QUALIFIERS

Project: Superlon

Pace Project No.: 258699

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: MSV/5014

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5043

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5051

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5055

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5108

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1n Acetone is a potential false positive result due to VOA vial contamination. This contamination was traced to the supplier of these VOA vials.

2n Result confirmed by second analysis performed out of hold.

3n This sample was originally analyzed within the EPA recommended holding time. However, some compounds contained in this sample exceeded the instrument's calibration curve. This sample was re-analyzed at a dilution for these compounds. This re-analysis was conducted outside of the EPA recommended holding time.

B Analyte was detected in the associated method blank.

CH The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.

QUALIFIERS

Project: Superlon

Pace Project No.: 258699

ANALYTE QUALIFIERS

- E Analyte concentration exceeded the calibration range. The reported result is estimated.
- L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.
- L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.
- L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.
- R1 RPD value was outside control limits.
- S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).
- S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

From: Kara Roberts
Date: February 21, 2012
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 258703
Sample Date(s): August 2, 2011

This review summarizes the data quality of analytical results generated in support of the August 2, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 258703.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 258703

Delivery Group Summary

Thirty-one soil samples, one soil field duplicate, and two soil trip blanks were collected by Pacific Environmental Redevelopment Corporation on August 2, 2011. Samples were hand delivered by a Pace Analytical Services representative to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for metals (arsenic, lead, cadmium), metals (mercury), gasoline range organics, diesel range organics, semivolatle organic compounds (pentachlorophenol only), and volatile organic compounds (VOCs) by methods 6010, 7471, NWTPH-Gx, NWTPH-Dx, 8270, and 8260, respectively.

The key data evaluation findings include the following:

- Metal results by method 6010 have 35.6% of the results qualified.
- Mercury results by method 7471 are of acceptable quality. None of the results were qualified.
- Pentachlorophenol results by method 8270 have 6.7% of the results qualified.
- VOC results by method by method 8260 have 11.7% of the results qualified.
- Diesel range organic results by method NWTPH-Dx are of acceptable quality. None of the results were qualified.
- Gasoline range organic results by method NWTPH-Gx have 100% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 31 Samples (1 Duplicate)	Groundwater= 0 Samples	Trip Blank (Soil)= 2 Samples	Trip Blank (Groundwater)= 0 Sample
6010 Metals (As, Pb, Cd) 7471 Mercury NWTPH-Dx NWTPH-Gx 8270 Pentachlorophenol Only 8260 VOCs		8260 VOCs	

Representativeness

Holding Time:

All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP.

Action: No action was taken based on the evaluation of holding times.

Surrogates:

Criteria Used to Qualify Data Associated with Surrogate Recoveries:

- 1) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than the upper acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are not flagged.
- 2) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than or equal to 10% but less than the lower acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged with the sample quantitation limit as approximated (UJ).
- 3) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction); one with a recovery greater than the upper acceptance limit and one with a recovery greater than or equal to 10% but less than the lower acceptance limit, qualify as described in criteria 2 above.
- 4) If any surrogate in a fraction shows less than 10% recovery:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged as unusable (R).

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Analytes/Methods Associated with Surrogate	Comment
SUP_SL_48 4-6	258703012	2,4,6-Tribromophenol	0.5	26-135	Low	Semivolatile Acid Surrogate	8270 Pentachlorophenol	Qualified based on criteria 4c.
		Dibromofluoromethane	26	72-129	Low	Volatile Surrogate	8260 VOCs	Qualified based on criteria 2b and 2c. (Results for hexachloro-1,3-butadiene, Trichloroethene, tetrachloroethene and cis-1,2-dichloroethene were not qualified by this QC data.)
SUP_SL_48 6-8	258703013	2,4,6-Tribromophenol	3	26-135	Low	Semivolatile Acid Surrogate	8270 Pentachlorophenol	Qualified based on criteria 4c.
		Dibromofluoromethane	28	72-129	Low	Volatile Surrogate	8260 VOCs	Qualified based on criteria 2b and 2c. (Results for tetrachloroethene and Trichloroethene were not qualified by this QC data.)

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples. All samples were transported via two coolers with the trip blanks.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment
Analyte:	1,2,3-Trichlorobenzene		
SUP_SL_48 4-6	258703012	81064	Method Blank. Qualified based on criteria 6.
Analyte:	1,2,4-Trichlorobenzene		
SUP_SL_17 14-16	258703004	80837	Method Blank. Qualified based on criteria 4.

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one with each extraction for method NWTPH-Dx and NWTPH-Gx, one per 10 samples for method 8270, and one per 20 samples for method

8260. Methods NWTPH-Dx, NWTPH-Gx, and 8260 did not have a MS/MSD prepared and analyzed. All other methods (6010 and 7471) had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_17 3-4	258703001	80572	Arsenic	3920/2000	75-125	13	30	High	Results not qualified based on criteria 2a.
SUP_SL_17 10-12	258703002								
SUP_SL_17 12-14	258703003		Cadmium	52/24	75-125	72	20	High /Low	Qualified based on criteria 2c and 2d. Samples 258703010, 258703011, 258703012, 258703013, 258703014, 258703015, 258703016, and 258703017 were not qualified since these samples were located within/near the occi-sludge area and the sample spiked (258703001) is not representative of the soil lithology for these sample.
SUP_SL_17 14-16	258703004								
SUP_SL_24 3-4	258703005

SUP_SL_49 1-2	258703018								
SUP_SL_49 2-4	258703019								
SUP_SL_49 4-6	258703020								

on criteria 2a.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one per extraction for method NWTPH-Dx and NWTPH-Dx, one per 20 samples for method 6010, and one per 10 for method 8270. All other methods (8260 and 7471) had LCS /LCSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_17 14-16	258703004	80838	Vinyl chloride	75/78	80-112	6	29	Low	Based on criteria above, results were not qualified.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 20 samples for method NWTPH-Dx, NWTPH-Gx and 7471, and one every 10 samples for method 8270. Methods 6010 and 8260 had field duplicates prepared and analyzed at the required frequency as specified in the SAP & QAPP. Sample SUP_SL_50_DUP (258703030) was collected as a field duplicate and is associated with sample SUP_SL_50 12-14 (258703028).

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
2. Aqueous Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 35%.
3. Solid Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 50%.

Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.

Analyte	Results		Units	RPD
	SUP_SL_50_DUP (Lab ID - 258703030)	SUP_SL_50 12-14 (Lab ID – 258703028)		
Arsenic	31.8	69.4	mg/kg	74
Cadmium	0.15 J	0.53 J	mg/kg	112
Lead	3.6	101	mg/kg	186
Acetone	29.5	50.2	ug/kg	52
Benzene	0.25 J	<0.19	ug/kg	27
Carbon disulfide	2.5 J	4.0	ug/kg	46
Naphthalene	<0.59	4.2	ug/kg	151
Tetrachloroethene	1.3 J	1.2 J	ug/kg	8

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

The trip blanks were not listed on the chain-of-custody. They were run for VOCs using method 8260. According to the SAP & QAPP gasoline range organics (NWTPH-Gx) should have also been run for the trip blanks. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice. Cooler custody seals were not used. The temperature of the delivery coolers were recorded at 7.0 and 8.5 °C and were not within the required temperature range. Since the samples were delivered on ice the same day of collection no samples were qualified based on cooler temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Due to extremely low recoveries (<10%) in the surrogates, the nondetected results for pentachlorophenol were rejected in samples SUP_SL_48 4-6 (258703012) and SUP_SL_48 6-8 (258703013). The lab confirmed the matrix interference with re-analysis but did not re-extract the sample.

Due to low recoveries in the surrogates (>10% and less than lower acceptance limit), the detected results for VOCs were flagged as estimated (J) and the nondetected results were flagged as non-detect estimated (UJ) in samples SUP_SL_48 4-6 (258703012) and SUP_SL_48 6-8 (258703013). The lab did not confirm the matrix interference with re-analysis.

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Two hundred seventy-nine (279) sample results were qualified (see Attachment 1).
- Twenty-seven detected sample results were qualified as estimated (J) due to surrogate recoveries that exceeded control limits or MS/MSD recoveries that exceeded control limits.
- One hundred one nondetected sample results were qualified as estimated (UJ) due to surrogate recoveries that exceeded control limits or MS/MSD recoveries that exceeded control limits.
- Fifty-seven detected sample results were qualified (B) and 64 detected sample results were qualified as nondetected (UB) due to method/trip blank contamination.
- Eighteen detected sample results were qualified estimated (JB) and 10 detected sample results were qualified as nondetected (UJB) due to method/trip blank contamination and LCS/LCSD recoveries that exceeded control limits or surrogate recoveries that exceeded control limits.
- Two nondetected samples results were qualified rejected (UR) due to surrogate recoveries that exceeded control limits.

Excluding the two rejected sample results, all other sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 258703

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on August 02, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, REV-1 01/04/12. Acetone is now flagged with a 1n qualifier for sample 258703028 (SUP_SL_50 12-14).

Amended Report, 03/15/12 REV2. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 258703

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: ICP/2284

[1] All samples diluted due to the presence of high levels of non-target analytes or other matrix interference.

Batch: MSV/5055

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5067

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5108

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1n Acetone is a potential false positive result due to VOA vial contamination. This contamination was traced to the supplier of these VOA vials.

B Analyte was detected in the associated method blank.

C0 Result confirmed by second analysis.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.

M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.

R2 RPD value was outside control limits due to matrix interference

S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).

S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

QUALIFIERS

Project: Superlon

Pace Project No.: 258703

ANALYTE QUALIFIERS

Z3 Methylene chloride is a common laboratory contaminant. Results for this analyte should be considered estimated unless the amount found in the sample is 3 to 5 times higher than that found in the method blank.

From: Kara Roberts
Date: February 21, 2012
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 258722
Sample Date(s): August 3, 2011

This review summarizes the data quality of analytical results generated in support of the August 3, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 258722.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 258722

Delivery Group Summary

Forty-eight soil samples and four soil trip blanks were collected by Pacific Environmental Redevelopment Corporation on August 3, 2011. Samples were hand delivered by a Pace Analytical Services representative to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for metals (arsenic, cadmium, lead), gasoline range organics, diesel range organics, and volatile organic compounds (VOCs) by methods 6010, NWTPH-Gx, NWTPH-Dx, and 8260, respectively.

The key data evaluation findings include the following:

- Metal results by method 6010 have 22.2% of the results qualified.
- VOC results by method 8260 have 13.4% of the results qualified.
- Diesel range organics by method NWTPH-Dx have 41.7% of the results qualified.
- Gasoline range organics by method NWTPH-Gx have 100% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 48 Samples	Groundwater= 0 Samples	Trip Blank (Soil)= 4 Samples	Trip Blank (Groundwater)= 0 Samples
6010 Metals (As, Pb, Cd) NWTPH-Dx NWTPH-Gx 8260 VOCs		NWTPH-Gx 8260 VOCs	

Holding Time:

All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP.

Action: No action was taken based on the evaluation of holding times.

Representativeness

Surrogates:

Criteria Used to Qualify Data Associated with Surrogate Recoveries:

- 1) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than the upper acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).

Accuracy

- c. Negative results for that fraction are not flagged.
- 2) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than or equal to 10% but less than the lower acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged with the sample quantitation limit as approximated (UJ).
- 3) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction); one with a recovery greater than the upper acceptance limit and one with a recovery greater than or equal to 10% but less than the lower acceptance limit, qualify as described in criteria 2 above.
- 4) If any surrogate in a fraction shows less than 10% recovery:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged as unusable (R).

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Analytes/ Methods Associated with Surrogate	Comment
SUP_SL_51 4-6	258722004	Dibromofluoromethane	46	72-129	Low	Volatile Surrogate	8260 VOCs	Qualified based on criteria 2b and 2c.
SUP_SL_51 8-10	258722006	Dibromofluoromethane	24	72-129	Low	Volatile Surrogate	8260 VOCs	Qualified based on criteria 2b and 2c.
SUP_SL_53 1-2	258722012	n-Octacosane	0	50-150	Low	Volatile Surrogate	NWTPH-Dx Diesel Range Organics	Surrogate recovery not evaluated against control limits due to sample dilution. Results were not qualified.
		o-Terphenyl	0	50-150	Low	Volatile Surrogate	NWTPH-Dx Diesel Range Organics	Surrogate recovery not evaluated against control limits due to sample dilution. Results were not qualified.
		4-Bromofluorobenzene	232	50-150	High	Volatile Surrogate	NWTPH-Gx Gasoline Range Organics	Qualified based on criteria 1b.
SUP_SL_55 0-1	258722020	n-Octacosane	0	50-150	Low	Volatile Surrogate	NWTPH-Dx Diesel Range Organics	Surrogate recovery not evaluated against control limits due to

								sample dilution. Results were not qualified.
		o-Terphenyl	0	50-150	Low	Volatile Surrogate	NWTPH-Dx Diesel Range Organics	Surrogate recovery not evaluated against control limits due to sample dilution. Results were not qualified.

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples. All samples were transported via four coolers with trip blanks.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment
Analyte:	1,2,3-Trichlorobenzene		
SUP_SL_58 14-16	258722044	81686	Method Blank. Qualified based on criteria 4.

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one with each extraction batch for method NWT PH-Gx and NWT PH-Dx, and one per 20 samples for method 8260. Methods NWT PH-Gx and NWT PH-Dx did not have a MS/MSD prepared and analyzed. All other methods (6010 and 8260) had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment	
SUP_SL_55 1-2	258722021	80753	Arsenic	-931/-1570	75-125	6	60	Low	Results were not qualified based on criteria 2a.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one per extraction batch for NWTPH-Gx and NWTPH-Dx, and one per 20 samples for 6010. Method 8260 had LCS/LCSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_53 14-16	258722019	81440	Diesel Range SG	99	61-98			High	Qualified based on criteria 1a and 1c.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 20 samples for method 6010, 8260, NWTPH-Gx and NWTPH-Dx. No duplicates were collected.

Action: No action was taken based on the evaluation of field duplicates.

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

The chain-of-custodies requested NWTPH-Gx, NWTPH-Dx, 8260 and 6010 be run for Trip Blank #11 (258722010), Trip Blank #6 (258722029), and Trip Blank #13 (258722052), however only NWTPH-Gx and 8260 were analyzed per the SAP & QAPP. No analysis was requested on the chain-of-custody for Trip Blank #12 (258722045) and the number of containers and preservatives used were not listed. The lab correctly ran method NWTPH-Gx and 8260 per the SAP & QAPP for this sample. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice. Cooler custody seals were not used. The temperature of the delivery coolers were recorded at 2.8, 1.8, 3.4, and 3.8 °C and were within the required temperature range. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Due to low recoveries in the surrogates (>10% and less than lower acceptance limit), the detected results for VOCs were flagged as estimated (J) in samples SUP_SL_51 4-6 (258722004) and SUP_SL_51 8-10 (258722006). The lab confirmed the matrix interference with re-analysis but did not re-extract the sample.

Due to high recoveries in the surrogates, the detected results for gasoline range organics were flagged as estimated (J) in sample SUP_SL_53 1-2 (258722012). The lab did not confirm the matrix interference with re-analysis.

Five detected acetone results for samples (SUP_SL_53 6-8 [258722015], SUP_SL_53 8-10 [258722016], SUP_SL_53 10-12 [258722017], SUP_SL_53 14-16 [258722019], and SUP_SL_55 8-10 [258722025]) were qualified as estimated (J) due to potential false positives from vial contamination from the manufacturer.

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Five hundred sixty-three (563) sample results were qualified (see Attachment 1).
- Fifty detected sample results were qualified as estimated (J) due to LCS/LCSD recoveries that exceeded control limits, surrogate recoveries that exceeded control limits, MS/MSD recoveries that exceeded control limits, or a laboratory noted qualifier.
- One hundred twenty-two nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD recoveries that exceeded control limits or surrogate recoveries that exceeded control limits.
- Seventy-two detected sample results were qualified (B) and 250 detected sample results were qualified as nondetected (UB) due to method/trip blank contamination.
- Eleven detected sample results were qualified estimated (JB) and 39 detected sample results were qualified as nondetected (UJB) due to method/trip blank contamination and LCS/LCSD recoveries that exceeded control limits or surrogate recoveries that exceeded control limits.
- Nineteen nondetected samples results were qualified rejected (UR) due to MS/MSD recoveries that exceeded control limits.

Excluding the nineteen rejected sample results, all other sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 258722

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on August 03, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/15/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 258722

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: MSV/5055

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: ICP/2295

[1] All samples diluted due to the presence of high levels of non-target analytes or other matrix interferences

Batch: MSV/5101

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5103

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5111

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5112

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5118

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: ICP/2304

[1] Samples diluted due to the presence of high levels of non-target analytes or other matrix interference.

ANALYTE QUALIFIERS

1n Acetone is a potential false positive result due to VOA vial contamination. This contamination was traced to the supplier of these VOA vials.

2n Laboratory control sample was outside of QC limits. Batch accepted based on matrix spike (MS) recovery

QUALIFIERS

Project: Superlon

Pace Project No.: 258722

ANALYTE QUALIFIERS

- B Analyte was detected in the associated method blank.
- B+
- CH The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.
- M3 Matrix spike recovery was outside laboratory control limits due to matrix interferences.
- S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.
- S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

Subject: Chemical Data Quality Review for Sample Delivery Group 258739
Sample Date(s): August 4, 2011

This review summarizes the data quality of analytical results generated in support of the August 4, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 258739.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 258739

Delivery Group Summary

Thirty-three soil samples, one soil field duplicate, and three soil trip blanks were collected by Pacific Environmental Redevelopment Corporation on August 4, 2011. Samples were hand delivered by a Pace Analytical Services representative to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for metals (arsenic, lead, and cadmium), semivolatile organic compounds (pentachlorophenol only), gasoline range organics, diesel range organics, and volatile organic compounds (VOCs) by methods 6010, 8270, NWTPH-Gx, NWTPH-Dx, and 8260, respectively.

The key data evaluation findings include the following:

- Metal results by method 6010 have 33.3% of the results qualified.
- Pentachlorophenol results by method 8270 are of acceptable quality. None of the results were qualified.
- VOC results by method 8260 have 8.9% of the results qualified.
- Diesel range organic results by method NWTPH-Dx are of acceptable quality. None of the results were qualified.
- Gasoline range organic results by method NWTPH-Gx have 100% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 33 Samples (1 Duplicate)	Groundwater= 0 Samples	Trip Blank (Soil)= 3 Samples	Trip Blank (Groundwater)= 0 Samples
6010 Metals (As, Pb, Cd) NWTPH-Dx NWTPH-Gx 8270 Pentachlorophenol Only 8260 VOCs		8260 VOCs NWTPH-Gx	

Holding Time:

All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP.

Action: No action was taken based on the evaluation of holding times.

Representativeness

Surrogates:

Criteria Used to Qualify Data Associated with Surrogate Recoveries:

- 1) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than the upper acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are not flagged.
- 2) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than or equal to 10% but less than the lower acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged with the sample quantitation limit as approximated (UJ).
- 3) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction); one with a recovery greater than the upper acceptance limit and one with a recovery greater than or equal to 10% but less than the lower acceptance limit, qualify as described in criteria 2 above.
- 4) If any surrogate in a fraction shows less than 10% recovery:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged as unusable (R).

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Analytes/ Methods Associated with Surrogate	Comment
SUP_SL_52 1-2	258739006	Dibromofluoromethane	14	72-129	Low	Volatile Surrogate	8260 VOCs	Qualified based on criteria 2b and 2c.
SUP_SL_56 1-2	258739030	n-Octacosane	0	50-150	Low	Volatile Surrogate	NWTPH-Dx Diesel Range Organics	Surrogate recover not evaluated against control limits due to sample dilution. Results were not qualified.
		o-Terphenyl	0	50-150	Low	Volatile Surrogate	NWTPH-Dx Diesel Range Organics	Surrogate recover not evaluated against control limits due to sample dilution. Results were not qualified.
SUP_SL_56 2-4	258739031	n-Octacosane	0	50-150	Low	Volatile Surrogate	NWTPH-Dx Diesel Range Organics	Surrogate recover not evaluated against control limits due to sample dilution.

								Results were not qualified.
		o-Terphenyl	0	50-150	Low	Volatile Surrogate	NWTPH-Dx Diesel Range Organics	Surrogate recover not evaluated against control limits due to sample dilution. Results were not qualified.
		4-Bromofluorobenzene	169	67-142	High	Volatile Surrogate	8260 VOCs	Qualified based on criteria 1b and 1c.

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples. All samples were transported via three coolers with trip blanks.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection

- limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
 6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment
Analyte:	1,2,3-Trichlorobenzene		
SUP_SL_52 1-2	258739006	82463	Method Blank. Qualified based on criteria 4.
Analyte:	1,2,4-Trichlorobenzene		
SUP_SL_52 1-2	258739006	82463	Method Blank. Qualified based on criteria 4.
Analyte:	2-Butanone (MEK)		
SUP_SL_56 2-4 SUP_SL_56 4-6	258739031 258739032	258739026	Trip Blank. Qualified based on criteria 4.
Analyte:	Acetone		
SUP_SL_52 1-2 SUP_SL_52 2-4	258739006 258739007	82463	Method Blank. Qualified based on criteria 4. Samples listed are potential false positives (except 258739007) due to vial contamination from the manufacturer.

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one with each extraction batch for method NWTPH-Dx and NWTPH-Gx. Methods NWTPH-Dx and NWTPH-Gx did not have a MS/MSD prepared and analyzed. All other methods (6010, 8270, and 8260) had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one per extraction batch for method NWTPH-Dx and NWTPH-Gx, one every 20 samples for method 6010, and one every 10 samples for method 8270. Method 8260 had LCS/LCSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics
 - a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
 - b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
 - c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).
2. Inorganics
 - a. Aqueous LCS:
 - i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
 - ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
 - iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
 - iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
 - v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
 - vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
 - vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).
 - b. Solid LCS:
 - i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
 - ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
 - iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
 - iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were potentially qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_49 8-10	258739001	81813	Vinyl chloride	114/111	80-112	3	29	High	Based on the criteria above, results were not qualified.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 10 samples for method 8270. All other methods (6010, NWTPH-Dx, NWTPH-Gx, and 8260) had field duplicates prepared and analyzed at the required frequency as specified in the SAP & QAPP. Sample SUP_SL_56 DUP (258739038) was collected as a field duplicate and is associated with sample SUP_SL_56 14-16.

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
2. Aqueous Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 35%.
3. Solid Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 50%.

Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.

Analyte	Results		Units	RPD
	SUP_SL_56 DUP (Lab ID -258739038)	SUP_SL_56 14-16 (Lab ID – 258739037)		
Gasoline Range Organics	1.1 J	1.1 J	mg/kg	0
Arsenic	2.1 J	2.5 J	mg/kg	17
Cadmium	<0.061	0.074 J	mg/kg	19
Lead	4.2	3.2	mg/kg	27

Acetone	14.6	23.0	ug/kg	45
Benzene	0.21 J	0.20 J	ug/kg	5
Carbon disulfide	1.8 J	3.8	ug/kg	72
Naphthalene	0.80 J	0.91 J	ug/kg	12
sec-Butylbenzene	<0.45	0.71 J	ug/kg	45

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

On the chain-of-custodies, methods 6010, 8270 and 8260 were requested for Trip Blank #15 (258739003), however only 8260 was analyzed. Trip Blank #5 (258739014) and Trip Blank #14 (258739026) were not run for methods NWTPH-Dx and 6010 requested on the chain-of-custody. According to the SAP & QAPP the trip blanks for this sample delivery group should have been run for methods 8260 and NWTPH-Gx. They were run for the requested method NWTPH-Gx and 8260. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition and were preserved correctly. Cooler custody seals were not used. The temperature of the delivery coolers were recorded at 0.4, 0.8 and 1.0 °C and were within the required temperature range. It was not noted whether the samples were on ice however based on the temperature of the coolers it is assumed ice was used. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Due to low recoveries in the surrogates (>10% and less than lower acceptance limit), the detected results for VOCs were flagged as estimated (J) and the nondetected results were flagged as non-detect estimated (UJ) in sample SUP_SL_52 1-2 (258739006). The lab did not confirm the matrix interference with re-analysis.

Due to high recoveries in the surrogates, the detected results for VOCs were flagged as estimated (J) in sample SUP_SL_56 2-4 (258739031). The lab confirmed the matrix interference with re-analysis but did not re-extract the sample.

Four detected acetone results for samples SUP_SL_49 8-10 (258739001), SUP_SL_49 10-12 (258739002), SUP_SL_50 8-10 (258739004), and SUP_SL_50 10-12 (258739005) were qualified as estimated (J) due to potential false positives from vial contamination from the manufacturer.

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Two hundred eighty-one (281) sample results were qualified (see Attachment 1).
- Thirty-two detected sample results were qualified as estimated (J) due to LCS/LCSD recoveries that exceeded control limits, surrogate recoveries that exceeded control limits, MS/MSD recoveries that exceeded control limits, or a laboratory noted qualifier.
- Sixty-four nondetected sample results were qualified as estimated (UJ) due to surrogate recoveries that exceeded control limits.
- Forty-five detected sample results were qualified (B) and 111 detected sample results were qualified as nondetected (UB) due to method/trip blank contamination.
- Four detected sample results were qualified estimated (JB) and 25 detected sample results were qualified as nondetected (UJB) due to method/trip blank contamination and LCS/LCSD recoveries that exceeded control limits or surrogate recoveries that exceeded control limits.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 258739

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on August 04, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 258739

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: MSV/5118

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5129

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5160

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5163

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1n Acetone is a potential false positive result due to VOA vial contamination. This contamination was traced to the supplier of these VOA vials.

B Analyte was detected in the associated method blank.

CH The continuing calibration for this compound is outside of Pace Analytical acceptance limits. The results may be biased high.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D4 Sample was diluted due to the presence of high levels of target analytes.

D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

QUALIFIERS

Project: Superlon

Pace Project No.: 258739

ANALYTE QUALIFIERS

- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- R1 RPD value was outside control limits.
- S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).
- S4 Surrogate recovery not evaluated against control limits due to sample dilution.
- S5 Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis).

To: Pacific Environmental and Redevelopment Corporation (PERC)
From: Kara Roberts
Date: February 21, 2012
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 258823
Sample Date(s): August 12, 2011

This review summarizes the data quality of analytical results generated in support of the August 12, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 258823.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 258823

Delivery Group Summary

Fourteen soil samples and one soil trip blank were collected by Pacific Environmental Redevelopment Corporation on August 12, 2011. Samples were hand delivered by a Pace Analytical Services representative to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for metals (arsenic, cadmium, lead), semivolatile organic compounds (pentachlorophenol only), and volatile organic compounds (VOCs) by methods 6010, 8270, and 8260, respectively.

The key data evaluation findings include the following:

- Metal results by method 6010 are of acceptable quality. None of the results were qualified.
- Pentachlorophenol results by method 8270 have 100% of the results qualified.
- VOC results by method 8260 have 4.5% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 14 Samples	Groundwater= 0 Samples	Trip Blank (Soil)= 1 Samples	Trip Blank (Groundwater)= 0 Samples
6010 Metals (As, Pb, Cd)		8260 VOCs	
8270 Pentachlorophenol Only			
8260 VOCs			

<p>Holding Time: All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP. <i>Action: No action was taken based on the evaluation of holding times.</i></p>	Representativeness
---	---------------------------

<p>Surrogates: All surrogate recoveries were within the control limits. <i>Action: No action was taken based on the evaluation of surrogate recoveries.</i></p>	Accuracy
--	-----------------

<p>Blanks: As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples. All samples were transported via one cooler with the trip blank.</p> <p>The following analytes were detected in the method or trip blanks:</p>	Representativeness
---	---------------------------

Blank ID	Blank Type	Associated Samples Field ID	Associated Sample Lab ID	Analyte	Result	Unit

				n-Propylbenzene	0.73 J	ug/kg
				p-Isopropyltoluene	0.45 J	ug/kg

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment
Analyte:	Acetone		
SUP_SL_20 8-10	258823003	258823010	Trip Blank. Qualified based on criteria 4 and 6. Samples listed are potential false positives due to vial contamination from the manufacturer. Positive results were qualified as estimated if it was greater than the associated blank concentration.

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were prepared and analyzed at the required frequency.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:

- a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.

2. Inorganics

- a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
- b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
- c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as

- estimated (J).
- d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD. No action was taken based on the evaluation of MS/MSDs.

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment

			1,2,4-Trichlorobenzene	77/56	40-134	33	30	High	Results not qualified based on criteria 1a.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one per 20 samples for method 6010 and one per 10 for method 8270. Method 8260 had LCS/LCSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10

analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment

								results were not qualified.
		2-Butanone (MEK)	161	44-160			High	Based on the criteria above, results were not qualified.
		Acetone	183	40-160			High	Qualified based on criteria 1a.
		Carbon disulfide	170	56-143			High	Qualified based on criteria 1a.
		Methylene chloride	160	59-149			High	Based on the criteria above, results were not qualified.
		cis-1,2-Dichloroethene	130	70-120			High	Qualified based on criteria 1a.
		Trichloroethene	114	80-112			High	Based on the criteria above, results were not qualified.
		Tetrachloroethene	119	80-112			High	Based on the criteria above, results were not qualified.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 20 samples for method 6010 and 8260, and one every 10 samples for method 8270. No duplicates were collected.

Action: No action was taken based on the evaluation of field duplicates.

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

According to the chain-of-custody the last sample was collected at 13:05, however the sampler relinquished the samples at 12:30 to Buck Pace of Pace Analytical Services. The sampler labeled the samples and filled out the chain-of-custody prior to collecting the sample by estimating what time the sample would be collected. The samples were collected faster than expected and given to the Pace representative at 12:30. On the chain-of-custody methods 6010, 8270 and 8260 were requested for the trip blank (Trip Blank #16 [258823010]). The trip blank was correctly run for method 8260 as specified in the SAP & QAPP. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition and were preserved correctly. The sample condition upon receipt report does not specify if the samples were on ice of any type, however the temperature collected upon receipt of the samples (5.0 °C) indicates ice must have been present. Cooler custody seals were not used. The temperature of the delivery cooler was recorded at 5.0 °C and was within the required temperature range. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Forty-two (42) sample results were qualified (see Attachment 1).
- One detected sample result was qualified as estimated (J) due to LCS/LCSD recoveries that exceeded control limits.

- Fourteen nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD recoveries that exceeded control limits.
- Six detected sample results were qualified (B) and 10 detected sample results were qualified as nondetected (UB) due to method/trip blank contamination.
- Nine detected sample results were qualified estimated (JB) and two detected sample results were qualified as nondetected (UJB) due to method/trip blank contamination and LCS/LCSD recoveries that exceeded control limits.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 258823

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on August 12, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 258823

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: MSV/5129

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1n Acetone is a potential false positive result due to VOA vial contamination. This contamination was traced to the supplier of these VOA vials.

B Analyte was detected in the associated method blank.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.

L0 Analyte recovery in the laboratory control sample (LCS) was outside QC limits.

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

R1 RPD value was outside control limits.

From: Kara Roberts
Date: February 21, 2012
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 258845
Sample Date(s): August 15, 2011

This review summarizes the data quality of analytical results generated in support of the August 15, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 258845.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 258845

Delivery Group Summary

Nine soil samples, one soil field duplicate, and one soil trip blank were collected by Pacific Environmental Redevelopment Corporation on August 15, 2011. Samples were hand delivered by Pace Analytical Services representative to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for metals (arsenic, cadmium, lead), semivolatile organic compounds (pentachlorophenol only), and volatile organic compounds (VOCs) by methods 6010, 8270, and 8260, respectively.

The key data evaluation findings include the following:

- Metal results by method 6010 are of acceptable quality. None of the results were qualified.
- Pentachlorophenol results by method 8270 are of acceptable quality. None of the results were qualified.
- VOC results by method 8260 have 2.7% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 9 Samples (1 Duplicate)	Groundwater= 0 Samples	Trip Blank (Soil)= 1 Samples	Trip Blank (Groundwater)= 0 Samples
6010 Metals (As, Pb, Cd)		8260 VOCs	
8270 Pentachlorophenol Only			
8260 VOCs			

<p>Holding Time: All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP. <i>Action: No action was taken based on the evaluation of holding times.</i></p>	Representativeness
<p>Surrogates: All surrogate recoveries were within the control limits. <i>Action: No action was taken based on the evaluation of surrogate recoveries.</i></p>	Accuracy
<p>Blanks: As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples. All samples were transported via one cooler with the trip blank.</p>	Representativeness

The following analytes were detected in the method or trip blanks:						
Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
258845006	Trip Blank	SUP_SL_8 6-7	258845001	1,2,4-Trichlorobenzene	0.25 J	ug/kg

		SUP_SL_21 10-12	258845010	Naphthalene	1.0 J	ug/kg
		SUP_SL_21 12-14	258845011			

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment
Analyte:	Acetone		
SUP_SL_8 8-10	258845003	258845007	Trip Blank. Qualified based on criteria 4 and 6. Samples listed are potential false positives (except 258845011) due to vial contamination from the manufacturer.
SUP_SL_8 10-12	258845004		
SUP_SL_8 12-14	258845005		
SUP_SL_8_DUP	258845006		
SUP_SL_21 8-10	258845009		
SUP_SL_21 10-12	258845010		
SUP_SL_21 12-14	258845011		
Analyte:	Toluene		

SUP_SL_8 8-10	258845003	258845007	Trip Blank. Qualified based on criteria 4.
SUP_SL_8_DUP	258845006		
SUP_SL_21 12-14	258845011		
Analyte:	Naphthalene		
SUP_SL_8 8-10	258845003	82463	Method Blank. Qualified based on criteria 4.
SUP_SL_8 10-12	258845004		
SUP_SL_8_DUP	258845006		

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one per 20 samples for method 8260. Method 8260 did not have a MS/MSD prepared and analyzed. All other methods (6010 and 8270) had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP. All sample recoveries were within control limits.

Action: No action was taken based on the evaluation of MS/MSD.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one per 20 samples for method 6010 and one per 10 samples for method 8270. Method 8260 had LCS/LCSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD. No action was taken based on the evaluation of LCS/LCSDs.

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_8 8-10 SUP_SL_8 10-12 SUP_SL_8 12-14 SUP_SL_8_DUP SUP_SL_21 8-10 SUP_SL_21 10-12 SUP_SL_21 12-14	258845003 258845004 258845005 258845006 258845009 258845010 258845011	82464	2-Hexanone	133/105	40-160	23	21	High	Based on the criteria above, results were not qualified.
			Dichlorodifluoromethane	167/152	40-160	10	24	High	Based on the criteria above, results were not qualified.
			Vinyl chloride	127/122	80-112	4	29	High	Based on the criteria above, results were not qualified.
			Tetrachloroethene	116/109	80-112	6	22	High	Based on the criteria above, results were not qualified.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were prepared and analyzed at the required frequency. Sample SUP_SL_8_DUP (258845006) was collected as a field duplicate and is associated with SUP_SL_8 8-10 (258845003).

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
2. Aqueous Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 35%.
3. Solid Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 50%.

Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.

Analyte	Results		Units	RPD
	SUP_SL_8_DUP (Lab ID -258845006)	SUP_SL_8 8-10 (Lab ID – 258845003)		
Arsenic	156	207	mg/kg	28
Cadmium	1.1J	1.1J	mg/kg	0
Lead	62.7	153	mg/kg	84
2-Butanone (MEK)	34.3	12.4J	ug/kg	94
Acetone	127	56.2	ug/kg	77
Benzene	1.1J	4.8J	ug/kg	125
Carbon disulfide	26.3	6.7J	ug/kg	119

Naphthalene	2.0J	2.0J	ug/kg	0
Toluene	1.1J	0.98J	ug/kg	12
1,2-Dichloroethene (Total)	<0.91	1.1J	ug/kg	19
cis-1,2-Dichloroethene	<0.51	1.1J	ug/kg	73

Sample Quantitation/Compound Identification:

A Level 4 review was not performed on this group of samples.

Additional Comments:

Pace Analytical Services noted that the MeOH vial for sample SUP_SL_21 10-12 (258845010) was returned to the lab without a sample. SUP_SL_21 10-12 (258845010) was still run for all requested methods. On the chain-of-custody Trip Blank #17 (258845007) did not have any analyses test requests. The sample was run for method 8260. According to the SAP & QAPP, trip blanks were to be run for VOCs for this sample delivery group. No other discrepancies were noted concerning sample delivery. Cooler custody seals were not used. The samples arrived in good condition, preserved correctly, and were on ice. The temperature of the delivery cooler was recorded at 3.9 °C and was within the required temperature range. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Thirteen (13) sample results were qualified (see Attachment 1).
- Three detected sample results were qualified (B) and 10 detected sample results were qualified as nondetected (UB) due to method/trip blank contamination.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 258845

RE: Project: Superlon
Pace Project No.: 258845

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on August 15, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 258845

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: MSV/5163

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1n Acetone is a potential false positive result due to VOA vial contamination. This contamination was traced to the supplier of these VOA vials.

B Analyte was detected in the associated method blank.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D6 The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits.

L3 Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias.

From: Kara Roberts
Date: February 21, 2012
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 258888
Sample Date(s): August 17, 2011

This review summarizes the data quality of analytical results generated in support of the August 17, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 258888.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 258888

Delivery Group Summary

Five soil samples and one soil trip blank were collected by Pacific Environmental Redevelopment Corporation on August 17, 2011. Samples were hand delivered by a Pace Analytical Services representative to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for metals (arsenic, cadmium, lead), semivolatile organic compounds (pentachlorophenol only), and volatile organic compounds (VOCs) by methods 6010, 8270, and 8260, respectively.

The key data evaluation findings include the following:

- Metal results by method 6010 have 33.3% of the results qualified.
- Pentachlorophenol results by method 8270 are of acceptable quality. None of the results were qualified.
- VOC results by method 8260 have 3.9% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 5 Samples	Groundwater= 0 Samples	Trip Blank (Soil)= 1 Samples	Trip Blank (Groundwater)= 0 Samples
6010 Metals (As, Pb, Cd)		8260 VOCs	
8270 Pentachlorophenol Only			
8260 VOCs			

<p>Holding Time: All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP. <i>Action: No action was taken based on the evaluation of holding times.</i></p>	Representativeness
---	---------------------------

<p>Surrogates: All surrogate recoveries were within the control limits. <i>Action: No action was taken based on the evaluation of surrogate recoveries.</i></p>	Accuracy
--	-----------------

<p>Blanks: As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples. All samples were transported via one cooler with the trip blank.</p> <p>The following analytes were detected in the method or trip blanks:</p>	Representativeness
---	---------------------------

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
258888006	Trip Blank	SUP_SL_7 6-7	258888001	Acetone	3.3 J	ug/kg
		SUP_SL_7 7-8	258888002	Carbon disulfide	0.39 J	ug/kg
		SUP_SL_7 8-10	258888003	Naphthalene	0.66 J	ug/kg
		SUP_SL_7 10-12	258888004	Toluene	0.32 J	ug/kg
82476	Method Blank	SUP_SL_7 8-10	258888003	1,2,3-Trichlorobenzene	0.30 J	ug/kg
		SUP_SL_7 10-12	258888004	Bromomethane	0.50 J	ug/kg
				Carbon disulfide	0.34 J	ug/kg
				Chloromethane	0.66 J	ug/kg
82656	Method Blank	SUP_SL_7 12-14	258888005	1,2,4-Trichlorobenzene	0.40 J	ug/kg
				Acetone	1.8 J	ug/kg
				Naphthalene	1.0 J	ug/kg

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment
Analyte:	Acetone		
SUP_SL_7 8-10 SUP_SL_7 10-12 SUP_SL_7 12-14	258888003 258888004 258888005	258888006	Trip Blank. Qualified based on criteria 4 and 6. Samples listed are potential false positives (except 258888005) due to vial contamination from the manufacturer.
Analyte:	Carbon disulfide		
SUP_SL_7 8-10 SUP_SL_7 10-12	258888003 258888004	258888006	Trip Blank. Qualified based on criteria 4 and 6.
Analyte:	Toluene		
SUP_SL_7 8-10	258888003	258888006	Trip Blank. Qualified based on criteria 4.
Analyte:	Naphthalene		
SUP_SL_7 8-10	258888003	82476	Method Blank. Qualified based on criteria 4.
SUP_SL_7 12-14	258888005	258888006	Trip Blank. Qualified based on criteria 4.

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one per 20 samples for method 8260. Method 8260 did not have a MS/MSD prepared and analyzed. All other methods (6010 and 8270) had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_7 8-10	258888003	83650	Arsenic	5/15	75-125		20	Low	Qualified based on criteria 2c.
SUP_SL_7 10-12	258888004								
SUP_SL_7 12-14	258888005								

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one per 20 samples for method 6010 and one per 10 samples for method 8270. Method 8260 had LCS/LCSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics
 - a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
 - b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
 - c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).
2. Inorganics
 - a. Aqueous LCS:
 - i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
 - ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
 - iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
 - iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).

- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).
- b. Solid LCS:
 - i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
 - ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
 - iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
 - iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD. No action was taken based on the evaluation of LCS/LCSDs.

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_7 8-10 SUP_SL_7 10-12	258888003 258888004	82477	Vinyl chloride	111/116	80-112	5	29	High	Based on the criteria above, results were not qualified.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were not prepared and analyzed at the required frequency of one every 20 samples for method 6010 and 8260, and one every 10 samples for method 8270. No duplicates were collected.

Action: No action was taken based on the evaluation of field duplicates.

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

The chain-of-custody requested that methods 6010, 8270 and 8260 be run on sample Trip Blank #7 (258888006) but 6010 and 8270 were not analyzed. According to the SAP & QAPP, trip blanks were to be run for VOCs for this sample delivery group. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice. Cooler custody seals were not used. The temperature of the delivery cooler was recorded at 9.4°C and exceeded the required temperature range. Since the samples were delivered on ice the same day of collection no samples were qualified based on cooler temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Eleven (11) sample results were qualified (see Attachment 1).
- Three detected sample results were qualified as estimated (J) due to MS/MSD recoveries that exceeded control limits.
- Three detected sample results were qualified (B) and five detected sample results were qualified as nondetected (UB) due to method/trip blank contamination.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 258888

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on August 17, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, 03/14/12 REV1. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Andy Brownfield for
Jennifer Gross

QUALIFIERS

Project: Superlon

Pace Project No.: 258888

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

BATCH QUALIFIERS

Batch: MSV/5164

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

Batch: MSV/5175

[M5] A matrix spike/matrix spike duplicate was not performed for this batch due to insufficient sample volume.

ANALYTE QUALIFIERS

1n Acetone is a potential false positive result due to VOA vial contamination. This contamination was traced to the supplier of these VOA vials.

B Analyte was detected in the associated method blank.

D3 Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference.

D4 Sample was diluted due to the presence of high levels of target analytes.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

From: Kara Roberts
Date: February 21, 2012
Project: Superlon
Subject: Chemical Data Quality Review for Sample Delivery Group 258906
Sample Date(s): August 18, 2011

This review summarizes the data quality of analytical results generated in support of the August 18, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 258906.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 258906

Delivery Group Summary

Eight soil samples, one groundwater samples, one soil field duplicate, one soil trip blank, and one groundwater trip blank were collected by Pacific Environmental Redevelopment Corporation on August 18, 2011. Samples were hand delivered by a Pace Analytical Services to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for total and dissolved metals (arsenic, lead, and cadmium), metals (mercury), semivolatile organics compounds (pentachlorophenol and polycyclic aromatic hydrocarbons [PAHs]), diesel range organics, gasoline range organics, and volatile organic compounds (VOCs) by methods 6010, 7471, 8270, NWTPH-Dx, NWTPH-Gx and 8260, respectively.

The key data evaluation findings include the following:

- Total and dissolved metal results by method 6010 have 22.2% of the results qualified.
- Mercury results by method 7471 are of acceptable quality. None of the results were qualified.
- Pentachlorophenol results by method 8270 are of acceptable quality. None of the results were qualified.
- PAH results by method 8270 are of acceptable quality. None of the results were qualified.
- VOC results by method 8260 have 12.8% of the results qualified.
- Diesel range organic results by method NWTPH-Dx are of acceptable quality. None of the results were qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:			
Collected by the Field Crew		Provided by the Laboratory	
Soil= 8 Samples (1 Duplicates)	Groundwater= 1 Sample	Trip Blank (Soil)= 1 Sample	Trip Blank (Groundwater)= 1 Sample
6010 Metals (As, Pb, Cd) 7471 Mercury NWTPH-Dx 8270 Pentachlorophenol and PAHs 8260 VOCs	6010 Total Metals (As, Pb, Cd) 6010 Dissolved Metals (As, Pb, Cd) 8260 VOCs	8260 VOCs NWTPH-Gx	8260 VOCs NWTPH-Gx

Representativeness

Holding Time:

Criteria Used to Qualify Data Associated with Holding Times:

- 1) Due to limited information concerning holding times for soil samples, it is left to the discretion of the reviewer to apply water holding time criteria to soil samples.
- 2) If holding times exceed:
 - a. Positive results are flagged as estimated (J).
 - b. Negative results are flagged with the sample quantitation limit as estimated (UJ).
- 3) If holding times grossly exceed upon first analysis or re-analysis:
 - a. Positive results are flagged as estimated (J or UJ).
 - b. Negative results are flagged as unusable (R).

Action: The following sample results exceeded holding times. No action was taken based on the evaluation of holding times.

Field ID	Lab ID	Analytes/Methods	Date Collected	Date Prepared	Date Analyzed	HT	Number of Days Past HT	Comment
SUP_SD_7 SUP_SD_8 SUP_SD_9 SUP_SD_DUP	258906007 258906008 258906009 258906010	8270 PAHs	8/18/11	9/01/11	9/02/11	14 days	1	Very slight exceedances of holding time. No change to qualifiers.

Accuracy

Surrogates:

Criteria Used to Qualify Data Associated with Surrogate Recoveries:

- 1) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than the upper acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are not flagged.
- 2) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than or equal to 10% but less than the lower acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged with the sample quantitation limit as approximated (UJ).
- 3) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction); one with a recovery greater than the upper acceptance limit and one with a recovery greater than or equal to 10% but less than the lower acceptance limit, qualify as described in criteria 2 above.
- 4) If any surrogate in a fraction shows less than 10% recovery:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged as unusable (R).

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Analytes/Methods Associated with Surrogate	Comment
SUP_SD_7	258906007	4-Bromofluorobenzene	155	67-142	High	Volatile Surrogate	8260 VOCs	Qualified based on criteria 1b and 1c.
SUP_SD_8	258906008	4-Bromofluorobenzene	168	67-142	High	Volatile Surrogate	8260 VOCs	Qualified based on

								criteria 1b and 1c.
--	--	--	--	--	--	--	--	---------------------

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples. All samples were transported via one cooler with the trip blanks.

The following analytes were detected in the method or trip blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
258906006	Trip Blank	SUP_SD_2 SUP_SD_3 SUP_SD_4 SUP_SD_5 SUP_SD_6 SUP_SD_7 SUP_SD_8 SUP_SD_9 SUP_SD_DUP	258906001 258906002 258906003 258906004 258906005 258906007 258906008 258906009 258906010	Gasoline Range Organics	0.66 J	mg/kg
				Naphthalene	0.59 J	ug/kg
				1,2,4-Trimethylbenzene	0.11 J	ug/L
				Acetone	1.5 J	ug/L
				Bromomethane	0.24 J	ug/L
				Carbon disulfide	0.16 J	ug/L
				Chloromethane	0.37 J	ug/L
				Methylene chloride	2.1 J	ug/L
				m&p-Xylene	0.32 J	ug/L
83631	Method Blank	SUP_SW_2	258906011	1,2,4-Trimethylbenzene	0.18 J	ug/L
				Acetone	0.93 J	ug/L
				m&p-Xylene	0.43 J	ug/L
				Methylene chloride	1.4 J	ug/L
				n-Butylbenzene	0.11 J	ug/L
				Naphthalene	0.15 J	ug/L
				Toluene	0.24 J	ug/L
				Xylene (Total)	0.55 J	ug/L
82810	Method Blank	SUP_SD_7	258906007	Chloromethane	0.48 J	ug/kg
				m&p-Xylene	0.77 J	ug/kg
				Naphthalene	0.83 J	ug/kg
				o-Xylene	0.46 J	ug/kg
				Xylene (Total)	1.2 J	ug/kg
83403	Method Blank	SUP_SD_8 SUP_SD_9 SUP_SD_DUP	258906008 258906009 258906010	1,2,3-Trichlorobenzene	0.74 J	ug/kg
				1,2,4-Trichlorobenzene	0.41 J	ug/kg
				Chloroform	0.48 J	ug/kg
				Naphthalene	1.0 J	ug/kg
				Toluene	0.51 J	ug/kg

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank,

must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).

- a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
 5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
 6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one with each extraction batch for NWT PH-Gx and NWT PH-Dx. Methods NWT PH-Dx and NWT PH-Gx did not have a MS/MSD prepared and analyzed. All other methods (6010, 8260, 8270, and 7471) had MS/MSDs prepared and analyzed at the required frequency as

specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec MS/MSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SD_7 SUP_SD_8 SUP_SD_9 SUP_SD_DUP	258906007 258906008 258906009 258906010	83650	Arsenic	5/15	75-125		20	Low	Qualified based on criteria 2c.

			Vinyl chloride	105/122	80-112	4	30	High	Results not qualified based on criteria 1a.

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one with each extraction batch for method NWTPH-Gx and NWTPH-Dx, one per 20 samples for method 6010 and 8260, and one per 10 samples for method 8270. LSC/LCSDs were not required for method 7471.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).

- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
 - c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated nondetected analytes should be qualified as estimated (J).
2. Inorganics
- a. Aqueous LCS:
 - i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
 - ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
 - iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
 - iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
 - v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
 - vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
 - vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).
 - b. Solid LCS:
 - i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
 - ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
 - iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
 - iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SD_7	258906007	82811	Dichlorodifluoromethane	171	40-160			High	Based on the criteria above, results were not qualified.
			Vinyl chloride	132	80-112			High	Based on the criteria above, results were not qualified.
SUP_SD_8 SUP_SD_9 SUP_SD_DUP	258906008 258906009 258906010	83404	1,3,5-Trimethylbenzene	127	78-124			High	Qualified based on criteria 1a. Based on the criteria above, results for samples 258906009 and 258906010 were not qualified.

			n-Butylbenzene	129	72-125			High	Based on the criteria above, results were not qualified.
			Tetrachloroethene	121	80-112			High	Based on the criteria above, results were not qualified.
			Vinyl chloride	129	80-112			High	Based on the criteria above, results were not qualified.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were prepared and analyzed at the required frequency. Sample SUP_SD_DUP (258906010) was collected as a field duplicate and is associated with sample SUP_SD_7 (258906007).

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
2. Aqueous Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 35%.
3. Solid Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 50%.

Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.

Analyte	Results		Units	RPD
	SUP_SD_DUP (Lab ID -258906010)	SUP_SD_7 (Lab ID - 258906007)

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

Gasoline range organics were run for the trip blank samples but was not requested on any of the other samples. Both trip blanks were run for NWTPH-Gx and 8260. TRIP BLANK (SOIL) #18 (258906006) was not run for the requested 6010, 7471, NWTPH-Dx and 8270 methods. Trip Blank (258906012) was run for NWTPH-Gx but the analysis was not requested on the chain-of-custody. According to the SAP & QAPP, trip blanks for this sample delivery group should have only been run for method 8260. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition and were preserved correctly. Cooler custody seals were not used. The temperature of the delivery cooler was recorded at 6.2 °C and exceeded the required temperature range. Since the samples were delivered the same day of collection no samples were qualified based on cooler temperature. It was not noted whether the samples were delivered on ice. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Due to high recoveries in the surrogates, the detected results for VOCs were flagged as estimated and the nondetected results were not flagged in samples SUP_SL_7 (258906007) and SUP_SL_8 (258906008). The lab did not confirm the matrix interference with re-analysis.

Three detected acetone results for samples (SUP_SD_7 [258906007], SUP_SD_8 [258906008], and SUP_SD_9 [258906009] were qualified as estimated (J) due to potential false positives from vial contamination from the manufacturer.

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- Forty-eight (48) sample results were qualified (see Attachment 1).
- Thirty-two detected sample results were qualified as estimated (J) due to LCS/LCSD recoveries that exceeded control limits, surrogate recoveries that exceeded control limits, MS/MSD recoveries that exceeded control limits, or a laboratory noted qualifier.
- One detected sample result was qualified (B) and eight detected sample results were qualified as nondetected (UB) due to method/trip blank contamination.

- Five detected sample results were qualified estimated (JB) and two detected sample results were qualified as nondetected (UJB) due to method blank contamination and surrogate recoveries that exceeded control limits.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.

RE: Project: Superlon
Pace Project No.: 258906

Dear Stacy Munson:

Enclosed are the analytical results for sample(s) received by the laboratory on August 18, 2011. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Amended Report, REV-1 01/24/12. Sample SUP_SD_7 (258906007) is now flagged as: Acetone is a potential false positive result due to VOA vial contamination. This contamination was traced to the supplier of these VOA vials.

Amended Report, 03/14/12 REV2. Per client request, the results were updated to report to the PQL and not the MDL.

Amended Report, 4/18/12 Rev 2.: Per client request, show non-detects as ND, and report both the RL and MDL columns with J flags.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

REPORT OF LABORATORY ANALYSIS

QUALIFIERS

Project: Superlon

Pace Project No.: 258906

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel Clean-Up

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-S Pace Analytical Services - Seattle

ANALYTE QUALIFIERS

- | | |
|----|---|
| 1n | Acetone is a potential false positive result due to VOA vial contamination. This contamination was traced to the supplier of these VOA vials. |
| 2n | Laboratory control sample was outside of QC limits. Batch accepted based on matrix spike (MS) recovery. |
| 3n | Result could not be confirmed by second analysis due to limited sample volume. |
| B | Analyte was detected in the associated method blank. |
| D3 | Sample was diluted due to the presence of high levels of non-target analytes or other matrix interference. |
| D6 | The relative percent difference (RPD) between the sample and sample duplicate exceeded laboratory control limits. |
| IS | The internal standard response is below criteria. Results may be biased high. |
| L3 | Analyte recovery in the laboratory control sample (LCS) exceeded QC limits. Analyte presence below reporting limits in associated samples. Results unaffected by high bias. |
| M1 | Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery. |
| R1 | RPD value was outside control limits. |
| S5 | Surrogate recovery outside control limits due to matrix interferences (not confirmed by re-analysis). |

Subject: Chemical Data Quality Review for Sample Delivery Group 2510017
Sample Date(s): November 15, 2011

This review summarizes the data quality of analytical results generated in support of the November 15, 2011 Remedial Investigation Workplan sampling event for the Superlon Plastics Site in Tacoma, Washington. Data reported by the laboratory was evaluated to determine usability for project purposes. This review summarizes the data quality in sample delivery group 2510017.

The review is intended to assess the primary elements of data quality: precision, accuracy, representativeness, completeness, comparability, and sensitivity (PARCCS). The data quality review includes evaluation of chain-of-custodies, holding times, sample blanks, sample duplicates, matrix spike (and duplicates), surrogate recoveries, and laboratory control samples. This review is limited to quality control provided by the lab. Raw data, chromatograms, and calibrations were not evaluated in this review.

The analytical data in this sample delivery group were evaluated using the criteria presented in:

1. Pacific Environmental and Redevelopment Corporation (PERC). 2010. Sample and Analytical Plan & Quality Assurance Project Plan for the Superlon Plastics Site (SAP & QAPP). Tacoma, Washington. February 22, 2010.
2. United States Environmental Protection Agency. 2004. National Functional Guidelines for Inorganic Data Review. October 2004.
3. United States Environmental Protection Agency. 1999. National Functional Guidelines for Organic Data Review. October 1999.

The review is arranged by data quality elements (PARCCS), and will focus on situations in which data were impacted by a quality control measure.

Sincerely,

Kara Roberts

Attachment 1: Applied Independent Data Review Qualifiers for Sample Delivery Group 2510017

Delivery Group Summary

Fifty-eight soil samples, four soil field duplicates, and two soil trip blanks were collected by Pacific Environmental Redevelopment Corporation on November 15, 2011. Samples were hand delivered by a Pace Analytical Services representative to Pace Analytical Services in Seattle, Washington on the same day of collection. Samples were analyzed for metals (arsenic, lead, and cadmium), gasoline range organics, and diesel range organics by methods 6010, NWTPH-Gx, and NWTPH-Dx, respectively.

The key data evaluation findings include the following:

- Metal results by method 6010 have 40.3% of the results qualified.
- Diesel range organic results by method NWTPH-Dx are of acceptable quality. None of the results were qualified.
- Gasoline range organic results by method NWTPH-Gx have 100% of the results qualified.

Qualifier Definitions

The following qualifiers may be used in this review:

Qualifier	Description
B	The analyte was detected in the associated method or trip blank.
J	The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
R	The sample results were rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte could not be verified.
U	The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
UJ	The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.

Media, Number of Samples Analyzed, and Methods:

Holding Time:

All samples were extracted and analyzed within the required holding time as specified in the SAP & QAPP.

Action: No action was taken based on the evaluation of holding times.

Representativeness

Surrogates:

Criteria Used to Qualify Data Associated with Surrogate Recoveries:

- 1) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than the upper acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are not flagged.

Accuracy

- 2) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction) or one surrogate in the volatile fraction have a recovery greater than or equal to 10% but less than the lower acceptance limit:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged with the sample quantitation limit as approximated (UJ).
- 3) If at least two surrogates in either semivolatile fraction (i.e. base/neutral or acid fraction); one with a recovery greater than the upper acceptance limit and one with a recovery greater than or equal to 10% but less than the lower acceptance limit, qualify as described in criteria 2 above.
- 4) If any surrogate in a fraction shows less than 10% recovery:
 - a. Specify the fraction that is being qualified (i.e. acid, base/neutral, or both)
 - b. Positive results for that fraction are flagged as estimated (J).
 - c. Negative results for that fraction are flagged as unusable (R).

Action: The following sample results exceeded control limits for surrogate recoveries and were qualified based on the criteria above:

Field ID	Lab ID	Surrogate	% Rec	QC Limit	Bias	Type of Fraction	Analytes /Methods Associated with Surrogate	Comment
SUP_SL_60_0-1_111511	2510017001	4-Bromofluorobenzene	157	50-150	High	Volatile Surrogate	NWTPH-Gx Gasoline Range Organics	Qualified based on criteria 1b.

Representativeness

Blanks:

As specified in the SAP & QAPP, method blanks and trip blanks were prepared and analyzed at the required frequency. Equipment blanks were not prepared and analyzed at the required frequency of one every 20 samples. Multiple coolers were used to transport the samples each containing a trip blank. There is no documentation on which trip blanks and samples went with which coolers. However, there were no detects in either trip blank.

The following analytes were detected in the method blanks:

Blank ID	Blank Type	Associated Samples Field ID	Associated Samples Lab ID	Analyte	Result	Unit
94362	Method Blank	SUP_SL_64_4-6_111511	2510017034	Cadmium	0.013 J	mg/kg

	SUP_SL_64_2-4_111511	2510017033		

Criteria Used to Qualify Data Associated with Blanks:

1. If an analyte is found in a blank but not found in the sample, no action is taken.
2. In the instance where more than one blank is associated with a given sample, qualification should be based upon a comparison with the associated blank having the higher concentration.
3. Any analyte (other than the five listed below) detected in the sample, which was also detected in any associated blank, must be qualified when the sample concentration is less than or equal to five times the blank concentration (5x Rule). For the following five analytes (common volatile laboratory contaminants), the results are qualified by elevating the limit of detection when the sample concentration is less than or equal to 10 times the blank concentration (10x Rule).
 - a. Methylene chloride
 - b. Acetone
 - c. 2-butanone
 - d. Cyclohexane
 - e. Common phthalate contaminants
4. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and greater than the detection limit, the result is flagged as nondetected (UB).
5. If the sample concentration is less than or equal to the corresponding 5x or 10x Rule and are less than the detection limit, the result is flagged as nondetected (UB) at the detection limit.
6. If the sample concentration is greater than the respective 5x or 10x Rule, the result is flagged with a B to indicate that the analyte was detected in the associated blank.

Action: The following sample results were qualified due to the evaluation of blanks:

Field ID	Lab ID	Blank ID	Associated Blank Type/Comment

Accuracy/Precision

Matrix Spike/Matrix Spike Duplicates:

As specified in the SAP & QAPP, MS/MSDs were not prepared and analyzed at the required frequency of one with each extraction batch for NWTPH-Gx and NWTPH-Dx. Methods NWTPH-Gx and NWTPH-Dx did not have a MS/MSD prepared and analyzed. Method 6010 had MS/MSDs prepared and analyzed at the required frequency as specified in the SAP & QAPP.

Criteria Used to Qualify Data Associated with MS/MSD:

1. Organics:
 - a. No action is taken on MS/MSD data alone to qualify an entire case. However, using informed professional judgment the data reviewer may use the MS/MSD results in conjunction with other QC criteria and determine the need for some qualification of the data.
2. Inorganics
 - a. Spike recovery must be within the limits of 75-125%. However, spike recovery limits do not apply when sample concentration exceeds the spike concentration by a factor of four or more.
 - b. If the spike recovery is >125% and the reported sample results are < MDL, the data is acceptable for use.
 - c. If the spike recovery is >125% or <75% and the sample results are > MDL, qualify the data for these samples as estimated (J).
 - d. If the spike recovery falls within the range of 30-74% and the sample results are < MDL, qualify the data for these samples as estimated (UJ).
 - e. If spike recovery results fall <30% and the sample results are < MDL, qualify the data for these samples as unusable (R).

Action: The following sample results exceeded control limits for the MS/MSD and were qualified based on the criteria above:

Accuracy

Laboratory Control Samples/Laboratory Control Sample Duplicates:

As specified in the SAP & QAPP, LCS/LCSDs were not prepared and analyzed at the required frequency of one per 20 samples for method 6010, and one per extraction batch for NWTPH-Gx and NWTPH-Dx.

Criteria Used to Qualify Data Associated with LCS/LCSD:

1. Organics

- a. If the LCS recovery is > than the upper control limit, then positive sample results for the affected analytes should be qualified as estimated (J).
- b. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated detected analytes should be qualified as estimated (J).
- c. If more than half of the analytes in the LCS are not within the required recovery criteria, then all of the associated nondetected analytes should be qualified as unusable (R). This criterion only applies if at least 10 analytes were analyzed in the LCS. If less than 10 analytes were analyzed in the LCS, then the associated

nondetected analytes should be qualified as estimated (J).

2. Inorganics

a. Aqueous LCS:

- i. All aqueous LCS percent recoveries must fall within the control limits of 80-120%, except for Sb and Ag which have no fixed control limits.
- ii. If the LCS recovery for any analyte falls within the range of 50-79% or >120%, qualify results > MDL as estimated (J).
- iii. If results are < MDL and the LCS recovery >120%, the data are acceptable.
- iv. If results are < MDL and the LCS recovery falls within the range of 50-79%, qualify the data for the affected analytes as estimated (UJ).
- v. If LCS recovery results are <50%, qualify results > MDL as estimated (J).
- vi. If LCS recovery results are <50%, qualify results < MDL as unusable(R).
- vii. If LCS recovery results are >150%, qualify all results (both detects and nondetected) as unusable (R).

b. Solid LCS:

- i. If the LCS results are greater than the control limits and the sample results are > MDL, qualify the data as estimated (J).
- ii. If the LCS results are greater than the control limits and the sample results are < MDL, the data are acceptable.
- iii. If the LCS results are less than the control limits, qualify all sample results > MDL as estimated (J).
- iv. If the LCS results are lower than the control limits, qualify all samples results < MDL as estimated (UJ).

Action: The following sample results exceeded control limits for the LCS/LCSD and were qualified based on the criteria above:

Associated Field ID	Associated Lab ID	Quality Control Sample	Analyte	% Rec LCS/LCSD	QC Limit	RPD	Max RPD	Bias	Comment
SUP_SL_60_0-1_111511 SUP_SL_60_1-2_111511 SUP_SL_60_2-4_111511 SUP_SL_60_4-6_111511 SUP_SL_60_6-8_111511 SUP_SL_60_8-10_111511 SUP_SL_60_10-12_111511	2510017001 2510017002 2510017003 2510017004 2510017005 2510017006 2510017007	94293	Gasoline Range Organics	105	61-98			High	Qualified based on criteria 1a and 1c.

Comparability

Field Duplicates:

As specified in the SAP & QAPP, field duplicates were prepared and analyzed at the required frequency. Sample SUP_SL_63_4-6_111511_D (2510017029), sample SUP_SL_65_8-10_111511_D (2510017043), sample SUP_SL_67_2-4_111511_D (2510017057), and sample SUP_SL_68_1-2_111511_D (2510017064) were collected as field duplicates.

Criteria Used to Qualify Data Associated with Field Duplicates

1. Compare the results reported for each sample and calculate the relative percent difference (RPD). No data will be qualified based solely on field duplicate precision.
2. Aqueous Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 35%.
3. Solid Field Duplicates:
 - a. Field duplicate precision will be screened against a RPD of 50%.

Action: The following sample results were observed. No action was taken based on the evaluation of field duplicates.

Sample Quantitation/Compound Identification:

A Level IV review was not performed on this group of samples.

Additional Comments:

On the chain-of-custody sample SUP_SL_65_2-4_111511 (2510017046) was mislabeled. The lab corrected the field ID to SUP_SL_66_2-4_111511. Additionally on the chain-of-custody it was requested to run the trip blanks (Trip Blank #1 [2510017030] and Trip Blank 2 [2510017050]) for method NWTPH-Gx, NWTPH-Dx and 6010, however only NWTPH-Gx was run per the SAP & QAPP. No other discrepancies were noted concerning sample receipt or delivery. The samples arrived in good condition, preserved correctly, and were on ice. Cooler custody seals were not used. The temperature of the delivery coolers were recorded at 7.0 and 8.8 °C and exceeded the required temperature range. Since the samples were delivered on ice the same day of collection no samples were qualified based on cooler temperature. No samples were qualified based on sample collection (e.g., correct containers, sufficient volume, correct preservation, filtering conducted, no headspace in vials) or condition (e.g. containers intact, preserved correctly).

Due to high recoveries in the surrogates, the detected results for gasoline range organics were flagged as estimated (J) and nondetected results were not flagged in samples SUP_SL_60_0-1_111511 (2510017001), SUP_SL_60_1-2_111511 (2510017002), SUP_SL_60_2-4_111511 (2510017003), SUP_SL_60_4-6_111511 (2510017004), SUP_SL_61_1-2_111511 (2510017009), SUP_SL_61_2-4_111511 (2510017010), SUP_SL_61_4-6_111511 (2510017011), SUP_SL_62_0-1_111511 (2510017015), SUP_SL_64_1-2_111511 (2510017032), SUP_SL_64_4-6_111511 (2510017034), SUP_SL_65_1-2_111511 (2510017038), and SUP_SL_66_1-2_111511 (2510017045). The lab confirmed the matrix interference with re-analysis but did not re-extract the sample.

Due to high recoveries in the surrogates, the detected results for gasoline range organics were flagged as estimated (J) in samples SUP_SL_68_2-4_111511 (2510017060) and SUP_SL_68_1-2_111511_D (2510017064). The lab did not confirm the matrix interference with re-analysis.

Overall Assessment:

Data reported by the laboratory for the Remedial Investigation sampling event were evaluated to determine usability for project purposes. Based on this review:

- One hundred thirty-seven (137) sample results were qualified (see Attachment 1).
- Forty-nine detected sample results were qualified as estimated (J) due to LCS/LCSD recoveries that exceeded control limits, surrogate recoveries that exceeded control limits, or MS/MSD recoveries that exceeded control limits.
- Twenty-nine nondetected sample results were qualified as estimated (UJ) due to LCS/LCSD recoveries that exceeded control limits.
- Fifty-seven detected sample results were qualified (B) and two detected sample results were qualified as nondetected (UB) due to method blank contamination.

Sample results reported by the laboratory were determined to be usable for project purposes, taking into account the qualifiers applied and the limitations of the data as described in the SAP & QAPP.
