PREFACE

A Remedial Investigation (RI) is being conducted for soil, groundwater, surface water, and sediment at the Superlon Plastics Site, located at 2116 Taylor Way in Tacoma Washington in accordance with the State of Washington Model Toxics Control Act (MTCA), Chapter 173-340 of the Washington Administrative Code (WAC) under Agreed Order No. DE 5940. This On-Property Soils and Surface Water RI Report has been created to provide the Washington State Department of Ecology (Ecology) with the results from soil and surface water samples located on the Superlon property (the Property) only. Definition of the Site and the results of samples from other media and off-Property samples will be presented in future RIs. This approach, which has been approved by Ecology, will accelerate the remediation of the Property while work focusing on defining the Site boundary and determining a remedy for the Site continues (Ecology, 2013).

This RI is designed to address the on-property contamination. Subsequent phases of the Site RI will be needed to characterize the nature and extent of contamination for the Site as a whole, especially as regards to groundwater.

This page has been left blank intentionally to allow for
double-sided printing.

EXECUTIVE SUMMARY

INTRODUCTION

This Remedial Investigation (RI) has been prepared on behalf of White Birch, LLC (White Birch) and E. I. duPont de Nemours and Company (DuPont). These companies are hereafter referred to as the “Companies”. The Companies or their authorized agent have completed the work described in three RI Work Plans. These Work Plans were developed in accordance with the State of Washington Model Toxics Control Act (MTCA), Chapter 173-340 of the WAC under Agreed Order No. DE 5940. The Agreed Order required that the Companies develop a RI to characterize the extent, distribution, and sources of all hazardous substances detected at the Site and submit it to Ecology for review and approval in accordance with WAC 173-340-350(7).

The purpose of this RI was to collect, develop, and evaluate sufficient information regarding the Superlon Plastics Property (Property) to enable the completion of the Feasibility Study (FS) for on-Property soil and surface water only. The RI characterizes the nature and extent of contamination in the context of past activities on the Property and presents the analytical data, fill characteristics, and other pieces of information that have been collected on the Property through the completion of the three phases of the RI.

PROPERTY LOCATION AND DESCRIPTION

The Property is located at 2116 Taylor Way in Tacoma, Washington and is currently owned by White Birch and operated by Superlon Plastics Incorporated, an extruded plastic pipe manufacturer (see Figure 2-1). The Property is located in a highly industrialized area of the Tacoma Tidal Flats located between the Blair and Hylebos Waterways.

The Property shows evidence of historical filling activities; however, the origin of the majority of the fill materials are largely unknown. Phase I, Phase II and Phase III of the RI collected additional information on the lithology of the Property.

Site History:

A history of Property ownership is as follows:

- In 1925, Latimer-Goodwin Chemical Company (Latimer-Goodwin) purchased an approximately 5-acre parcel from Buffelen Lumber & Manufacturing Company. Latimer-Goodwin developed it for the manufacture of lead arsenate pesticides.
- In 1944, Grasselli Chemicals Department (Grasselli), a subsidiary of DuPont, purchased Latimer-Goodwin’s land parcel and the pesticide manufacturing facilities located there. Grasselli manufactured lead arsenate and calcium arsenate insecticides until in 1946, and performed product mixing and agricultural chemical warehousing operations until 1949.
- In 1951, DuPont sold the Property to V.C. Monahan, who operated the Cabin Creek Lumber Company. In 1968, V.C. Monahan in turn sold the Property to Justus Company, Inc., who operated a wood treatment facility there.

Remedial Investigation Report On-Property Soils and Surface Water at the Superlon Plastics Property, Tacoma, Washington

- In 1972, Frank B. Lynott, of Justus Cedar Homes and Lindal Cedar Homes sold the Property to Mr. Ragnar M. Nars, to be used for Superlon Plastics Company, Inc.
- In 1992, the Property was subdivided evenly into thirds, all of which were re-consolidated and granted through a series of quit claim deeds to White Birch Group, LLC. White Birch continues to own the Property.

GEOLOGY

Regional Geology

The site is located within the Tacoma tide flats, an area of unconsolidated sediment from the Puyallup River Valley, which extends from Commencement Bay to the south flank of Mount Rainier, more than 45 miles to the east. Sediment deposited at the mouth of the Puyallup River resulted in a large estuarine delta into Commencement Bay. The delta consisted of a tidal flat that merged landward with complex tidal marshes and sinuous tidal channels that in turn merged with the Puyallup River Valley floor.

Local Geology

Locally the shallow geology (up to 50 feet in depth) consists of up to 10 feet of unconsolidated fill material ranging from fine sands and silts to lengths of large wood pilings, construction debris and imported wastewater treatment sludge and gypsum-related by-products. Clays, representing the former ground surface prior to filling of the Property after 1961, occur between 8 to 10 feet below ground surface (bgs) and range in thickness between 4 and 8 feet thick. Below the clay is the first water-bearing course sorted sands. These sands range from 8 to 19 feet in thickness. Underlying the sands is a 1- to 8-foot thick layer of dark gray, organic very dense clay followed by a 20-foot thick layer of black sorted water-bearing sands with intermittent clay layers.

SITE HYDROGEOLOGY

The evaluation of hydrogeology within this RI is restricted to the discussion of the surface water under Building A and within the Building B footprint (Figure 4-1) prior to the installation of quarry spalls and gravel to create an exposure barrier in that area. Site groundwater will be discussed in a future RI.

Prior to the start of the RI, on-Property surface water consisted of an intermittent pond that occurred within the basements of the former Building B and Building A. Surface water remains under Building A, and sampling was conducted from the surface water to determine water quality.

INTERIM ACTIONS

Two Interim Actions (IA) were conducted on the Property between 2009 and 2011 and two IAs are on-going. The first two of these activities are complete and have been summarized in IA reports issued to Ecology (see Section 11 for references) as follows:

1. Property Preparation and Building B Demolition (Pacific Environmental and Redevelopment Corporation [PERC] 2010a)
2. Occidental Sludge Removal and Disposal (PERC 2012)

The following two IAs are on-going and will be summarized in IA reports issued to Ecology in the future:

1. Building D Soil Removal and Disposal (Completed in March, 2012; report to be available in 2013)

2. Building B Soil Removal and Disposal (Begin in the late summer of 2012 and will be continued until 2015)

All four of the IAs have removed or will be removing soils and/or wastes impacted with Property Constituents of Potential Interest (COPIs¹).

UST INVESTIGATION

Ground penetrating radar and a magnetometer were used to determine the existence and location of underground utilities on-Property prior to start of Phase I of the RI. This investigation identified three anomalies that seemed to indicate in-place underground storage tanks (USTs). Upon invasive investigation, no USTs were discovered.

SOIL QUALITY

Sampling Approach

Soil sample locations were determined based on a sampling grid to establish a systematic characterization of the Property. Two grids were established; a Property-wide grid on 75-foot centers that covered the exposed sections of the Property (i.e. those areas not covered by buildings and other structures) and a 37.5-foot grid within the Building A and B locations. Each RI sample was analyzed for two or more constituents. Figure 7-1 shows the soil boring locations.

Laboratory analyses performed on soil samples were determined based upon the location of the sample and the COPIs expected to be present. The COPIs for each soil sample were included in the RI Work Plans and approved by Ecology prior to the sampling effort. All samples were collected using a GeoProbe,[®] except under Building A where hand augering was necessary. All samples were collected using the methodology described in the Sampling and Analytical Plan & Quality Assurance Project Plan (PERC/ PIONEER Technologies Corporation [PIONEER] 2010b). Appendix A contains the Quality Assurance/Quality Control (QA/QC) reviews and laboratory reports for these samples. The results are presented in tables in Appendix B. The locations where COPIs were detected are shown on Figures 7-3 through 7-14.

Soil Conditions

The general subsurface materials encountered consist of up to 10 feet of non-native, unconsolidated fill material. The soil type within the fill material consists of grey to dark gray silt and clay mixed with variable percentages of sand, and fine gravel. Construction and other debris makes up to 35% of the fill, and consists of wood and brick fragments, metal chain and piping, large wood pilings, porcelain fragments and imported wastewater treatment sludge, gypsum and industrial by-products. The fill material was observed consistently throughout the Property.

On-Property Soil COPCs

A total of 1,294 on-Property soil samples were collected during Phase I, II and III of the RI. Screening² of on-Property COPIs indicate that the constituents of potential concern (COPC) in on-Property soils are

¹ COPIs were identified in the RI Work Plan (PERC 2010) and included all constituents previously found to be present during environmental investigations as well as other constituents that could be present based on historical activities at the property. COPIs included, arsenic, lead, cadmium, mercury, TPH-D, TPH-G, pentachlorophenol, and volatile organic constituents.

² Media concentrations were compared to screening criteria in order to identify constituents that may be of potential concern.

arsenic, lead, cadmium, select volatile organic constituents (VOCs), pentachlorophenol, heavy oils (TPH-HO), diesel-range total petroleum hydrocarbons (TPH-D) and gasoline-range total petroleum hydrocarbons (TPH-G). While this list represents the full range of COPCs encountered in the on-Property soils, the primary Property COPCs are arsenic and lead.

SURFACE WATER QUALITY

Sampling Approach

Five surface water samples were collected from the former Building B Basement footprint and under Building A. Laboratory analyses performed on surface water samples included total and dissolved arsenic, lead cadmium, and mercury and VOCs, and semi-volatile organic constituents (SVOCs). The locations of these samples and a summary of the COPCs detected are shown on Figure 7-15 and included in Appendix B.

On-Property Surface Water COPCs

Only arsenic, cadmium, lead, mercury, TPH-HO, pentachlorophenol, 1,2-cis-dichloroethylene, trichloroethylene and vinyl chloride were detected above the screening levels. These chemicals are the COPCs for on-Property surface water.

CONCLUSIONS AND RECOMMENDATIONS

This RI characterizes the nature and extent of contamination in the context of past activities on the Property and presents the analytical data, fill characteristics, and other pieces of information that have been collected on the Property through the completion of Phase III of the RI. The evaluation of data collected during the RI and the screening of these data has determined the COPCs for on-Property soils and surface water. When evaluating these COPCs and their physical location on-Property the following can be concluded:

1. The nature and extent of COPCs in soil have been adequately characterized.
2. The on-Property COPCs are:

**Remedial Investigation Report
On-Property Soils and Surface Water at the
Superlon Plastics Property,
Tacoma, Washington**

Soil COPCS		Surface Water COPCs
COPC based on exceedance of drinking water criteria in the surficial aquifer ³	COPCs based on exceedance of MTCA Industrial Method C Direct Contact Screening Levels	COPC based on exceedance of drinking water criteria ⁴
Arsenic	Arsenic	Arsenic
Cadmium	--	Cadmium
Lead	Lead	Lead
--	--	Mercury
Pentachlorophenol	--	Pentachlorophenol
--	TPH-D	--
--	TPH-G	--
--	TPH-HO	TPH-HO
--	--	cis-1,2-Dichloroethylene
--	--	Trichloroethylene
Vinyl Chloride	--	

- Arsenic and lead are present in soil throughout the Property and concentrations exceed industrial land use direct contact screening levels.
- Arsenic, cadmium, lead, pentachlorophenol and vinyl chloride in soil may be contributing to the groundwater concentrations in the surficial aquifer.
- TPH-G, TPH-D and TPH-HO soil concentrations are greater than the industrial land use direct contact screening levels at a few isolated locations. These occurrences are co-mingled, in all cases, with arsenic and/or lead.
- VOCs (in particular trichloroethylene and vinyl chloride) appear to have been associated with the wastewater treatment sludge formerly located in the western corner of the Property. An Interim Action removed the VOC-containing wastewater treatment sludge, with the exception of a thin lens of the material at the excavation limits along the southern property boundaries in two directions - toward the Gardner-Fields property and toward the off-Property drainage ditch. This remaining material will be addressed in the FS.
- Arsenic, cadmium, lead, mercury, TPH-HO, pentachlorophenol, 1,2-cis-dichloroethylene, trichloroethylene, and vinyl chloride have been detected in surface water above drinking water screening levels, and will be considered further in the FS.

Potential Sources

Impacts to the on-Property soil and surface waters appear to have come from two types of sources - the manufacturing of lead arsenate and calcium arsenate pesticides, and the importation of non-native fill. The impacts associated with the lead arsenate and calcium arsenate pesticide manufacturing appears to be isolated to the surface water and the soils within the Building A and B footprints.

³ The aquifers beneath the Property are brackish and non-potable. As such, they cannot serve as a source of drinking water. However, the use of drinking water criteria for the purposes of COPC identification ensures that constituents will not be prematurely eliminated from further consideration in the FS.

⁴ Surface waters on the Property exist only beneath Building A and underneath quarry spalls in the former Building B footprint. As such, they cannot serve as a source of drinking water. However, the use of drinking water criteria for the purposes of COPC identification ensures that constituents will not be prematurely eliminated from further consideration in the FS.

Impacts from the introduction of imported fill are more wide-spread and consist of three distinct fill types, including:

- **Wastewater Treatment Sludge:** This material was discreetly located in the southern quarter of the property, and was largely removed in an IA (see Occidental Sludge Removal and Disposal (PERC 2012)).
- **Black Shot:** Black spherical crystalline particles believed to be “shot” likely originating from the former adjacent US Gypsum Site, located at 2301 Taylor Way. This material occurs in two locations on-Property - in the extreme eastern corner of the Property and in the general vicinity of Building D.
- **General Fill:** During IAs conducted on-Property fill was discovered which contained many types of materials including creosote-covered wood, discarded oil containers, mixed metal of various types including lead pipe, and a white, gypsum-like material believed to be a gypsum manufacturing by-product. This fill also contained typical construction debris.

COPC Groups

Due to the Property’s manufacturing and filling history, COPCs have been co-mingled at different concentration ratios and in different material types at various locations on the Property. However, from the RI it is possible to identify four main groups of COPC-bearing materials. These are:

- Soils impacted with COPCs associated with the manufacturing of lead arsenate and calcium arsenate pesticides;
- Wastewater treatment sludge: A small amount of this material remains at the southern corner of the Property along the property boundaries;
- Soils containing black, spherical particles believed to be “shot”; and,
- General Fill/waste.

It is likely that these different materials and soils will need to be addressed separately in the FS.

Recommendations for the Feasibility Study

Based on the outcome of the three phases of RI conducted on the Property, the following actions are recommended for inclusion in the FS:

- Conduct additional leachability and treatability studies to determine the physiochemical and environmental transport characteristics of on-Property soil COPCs, in particular arsenic, lead and cadmium, for each COPC grouping.
- Identify potential human and ecological receptors and exposure pathways.
- Develop recommended remediation levels for COPCs in soil.
- Determine the site-specific cleanup levels for COPCs in non-potable surface, water once additional information is developed.
- Determine the points of compliance for soil and surface water.
- Identify areas of the Property that, based on the remediation levels and the future Property Land Use Plan, will require further remediation beyond that accomplished in the IAs.
- Identify, based on a consideration of model remedies and the future Property Land Use Plan, potentially viable remedial technologies to be for used material in each COPC grouping.

SECTION 1. INTRODUCTION

This RI has been prepared on behalf of White Birch, LLC (White Birch) and E. I. duPont de Nemours and Company (DuPont). These companies are hereafter referred to as the “Companies”. The Companies, or their authorized agent, have completed the work described in three Work Plans entitled:

1. “Phase I Remedial Investigation Work Plan, for the Superlon Plastics Site, Tacoma, Washington,” February 22, 2010 (PERC 2010).
2. “Phase II Remedial Investigation Work Plan, for the Superlon Plastics Site, Tacoma, Washington,” May 12, 2011 (PERC 2011a).
3. “Phase III Remedial Investigation Work Plan, for the Superlon Plastics Site, Tacoma, Washington,” July 17, 2012 (PERC 2012a).

These Work Plans were developed in accordance with the State of Washington Model Toxics Control Act (MTCA), Chapter 173-340 of the Washington Administrative Code (WAC) under Agreed Order No. DE 5940. The Agreed Order required that the Companies develop a RI to characterize the extent, distribution, and sources of all hazardous substances detected at the Site, as defined in WAC-340-200, and submit it to Washington State Department of Ecology (Ecology) for review and approval in accordance with WAC 173-340-350(7). The purpose of this RI is to collect, develop, and evaluate sufficient information regarding the Property occupied by Superlon Plastics Company, Incorporated (the Property) to enable the completion of a Feasibility Study (FS) for the on-Property soil and surface water at the Site. This RI characterizes the nature and extent of contamination in the context of past activities on the Property and the analytical data, fill characteristics, and other information that have been collected on the Property through the completion of Phase III of the RI.

1.1. REPORT ORGANIZATION

The RI Report is organized into eleven sections and a companion set of appendices:

- Section 1—Introduction: This section presents the purpose and objectives of the RI investigation and describes the report’s organization.
- Section 2 – Property Location and Description: This section presents a general description of the Property’s location and description.
- Section 3 – Objective and Scope of the RI: This section describes the tasks that were completed during the RI and those tasks that were excluded from this RI that were originally specified in the AO. These excluded tasks will be completed once sufficient information is developed and the collected information will presented in future RI reports.
- Section 4 – Property Physical Characteristics. This section presents a description of the Property’s background and environmental setting including the ownership history of the Site and a description of the depositional history of the non-native fill materials placed on the Property.

- Section 5 – Interim Actions: This section provides a summary of those actions that were taken and which are underway to remove impacted soils and/or wastes.
- Section 6 – UST Investigation: This section describes the process taken to determine the presence or absence of possible USTs on-Property.
- Section 7 – RI Investigation: This section describes the tasks completed to determine the absence or presence COPIs and the results of this work.
- Section 8 – Determination of COPCs: This section describes the approach used to determine the constituents of potential concern (COPCs) to be considered in the FS. The factors include a conceptual understanding of the potential or suspected sources of hazardous substances and contaminated media leading to the selection of preliminary screening levels.
- Section 9 – Screening Results: This section lists the results of the screening of the data collected during this RI and the selection of COPCs to be considered in the FS.
- Section 10 - Conclusions and Recommendations: This section reviews the results of the RI and provides -recommendations for the FS.
- Section 11 - References.

SECTION 2. PROPERTY LOCATION AND DESCRIPTION

The Property is currently owned by White Birch, LLC and operated by Superlon Plastics Incorporated (see Figure 2-1). Taylor Way borders the northeast edge of the Property. Beyond Taylor Way is a property owned by the Port of Tacoma. The Property is bounded to the north by a railroad right-of-way owned by the City of Tacoma Public Works (Parcel D). Beyond this right-of-way is a vacant triangle-shaped parcel of land owned by the Port of Tacoma. To the northwest are Lincoln Avenue and a warehouse operation. To the south and southwest is Port of Tacoma property, which is leased and, until recently, operated as the Haub Log Yard. The property to the southeast is owned by RTH Tacoma, LLC and leased and operated by Gardner-Fields Products, a roofing and waterproofing products manufacturing business.

The Property is located at 2116 Taylor Way in Tacoma, Washington and is currently owned by White Birch, LLC and operated by Superlon Plastics Incorporated, an extruded plastic pipe manufacturer. The Property is located in a highly industrialized area of the Tacoma tidal flats, located between the Blair and Hylebos Waterways. Several known Ecology and United States Environmental Protection Agency (EPA) hazardous waste cleanup sites are within 0.25 miles of the Property including the Reichold Chemical/SSA Container site, owned by SSA Containers and the Puyallup Tribe, and the Arkema site, the US Gypsum/Thermofiber Plant site, the Atofina (formerly ELF Atochem) site and the former Murray Pacific Log Yard #1, all of which are owned by the Port of Tacoma. The Hylebos Waterway National Priorities List (NPL) site is located less than 0.5 miles to the northeast.

The Property shows evidence of historical filling activities; however, the nature and origin of the majority of the fill materials are largely unknown. Previous drilling on the Site by Landau Associates (LA) for the Port of Tacoma provides some limited information on the lithology of the material (Landau, 2008). Phase I, Phase II and Phase III of the RI collected additional information on the lithology of the material. This information is included in this RI Report (see Section 4.7).

This page has been left blank intentionally to allow for
double-sided printing.

SECTION 3. OBJECTIVE AND SCOPE OF RI

The objectives of the on-Property RI were to characterize existing contamination in soil and groundwater throughout the Superlon Property, and to develop information that can help to define the boundaries of the Site. The Companies accomplished these objectives, as they relate to on-Property soils and surface water, by completing the investigations described below:

- Developed a Sampling and Analysis Plan (SAP) (PERC 2010e) and a Health and Safety Plan (HASP) (PERC 2010c) per WAC 173-340-350(7)(c)(iv). These plans were prepared and referenced as part of the RI and IA Work Plans, and conform to the requirements specified in WAC 173-340-810 and WAC 173-340-820. The HASP and the SAP were submitted to Ecology for review and approval. Analytical procedures were in accordance with WAC 173-340-830;
- Assessed the type, extent and concentrations of residual constituents of potential interest (COPI) in soil on the Property;
- Conducted additional sampling and analysis of Property soils in order to fill data gaps discovered during review of Phase I and II of the RI. Specific data gaps included, but were not be limited to, the distribution of COPIs in areas within the Building A and B footprints, within the paved and non-paved areas along south, southeast and northwestern sides of the Property, and in the areas of former diesel and gasoline underground storage tanks (USTs). Analysis of these samples included, but were not be limited to, constituents typical of pesticides of the nature previously formulated or stored on-Property, wood treating operations formerly present on-Property, and other activities or materials previously found to be present on-Property;
- Completed sampling of surface water within the former Building B Basement footprint and under Building A;
- Evaluated COPIs and developed a list of Constituents of Potential Concern (COPCs) for on-Property soils and surface waters;
- Developed a conceptual exposure model that depicts an understanding of current exposure pathways to the on-Property COPCs in soils;
- Investigated the area where former underground storage tanks (UST)s were reported to determine if they remain in place;
- Identified additional data required to complete a Feasibility Study;
- Evaluated groundwater-to-indoor air pathway associated with VOCs on the Property. An interim action was completed to remove the waste water treatment sludge and the associated potential for exposure through this pathway; and,
- Identified, pursuant to WAC 173-340-710(2), all state and federal laws and permits and substantive requirements of those permits applicable to the above listed activities that were conducted under the Agreed Order. Pursuant to WAC 173-340-710(9)(e) and paragraph P of Section VIII of the Agreed Order), additional permits or approvals or substantive requirements were met and reported to Ecology.

The Companies also accomplished the following and the results of these activities will be reported in future RIs:

- Collected off-Property surface water and sediment samples in the drainage ditch located immediately adjacent to the northwest property boundary.
- Collected off-Property soil samples at the Gardner-Fields facility located to the southeast of the Property and on the Port of Tacoma's parcel to the northeast of the Property.
- Collected a grab sample of groundwater at one location on the Gardner-Fields property.
- Installed 16 groundwater (8 in the surficial aquifer and 8 in the intermediate aquifer) monitoring wells on-Property to aid in the delineation the lateral and vertical extent of constituents in groundwater. The results of this groundwater sampling also were used to identify COPCs in soils to account for potential soil-to-groundwater impacts.
- Investigated potential impacts from past sump pump discharges to the surrounding ditch system.

Excluded from this RI are the following tasks specified in the original RI Work Plan approved by Ecology. The following investigation activities are not complete but, once sufficient information is developed, will be presented in future RI reports:

- Definition of the boundaries of the Site.
- A hydrogeological conceptual model for the Site.
- Delineation of the lateral and vertical extent of constituents in groundwater, and sediments throughout the Site (i.e., define the Site boundaries).
- Identification, pursuant to WAC 173-340-710(2), of all state and federal laws and permits and substantive requirements of those permits applicable to the excluded activities conducted under the Agreed Order. Pursuant to WAC 173-340-710(9)(e) and paragraph P of Section VIII of the Agreed Order), the determination of whether additional permits or approvals or substantive requirements are required are a continuing obligation of the Companies. Reports on initial and subsequent identifications shall be submitted to Ecology.

SECTION 4. PROPERTY PHYSICAL CHARACTERISTICS

The physical characteristics of the Superlon Property are an important factor in predicting the transport and fate of hazardous constituents in the environment, and in determining potential exposure pathways. This section discusses the RI findings regarding the physical characteristics of the Property, as specified by the Order. These physical characteristics provide input parameters for evaluating the protectiveness of future remedial actions in the Feasibility Study.

The alternatives evaluated in the FS will use these characteristics to establish cleanup and remediation levels that will be used in the final remediation of the Property. The findings presented here should therefore be considered in the context of their role within the FS evaluation framework. The following subsections describe the on-Property setting, history of past environmental studies on the Property, land use, and regional and Property-specific geology.

4.1. Location and Description of the Property

The Property is used for industrial purposes and is almost entirely developed with buildings or covered with asphalt, concrete paving or other impervious surfaces (Figure 4-1). The Property meets the MTCA definition for an industrial property (WAC 173-340-200). The ground surface elevation on-Property ranges from approximately 14 to 17 feet above the National Geodetic Vertical Datum.

4.2. Climate

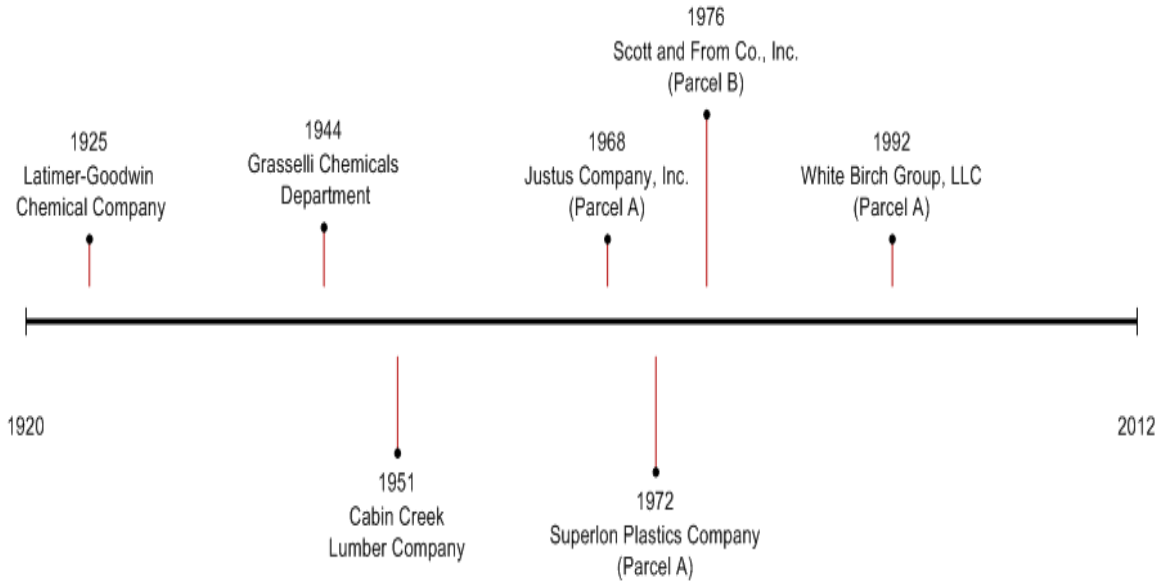

Mild temperatures and a prolonged rainy season typical of the Puget Sound region characterize the climate at the Property, with average winter daytime high temperatures in the 40s (degrees Fahrenheit) and the nighttime temperatures in the 30s. Summer daytime high temperatures average in the 70s, with nighttime lows in the 50s. Extreme temperatures usually are of short duration. The dry season is centered on July and August, with the rainy season extending from October to March. Average annual precipitation is 39.2 inches (TWC 2013).

4.3. Ecological Setting

The Property is covered with pavement, buildings and other impervious surfaces. Ecological receptors would not be directly exposed to soil containing hazardous substance(s). A Storm Water Ditch is located immediately adjacent to the northwest Property boundary and is identified as a wetland area by the City of Tacoma (GovME 2013).

4.4. Property Land Use History and Aerial Photography Review

A history of Property ownership is illustrated below:

**Remedial Investigation Report
On-Property Soils and Surface Water at the
Superlon Plastics Property,
Tacoma, Washington**

In 1925, Latimer-Goodwin Chemical Company (Latimer-Goodwin) purchased an approximately 5-acre parcel from Buffelen Lumber & Manufacturing Company. Latimer-Goodwin developed this property and manufactured lead arsenate, a fruit orchard pesticide, on the Property.

Aerial Photograph 1: The aerial photograph shown above is from 1931. It shows the construction of Taylor Way and Lincoln Avenue. Construction on-Property is limited to the construction of Buildings A and B. No filling of the Property is apparent, as evidenced by the presence of natural drainage features.

Remedial Investigation Report On-Property Soils and Surface Water at the Superlon Plastics Property, Tacoma, Washington

In 1944, Grasselli Chemicals Department (Grasselli), a subsidiary of E.I. duPont de Nemours and Company (DuPont), purchased Latimer-Goodwin's land parcel and lead arsenate manufacturing facilities on-Property, including processes, inventories, select contracts, goodwill, and trademarks. In 1945, DuPont purchased another 1-acre land parcel from Buffelen Lumber & Manufacturing Company. Grasselli continued to manufacture lead arsenate and calcium arsenate insecticides until 1946, and perform dust mixing and agricultural chemical warehousing operations until 1949. Grasselli also used the Property as their western US sales office, and operated a market development program for insecticides in the northwest fruit growing area at the facility. In 1946 and 1951, portions of DuPont's land holdings were sold to the City of Tacoma (Parcel C) and Buffelen Lumber Manufacturing Company (Parcel D), respectively. However, the subject Property (Parcel A) remained in DuPont's possession.

Aerial Photograph 2: The aerial photograph shown above is from 1950. It shows the construction of the curved railroad right-of-way that defines the north boundary of the Property. Construction on-Property since that shown in Photo 1 above is isolated to the construction an access road that bisects the Property in a northeast to southwest direction and clearing of the area south of Buildings A and B. No filling of the Property is apparent, as evidenced by the presence of the same natural drainage features shown in the earlier photograph.

In 1951, DuPont sold the remaining land holding (Parcels A and B, totaling 6.07 acres), including the Property (Parcel A), to V.C. Monahan, who operated as Cabin Creek Lumber Company. In 1968, V.C. Monahan divided the land holding and sold 3.1 acres (Parcel A) to Justus Company, Inc., who operated a wood treatment operations on-Property.

Aerial Photograph 3: The aerial photograph shown above is from 1967. It shows the filling of the northern section of the Property with a white gypsum-like fill material. The construction of Taylor Way and Lincoln Avenue is near completion. Construction on-Property appears to be unchanged since that shown in Photo 2, above. Filling of the current Gardner-Fields property south of the Property is apparent, as evidenced by the presence of black material and the absence of the natural drainage features shown in earlier photographs. This filling also extends onto the extreme southeastern corner of the Property.

In 1972, Frank B. Lynott, of Justus Cedar Homes and Lindal Cedar Homes, ceased wood treatment operations on-Property and sold the 3.1-acre Property (Parcel A) to Mr. Ragnar M. Nars, for use by the Superlon Plastics Company, Incorporated (Superlon). In 1976, Parcel B was sold to Scott and From Co. Incorporated.

Aerial Photograph 4: The aerial photograph shown above is from 1972. It shows the completion of the filling of the property and the construction of the first phase of Superlon's Building C. Development of the Haub Log Yard is underway, and the configuration of the drainage ditch along the southern property boundary has changed from its former location to, roughly, its current location.

From 1992 to present, ownership of the Property (Parcel A) was subdivided evenly into thirds, all of which were re-consolidated and granted through a series of quit claim deeds to White Birch Group, LLC.

Aerial Photograph 5: The aerial photograph shown above is from 1992. Development of the Property continues with the expansion of Building C to its current size. The current Gardner-Fields property has been completely filled, and is being used for storage.

Aerial Photograph 6: The aerial photograph above shows the property as it appeared on July 5, 2012. This photograph shows the results of the on-Property installation of the exposure barrier in the east-southeastern section of the Property, the demolition of Building B and the placement of an exposure barrier in its footprint, and the construction of Building D. The Property remains in the ownership of White Birch Group, LLC., in this configuration. The storage tanks shown on the Gardner-Fields property were constructed in 2011.

4.5. Deposition of Non-native Soils and Fill

Deposition of fill on-Property began after 1961 with the introduction of non-native, unconsolidated fill material ranging from fine sands and silts to lengths of large wood pilings, construction debris (including lead pipe), wastewater treatment sludge, gypsum wastes and manufacturing by-products imported from off-Property sources. This fill occurs Property-wide, ranging from 8 to 10 feet in thickness (see Figure 4-2).

4.6. Land Use

Based upon information obtained from the most recent City of Tacoma zoning map (dated 17 September 2012) the Property and surrounding land it are zoned for industrial use.

4.7. Geology

4.7.1. Regional Geology

The Property is located within the Tacoma tide flats, an area of unconsolidated sediment from the Puyallup River Valley, which extends from Commencement Bay to the south flank of Mount Rainier, more than 45 miles to the east. Sediment deposited at the mouth of the Puyallup River resulted in a large estuarine delta into Commencement Bay. The delta consisted of a tidal flat that merged landward with complex tidal marshes and sinuous tidal channels that, in turn, merged with the Puyallup River Valley floor.

4.7.2. Local Geology

Locally, the shallow geology (up to 50 feet in depth) consists of up to 10 feet of unconsolidated fill material ranging from fine sands and silts to lengths of large wood pilings, construction debris and imported wastewater treatment sludge, gypsum and manufacturing by-products. Clays, representing the former ground surface prior to filling of the Property after 1961, occur between 8 to 10 feet below bgs and range in thickness between 4 and 8 feet thick. Below the clay is the first water-bearing course sorted sands. These sands range from 8 to 19 feet in thickness. Underlying the sands is a 5- to 8-foot thick layer of dark gray, organic very dense clay followed by a 20-foot thick layer of black sorted water-bearing sands. A thin clay layer underlies the sands and completes the top 50 feet of the soil column (Figure 4-3).

4.7.2.1. *Geologic Unit A - Fill Unit*

The uppermost geological unit underlying the on-Property is the Fill Unit. This unit consists of up to 10 feet of unconsolidated fill material ranging from fine sands and silts to lengths of large wood pilings, construction debris, wastewater treatment sludge, gypsum, and manufacturing by-product wastes imported from off-Property sources. Water is intermittently present in this fill material and is discontinuous. Recharge to this water-bearing zone is mainly through infiltration of precipitation in unpaved areas.

4.7.2.2. Geologic Unit B

Geologic Unit B comprises the uppermost layer of pre-filling soil and consists of 8 to 19 feet of predominantly sandy to clayey organic silt with minor peat, woody debris, and shell fragments. Unit B is a confining unit separating the surface/perched water in Unit A and the shallow aquifer in Unit C (discussed below). The upper surface of this layer varies in elevation, probably because of surface drainages previously located throughout the tide flats (Bortleson et. al. 1980).

4.7.2.3. Geologic Unit C

Geologic Unit C comprises the sandy deltaic sediments underlying Unit B, and is identified as the shallow aquifer. The black to medium gray sands are fine to coarse grained with occasional silt. The thickness of this unit range from 8 to 19 feet in thickness in borings advanced to its depth. Groundwater within Unit B will be described within the RI for that media.

4.7.2.4. Geologic Unit D

Geologic Unit D comprises the low permeability layer below the shallow aquifer (Unit C). This low permeability unit consists of sandy silt or clayey silt deltaic sediments. On-Property the thickness of this unit ranges from 1 to 8 feet.

4.7.2.5. Geologic Unit E

On-Property Geologic Unit E consists of a 20-foot thick layer of black sorted sands below Unit D that extend to a depth of greater than 50 feet bgs. Unit E is identified as the intermediate aquifer. Groundwater within Unit E will be described within the RI for that media.

4.7.2.6. Geologic Unit F

Geologic Unit E consists of a low permeability layer of sandy silt or clayey silt deltaic sediments. On-Property the thickness of this unit ranges from 3 to 10 feet.

Regionally, Geologic Units E and F are part of a larger unit consisting of alternating layers of silts and sands below Unit D that extend to a depth of at least 120 feet bgs (Bortleson et. al. 1980).

4.8. On-Property Hydrogeology

Once the Site groundwater characteristics have been defined, they will be discussed in a future RI report.

SECTION 5. INTERIM ACTIONS (IA)

Two IAs were conducted on the Property between 2010, and 2011 and two IAs are on-going. The first two of these activities are complete and have been summarized in IA reports issued to Ecology (see Section 11 for references). They are:

1. Phase I Interim Action Report for the Superlon Plastics Site (PERC 2012b). This IA included:
 - Removing surficial vegetation;
 - Installing a coffer dam between Buildings A and B to facilitate surface water management;
 - Removing and disposing a four-inch layer of surface soil across all exposed areas of the Property;
 - Contouring the ground surface to direct surface water toward Building B;
 - Placing a compacted gravel layer over the area to prevent contact with contaminated soils;
 - Characterizing Building B materials to determine the proper disposal option after demolition;
 - Demolishing Building B and disposing the resulting debris; and,
 - Securing the Building B footprint by placing a layer of quarry spalls over this area.
2. Sludge Excavation and Disposal for the Superlon Plastics Site (PERC 2012c). This IA included:
 - Excavating wastewater treatment sludge;
 - Characterizing excavated materials to determine the proper disposal option; and,
 - Disposing the excavated waste water treatment sludge.

The following two IAs are on-going and will be summarized in IA reports issued to Ecology in the future. They are:

1. Building D Soil Removal and Disposal. This work was completed in March, 2012, and a report will be available in 2013. During this work the following was accomplished:
 - Excavating soil exceeding excavation goals underneath the footprint of Building D;
 - Characterizing excavated materials to determine the proper disposal option; and,
 - Disposing the excavated soils.
2. Building B Soil Removal and Disposal. This work began in the late summer of 2012 and is scheduled to be completed in 2015 (PERC 2011). During this work the following was or will be accomplished:
 - Excavating soils exceeding excavation goals within the footprint of former Building B;
 - Characterizing excavated materials to determine the proper disposal option; and,
 - Dewatering and disposing the excavated soils.

All four of the IAs have removed or will be removing impacted soils and/or wastes. Data from sampling points that have been or will be removed during the approved IAs are not be included in this RI Report, because they no longer represent Property conditions that should be evaluated in the FS.

This page has been left blank intentionally to allow for
double-sided printing.

SECTION 6. UST INVESTIGATION

Ground penetrating radar and a magnetometer were used to determine the existence and location of underground utilities on-Property prior to start of Phase I of the RI. This investigation identified three anomalies that seemed to indicate in-place underground storage tanks (USTs). Figure 6-1 presents these locations. Since no USTs were reported to be in the vicinity of these anomalies, an investigation was conducted to determine if they were present. Upon investigation, no USTs were discovered.

Location 1:

An exploratory Test pit was dug to a depth of six feet. The material/soil excavated was non-native fill consisting of mixed metal and gypsum rich-soil. No evidence of an UST was noted. The photograph shows the depth of excavation.

Location 2:

An exploratory Test pit was dug to a depth of six feet. The material/soil excavated was non-native fill consisting of mixed metal, wood, metal plating and gypsum rich-soil. No evidence of an UST was noted. The photograph shows the depth of excavation.

Location 3:

An exploratory Test pit was dug to a depth of seven feet. The material/soil excavated was non-native fill consisting of corrugated mixed metal, and gypsum rich-soil. No evidence of an UST was noted. The photograph shows the depth of excavation.

This page has been left blank intentionally to allow for double-sided printing.

SECTION 7. RI INVESTIGATION – FIELD WORK

The following tasks were completed during this RI to determine the nature and extent of COPIs⁵ in on-Property soils and surface water. This work included sample collection, laboratory analyses, data evaluation, and presentation of sampling results from the two environmental media, as follows:

- 59 soil borings were completed and 1294 soil samples were collected (see Figure 7-1). A total of 3,072 analyses were conducted on these samples. The soil boring logs are included as Appendix C.
- Five surface water samples were collected (see Figure 7-2).

Samples of two other environmental media, groundwater and off-Property sediment, also were collected during the three phases of the RI. The results of this work will be presented in future RI reports.

All RI data were collected in accordance with the Sampling and Analytical Plan & Quality Assurance Project Plan (PERC/PIONEER 2010b). All of the on-Property soil and surface water data collected during Phase I, II, and III are presented in this document. Data from sampling points that have been or will be removed during the approved IAs are not included in this RI Report, because they will not represent Property conditions that should be evaluated in the FS.

7.1. Soil Quality

7.1.1. Sampling Approach

Phase I soil sample locations were determined based on a sampling grid to establish a systematic characterization of the Property. Two grids were established; a Property-wide grid on 75-foot centers that covered the exposed sections of the Property (i.e. those areas not covered by buildings and other structures) and a 37.5-foot grid under the locations of Buildings A and B.

Phase II and Phase III soil sample locations were selected based on an evaluation of the Phase I sampling results. Phase II and III soil samples were collected to further characterize the lateral and vertical extent of COPIs and to aid the design of IAs. Each RI sample was analyzed for two or more constituents. Figure 7-1 shows the on-Property soil boring locations.

Laboratory analyses performed on soil samples included four total metals (arsenic, lead, cadmium, and, in selected locations, mercury), volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs [pentachlorophenol]), and Total Petroleum Hydrocarbons – diesel fraction (TPH-D) and Total Petroleum Hydrocarbons – gasoline fraction (TPH-G) and heavy oils. Summary tables for arsenic, lead, cadmium, mercury, pentachlorophenol, benzene, trichloroethylene (TCE), tetrachloroethylene (PCE), vinyl chloride (VC), TPH-D, TPH-G and TPH-HO are contained in Tables 7-3 through 7-14. Appendix A contains the QA/QC and laboratory

⁵ COPIs were identified in the RI Work Plan (PERC 2010) and included all constituents previously found to be present during environmental investigations as well as other constituents that could be present based on historical activities at the property. COPIs included, arsenic, lead, cadmium, mercury, TPH-D, TPH-G, pentachlorophenol, and volatile organic constituents.

reports for these samples. Detailed results are presented for each sample in each medium in tables in Appendix B.

All samples were collected using a Geoprobe® drill, except under Building A, where hand augering was necessary. All samples were collected using the methodology described in the Sampling and Analytical Plan & Quality Assurance Project Plan (PERC/PIONEER 2010b).

7.1.2. On-Property COPIs in Soils

A total of 1,294 samples of on-Property soils were collected during Phase I, II, and III of the RI. Laboratory analyses performed on these samples included up to four metals (arsenic, lead, cadmium, and, in selected locations, mercury), VOCs, SVOCs (pentachlorophenol), and Heavy Oils, TPH-D and TPH-G. The laboratory analytical results for all constituents are presented in Appendix B.

The data collected during Phase I, II, and III of the RI were evaluated based historical information, constituent concentrations, and the frequency of detection and the following key COPIs were identified:

- Lead
- Arsenic
- Cadmium
- Mercury
- TPH-D
- TPH-G
- Heavy oils
- Pentachlorophenol
- VOCs, in particular PCE, TCE and VC

7.1.3. COPI Detections in Soils

A summary of the number of sample analyzes and the number of detections for the key COPIs is presented in Table 7-1. The locations where the key COPIs were detected are shown on Figure 7-2 through 7-13. Subsurface cross-sections showing key COPI detections across selected areas of the Property are shown on Figures 7-16 through 7-20.

**Table 7-1: Number of Sample Analyzes and Detections in on-Property
Soil**

Soil COPIs	Number of Analyzes	Number of Detections
Arsenic	393	379
Lead	393	391
Cadmium	389	250
Mercury	21	18
TPH-G	150	48
TPH-D	156	66
TPH-HO	83	33
Pentachlorophenol	187	5
Tetrachloroethylene	325	50
Trichloroethylene	325	82
Vinyl chloride	325	33
Benzene	325	126

7.2. Surface Water Quality

Prior to the start of the RI, surface water consisted of intermittent standing water that occurred within the basements of the former Building B and Building A. To create a safe environment for workers and the local ecology, an exposure barrier of quarry spalls and/or crushed rock was installed, effectively covering the surface water in the footprint of building B after it was demolished. Surface water remains under Building A. Sampling was conducted from these surface waters to determine water quality.

7.2.1. Sampling Approach

A total of five surface water samples were collected from the former Building B footprint and under Building A. Laboratory analyses performed on surface water samples included total and dissolved arsenic, lead cadmium, and mercury and VOCs, and SVOCs.

7.2.2. Detections of COPIs in Surface Water

A summary of the number of analyzes and the number of detections for the key COPIs is presented in Table 7-14. The sample locations and a summary of the key COPI concentrations are shown on Figure 7-15 and included in Appendix B.

Table 7-14: Number of Analyzes and Detections in on-Property Surface Water

Surface Water (Totals data) COPIs	Number of Analyzes	Number of Detections
Arsenic	5	5
Lead	5	5
Cadmium	5	5
Mercury	3	2
Tetrachloroethylene	3	2
Trichloroethylene	3	1
cis-1,2-Dichloroethylene	3	3
Vinyl chloride	3	3
Pentachlorophenol	3	1
TPH-HO	2	2

7.3. Groundwater Quality

Groundwater quality will be discussed in a future RI.

7.4. Ditch Sediment and Surface Water Quality

The results of the surface water sediment sampling conducted within the ditch that borders the northwest Property boundary will be presented in a future RI.

7.5. Off-Property Soil Quality

Off-Property soil quality will be presented in a future RI.

SECTION 8. DETERMINATION OF COPCS

COPCs were identified by comparing maximum constituent concentrations to screening criteria. If any constituent concentration exceeded the screening criteria then it was considered to be a COPC. The COPCs that will be considered in the FS are based on the potential or suspected sources of constituents, types and concentrations of constituents, potentially affected media, potential exposure pathways and receptors, and land use. This determination of on-Property COPCs will aid in the development of an on-Property conceptual site model in the FS that will reflect Property conditions at the time of FS development and future Property development. All complete exposure pathways will be considered at that time, while examining risks to human health and the environment and developing proposed cleanup and remediation levels. Details of the sources and transport mechanisms, in addition to transport pathways, exposure routes, and receptors will be presented in the FS.

8.1. Potential Source Related Activities

The potential sources of constituents historically associated with the Property and addressed in the RI can generally be attributed to one of the following general manufacturing processes or activities:

- Pesticide Manufacturing
- Wood Treatment
- Chemical storage
- Fuel storage
- Historic land filling activities

The Property was investigated for potential sources of hazardous substances in environmental media Property-wide. In addition, on-Property groundwater, as well as soil and sediment immediately adjacent to the Property were investigated.

8.2. Land Use

The Property and surrounding properties are used solely for Industrial purposes. The Property meets the criteria of an industrial property as specified in WAC 173-340-745. The Property and adjacent properties are zoned Port Maritime and Industrial under Title 13 of the City of Tacoma Municipal Code. A long-term property land use plan has been developed and incorporates Superlon's long-term goals and desire to expand and upgrade their operations (ESM 2011). This land use plan will be incorporated in the FS when evaluating various remedial alternatives.

8.3. Drinking Water Quality

Groundwater underlying the Property is non-potable under WAC 173-340-720(2). Ecology confirmed this assumption in the Cleanup Action Plan for the Reichold Chemical Site, an adjacent property by stating "The site is underlain by three aquifers and two confining layers or 'aquifers'.... and that "....these three aquifers are brackish and non-potable...." (Ecology, 2008). This also has been confirmed by groundwater sampling at the Property, which has demonstrated that it is brackish and therefore, non-potable (see Figure 8-1).

Figure 8-1: Salinity Concentration in the Surficial and Intermediate Aquifer

8.4. Environmental Protection

Because the Property is covered with pavement, buildings and other impervious surfaces, ecological receptors cannot be directly exposed to soil or surface water containing hazardous substance(s). Therefore, the Property would qualify for an exclusion from a terrestrial ecological evaluation under WAC 173-340-7491 (see Table 8-1).

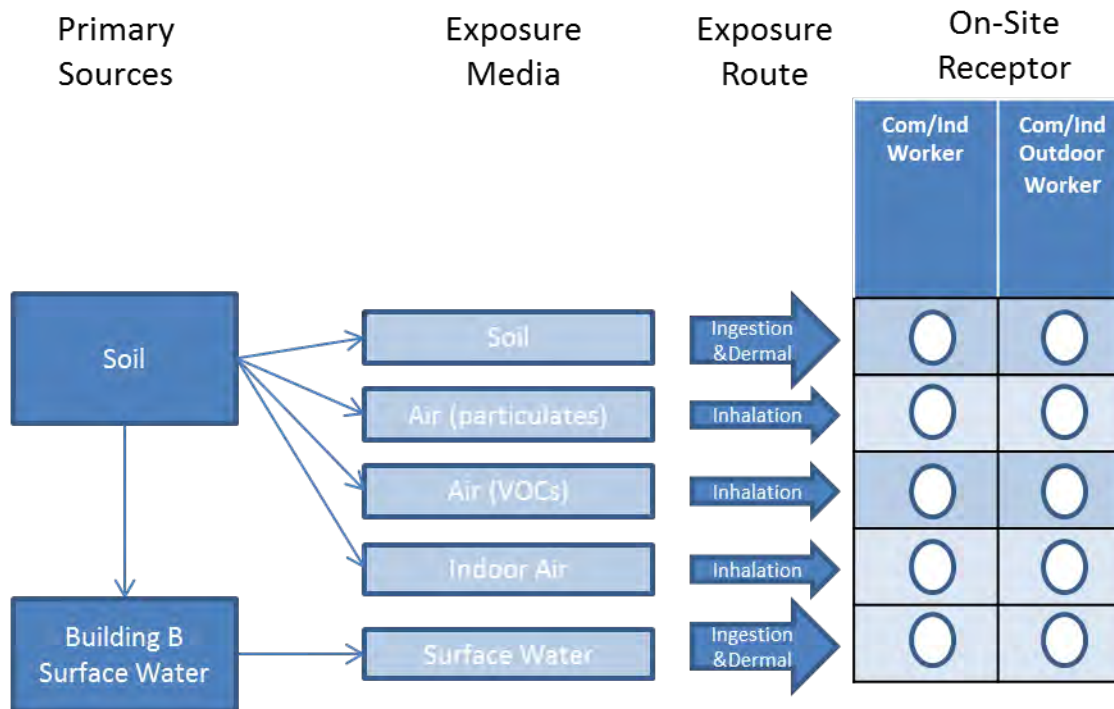

Table 8-1: Simplified Terrestrial Ecological Evaluation- Exposure Analysis Procedure

MTCA Simplified TEE Question		Property Result
Estimate the area of contiguous (connected) undeveloped land on the site or within 500 feet of any area of the site to the nearest ½ acre (1/4 acre if the area is less than 0.5 acre).		All of the current Property is currently used for industrial purposes, or is undergoing remediation. All surrounding properties are also either active industrial facilities or designated for industrial use.
1) From the table below, find the number of points corresponding to the area and enter this number in the field to the right.		
Area (acres)	Points	Property Score
0.25 or less	4	4
0.5	5	
1.0	6	
1.5	7	
2.0	8	
2.5	9	
3.0	10	
3.5	11	
4.0 or more	12	
2) Is this an industrial or commercial property? If yes, enter a score of 3. If no, enter a score of 1.		3
3) Enter a score in the box to the right for the habitat quality of the site using the following rating system ³ : High = 1, Medium = 2, Low = 3		3
4) Is the undeveloped land likely to attract wildlife ⁴ ? If yes, enter a score of 1 in the box to the right. If no, enter a score of 2.		2
5) Are there any of the following soil contaminants present: Chlorinated dioxins/furans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, pentachlorobenzene? If yes, enter a score of 1 in the box to the right. If no, enter a score of 4.		1
6) Add the numbers in the boxes on lines 2-5 and enter this number in the box to the right. If this number is larger than the number in the box on line 1, the simplified evaluation may be ended.		13

8.5. Pathway and Receptor Analysis

Information collected during the RI will be used in the FS to determine current and future land use, receptors, potentially complete exposure pathways, and ultimately cleanup and remediation levels. The figure presented below is the conceptual exposure model (CEM) for On-Property soil and surface water under the current land use. As shown in this CEM, there currently are no complete exposure pathways.

Figure 8-2: Conceptual Exposure Model for On-Property Soil and Surface Water

Notes:

-  Complete Exposure Pathway
-  Incomplete Exposure Pathway
-  Potentially complete but, insignificant exposure pathway

8.6. Screening Levels Used to Identify COPCs

Screening levels are numerical concentrations used to compare with constituent concentrations in soil and surface water on the Property in order to determine if the Property is adequately characterized, and to identify which areas of the Property require further consideration in the FS. The aquifers beneath the Property are brackish and non-potable. As such, they cannot serve as a source of drinking water. Similarly, surface waters on the Property exist only beneath Building A and underneath quarry spalls in the former Building B footprint and as such, cannot serve as a source of drinking water. However, the use of drinking water criteria as screening levels for the purposes of COPC identification ensures that constituents will not be prematurely eliminated from further consideration in the FS.

The applicability and appropriateness of these screening levels will be considered during the remedial alternatives evaluation in the FS. This evaluation will take into consideration the Property's physical conditions, fate and transport analysis, and the CEM. Proposed remedial actions will be developed in the FS and will include appropriate and protective cleanup levels and remediation levels for approval by Ecology.

8.6.1.1. Soil Screening Levels

Soil constituent concentrations were screened in this RI using two different methods. Any COPC that exceeds either of these screening levels were considered a soil COPC for this RI and recommended for further evaluation in the FS.

The first screening evaluation that was performed to identify soil COPCs was to compare surficial groundwater concentrations, obtained as part of the RI, to MTCA drinking water criteria. The Property groundwater is not potable but, this comparison was made in order to identify constituents in soil that may be affecting groundwater. In other words, if a constituent is detected in soil but not detected in groundwater, then soil-to-groundwater is an incomplete transport pathway. Conversely, if a constituent was detected in groundwater above its MTCA drinking water criterion this indicates that it should be included as COPC for soil, due to the potential for soil-to-groundwater transport. Table 9-1 compares the maximum detected constituent concentration in groundwater to MTCA Method B drinking water criteria. Based on that comparison the following soil COPCs were identified:

- Arsenic
- Lead
- Cadmium
- Pentachlorophenol
- Vinyl Chloride

The second screening evaluation that was performed to identify soil COPCs was to compare on-Property soil concentrations to default commercial/industrial risk-based screening criteria (Industrial Method C). Table 9-2 compares the maximum detected soil concentrations to MTCA Method C Commercial/Industrial screening concentration and The following soil COPCs were identified:

- Arsenic
- Lead
- TPH: Diesel Range Organics
- TPH: Gasoline Range Organics
- TPH: Motor Oil Range Organics

8.6.1.2. Surface Water Screening Levels

The Property meets the criteria of an industrial property as specified in WAC 173-340-745, and Ecology has determined that the groundwater is non-potable (Ecology, 2008). On-Property surface water is also non-potable and no longer accessible, as there is an exposure barrier present. MTCA Method C Industrial non-potable groundwater (WAC 173-340-720) criteria could have been developed for the surface water if there had been any complete on-property exposure pathways. Since there are no complete on-Property exposure pathways, surface water constituent concentrations were compared to MTCA Method B drinking water criteria. Table 8-3 compares the maximum detected surface water concentrations to MTCA Method B drinking water screening concentrations and the following surface water COPCs were identified:

- Arsenic
- Cadmium
- Lead
- Mercury
- TPH: Heavy Oil Range Organics
- Pentachlorophenol
- cis-1,2-Dichloroethylene
- Trichloroethylene
- Vinyl Chloride

SECTION 9. SCREENING RESULTS

9.1.1. COPCs in On-Property Soils

Screening of the data collected during Phase I, II and III of the RI indicate that the COPCs in on-Property soils include (Tables 9-1 and 9-2):

- Arsenic
- Lead
- Cadmium
- Pentachlorophenol
- Vinyl Chloride
- TPH: Diesel Range Organics
- TPH: Gasoline Range Organics
- TPH: Motor Oil Range Organics

Data from the Phase I, II and III RI sampling and analysis indicate that the highest concentrations of these constituents occur in shallow (0-8 feet) soil samples collected in the footprint of Building B and surface (0-3 feet) soil samples collected beneath Building A. Constituent concentrations outside of Buildings A and B are fairly consistent, although there are isolated exceptions. The highest constituent concentrations of COPCs in soils outside of the Buildings A and B footprints occur in shallow (0-8 feet) soil samples.

9.1.2. Lateral and Vertical Extent of COPCs in Soil

The vertical extent of constituents was generally confined to a depth of less than 10 feet and equal to the depth from the current ground surface to the ground surface prior to filling of the Property after 1961. The material/soil making up this soil column is introduced non-native fill material. The lateral extent of the constituents detected in Property soil and debris was generally limited to:

- **Lead:** Lead detections were encountered Property-wide, primarily within the fill introduced to bring the Property up to current ground surface (cgs) and within the Building B footprint and under Building A. The highest concentrations occur within the footprints of Buildings A and B, and in an approximately 75-foot wide section of Property with a decreasing concentration trend southward from the Building A footprint toward the Gardner-Fields property.
- **Arsenic:** Arsenic detections were encountered Property-wide primarily within the fill introduced to bring the Property up to current ground surface (cgs) and within the Building B footprint and under Building A. In all cases arsenic, if detected, was associated with lead. The highest concentrations occur within the footprints of Buildings A and B, and in an approximately 75-foot wide section of Property with a decreasing concentration trend southward from the Building A footprint toward the Gardner-Fields property.
- **Cadmium:** Cadmium is detected fairly consistently Property-wide, but mostly at low concentrations outside the Building A and B footprints.

- Pentachlorophenol: Pentachlorophenol concentrations exceeding the screening level limited to one sample, SUP-SL_1, located in the southernmost corner of the Property.
- TPH-G, TPH-D and TPH-HO exceedances are primarily isolated to the northern corner of the Property, near Building D.
- VOCs (in particular PCE, TCE, and VC) appear to have been associated with the wastewater treatment sludge formerly located in the western corner of the Property. Interim Actions have largely removed all VOCs, leaving only a thin lens of wastewater treatment sludge containing VOCs at the excavation limits along the southern property boundaries in two directions; toward the Gardner-Fields property and toward the drainage ditch. This remaining waste water sludge will be addressed in the FS.

9.1.3. Screening Results: COPCs in On-Property Surface Water

Screening of the data collected during Phase I, II and III of the RI indicates that the COPCs in on-Property soils include (Table 9-3):

- Arsenic
- Cadmium
- Lead
- Mercury
- TPH: Heavy Oil Range Organics
- Pentachlorophenol
- 1,2-cis-DichloroethyleneTrichloroethylene
- Vinyl Chloride

The source of all VOCs was largely removed during the wastewater treatment sludge IA. The exceedances of VOCs in surface water are expected to diminish over time, following this IA.

9.1.4. Lateral and Vertical Extent of COPCs in Surface Water

Concentrations of COPCs exceed at least one screening level throughout the surface water body.

SECTION 10. CONCLUSIONS AND RECOMMENDATIONS

10.1. Conclusions

This RI characterizes the nature and extent of contamination resulting from past activities on the Superlon Plastics Property and presents the analytical data, fill characteristics, and other information that have been collected on the Property through the completion of Phase III of the RI. The evaluation of data collected during the RI, and the screening of these data has determined the COPCs for on-Property soils and surface water. When evaluating these COPCs and their physical location on-Property the following can be concluded:

1. The nature and extent of COPCs in soil have been adequately characterized.
2. The on-Property COPCs are:

Soil COPCs		Surface Water COPCs
COPC based on exceedance of drinking water criteria in the surficial aquifer ⁶	COPCs based on exceedance of MTCA Industrial Method C Direct Contact Screening Levels	COPC based on exceedance of drinking water ⁷
Arsenic	Arsenic	Arsenic
Cadmium	--	Cadmium
Lead	Lead	Lead
--	--	Mercury
Pentachlorophenol	--	Pentachlorophenol
--	TPH-D	--
--	TPH-G	--
--	TPH-HO	TPH-HO
--	--	cis-1,2- Dichloroethylene
--	--	Trichloroethylene
Vinyl Chloride	--	

10.2. Potential Sources

Impacts to the on-Property soil and surface waters appear to have come from two sources - the manufacturing of lead arsenate and calcium arsenate pesticides, and the importation of non-native fill. The impacts associated with pesticide manufacturing seem to be isolated to the surface water and the soils within the Building A and B footprints.

⁶ The aquifers beneath the Property are brackish and non-potable. As such, they cannot serve as a source of drinking water. However, the use of drinking water criteria for the purposes of COPC identification ensures that constituents will not be prematurely eliminated from further consideration in the FS.

⁷ Surface waters on the Property exist only beneath Building A and underneath quarry spalls in the former Building B footprint. As such, they cannot serve as a source of drinking water. However, the use of drinking water criteria for the purposes of COPC identification ensures that constituents will not be prematurely eliminated from further consideration in the FS.

Impacts from the introduction of imported fill are more wide-spread and consist of three distinct types. They are:

- **Wastewater treatment sludge:** This material was discreetly located in the southern quarter of the property, and was largely removed in an IA (see Sludge Excavation Removal and Disposal (PERC 2012)).
- **Black Shot:** Spherical particles believed to be “shot” likely originating from the former adjacent US Gypsum Site located at 2301 Taylor Way. This material occurs in two locations on-Property - in the extreme eastern corner of the Property and in the general vicinity of Building D.
- **General Fill:** During IAs conducted on-Property fill was discovered which contained many types of materials, including creosote-covered wood, discarded oil containers, mixed metal of various types including lead pipe, and a white gypsum-like material believed to be a gypsum manufacturing by-product. This fill also contained typical construction debris.

10.3. COPC Groups

Due to the Property’s manufacturing and filling history, COPCs have been co-mingled at different concentration ratios and in different material types at various locations on the Property. However, from the RI it is possible to identify four main groups of COPC-bearing materials. These are:

- Soils impacted with COPCs associated with the manufacturing of lead arsenate and calcium arsenate pesticides;
- Wastewater treatment sludge: A small amount of this material remains at the southern corner of the Property along the property boundaries;
- Soils containing black, spherical particles believed to be “shot”; and,
- General Fill/waste.

It is likely that these different materials and soils will need to be addressed separately in the FS.

10.4. Recommendations for the Feasibility Study

Based on the outcome of the three phases of RI conducted on the Property, the following actions are recommended for inclusion in the FS:

- Conduct additional leachability and treatability studies to determine the physiochemical and environmental transport characteristics of on-Property soil COPCs, in particular arsenic, lead and cadmium, for each COPC grouping.
- Identify potential human and ecological receptors and exposure pathways.
- Develop recommended remediation levels for COPCs in soil.
- Determine the site specific cleanup levels for non-potable surface water once additional information is developed.
- Determine the points of compliance for soil and surface water.
- Identify areas of the Property that, based on the remediation levels and the future Property Land Use Plan, will require further remediation beyond that accomplished in the IAs.
- Identify, based on a consideration of model remedies and the future Property Land Use Plan, potentially viable remedial technologies to be for used material in each COPC grouping.

--: Not sampled PCE = Tetrachloroethylene

All results are presented to two significant figures, unless the result is greater than 100.

Qualifier Codes: B = Constituent was detected in laboratory blank; H = Concentration in sample was higher than concentration of QA spike; J = Concentration is estimated; U = Non-detect at reported concentration

Notes:

CLARC: Cleanup Levels and Risk Calculation

MTCA: Model Toxics Control Act

TPH: Total Petroleum Hydrocarbons

¹MTCA Values were obtained from the CLARC database. The lower of the Cancer and Noncancer Method B Value was used as the 'MTCA B Concentration'.

²If no MTCA Method B Value was available, the MTCA Method A Value was used.

Notes:

CLARC: Cleanup Levels and Risk Calculation

DDD: Dichlorodiphenyldichloroethane

DDE: Dichlorodiphenyldichloroethylene

DDT: Dichlorodiphenyltrichloroethane

MTCA: Model Toxics Control Act

TPH: Total Petroleum Hydrocarbons

¹MTCA Values were obtained from the CLARC database. The lower of the Cancer and Noncancer Method C Value was used as the 'MTCA C Concentration'.

²MTCA C Concentration incorporates arsenic bioavailability of 40%.

³If no MTCA Method C Value was available, the MTCA Method A Value was used.

County: **Pierce County, WA**

Boring No: **SL-1**

Surface Elevation: **10 Ft -MSL** Completion Depth: **60 Feet**

Date: Start: **August 10, 2010** Finish: **August 10, 2010**

Site Name: **Superlon Plastics**
2116 Taylor Way
Tacoma, Washington

Latitude: **47° 16.209'** Longitude: **122° 23.043'**

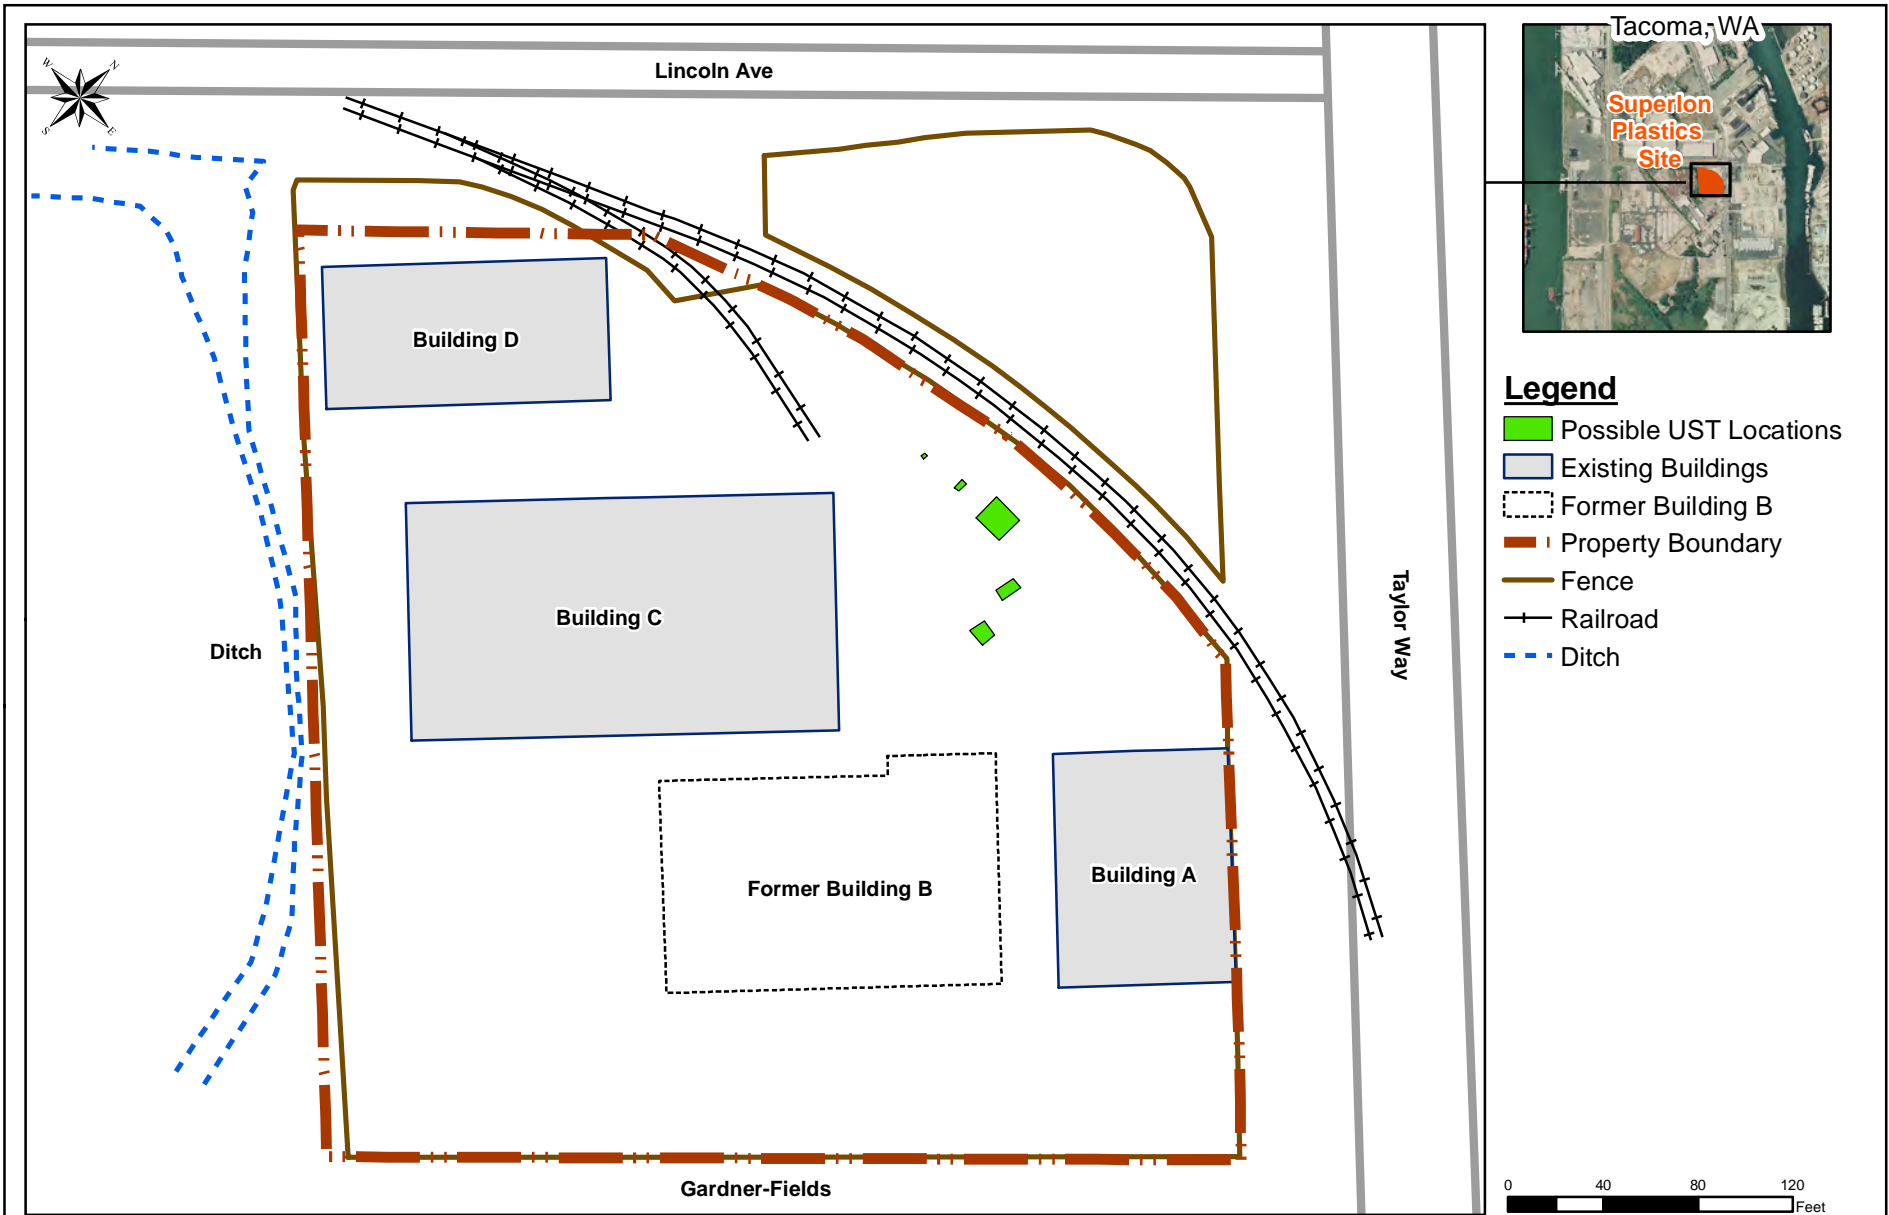

Boring Location: **Approx. 200 feet to NE of SE Corner of Main Bldg**

Drilling Equipment: **Geoprobe**

Elev., 10 Ft.	Description of Geoprobe Push Core Recovered	Depth (Ft.)	Dominant Lithology Log	SAMPLES					Personnel	REMARKS
				Sample No.	Sample Type	Sample Recovery (%)	Penetrometer	N Values (Blow Counts)	OVA or HNU Readings	
5 Ft.	Core 1 --- Gravel, mixed olive gray (5Y 3/2) to light olive gray (5Y 5/2), angular to rounded. About 8 inches in thickness. Core 1A --- 0 to 6" Gravel, 1" red-brown wood frags., 1" clay (5R 3/4), 1" zone of unknown (10YR 5/6) Sand, clayey, medium light gray (N6), fine grained, well sorted to bottom of sample.	5	Recent Fill Material		Core 1 & Core 1A	50% -1A 50 %				Multiple layers of fill in this zone. A 6" interval of blocky cement, see Core Photo 1582. Old Wood at base of core and top of following core that plugged because of it. See Core Photos 1581 and 1609 (close up). Other fill material, see 1613, 1614, and 1615. Total core photo at 1580. Note top Fill Material in core photo (bottom core tray).
MSL	Core 2 --- Sand, gray brown (5YR 3/2), fine grained, well sorted with thin medium-grained sand intervals of 1 inch and less. Core 2A --- Bottom of Core 1A and Core 2A with 90% in loss due to wood fragments from above plugging core barrel, 3 inches of Clay, sandy (5YR 3/2) at bottom.	5	Older Fill Material		Core 2 & Core 2A	10% -2A 15%			Transition zone from Fill Material to original sediments.	
-5 Ft.	Core 3 --- Clay, dark gray (N3 to N4), organic(?), isolated pebbles within dense clay, plastic (cut closes rapidly, 3 minutes).	10	Clay		Core 3	100%			Aquitard I 2" rounded pebble imbeded in Clay unit. No surrounding structures.	
-10 Ft.	Core 4 --- Sand, dark brown (5YR 2/1), fine grained, well sorted; 3 inches from top of core a zone of 5 inches of angular and well rounded pebbles, sharp contact with clay (N5-N6) below. Sand, dark brown, as above.	15	Sand		Core 4	90%			Sand Unit I 1.5" rounded pebble imbeded in Sand unit. No surrounding structures.	
-15 Ft.	Core 5 --- Clay, dark gray (N3 to N4), organic (?), very dense, breaks rather than bends, fine reddish filaments in clay.	20	Clay		Core 5	60%			Aquitard II	
-20 Ft.	Core 6 --- Sand, dark brown (5YR 3/2), fine grained, well sorted; with wood frags at top of core recovered (cavings?).	25	Sand		Core 6	70%			Major Sand II	
-25 Ft.	Core 7 --- Sand, as above. No wood frags.	30	Sand		Core 7	30%				
-30 Ft.	Core 8 --- Sand, as above.	35	Sand		Core 8	70%			Aquitard III	
-35 Ft.	Core 9 --- Sand, as above, with increase in grain size to medium-grained mixed with fine-grained sand, now poorly sorted, some clay-sized material as well. Clay plug at core bottom (N4-N5), dense.	40	Sand		Core 9	50%				
-40 Ft.	Core 10 --- Clay, dark gray (N4-N5), top 2.5 feet of core, underlain by Sand, fine grained, as above, but all fine grained (5YR 3/2), & well sorted.	45	Clay		Core 10	60%			Sand Unit III A 1.5" Clay ball in Sand unit. No surrounding structures. Aquitard IV	
-45 Ft.	Core 11 --- Sand, dark brown (5YR 3/2), fine grained, well sorted, over top 2 feet of core, sharp contact with Clay (N4-N5) dense over 1 foot becoming sandy clay to bottom. Scattered white fossil fragments.	50	Sand		Core 11	60%				
-50 Ft.	Core 12 --- Sand, darker brown than above, clayey grading to Sandy Clay with numerous fossil shell fragments over the 3 feet grading back to Sand, darker brown, fine grained, well sorted to bottom of recovered core.	55	Sand Sandy Clay Sand		Core 12	60%			Interbedded Sand & Clay Intervals	

Note: Because of less than 100% core recovery, the tops and bottoms of the lithologic units identified above are only approximations.

Introduction

This report summarizes the data quality review of analytical results generated in support of the Phase I Remedial Investigation sampling event for the Superlon Plastics Site in Tacoma, Washington. The criteria applied are consistent with analytical method protocols, in conjunction with the laboratory-established control limits. In cases where specific guidance was not available from between these sources, the data have been evaluated using professional judgment consistent with industry standards. The review included evaluation of chain-of-custodies, holding time and summary information for blanks (to assess contamination), sample duplicates (to assess precision), matrix spike and surrogate recoveries (to assess matrix effect), laboratory control samples and instrument calibration to assess (accuracy). Level IV validation (raw data verification) was performed on designated samples.

This report summarizes the data quality review of data contained in sample delivery groups (SDGs) 580-20790-1, 580-20969-1, 580-20969-2, 580-20984-1 and 580-21283-1.

The report is arranged by method; within each method section is a sub-section addressing each data quality indicator. Only situations in which data were impacted by quality control exceedance will be discussed.

I certify that all data validation criteria described above was assessed, and any qualifications made to the data were in accordance with the cited reference documents.

Authorized Signature

Qualifier and Reason Code (RC) Definition

The following qualifiers and reason codes may be used in this report:

- U The analyte was not detected above the reported method detection limit.
- UJ The analyte was not detected above the reported method detection limit. However, the reported Limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- J/none The sample results for the analyte are estimated for positive results, results reported below the quantitation limit are not qualified (high bias).
- J/UJ Sample results for the analyte are estimated for both positive and results reported below the quantitation limit (low bias).

- R/UR The sample results are rejected for both positive results and results reported below the detection limit due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

- a The analyte was found in the method blank
- a- Negative drift observed in instrument calibration blanks
- b Surrogate spike recovery outside control limits
- c Matrix Spike/Matrix Spike Duplicate (MS/MSD) recovery outside control limits
- d Laboratory Control Sample (LCS) recovery outside control limits
- e Holding time exceeded
- f MS/LCS sample duplicate failed precision criteria
- h Second column results indicate that the results were not confirmed
- i Instrument calibration outside of control limits
- k The analyte was found in the field blank
- m Numerical value is between the MDL and RL
- n Field duplicate precision exceedance
- o Results reported exceed calibration range
- p Sample was not properly collected, preserved or shipped
- s Internal Standard outside of control limits
- t Sample temperature outside acceptance criteria
- x Sample improperly prepared
- g Serial dilution exceeded criteria

Executive Summary

One hundred and thirty-five soils, five sediments, one surface water and five groundwater samples and two soil field duplicates were collected by Pacific Environmental and Redevelopment from August 2, 2010 to August 31, 2010. Samples were hand delivered to TestAmerica Laboratories, Inc. in Tacoma, Washington the same day of collection. Samples were analyzed for volatile organics by method 8260B (GC/MS), pentachlorophenol by method 8270C (GC/MS), diesel and motor oil by NWTPH-Dx, gasoline by NWTPH-Gx, arsenic, cadmium and lead by method 6010B (ICP) for solid samples or method 6020(ICP/MS) for water samples and mercury by methods 7470A/7471A.

The key data evaluation findings include the following:

- Volatile organics by method 8260B are of acceptable quality. Approximately (18.2%) of the results are qualified.
- Pentachlorophenol results by method 8270C were severely impacted. Non-detected pentachlorophenol results in soil and sediment samples (87%) are rejected due to improper sample preparation technique. Detected pentachlorophenol results reported are minimum values in the soil matrix.
- Extractable fuels by method NWTPH-Dx data were significantly impacted. Detected results in soil and sediment samples (90.4%) of data are qualified as estimated with a low bias due to improper sample preparation technique. Detected results reported are minimum values in the soil matrix.
- Gasoline data by method NWTPH-Gx are of good quality.
- Metals data are of good quality. Most qualifications (17.5%) made to the metals data are due to low concentrations detected. Some matrix effect and matrix interference for arsenic and lead was exhibited in the matrix spikes and serial dilutions. Poor precision was observed for soil samples in both laboratory and field duplicates indicating a heterogeneous matrix.
- Several samples exceeded holding time in methods 8260B and 8270C due to incomplete chain-of-custody documentation.

Volatile Organics by method 8260B/5030/5035

The following number of samples were prepared and analyzed by the listed methods:

92 Soils	5035/8260B
5 Sediments	5035/8260B
4 Ground Waters	5030/8260B
1 Surface Water	5030/8260B

Holding Time

All samples were analyzed within the required technical holding time except the following:

Field ID	Lab ID	Date Coll.	Date Anal	ACHT	RTHT	Qual	Bias	RC
SUP_SL_2 2-4	20969-14	8/11/10	9/9/10	28	14	J/UJ	Low	e
SUP_SL_2 6-8	20969-16	8/11/10	9/9/10, 9/21/10	28,40	14	J/UJ	Low	e
SUP_SL_2 8-10	20969-17	8/11/10	9/9/10, 9/21/10	28,40	14	J/UJ	Low	e
SUP_SL_2 10-12	20969-18	8/11/10	9/21/10	40	14	J/UJ	Low	e
SUP_SL_2 12-14	20969-19	8/11/10	9/21/10	40	14	J/UJ	Low	e
SUP_SL_2 14-16	20969-20	8/11/10	9/21/10	40	14	J/UJ	Low	e

Detected and non-detected results may be biased low.

Samples SUP_SL_2 6-8 (20969-16), SUP_SL_2 8-10 (20969-17) were reanalyzed at a dilution due to high concentrations detected. Samples SUP_SL_2 10-12 (20969-18), SUP_SL_2 12-14 (20969-19), SUP_SL_2 14-16 (20969-20) were reanalyzed due to possible contamination carry-over.

Samples had been delivered to laboratory on 8/11/10.

Surrogates/Internal Standards

Surrogate recoveries exceeded the control limits in the following samples:

Field ID	Lab ID	Surrogate	% Rec	QC Limits	Qual	Bias/RC
SUP_SL_7 1-2	20790-2	trifluorotoluene	70	75-125	J/UJ	Low b
SUP_SL_1 2-4	20969-3	toluene-d8	121	85-115	J/None	High b
SUP_SL_4 8-10	20969-34	trifluorotoluene	55	75-125	J/UJ	Low b
SUP_SL_15 6-8	20969-57	trifluorotoluene	74	75-125	J/UJ	Low b
SUP_SL_36 4-6	20984-3	trifluorotoluene	73	75-125	J/UJ	Low b
SUP_SD_5 083110	21283-4	trifluorotoluene	130	75-125	J/None	High b
SUP_SD_6 083110	21283-5	trifluorotoluene	129	75-125	J/None	High b
SUP_SD_6 083110	21283-5	ethylbenzene-d10	137	75-125	J/None	High b

Detected and non-detected results may be biased as shown.

Data were not qualified due to internal standard exceedance.

Blanks

Method blanks were prepared and analyzed at the required frequency. The following compounds were qualified as non-detected (UJ) due to method blank contamination:

Field ID	Lab ID	Compound	Result/Qual		Blank ID	Bias/RC
SUP_SL_7 0-1	20790-1	4-isopropyltoluene	4.6	UJ	580-69185	High a
SUP_SL_20 0-1	20790-6	4-isopropyltoluene	16	UJ	580-69185	High a

SUP_SW_1 083110	21283-6	n-propylbenzene	0.16	UJ	580-70823	High a
SUP_SW_1 083110	21283-6	1,3,5-trimethylbenzene	0.12	UJ	580-70823	High a
SUP_SW_1 083110	21283-6	4-isopropyltoluene	0.27	UJ	580-70823	High a

Samples were qualified as non-detected at the concentrations detected; detection limits were not elevated. Non-detected results are estimated (UJ).

Many samples were reanalyzed due to potential carry-over contamination in the original analysis.

Trip blanks were not analyzed by this method.

Calibrations/Tunes

Instrument tunes were performed at the required frequency and met method specific criteria. All target compounds met linearity and response criteria for method 8260B. A second source standard (initial calibration verification) met recovery limits in most cases. Continuing calibrations were performed at the required frequency. The following samples were qualified due to calibration exceedance:

SUP_SD_6 083110	21283-5

Matrix Spike/Matrix Spike Duplicates

MS/MSDs were performed at the required frequency. Data were not qualified due to matrix spike recoveries or precision exceedance.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. Data were not qualified due to LCS recoveries or precision exceedance.

Sample Quantitation/ Compound Identification

Sample and associated quality control (QC) results were recalculated in SDGs 580-20790-1 and 580-21283-1 with the proper sample weights, percent moisture, dilution factors and volumes used to calculate results. Samples and associated QC were correctly quantitated. Transcription errors were not observed.

The relative retention times, mass spectra, and peak identification of the samples were evaluated. Target compound identification was considered to be correct.

Quantitation Limits

The laboratory reported values down to the method detection limit. Three hundred and eight results were reported below the reporting limit and are flagged "J". Results below the reporting limit are considered qualitatively acceptable, but quantitatively unreliable due to uncertainty in precision near the limit of detection.

Field Duplicates

Field duplicates were not collected for this method.

Additional Comments

Due to evidence of methanol leakage during sampling/shipping, samples SUP_SL_15 8-10 (20969-58) and SUP_SL_36 10-12 (20984-6) are qualified as estimated (J/UJ) bias may be low.

Overall Assessment

Data were not rejected. Due to holding time exceedance, six samples were qualified as estimated with a potential low bias. Results in two samples (1.9%) of data were qualified as estimated with a potential low bias due to methanol leakage. Due to matrix effect results in seven samples, (3.8%) of data were qualified as estimated because of surrogate recovery exceedance. Due to method blank contamination several compounds were qualified as non-detected in some samples (approximately 1%). (1.9%) of data were qualified due to calibration exceedance. (5.1%) of data were qualified due to low concentrations detected (less than the reporting limit). Data that are qualified as non-detected or estimated are useable for limited purposes. All remaining data should be considered useable as reported.

Pentachlorophenol by Method 8270C

The following number of samples were prepared and analyzed by the listed methods:

5 Sediments	3550B/8270C
37 Soils	3550B/8270C
4 Ground Waters	3520C/8270C

Holding Time

The following samples were qualified as estimated (J/UJ) due to holding time exceedance.

Field ID	Lab ID	Dates			ACHT	RTHT	Qual	Bias	RC
		Collect	Prep	Analysis					
SUP_SL_2 1-2	20969-13	8/11/10	9/9/10	9/14/10	28	14/40	J/UJ	Low	e
SUP_SL_2 2-4	20969-14	8/11/10	9/9/10	9/14/10	28	14/40	J/UJ	Low	e
SUP_SL_2 4-6	20969-15	8/11/10	9/9/10	9/14/10	28	14/40	J/UJ	Low	e
SUP_SL_2 6-8	20969-16	8/11/10	9/9/10	9/14/10	28	14/40	J/UJ	Low	e
SUP_SL_2 8-10	20969-17	8/11/10	9/9/10	9/14/10	28	14/40	J/UJ	Low	e
SUP_SL_2 10-12	20969-18	8/11/10	9/9/10	9/14/10	28	14/40	J/UJ	Low	e
SUP_SL_2 12-14	20969-19	8/11/10	9/9/10	9/14/10	28	14/40	J/UJ	Low	e
SUP_SL_2 14-16	20969-20	8/11/10	9/9/10	9/14/10	28	14/40	J/UJ	Low	e

Detected and non-detected results were qualified as estimated (J/UJ). Results may be biased low.

Samples had been delivered to the laboratory on 8/11/10.

Surrogates/Internal Standards

Surrogate recoveries met recovery criteria except in the following:

Field ID	Lab ID	Surrogate	Rec	QC Limit	Qual	Bias	RC
SUP_SL_2 6-8	20969-16	2-fluorophenol	3%	36-145	J/UR	Low	b
SUP_SL_2 6-8	20969-16	phenol-d5	22%	38-149	J/UJ	Low	b
SUP_SL_2 6-8	20969-16	2,4,6 TBP	0.7%	28-143	J/UR	Low	b

Due to extremely low recoveries (<10%) in the acid surrogates, the non-detected result for pentachlorophenol is rejected in sample SUP_SL_2 6-8 (20969-16). The lab re-extracted and reanalyzed the sample with concurring low recoveries confirming matrix effect. The lab reported the original analysis.

Data were not qualified due to internal standard exceedance.

Blanks

Method blanks were prepared and analyzed at the required frequency. Pentachlorophenol was non-detected.

Field blanks were not collected for this method.

Calibrations/Tunes

Instrument tunes were performed at the required frequency and met all method specific criteria. Pentachlorophenol met linearity and response criteria for method 8270C. A second source standard (initial calibration verification) met recovery limits. Continuing calibrations were performed at the required frequency and met response and % drift requirements.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs were performed at the required frequency for soil samples. Insufficient sample was collected to perform matrix spikes on the water matrix.

The following results were observed:

Field ID	Cmp	Lab ID	MS/MSD/RPD	QC Limit	Qual	Bias	RC
SUP_SL_2 1-2	PCP	20969-13	128, 117 12	29-124/68	J/None	High	c

Pentachlorophenol was qualified as estimated (J) results may be biased high.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

Sample Quantitation/ Compound Identification

Sample and associated quality control (QC) results were recalculated in SDGs 580-20790-1 and 580-21283-1 with the proper weights, percent moisture, dilution factors and volumes used to calculate results. Samples and associated QC were correctly quantitated. Transcription errors were not observed.

The relative retention times, mass spectra, and peak identification of the samples were evaluated. Target compound identification was considered to be correct.

Quantitation Limits

The laboratory reported values down to the method detection limit. All non-detected results for this method were rejected. Two results were reported below the reporting limit and are flagged "J". Results below the reporting limit are considered qualitatively acceptable, but quantitatively unreliable due to uncertainty in precision near the limit of detection.

Field Duplicates

Sample SUP_SL_8 1-2 (20970-4) was collected as the field duplicate. Pentachlorophenol was non-detected.

Additional Comments

Soil samples were extracted using the medium/high concentration method described within method 3550C of SW846. The method is appropriate for sample concentrations above 20 mg/kg. The extraction process is less rigorous than the procedure described for low concentration samples, uses only ten milliliters of solvent to extract samples and does not have a concentration step in the sample prep process, therefore low concentrations may not be detected. Potential for false non-detects exists. Reported results may be biased low.

Sample SUP_GW_4 (20969-25) was originally collected for 8270 analysis but was destroyed during the extraction process. Insufficient sample remained for re-extraction.

Soil and water samples in SDG 580-20969-1 were analyzed for additional compounds although only pentachlorophenol had been requested. Polyaromatic hydrocarbons (PAHs) were detected in samples SUP_SL_1 0-1 (20969-3), SUP_SL_1 4-6 (20969-4), SUP_SL_1 6-8 (20969-5), SUP_SL_4 2-4 (20969-31), SUP_SL_4 4-6 (20969-32), SUP_SL_4 6-8, (20969-33), SUP_SL_4 8-10 (20969-34), SUP_SL_4 10-12 (20969-35), SUP_SL_4 12-14, (20969-36), SUP_SL_4 14-16 (20969-37), SUP_GW_2 (20969-38) and sample SUP_GW_5 (20969-62).

Overall Assessment

All non-detected pentachlorophenol results in soil and sediment samples are rejected due to improper sample preparation. Results for these samples are unusable for any purpose.

Detected pentachlorophenol results in soil samples SUP_SL_2 1-2 (20969-13) and SUP_SL_2 2-4 (20969-14) are qualified as estimated (J) with a potential low bias due to improper sample preparation and holding time exceedance. Results are minimum values and are useable for limited purposes.

Results in water samples should be considered useable as reported.

NWTPH-Dx

The following number of samples were prepared and analyzed by the listed methods:

5 Sediments	3550C/NWTPH-Dx
19 Soils	3550C/NWTPH-Dx
2 Ground Waters	3510C/NWTPH-Dx

Holding Times

Samples were prepped and analyzed within the required method holding time. Extraction and analyses dates reported were verified against supporting documentation. Discrepancies were not observed.

Surrogates

Surrogate recoveries met recovery criteria of 50-150%.

Blanks

Method blanks were prepared and analyzed at the required frequency. The following sample results were qualified as nondetected due to method blank contamination.

Field ID	Lab ID	Compound	Result/Qual	Blank ID	Bias	RC
SUP_SL_38 8-10	20984-30	motor oil	32 UJ	580-70052	High	a
SUP_SL_41 8-10	20984-39	motor oil	47 UJ	580-70052	High	a
SUP_SL_41 12-14	20984-41	motor oil	21 UJ	580-70052	High	a
SUP_SL_41 14-16	20984-42	motor oil	14 UJ	580-70052	High	a

Samples were qualified as non-detected at the concentrations detected; detection limits were not elevated. Non-detected results are estimated (UJ).

Field blanks were not collected for analysis by this method.

Calibrations

All compounds met linearity criteria for method NWTPH-Dx. Continuing calibrations were performed at the required frequency with all percent differences less than 15%.

Matrix Spike/Matrix Duplicates

MS/MSDs were not performed on any of the associated samples. Matrix specific recovery data is not available. Insufficient sample was collected to perform matrix spikes on the water matrix.

The lab performed a laboratory duplicate on the following sample:

Field ID	Lab ID	Cmp	mg/kg	Lab Duplicate	mg/kg	RPD	Qual	Bias	RC
SUP_SL_41 4-6	20984-37	#2 diesel	58	SUP_SL_41 4-6	87	40	J	None	f

Due to poor precision in the laboratory duplicate analysis the result for #2 diesel was qualified as estimated (J).

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

Sample Quantitation/ Compound Identification

Samples and associated quality control (QC) results in sample delivery groups 580-20984-1 and 580-21283-1 were recalculated with the proper weights, percent moisture, dilution factors, and volumes used to calculate results. Samples and associated QC were correctly quantitated. Transcription errors were not observed.

Quantitation Limits

The laboratory reported values down to the method detection limit. Ten results were reported below the reporting limit and are flagged "J". Results below the reporting limit are considered qualitatively acceptable, but quantitatively unreliable due to uncertainty in precision near the limit of detection.

Field Duplicates

Field duplicate samples were not collected for this method.

Additional Comments

Soil samples were extracted using the medium/high concentration method described within method 3550C of SW846, the method is appropriate for sample concentrations above 20 mg/kg. The extraction process is less rigorous than the procedure described for low concentration samples, uses only ten milliliters of solvent to extract samples and does not have a concentration step in the sample prep process, therefore low concentrations may not be detected. The potential for false non-detects exists and detected results may be biased low.

Overall Assessment

The non-detected result for #2 diesel in sample SUP_SL_41 14-16 (20984-42) is rejected due to improper sample preparation. Data are unusable for any purpose.

All detected results (90.4%) are qualified as estimated with a potential low bias due to improper sample preparation. Four soil samples were qualified as non-detected for motor oil due to method blank contamination. Due to poor precision in the laboratory duplicate analysis, one sample SUP_SL_41 4-6 (20984-37) is qualified as estimated bias unknown. All data are useable for limited purposes.

Results reported for the water matrix should be considered useable as reported.

NWTPH-Gx

The following number of samples were prepared and analyzed by the listed methods:

5 Sediments	5035/NWTPH-Gx
14 Soils	5035/NWTPH-Gx
2 Ground Waters	5030/NWTPH-Gx

Holding Times

Samples were analyzed within the required method holding time. Analyses dates reported were verified against supporting documentation. Discrepancies were not observed.

Surrogates

Surrogate recoveries met recovery criteria of 50-150%.

Blanks

Method blanks were prepared and analyzed at the required frequency. The following sample was qualified as non-detected due to method blank contamination.

Field ID	Lab ID	Compound	Results/Qual	Blank ID	Bias	RC
SUP_GW_12	20984-34	gasoline	0.17 UJ	580-6992	High	a

The sample was qualified as non-detected at the concentration detected; the detection limit was not elevated. The non-detected result is estimated (UJ).

Field blanks were not collected for analysis by this method.

Calibrations

Gasoline met linearity criteria for method NWTPH-Gx. Continuing calibrations were performed at the required frequency. Data were not qualified due to calibration exceedance.

Matrix Spike/Matrix Duplicates

MS/MSDs were performed at the required frequency from the associated samples. Recoveries and precision met method criteria.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

Sample Quantitation/ Compound Identification

Sample and associated quality control (QC) results were recalculated in SDGs 580-20984-1 and 580-21283-1 with the proper weights, percent moisture, dilution factors and volumes used to calculate results. Samples and associated QC were correctly quantitated. Transcription errors were not observed.

Quantitation Limits

The laboratory reported values down to the method detection limit. Three results were reported below the reporting limit and are flagged "J". Results below the reporting limit are considered qualitatively acceptable, but quantitatively unreliable due to uncertainty in precision near the limit of detection.

Field Duplicates

Field duplicate samples were not collected for this method.

Overall Assessment

Due to method blank contamination gasoline in sample SUP_GW_12 (20984-34) is qualified as non-detected. Gasoline results in three samples were reported below the reporting limit and are qualified as estimated. Non-detected or estimated data are useable for limited purposes. All remaining data met control criteria and should be considered useable as reported.

Metals by Methods 6010B, 6020, 7471/7470

The following number of samples were prepared and analyzed by the listed methods:

5 Sediments	3050B/6010B/7471A
1 Surface water	3005A/6020/7470A
127 Soils	3050B/6010B
5 Ground Waters	3005A/6020/7470A

Water samples were analyzed for both total and dissolved metals.

Holding Times

All samples were prepared and analyzed within required method holding times. Preparation and analyses dates reported were verified against supporting documentation. Discrepancies were not observed.

Calibrations

Initial calibration verification and continuing calibrations were analyzed at the required frequency. All target analytes met method recovery criteria (90-110%).

Blanks

Method blanks were prepared and analyzed at the required frequency. The following sample was qualified as non-detected due to method blank contamination.

Field ID	Lab ID	Analytes	Result/Qual	Blank ID	Bias	RC
SUP_SD_2 83110	21283-1	cadmium	0.39 UJ	580-70855	High	a

The sample was qualified as non-detected at the concentration detected; the detection limit was not elevated. The non-detected result is estimated (UJ).

Field blanks were not collected for analysis by this method.

Matrix Spikes/ Sample Duplicates

Matrix spikes were prepared and analyzed at the required frequency for soil and water samples. Due to severe matrix interference (analyte recoveries less than 30% in the matrix spike and recoveries less than 75% in the post digestion spike), the following detected results are estimated and non-detects are rejected (J/UR):

Field ID	Lab ID	Analyte	%Rec/RPD	QC Limits	Bias	RC
SUP_SL_36 1-2	20984-1	arsenic	-25, -48/9	75-125/35	Low	c
SUP_SL_42 2-4	20984-44	Cadmium	28, 27/2	75-125/35	Low	c

Due to accuracy problems in the matrix spike analysis, the following detected and non-detected results are qualified as estimated (J/UJ):

Field ID	Lab ID	Analyte	%Rec/RPD	QC Limits	Bias	RC
SUP_SL_3 10-12	20969-27	arsenic	48, 21/9	75-125/35	Low	c
SUP_SL_36 1-2	20984-1	cadmium	54, 71/12	75-125/35	Low	c
SUP_SL_14 10-12	20984-22	lead	72, 73/9	75-125/35	Low	c

Due to accuracy problems in the matrix spike analysis, the following detected results are qualified as estimated (J/none):

Field ID	Lab ID	Analyte	%Rec/RPD	QC Limits	Bias	RC
SUP_SL_7 0-1	90790-1	arsenic	121,343/45	75-125/35	High	c
SUP_SL_2 1-2	20969-13	arsenic	135,146/17	75-125/35	High	c
SUP_SL_2 1-2	20969-13	lead	157,179/19	75-125/35	High	c

Due to high variability in the matrix, only the sample used as the matrix spike was qualified.

Matrix Duplicates

Matrix duplicates were prepped and analyzed at the proper frequency. Precision was acceptable in all cases except in the following:

Field ID	Lab ID	Analyte	RPD	Limit	Qual	Bias	RC
SUP_SL_7 0-1	90790-1	lead	71	35	J	None	f
SUP_SD_2 083110	21283-1	lead	53	35	J	None	f
SUP_SL_5 14-16	20969-46	arsenic	45	35	J	None	f
SUP_SL_5 14-16	20969-46	lead	45	35	J	None	f
SUP_SL_2 1-2	20969-13	lead	40	35	J	None	f

Results were qualified as estimated due to precision exceedance. Only the sample used as the duplicate was qualified.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

ICP Serial Dilution

ICP serial dilutions were performed at the required frequency. Due to ICP serial dilution problems, the following detected and non-detected results are qualified as estimated (J/UJ).

Field ID	Lab ID	Analyte	(mg/Kg)	%D	Qual	Bias	RC
SUP_SL_5 14-16	20969-46	arsenic	780	78	J	None	g
SUP_SL_5 14-16	20969-46	lead	1400	78	J	None	g
SUP_SL_36 1-2	20984-1	lead	690	21	J	None	g
SUP_SL_14 10-12	20984-22	lead	21	20.5	J	None	g
SUP_SL_42 2-4	20984-44	arsenic	2000	70	J	None	g
SUP_SL_42 2-4	20984-44	cadmium	12	82	J	None	g
SUP_SL_42 2-4	20984-44	lead	3200	68	J	None	g

Only the sample used for the serial dilution was qualified.

Field Duplicates

Sample SUP_SL_8 1-2 (20790-4) was collected as a field duplicate. The following results were observed.

Analyte	Field ID	mg/kg	Field ID	mg/kg	RPD	Qual	RC
Arsenic	SUP_SL_8 1-2	1300	SUP_SL_DUP	3600	94	J	n
Cadmium	SUP_SL_8 1-2	1.7	SUP_SL_DUP	1.9	11	J	n
Lead	SUP_SL_8 1-2	310	SUP_SL_DUP	12000	190	J	n

Sample SUP_SL_42 14-16 (20984-50) was collected as a field duplicate. The following results were observed.

Analyte	Field ID	mg/kg	Field ID	mg/kg	RPD	Qual	RC
Arsenic	SUP_SL_42 14-16	19	SUP_SL_DUP	1500	195	J	n
Cadmium	SUP_SL_42 14-16	0.27	SUP_SL_DUP	0.99	114	J	n
Lead	SUP_SL_42 14-16	7.6	SUP_SL_DUP	1400	198	J	n

Due to high variability detected results were flagged as shown. Only the samples used as field duplicates were qualified. Bias is non-determined.

Analyte Quantitation

Sample results and associated QC were recalculated in SDGs 580-20790-1 and 580-21283-1, with the proper, weights, percent moisture, dilution factors and volumes used to calculate the sample results. The samples were found to be correctly quantitated. Transcription errors were not observed.

Quantitation Limits

The laboratory reported values down to the method detection limit. Seventy-nine results were reported below the reporting limit and are flagged "J". Results below the reporting limit are considered qualitatively acceptable, but quantitatively unreliable due to uncertainty in precision near the limit of detection.

Additional Comments

Due to the high variability in the soil matrix only the sample used as the quality control was qualified.

Overall Assessment

Data were not rejected. Most data qualified (17.5%) were due to low concentrations detected. Due to high variability in the soil and sediment samples four samples were qualified as estimated for lead and arsenic in the laboratory duplicates. In addition arsenic and lead were qualified in the field duplicates indicating a heterogeneous matrix. Due to matrix effect and a heterogeneous matrix, six samples were qualified as estimated for mostly arsenic and lead in the matrix spikes and four samples were qualified due to serial dilution exceedance indicative of matrix interference. Due to method blank contamination one sample was qualified as non-detected for cadmium. All data qualified as estimated or non-detected are useable for limited purposes. All remaining data should be considered useable as reported.

Sample Collection/Condition

Chain of Custody/Sample Receipt SDG 580-20790-1

Samples were received in one cooler. The temperature of the cooler was 14.4°C upon arrival to the lab, the cooling process had begun. Samples had been delivered immediately after collection on August 2, 2010. The lab noted that the samples arrived in good condition, properly preserved and on ice with the following exceptions:

- One sample jar was received by the lab without a label. The lab determined by the process of elimination that the sample was SUP_SL_8 1-2 for 8270 and metal analysis.
- One sample jar for sample SUP_SL_22 0-1 was received with a cracked lid for 8270 and metal analysis. The lab replaced the lid during the lab login process.

Data qualified due to sample condition

Data were not qualified due to sample condition.

Chain of Custody/Sample Receipt SDG 580-20969-1

Samples were received in three coolers. The temperatures of the coolers were 10.5°, 8.5° and 5.9°C upon arrival to the lab, the cooling process had begun. Samples had been delivered immediately after collection on August 11, 2010. The lab noted that the samples arrived in good condition, properly preserved and on ice with the following exceptions:

- Sample SUP_SL_3 D3 listed on the COC was not received. Jeff King of Pacific Environmental Resources canceled this sample.
- Most of the methanol vials provided for 8260 analysis had different collection times recorded than times listed on the COC or other sample aliquots.
- Sample SUP_SL_15 8-10 (20969-58) showed evidence of methanol leakage during sampling/shipping.
- Samples SUP_SL_2 0-2, SUP_SL_2 2-4, SUP_SL_2 4-6, SUP_SL_2 6-8, SUP_SL_2 8-10, SUP_SL_2 10-12, SUP_SL_2 12-14 and SUP_SL_2 14-16 were originally collected and listed on the COC however the requested analyses were not indicated (checked) therefore the lab did not analyze the samples. This omission was not detected until September 7, 2010. Pioneer Technologies instructed the lab to analyze samples on September 8, 2010 at that time volatile organics by method 8260B and pentachlorophenol by method 8270C were outside of holding time. Pioneer Technologies corrected the sample ID for SUP_SL_2 0-2 (20969-13) to SUP_SL_2 1-2.

Data qualified due to Sample Condition

Sample SUP_SL_15 8-10 (20969-58) was qualified as estimated (J/UJ) due to methanol leakage. Detected and non-detected results may be biased low.

Samples SUP_SL_2 1-2, SUP_SL_2 2-4, SUP_SL_2 4-6, SUP_SL_2 6-8, SUP_SL_2 8-10, SUP_SL_2 10-12, SUP_SL_2 12-14 and SUP_SL_2 14-16 were qualified as estimated due to holding time exceedance for volatile organics and pentachlorophenol.

Chain of Custody/Sample Receipt SDG 580-20984-1

Samples were received in three coolers. The temperatures of coolers were 19.1°, 9.1°, and 7.1°C upon arrival to the lab; the cooling process had begun. Samples had been delivered immediately after collection on August 12, 2010. The lab noted that the samples arrived in good condition, properly preserved and on ice with the following exceptions:

- The container label for the following sample did not match the information on the Chain-of-Custody (COC). The container labels list SUP_42_DUP the COC listed SUP_SL DUP.
- Many methanol vials had different sampling times than the COC or other sample aliquots. Some methanol vials did not have the time recorded on the label.
- SUP_GW_13 and SUP_GW_12 required PH adjustment in the NWTPH-Dx aliquots.
- Sample SUP_SL_36 10-12 (20984-6) showed evidence of methanol leakage during sampling/shipping.
- A trip blank was submitted for analysis with the samples; however it was not listed on the Chain-of Custody. The lab did not analyze the trip blank.

Data qualified due to Sample Condition

Due to methanol leakage sample SUP_SL_36 10-12 (20984-6) was qualified as estimated (J/UJ) in the 8260 analysis. Results and reporting limits may be biased low.

Chain of Custody/Sample Receipt SDG 580-21283-1

Samples were received in one cooler. The temperature of cooler was 12.2°C upon arrival to the lab, the cooling process had begun. Samples had been delivered immediately after collection on August 31, 2010. The lab noted that the samples arrived in good condition, properly preserved and on ice. Discrepancies were not noted.

Data qualified due to Sample Condition

Data were not qualified due to sample condition.

Introduction

This report summarizes the data quality review of analytical results generated in support of the Phase I Remedial Investigation sampling event for the Superlon Plastics Site in Tacoma, Washington. The criteria applied are consistent with analytical method protocols, in conjunction with the laboratory-established control limits. In cases where specific guidance was not available from between these sources, the data have been evaluated using professional judgment consistent with industry standards. The review included evaluation of chain-of-custody, holding time and summary information for blanks (to assess contamination), sample duplicates (to assess precision), matrix spike and surrogate recoveries (to assess matrix effect), laboratory control samples and instrument calibration to assess (accuracy). Level IV validation (raw data verification) was not performed.

This report summarizes the data quality review of data contained in sample delivery groups (SDGs) 580-21738-1, 580-21738-3, 580-2738-4 and 580-22215-1.

The report is arranged by method; within each method section is a sub-section addressing each data quality indicator. Only situations in which data were impacted by quality control exceedance will be discussed.

I certify that all data validation criteria described above was assessed, and any qualifications made to the data were in accordance with the cited reference documents.

Authorized Signature

Qualifier and Reason Code (RC) Definitions

U	The analyte was not detected above the reported method detection limit.
UJ	The analyte was not detected above the reported method detection limit. However, the reported Limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
J/none	The sample results for the analyte are estimated for positive results, results reported below the quantitation limit are not qualified (high bias).
J/UJ	Sample results for the analyte are estimated for both positive and results reported below the quantitation limit (low bias).
R/UR	The sample results are rejected for both positive results and results reported below the detection limit due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
a	The analyte was found in the method blank or interference check sample
a-	Negative drift observed in instrument calibration blanks or interference check sample
b	Surrogate spike recovery outside control limits
c	Matrix Spike/Matrix Spike Duplicate (MS/MSD) recovery outside control limits
d	Laboratory Control Sample (LCS) recovery outside control limits
e	Holding time exceeded
f	MS/LCS sample duplicate failed precision criteria
h	Second column results indicate that the results were not confirmed
i	Instrument calibration outside of control limits
k	The analyte was found in the field blank
m	Numerical value is between the MDL and RL
n	Field duplicate precision exceedance
o	Results reported exceed calibration range
p	Sample was not properly collected, preserved or shipped
s	Internal Standard outside of control limits
t	Sample temperature outside acceptance criteria
x	Sample improperly prepared
g	Serial dilution exceeded criteria

Executive Summary

Two concrete samples and one solid and one aqueous sample were collected by Pacific Environmental and Redevelopment September 21, 2010 and October 14, 2010. Samples were hand delivered to TestAmerica Laboratories, Inc. in Tacoma, Washington the same day of collection. Samples were prepared for TCLP by method 1311 and analyzed for pentachlorophenol by method 8270C (GC/MS) and arsenic, cadmium and lead by method 6010B (ICP) and mercury by method 7470A. In addition, concrete samples were analyzed for PCBs by method 8082 and total RCRA metals.

The key data evaluation findings include the following:

- Holding times were exceeded for PCBs and mercury in concrete samples BCS-1 and BCM-1. Results for these samples were qualified as estimated.

TCLP-PCP by Method 8270C

The following number of samples were prepared and analyzed by the listed methods:

2 Concrete samples	1311/3550B/8270C
1 Solid	1311/3550B/8270C
1 aqueous sample	1311/3520C/8270C

Holding Time

All samples were prepared and analyzed within required method holding times. Preparation and analyses dates reported were verified against supporting documentation. Discrepancies were not observed.

Surrogates/Internal Standards

All surrogate recoveries met recovery criteria. Internal standards met response and retention time criteria.

Blanks

Method blanks were prepared and analyzed at the required frequency. Pentachlorophenol was non-detected.

Field blanks were not collected for this method.

Calibrations/Tunes

Instrument tunes were performed at the required frequency and met all method specific criteria. Pentachlorophenol met linearity and response criteria for method 8270C. A second source standard (initial calibration verification) met recovery limits. Continuing calibrations were performed at the required frequency and met response and % drift requirements.

Matrix Spike/Matrix Spike Duplicates

A matrix spike was performed on DWD-1 and met recovery criteria.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

Sample Quantitation/ Compound Identification

A level IV review was not performed on this group of samples.

Quantitation Limits

The laboratory reported values down to the method detection limit. All samples were non-detected for pentachlorophenol.

Field Duplicates

Field duplicates were not collected for this method.

Overall Assessment

All quality control criteria were met for this method. Data are useable as reported.

TCLP & Total RCRA Metals

The following number of samples were prepared and analyzed by the listed methods:

2 concrete samples	1311/3050B/6010B/7470A
2 concrete samples	3050B/6010B/7471A
1 Solid sample	1311/3050B/6010B/7470A
1 aqueous sample	1311/3005A/6020/7470A

Holding Times

All samples were prepared and analyzed within required method holding times except the following:

Field ID	Lab ID	analyte	Date Coll.	Date Anal	ACHT	RTHT	Qual	Bias	RC
BCM-1	21738-1	mercury	9/21/10	12/8/10	87	28	J/UJ	Low	e
BCS-1	21738-2	mercury	9/21/10	12/8/10	87	28	J/UJ	Low	e

Calibrations

Initial calibration verification and continuing calibrations were analyzed at the required frequency. All target analytes met method recovery criteria (90-110%).

Blanks

Method blanks were prepared and analyzed at the required frequency. All target analytes were non-detected.

Field blanks were not collected for analysis by this method.

Matrix Spikes/ Sample Duplicates

Matrix spikes and sample duplicates were performed on sample BCM-1 all recovery and precision criteria were met.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

ICP Serial Dilution

ICP serial dilution was not performed on associated samples.

Field Duplicates

Field duplicates were not collected for this method.

Analyte Quantitation

A level IV review was not performed on this group of samples.

Quantitation Limits

The laboratory reported values down to the method detection limit. Three results were reported below the reporting limit and are flagged "J" for TCLP metals. Results below the reporting limit are considered qualitatively acceptable, but quantitatively unreliable due to uncertainty in precision near the limit of detection.

Overall Assessment

Three results were reported below the reporting limit and are qualified as estimated due to low concentrations detected for TCLP metals. Mercury results for total RCRA metals are qualified as estimated due to holding time exceedance results may be biased low.

Method 8082 (PCBs)

The following number of samples were prepared and analyzed by the listed methods:

2 concrete samples 3550C/8082

Holding Times

The following samples exceeded holding times:

Field ID	Lab ID	Date Coll.	Date Extr/Anal	ACHT	RTHT	Qual	Bias	RC
BCM-1	21738-1	9/21/10	12/2/10 12/2/10	81/0	14/40	J/UJ	None	e
BCS-1	21738-2	9/21/10	12/2/10 12/2/10	81/0	14/40	J/UJ	None	e

PCBs are very stable and therefore results are not expected to be biased low.

Surrogates

All surrogate recoveries met recovery criteria.

Blanks

Method blanks were prepared and analyzed at the required frequency. PCBs were non-detected.

Calibrations

All PCBs met linearity criteria for method 8082. Continuing calibrations were performed at the required frequency with all percent differences less than 20%.

Matrix Spike/Matrix Duplicates

A MS/MSD was performed on sample BCM-1(580-21738-1) recovery and precision criteria were met.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within the required limits.

Sample Quantitation/ Compound Identification

A level IV review was not performed on this group of samples.

Quantitation Limits

The laboratory reported values down to the method detection limit. All results were reported as non-detected for PCB 1016, 1221, 1232, 1242, 1248, 1254 and 1260.

Field Duplicates

Field duplicate samples were not collected for this method.

Additional Comments

PCBs by method 8082 were requested for samples BCM-1 and BCS-1 on November 12, 2010. The sampling location for these samples was under water at that time and could not be accessed therefore a decision was made to analyze samples that had been previously collected. Samples were outside of holding time at the time the request for analysis was made.

Overall Assessment

Non-detected results in samples BCM-1 and BCS-1 are qualified as estimated due to holding time exceedance.

Sample Collection/Condition

Chain of Custody/Sample Receipt SDG 580-21738-1

Samples were received without a cooler therefore a temperature upon receipt was not recorded. Samples had been hand delivered immediately after collection on September 21, 2010 in zip-lock plastic bags. The lab noted that the samples arrived in good condition. PCB analysis by method 8082 was requested on November 11, 2011 at this time holding times had been exceeded. Total RCRA metals by methods 6010B and 7471A were requested on December 6, 2010 at this time holding times for mercury had been exceeded.

Data qualified due to sample condition

Samples BCM-1 and BCS-1 were qualified as estimated for PCBs and mercury due to holding time exceedance.

Chain of Custody/Sample Receipt SDG 580-22215-1

Samples were received without a cooler therefore a temperature upon receipt was not recorded. Samples had been hand delivered immediately after collection on October 14, 2010. The lab noted that the samples arrived in good condition and properly preserved. The lab noted the following discrepancy.

- The time recorded on one of the container labels for sample DWD-1 did not match the time recorded on the chain of custody.

Data qualified due to Sample Condition

Data were not qualified due to sample condition.

k	The analyte was found in the field blank
m	Numerical value is between the MDL and RL
n	Field duplicate precision exceedance
o	Results reported exceed calibration range
p	Sample was not properly collected, preserved or shipped
s	Internal Standard outside of control limits
t	Sample temperature outside acceptance criteria
x	Sample improperly prepared
g	Serial dilution exceeded criteria

Executive Summary

Two concrete samples and one solid and one aqueous sample were collected by Pacific Environmental and Redevelopment September 21, 2010 and October 14, 2010. Samples were hand delivered to TestAmerica Laboratories, Inc. in Tacoma, Washington the same day of collection. Samples were prepared for TCLP by method 1311 and analyzed for pentachlorophenol by method 8270C (GC/MS) and arsenic, cadmium and lead by method 6010B (ICP) and mercury by method 7470A. In addition, concrete samples were analyzed for PCBs by method 8082 and total RCRA metals.

The key data evaluation findings include the following:

- Holding times were exceeded for PCBs and mercury in concrete samples BCS-1 and BCM-1. Results for these samples were qualified as estimated.

TCLP-PCP by Method 8270C

The following number of samples were prepared and analyzed by the listed methods:

2 Concrete samples	1311/3550B/8270C
1 Solid	1311/3550B/8270C
1 aqueous sample	1311/3520C/8270C

Holding Time

All samples were prepared and analyzed within required method holding times. Preparation and analyses dates reported were verified against supporting documentation. Discrepancies were not observed.

Surrogates/Internal Standards

All surrogate recoveries met recovery criteria. Internal standards met response and retention time criteria.

Blanks

Method blanks were prepared and analyzed at the required frequency. Pentachlorophenol was non-detected.

Field blanks were not collected for this method.

Calibrations/Tunes

Instrument tunes were performed at the required frequency and met all method specific criteria. Pentachlorophenol met linearity and response criteria for method 8270C. A second source standard (initial calibration verification) met recovery limits. Continuing calibrations were performed at the required frequency and met response and % drift requirements.

Matrix Spike/Matrix Spike Duplicates

A matrix spike was performed on DWD-1 and met recovery criteria.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

Sample Quantitation/ Compound Identification

A level IV review was not performed on this group of samples.

Quantitation Limits

The laboratory reported values down to the method detection limit. All samples were non-detected for pentachlorophenol.

Field Duplicates

Field duplicates were not collected for this method.

Overall Assessment

All quality control criteria were met for this method. Data are useable as reported.

TCLP & Total RCRA Metals

The following number of samples were prepared and analyzed by the listed methods:

2 concrete samples	1311/3050B/6010B/7470A
2 concrete samples	3050B/6010B/7471A
1 Solid sample	1311/3050B/6010B/7470A
1 aqueous sample	1311/3005A/6020/7470A

Holding Times

All samples were prepared and analyzed within required method holding times except the following:

Field ID	Lab ID	analyte	Date Coll.	Date Anal	ACHT	RTHT	Qual	Bias	RC
BCM-1	21738-1	mercury	9/21/10	12/8/10	87	28	J/UJ	Low	e
BCS-1	21738-2	mercury	9/21/10	12/8/10	87	28	J/UJ	Low	e

Calibrations

Initial calibration verification and continuing calibrations were analyzed at the required frequency. All target analytes met method recovery criteria (90-110%).

Blanks

Method blanks were prepared and analyzed at the required frequency. All target analytes were non-detected.

Field blanks were not collected for analysis by this method.

Matrix Spikes/ Sample Duplicates

Matrix spikes and sample duplicates were performed on sample BCM-1 all recovery and precision criteria were met.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

ICP Serial Dilution

ICP serial dilution was not performed on associated samples.

Field Duplicates

Field duplicates were not collected for this method.

Analyte Quantitation

A level IV review was not performed on this group of samples.

Quantitation Limits

The laboratory reported values down to the method detection limit. Three results were reported below the reporting limit and are flagged "J" for TCLP metals. Results below the reporting limit are considered qualitatively acceptable, but quantitatively unreliable due to uncertainty in precision near the limit of detection.

Overall Assessment

Three results were reported below the reporting limit and are qualified as estimated due to low concentrations detected for TCLP metals. Mercury results for total RCRA metals are qualified as estimated due to holding time exceedance results may be biased low.

Method 8082 (PCBs)

The following number of samples were prepared and analyzed by the listed methods:

2 concrete samples 3550C/8082

Holding Times

The following samples exceeded holding times:

Field ID	Lab ID	Date Coll.	Date Extr/Anal	ACHT	RTHT	Qual	Bias	RC
BCM-1	21738-1	9/21/10	12/2/10 12/2/10	81/0	14/40	J/UJ	None	e
BCS-1	21738-2	9/21/10	12/2/10 12/2/10	81/0	14/40	J/UJ	None	e

PCBs are very stable and therefore results are not expected to be biased low.

Surrogates

All surrogate recoveries met recovery criteria.

Blanks

Method blanks were prepared and analyzed at the required frequency. PCBs were non-detected.

Calibrations

All PCBs met linearity criteria for method 8082. Continuing calibrations were performed at the required frequency with all percent differences less than 20%.

Matrix Spike/Matrix Duplicates

A MS/MSD was performed on sample BCM-1(580-21738-1) recovery and precision criteria were met.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within the required limits.

Sample Quantitation/ Compound Identification

A level IV review was not performed on this group of samples.

Quantitation Limits

The laboratory reported values down to the method detection limit. All results were reported as non-detected for PCB 1016, 1221, 1232, 1242, 1248, 1254 and 1260.

Field Duplicates

Field duplicate samples were not collected for this method.

Additional Comments

PCBs by method 8082 were requested for samples BCM-1 and BCS-1 on November 12, 2010. The sampling location for these samples was under water at that time and could not be accessed therefore a decision was made to analyze samples that had been previously collected. Samples were outside of holding time at the time the request for analysis was made.

Overall Assessment

Non-detected results in samples BCM-1 and BCS-1 are qualified as estimated due to holding time exceedance.

Sample Collection/Condition

Chain of Custody/Sample Receipt SDG 580-21738-1

Samples were received without a cooler therefore a temperature upon receipt was not recorded. Samples had been hand delivered immediately after collection on September 21, 2010 in zip-lock plastic bags. The lab noted that the samples arrived in good condition. PCB analysis by method 8082 was requested on November 11, 2011 at this time holding times had been exceeded. Total RCRA metals by methods 6010B and 7471A were requested on December 6, 2010 at this time holding times for mercury had been exceeded.

Data qualified due to sample condition

Samples BCM-1 and BCS-1 were qualified as estimated for PCBs and mercury due to holding time exceedance.

Chain of Custody/Sample Receipt SDG 580-22215-1

Samples were received without a cooler therefore a temperature upon receipt was not recorded. Samples had been hand delivered immediately after collection on October 14, 2010. The lab noted that the samples arrived in good condition and properly preserved. The lab noted the following discrepancy.

- The time recorded on one of the container labels for sample DWD-1 did not match the time recorded on the chain of custody.

Data qualified due to Sample Condition

Data were not qualified due to sample condition.

Introduction

This report summarizes the data quality review of analytical results generated in support of the November 2010 Phase I Remedial Investigation sampling event for the Superlon Plastics Site in Tacoma, Washington. The criteria applied are consistent with analytical method protocols, in conjunction with the laboratory-established control limits. In cases where specific guidance was not available from between these sources, the data have been evaluated using professional judgment consistent with industry standards. The review included evaluation of chain-of-custodies, holding time and summary information for blanks (to assess contamination), sample duplicates (to assess precision), matrix spike and surrogate recoveries (to assess matrix effect), laboratory control samples and instrument calibration to assess (accuracy). Level IV validation (raw data verification) was not performed.

This report summarizes the data quality review of data contained in sample delivery groups (SDGs) 580-22957-1 and 580-22988-1.

The report is arranged by method; within each method section is a sub-section addressing each data quality indicator. Only situations in which data were impacted by quality control exceedance will be discussed.

I certify that all data validation criteria described above was assessed, and any qualifications made to the data were in accordance with the cited reference documents.

Authorized Signature

Qualifier and Reason Code (RC) Definition

The following qualifiers and reason codes may be used in this report:

- U The analyte was not detected above the reported method detection limit.
- UJ The analyte was not detected above the reported method detection limit. However, the reported Limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- J/none The sample results for the analyte are estimated for positive results, results reported below the quantitation limit are not qualified (high bias).
- J/UJ Sample results for the analyte are estimated for both positive and results reported below the quantitation limit (low bias).
- R/UR The sample results are rejected for both positive results and results reported below the detection limit due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.
- a The analyte was found in the method blank
- a- Negative drift observed in instrument calibration blanks
- b Surrogate spike recovery outside control limits
- c Matrix Spike/Matrix Spike Duplicate (MS/MSD) recovery outside control limits
- d Laboratory Control Sample (LCS) recovery outside control limits
- e Holding time exceeded
- f MS/LCS sample duplicate failed precision criteria
- h Second column results indicate that the results were not confirmed
- i Instrument calibration outside of control limits
- k The analyte was found in the field blank
- m Numerical value is between the MDL and RL
- n Field duplicate precision exceedance
- o Results reported exceed calibration range
- p Sample was not properly collected, preserved or shipped
- s Internal Standard outside of control limits
- t Sample temperature outside acceptance criteria
- x Sample improperly prepared
- g Serial dilution exceeded criteria

Executive Summary

Seventy-four soil samples, three groundwater samples and three soil field duplicates were collected by Pacific Environmental and Redevelopment on November 15, 2010 and November 16, 2010. Samples were hand delivered to TestAmerica Laboratories, Inc. in Tacoma, Washington the same day of collection. Samples were analyzed for volatile organics by method 8260B (GC/MS), pentachlorophenol by method 8270C (GC/MS), organochlorine pesticides by method 8081A, diesel and motor oil by NWTPH-Dx, gasoline by NWTPH-Gx, and arsenic, cadmium and lead by method 6010B (ICP) for solid samples or method 6020(ICP/MS) for water samples.

The key data evaluation findings include the following:

- Volatile organics by method 8260B are of acceptable quality. Approximately (15.5%) of the results are qualified.
- Pentachlorophenol in one water sample was rejected due to low surrogate recovery. Pentachlorophenol results in the soil matrix met all quality control criteria.
- A significant amount of data (58.9%) was qualified for organochlorine pesticides by method 8081A. Most data were qualified due to matrix effect.
- Extractable fuels by method NWTPH-Dx data are significantly impacted. Detected and non-detected results in soil samples (96.7%) of data were qualified as estimated due to improper sample preparation technique.
- Gasoline data by method NWTPH-Gx are of good quality.
- Metals data are of good quality. Most qualifications (11.7%) made to the metals data are due to low concentrations detected. Some matrix effect and matrix interference for lead was exhibited in the matrix spikes and serial dilutions.

Volatile Organics by method 8260B/5030/5035

The following number of samples were prepared and analyzed by the listed methods:

62 Soils	5035/8260B
2 Ground Waters	5030/8260B
1 solid Trip Blank	5035/8260B
1 aqueous Trip Blank	5030/8260B

Holding Time

All samples were analyzed within the required technical holding time except the following:

Field ID	Lab ID	Date Coll	Date Anal	ACHT	RTHT	Qual	Bias	RC
SUP_GW_11	22957-44	11/15/10	12/1/10	15	14	J/UJ	Low	e
SUP_SL_34 8-10	22957-30	11/15/10	12/1/10	15	14	J/UJ	Low	e
Trip Blank	22957-63	11/15/10	12/1/10	15	14	J/UJ	Low	e
SUP_GW_10	22988-6	11/16/10	12/1/10	15	14	J/UJ	Low	e

Detected and non-detected results may be biased low.

Sample SUP_SL_34 8-10 (22957-30) was reanalyzed at a dilution due to the high concentration of 1,2,4-trimethylbenzene detected. The result for 1,2,4-trimethylbenzene is qualified as estimated due to holding time exceedance.

In SDG 580-22957-1 approximately 60% of samples were analyzed on the last day of holding time.

Surrogates/Internal Standards

Surrogate recoveries exceeded the control limits in the following samples:

Field ID	Lab ID	Surrogate	% Rec	QC Limits	Qual	Bias/RC
SUP_SL_29 14-16	22957-7	trifluorotoluene	70	75-125	J/UJ	Low b
SUP_SL_32 8-10	22957-13	trifluorotoluene	146	75-125	J/None	High b
SUP_SL_33 12-14	22957-24	trifluorotoluene	130	75-125	J/None	High b

Detected and non-detected results may be biased as shown.

Data were not qualified due to internal standard exceedance.

Blanks

Method blanks were prepared and analyzed at the required frequency. The following compounds were qualified as non-detected (UJ) due to method blank contamination:

Field ID	Lab ID	Compound	Result/Qual	Blank ID	Bias/RC
SUP_SL_34 12-14	22957-32	benzene	7.5 UJ	580-76049	High a
SUP_SL_34 12-14	22957-32	trichloroethene	14 UJ	580-76049	High a
SUP_SL_34 14-16	22957-33	benzene	5.2 UJ	580-76049	High a

SUP_SL_39 8-10	22957-49	benzene	13 UJ	580-76049	High a
SUP_SL_39 8-10	22957-49	trichloroethene	6.4 UJ	580-76049	High a
SUP_SL_39 10-12	22957-50	benzene	8 UJ	580-76049	High a
SUP_SL_39 10-12	22957-50	trichloroethene	6.1 UJ	580-76049	High a
SUP_SL_39 10-12	22957-50	naphthalene	13 UJ	580-76049	High a
SUP_SL_39 12-14	22957-51	trichloroethene	5.8 UJ	580-76049	High a
SUP_SL_39 14-16	22957-52	trichloroethene	3.6 UJ	580-76049	High a
SUP_SL_34 10-12	22957-31	benzene	10 UJ	580-76049	High a
SUP_GW_11	22957-44	n-propylbenzene	0.41 UJ	580-76518	High a
SUP_GW_11	22957-44	1,2,4-trimethylbenzene	1.9 UJ	580-76518	High a
Trip Blank	22957-63	1,2,4-trimethylbenzene	0.58 UJ	580-76518	High a
SUP_GW_10	22988-6	1,2,4-trimethylbenzene	0.50 UJ	580-76518	High a

Samples less than 5 times the concentration detected in the associated method blank were qualified as non-detected at the concentrations detected; detection limits were not elevated. Non-detected results are estimated (UJ).

The following sample result was qualified as non-detected due to detection of 1,3,5-trimethylbenzene in the associated trip blank (22957-63).

Field ID	Lab ID	Compound	Result/Qual	Bias/RC
SUP_GW_11	22957-44	1,3,5-trimethylbenzene	0.84 UJ	High k

Calibrations/Tunes

Instrument tunes were performed at the required frequency and met method specific criteria. All target compounds met linearity and response criteria for method 8260B. A second source standard (initial calibration verification) met recovery limits in all cases. Continuing calibrations were performed at the required frequency. The following samples were qualified due to calibration exceedance:

CCV 11/25/10 2:22

Compound	%Diff	Qualifier	Bias	RC

CCV 11/24/10 18:08

Compound	%Diff	Qualifier	Bias	RC
tetrachloroethene	-26.1	J/UJ	Low	i

Impacted Samples

Field ID	Lab ID
SUP_SL_30 2-4	22988-1
SUP_SL_30 4-6	22988-2
SUP_SL_30 10-12	22988-3
SUP_SL_30 12-14	22988-4

Note: Compounds that exceeded 25% difference were qualified as estimated.

Results may be biased as shown.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs were performed at the required frequency. Data were not qualified due to matrix spike recoveries or precision exceedance.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. Data were not qualified due to LCS recoveries or precision exceedance.

Sample Quantitation/ Compound Identification

A Level 4 review was not performed for this group of samples.

Quantitation Limits

The laboratory reported values down to the method detection limit. One hundred and seventy-three results were reported below the reporting limit and are flagged "J". Results below the reporting limit are considered qualitatively acceptable, but quantitatively unreliable due to uncertainty in precision near the limit of detection.

Field Duplicates

Sample SUP_SL_39 12-14 (22957-51) and SUP_SL_39 DUP (22957-53) were collected as field duplicates. The following detected results were observed.

Analyte	Field ID	ug/kg	Field ID	ug/kg	RPD	Qual/RC
Methylene chloride	SUP_SL_39 12-14	33	SUP_SL_39 DUP	25	27.5	none
Trichloroethene	SUP_SL_39 12-14	5.8	SUP_SL_39 DUP	ND	NC	none

All remaining compounds were non-detected.

Additional Comments

Due to the presence of headspace in sample SUP_GW_10 (22988-6) detected and non-detected results were qualified as estimated (J/UJ). Results may be biased low.

Overall Assessment

Data were not rejected. Approximately (15.5%) of data were qualified. Results in three samples were qualified as estimated with a potential low bias due to holding time exceedance. Results in one sample were qualified as estimated with a potential low bias due to the presence of headspace. Due to matrix effect, three samples were qualified as estimated because of surrogate recovery exceedance. Approximately one percent of data was qualified as non-detected due to method blank contamination. Due to calibration exceedance approximately (4%) of data was qualified as estimated.

Pentachlorophenol by Method 8270C

The following number of samples were prepared and analyzed by the listed methods:

17 Soils	3550B/8270C
1 Ground Water	3520C/8270C

Holding Time

All samples were prepared and analyzed within the method required holding time.

Surrogates/Internal Standards

Surrogate recoveries met recovery criteria except in the following:

Field ID	Lab ID	Surrogate	Rec	QC Limit	Qual	Bias	RC
SUP_GW_11	22957-44	2,4,6-tribromophenol	1%	44-125	J/UR	Low	b

Due to extremely low recoveries (<10%), the non-detected result for pentachlorophenol was rejected in sample SUP_GW_11 (22957-44). The lab noted re-extraction and reanalysis was not performed.

Data were not qualified due to internal standard exceedance.

Blanks

Method blanks were prepared and analyzed at the required frequency. Pentachlorophenol was non-detected.

Field blanks were not collected for this method.

Calibrations/Tunes

Instrument tunes were performed at the required frequency and met all method specific criteria. Pentachlorophenol met linearity and response criteria for method 8270C. A second source standard (initial calibration verification) met recovery limits. Continuing calibrations were performed at the required frequency and met response and % drift requirements.

Matrix Spike/Matrix Spike Duplicates

MS/MSDs were performed at the required frequency for soil samples all recoveries and precision were within limits.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

Sample Quantitation/ Compound Identification

A Level 4 review was not performed for this group of samples.

Quantitation Limits

The laboratory reported values down to the method detection limit.

Field Duplicates

Field duplicates were not collected for this method.

Additional Comments

Twelve soil samples were originally collected in August of 2010. Non-detected pentachlorophenol results were rejected for these samples due to improper preparation technique. Soil samples were re-sampled and reanalyzed in November 2010. Most soils were reported as non-detected for pentachlorophenol, which confirmed the original results. Sample SUP_SL_1 1-2 (22988-7) was originally reported as non-detected however pentachlorophenol was reported at 710 µg/kg in the re-sampled soil.

The aliquot analyzed for sample SUP_GW_11 (22957-44) was improperly preserved with hydrochloric acid which may have contributed to the low surrogate recovery.

Overall Assessment

Pentachlorophenol was rejected in sample SUP_GW_11 (22957-44) due to low surrogate recovery <10%. Soil samples met all quality control criteria and should be considered useable as reported.

Organochlorine Pesticides Method 8081A

The following number of samples were prepared and analyzed by the listed methods:

8 Soils

3550B/8081A

Holding Times

Samples were originally prepared and analyzed within the required method holding time, however, the laboratory control sample failed low for delta-BHC in the original extraction batch. The samples were re-extracted and re-analyzed for delta-BHC eight days outside of holding time. Delta-BHC is qualified as estimated with a potential low bias in the following samples:

Field ID	Lab ID	Date Coll.	Prep Date	ACHT	RTHT	Qual	Bias	RC
SUP_SL_32 1-2	22957-9	11/15/10	12/7/10	22	14	J/UJ	Low	e
SUP_SL_32 2-4	22957-10	11/15/10	12/7/10	22	14	J/UJ	Low	e
SUP_SL_32 4-6	22957-11	11/15/10	12/7/10	22	14	J/UJ	Low	e
SUP_SL_32 6-8	22957-12	11/15/10	12/7/10	22	14	J/UJ	Low	e
SUP_SL_32 8-10	22957-13	11/15/10	12/7/10	22	14	J/UJ	Low	e
SUP_SL_32 10-12	22957-14	11/15/10	12/7/10	22	14	J/UJ	Low	e
SUP_SL_32 12-14	22957-15	11/15/10	12/7/10	22	14	J/UJ	Low	e
SUP_SL_32 14-16	22957-16	11/15/10	12/7/10	22	14	J/UJ	Low	e

The original extraction was performed on the last day of holding time.

Surrogates

Surrogate recoveries exceeded the control limits in the following samples:

Field ID	Lab ID	Surrogate	Rec	QC Limit	Qual	Bias	RC
SUP_SL_32 2-4	22957-10	tetrachloro-m-xylene	45%	49-123	J/UJ	Low	b
SUP_SL_32 6-8	22957-12	tetrachloro-m-xylene	47%	49-123	J/UJ	Low	b
SUP_SL_32 8-10	22957-13	tetrachloro-m-xylene	48%	49-123	J/UJ	Low	b

Detected and non-detected results may be biased as shown.

Blanks

Method blanks were prepared and analyzed at the required frequency. All target compounds were non-detected.

Field blanks were not collected for this method.

Calibrations

All compounds met linearity criteria for method 8081A on both the primary and confirmation columns. A second source standard (ICV) met recovery limits. Continuing calibrations were performed at the required frequency. The following samples were qualified due to calibration exceedance:

CCV 12/7/10 22:43

Compound	%Diff	Qualifier	Bias	RC
4,4-DDT	-57.0	J/UJ	Low	i
methoxychlor	-46.6	J/UJ	Low	i

CCV 12/7/10 23:02

toxaphene	-58.5	J/UJ	Low	i
-----------	-------	------	-----	---

Impacted Samples

Field ID	Lab ID	Field ID	Lab ID

gamma-BHC	31,34/12	50-127/30	J/UJ	Low	c
4,4' DDD	29,51/28	44-141/30	J/UJ	Low	c
4,4'DDE	21,104/53	47-140/30	J/UJ	Low	c
4,4'DDT	34,42/18	34-159/30	J/UJ	Low	c
dieldrin	35,39/12	53-134/30	J/UJ	Low	c
endosulfan I	35,39/12	52-122/30	J/UJ	Low	c
endosulfan II	32,37/15	53-132/30	J/UJ	Low	c
endosulfan sulfate	17,20/17	42-128/30	J/UJ	Low	c
endrin	42,45/10	46-138/30	J/UJ	Low	c
heptachlor	41,44/9	50-130/30	J/UJ	Low	c
heptachlor epoxide	38,39/6	49-123/30	J/UJ	Low	c
methoxychlor	37,43/16	46-154/30	J/UJ	Low	c
endrin ketone	34,38/13	45-127/30	J/UJ	Low	c
alpha-chlordane	35,39/14	46-118/30	J/UJ	Low	c
gamma-chlordane	-11,-4/20	49-122/30	J/UJ	Low	c

Results may be biased as shown. Only the sample spiked was qualified.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

Sample Quantitation/ Compound Identification

A Level 4 review was not performed on associated samples.

Quantitation Limits

The laboratory reported values down to the method detection limit. Two results were reported below the reporting limit and are flagged "J". Results below the reporting limit are considered qualitatively acceptable, but quantitatively unreliable due to uncertainty in precision near the limit of detection.

Field Duplicates

Field Duplicates were not collected for this method.

Overall Assessment

No data were rejected and 58.9% of data were qualified as estimated with a potential low bias. Delta-BHC was qualified as estimated in all samples due to holding time exceedance. 4,4'-DDT, methoxychlor and toxaphene results in all samples were qualified due to low CCV response. Due to matrix effect low surrogate recoveries were observed in three samples and most compounds were qualified in sample SUP_SL_32 1-2 (22957-9) due to low matrix spike recovery.

NWTPH-Dx

The following number of samples were prepared and analyzed by the listed methods:

58 Soils	3550C/NWTPH-Dx
2 Ground Waters	3510C/NWTPH-Dx

Holding Times

Samples were prepped and analyzed within the required method holding time.

Surrogates

Surrogate recoveries met recovery criteria of 50-150%.

Blanks

Method blanks were prepared and analyzed at the required frequency. The following sample results were qualified as nondetected due to method blank contamination.

Field ID	Lab ID	Compound	Result/Qual		Blank ID	Bias	RC
SUP_SL_32 2-4	22957-10	motor oil	51	UJ	580-76044	High	a
SUP_SL_32 6-8	22957-12	motor oil	44	UJ	580-76044	High	a
SUP_SL_32 8-10	22957-13	motor oil	100	UJ	580-76044	High	a
SUP_SL_32 10-12	22957-14	motor oil	110	UJ	580-76044	High	a
SUP_SL_32 12-14	22957-15	motor oil	67	UJ	580-76044	High	a

SUP_SL_34 4-6	22957-28	motor oil	120	UJ	580-76311	High	a
SUP_SL_34 6-8	22957-29	motor oil	77	UJ	580-76311	High	a
SUP_SL_34 10-12	22957-31	motor oil	110	UJ	580-76311	High	a
SUP_SL_34 12-14	22957-32	motor oil	89	UJ	580-76311	High	a
SUP_SL_34 14-16	22957-33	motor oil	54	UJ	580-76311	High	a
SUP_SL_35 1-2	22957-36	motor oil	170	UJ	580-76311	High	a
SUP_SL_35 6-8	22957-39	motor oil	170	UJ	580-76311	High	a
SUP_SL_35 8-10	22957-40	motor oil	73	UJ	580-76311	High	a
SUP_SL_35 10-12	22957-41	motor oil	73	UJ	580-76311	High	a
SUP_SL_35 12-14	22957-42	motor oil	68	UJ	580-76311	High	a
SUP_SL_35 14-16	22957-43	motor oil	87	UJ	580-76311	High	a
SUP_SL_39 1-2	22957-45	motor oil	120	UJ	580-76311	High	a
SUP_SL_39 2-4	22957-46	motor oil	110	UJ	580-76311	High	a
SUP_SL_39 10-12	22957-50	motor oil	59	UJ	580-76314	High	a
SUP_SL_39 12-14	22957-51	motor oil	78	UJ	580-76314	High	a
SUP_SL_39 14-16	22957-52	motor oil	46	UJ	580-76314	High	a
SUP_SL_40 8-10	22957-59	motor oil	57	UJ	580-76314	High	a
SUP_SL_40 10-12	22957-60	motor oil	54	UJ	580-76314	High	a
SUP_SL_40 12-14	22957-61	motor oil	50	UJ	580-76314	High	a
SUP_SL_40 14-16	22957-62	motor oil	55	UJ	580-76314	High	a
SUP_SL_30 2-4	22988-1	motor oil	21	UJ	580-76261	High	a
SUP_SL_30 10-12	22988-3	motor oil	35	UJ	580-76261	High	a
SUP_SL_30 12-14	22988-4	motor oil	18	UJ	580-76261	High	a
SUP_SL_30 14-16	22988-5	motor oil	14	UJ	580-76261	High	a

Samples less than 5 times the concentration detected in the associated method blank were qualified as non-detected at the concentrations detected; detection limits were not elevated. Non-detected results are estimated (UJ).

Field blanks were not collected for analysis by this method.

Calibrations

#2 diesel and motor oil met linearity criteria for method NWTPH-Dx. Continuing calibrations were performed at the required frequency. The following samples were qualified due to CCV exceedance:

CCV 11/30/10 4:18

Compound	%Diff	Qualifier	Bias	RC
motor oil	15.8	J/None	High	i

Impacted Samples

Field ID	Lab ID
SUP_SL_39 14-16	22957-52
SUP_SL_40 8-10	22957-59
SUP_SL_40 10-12	22957-60
SUP_SL_40 12-14	22957-61
SUP_SL_40 14-16	22957-62

Note: Compounds that exceeded 15% difference were qualified as estimated.

Matrix Spike/Matrix Duplicates

MS/MSDs were not performed on any of the associated samples. Matrix specific recovery data is not available.

The lab performed laboratory duplicates on the following samples:

Field ID	Lab ID	Compound	mg/kg	mg/kg	RPD	Limit	Qual	Bias	RC
SUP_SL_33 1-2	22957-18	motor oil	650	1240	62	35	J	None	f
SUP_SL_39 8-10	22957-49	motor oil	290	445	43	35	J	None	f

Due to poor precision in the laboratory duplicate analysis, results for motor oil were qualified as estimated (J).

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

Sample Quantitation/ Compound Identification

A Level 4 Review was not performed on associated samples.

Quantitation Limits

The laboratory reported values down to the method detection limit. Eighteen results were reported below the reporting limit and are flagged "J". Results below the reporting limit are considered qualitatively acceptable, but quantitatively unreliable due to uncertainty in precision near the limit of detection.

Field Duplicates

Samples SUP_SL_33 2-4 (22957-19) and SUP_SL_33 DUP (22957-17) were collected as field duplicates. The following results were observed.

Analyte	Field ID	mg/kg	Field ID	mg/kg	RPD	Qual	RC
#2 diesel	SUP_SL_33 2-4	61	SUP_SL_33 DUP	15	121	J	n
motor oil	SUP_SL_33 2-4	490	SUP_SL_33 DUP	200	84	J	n

Sample SUP_SL_34 8-10 (22957-30) and SUP_SL_34 DUP (22957-34) were collected as field duplicates. The following results were observed.

Analyte	Field ID	mg/kg	Field ID	mg/kg	RPD	Qual	RC
#2 diesel	SUP_SL_34 8-10	10000	SUP_SL_34 DUP	2100	131	J	n
motor oil	SUP_SL_34 8-10	22000	SUP_SL_34 DUP	4500	132	J	n

Sample SUP_SL_39 12-14 (22957-51) and SUP_SL_39 DUP (22957-53) were collected as field duplicates. The following results were observed.

Analyte	Field ID	mg/kg	Field ID	mg/kg	RPD	Qual	RC
#2 diesel	SUP_SL_39 12-14	18	SUP_SL_39 DUP	140	154	J	n
motor oil	SUP_SL_39 12-14	78	SUP_SL_39 DUP	390	133	J	n

Due to high variability detected results were flagged as shown. Only the samples used as field duplicates were qualified. Bias is non-determined.

Additional Comments

Soil samples were extracted using a method developed by the laboratory not method 3550B as reported in analytical reports. The laboratory's method utilized a heated sonic bath to extract samples instead of a sonic horn as prescribed within method 3550B. The lab used only 10gms of sample (the method NWTPH-DX requires 20gms). Only ten milliliters (mls.) of solvent was used by the lab to extract samples and the process did not have a concentration step whereas method 3550B recommends 300 mls. of solvent to extract samples and requires a concentration step in the sample preparation process.

The laboratory's method detection limits (MDLs) and reporting limits are based on the process used by the lab and not method 3550B as reported. Laboratory control samples were submitted for accuracy information, however, matrix spikes were not performed for this method therefore matrix specific recovery data is unknown.

Overall Assessment

All soil samples were qualified as estimated due to improper sample preparation technique. Motor oil results in thirty-two samples were qualified as non-detected due to method blank contamination. Motor oil and #2 diesel results in several samples were qualified as estimated due to poor precision in field and laboratory duplicates indicating a heterogeneous matrix.

NWTPH-Gx

The following number of samples were prepared and analyzed by the listed methods:

54 Soils	5035/NWTPH-Gx
2 Ground Waters	5030/NWTPH-Gx
1 Solid Trip Blank	5035/NWTPH-Gx
1 Aqueous Trip Blank	5030/NWTPH-Gx

Holding Times

Samples were analyzed within the required method holding time.

Surrogates

Data were not qualified due to surrogate recovery exceedance.

Blanks

Method blanks were prepared and analyzed at the required frequency. Samples were not qualified due to method blank contamination.

Trip blanks were non-detected for gasoline.

Calibrations

Gasoline met linearity criteria for method NWTPH-Gx. Continuing calibrations were performed at the required frequency. Data were not qualified due to calibration exceedance.

Matrix Spike/Matrix Duplicates

MS/MSDs were performed at the required frequency from the associated samples. Recoveries and precision met method criteria.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

Sample Quantitation/ Compound Identification

A Level 4 review was not performed on associated samples.

Quantitation Limits

The laboratory reported values down to the method detection limit. Sixteen results were reported below the reporting limit and are flagged "J". Results below the reporting limit are considered qualitatively acceptable, but quantitatively unreliable due to uncertainty in precision near the limit of detection.

Field Duplicates

Samples SUP_SL_39 12-14 (22957-51) and SUP_SL_39 DUP (22957-53) were collected as field duplicates. The following results were observed.

Analyte	Field ID	mg/kg	Field ID	mg/kg	RPD
gasoline	SUP_SL_39 12-14	ND	SUP_SL_39 DUP	ND	NC

Overall Assessment

No data were rejected. All data qualified (27.6%) were due to concentrations detected below the reporting limit.

Metals by As, Cd, & Pb by Methods 6010B, 6020

The following number of samples were prepared and analyzed by the listed methods:

65 Soils	3050B/6010B
3 Ground Waters	3005A/6020/7470A

Water samples were analyzed for both total and dissolved metals.

Holding Times

All samples were prepared and analyzed within required method holding times.

Calibrations

Initial calibration verification and continuing calibrations were analyzed at the required frequency and met recovery of criteria (90-110%).

Blanks

Method blanks were prepared and analyzed at the required frequency. Method Blanks were non-detected for all target analytes.

Field blanks were not collected for analysis by this method.

Matrix Spikes/ Sample Duplicates

Matrix spikes were prepared and analyzed at the required frequency for soil and water samples. Due to accuracy problems in the matrix spike analysis, the following detected and non-detected results are qualified as estimated (J/UJ):

Field ID	Lab ID	Analyte	%Rec/RPD	QC Limits	Bias	RC
SUP_SL_32 1-2	22957-9	lead	70, 75/4	75-125/35	Low	c
SUP_SL_35 0-1	22957-35	lead	55, 73/18	75-125/35	Low	c

Due to high variability in the matrix, only the sample used as the matrix spike was qualified.

Matrix Duplicates

Matrix duplicates were prepped and analyzed at the proper frequency. Precision was acceptable in all cases.

Laboratory Control Samples

Laboratory control samples were analyzed at the required frequency. All recoveries were within required limits.

ICP Serial Dilution

ICP serial dilutions were performed at the required frequency. Due to ICP serial dilution problems, the following detected results are qualified as estimated (J).

Field ID	Lab ID	Analyte	(mg/Kg) %D	Qual	Bias	RC
SUP_SL_32 1-2	22957-9	lead	46 13.2	J	None	g
SUP_SL_35 0-1	22957-35	lead	46 16.6	J	None	g
SUP_SL_39 DUP	22957-53	lead	16 24	J	None	g

Only the sample used for the serial dilution was qualified.

Field Duplicates

Sample SUP_SL_33 2-4 (22957-19) and SUP_SL_33 DUP (22957-17) were collected as field duplicates. The following results were observed.

Analyte	Field ID	mg/kg	Field ID	mg/kg	RPD	Qual	RC
Arsenic	SUP_SL_33 2-4	24	SUP_SL_33 DUP	ND	NC		
Cadmium	SUP_SL_33 2-4	ND	SUP_SL_33 DUP	ND	NC		
Lead	SUP_SL_33 2-4	62	SUP_SL_33 DUP	9.2	148	J	n

Sample SUP_SL_34 8-10 (22957-30) and SUP_SL_34 DUP (22957-34) were collected as field duplicates. The following results were observed.

Analyte	Field ID	mg/kg	Field ID	mg/kg	RPD	Qual	RC
Arsenic	SUP_SL_34 8-10	150	SUP_SL_34 DUP	210	33		
Cadmium	SUP_SL_34 8-10	ND	SUP_SL_34 DUP	ND	NC		
Lead	SUP_SL_34 8-10	45	SUP_SL_34 DUP	11	121	J	n

Sample SUP_SL_39 12-14 (22957-51) and SUP_SL_39 DUP (22957-53) were collected as field duplicates. The following results were observed.

Analyte	Field ID	mg/kg	Field ID	mg/kg	RPD	Qual	RC
Arsenic	SUP_SL_39 12-14	1300	SUP_SL_39 DUP	ND	NC	J	n
Cadmium	SUP_SL_39 12-14	ND	SUP_SL_39 DUP	ND	NC		
Lead	SUP_SL_39 12-14	4.5	SUP_SL_39 DUP	16	112	J	n

Due to high variability detected results were flagged as shown. Only the samples used as field duplicates were qualified. Bias is non-determined.

Analyte Quantitation

A Level 4 review was not performed on associated samples.

Quantitation Limits

The laboratory reported values down to the method detection limit. Seventy-nine results were reported below the reporting limit and are flagged "J". Results below the reporting limit are considered qualitatively acceptable, but quantitatively unreliable due to uncertainty in precision near the limit of detection.

Additional Comments

Due to high buffering capacity in sample SUP_GW_11 the pre-preserved HNO₂ acid container was not sufficient to reduce the PH to 2. The lab tried to adjust the PH but was unable to change the PH so the lab analyzed the sample as was. Results in sample SUP_GW_11 are qualified as estimated (J/UJ) with a potential low bias.

Due to high buffering capacity in sample SUP_GW_10 the pre-preserved HNO₃ acid container was not sufficient to reduce the PH to 2. The sample was received at a PH of 4; the lab adjusted the PH to 2 upon receipt. Results in sample SUP_GW_10 are qualified as estimated (J/UJ) with a potential low bias.

Overall Assessment

Data were not rejected. Most data qualified (11.7%) were due to low concentrations detected. Due to high buffering capacity detected and non-detected results for both total and dissolved metals were qualified as estimated in samples SUP_GW_10 and SUP_GW_11. Due to matrix effect, two samples were qualified as estimated for lead in the matrix spikes and three samples were qualified due to serial dilution exceedance. Lead results in three sets of field duplicates and arsenic results in one field duplicate set were qualified due to poor precision.

Sample Collection/Condition

Chain of Custody/Sample Receipt SDG 580-22957-1

Samples were received in four coolers. The temperature of the coolers was 8.9°C, 9.5°C, 5.6°C and 5.4°C upon arrival to the lab the cooling process had begun. Samples had been delivered immediately after collection on November 15, 2010. The lab noted that the samples arrived in good condition, properly preserved and on ice with the following exceptions:

- The lab did not receive sample SUP_SL_33 DUP as listed on the chain of custody but received sample SUP_SL_32 DUP which was not listed on the COC. Pioneer Technologies instructed the lab to change the sample ID to SUP_SL_33 DUP (22957-17) and run all analyses as listed on the COC.
- The lab received two methanol vials for sample SUP_SL_32 2-4 (22957-10) but did not receive a methanol vial for sample SUP_SL_33 2-4 (22957-19). One methanol vial of SUP_SL_32 2-4 matched the sampling time on the COC for sample SUP_SL_33 2-4. Pioneer instructed the lab to change the one methanol vial that listed the correct time on the label to sample SUP_SL_33 2-4.
- All times on methanol vials matched times listed on the chain of custody; however, the times displayed on soil jar labels did not match the times collected on the COC. Two different samplers were collecting the samples listed on the chain. Pioneer Technologies instructed the lab to use the times listed on the chain of custody as the times collected for sample log in.
- Sample SUP_SL_9 was listed on the chain of custody but the ID on the sample label was SUP_GW_9. The sample was a ground water; therefore, the lab corrected the sample ID to SUP_GW_9.
- A trip blank was submitted for analysis; however, it was not listed on the COC. Pioneer Technologies instructed the lab to analyze the trip blank for 8260B and NWTPH-Gx.
- A methanol vial for sample SUP_SL_40 0-1 (22957-54) was not received by the lab. Pioneer Technologies instructed the lab to run all other analyses as listed on the COC and cancelled the 8260B and NWTPH-Gx analyses.
- The lab received a methanol vial for sample SUP_SL_39 0-1 but this sample was listed as cancelled on the COC. The lab confirmed with Pioneer Technologies that the sample was indeed cancelled.
- Sample SUP_GW_11 (22957-44) was received in a properly pre-preserved HNO₃ poly container for metal analysis and a HCL amber jar for NWTPH-Dx analysis, however, the PH was outside of criteria. The PH when verified by the lab was 14 the lab added 3 mls. of nitric acid to the sample but the PH did not lower. The lab stopped adding additional acid and analyzed samples as they were received.
- The lab did not receive a non-preserved amber bottle for sample SUP_GW_11 for 8270C analyses. As per Jeff King of Pacific Environmental Redevelopment the lab was instructed to analyze 8270C (PCP) on the HCL preserved sample bottle.
- Sample SUP_SL_33 6-8 lost all methanol contents during transit. As per Jeff King of Pacific Environmental Redevelopment the lab was instructed to cancel 8260B and NWTPH-Gx analyses.

Data qualified due to sample condition

Metal results by method 6020 were qualified as estimated (J/UJ) in sample SUP_GW-11 (22957-44).

Chain of Custody/Sample Receipt SDG 580-22988-1

Samples were received in two coolers. The temperature of the coolers was 9.6°C and 5.6°C upon arrival to the lab the cooling process had begun. Samples had been delivered immediately after collection on November 16, 2010. The lab noted that the samples arrived in good condition, properly preserved and on ice with the following exceptions:

- A trip blank was submitted for analysis however not listed on the chain of custody. The lab added the trip blank to the COC and placed the sample on hold. Pioneer Technologies instructed the lab to analyze the trip blank for methods 8260B and NWTPH-Gx.
- Sample SUP-GW-10 (22988-6) was collected in properly pre-preserved containers for metals and NWTPH-Dx, however, due to the high buffering capacity of this sample the PH was 5 for method NWTPH-Dx and PH 4 for metal analysis. The lab added additional acid to the containers to adjust final PH to 2.
- Water sample SUP_GW-10 (22988-6) contained a large amount of sediment.
- Times listed on soil jars did not match the times listed on the COC. Pioneer Technologies instructed the lab to log in samples with the time listed on the COC.
- Sample SUP_GW-10 (22988-6) contained headspace. Pioneer Technologies instructed the lab to analyze the sample for method 8260B.

Data qualified due to sample condition

Metal and volatile organic results by methods 6020 and 8260B were qualified as estimated in sample SUP_GW-10 (22988-6).

To: Pacific Environmental and Redevelopment Corporation (PERC)
From: Kara Roberts
Date: February 21, 2012
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 257565
Sample Date(s): May 9, 2011

This review summarizes the data quality of analytical results generated in support of the May 9, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 257565.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 257565

Delivery Group Summary

Thirty one soil samples and two soil field duplicates were collected by Pacific Environmental Redevelopment Corporation on May 9, 2011. Samples were hand delivered to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for semivolatile organic compounds (pentachlorophenol only) by method 8270.

The key data evaluation findings include the following:

- Pentachlorophenol results by method 8270 have 69.7% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:

Collected by the Field Crew		Provided by the Laboratory	
Soil= 31 Samples (2 Duplicates)	Groundwater= 0 Samples	Trip Blank (Soil)= 0 Samples	Trip Blank (Groundwater)= 0 Samples
8270 Pentachlorophenol Only			

Holding Time:

All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP.

Action: No action was taken based on the evaluation of holding times.

Representativeness

Surrogates:

Criteria Used to Qualify Data Associated with Surrogate Recoveries:

- 1) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than the upper acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are not flagged.
- 2) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than or equal to 10% but less than the lower acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged with the sample quantitation limit as approximated (UJ).
- 3) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction); one with a recovery greater than the upper acceptance limit and one with a recovery greater than or equal to 10% but less than the lower acceptance limit, qualify as described in criteria 2 above.
- 4) If any surrogate in a fraction shows less than 10% recovery:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)

Accuracy

- b. Positive results for that fraction are flagged as estimated (J).
- c. Negative results for that fraction are flagged as unusable (R).

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Analytes /Methods Associated with Surrogate	Comment
SUP_SL_14 6-8	257565021	2,4,6-Tribromophenol	0.6	26-135	Low	Semivolatile Acid Surrogate	8270 Pentachlorophenol	Qualified based on criteria 4c.
SUP_SL_15 4-6	257565027	2,4,6-Tribromophenol	0.5	26-135	Low	Semivolatile Acid Surrogate	8270 Pentachlorophenol	Qualified based on criteria 4c.
SUP_SL_15 6-8	257565028	2,4,6-Tribromophenol	0.5	26-135	Low	Semivolatile Acid Surrogate	8270 Pentachlorophenol	Qualified based on criteria 4c.
SUP_SL_15 DUP	257565033	2,4,6-Tribromophenol	2	26-135	Low	Semivolatile Acid Surrogate	8270 Pentachlorophenol	Qualified based on criteria 4c.

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples and trip blanks were not applicable for this sampling event. All blank results were nondetected.

Action: No action was taken based on the evaluation of blanks.

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one every 10 samples.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD. No action was taken based on the evaluation of MS/MSDs.

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_3 4-6	257565012	71494	Pentachlorophenol	0/0	40-119		30		MS/MSD recovery

									not evaluated against control limits due to sample dilution. Result was not qualified.
--	--	--	--	--	--	--	--	--	--

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one every ten samples.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics
 - a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
 - b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
 - c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).
2. Inorganics
 - a. Aqueous LCS:
 - i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
 - ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
 - iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
 - iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
 - v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
 - vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
 - vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).
 - b. Solid LCS:
 - i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
 - ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
 - iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
 - iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_1 10-12	257565001	69321	Pentachlorophenol	36	40-119			Low	Qualified based on criteria 1c.
SUP_SL_1 12-14	257565002								
SUP_SL_1 14-16	257565003								
SUP_SL_2 2-4	257565004								
SUP_SL_2 4-6	257565005								
SUP_SL_2 6-8	257565006								
SUP_SL_2 8-10	257565007								
SUP_SL_2 10-12	257565008								
SUP_SL_2 12-14	257565009								

SUP_SL_2 14-16	257565010								
SUP_SL_3 2-4	257565011								
SUP_SL_3 6-8	257565013								
SUP_SL_3 8-10	257565014								
SUP_SL_3 10-12	257565015								
SUP_SL_3 12-14	257565016								
SUP_SL_3 14-16	257565017								
SUP_SL_3 10-12 DUP	257565018								
SUP_SL_14 2-4	257565019								
SUP_SL_14 4-6	257565020								

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every ten samples. Sample SUP_SL_3 10-12 DUP (257565018) and sample SUP_SL_15 DUP (257565033) were collected as field duplicates. Sample SUP_SL_15 DUP (257565033) is associated with sample SUP_SL_15 4-6 (257565027). All sample results were non-detect.

Action: No action was taken based on the evaluation of field duplicates.

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

No discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition and were on ice. Cooler custody seals were used. The temperature of the delivery cooler was recorded at 5.9 °C and was within the required temperature range. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Due to extremely low recoveries (<10%) in the surrogates, the nondetected results for pentachlorophenol were rejected in samples SUP_SL_14 6-8 (257565021), SUP_SL_15 4-6 (257565027), SUP_SL_15 6-8 (257565028) and SUP_SL_15 DUP (257565033). The lab confirmed the matrix interference by re-analysis but did not re-extract the sample.

The lab reported that the pentachlorophenol result for samples SUP_SL_2 2-4 (257565004) and SUP_SL_3 6-8 (257565013) could not be concentrated to the routine final volume, resulting in elevated reporting limits. No action was taken.

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Twenty-three (23) sample results were qualified (see Attachment 1).
- Nineteen nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD recoveries that exceeded control limits.
- Four nondetected samples results were qualified rejected (UR) due to surrogate recoveries that exceeded control limits.

Excluding the four rejected sample results, all other sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 257565

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on May 09, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the PQL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 257565

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

ANALYTE QUALIFIERS

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

P3 Sample extract could not be concentrated to the routine final volume, resulting in elevated reporting limits.

S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).

Date: February 21, 2012
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 257591
Sample Date(s): May 10, 2011

This review summarizes the data quality of analytical results generated in support of the May 10, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 257591.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 257591

Delivery Group Summary

Fifty-five soil samples, two groundwater samples, two soil field duplicates, five soil trip blanks, and one groundwater trip blank were collected by Pacific Environmental Redevelopment Corporation on May 10, 2011. Samples were delivered to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for total and dissolved metals (arsenic, cadmium, lead), metals (mercury), diesel range organics, gasoline range organics, semivolatile organic compounds (pentachlorophenol only), and volatile organic compounds (VOCs) by methods 6010, 7471, NWTPH-Dx, NWTPH-Gx, 8270, and 8260, respectively.

The key data evaluation findings include the following:

- Total and dissolved metal results by method 6010 have 10.2% of the results qualified.
- Mercury results by method 7471 are of acceptable quality. None of the results were qualified.
- Pentachlorophenol results by method 8270 have 96.5% of the results qualified.
- VOC results by method 8260 have 7.4% of the results qualified.
- Diesel range organic results by method NWTPH-Dx are of acceptable quality. None of the results were qualified.
- Gasoline range organic results by method NWTPH-Gx have 100% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 53 Samples (2 Duplicates)	Groundwater= 2 Samples	Trip Blank (Soil)= 5 Samples	Trip Blank (Groundwater)= 1 Sample
6010 Metals (As, Pb, Cd) 7471 Mercury NWTPH-Dx NWTPH-Gx 8270 Pentachlorophenol Only 8260 VOCs	6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 8270 Pentachlorophenol Only 8260 VOCs	NWTPH-Gx 8260 VOCs	8260 VOCs

Representativeness

Holding Time:

All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP.

Action: No action was taken based on the evaluation of holding times.

Accuracy

Surrogates:

All surrogate recoveries were within the control limits.

Action: No action was taken based on the evaluation of surrogate recoveries.

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Multiple coolers were used to transport the samples but some of them did not contain trip blanks. There is also no documentation on which trip blanks and samples went with which cooler, therefore trip blank detects are listed below but were not used to qualify sample results. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
257591006	Trip Blank			1,2,3-Trichlorobenzene	0.56 J	ug/kg
				1,2,4-Trichlorobenzene	0.38 J	ug/kg
				1,2,4-Trimethylbenzene	0.62 J	ug/kg
				Acetone	2.3 J	ug/kg
				Chloroform	0.20 J	ug/kg
				Ethylbenzene	0.49 J	ug/kg
				Toluene	1.7 J	ug/kg
				Xylene (Total)	2.5 J	ug/kg

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment
Analyte:	1,2,3-Trichlorobenzene

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one with each extraction for method NWTPH-Dx and NWTPH-Gx, and one per 10 samples for method 8270 (soil and water). Methods NWTPH-Dx, NWTPH-Gx and 8270 (water) did not have a MS/MSD prepared and analyzed. All other methods (6010, 7471, and 8260) had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD. No action was taken based on the evaluation of MS/MSDs.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one per extraction batch for methods NWTPH-Dx and NWTPH-Gx, one per 20 for method 6010 and 8260, one per 10 samples for method 8270. LCS/LCSDs were not required for method 7470.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated

nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 10 samples for method 8270, and one every 20 samples for method NWTPH-Dx, NWTPH-Gx, 8260, 6010, and 7471. Methods NWTPH-Dx and NWTPH-Gx did not have any field duplicates prepared and analyzed. Sample SUP_SL_11 DUP (257591014) and sample SUP_SL_17_DUP (257591045) were collected as field duplicates. These samples are associated with samples SUP_SL_11 6-8 (257591009) and SUP_SL_17 10-12 (257591042), respectively.

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
2. Aqueous Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 35%.
3. Solid Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 50%.

Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.

Analyte	Results		Units	RPD
	SUP_SL_11 DUP (Lab ID -257591014)	SUP_SL_11 6-8 (Lab ID – 257591009)

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

The trip blanks were not listed on the chain-of-custody. The soil trip blank was correctly run for VOCs using method 8260 and the water trip blank was run for VOCs (8260) and gasoline range organics (NWTPH-Gx). The soil trip blank should have also been run for gasoline range organics using method NWTPH-Gx per the SAP & QAPP. According to the SAP & QAPP, the soil trip blank should have also been run for gasoline range organics for this sample delivery group. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice. Cooler custody seals were not used. The temperature of the delivery coolers were recorded at 2.2, 12.4, 14, 12.2, and 9.3 °C, all except the first cooler exceeded the required temperature range. Since the samples were delivered on ice the same day of collection no samples were qualified based on cooler temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

The lab reported that the arsenic and lead results for sample SUP_SL_16 12-14 (257591039), and the arsenic and cadmium results for sample SUP_SL_12 5-6 (257591017) had serial dilution differences that were great than 10%. Therefore, matrix interference is suspected for these samples. An estimated qualifier (J) was assigned to these sample results.

The lab reported that the 1,2,4-trimethylbenzene, naphthalene, and m&p-xylene results for sample SUP_SL_27 4-5 (257591053) may be due to carryover. There was not enough sample left for re-analysis. An estimated qualifier (J) was assigned to these sample results.

The lab reported that the xylene (total) result for sample SUP_SL_27 14-16 (257591059) is estimated because one or more of the constituent results are qualified as such. An estimated qualifier (J) was assigned to this sample.

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Three hundred seventy (370) of the sample results were qualified (see Attachment 1).
- Sixteen detected sample results were qualified as estimated (J) due to LCS/LCSD recoveries that exceeded control limits or a laboratory noted qualifier.
- Fifty-three nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD recoveries that exceeded control limits or a laboratory noted qualifier.

- Nineteen detected sample results were qualified (B) and 282 detected sample results were qualified as nondetected (UB) due to method blank contamination.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 257591

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on May 10, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the PQL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 257591

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: MSSV/1619

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1n Result may be due to carryover. There was no sample left for reanalysis.

2n Sample weight exceeded method recommendations.

3n Serial dilution difference was greater than 10%.

4n Serial dilution result was greater than 10% difference.

B Analyte was detected in the associated method blank.

D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

ES The reported result is estimated because one or more of the constituent results are qualified as such.

IS The internal standard response is below criteria. Results may be biased high.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

P8 Analyte was detected in the method blank. All associated samples had concentrations of at least ten times greater than the blank or were below the reporting limit.

R1 RPD value was outside control limits.

Z3 Methylene chloride is a common laboratory contaminant. Results for this analyte should be considered estimated unless the amount found in the sample is 3 to 5 times higher than that found in the method blank.

Subject: Chemical Data Quality Review for Sample Delivery Group 257614
Sample Date(s): May 11, 2011

This review summarizes the data quality of analytical results generated in support of the May 11, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 257614.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 257614

Delivery Group Summary

Forty soil samples, one groundwater sample, one soil field duplicate, three soil trip blanks, and one groundwater trip blank were collected by Pacific Environmental Redevelopment Corporation on May 11, 2011. Samples were hand delivered by a Pace Analytical Services representative to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for total and dissolved metals (arsenic, cadmium, lead), total and dissolved metals (mercury), semivolatile organic compounds (pentachlorophenol only), and volatile organic compounds (VOCs) by methods 6010, 7471, 7470, 8270, and 8260, respectively.

The key data evaluation findings include the following:

- Total and dissolved metal results by method 6010 have 18.8% of the results qualified.
- Total and dissolved mercury results by method 7471 and 7470 are of acceptable quality. None of the results were qualified.
- Pentachlorophenol results by method 8270 have 54.8% of the results qualified.
- VOC results by method 8260 have 4.4% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 40 Samples (1 Duplicate)	Groundwater= 1 Samples	Trip Blank (Soil)= 3 Samples	Trip Blank (Groundwater)= 1 Sample
6010 Metals (As, Pb, Cd) 7471 Mercury 8270 Pentachlorophenol Only 8260 VOCs	6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 7470 Total Mercury 7470 Dissolved Mercury 8270 Pentachlorophenol Only 8260 VOCs	8260 VOCs	8260 VOCs

Holding Time:

All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP.
Action: No action was taken based on the evaluation of holding times.

Representativeness

Accuracy

Surrogates:

All surrogate recoveries were within the control limits.

Action: No action was taken based on the evaluation of surrogate recoveries.

Representativeness

Blanks:

As specified in the SAP & QAPP, method and trip blanks were prepared and analyzed at the required frequency. Multiple coolers were used to transport the samples but some of them did not contain trip blanks. There is also no documentation on which trip blanks and samples went with which cooler, therefore trip blank detects are listed below but were not used to qualify sample results. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
257614009	Trip Blank			1,2,4-Trichlorobenzene	0.24 J	ug/kg
				1,2,4-Trimethylbenzene	0.84 J	ug/kg
				Acetone	3.7 J	ug/kg

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one per 10 samples for method 8270 (solid and water). Method 8270 (water) did not have a MS/MSD prepared and analyzed. All other methods (6010, 7470/7471, and 8260) had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD. No action was taken based on the evaluation of MS/MSDs.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one per 20 samples for method 6010, 8260, and one per 10 samples for method 8270. LCS/LCSDs were not required for method 7470.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).

iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 20 samples for method 6010, 8260, 7470, 7471, and one every 10 samples for method 8270. Sample SUP_SL_24 DUP (257614023) was collected as a field duplicate and is associated with sample SUP_SL_24 6-8 (257614018).

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
2. Aqueous Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 35%.
3. Solid Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 50%.

Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.

Analyte	Results		Units	RPD
	SUP_SL_24 DUP (Lab ID -257614023)	SUP_SL_24 6-8 (Lab ID – 257614018)		
Arsenic	144	177	mg/kg	21
Cadmium	3.2 J	4.3 J	mg/kg	29
Lead	89.1	82.1	mg/kg	8
Mercury	0.069 J	0.11 J	mg/kg	46
1,2,4-Trimethylbenzene	<1.1	0.95 J	ug/kg	15
2-Butanone (MEK)	<3.1	13.0 J	ug/kg	123
Acetone	<2.3	55.1	ug/kg	184
Benzene	<3.1	0.65 J	ug/kg	131
Methylene chloride	<5.4	12.6 J	ug/kg	80
Xylene (Total)	<1.5	2.3 J	ug/kg	42
m&p-Xylene	<1.5	1.8 J	ug/kg	18

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

On the chain-of-custody sample SUP_SL_29 12-14 (257614043) was listed as SUP_SL_29 20-14, the lab corrected the typo to SUP_SL_29 12-14. SUP_GW_7 (257614045) did not have a date and time on the chain-of-custody. Through email correspondence with the sampler a date of May 11, 2011 at 10:11 was given to the sample. Sample SUP_SL_29 2-4 (257614038) had conflicting time stamps between the chain-of-custody and the label on the sample. A time of 8:51 was given to the sample after correspondence with the sampler. The trip blanks were not listed on the chain-of-custody. They were correctly run for VOCs using method 8260, as required by the SAP & QAPP. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice. Cooler custody seals were used. The temperature of the delivery coolers were recorded at 7.9, 9.0, and 5.4 °C, the first two coolers exceeded the required temperature range. Since the samples were delivered on ice the same day of collection no samples were qualified based on cooler temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

The lab reported that the arsenic, cadmium, and lead results for sample SUP_SL_18 3-4 (257614001) had a serial dilution difference that was greater than 10%. Therefore, matrix interference is suspected for these results. An estimated qualifier (J) was assigned to these sample results.

The lab reported that the pentachlorophenol results for samples SUP_SL_29 2-4 (257614038) and SUP_SL_29 4-6 (257614039) could not be concentrated to the routine final volume, resulting in elevated reporting limits. No action was taken.

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- One hundred twenty-eight (128) sample results were qualified (see Attachment 1).
- Three detected sample results were qualified as estimated (J) due to a laboratory noted qualifier.
- Twenty-three nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD recoveries that exceeded control limits.
- Fifteen detected sample results were qualified (B) and 23 detected sample results were qualified as nondetected (UB) due to method blank contamination.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 257614

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on May 11, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the PQL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 257614

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: MSSV/1619

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/4538

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1n Sample weight exceeded method recommendations.

2n Serial dilution difference greater than 10%.

B Analyte was detected in the associated method blank.

B+

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

P3 Sample extract could not be concentrated to the routine final volume, resulting in elevated reporting limits.

P8 Analyte was detected in the method blank. All associated samples had concentrations of at least ten times greater than the blank or were below the reporting limit.

R1 RPD value was outside control limits.

Subject: Chemical Data Quality Review for Sample Delivery Group 258288
Sample Date(s): June 27, 2011

This review summarizes the data quality of analytical results generated in support of the June 27, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 258288.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 258288

Delivery Group Summary

One groundwater sample and one groundwater trip blank were collected by Pacific Environmental Redevelopment Corporation on June 27, 2011. Samples were hand delivered to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for total and dissolved metals (arsenic, cadmium, lead), total and dissolved metals (mercury), diesel range organics, gasoline range organics, semivolatile organics (pentachlorophenol only), and volatile organic compounds (VOCs) by methods 6010, 7470, NWTPH-Dx, NWTPH-Gx, 8270, and 8260, respectively.

The key data evaluation findings include the following:

- Total and dissolved metal results by method 6010 are of acceptable quality. None of the results were qualified.
- Total mercury results by method 7470 have 100% of the results qualified. Dissolved mercury results by method 7470 are of acceptable quality. None of the results were qualified.
- Pentachlorophenol results by method 8270 are of acceptable quality. None of the results were qualified.
- VOC results by method 8260 have 9% of the results qualified.
- Diesel range organic results by method NWTPH-Dx are of acceptable quality. None of the results were qualified.
- Gasoline range organic results by method NWTPH-Gx have 100% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 0 Samples	Groundwater= 1 Sample	Trip Blank (Soil)= 0 Samples	Trip Blank (Groundwater)= 1 Sample
	6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 7470 Total Mercury 7470 Dissolved Mercury 8270 Pentachlorophenol Only NWTPH-Gx NWTPH-Dx 8260 VOCs		8260 VOCs NWTPH-Gx

Representativeness

Holding Time:

All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP.

Action: No action was taken based on the evaluation of holding times.

Accuracy

Surrogates:

All surrogate recoveries were within the control limits.

Action: No action was taken based on the evaluation of surrogate recoveries.

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples. All samples were transported via one cooler with the trip blank.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
258288002	Trip Blank	SUP_MW_3	258288001	Benzene	0.067 J	ug/L
				Methylene chloride	1.8 J	ug/L
				Naphthalene	0.090 J	ug/L
				Toluene	0.068 J	ug/L
				Xylene (Total)	0.80 J	ug/L
				m&p-Xylene	0.78 J	ug/L
				n-Propylbenzene	0.038 J	ug/L
77065	Method Blank	SUP_MW_3	258288001	Mercury	0.000017 J	mg/L
77069	Method Blank	SUP_MW_3	258288001	Mercury, Dissolved	0.000029 J	mg/L
76054	Method Blank	SUP_MW_3	258288001	1,2,3-Trichlorobenzene	0.46 J	ug/L
				1,3,5-Trimethylbenzene	0.071 J	ug/L
				Benzene	0.094 J	ug/L
				Ethylbenzene	0.091 J	ug/L
				Hexachloro-1,3-butadiene	0.30 J	ug/L
				m&p-Xylene	0.86 J	ug/L
				Methylene chloride	2.6 J	ug/L
				n-Butylbenzene	0.11 J	ug/L
				n-Propylbenzene	0.086 J	ug/L
				Naphthalene	0.47 J	ug/L
				p-Isopropyltoluene	0.073 J	ug/L
				sec-Butylbenzene	0.069 J	ug/L
				Toluene	0.055 J	ug/L
Xylene (Total)	0.90 J	ug/L				

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone

- c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
 5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
 6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment
Analyte:	Toluene		
SUP_MW_3	258288001	258288002	Trip Blank. Qualified based on criteria 4.
Analyte:	Mercury (Total)		
SUP_MW_3	258288001	76054	Method Blank. Qualified based on criteria 6.
Analyte:	Benzene		
SUP_MW_3	258288001	76054	Method Blank. Qualified based on criteria 4.
Analyte:	m&p-Xylene		
SUP_MW_3	258288001	76054	Method Blank. Qualified based on criteria 4.
Analyte:	Methylene chloride		
SUP_MW_3	258288001	76054	Method Blank. Qualified based on criteria 4.
Analyte:	Naphthalene		
SUP_MW_3	258288001	76054	Method Blank. Qualified based on criteria 4.
Analyte:	Xylene (Total)		
SUP_MW_3	258288001	76054	Method Blank. Qualified based on criteria 4.

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one with each extraction batch for method NWTPH-Dx and NWTPH-Gx. Methods NWTPH-Dx and NWTPH-Gx did not have a MS/MSD prepared and analyzed. All other methods (6010, 7470, 8270, and 8260) had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD. No action was taken based on the evaluation of MS/MSDs.

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_MW_3	258288001	76375	Arsenic	140/120	75-125	2	20	High	Results were not qualified based on criteria 2a.
SUP_MW_3	258288001	76109	1,1,2,2-Tetrachloroethane	128/133	69-123	4	30	High	Results were not qualified based on criteria 1a.
			1,1,2-Trichloroethane	119/125	76-114	5	30	High	Results were not qualified based on criteria 1a.
			1,2-Dibromoethane (EDB)	120/125	78-117	4	30	High	Results were not qualified based on criteria 1a.
			1,3-Dichloropropane	119/124	74-119	3	30	High	Results were not qualified based on criteria 1a.
			Carbon disulfide	144/140	39-122	2	30	High	Results were not qualified based on criteria 1a.
			Dibromomethane	123/126	75-124	2	30	High	Results were not qualified based on criteria 1a.
			Styrene	118/122	76-121	3	30	High	Results were not qualified based on criteria 1a.
			cis-1,2-Dichloroethene	121/121	70-120	0.08	30	High	Results were not qualified based on criteria 1a.
			Trichloroethene	113/111	80-112	1	30	High	Results were not qualified

									based on criteria 1a.
			Tetrachloroethene	113/116	80-112	2	30	High	Results were not qualified based on criteria 1a.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one with each extraction batch for method NWTPH-Dx and NWTPH-Gx, one per 20 samples for method 6010 and 8260, and one per 10 samples for method 8270. LCS/LCSDs were not required for method 7470.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_MW_3	258288001	76119	Motor Oil Range SG	99	61-98			High	Based on the criteria above, results were not qualified.
SUP_MW_3	258288001	76047	Gasoline Range	119	61-98			High	Qualified based on criteria 1c.

			Organics

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 20 samples for method 6010, 8260, 7470, NWTPH-Dx and NWTPH-Gx, and one every 10 samples for method 8270. No duplicates were collected.

Action: No action was taken based on the evaluation of field duplicates.

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

Pentachlorophenol was requested on the chain-of-custody for sample SUP_MW_3 (258288001) by method 8260, however the correct method (8270) was run by the lab. The lab noted that they received three vials for the trip blank not the six as indicated on the chain-of-custody. The lab had sufficient volume to conduct the requested analysis. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice. Cooler custody seals were used. The temperature of the delivery cooler was recorded at 10.3 °C and exceeded the required temperature range. Since the samples were delivered on ice the same day of collection no samples were qualified based on cooler temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Eight (8) sample results were qualified (see Attachment 1).
- One nondetected sample result was qualified as estimated (UJ) due to LCS/LCSD recoveries that exceeded control limits.
- One detected sample result was qualified (B) and six detected sample results were qualified as nondetected (UB) due to method/trip blank contamination.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 258288

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on June 27, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 258288

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

From: Kara Roberts
Date: February 21, 2012
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 258336
Sample Date(s): June 30, 2011

This review summarizes the data quality of analytical results generated in support of the June 30, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 258336.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 258336

Delivery Group Summary

Four groundwater samples and one groundwater trip blank were collected by Pacific Environmental Redevelopment Corporation on June 30, 2011. Samples were hand delivered by a Pace Analytical Services representative to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for total and dissolved metals (arsenic, cadmium, lead), total and dissolved metals (mercury), diesel range organics, gasoline range organics, semivolatile organics compounds (pentachlorophenol only), and volatile organic compounds (VOCs) by methods 6010, 7470, NWTPH-Dx, NWTPH-Gx, 8270, and 8260, respectively.

The key data evaluation findings include the following:

- Total and dissolved metal results by method 6010 are of acceptable quality. None of the results were qualified.
- Total and dissolved mercury results by method 7470 have 62.5% of the results qualified.
- Pentachlorophenol results by method 8270 are of acceptable quality. None of the results were qualified.
- VOC results by method 8260 have 6.7% of the results qualified.
- Diesel range organic results by method NWTPH-Dx have 100% of the results qualified.
- Gasoline range organic results by method NWTPH-Gx have 100% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 0 Samples	Groundwater= 4 Samples	Trip Blank (Soil)= 0 Samples	Trip Blank (Groundwater)= 1 Sample
	6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 7470 Total Mercury 7470 Dissolved Mercury 8270 Pentachlorophenol Only 8260 VOCs NWTPH-Dx NWTPH-Gx		NWTPH-Gx 8260 VOCs

Representativeness

Holding Time:

All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP.

Action: No action was taken based on the evaluation of holding times.

Accuracy

Surrogates:

All surrogate recoveries were within the control limits.

Action: No action was taken based on the evaluation of surrogate recoveries.

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency.

Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples. All samples were transported via one cooler with the trip blank.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one with each extraction batch for NWTTPH-Dx and NWTTPH-Gx, and one per 10 samples for method 8270. Methods NWTTPH-Dx, NWTTPH-Gx, and 8270 did not have a MS/MSD prepared and analyzed. All other methods (6010, 8260, and 7470) had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD. No action was taken based on the evaluation of MS/MSDs.

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_MW_1	258336001	76759	Bromomethane	56/60	58-139	7	30	Low	Results were not qualified based on criteria 1a.
SUP_MW_2	258336002								
SUP_MW_4	258336003		Vinyl chloride	72/72	80-112	0.9	30	Low	Results were not qualified based on criteria 1a.
SUP_MW_5	258336004								

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency one with each extraction batch for method NWTPH-Dx and NWTPH-Gx, one per 20 samples for method 6010 and 8260, and one per 10 samples per method 8270. LCS/LCSDs were not required for method 7470.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics
 - a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
 - b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
 - c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).
2. Inorganics
 - a. Aqueous LCS:
 - i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
 - ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
 - iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
 - iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
 - v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
 - vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
 - vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).
 - b. Solid LCS:
 - i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
 - ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
 - iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
 - iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_MW_1 SUP_MW_2 SUP_MW_4 SUP_MW_5	258336001 258336002 258336003 258336004	76802	Diesel Range SG	104	61-98			High	Qualified based on criteria 1c.
			Motor Oil Range SG	108	61-98			High	Qualified based on criteria 1c.

			Acetone	185	30-180			High	Based on the criteria

									above, results were not qualified.
			Vinyl chloride	70	80-112			Low	Based on the criteria above, results were not qualified.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one per 20 samples for methods 6010, 8260, 7470, NWTPH-Dx, NWTPH-Gx and one every 10 for method 8270. No duplicates were collected.

Action: No action was taken based on the evaluation of field duplicates.

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

Pentachlorophenol was requested on the chain-of-custody for samples SUP_MW_1 (258336001), SUP_MW_2 (258336002), SUP_MW_4 (258336003), and SUP_MW_5 (258336004) by method 8260, however the correct method and the method run was 8270. The lab noted that they received three vials for the trip blank not the six as indicated on the chain-of-custody. The lab had sufficient volume to conduct the requested analysis. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice. Cooler custody seals were used. The temperature of the delivery cooler was recorded at 7.6 °C and exceeded the required temperature range. Since the samples were delivered on ice the same day of collection no samples were qualified based on cooler temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Thirty-five (35) sample results were qualified (see Attachment 1).
- Eight nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD recoveries that exceeded control limits.
- Three detected sample results were qualified (B) and 24 detected sample results were qualified as nondetected (UB) due to method/trip blank contamination.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 258336

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on June 30, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 258336

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: MSSV/1682

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: GCSV/2672

[1] A duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/4877

[1] A duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

Subject: Chemical Data Quality Review for Sample Delivery Group 258342
Sample Date(s): July 1, 2011

This review summarizes the data quality of analytical results generated in support of the July 1, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 258342.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 258342

Delivery Group Summary

Two groundwater samples and one groundwater trip blank were collected by Pacific Environmental Redevelopment Corporation on July 1, 2011. Samples were hand delivered by a Pace Analytical Services representative to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for total and dissolved metals (arsenic, lead, cadmium), total and dissolved metals (mercury), diesel range organics, gasoline range organics, semivolatile organic compounds (pentachlorophenol only), and volatile organic compounds (VOCs) by methods 6010, 7470, NWTPH-Dx, NWTPH-Gx, 8270, and 8260, respectively.

The key data evaluation findings include the following:

- Total and dissolved metal results by method 6010 are of acceptable quality. None of the results were qualified.
- Total and dissolved mercury results by method 7470 have 100% of the results qualified.
- Pentachlorophenol results by method 8270 are of acceptable quality. None of the results were qualified.
- VOC results by method 8260 have 10.4% of the results qualified.
- Diesel range organic results by method NWTPH-Dx have 100% of the results qualified.
- Gasoline range organic results by method NWTPH-Gx have 100% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 0 Samples	Groundwater= 2 Samples	Trip Blank (Soil)= 0 Samples	Trip Blank (Groundwater)= 1 Sample
	6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 7470 Total Mercury 7470 Dissolved Mercury 8270 Pentachlorophenol Only 8260 VOCs NWTPH-Dx NWTPH-Gx		NWTPH-Gx 8260 VOCs

Representativeness

Holding Time:

All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP.

Action: No action was taken based on the evaluation of holding times.

Accuracy

Surrogates:

All surrogate recoveries were within the control limits.

Action: No action was taken based on the evaluation of surrogate recoveries.

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples. All samples were transported via one cooler with the trip blank.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
258342003	Trip Blank	SUP_MW_6 SUP_MW_7	258342001 258342002	1,2,4-Trimethylbenzene	0.12 J	ug/L
				Benzene	1.3	ug/L
				Naphthalene	0.50 J	ug/L
				n-Propylbenzene	0.21 J	ug/L
77065	Method Blank	SUP_MW_6 SUP_MW_7	2588342001 2588342002	Mercury	0.000017 J	mg/L
77077	Method Blank	SUP_MW_6 SUP_MW_7	2588342001 2588342002	Mercury, Dissolved	0.000019 J	mg/L
76788	Method Blank	SUP_MW_6	2588342001	1,2,3-Trichlorobenzene	0.52 J	ug/L
				1,2-Dichlorobenzene	0.050 J	ug/L
				1,3,5-Trimethylbenzene	0.090 J	ug/L
				1,3-Dichlorobenzene	0.044 J	ug/L
				1,4-Dichlorobenzene	0.051 J	ug/L
				Hexachloro-1,3-butadiene	0.28 J	ug/L
				m&p-Xylene	0.79 J	ug/L
				Methylene chloride	0.40 J	ug/L
				n-Butylbenzene	0.11 J	ug/L
				n-Propylbenzene	0.074 J	ug/L
				Naphthalene	0.37 J	ug/L
				p-Isopropyltoluene	0.068 J	ug/L
				Toluene	0.017 J	ug/L
Xylene (Total)	0.81 J	ug/L				
77505	Method Blank	SUP_MW_7	258342002	1,2,3-Trichlorobenzene	0.26 J	ug/L
				1,2,4-Trichlorobenzene	0.29 J	ug/L
				1,2,4-Trimethylbenzene	0.24 J	ug/L
				Benzene	0.30 J	ug/L
				n-Butylbenzene	0.23 J	ug/L
				n-Propylbenzene	0.16 J	ug/L
				Naphthalene	0.56 J	ug/L
				p-Isopropyltoluene	0.10 J	ug/L

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.

3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment
Analyte:	1,2,4-Trimethylbenzene		
SUP_MW_7	25834002	77505	Method Blank. Qualified based on criteria 4.
Analyte:	Benzene		
SUP_MW_7	25834002	258342003	Trip Blank. Qualified based on criteria 4.
Analyte:	Naphthalene		
SUP_MW_6	25834001	258342003	Trip Blank. Qualified based on criteria 4.

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one with each extraction batch for method NWTPH-Dx and NWTPH-Gx, and one per 10 samples for method 8270. Methods NWTPH-Dx, NWTPH-Gx, and 8270 did not have a MS/MSD prepared and analyzed. All other methods (6010, 7470, and 8260) had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD. No action was taken based on the evaluation of MS/MSDs.

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_MW_6	258342001	77042	Carbon disulfide	116/125	39-122	7	30	High	Results not qualified based on criteria 1a.
			Vinyl chloride	71/72	80-112	2	30	Low	Results not qualified based on criteria 1a.
SUP_MW_7	258342002	77886	2-Hexanone	59/60	60-135	1	30	Low	Results not qualified based on criteria 1a.
			4-Chlorotoluene	123/119	70-122	3	30	High	Results not qualified based on criteria 1a.
			4-Methyl-2-pentanone (MIBK)	66/67	70-135	1	30	Low	Results not qualified based on criteria 1a.
			Acetone	43/44	58-146	2	30	Low	Results not qualified based on criteria 1a.
			Benzene	427/173	75-124	85	30	High	Results not qualified based on criteria 1a.
			Bromobenzene	117/114	74-116	3	30	High	Results not qualified based on criteria 1a.

			Chlorobenzene	118/115	78-115	3	30	High	Results not qualified based on criteria 1a.
			Dichlorodifluoromethane	142/122	30-140	15	30	High	Results not qualified based on criteria 1a.
			Ethylbenzene	125/116	76-124	7	30	High	Results not qualified based on criteria 1a.
			cis-1,2-Dichloroethene	122/120	70-120	2	30	High	Results not qualified based on criteria 1a.
			Trichloroethene	116/114	80-112	2	30	High	Results not qualified based on criteria 1a.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one with each extraction for methods NWTPH-Dx and NWTPH-Gx, one per 20 samples for method 6010 and 8260, one per 10 samples for method 8270. LCS/LCSDs were not required for method 7470.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

- a. Aqueous LCS:
 - i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
 - ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
 - iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
 - iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
 - v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
 - vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
 - vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).
- b. Solid LCS:
 - i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
 - ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
 - iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
 - iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_MW_6 SUP_MW_7	258342001 258342002	76802	Diesel Range SG	104	61-98			High	Qualified based on criteria 1c.
			Motor Oil Range SG	108	61-98			High	Qualified based on criteria 1c.
SUP_MW_6	258342001	76789	Acetone	182	30-180			High	Based on criteria above, results were not qualified.
			Vinyl Chloride	76	80-112			Low	Based on criteria above, results were not qualified.
SUP_MW_7	258342002	77506	Tetrachloroethene	74	80-112			Low	Based on criteria above, results were not qualified.
SUP_MW_6 SUP_MW_7	258342001 258342002	76762	Gasoline Range Organics	106	61-98			High	Qualified based on criteria 1a and 1c.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 20 samples for method 6010, 8260, 7470, NWTPH-Dx and NWTPH-Gx, and one every 10 samples for method 8270. No duplicates were collected.

Action: No action was taken based on the evaluation of field duplicates.

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

Pentachlorophenol was requested on the chain-of-custody for samples SUP_MW_6 (258342001) and SUP_MW_7 (258342002) by method 8260, however the correct method and the method run was 8270. The lab noted that they received three vials for the trip blank not the six as indicated on the chain-of-custody. The lab had sufficient volume to conduct the requested analysis. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice. Cooler custody seals were used. The temperature of the delivery cooler was recorded at 3.5 °C and was within the required temperature range. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Twenty-four (24) sample results were qualified (see Attachment 1).
- One detected sample result was qualified as estimated (J) due to LCS/LCSD recoveries that exceeded control limits.
- Five nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD recoveries that exceeded control limits.

- Eighteen detected sample results were qualified as nondetected (UB) due to method/trip blank contamination. Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 258342

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on July 01, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 258342

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: MSSV/1682

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: GCSV/2672

[1] A duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

B Analyte was detected in the associated method blank.

D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

To: Pacific Environmental and Redevelopment Corporation (PERC)
From: Kara Roberts
Date: February 21, 2012
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 258699
Sample Date(s): August 1, 2011

This review summarizes the data quality of analytical results generated in support of the August 1, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 258699.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 258699

Delivery Group Summary

Forty soil samples, one soil field duplicate, and one soil trip blank were collected by Pacific Environmental Redevelopment Corporation on August 1, 2011. Samples were hand delivered by a Pace Analytical Services representative to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for metals (arsenic, cadmium, and lead), semivolatle organic compounds (pentachlorophenol only) and volatile organic compounds (VOCs) by methods 6010, 8270, and 8260, respectively.

The key data evaluation findings include the following:

- Metal results by method 6010 have 58.5% of the results qualified.
- Pentachlorophenol results by method 8270 have 9.8% of the results qualified.
- VOC results by method 8260 have 13.7% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 40 Samples (1 Duplicate)	Groundwater= 0 Samples	Trip Blank (Soil)= 1 Sample	Trip Blank (Groundwater)= 0 Samples
6010 Metals (As, Pb, Cd)		8260 VOCs	
8270 Pentachlorophenol Only			
8260 VOCs			

Representativeness

Holding Time:

Criteria Used to Qualify Data Associated with Holding Times:

- 1) Due to limited information concerning holding times for soil samples, it is left to the discretion of the reviewer to apply water holding time criteria to soil samples.
- 2) If holding times exceed:
 - a. Positive results are flagged as estimated (J).
 - b. Negative results are flagged with the sample quantitation limit as estimated (UJ).
- 3) If holding times grossly exceed upon first analysis or re-analysis:
 - a. Positive results are flagged as estimated (J or UJ).
 - b. Negative results are flagged as unusable (R).

Action: The following sample results exceeded holding times. No action was taken based on the evaluation of holding times.

Field ID	Lab ID	Analytes/Methods	Date Collected	Date Prepared	Date Analyzed	HT	Number of Days Past HT	Comment
SUP_SL_45 6-8	258699020	8260	8/1/11	8/15/11	8/16/11	14 days	1	Very slight exceedances of holding time. Results were not qualified.

Accuracy

Surrogates:

Criteria Used to Qualify Data Associated with Surrogate Recoveries:

- 1) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than the upper acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are not flagged.
- 2) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than or equal to 10% but less than the lower acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged with the sample quantitation limit as approximated (UJ).
- 3) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction); one with a recovery greater than the upper acceptance limit and one with a recovery greater than or equal to 10% but less than the lower acceptance limit, qualify as described in criteria 2 above.
- 4) If any surrogate in a fraction shows less than 10% recovery:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged as unusable (R).

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Analytes/M methods Associated with Surrogate	Comment
SUP_SL_45 4-6	258699019	2,4,6-Tribromophenol	2	26-135	Low	Semivolatile Acid Surrogate	8270 Pentachloro phenol	Qualified based on criteria 4c.
		Dibromofluoromethane	32	72-129	Low	Volatile Surrogate	8260 VOCs	Qualified based on criteria 2b and 2c. Results for 1,2-dichloroethene [total], tetrachloroethene, trichloroethene, vinyl chloride, and cis-1,2-dichloroethene were not qualified based on this QC data.
SUP_SL_45 6-8	258699020	2,4,6-Tribromophenol	0.7	26-135	Low	Semivolatile Acid	8270 Pentachloro	Qualified based on criteria 4c.

						Surrogate	phenol	
		Dibromofluoromethane	67	72-129	Low	Volatile Surrogate	8260 VOCs	Qualified based on criteria 2b and 2c. Results for 1,2-dichloroethene [total], tetrachloroethene, trichloroethene, vinyl chloride, hexachloro-1,3-butadiene and cis-1,2-dichloroethene were not qualified based on this QC data.
SUP_SL_47 4-6	258699036	2,4,6-Tribromophenol	0	26-135	Low	Semivolatile Acid Surrogate	8270 Pentachloro phenol	Qualified based on criteria 4c.
		Dibromofluoromethane	32	72-129	Low	Volatile Surrogate	8260 VOCs	Qualified based on criteria 2b and 2c. Results for 1,2-dichloroethene [total], tetrachloroethene, trichloroethene, hexachloro-1,3-butadiene, and cis-1,2-dichloroethene were not qualified based on this QC data.
SUP_SL_47 6-8	258699037	2,4,6-Tribromophenol	2	26-135	Low	Semivolatile Acid Surrogate	8270 Pentachloro phenol	Qualified based on criteria 4c.
		Dibromofluoromethane	27	72-129	Low	Volatile Surrogate	8260 VOCs	Qualified based on criteria 2b and 2c. Results for 1,2-dichloroethene [total], tetrachloroethene, trichloroethene, hexachloro-1,3-butadiene, and cis-1,2-dichloroethene were not qualified based on this QC data.

Representativeness

Blanks:
 As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20. Multiple coolers were used to transport the samples but some of them did not contain trip blanks. There is also no documentation on which cooler contained the trip blank, therefore the trip blank detects are listed below but were not used to qualify sample results.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
258699042	Trip Blank			Carbon disulfide	0.58 J	ug/kg
				Tetrachloroethene	0.54 J	ug/kg

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment
Analyte:	1,2,3-Trichlorobenzene		
SUP_SL_43 14-16	258699008	80645	Method Blank. Qualified based on criteria 4.
Analyte:	1,2,4-Trichlorobenzene

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one per 10 samples for method 8270 and one per 20 samples for method 8260. Method 8260 did not have a MS/MSD prepared and analyzed. Method 6010 had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_43 1-2	258699001	80491	Arsenic	336/1320	75-125	46	20	High	Results were not qualified based on criteria 2a.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one per 20 samples for method 6010 and one per 10 samples for method 8270. Method 8260 had LCS/LCSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the

associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment

SUP_SL_46 4-6	258699027								

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 20 samples for method 6010 and 8260, and one every 10 samples for method 8270. Sample SUP_SL_46_DUP (258699033) was collected as a field duplicate and is associated with sample SUP_SL_46 8-10 (258699029).

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
2. Aqueous Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 35%.
3. Solid Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 50%.

Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.

Analyte	Results		Units	RPD
	SUP_SL_46_DUP (Lab ID -258699033)	SUP_SL_46 8-10 (Lab ID – 258699029)

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

The trip blank was not listed on the chain-of-custody. However, it was correctly run for method 8260 per the SAP & QAPP. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice. Cooler custody seals were not used. The temperature of the delivery coolers were recorded at 8.2, 10.0, and 11.8 °C and exceeded the required temperature range. Since the samples were delivered on ice the same day of collection no samples were qualified based on cooler temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Due to extremely low recoveries (<10%) in the surrogates, the nondetected results for pentachlorophenol were rejected in samples SUP_SL_45 4-6 (258699019), SUP_SL_45 6-8 (258699020), SUP_SL_47 4-6 (258699036) and SUP_SL_47 6-8 (258699037). The lab confirmed the matrix interference with re-analysis but did not re-extract the sample.

Due to low recoveries in the surrogates (>10% and less than lower acceptance limit), the detected results for VOCs were flagged as estimated (J) and the nondetected results were flagged as non-detect estimated (UJ) in samples SUP_SL_45 4-6 (258699019), SUP_SL_45 6-8 (258699020), SUP_SL_47 4-6 (258699036) and SUP_SL_47 6-8 (258699037). The lab did not confirm the matrix interference with re-analysis.

Eleven detected acetone results for samples (SUP_SL_43 12-14 [258699007], SUP_SL_46 6-8 [258699028], SUP_SL_46 10-12 [258699030], SUP_SL_46 12-14 [258699031], SUP_SL_46_DUP [258699033], SUP_SL_47 1-2 [258699034], SUP_SL_47 2-4 [258699035], SUP_SL_47 8-10 [258699038], SUP_SL_47 10-12 [258699039], SUP_SL_47 12-14 [258699040], and SUP_SL_47 14-16 [258699041],) were qualified as estimated (J) due to potential false positives from vial contamination from the manufacturer.

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Four hundred sixty-four (464) sample results were qualified (see Attachment 1).
- Seventy-five detected sample results were qualified as estimated (J) due to LCS/LCSD recoveries that exceeded control limits, surrogate recoveries that exceeded control limits, or a laboratory noted qualifier.
- One hundred eighty nondetected sample results were qualified as estimated (UJ) due to surrogate recoveries that exceeded control limits.
- Ninety detected sample results were qualified (B) and 61 detected sample results were qualified as nondetected (UB) due to method blank contamination.
- Thirty detected sample results were qualified estimated (JB) and 24 detected sample results were qualified as nondetected (UJB) due to method blank contamination and LCS/LCSD recoveries that exceeded control limits and/or MS/MSD recoveries that exceeded control limits or surrogate recoveries that exceeded control limits.
- Four nondetected samples results were rejected (UR) due to surrogate recoveries that exceeded control limits.

Excluding the four rejected sample results, all other sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 258699

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on August 01, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross
