples	Groundwater= 7 Samples	Trip Blank (Soil)= 0 Samples	Trip Blank (Groundwater)= 1 Sample
	6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 7470 Total Mercury 7470 Dissolved Mercury 8270 Pentachlorophenol Only 8260 VOCs NWTPH-Dx NWTPH-Gx		NWTPH-Gx 8260 VOCs

Representativeness

Holding Time:

Criteria Used to Qualify Data Associated with Holding Times:

- 1) Due to limited information concerning holding times for soil samples, it is left to the discretion of the reviewer to apply water holding time criteria to soil samples.
- 2) If holding times exceed:
 - a. Positive results are flagged as estimated (J).
 - b. Negative results are flagged with the sample quantitation limit as estimated (UJ).
- 3) If holding times grossly exceed upon first analysis or re-analysis:
 - a. Positive results are flagged as estimated (J or UJ).
 - b. Negative results are flagged as unusable (R).

Action: The following sample results exceeded holding times and were qualified based on the criteria above:

Field ID	Lab ID	Analytes/ Methods	Date Collected	Date Prepared	Date Analyzed	HT	Number of Days Past HT	Comment
SUP_MW_1_121911 SUP_MW_2_121911 SUP_MW_3_121911 SUP_MW_4_121911 SUP_MW_5_121911	2510387001 2510387002 2510387003 2510387004 2510387005	8270 Pentachlor ophenol	12/19/11	12/23/11	12/27/11	7 days	1	Slight exceedances of holding time. Qualified based on criteria 2a and 2b.
SUP_MW_1_121911 SUP_MW_2_121911 SUP_MW_3_121911 SUP_MW_4_121911 SUP_MW_5_121911	2510387001 2510387002 2510387003 2510387004 2510387005	NWTPH-Dx (Diesel Range SG and Motor Oil Range SG)	12/19/11	12/27/11	12/27/11	7 days to extract, 40 days after extraction	1	Slight exceedances of holding time. Qualified based on criteria 2b.

Accuracy

Surrogates:

All surrogate recoveries were within the control limits.

Action: No action was taken based on the evaluation of surrogate recoveries.

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples. All samples were transported via three coolers with trip blanks. Due to the way the chain-of-custody was filled out the lab only ran Trip Blank 1.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
2510387008	Trip Blank	SUP_MW_1_121911	2510387001	Carbon disulfide	0.23 J	ug/L
		SUP_MW_2_121911	2510387002	Trichloroethene	0.33 J	ug/L
		SUP_MW_3_121911	2510387003			
98401	Method Blank	SUP_MW_1_121911	2510387001	Mercury	0.000029 J	mg/L

		SUP_MW_6_122011	2510387006			
		SUP_MW_7_122011	2510387007			

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one with each extraction batch for method NWTPH-Dx. Method NWTPH-Dx did not have a MS/MSD prepared and analyzed. All other methods (6010, 7470, 8270, 8260, and NWTPH-Gx) had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD. No action was taken based on the evaluation of MS/MSDs.

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one every 20 samples for method 6010 and 8260, one per 10 samples for method 8270, and one per extraction batch for method NWTTPH-Dx. All other methods (7470 and NWTTPH-Gx) had LCS/LCSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the

associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_MW_1_121911	2510387001	98066	1,2,4-Trimethylbenzene	124	71-122			High	Qualified based on criteria 1a.
			2-Chlorotoluene	129	69-119			High	Based on the criteria above, results were not qualified.
			n-Butylbenzene	136	69-129			High	Based on the criteria above, results were not qualified.
			Vinyl chloride	113	80-112			High	Qualified based on criteria 1a.
SUP_MW_2_121911 SUP_MW_3_121911 SUP_MW_4_121911 SUP_MW_5_121911 SUP_MW_6_122011 SUP_MW_7_122011	2510387002 2510387003 2510387004 2510387005 2510387006 2510387007	98204	1,3,5-Trimethylbenzene	128	70-123			High	Based on the criteria above, results were not qualified.
2-Chlorotoluene	122		69-			High	Based on the		

					119				criteria above, results were not qualified.
			n-Propylbenzene	128	66-126			High	Based on the criteria above, results were not qualified.
			Tetrachloroethene	123	80-112			High	Based on the criteria above, results were not qualified.
			Trichloroethene	118	80-112			High	Qualified based on criteria 1a.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 20 samples for method 6010, 8260, 7470, NWTPH-Gx and NWTPH-Dx, and one every 10 samples for method 8270. No duplicates were collected.

Action: No action was taken based on the evaluation of field duplicates.

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

On the chain-of-custody the method listed for pentachlorophenol was 8260. The lab corrected the method to 8270 per communication with the client. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice. Cooler custody seals were used. The temperature of the delivery coolers were recorded at 5.3, 4.7, and 3.7°C and the first two coolers exceed the required temperature range. Samples SUP_MW_1_121911, SUP_MW_2_111911, SUP_MW_3_121911, SUP_MW_4_121911, and SUP_MW_5_121911 were kept in the cooler on ice overnight and were delivered to the lab with the other samples on November 20, 2011. Since the samples were kept on ice and only slightly exceeded the required temperature no samples were qualified based on cooler temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Forty-eight (48) sample results were qualified (see Attachment 1).
- Three detected sample results were qualified as estimated (J) due to LCS/LCSD recoveries that exceeded control limits or because the analysis was performed outside the holding time.
- Fourteen nondetected sample results were qualified as estimated (UJ) because the analysis was performed outside the holding time.
- One detected sample result was qualified (B) and 24 detected sample results were qualified as nondetected (UB) due to method/trip blank contamination.

- Six detected sample results were qualified as nondetected (UJB) due to method blank contamination and LCS/LCSD recoveries that exceeded control limits.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 2510387

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on December 20, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 2510387

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 2511542
Sample Date(s): April 2, 2012 through April 3, 2012

This review summarizes the data quality of analytical results generated in support of the April 2nd and 3rd, 2012 Remedial Investigation Workplan (groundwater monitoring) sampling event for the Superlon Plastics Site in Tacoma, Washington. This review summarizes the data quality in sample delivery group 2511542.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 2511542

Delivery Group Summary

Seven groundwater samples, one groundwater duplicate, four groundwater trip blanks, and one equipment blank were collected by Pacific Environmental Redevelopment Corporation on April 2nd and 3rd, 2012. Samples were hand delivered to Pace Analytical Services in Seattle, Washington on April 3rd, 2012. Samples were analyzed for total and dissolved metals (arsenic, cadmium, lead), total and dissolved mercury, diesel range organics, gasoline range organics, semivolatile organic compounds (pentachlorophenol only), volatile organic compounds (VOCs), total dissolved solids, and salinity by methods 6010, 7470, NWTPH-Dx, NWTPH-Gx, 8270, 8260, 2540C and 2520B, respectively. Pace Analytical Services subcontracted Fremont Analytical in Seattle, Washington to conduct the salinity analysis.

The key data evaluation findings include the following:

- Total and dissolved metal results by method 6010 are of acceptable quality. None of the results were qualified.
- Total and dissolved mercury results by method 7470 have 100% of the results qualified.
- Pentachlorophenol results by method 8270 have 88.8% of the results qualified.
- VOC results by method 8260 have 2.0% of the results qualified.
- Diesel range organic results by method NWTPH-Dx have 77.7% of the results qualified.
- Gasoline range organic results by method NWTPH-Gx are of acceptable quality. None of the results were qualified.
- Total dissolved solid results by method 2540C have 100% of the results qualified.
- Salinity results by method 2520B are of acceptable quality. None of the results were qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:		
Collected by the Field Crew		Provided by the Laboratory
Groundwater= 7 Samples (1 Duplicate)	Equipment Blank= 1 Sample	Trip Blank (Groundwater)= 4 Samples
6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 7470 Total Mercury 7470 Dissolved Mercury 8270 Pentachlorophenol Only 8260 VOC NWTPH-Dx NWTPH-Gx 2540C Total Dissolved Solids 2520B Salinity	6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 7470 Total Mercury 7470 Dissolved Mercury 8270 Pentachlorophenol Only 8260 VOC NWTPH-Dx NWTPH-Gx 2540C Total Dissolved Solids 2520B Salinity	NWTPH-Gx 8260 VOCs

Representativeness

Holding Time:

Criteria Used to Qualify Data Associated with Holding Times:

- 1) Holding Times for Soil Samples:
 - a. Due to limited information concerning holding times for soil samples, it is left to the discretion of the reviewer to apply water holding time criteria to soil samples.
- 2) Holding Times for Water Samples:
 - a. If holding times exceed:
 - i. Positive results are flagged as estimated (J).
 - ii. Negative results are flagged with the sample quantitation limit as estimated (UJ).
 - b. If holding times grossly exceed upon first analysis or re-analysis:
 - i. Positive results are flagged as estimated (J or UJ).
 - ii. Negative results are flagged as unusable (R).

Action: The following sample results exceeded holding times and were qualified based on the criteria above:

Accuracy

Surrogates:

Criteria Used to Qualify Data Associated with Surrogate Recoveries:

- 1) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than the upper acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are not flagged.
- 2) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than or equal to 10% but less than the lower acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged with the sample quantitation limit as approximated (UJ).
- 3) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction); one with a recovery greater than the upper acceptance limit and one with a recovery greater than or equal to 10% but less than the lower acceptance limit, qualify as described in criteria 2 above.
- 4) If any surrogate in a fraction shows less than 10% recovery:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged as unusable (R).

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Analytes/Methods Associated with Surrogate	Comment
SUP_MW_3_040212	2511542002	2-Fluorophenol	6	12-110	Low	Semivolatile Acid Surrogate	8270 Pentachlorophenol	Qualified based on criteria 4c.
		2,4,6-Tribromophenol	11	30-126	Low	Semivolatile Acid Surrogate		
NA	Method Blank: 109907	2,4,6-Tribromophenol	9	30-126	Low	Semivolatile Acid Surrogate	8270 Pentachlorophenol	Results were not qualified since they are quality control data.
		2-Fluorophenol	4	12-110	Low	Semivolatile Acid Surrogate		
NA	Matrix Spike Sample: 109909	2,4,6-Tribromophenol	0	30-126	Low	Semivolatile Acid Surrogate	8270 Pentachlorophenol	Results were not qualified since they are quality control data.
		2-Fluorophenol	0.7	12-110	Low	Semivolatile Acid Surrogate		
		Phenol-d6	5	10-110	Low	Semivolatile Acid Surrogate		

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples (minimum of one per day per matrix). All samples were transported via four cooler with trip blanks.

The following analytes were detected in the method, trip, and equipment blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
Trip Blank #1	Trip Blank	SUP_MW_5_040312 SUP_MW_6_040312	2511542008 2511542009	Carbon disulfide	0.32 J	ug/L

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is less than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one with each extraction batch for NWTTPH-Dx.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following samples exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one per 20 samples for method 6010 and 8260, one per extraction batch for method NWTPH-Gx and NWTPH-Dx, and one per 10 samples for method 8270.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_MW_4_040212	2511542001	109831	Diesel Range SG	99	61-98			High	Qualified based on criteria 1a and 1c.

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were prepared and analyzed at the required frequency. Sample SUP_MW_DUP_040212 (2511542006) was collected as a field duplicate and is associated with SUP_MW_2_040212 (2511542005).

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
2. Aqueous Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 35%.
3. Solid Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 50%.

Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.

Analyte	Results		Units	RPD

Total Dissolved Solids	526	537	mg/L	2

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

No discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice, however it was noted that MW-3 had an amber jar for NWTPH-Dx that had an approximate pH of 4. Cooler custody seals were used. The temperature of the delivery coolers were recorded at 2.6, 5.5, 6.9, and 7.4 °C. The first two coolers were within the required temperature. The other two coolers exceeded the required temperature range. Since the samples were delivered on ice the same day of collection, or kept on ice over-night, no samples were qualified based on cooler temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly). Salinity analysis was not conducted as requested on the chain-of-custody.

As reported by the lab, it should be noted the dissolved arsenic and cadmium sample results for SUP_MW_3_040212 (2511542002) were greater than the total arsenic and cadmium sample results. No qualification was given to these sample results.

It should be noted that there were poor recoveries of surrogates for pentachlorophenol analysis. Both the matrix spike, and the method blank had extremely low surrogate recoveries (<10%). In addition, the matrix spike pentachlorophenol had an extremely low percentage recovery. Due to pentachlorophenol's chemical characteristics, it typically exhibits poor recoveries. Pentachlorophenol sample results were not qualified based on the pentachlorophenol quality control data that exceeded surrogate and matrix spike recoveries.

One equipment blank was collected for this sampling event, SUP_MW_EQUIP_040312 (2511542012), and all groundwater samples collected for this event were assumed to be associated with this equipment blank. However, it was found that distilled water instead of deionized water was used to collect the equipment blank and for decontaminating equipment between sample

collection. Decontamination procedures, the use of distilled water, and the effects of both on the field samples are unknown. Purging of the well prior to collection of the groundwater samples may or may not have rinsed-out contaminants potentially left behind on the equipment from the distilled water. Since the technical implications of using distilled water are unable to be quantified based on the data collected, additional qualification of the data based on the equipment blank was not performed.

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Sixty-one (61) sample results were qualified (see Attachment 1).
- Two detected sample results were qualified as estimated (J) due to LCS/LCSD or MS/MSD recoveries that exceeded control limits.
- Thirty-seven nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD or MS/MSD recoveries that exceeded control limits and/or the analysis was conducted outside method holding times.
- Nine detected sample results were qualified (B) due to method blank contamination.
- One nondetected sample result was rejected (UR) due to surrogate recoveries that exceeded control limits. The same sample result had its analysis conducted outside method holding time.
- Twelve detected sample results were qualified as nondetect (UB) due to trip or method blank contamination.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 2511542

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on April 03, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Some analyses have been subcontracted outside of the Pace Network. The subcontracted laboratory report has been attached.

Amended Report, 4/18/12 Rev 1.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Karen Jang
karen.jang@pacelabs.com

QUALIFIERS

Project: Superlon

Pace Project No.: 2511542

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: GCSV/3445

[1] A duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

CL The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased low.

D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.

D9 Dissolved result is greater than the total. Data is within laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

P2 Re-extraction or re-analysis could not be performed due to insufficient sample amount.

S0 Surrogate recovery outside laboratory control limits.

To: Pacific Environmental and Redevelopment Corporation (PERC)
From: Kara Roberts
Date: September 28, 2012
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 2512829
Sample Date(s): July 5, 2012 through July 6, 2012

This review summarizes the data quality of analytical results generated in support of the July 6th and 7th, 2012 Remedial Investigation sampling event for the Superlon Plastics Site in Tacoma, Washington. This review summarizes the data quality in sample delivery group 2512829.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2012. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. Revision 3 September 2012.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 2512829

Delivery Group Summary

Seven groundwater samples, one groundwater duplicate, one equipment blank, and four trip blanks were collected by Pacific Environmental Redevelopment Corporation on July 5th and 6th, 2012. Samples were hand delivered to Pace Analytical Services in Seattle, Washington on July 6th, 2012 by a Pace representative. Samples were analyzed for total and dissolved metals (arsenic, cadmium, lead), total and dissolved mercury, diesel range organics, gasoline range organics, semivolatile organic compounds (pentachlorophenol only), volatile organic compounds (VOCs), total dissolved solids, and salinity by methods 6010, 7470, NWTPH-Dx, NWTPH-Gx, 8270, 8260, 2540C and 2520B, respectively.

The key data evaluation findings include the following:

- Total and dissolved metal results by method 6010 – None of the results were qualified.
- Total and dissolved mercury results by method 7470 – 100% of the results were qualified.
- Pentachlorophenol results by method 8270 – None of the results were qualified.
- VOC results by method 8260 – 1.3% of the results were qualified.
- Diesel range organic results by method NWTPH-Dx – 50% of the results were qualified.
- Gasoline range organic results by method NWTPH-Gx – None of the results were qualified.
- Total dissolved solid results by method 2540C – 100% of the results were qualified.
- Salinity results by method 2520B – None of the results were qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:		
Collected by the Field Crew		Provided by the Laboratory
Groundwater= 7 Samples (1 duplicate)	Equipment Blank = 1 Sample	Trip Blank (Groundwater)= 4 Sample
6010 Total Metals (As, Pb, Cd)	6010 Total Metals (As, Pb, Cd)	NWTPH-Gx
6010 Dissolved Metals (As, Pb, Cd)	6010 Dissolved Metals (As, Pb, Cd)	8260 VOCs
7470 Total Mercury	7470 Total Mercury	
7470 Dissolved Mercury	7470 Dissolved Mercury	
8270 Pentachlorophenol Only	8270 Pentachlorophenol Only	
8260 VOCs	8260 VOCs	
NWTPH-Dx	NWTPH-Dx	
NWTPH-Gx	NWTPH-Gx	
2540C Total Dissolved Solids	2540C Total Dissolved Solids	
2520B Salinity	2520B Salinity	

Representativeness

Holding Time:

All samples were extracted and analyzed within the required holding time as specified in the Sap & QAPP.

Action: No action was taken based on the evaluation of holding times.

Accuracy

Surrogates:

Criteria Used to Qualify Data Associated with Surrogate Recoveries:

- 1) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than the upper acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are not flagged.
- 2) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than or equal to 10% but less than the lower acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged with the sample quantitation limit as approximated (UJ).
- 3) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction); one with a recovery greater than the upper acceptance limit and one with a recovery greater than or equal to 10% but less than the lower acceptance limit, qualify as described in criteria 2 above.
- 4) If any surrogate in a fraction shows less than 10% recovery:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged as unusable (R).

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Analytes/Methods Associated with Surrogate	Comment
SUP_MW_3_070512	2512829002	Terphenyl-d14	32	38-121	Low	Base/Neutral	Pentachlorophenol	Results not qualified since there is only one SVOC fraction with a low recovery.

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Analytes/Methods Associated with Surrogate	Comment
Not Applicable	122313	Terphenyl-d14	146	38-121	High	Base/Neutral	Pentachlorophenol	Results not qualified since there is only one SVOC fraction with a high recovery.

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples or a minimum of one per day per matrix. All samples were transported via four coolers with the trip blanks.

The following analytes were detected in the method, trip, or equipment blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
Trip Blank 1	Trip Blank	SUP_MW_4_070512	2512829001	Bromomethane	0.19 J	ug/L
		SUP_MW_3_070512	2512829002	Methylene chloride	1.9 J	ug/L

		SUP_MW_EQUIP_070512	2512829004	Methylene chloride	0.77 J	ug/L
		SUP_MW_2_070512	2512829005	n-Butylbenzene	0.15 J	ug/L
		SUP_MW_5_070612	2512829006			
		SUP_MW_5_070612_9	2512829007			
		SUP_MW_6_070612	2512829008			
122325	Method Blank	SUP_MW_4_070512	2512829001	Total Dissolved Solids	2.0 J	mg/L
		SUP_MW_3_070512	2512829002			
		SUP_MW_1_070512	2512829003			
		SUP_MW_EQUIP_070512	2512829004			
		SUP_MW_2_070512	2512829005			
		SUP_MW_5_070612	2512829006			
		SUP_MW_5_070612_9	2512829007			
		SUP_MW_6_070612	2512829008			
SUP_MW_7_070612	2512829009					

The following analytes were detected in the method, trip, or equipment blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
SUP_MW_E QUIP_0705 12	Equipment Blank	(See Additional Comment Section)	(See Additional Comment Section)	Arsenic	0.0095 J	mg/L
				Lead	0.014	mg/L
				Arsenic, Dissolved	0.0073 J	mg/L
				Lead, Dissolved	0.0024 J	mg/L
				Bromodichloromethane	2.0	ug/L
				Bromoform	2.5	ug/L
				Chloroform	1.2	ug/L
				Dibromochloromethane	2.1	ug/L
				Toluene	0.12 J	ug/L
				Total Dissolved Solids	155	mg/L
Salinity	100	mg/L				

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is less than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Sample Result	Blank Result	Unit	Blank ID	Associated Blank Type/Comment
Analyte:	1,2,4-Trimethylbenzene					
SUP_MW_1_070512	2512829003	0.20 J	0.15 J	ug/L	122203	Method Blank
Analyte:	Acetone

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one with each extraction batch for method NWTPH-Dx. There was also no MS/MSD prepared and analyzed for method 2540C and 2520B.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following samples exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_MW_4_070512	2512829001	121910	Mercury	72/73	75-125	0.9	20	Low	Qualified based on criteria 2c and 2d.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one per 20 samples for method 6010 and 8260, one per 10 samples for method 8270, and one pair per extraction for method NWTPH-Dx. A LCSD was not prepared and analyzed for method 2540C and 2520B.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the

- data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
 - iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
 - iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_MW_4_070512	2512829001	123159	Motor Oil Range SG	100	61-98	-	-	High	Qualified based on criteria 1c.

SUP_MW_7_070612	2512829009								

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were prepared and analyzed at the required frequency. Sample SUP_MW_5_070612_9 was collected as a field duplicate and is associated with SUP_MW_5_070612.

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
2. Aqueous Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 35%.
3. Solid Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 50%.

Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.

Analyte	Results		Units	RPD
	SUP_MW_5_070612 (Lab ID - 2512829006)	SUP_MW_5_070612_9 (Lab ID - 2512829007)		
Diesel Range SG	0.039	ND (DL of 0.039)	mg/L	0
Arsenic	1.4	1.4	mg/L	0
Cadmium	0.021	0.022	mg/L	5
Arsenic, Dissolved	0.52	0.50	mg/L	4
Cadmium, Dissolved	0.0097	0.0092	mg/L	5
Total Dissolved Solids	2330	2280	mg/L	2
Bromomethane	ND (DL of 0.10)	0.23	ug/L	79
Salinity	1,730	1,730	mg/L	0

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

No discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice. Cooler custody seals were used. The temperature of the delivery coolers were recorded at 9.3, 6.0, 1.3 and 1.1 °C. The first cooler exceeded the required temperature range. The rest of the coolers were within the required

temperature. Since the samples were delivered on ice the same day of collection, or kept on ice over-night, no samples were qualified based on cooler temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

One equipment blank was collected for this sampling event, SUP_MW_EQUIP_070512 (2512829004), and all groundwater samples collected for this event were assumed to be associated with this equipment blank. However, it was found that distilled water instead of deionized water was used to collect the equipment blank and for decontaminating equipment between sample collection. Decontamination procedures, the use of distilled water, and the effects of both on the field samples are unknown. Purging of the well prior to collection of the groundwater samples may or may not have rinsed-out contaminants potentially left behind on the equipment from the distilled water. Since the technical implications of using distilled water are unable to be quantified based on the data collected, additional qualification of the data based on the equipment blank was not performed.

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Forty-four (44) sample results were qualified (see Attachment 1).
- Five detected sample results were qualified as estimated (J) due to MS/MSD recoveries that exceeded control limits.
- Twenty-two nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD recoveries that exceeded control limits, or MS/MSD recoveries that exceeded control limits.
- Nine detected sample results were qualified (B) and 8 detected sample results were qualified as nondetected (UB) due to method blank contamination.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 2512829

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on July 06, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Some analyses have been subcontracted outside of the Pace Network. The subcontracted laboratory report has been attached.

Ammended report, REV-1 09/07/2012. This report has been revised at the client's request to correctly report the acid surrogates.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Karen Jang

QUALIFIERS

Project: Superlon

Pace Project No.: 2512829

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

S6 Surrogate recovery outside control limits. Data accepted based on valid recovery of applicable surrogates (no analytes associated with this surrogate)

RE: Superlon
Lab ID: 1207033

July 12, 2012

Attention Karen Jang:

Fremont Analytical, Inc. received 9 sample(s) on 7/9/2012 for the analyses presented in the following report.

Salinity by SM 2520B

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Michelle Clements", written over a light blue horizontal line.

Michelle Clements
Sr. Chemist / Lab Manager

CLIENT: Pace Analytical Seattle**Project:** Superlon

I. SAMPLE RECEIPT:

All samples were received intact. The internal ice chest temperatures were measured on receipt and are recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Chain of Custody

1. Were custodial seals present? Yes No Not Required
2. Is Chain of Custody complete? Yes No Not Present
3. How was the sample delivered? Courier

Log In

4. Coolers are present? Yes No NA
5. Was an attempt made to cool the samples? Yes No NA
6. Were all coolers received at a temperature of >0° C to 10.0°C Yes No NA
7. Sample(s) in proper container(s)? Yes No
8. Sufficient sample volume for indicated test(s)? Yes No
9. Are samples properly preserved? Yes No
10. Was preservative added to bottles? Yes No NA
11. Is there headspace present in VOA vials? Yes No NA
12. Did all sample containers arrive in good condition?(unbroken) Yes No
13. Does paperwork match bottle labels? Yes No
14. Are matrices correctly identified on Chain of Custody? Yes No
15. Is it clear what analyses were requested? Yes No
16. Were all holding times able to be met? Yes No

Special Handling (if applicable)

17. Was client notified of all discrepancies with this order? Yes No NA

To: Pacific Environmental and Redevelopment Corporation (PERC)
From: Kara Roberts
Date: January 2, 2013
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 2513412 and 2513623
Sample Date(s): August 23, 2012 through September 20, 2012

This review summarizes the data quality of analytical results generated in support of the August 23rd through September 20th, 2012 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. This review summarizes the data quality in sample delivery group 2513412 and 2513623.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010. Rev 3, September 2012.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 2513412 and 2513623

Delivery Group Summary

Fifty soil samples, one groundwater sample, two surface water samples, three soil field duplicates, and four trip blank were collected by Pacific Environmental Redevelopment Corporation between August 23rd and September 20th, 2012. Samples were hand delivered by a Pace representative to Pace Analytical in Seattle, Washington on August 24th, 2012 and September 20th 2012. Samples were analyzed for total and dissolved metals (arsenic, cadmium, lead), total and dissolved mercury, diesel range organics, gasoline range organics, volatile organic compounds (VOCs), and total organic carbon (TOC) by methods 6010, 7470, NWTPH-Dx, NWTPH-Gx, 8260, and 9060, respectively.

The key data evaluation findings include the following:

- Total and dissolved metal results by method 6010 – 5.2% of the results were qualified.
- Total and dissolved mercury results by method 7470 – 16.7% of the results were qualified.
- VOC results by method 8260 – 9.8% of the results were qualified.
- Diesel range organic results by method NWTPH-Dx – 25% of the results were qualified.
- Gasoline range organic results by method NWTPH-Gx – None of the results were qualified.
- TOC results by method 2540C – None of the results were qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:				
Collected by the Field Crew			Provided by the Laboratory	
Soil = 50 Samples (3 Duplicates)	Groundwater = 1 Sample	Surface water = 2 Samples	Trip Blank (Solid) = 2 Samples	Trip Blank (Water) = 2 Sample
6010 Metals (As, Pb, Cd) 8260 VOCs 9060 TOC	6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 7470 Total Mercury 7470 Dissolved Mercury NWTPH-Gx NWTPH-Dx	6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 7470 Total Mercury 7470 Dissolved Mercury NWTPH-Dx NWTPH-Gx	8260 VOCs	NWTPH-Gx

Holding Time:

Criteria Used to Qualify Data Associated with Holding Times:

Representativeness

- 1) Holding Times for Soil Samples:
 - a. Due to limited information concerning holding times for soil samples, it is left to the discretion of the reviewer to apply water holding time criteria to soil samples.
- 2) Holding Times for Water Samples:
 - a. If holding times exceed:
 - i. Positive results are flagged as estimated (J).
 - ii. Negative results are flagged with the sample quantitation limit as estimated (UJ).
 - b. If holding times grossly exceed upon first analysis or re-analysis:
 - i. Positive results are flagged as estimated (J or UJ).
 - ii. Negative results are flagged as unusable (R).

Action: The following sample results exceeded holding times and were qualified based on the criteria above:

Field ID	Lab ID	Analytes/ Methods	Date Collected	Date Prepared	Date Analyzed	HT	Number of Days Past HT	Comment
SUP_SL_73_6- 8_082412	2513412034	Hexachloro-1,3-butadiene	8/24/12	9/5/12	9/11/12	14 days	4	Holding times were exceeded; however, based on criteria 1a, no qualifiers were applied or changed since the holding times for the soil sample only slightly exceeded.
		Tetrachloroethene						
		Trichloroethene						
SUP_SL_73_8- 10_082412	2513412035	Hexachloro-1,3-butadiene	8/24/12	9/5/12	9/11/12	14 days	4	Holding times were exceeded; however, based on criteria 1a, no qualifiers were applied or changed since the holding times for the soil sample only slightly exceeded.
		Tetrachloroethene						
		Trichloroethene						

Action: The following sample results exceeded holding times and were qualified based on the criteria above:

Field ID	Lab ID	Analytes/ Methods	Date Collected	Date Prepared	Date Analyzed	HT	Number of Days Past HT	Comment
SUP_SL_73_10- 12_082412	2513412036	Tetrachloroethene	8/24/12	9/5/12	9/11/12	14 days	4	Holding times were exceeded; however, based on criteria 1a, no qualifiers were applied or changed since the holding times for the soil sample only slightly exceeded.
		Trichloroethene						
SUP_SL_73_12- 14_082412	2513412037	Tetrachloroethene	8/24/12	9/5/12	9/11/12	14 days	4	Holding times were exceeded; however, based on criteria 1a, no qualifiers were applied or changed since the holding times for the soil sample only slightly exceeded.
SUP_SL_74_4- 6_082412	2513412041	p-Isopropyltoluene	8/24/12	9/5/12	9/11/12	14 days	4	Holding times were exceeded; however, based on criteria 1a, no qualifiers were applied or changed since the holding times for the soil sample only slightly exceeded.
SSMW-4S	2513623008	TOC	9/12/12		10/11/12	28 days	1	Holding times were exceeded; however, based on criteria 1a, no qualifiers were applied or changed since the holding times for the soil sample only slightly exceeded. Analysis was run at client request.

Accuracy

Surrogates:

Criteria Used to Qualify Data Associated with Surrogate Recoveries:

- 1) If at least two surrogates in either semivolatiles fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than the upper acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are not flagged.
- 2) If at least two surrogates in either semivolatiles fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than or equal to 10% but less than the lower acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both).
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged with the sample quantitation limit as approximated (UJ).
- 3) If at least two surrogates in either semivolatiles fraction (i.e. base/neutral or acid fraction); one with a recovery greater than the upper acceptance limit and

one with a recovery greater than or equal to 10% but less than the lower acceptance limit, qualify as described in criteria 2 above.

- 4) If any surrogate in a fraction shows less than 10% recovery:
- Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - Positive results for that fraction are flagged as estimated (J).
 - Negative results for that fraction are flagged as unusable (R).

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Methods Associated with Surrogate	Comment
SUP_SL_73_6-8_082412	2513412034	Dibromofluoromethane	48	74-126	Low	Volatile Surrogate	8260 VOCs	<p>Surrogate was outside QC limits and VOC results associated with the surrogate were qualified based on criteria 2b and 2c.</p> <p>It should be noted that the results for 1,2-dichloroethene (Total), hexachloro-1,3-butadiene, tetrachloroethene, trichloroethene, vinyl chloride, cis-1,2-dichloroethene, and trans-1,2-dichloroethene for this sample were not qualified since they were run under a separate method (8260 MSV 5035A Med Level VOA) with their own surrogate recoveries.</p>
SUP_SL_73_8-10_082412	2513412035	Dibromofluoromethane	47	74-126	Low	Volatile Surrogate	8260 VOCs	<p>Surrogate was outside QC limits and VOC results associated with the surrogate were qualified based on criteria 2b and 2c.</p> <p>It should be noted that the results for 1,2-dichloroethene (Total), cis-1,2-dichloroethene, trans-1,2-dichloroethene, hexachloro-1,3-butadiene, tetrachloroethene, trichloroethene, and vinyl chloride for this sample were not qualified since they were run under a separate method (8260 MSV 5035A Med Level VOA) with their own surrogate recoveries.</p>

Blanks:

SDG 25134120: As specified in the SAP & QAPP, method blanks were prepared and analyzed at the required frequency. All samples were transported via four coolers. Trip blanks were not prepared and analyzed at the required frequency of one trip blank per sample cooler submitted to the lab. Three of the four coolers contained trip blanks.

SDG 25136230: As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. It should be noted that there was not a method blank for TOC, however there are no requirements for method blanks for TOC in the SAP & QAPP. All samples were transported via one cooler with the trip blank.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
129084	Method Blank	SUP_GW_20_082412	2513412017	Mercury	0.000030 J	mg/L
128762	Method Blank	SUP_SL_74_6-8_082412 SUP_SL_74_8-10_082412 SUP_SL_74_10-12_082412 SUP_SL_74_12-14_082412 SUP_SL_74_12-14_082412	2513412042 2513412043 2513412044 2513412045 2513412046	Lead	0.064 J	mg/kg
131974	Method Blank	SW-SW-3-092012 SW-SW-4-092012	2513623001 2513623002	Arsenic, Dissolved	0.0040 J	mg/L

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:			
Field ID	Lab ID	Blank ID	Associated Blank Type/Comment
Analyte:	Mercury		
SUP_GW_20_082412	2513412017	129084	Method Blank

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one every 20 samples per matrix for method 8260 and one with each extraction batch for method NWTPH-Dx.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following samples exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	QC Sample	Analyte	% Rec	QC Limit	RP D	Max RPD	Bias	Comment
SUP_SL_69_2-4_082412	2513412001	128755/128756	Arsenic	-392/-426	75-125	5	20	Low	MS/MSD was outside QC limits; however, based on criteria 2a, no qualifiers were applied or changed since the sample concentration exceeded the spike concentration by a factor of four or more.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one every 20 samples per matrix for method 7470, 8260, 6010, and one per extraction batch for method NWTPH-Dx and NWTPH-Gx.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be

qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	QC Sample	Analyte	% Rec	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_73_6-8_082412	2513412034	129221	Vinyl Chloride	67	80-112	--	--	Low	LCS/LCSD was outside QC limits; however, based on criteria 1b and 1c, no qualifiers were applied or changed since more than half of the analytes in the LCS/LCSD were within the required recovery.
SUP_SL_73_8-10_082412	2513412035								
SUP_SL_73_10-12_082412	2513412036								
SUP_SL_73_12-14_082412	2513412037								
SUP_SL_74_4-6_082412	2513412041								
SUP_SL_74_6-8_082412	2513412042								
SUP_SL_74_8-10_082412	2513412043								

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	QC Sample	Analyte	% Rec	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_72_4-6_082412 SUP_SL_72_6-8_082412 SUP_SL_72_8-10_082412 SUP_SL_72_10-12_082412 SUP_SL_72_12-14_082412 SUP_SL_72_14-16_082412 SUP_SL_73_2-4_082412 SUP_SL_73_6-8_082412 SUP_SL_73_8-10_082412 SUP_SL_73_10-12_082412 SUP_SL_73_12-14_082412	2513412027 2513412028 2513412029 2513412030 2513412031 2513412032 2513412033 2513412034 2513412035 2513412036 2513412037	128626	tert-Amylmethyl ether	163	55-150	--	--	High	LCS/LCSD was outside QC limits and the results associated with the MS/MSD were qualified based on criteria 1a.
			Vinyl chloride	115	80-112	--	--	High	LCS/LCSD was outside QC limits and the results associated with the MS/MDS were qualified based on criteria 1a. It should be noted that the results for vinyl chloride for samples 2513412034 and 2513412035 were not qualified since they were run under a separate method (8260 MSV 5035A Med Level VOA) with their own MS/MSD.
SUP_SL_73_14-16_082412	2513412038	129143	Vinyl chloride	117	80-112	--	--	High	LCS/LCSD was outside QC limits; however based on criteria 1a, no qualifiers were applied or changed since none of the results were detected.

			Motor Oil Range SG	102	61-98	--	--	High	LCS/LCSD was outside QC limits and the results associated with the MS/MSD were qualified based on criteria 1a.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 20 samples for method 7470, NWTPH-Dx, and NWTPH-Gx.

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
2. Aqueous Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 35%.
3. Solid Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 50%.

<i>Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.</i>

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

SDG 2513412:

It was noted on the sample receipt that the analysis requested for the trip blanks was not able to be conducted with the amount of sample volume delivered (i.e., the sampler had 6010, 7470, and NWTPH-Dx requested on the chain-of-custody for the trip blanks but they only supplied with enough trip blanks for 8260 and NWTPH-Gx analysis). Stacy Munson was contacted and the laboratory was instructed to analyze trip blank 1 and trip blank 2 for method 8260 and trip blank 3 for method NWTPH-Gx. The sample receipt indicated that the terra vials had no date, time, or ID name, and that there was a MeOH vial with no sample for SUP_SL_72_12-14_082412; however, it appears that all of the requested analyses were conducted for the samples. The samples arrived in good condition, preserved correctly, and were on ice. It should be noted that two soil samples (SSMW7-C [2513412050] and SSMW7-S [2513412051]) were collected on 08/23/12 but were delivered to the laboratory the next day. These samples were kept in a refrigerator overnight before delivery to the laboratory. Cooler custody seals were used. The temperature of the delivery coolers were recorded at 2.4, 1.9, 3.1, and 5.1 °C and were within the required temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

The groundwater sample collected for this event (SUP_GW_20_082412 [2513412017]) should have been analyzed for total and dissolved metals using method 6020 instead of 6010 according to the SAP & QAPP. No action was taken based on this information.

Due to low recoveries in the surrogates (>10% but less than the lower acceptance limit), the detected and nondetected results for VOCs were flagged as estimated in samples SUP_SL_73_6-8_082412 (2513412034) and SUP_SL_73_8-10_082412 (2513412035). The surrogate recovery was outside control limits due to matrix interferences and was not confirmed with re-analysis. No action was taken based on this information.

The sample weight for dibromofluoromethane(S) in samples SUP_SL_72_4-6_082412 (2513412027), SUP_SL_72_10-12_082412 (2513412030), SUP_SL_72_12-14_082412 (2513412031), SUP_SL_74_2-4_082412 (2513412040), SUP_SL_74_6-8_082412 (2513412042), SUP_SL_74_8-10_082412 (2513412043), SUP_SL_74_10-12_082412 (2513412044), SUP_SL_74_12-14_082412 (2513412045), SUP_SL_74_14-16_082412 (2513412046), SUP_SL_74_4-6_082412 (2513412041), and SUP_SL_73_14-16_082412 (2513412038) did not meet method specifications. No action was taken based on this information.

The continuing calibration for the following laboratory control samples were outside of Pace analytical acceptance limits, therefore the results may be biased high. Based on this information, the detected results for the associated field sample results were qualified as estimated.

QC Sample	Associated Field ID	Associated Lab ID	Analyte
128626	SUP_SL_72_4-6_082412	2513412027	1,1-Dichloroethene
	SUP_SL_72_6-8_082412	2513412028	Tetrachloroethene ¹
	SUP_SL_72_8-10_082412	2513412029	tert-Amylmethyl ether
	SUP_SL_72_10-12_082412	2513412030	
	SUP_SL_72_12-14_082412	2513412031	
	SUP_SL_72_14-16_082412	2513412032	
	SUP_SL_73_2-4_082412	2513412033	
	SUP_SL_73_6-8_082412	2513412034	
	SUP_SL_73_8-10_082412	2513412035

SUP_SL_73_12-14_082412	2513412037		
128628	SUP_SL_73_14-16_082412	2513412039	1,1-Dichloroethene
	SUP_SL_74_2-4_082412	2513412040	Tetrachloroethene ²
	SUP_SL_74_6-8_082412	2513412042	tert-Amylmethyl ether
	SUP_SL_74_8-10_082412	2513412043	
	SUP_SL_74_10-12_082412	2513412044	
	SUP_SL_74_12-14_082412	2513412045	
	SUP_SL_74_14-16_082412	2513412046	
128907	SUP_SL_74_4-6_082412	2513412041	Vinyl chloride
129143	SUP_SL_73_14-16_082412	2513412038	Acetone

¹ The sample results for 2513412034, 2513412035, 2513412036, and 2513412037 for this analyte were not qualified since they were run under a separate method (8260 MSV 5035A Med Level VOA) with its own QC data.

² The sample result for 2513412043 for this analyte was not qualified since it was run under a separate method (8260 MSV 5035A Med Level VOA) with its own QC data.

SDG 2513623:

It was noted on the sample receipt that the 1L amber jar for SW-SW-3-092012 (2513623001) had a pH of 6 and was not in compliance with EPA recommendations. The SAP & QAPP does not specify a required pH level, however since the sample was not in compliance with EPA recommendations the results are likely biased low and the associated results were flagged as estimated (J). No additional samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact). The samples arrived in good condition, and were on ice. Cooler custody seals were used. The temperature of the delivery cooler was recorded at 3.0 °C and was within the required temperature.

Samples collected on 9/12/12, 9/13/12, and 9/14/12 were kept in a refrigerator on-site until delivery to the lab on 9/20/12.

The surface water samples (SW-SW-3-092012[2513623001] and SW-SW-4-092012 [2513623002]) for this event were analyzed using method 6010 for total and dissolved metals. According to the SAP & QAPP, these samples should have been analyzed using method 6020. No action was taken based on this discrepancy.

Overall Assessment of 2513412 and 2513623:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- One hundred forty-eight (148) sample results were qualified (see Attachment 1).
- Thirty-two detected sample results were qualified as estimated (J) due to a the continuing calibration check being outside acceptance limits and/or surrogate recoveries that exceeded control limits, MS/MSD recoveries that exceeded control limits, LCS/LCSD recoveries that exceeded control limits, or the sample did not meet EPA recommended pH requirements.

- One hundred eight nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD recoveries that exceeded control limits or surrogate recoveries that exceeded control limits.
- Seven detected sample results were qualified (B) and one detected sample result was qualified as nondetected (UB) due to method blank contamination.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon-R1 Phase III
Pace Project No.: 2513412

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on August 24, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Karen Jang

QUALIFIERS

Project: Superlon-R1 Phase III

Pace Project No.: 2513412

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-G Pace Analytical Services - Green Bay

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: MSV/7663

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/7664

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/7686

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/7694

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: WETA/14005

[WB] Results reported on dry weight basis per cited method.

Batch: WETA/14006

[WB] Results reported on dry weight basis per cited method.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

CH The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

QUALIFIERS

Project: Superlon-R1 Phase III

Pace Project No.: 2513412

ANALYTE QUALIFIERS

- D4 Sample was diluted due to the presence of high levels of target analytes.
- G2 The sample weight in the container did not meet method specifications.
- L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M2 Matrix spike recovery was below QC limits due to sample dilution. Data acceptance based on laboratory control sample (LCS) recovery.
- R1 RPD value was outside control limits.
- S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

To: Pacific Environmental and Redevelopment Corporation (PERC)
From: Kara Roberts
Date: January 2, 2013
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 2513412 and 2513623
Sample Date(s): August 23, 2012 through September 20, 2012

This review summarizes the data quality of analytical results generated in support of the August 23rd through September 20th, 2012 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. This review summarizes the data quality in sample delivery group 2513412 and 2513623.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010. Rev 3, September 2012.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 2513412 and 2513623

Delivery Group Summary

Fifty soil samples, one groundwater sample, two surface water samples, three soil field duplicates, and four trip blank were collected by Pacific Environmental Redevelopment Corporation between August 23rd and September 20th, 2012. Samples were hand delivered by a Pace representative to Pace Analytical in Seattle, Washington on August 24th, 2012 and September 20th 2012. Samples were analyzed for total and dissolved metals (arsenic, cadmium, lead), total and dissolved mercury, diesel range organics, gasoline range organics, volatile organic compounds (VOCs), and total organic carbon (TOC) by methods 6010, 7470, NWTPH-Dx, NWTPH-Gx, 8260, and 9060, respectively.

The key data evaluation findings include the following:

- Total and dissolved metal results by method 6010 – 5.2% of the results were qualified.
- Total and dissolved mercury results by method 7470 – 16.7% of the results were qualified.
- VOC results by method 8260 – 9.8% of the results were qualified.
- Diesel range organic results by method NWTPH-Dx – 25% of the results were qualified.
- Gasoline range organic results by method NWTPH-Gx – None of the results were qualified.
- TOC results by method 2540C – None of the results were qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:				
Collected by the Field Crew			Provided by the Laboratory	
Soil = 50 Samples (3 Duplicates)	Groundwater = 1 Sample	Surface water = 2 Samples	Trip Blank (Solid) = 2 Samples	Trip Blank (Water) = 2 Sample
6010 Metals (As, Pb, Cd) 8260 VOCs 9060 TOC	6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 7470 Total Mercury 7470 Dissolved Mercury NWTPH-Gx NWTPH-Dx	6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 7470 Total Mercury 7470 Dissolved Mercury NWTPH-Dx NWTPH-Gx	8260 VOCs	NWTPH-Gx

Holding Time:

Criteria Used to Qualify Data Associated with Holding Times:

Representativeness

- 1) Holding Times for Soil Samples:
 - a. Due to limited information concerning holding times for soil samples, it is left to the discretion of the reviewer to apply water holding time criteria to soil samples.
- 2) Holding Times for Water Samples:
 - a. If holding times exceed:
 - i. Positive results are flagged as estimated (J).
 - ii. Negative results are flagged with the sample quantitation limit as estimated (UJ).
 - b. If holding times grossly exceed upon first analysis or re-analysis:
 - i. Positive results are flagged as estimated (J or UJ).
 - ii. Negative results are flagged as unusable (R).

Action: The following sample results exceeded holding times and were qualified based on the criteria above:

Field ID	Lab ID	Analytes/ Methods	Date Collected	Date Prepared	Date Analyzed	HT	Number of Days Past HT	Comment
SUP_SL_73_6- 8_082412	2513412034	Hexachloro-1,3-butadiene	8/24/12	9/5/12	9/11/12	14 days	4	Holding times were exceeded; however, based on criteria 1a, no qualifiers were applied or changed since the holding times for the soil sample only slightly exceeded.
		Tetrachloroethene						
		Trichloroethene						
SUP_SL_73_8- 10_082412	2513412035	Hexachloro-1,3-butadiene	8/24/12	9/5/12	9/11/12	14 days	4	Holding times were exceeded; however, based on criteria 1a, no qualifiers were applied or changed since the holding times for the soil sample only slightly exceeded.
		Tetrachloroethene						
		Trichloroethene						

Action: The following sample results exceeded holding times and were qualified based on the criteria above:

Field ID	Lab ID	Analytes/ Methods	Date Collected	Date Prepared	Date Analyzed	HT	Number of Days Past HT	Comment
SUP_SL_73_10- 12_082412	2513412036	Tetrachloroethene	8/24/12	9/5/12	9/11/12	14 days	4	Holding times were exceeded; however, based on criteria 1a, no qualifiers were applied or changed since the holding times for the soil sample only slightly exceeded.
		Trichloroethene						
SUP_SL_73_12- 14_082412	2513412037	Tetrachloroethene	8/24/12	9/5/12	9/11/12	14 days	4	Holding times were exceeded; however, based on criteria 1a, no qualifiers were applied or changed since the holding times for the soil sample only slightly exceeded.
SUP_SL_74_4- 6_082412	2513412041	p-Isopropyltoluene	8/24/12	9/5/12	9/11/12	14 days	4	Holding times were exceeded; however, based on criteria 1a, no qualifiers were applied or changed since the holding times for the soil sample only slightly exceeded.
SSMW-4S	2513623008	TOC	9/12/12		10/11/12	28 days	1	Holding times were exceeded; however, based on criteria 1a, no qualifiers were applied or changed since the holding times for the soil sample only slightly exceeded. Analysis was run at client request.

Accuracy

Surrogates:

Criteria Used to Qualify Data Associated with Surrogate Recoveries:

- 1) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than the upper acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are not flagged.
- 2) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than or equal to 10% but less than the lower acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both).
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged with the sample quantitation limit as approximated (UJ).
- 3) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction); one with a recovery greater than the upper acceptance limit and

one with a recovery greater than or equal to 10% but less than the lower acceptance limit, qualify as described in criteria 2 above.

- 4) If any surrogate in a fraction shows less than 10% recovery:
- a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged as unusable (R).

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Methods Associated with Surrogate	Comment
SUP_SL_73_6-8_082412	2513412034	Dibromofluoromethane	48	74-126	Low	Volatile Surrogate	8260 VOCs	<p>Surrogate was outside QC limits and VOC results associated with the surrogate were qualified based on criteria 2b and 2c.</p> <p>It should be noted that the results for 1,2-dichloroethene (Total), hexachloro-1,3-butadiene, tetrachloroethene, trichloroethene, vinyl chloride, cis-1,2-dichloroethene, and trans-1,2-dichloroethene for this sample were not qualified since they were run under a separate method (8260 MSV 5035A Med Level VOA) with their own surrogate recoveries.</p>
SUP_SL_73_8-10_082412	2513412035	Dibromofluoromethane	47	74-126	Low	Volatile Surrogate	8260 VOCs	<p>Surrogate was outside QC limits and VOC results associated with the surrogate were qualified based on criteria 2b and 2c.</p> <p>It should be noted that the results for 1,2-dichloroethene (Total), cis-1,2-dichloroethene, trans-1,2-dichloroethene, hexachloro-1,3-butadiene, tetrachloroethene, trichloroethene, and vinyl chloride for this sample were not qualified since they were run under a separate method (8260 MSV 5035A Med Level VOA) with their own surrogate recoveries.</p>

Blanks:

SDG 25134120: As specified in the SAP & QAPP, method blanks were prepared and analyzed at the required frequency. All samples were transported via four coolers. Trip blanks were not prepared and analyzed at the required frequency of one trip blank per sample cooler submitted to the lab. Three of the four coolers contained trip blanks.

SDG 25136230: As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. It should be noted that there was not a method blank for TOC, however there are no requirements for method blanks for TOC in the SAP & QAPP. All samples were transported via one cooler with the trip blank.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
129084	Method Blank	SUP_GW_20_082412	2513412017	Mercury	0.000030 J	mg/L
128762	Method Blank	SUP_SL_74_6-8_082412 SUP_SL_74_8-10_082412 SUP_SL_74_10-12_082412 SUP_SL_74_12-14_082412 SUP_SL_74_12-14_082412	2513412042 2513412043 2513412044 2513412045 2513412046	Lead	0.064 J	mg/kg
131974	Method Blank	SW-SW-3-092012 SW-SW-4-092012	2513623001 2513623002	Arsenic, Dissolved	0.0040 J	mg/L

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:			
Field ID	Lab ID	Blank ID	Associated Blank Type/Comment
Analyte:	Mercury		
SUP_GW_20_082412	2513412017	129084	Method Blank
Analyte:	Lead		
SUP_SL_74_6-8_082412	2513412042	128762	Method Blank

Analyte:	Arsenic, Dissolved		
SW-SW-3-092012	2513623001	131974	Method Blank
SW-SW-4-092012	2513623002		

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one every 20 samples per matrix for method 8260 and one with each extraction batch for method NWTPH-Dx.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following samples exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	QC Sample	Analyte	% Rec	QC Limit	RP D	Max RPD	Bias	Comment
SUP_SL_69_2-4_082412	2513412001	128755/128756	Arsenic	-392/-426	75-125	5	20	Low	MS/MSD was outside QC limits; however, based on criteria 2a, no qualifiers were applied or changed since the sample concentration exceeded the spike concentration by a factor of four or more.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one every 20 samples per matrix for method 7470, 8260, 6010, and one per extraction batch for method NWTPH-Dx and NWTPH-Gx.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be

qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	QC Sample	Analyte	% Rec	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_73_6-8_082412	2513412034	129221	Vinyl Chloride	67	80-112	--	--	Low	LCS/LCSD was outside QC limits; however, based on criteria 1b and 1c, no qualifiers were applied or changed since more than half of the analytes in the LCS/LCSD were within the required recovery.
SUP_SL_73_8-10_082412	2513412035								
SUP_SL_73_10-12_082412	2513412036								
SUP_SL_73_12-14_082412	2513412037								
SUP_SL_74_4-6_082412	2513412041								
SUP_SL_74_6-8_082412	2513412042								
SUP_SL_74_8-10_082412	2513412043								

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	QC Sample	Analyte	% Rec	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_72_4-6_082412 SUP_SL_72_6-8_082412 SUP_SL_72_8-10_082412 SUP_SL_72_10-12_082412 SUP_SL_72_12-14_082412 SUP_SL_72_14-16_082412 SUP_SL_73_2-4_082412 SUP_SL_73_6-8_082412 SUP_SL_73_8-10_082412 SUP_SL_73_10-12_082412 SUP_SL_73_12-14_082412	2513412027 2513412028 2513412029 2513412030 2513412031 2513412032 2513412033 2513412034 2513412035 2513412036 2513412037	128626	tert-Amylmethyl ether	163	55-150	--	--	High	LCS/LCSD was outside QC limits and the results associated with the MS/MSD were qualified based on criteria 1a.
			Vinyl chloride	115	80-112	--	--	High	LCS/LCSD was outside QC limits and the results associated with the MS/MDS were qualified based on criteria 1a. It should be noted that the results for vinyl chloride for samples 2513412034 and 2513412035 were not qualified since they were run under a separate method (8260 MSV 5035A Med Level VOA) with their own MS/MSD.
SUP_SL_73_14-16_082412	2513412038	129143	Vinyl chloride	117	80-112	--	--	High	LCS/LCSD was outside QC limits; however based on criteria 1a, no qualifiers were applied or changed since none of the results were detected.

			Motor Oil Range SG	102	61-98	--	--	High	LCS/LCSD was outside QC limits and the results associated with the MS/MSD were qualified based on criteria 1a.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 20 samples for method 7470, NWTPH-Dx, and NWTPH-Gx.

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
2. Aqueous Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 35%.
3. Solid Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 50%.

<i>Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.</i>

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

SDG 2513412:

It was noted on the sample receipt that the analysis requested for the trip blanks was not able to be conducted with the amount of sample volume delivered (i.e., the sampler had 6010, 7470, and NWTPH-Dx requested on the chain-of-custody for the trip blanks but they only supplied with enough trip blanks for 8260 and NWTPH-Gx analysis). Stacy Munson was contacted and the laboratory was instructed to analyze trip blank 1 and trip blank 2 for method 8260 and trip blank 3 for method NWTPH-Gx. The sample receipt indicated that the terra vials had no date, time, or ID name, and that there was a MeOH vial with no sample for SUP_SL_72_12-14_082412; however, it appears that all of the requested analyses were conducted for the samples. The samples arrived in good condition, preserved correctly, and were on ice. It should be noted that two soil samples (SSMW7-C [2513412050] and SSMW7-S [2513412051]) were collected on 08/23/12 but were delivered to the laboratory the next day. These samples were kept in a refrigerator overnight before delivery to the laboratory. Cooler custody seals were used. The temperature of the delivery coolers were recorded at 2.4, 1.9, 3.1, and 5.1 °C and were within the required temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

The groundwater sample collected for this event (SUP_GW_20_082412 [2513412017]) should have been analyzed for total and dissolved metals using method 6020 instead of 6010 according to the SAP & QAPP. No action was taken based on this information.

Due to low recoveries in the surrogates (>10% but less than the lower acceptance limit), the detected and nondetected results for VOCs were flagged as estimated in samples SUP_SL_73_6-8_082412 (2513412034) and SUP_SL_73_8-10_082412 (2513412035). The surrogate recovery was outside control limits due to matrix interferences and was not confirmed with re-analysis. No action was taken based on this information.

The sample weight for dibromofluoromethane(S) in samples SUP_SL_72_4-6_082412 (2513412027), SUP_SL_72_10-12_082412 (2513412030), SUP_SL_72_12-14_082412 (2513412031), SUP_SL_74_2-4_082412 (2513412040), SUP_SL_74_6-8_082412 (2513412042), SUP_SL_74_8-10_082412 (2513412043), SUP_SL_74_10-12_082412 (2513412044), SUP_SL_74_12-14_082412 (2513412045), SUP_SL_74_14-16_082412 (2513412046), SUP_SL_74_4-6_082412 (2513412041), and SUP_SL_73_14-16_082412 (2513412038) did not meet method specifications. No action was taken based on this information.

The continuing calibration for the following laboratory control samples were outside of Pace analytical acceptance limits, therefore the results may be biased high. Based on this information, the detected results for the associated field sample results were qualified as estimated.

QC Sample	Associated Field ID	Associated Lab ID	Analyte
128626	SUP_SL_72_4-6_082412	2513412027	1,1-Dichloroethene
	SUP_SL_72_6-8_082412	2513412028	Tetrachloroethene ¹
	SUP_SL_72_8-10_082412	2513412029	tert-Amylmethyl ether

128628	SUP_SL_73_14-16_082412	2513412039	1,1-Dichloroethene
	SUP_SL_74_2-4_082412	2513412040	Tetrachloroethene ²
	SUP_SL_74_6-8_082412	2513412042	tert-Amylmethyl ether
	SUP_SL_74_8-10_082412	2513412043	
	SUP_SL_74_10-12_082412	2513412044	
	SUP_SL_74_12-14_082412	2513412045	
	SUP_SL_74_14-16_082412	2513412046	
128907	SUP_SL_74_4-6_082412	2513412041	Vinyl chloride
129143	SUP_SL_73_14-16_082412	2513412038	Acetone

¹ The sample results for 2513412034, 2513412035, 2513412036, and 2513412037 for this analyte were not qualified since they were run under a separate method (8260 MSV 5035A Med Level VOA) with its own QC data.

² The sample result for 2513412043 for this analyte was not qualified since it was run under a separate method (8260 MSV 5035A Med Level VOA) with its own QC data.

SDG 2513623:

It was noted on the sample receipt that the 1L amber jar for SW-SW-3-092012 (2513623001) had a pH of 6 and was not in compliance with EPA recommendations. The SAP & QAPP does not specify a required pH level, however since the sample was not in compliance with EPA recommendations the results are likely biased low and the associated results were flagged as estimated (J). No additional samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact). The samples arrived in good condition, and were on ice. Cooler custody seals were used. The temperature of the delivery cooler was recorded at 3.0 °C and was within the required temperature.

Samples collected on 9/12/12, 9/13/12, and 9/14/12 were kept in a refrigerator on-site until delivery to the lab on 9/20/12.

The surface water samples (SW-SW-3-092012[2513623001] and SW-SW-4-092012 [2513623002]) for this event were analyzed using method 6010 for total and dissolved metals. According to the SAP & QAPP, these samples should have been analyzed using method 6020. No action was taken based on this discrepancy.

Overall Assessment of 2513412 and 2513623:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- One hundred forty-eight (148) sample results were qualified (see Attachment 1).
- Thirty-two detected sample results were qualified as estimated (J) due to a the continuing calibration check being outside acceptance limits and/or surrogate recoveries that exceeded control limits, MS/MSD recoveries that exceeded control limits, LCS/LCSD recoveries that exceeded control limits, or the sample did not meet EPA recommended pH requirements.

- One hundred eight nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD recoveries that exceeded control limits or surrogate recoveries that exceeded control limits.
- Seven detected sample results were qualified (B) and one detected sample result was qualified as nondetected (UB) due to method blank contamination.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon - R1 Phase III
Pace Project No.: 2513623

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on September 20, 2012. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Sample 2513623-008 (SSMW-4S) was analyzed outside of hold time for TOC. Analysis was completed upon client approval.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Karen Jang

QUALIFIERS

Project: Superlon - R1 Phase III

Pace Project No.: 2513623

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

B Analyte was detected in the associated method blank.

D4 Sample was diluted due to the presence of high levels of target analytes.

H1 Analysis conducted outside the recognized method holding time.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

To: Pacific Environmental and Redevelopment Corporation (PERC)
From: Kara Roberts
Date: April 8, 2013
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 10218920
Sample Date(s): January 28, 2013 through January 30, 2013

This review summarizes the data quality of analytical results generated in support of the January 28, 2013 through January 30, 2013 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. This review summarizes the data quality in sample delivery group 10218920.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010. Rev 3, September 2012.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 10218920

Delivery Group Summary

Thirty-two groundwater samples, six equipment blanks, four field groundwater duplicates, and one trip blank were collected by Pacific Environmental Redevelopment Corporation (PERC) on January 28, 2013 through January 30, 2013. Samples were relinquished to a Pace representative on-site and shipped by courier to Pace Analytical Laboratories, in Minneapolis, Minnesota and Billings, Montana on January 30th, 2013. Samples were analyzed for total and dissolved metals (arsenic, cadmium, lead), total and dissolved mercury, diesel range organics, gasoline range organics, semivolatile organic compounds (pentachlorophenol only), volatile organic compounds (VOCs), total dissolved solids, specific conductance, and salinity by methods 6020, 7470, NWTPH-Dx, NWTPH-Gx, 8270, 8260, 2540C, 2510B, and a calculated method, respectively.

The key data evaluation findings include the following:

- Total and dissolved metal results by method 6020 – 46.0% of the results were qualified.
- Total and dissolved mercury results by method 7470 – 8.3% of the results were qualified.
- Pentachlorophenol results by method 8270 – None of the results were qualified.
- VOC results by method 8260 – None of the results were qualified.
- Diesel range organic results by method NWTPH-Dx – 27.8% of the results were qualified.
- Gasoline range organic results by method NWTPH-Gx – None of the results were qualified.
- Total dissolved solid results by method 2540C – 84.6% of the results were qualified.
- Specific conductance results by method 2510B – 46.2% of the results were qualified.
- Salinity results using a calculated method – 69.2% of the results were qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:		
Collected by the Field Crew		Provided by the Laboratory
Groundwater = 32 Samples (4 Field Duplicates)	Equipment Blank = 6 Samples	Trip Blank (Groundwater) = 1 Sample
6020 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 8270 Pentachlorophenol Only 8260 VOCs NWTPH-Gx NWTPH-Dx 7470 Total Mercury 7470 Dissolved Mercury 2540C Total Dissolved Solids 2510B Specific Conductance Calculated Salinity	6020 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 8270 Pentachlorophenol Only 8260 VOCs NWTPH-Gx NWTPH-Dx 7470 Total Mercury 7470 Dissolved Mercury 2540C Total Dissolved Solids 2510B Specific Conductance Calculated Salinity	NWTPH-Gx 8260 VOCs

Representativeness

Holding Time:

Criteria Used to Qualify Data Associated with Holding Times:

- 1) Holding Times for Soil Samples:
 - a. Due to limited information concerning holding times for soil samples, it is left to the discretion of the reviewer to apply water holding time criteria to soil samples.
- 2) Holding Times for Water Samples:
 - a. If holding times exceed:
 - i. Positive results are flagged as estimated (J).
 - ii. Negative results are flagged with the sample quantitation limit as estimated (UJ).
 - b. If holding times grossly exceed upon first analysis or re-analysis:
 - i. Positive results are flagged as estimated (J or UJ).
 - ii. Negative results are flagged as unusable (R).

Action: The following sample results exceeded holding times and were qualified based on the criteria above:

Field ID	Lab ID	Analytes/ Methods	Date Collected	Date Prepared	Date Analyzed	HT	Number of Days Past HT	Comment
GW-MW-6I-012813	10218920001	Total	1/28/13	Not	2/5/13	7 Days	1	Holding time exceeded EPA requirements (holding time for analyte was not specified in SAP/QAPP). Result was qualified based on criteria 2a.
EB-PUMP-1-012813	10218920003	Dissolved		Applicable				
GW-MW-4I-012813	10218920015	Solids						
GW-MW-5I-012813	10218920021							

Surrogates:

Criteria Used to Qualify Data Associated with Surrogate Recoveries:

- 1) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than the upper acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are not flagged.
- 2) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than or equal to 10% but less than the lower acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged with the sample quantitation limit as approximated (UJ).
- 3) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction); one with a recovery greater than the upper acceptance limit and one with a recovery greater than or equal to 10% but less than the lower acceptance limit, qualify as described in criteria 2 above.
- 4) If any surrogate in a fraction shows less than 10% recovery:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged as unusable (R).

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Analytes/Methods Associated with Surrogate	Comment
GW-MW-6-012813	10218920023	2,4,6-Tribromophenol	34	42-127	Low	Semivolatile Acid Surrogate	8270 Pentachlorophenol	Associated results were not qualified since only one surrogate in the semivolatile fraction was outside QC limits and the recovery was greater than 10%.
Not Applicable	1372646/1372647	n-Pentacosane	48/49	50-150	Low	N/A	NWTPH-Dx	Results were not qualified since the surrogate recovery that exceeded QC Limits was observed in a laboratory QA/QC sample and not on a field sample.

Representativeness

Blanks:

As specified in the SAP & QAPP, method, equipment, and trip blanks were prepared and analyzed at the required frequency. All samples were transported via 12 coolers with one of the twelve coolers containing the volatile samples and the trip blank.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit	
EB-PUMP-1-012813	Equipment Blank	GW-MW-6I-012813	10218920001	Arsenic	0.0028	mg/L

		GW-MW-8-013013	10218920039			
		GW-MW-8-013013-(20)	10218920040			

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:			
Field ID	Lab ID	Blank ID	Associated Blank Type/Comment

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one every 10 samples for method 8270 and one with each extraction batch for method NWTPH-Dx.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics

- a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
- b. If the spike recovery is >125% and the reported sample results are < PQL, the data is acceptable for use.
- c. If the spike recovery is >125% or <75% and the sample results are > PQL, qualify the data for these samples as estimated (J).
- d. If the spike recovery falls within the range of 30-74% and the sample results are < PQL, qualify the data for these samples as estimated (UJ).
- e. If spike recovery results fall <30% and the sample results are < PQL, qualify the data for these samples as unusable (R).

Action: The following samples exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	QC Sample	Analyte	% Rec	QC Limit	RPD	Max RPD	Bias	Comment
EB-PUMP-1-013013-(20)	10218920042	1375695/ 1375696	Mercury, Dissolved	68/60	75- 125	12	20	Low	MS/MSD was outside QC limits and the result associated with the MS/MSD was qualified based on criteria 2d.
GW-MW-6-012813 GW-MW-3I-013013 GW-MW-8I-013013 GW-MW-8-013013 EB-PUMP-1-013013	10218920023 10218920035 10218920037 10218920039 10218920041	1371899/ 1371900	Arsenic	71/152	75- 125	3	20	Low/ High	MS/MSD was outside QC limits; however, based on criteria 2a, no qualifiers were applied or changed since the sample concentration exceeded the spike concentration by a factor of four or more.
GW-MW-3I-013013-(20) GW-MW-8I-013013-(20) EB-PUMP-1-013013-(20)	10218920036 10218920038 10218920042	1373638/ 1373639	Arsenic, Dissolved	92/316	75- 125	17	20	High	MS/MSD was outside QC limits; however, based on criteria 2a, no qualifiers were applied or changed since the sample concentration exceeded the spike concentration by a factor of four or more.

Action: The following samples exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one every 20 samples for method 7470 and 6020, and one every 10 samples for method 8270.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).

- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > PQL as estimated (J).
- iii. If results are < PQL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < PQL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > PQL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < PQL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > PQL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < PQL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > PQL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < PQL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	QC Sample	Analyte	% Rec	QC Limit	RPD	Max RPD	Bias	Comment
GW-MW-6I-012813	10218920001	1372645/	Diesel	58/52	61-98	12	20	Low	LCS/LCSD was outside QC limits and the results associated with the LCS/LCSD were qualified based on criteria 1c.
EB-PUMP-1-012813	10218920003	1372652	Fuel

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 10 samples for method 8260.

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
 - a. Aqueous Field Duplicates:
 - i. Field duplicate precision will be screened against a RPD of 35%.
 - b. Solid Field Duplicates:
 - i. Field duplicate precision will be screened against a RPD of 50%.

Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.

Analyte	Results		Units	RPD
	GW-MW-5-012813 (Lab ID – 10218920017)	GW-MW-5-012813-(01) (Lab ID – 10218920019)

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

The samples arrived preserved correctly and were on ice. There were a couple of containers that were not intact upon receipt and a couple missing, however all required analysis was still able to be conducted. Cooler custody seals were used. The temperature of the delivery coolers were recorded at 4.4, 3.8, 3.4, 1.0, 2.3, 0.4, 1.6, 7.0, 6.2, 3.3, 1.6, and 1.2 °C. Five of the coolers arrived within the required temperature (4 ±2). Since the samples arrived to the lab on ice the same day of collection, or kept on ice overnight during the sampling event, and the required temperatures was only slightly exceeded, no samples were qualified based on cooler temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. preserved correctly).

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Ninety-five (95) sample results were qualified (see Attachment 1).
- One detected sample result was qualified as estimated (J) due to the analysis was conducted outside EPA's method holding time.
- Eleven nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD or MS/MSD recoveries that exceeded control limits.
- Forty-two detected sample results were qualified (B) and 38 detected sample results were qualified as nondetected (UB) due to equipment blank contamination.
- Three detected sample results were qualified as estimated (JB) due to equipment blank contamination and analysis being conducted outside EPA's method holding times.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon - Jan 2013 GWM
Pace Project No.: 10218920

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on January 30, 2013. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Revised Report, REV-1 Per client request, the results are evaluated to the PQL and Salinity as Seawater was removed.

The samples reported herein were analyzed via the NWTPH-Dx method and had Silica Gel clean up performed.

Due to a lab error, TDS was analyzed outside of the holding time for samples GW-MW-6I-012813, EB-PUMP-1-012813, GW-MW-4I-012813 & GW-MW-5I-012813 (10218920-001, 003, 015, 021). The client was notified 02/12/13 via email.

Due to a lab oversight, 8270 PCP batch 20833 included sixteen samples instead of only ten. This is per the PERC QAPP. The 8270 method allows twenty per batch. The client was notified 02/05/13 per email.

Revised Report, REV-2 "B" Flags were removed and cover letter narrative was updated for the samples with missed holds.

QUALIFIERS

Project: Superlon - Jan 2013 GWM

Pace Project No.: 10218920

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-M Pace Analytical Services - Minneapolis

PASI-MT Pace Analytical Services - Montana

ANALYTE QUALIFIERS

1M Out of hold result confirms in hold data.

2M Sample re-extracted out of hold to confirm, data was confirmed.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

H1 Analysis conducted outside the recognized method holding time.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

S0 Surrogate recovery outside laboratory control limits.

S1 Surrogate recovery outside laboratory control limits (confirmed by re-analysis).
