

9th Avenue Sewer Upgrade Environmental Investigation Summary

PREPARED FOR: Roger Beierle
PREPARED BY: Mario Lopez/CH2M HILL
Rachel Chang/CH2M HILL
DATE: May 19, 2008
PROJECT NUMBER: 350429.AU.18.03.02

Purpose and Background

This technical memorandum presents the results of the environmental investigation conducted by CH2M HILL in support of the proposed sewer upgrade located along the 9th Avenue corridor between Republican Street and Aloha Street in the South Lake Union area of Seattle, Washington. The objective of this environmental investigation was to evaluate whether there are areas of soil and groundwater contamination present within the proposed sewer alignment that have constituents that exceed cleanup criteria provided in the Washington State Model Toxics Control Act (MTCA) regulations, and to assist in the planning for management of potentially contaminated soil and/or groundwater during sewer upgrade activities.

This investigation was conducted in conjunction with the geotechnical investigation. The general project location is shown on Figure 1. A total of four borings were drilled as part of the overall investigation and environmental samples were collected from three of the four borings to evaluate whether contamination exceeding the MTCA cleanup levels (CUL) are present in the soil and groundwater.

Previous Investigations

In 1998 a Phase II investigation was conducted by Black & Veatch. The purpose of the investigation was to identify the presence or absence of contaminated soil and groundwater along Denny Way/Lake Union Combined Sewer Overflow (CSO). In that investigation, a total of 24 soil samples were collected from soil borings in the South Lake Union area along Valley Street and 8th Avenue North. Seventeen groundwater samples were also collected and submitted for analytical testing. All soil and groundwater samples were analysed for TPH using WTPH-HCID. Of all the soil samples collected, BB-14, located near the ConocoPhillip site contained heavy oil-range TPH above screening levels. Analytical results for groundwater indicated that volatile organic compounds (VOC) including Vinyl Chloride, 1,2-Dichlorethane, Trichloroethene (TCE) were detected at levels above MTCA Method A cleanup levels from wells BB-8, BB-12, and BB-13. These samples are located on Valley Street between 8th Avenue North and Westlake Avenue North.

Between 2006 and 2008, CH2M HILL conducted the following studies as part of the Phase III Mercer Corridor Improvements Project

- Hazardous Material Discipline Report (HMDR) (CH2M HILL, 2006)
- Phase I Environmental Site Assessments (ESA) (CH2M HILL, January 2008)
- Transaction Screening Reports (CH2M HILL, February 2008)
- Phase II Environmental Site Assessments (ESAs) (CH2M HILL, May 2008).

Based on the findings of the HMDR and the Phase I ESAs, soil and groundwater in the vicinity of the 9th Avenue is believed to be potentially impacted by total petroleum hydrocarbons (TPH) and VOCs. Possible sources of the TPH include historical releases from past site use as retail gas station, automotive dealership and maintenance and repair facility, and dry cleaner.

As part of the Phase II ESA conducted in February 2008 for the Phase III Mercer Corridor Improvement Project, soil and groundwater samples were collected from 800 Mercer Street, the property located west of 9th Avenue between Roy Street and Mercer. The soil samples were analyzed for TPH (gasoline-, diesel- and oil-range hydrocarbons including BTEX) and total metals. In addition, two samples (P24-B3-6.0-8.0 and P24-B3-21.0-23.0) were analyzed for VOCs and semi-volatile organic compounds (SVOCs). Petroleum hydrocarbons, metals, VOCs and SVOCs were either not detected or detected below cleanup levels.

Two groundwater samples and a duplicate sample collected at 800 Mercer Street were analyzed for TPH (gasoline-, diesel- and oil-range hydrocarbons including BTEX), total metals, and VOCs. Petroleum hydrocarbons, metals, and VOCs were either not detected or detected below cleanup levels with the following exception: at P24-B2, tetrachloroethene (PCE) was detected at 4.1 µg/L and TCE was detected at 0.8 µg/L, above the MTCA Method B cleanup level for PCE (0.081 µg/L) and TCE (0.11 µg/L).

Field Sampling and Analysis

During the week of April 14 through 18, 2008, soil borings were advanced at four locations (CHB-07 through CHB-10) along 9th Avenue between just north of Aloha Street and Republican Street (Figure 2). A total of five soil and three groundwater samples were collected at three boring locations (CHB-07, CHB-08, and CHB-09). Samples were not collected from CHB-10 because the potential for encountering contamination is considered to be lower the other three boring locations. Samples were obtained from soil cores using hollow stem auger sampling methods provided by Gregory Drilling located in Redmond, Washington.

Soil samples were collected and screened with a PID and X-Wand. The sample with the highest PID readings or other evidence of contamination (such as odors or staining) from each boring was analyzed for petroleum hydrocarbons using NWTPH-Gx and NWTPH-Dx, and for VOCs. If no PID readings above background were observed, one sample was collected from just below ground surface (~ 2-5 ft bgs) and a second soil sample was collected just above the water table. Table 1 shows the soil sample locations, their depths and analytical information collected at each interval. One groundwater sample was

collected from each boring location and analyzed for petroleum hydrocarbons using NWTPH-Gx and NWTPH-Dx, and for VOCs.

TABLE 1
Soil Sampling and Analytical Summary

Soil Boring	Location along 9 th Avenue	Depth Interval (feet)	Sample Date	NWTPH-Gx	NWTPH-Dx Extended	VOCs
CHB-07	North of Aloha (between Ward Street and Aloha)	5.0-7.0	April 14, 2008	X	X	
CHB-07	North of Aloha (between Ward Street and Aloha)	12.5-13..5	April 14, 2008	X	X	X
CHB-08	Between Aloha and Roy Street	15.0-16.0	April 15, 2008	X	X	X
CHB-09	Between Roy Street and Mercer Street	20-21.5	April 16, 2008	X	X	
CHB-09	Between Roy Street and Mercer Street	25.0-26.5	April 16, 2008	X	X	X

Notes:

NWTPH-Gx = Gasoline-ranged total petroleum hydrocarbons; NWTPH-Gx = Gasoline-ranged total petroleum hydrocarbons; NWTPH-Dx extended = Diesel and oil ranged TPH; VOC = volatile organic compound

Laboratory Analysis and QA/QC Review

All soil and groundwater samples were extracted and analyzed by Analytical Resources Inc. (ARI) (Tukwila, WA). The laboratory quality assurance quality control (QA/QC) measures performed by the laboratory included method blank and lab control blank. All QA/QC parameters for the data were within their respective laboratory-established control limits.

The sample results for all analyses are considered appropriate for their intended use. The analytical data reports are included as Attachment 1.

Sample Results

The detected analytes and their concentrations are presented in Tables 2 and 3. The results are compared to Model Toxics Control Act (MTCA) Methods A and B Cleanup Levels (CULs) for Unrestricted Land Uses.

Significant findings are as follows:

- Detected soil analytes include diesel- and oil- range TPH, benzene, and chlorinated compounds such as cis-1,2-Dichloroethene, trans-1,2-Dichlorethene, and Vinyl Chloride. However, all the results were well below MTCA Method A and B cleanup levels.
- At boring locations CHB-07 and CHB-08, detected groundwater analytes include diesel and oil-range TPH, Benzene, Toluene, and chlorinated compounds such as 1,1-

Dichlorethane, 1,1-Dichloroethene, Tetrachloroethene (PCE), cis-1,2-Dichloroethene, trans-1,2-Dichlorethane, and Vinyl Chloride.

- At CHB-07, MTCA Method B CULs for groundwater were exceeded for cis-1,2-Dichloroethene (480 µg/L), and Vinyl Chloride (220 µg/L). The MTCA Method B CULs are 0.073, 80, and 0.029 µg/L respectively. MTCA Method A CUL was also exceeded for Vinyl Chloride. MTCA Method B CUL is 0.029 µg/L.
- At CHB-09, MTCA Method B CUL for groundwater was exceeded for tetrachloroethene (0.2 µg/L). The detection concentration for oil-range TPH was 1,400 µg/L which exceeded MTCA Method A CUL of 500 µg/L.

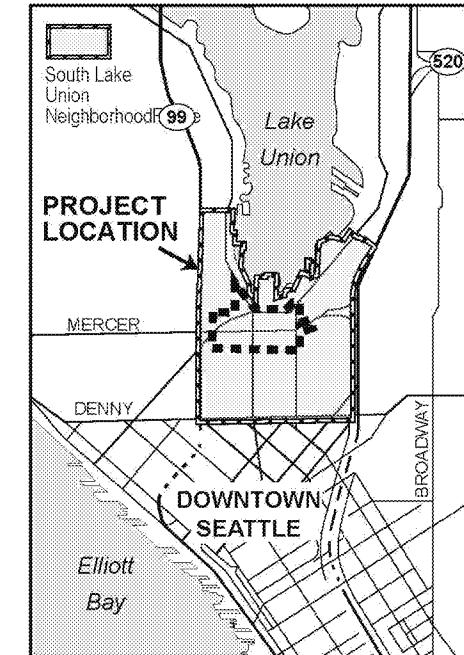

Conclusion and Recommendations

Based on findings from previous and current investigations, groundwater contaminated with VOCs and petroleum hydrocarbons is likely to be present along 9th Avenue between Ward Street and Aloha Street (as represented by CHB-07), and between Valley and Mercer Street (as represented by CHB-09). Groundwater results for CHB-07 shows exceedance of the MTCA CULs for Vinyl Chloride and cis-1,2-Dichloroethene with concentrations of 220 µg/L and 480 µg/L respectively. Groundwater results for CHB-09 showed exceedances for PCE and petroleum hydrocarbons in the Motor Oil range with a concentration of 0.2 µg/L and 1,400 µg/L respectively. The presence of these contaminants is likely due to off-site transport of contaminated groundwater from upgradient sources such as leaking underground storage tanks, automotive maintenance facilities and dry cleaners.

During construction activities, groundwater generated at these locations will need to be treated and disposed in accordance with applicable federal, state, and local regulations. The potential to alter groundwater pathways resulting in the spread of existing contaminants into previously uncontaminated areas will also need to be carefully evaluated and avoided.

ARI Job No: MS22

Dear Ms. Chang:

Please find enclosed sample custody records and final results for samples from the project referenced above. Analytical Resources, Inc accepted soil and water samples and a trip blank on April 14, 2008.

The samples were analyzed for NWTPH-Dx, NWTPH-Gx by WDOE methods, and Volatile Organics by EPA 8260B, as requested.

There were no anomalies associated with these samples.

Copies of the reports will be kept on file at ARI. If you have any questions or require additional information, please contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Project Name: 9th Ave Sewer Upgrade
Delivered by: Hand
Tracking No: _____

Preliminary Examination Phase:

- Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES NO
Were custody papers included with the cooler? YES NO
Were custody papers properly filled out (ink, signed, etc.) YES NO
Record cooler temperature (recommended 2.0-6.0 °C for chemistry) 9.4 °C

Cooler Accepted by: JL Date: 4/14/02 Time: 1650

Complete custody forms and attach all shipping documents

Log-In Phase:

- Was a temperature blank included in the cooler? YES NO
What kind of packing material was used? YES NO
Was sufficient ice used (if appropriate)? YES NO
Were all bottles sealed in individual plastic bags? YES NO
Did all bottle arrive in good condition (unbroken)? YES NO
Were all bottle labels complete and legible? YES NO
Did all bottle labels and tags agree with custody papers? YES NO
Were all bottles used correct for the requested analyses? YES NO
Do any of the analyses (bottles) require preservation? (attach preservation checklist) YES NO
Were all VOC vials free of air bubbles? NA YES NO
Was sufficient amount of sample sent in each bottle? YES NO

Samples Logged by: JL Date: 4/14/02 Time: 1700

April 15, 2008

Ms. Rachel Chang
CH2M Hill
1100 112th Avenue NE, Suite 400
Bellevue, WA 98004-4504

Client Project: 350429 / 9th Avenue SU project
ARI Job No: MS40

Dear Ms. Chang:

Please find enclosed sample custody records and final results for samples from the project referenced above. Analytical Resources, Inc accepted soil and water samples and a trip blank on April 15, 2008.

The samples were analyzed for NWTPH-Dx, NWTPH-Gx by WDOE methods, and Volatile Organics by EPA 8260B, as requested.

There were no anomalies associated with these samples.

Copies of the reports will be kept on file at ARI. If you have any questions or require additional information, please contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

A handwritten signature in black ink.

Limits of Liability: ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, successors, or assigns, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or signed agreement between ARI and the Client.

Sample Retention Policy: All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

Cooler Receipt Form

ARI Client: Cham Hill
COC No: _____
Assigned ARI Job No: M540

Project Name: 97th Avenue SV Project
Delivered by: Hand-delivered
Tracking No: _____

Preliminary Examination Phase:

- Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES NO
Were custody papers included with the cooler? YES NO
Were custody papers properly filled out (ink, signed, etc.) YES NO
Record cooler temperature (recommended 2.0-6.0 °C for chemistry) 4.0 °C

Cooler Accepted by: anl Date: 4/15/08 Time: 1521

Complete custody forms and attach all shipping documents

Log-In Phase:

- Was a temperature blank included in the cooler? YES NO
What kind of packing material was used? YES NO ICE
Was sufficient ice used (if appropriate)? YES NO
Were all bottles sealed in individual plastic bags? YES NO
Did all bottle arrive in good condition (unbroken)? YES NO
Were all bottle labels complete and legible? YES NO
Did all bottle labels and tags agree with custody papers? YES NO
Were all bottles used correct for the requested analyses? YES NO
Do any of the analyses (bottles) require preservation? (attach preservation checklist) YES NO
Were all VOC vials free of air bubbles? NA YES NO
Was sufficient amount of sample sent in each bottle? YES NO

Samples Logged by: anl Date: 4/15/08 Time: 1750

**** Notify Project Manager of discrepancies or concerns ****

Explain discrepancies or negative responses:

*Two trip blanks provided, not included

1100 112th Avenue NE, Suite 400
Bellevue, WA 98004-4504

Client Project: 350429 / 9th Avenue SU project
ARI Job No: MS68

Dear Ms. Chang:

Please find enclosed sample custody records and final results for samples from the project referenced above. Analytical Resources, Inc accepted soil and water samples and a trip blank on April 16, 2008.

The samples were analyzed for NWTPH-Dx, NWTPH-Gx by WDOE methods, and Volatile Organics by EPA 8260B, as requested.

The surrogate o-Terphenyl is out of control low for sample IDW-0809-041608 due to matrix effects for the NWTPH-Dx. All other QC is in control.

There were no other anomalies associated with these samples.

Copies of the reports will be kept on file at ARI. If you have any questions or require additional information, please contact me at your convenience.

Sincerely,

ANALYTICAL RESOURCES, INC.

Limits of Liability: ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

Sample Retention Policy: All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

Analytical Chemists and Consultants

Cooler Receipt Form

ARI Client: CH2M Hill

COC No: _____

Assigned ARI Job No: MS 68

Project Name: 9th Avenue SC Project

Delivered by: Hand

Tracking No: _____

Preliminary Examination Phase:

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES NO

Were custody papers included with the cooler? YES NO

Were custody papers properly filled out (ink, signed, etc.) YES NO

Record cooler temperature (recommended 2.0-6.0 °C for chemistry) 5.6 °C

Cooler Accepted by: JL Date: 4/16/08 Time: 1532

Complete custody forms and attach all shipping documents

Log-In Phase:

Was a temperature blank included in the cooler? YES NO

What kind of packing material was used? YES NO

Was sufficient ice used (if appropriate)? YES NO

Were all bottles sealed in individual plastic bags? YES NO

Did all bottle arrive in good condition (unbroken)? YES NO

Were all bottle labels complete and legible? YES NO

Did all bottle labels and tags agree with custody papers? YES NO

Were all bottles used correct for the requested analyses? YES NO

Do any of the analyses (bottles) require preservation? (attach preservation checklist) YES NO

Were all VOC vials free of air bubbles? NA YES NO

Was sufficient amount of sample sent in each bottle? YES NO

Samples Logged by: arl Date: 4/16/08 Time: 1600

**** Notify Project Manager of discrepancies or concerns ****

Explain discrepancies or negative responses:

See COC for. von discrepancy.

Gasoline values reported in mg/kg (ppm)

Quantitation on total peaks in the gasoline range from Toluene to Naphthalene.

GAS: Indicates the presence of gasoline or weathered gasoline.

GRO: Positive result that does not match an identifiable gasoline pattern.

Results corrected for soil moisture content per Section 11.10.5 of EPA Method 8000C.

Reported in mg/L (ppm)

EFV-Effective Final Volume in mL.

DL-Dilution of extract prior to analysis.

RL-Reporting limit.

Diesel quantitation on total peaks in the range from C12 to C24.
 Motor Oil quantitation on total peaks in the range from C24 to C38.
 HC ID: DRO/RRO indicates results of organics or additional hydrocarbons in
 ranges are not identifiable.
