F. Description of Release(s) at the Site.

Source of Release(s).

What are the source(s) of the release(s) at the Site? Please check all that apply.

- ☒ Non-point source (e.g., contaminated soil used as fill)
- ☐ Area-wide lead and arsenic soil contamination (see questions below)
- ☐ Other – please specify: _____
- ☒ Unknown

To the extent known, please describe the source(s) of the release(s):

Direct sources of release or contaminated material are historic and unconfirmed.

Based on assessments and limited knowledge of site historical use, affected soils identified only at shallow levels and variable by location are interpreted to be a result of past site-wide activities.

Sources may have included incidental petroleum leakage from containers or machines, discarded metal refuse and shavings, leaching of stored equipment or materials related to railroad use.

No point sources are known, and no acute areas of contamination were identified by the 2017 Phase 2 ESA.

Attach additional pages if necessary.

Circumstances of Release(s). To the extent known, please describe below the circumstances of the release(s).

Actual circumstances are unknown, likely many small events over historic use.

Suspected to be related to long-term use of site as a storage, loading, and staging area for railway shipping by timber company.

Attach additional pages if necessary.

Circumstances of Release Discovery. To the extent known, please describe below the circumstances of the discovery of the release(s).

Initial knowledge of potential for on-site contamination is unknown.

First confirmation of affected conditions in 2012 by previous consultant via test pit excavations and initial sampling. Results exceeding MTCA Method A levels reported informally to DoE. IRA in 2012 removed and disposed suspected affected soils from areas of highest discovered concentration.

Other areas not remediated. 2017 P2 ESA found remnant affected soils outside of prior IRA area.

Attach additional pages if necessary.
