PROJECT: Groundwater Sampling at 1<sup>st</sup> and K Street  
Cheney, WA

SUBJECT: September 2017 Monitoring Results

Dear Geshke,

Per your request, we sampled the East Excavation and MW-53 on the lot on the corner of 1<sup>st</sup> Street and K Street in Cheney, Washington. Petroleum-based hydrocarbon contamination was identified due to Underground Storage Tank leakage from a previous maintenance facility on the property. We understand that you intend to construct a parking lot on the site for an apartment complex proposed for the property to the west.

Following discussions with the Washington State Department of Ecology (Ted Uecker, VCP Coordinator), we obtained samples from these two wells for chemical analysis. The results are intended for submittal to WSDOE under the Voluntary Cleanup Program.

We sampled the two locations on September 7, 2017. We purged the well of at least three times its volume and monitored field parameters until stabilized. The water samples were placed in containers provided by the laboratory and transported under a chain of custody. We requested that Antatek Labs in Spokane, WA analyze the samples for diesel and heavy oil range petroleum hydrocarbons, along with Volatile Organic Compounds (VOC), and heavy metals (filtered and unfiltered) and discussed with Mr. Uecker.

- Diesel and heavy oil range petroleum hydrocarbons were not detected.
- Arsenic was detected in the East Excavation at a low concentration of 3.32 ppb total, and 2.77 ppb dissolved. This concentration is slightly lower than previous sampling events and is below the MTCA Method A Cleanup Levels. Other metals were also detected at low concentrations that did not exceed MTCA Method A Cleanup Levels. Trace concentrations of two VOC's were detected: sec-Butylbenzene was detected at 0.66 ppb and acetone was detected a 2.96 ppb. There are not designated cleanup levels for these two VOC's.
- Total Mercury was not detected above detection limits in the MW-53 sample. Dissolved mercury was detected at 0.00237 ppb; well below the 2.0 ppb regulatory limit for

mercury. The VOC chloromethane was detected at a trace concentration of 0.68 ppb. There is not a designated cleanup level for this VOC.

Based on these test results, and the results of previous chemical analysis, we conclude that the water table at the site is no longer significantly contaminated. We recommend capping the site with a parking lot as planned and properly sealing and decommissioning the monitoring wells. We conclude that additional remediation and further monitoring are no longer warranted.

We also located MW 45 in the visitor center parking lot to the south. The casing was offset and partially filled with soil. It was not sampled due to being filled. We recommend that the well be properly sealed and decommissioned.

A site plan, laboratory summary, laboratory reports, QA/QC data and chain of custody are provided as attachments to this report.

Please do not hesitate to call should you have any questions or would like further assistance.

Respectfully Submitted:

**SAMPLE CONDITION RECORD**

Samples received in a cooler?	Yes
Samples received intact?	Yes
What is the temperature of the sample(s)? (°C)	12.2
Samples received with a COC?	Yes
Samples received within holding time?	Yes
Are all sample bottles properly preserved?	Yes
Are VOC samples free of headspace?	Yes
Is there a trip blank to accompany VOC samples?	N/A
Labels and chain agree?	Yes

### SAMPLE CONDITION RECORD

---

Samples received in a cooler?	Yes
Samples received intact?	Yes
What is the temperature of the sample(s)? (°C)	7.3
Samples received with a COC?	Yes
Samples received within holding time?	Yes
Are all sample bottles properly preserved?	Yes
Are VOC samples free of headspace?	Yes
Is there a trip blank to accompany VOC samples?	Yes
Labels and chain agree?	Yes
