PERIODIC REVIEW

Costco Wholesale 670
Facility Site ID#: 82832887
Cleanup Site ID#: 1073

5601 East Sprague Avenue
Spokane Valley, Washington 99212

Eastern Regional Office
TOXICS CLEANUP PROGRAM
April 2012
1.0 INTRODUCTION

This document is a review by the Washington State Department of Ecology (Ecology) of post-
cleanup site conditions and monitoring data to ensure that human health and the environment are
being protected at the Costco Wholesale 670 site (Site). Cleanup at this Site was implemented
under the Model Toxics Control Act (MTCA) regulations, Chapter 173-340 Washington
Administrative Code (WAC).

Cleanup activities at this Site were conducted under the Voluntary Cleanup Program. The
cleanup actions resulted in concentrations of total petroleum hydrocarbons (TPH), polynuclear
aromatic hydrocarbons (PAHs), lead, cadmium, zinc and mercury in soil exceeding MTCA
Method A cleanup levels remaining at the Site. The MTCA Method A cleanup levels for soil are
established under WAC 173-340-740(2). The MTCA rule also requires that Ecology conduct a
periodic review of a site every five years under the following conditions:

- Whenever the department conducts a cleanup action.
- Whenever the department approves a cleanup action under an order, agreed order or
  consent decree.
- Or, as resources permit, whenever the department issues a no further action opinion
- And one of the following conditions exists:

  (a) Institutional controls or financial assurance are required as part of the cleanup.
  (b) Where the cleanup level is based on a practical quantitation limit.
  (c) Where, in the department’s judgment, modifications to the default equations or
      assumptions using site-specific information would significantly increase the
      concentration of hazardous substances remaining at the site after cleanup or the
      uncertainty in the ecological evaluation or the reliability of the cleanup action is
      such that additional review is necessary to assure long-term protection of human
      health and the environment.

When evaluating whether human health and the environment are being protected, the factors the
department shall consider include [WAC 173-340-420(4)]:

- The effectiveness of ongoing or completed cleanup actions, including the effectiveness of
  engineered controls and institutional controls in limiting exposure to hazardous
  substances remaining at the Site.
- New scientific information for individual hazardous substances of mixtures present at the
  Site.
- New applicable state and federal laws for hazardous substances present at the Site.
- Current and projected Site use.
- Availability and practicability of higher preference technologies.
- The availability of improved analytical techniques to evaluate compliance with cleanup
  levels.

The department shall publish a notice of all periodic reviews in the Site Register and provide an
opportunity for public comment.
2.0 SUMMARY OF SITE CONDITIONS

2.1 Site History

The Costco Wholesale Site is located at 5601 East Sprague Avenue within the incorporated city limits of Spokane Valley, Washington. The Site is bordered by railroad tracks to the north, vacant former railroad property to the west, commercial property to the east, and commercial property and Sprague Avenue to the south.

Historically, the Site consisted of two parcels. Records from 1912 indicate the northern portion of the Site was owned by the Chicago-Milwaukee and Puget Sound Railroad and the Oregon-Washington Railroad. A rail line transected the southern portion of the Site, near the current southern Site boundary. The Site remained undeveloped until the early 1950s, when the Site was developed into a switchyard and rail yard. By the early 1960s, a roundhouse had been constructed adjacent to the west property boundary, and railroad-related shops were located on the Site, including a shop, a carpenter's shop, coal and ice buildings, a tank, and several other structures. By the early 1970s these buildings had been removed and the entire main portion of the Site was used for switching and siding of railcars. By the late 1980s to early 1990s, most of the railroad tracks had been removed from the Site. The eastern portion of the Site was owned by the Federal Match Company form about 1930 until about 1957. Following this period, these lots were occupied by a construction company, a utility trailer service company, and a bottled gas company. In the mid-1990s most of the buildings had been demolished. By the late 1990s, the Site was owned by Home Depot and a paved access driveway and stormwater runoff swale was constructed across the northern portion of the Site. The property was purchased by Costco in 2000 and a 147,000 square foot wholesale store and gasoline retail facility are now located on the 17-acre property.

Depth to groundwater at the Site is estimated to be greater than 50 feet. Groundwater flow is projected to be to the west.

A vicinity map is available as Appendix 6.1 and a Site plan is available as Appendix 6.2.

2.2 Cleanup Levels

WAC 173-340-704 states that MTCA Method A may be used to establish cleanup levels at sites that have few hazardous substances, are undergoing a routine cleanup action, and where numerical standards are available for all indicator hazardous substances in the media for which the Method A cleanup level is being used.

MTCA Method A cleanup levels for unrestricted land use were determined to be appropriate for this Site. The cleanup actions conducted at the Site were determined to be ‘routine’, few hazardous substances were found at the Site, and numerical standards were available in the MTCA Method A table for each hazardous substance.
2.3 Previous Home Depot Site Investigations and Remedial Actions

In 1995, Home Depot conducted Phase I and Phase II environmental assessments of the main portion of the Site (rail yard), which included soil and groundwater sampling. In addition, the former Site owner (Union Pacific Railroad) performed supplemental soil and groundwater sampling. Results of these investigations indicated that soil contained concentrations of lead, cadmium, mercury, zinc, and TPH above MTCA Method A cleanup levels. Groundwater sampling indicated the presence of lead at concentrations exceeding the MTCA Method A cleanup level.

Following the investigation, approximately 36,000 cubic yards of contaminated soil were removed from the property. In addition, approximately 1,900 cubic yards of soil were placed into engineered containment cells located under the Home Depot parking lot. In 1999, Home Depot was granted a no further action status from Ecology.

2.4 Costco Site Investigations and Remedial Actions

In 2000, Costco conducted a Phase I and II assessment of their property. The assessments included soil sampling, drilling two borings, and excavating more than 40 test pits. Analytical results indicated that near surface soil at various locations (TP-18, TP-40, TP-41, SS-4, SS-7, SS-8 and SS-10) in the southwest corner of the Site were impacted with metals (lead, cadmium, zinc and mercury), TPH, and PAHs at concentrations exceeding cleanup levels. Samples collected at depth (up to 3 feet below ground surface [bgs]) from SS-7 and TP-40 were below cleanup levels. Results also indicated that the central-eastern portion of the Site (TP-17, TP-36, and TP-39) and the central and western portions of the Site (TP-4 and TP-32) were impacted with lead, PAHs and TPH at concentrations exceeding cleanup levels. These areas appeared to be associated with in-place railroad ballast material present at the Site. Analytical data is available as Appendix 6.3. In addition, approximately 1,000 cubic yards of stockpiled soil and debris in three stockpiles contained concentrations of lead, cadmium, zinc and TPH at concentrations exceeding cleanup levels.

Remedial activities were conducted between August 1 and 15, 2000 and consisted of removal and temporary stockpiling of the impacted ballast material and contaminated soil. Activities also included final placement of ballast and soil into on-site containment cells. The previous owner (Home Depot) removed the 1,000 cubic yards of stockpiled soil and debris from the Site.

Approximately 5,000 cubic yards of impacted ballast were removed from the central portion of the Site and temporarily stockpiled in the southwest portion of the Site. The impacted ballast was removed to a depth of about 1-foot bgs using road graders. The impacted ballast was temporarily stockpiled over contaminated soil areas. The stockpiled impacted ballast, underlying contaminated soil, and the contaminated soil located on Lots 22 and 23 were excavated and transferred to containment areas.

The impacted soil and ballast material were consolidated in two containment cells. Each containment area was excavated to a depth of 6 feet below grade. About 1 foot of non-
contaminated soil was placed and compacted over each cell. The entire containment area was then capped with 6 inches of compacted base coarse gravel and 4 inches of continuous asphalt concrete pavement.

According to the Independent Remedial Action Report, Costco is required to conduct annual monitoring of the asphalt cap. Activities should include physical inspection and annual documentation of the integrity of the cap and repairs to the surface, as needed. In addition, a restrictive covenant will be placed on the property.

Confirmation samples were collected following removal of the impacted ballast and contaminated soil. Twenty-three soil samples were collected from the soil that was exposed following excavation of the impacted ballast (CS-1 through CS-23). All samples were analyzed for lead; samples CS-1, CS-2, CS-11, CS-22 and CS-23 were also analyzed for diesel and oil-range hydrocarbons and PAHs. Sample CS-11 was also analyzed for gasoline range hydrocarbons. Results indicated that impacted ballast was removed and that all contaminant concentrations were below cleanup levels.

Eleven soil samples were collected from the soil that was exposed after excavation of the contaminated soil located in the southwest portion of the Site (CS-A through CS-H) and Lots 22 and 23 (CS-I, CS-J and CS-J2). Samples CS-A through CS-H were analyzed for cadmium and lead, mercury, diesel and oil-range hydrocarbons and PAHs. Samples from Lots 22 and 23 were analyzed for lead. All results were non-detect or below cleanup levels, with the exception of sample CS-J, which had a lead concentration of 513 milligrams per kilogram. An additional 2 feet of soil was removed from this area and was then resampled (CS-J2). Results were below cleanup levels.

2.5 Institutional Controls

It was determined that the Site would be eligible for a no further action determination with the implementation of institutional controls in the form of a restrictive covenant. A restrictive covenant was recorded for the Site in 2006. The restrictive covenant imposes the following limitations:

1. Any activity on that portion of the Property that includes the two (2) encapsulation areas depicted in the Report and on Exhibit A of the restrictive covenant attached hereto that might result in the release or exposure to the environment of the contaminated soil that was contained as part of the Remedial Action, or create a new exposure pathway, is prohibited. Examples of activities that are prohibited in the two (2) encapsulation areas include, without limitation, drilling, digging, placement of any objects or use of any equipment which deforms or stresses the surface beyond its load bearing capacity, piercing the surface with a rod, spike or similar item, and/or bulldozing or earthwork.

2. Any activity on the Property that may interfere with the integrity of the Remedial Action and continued protection of human health and the environment is prohibited.

3. Any activity on the Property that might result in the release or exposure to the environment of a hazardous substance that remains on the Property as part of the
Remedial Action, or creates a new exposure pathway, is prohibited without prior written approval from Ecology.

4. Owner must give thirty (30) days advance written notice to Ecology of Owner's intent to convey any interest in the Property. Owner shall not consummate any conveyance of title, easement, lease, or other interest in the Property without adequate and complete provision for continued monitoring, operation, and maintenance of the Remedial Action.

5. Owner must restrict leases to uses and activities consistent with the Restrictive Covenant and notify all lessees of the restrictions on the use of the Property.

6. Owner must notify and obtain approval from Ecology prior to any use of the Property that is inconsistent with the terms of this Restrictive Covenant. Ecology may approve any inconsistent use only after public notice and comment.

7. Owner shall allow authorized representatives of Ecology the right to enter the Property at reasonable times for the purpose of evaluating the Remedial Action, to take samples, to inspect remedial actions conducted at the Property, and to inspect records that are related to the Remedial Action.

8. Owner reserves the right under WAC 173-340-440 to record an instrument that provides that this Restrictive Covenant shall no longer limit use of the Property or be of any further force or effect. However, such an instrument may be recorded only if Ecology, after public notice and opportunity for comment, concurs.

The restrictive covenant is available as Appendix 6.4.
3.0 PERIODIC REVIEW

3.1 Effectiveness of completed cleanup actions

Based upon the Site visit conducted on September 10, 2011, the containment areas remain covered by asphalt. The asphalt is in excellent condition with only minor visible cracking. The asphalt appears well maintained and continues to provide an adequate barrier to direct exposure pathways (ingestion, contact) to the capped contaminated soils. Additionally, this cover prevents water infiltration which could increase the mobility of the contaminants to groundwater. The Site remains occupied by a Costco Wholesale store. All areas of the Site are accessible to the public. A photo log is available as Appendix 6.5.

The GeoEngineers Independent Remedial Action Report from 2001 states that Costco should complete annual monitoring of the asphalt cap. There is no evidence that this has been conducted; however, there are no conditions in the no further action letter from Ecology, or the recorded restrictive covenant that state annual monitoring of the asphalt cap is required. Site inspections conducted during periodic reviews every five years are sufficient to ensure that the remedy for the Site remains protective of human health and the environment.

The Restrictive Covenant for the Site was recorded with Spokane County and remains active. The Restrictive Covenant prohibits activities that may expose contaminated soils capped at the Site, and prohibits any use of the property that is inconsistent with the Covenant.

The remedial actions conducted at the Site continue to be effective at protecting human health and the environmental from the hazardous substances capped at the Site.

3.2 New scientific information for individual hazardous substances for mixtures present at the Site

There is no new relevant scientific information for the contaminants related to the Site.

3.3 New applicable state and federal laws for hazardous substances present at the Site

MTCA Method A cleanup levels have not changed for contaminants of concern at the Site since the no further action determination was issued in 2006.

3.4 Current and projected Site use

The Site is currently occupied by a Costco Wholesale store. There have been no changes in current or projected Site or resource uses.
3.5 Availability and practicability of more permanent remedies

The remedy implemented included containment of hazardous substances. Containment remains an effective remedy for the contamination remaining beneath Site structures. More permanent remedies are available; however, they are not practical for this Site.

3.6 Availability of improved analytical techniques to evaluate compliance with cleanup levels

The analytical methods used at the time of the remedial action were capable of detection below MTCA Method A cleanup levels. The presence of improved analytical techniques would not affect decisions or recommendations made for the Site.
4.0 CONCLUSIONS

- The remedial actions conducted at the Site appear to be protective of human health and the environment.

- MTCA Method A soil cleanup levels have not been met at the Site; however, under WAC 173-340-740(6) (f), the cleanup action is determined to comply with cleanup standards, since the long-term integrity of the containment system is ensured and the requirements for containment technologies have been met.

- A Restrictive Covenant is in place for the property and is effective in preserving the remedy and preventing exposure to contaminated soils capped at the Site.

Based on this periodic review, the Department of Ecology has determined that remedial actions conducted at the Site continue to be protective of human health or the environment. The requirements of the Restrictive Covenant are being satisfactorily met and no additional remedial actions are required. It is the property owner’s responsibility to continue to inspect the Site to ensure that the integrity of the remedial actions is maintained.

4.1 Next Review

The next review for the Site will be scheduled five years from the date of this periodic review. In the event that additional cleanup actions or institutional controls are required, the next periodic review will be scheduled five years from the completion of those activities.

Notes:
This table and copies of analytical laboratory certificates are included in Appendix A of this report.
1. Analysis performed by North Creek Analytical of Spokane, Washington.
3. PAHs analyzed by EPA Method 8100; PCBs analyzed by EPA Method 8081.
4. For brevity, individual analytes not shown. Refer to Appendix A for PAH and PCB concentrations.
5. Cleanup level as determined by Model Toxics Control Act (MTCA) Method B Methods.

mg/kg = milligrams per kilogram
Bold indicates exceedence of cleanup level

RESTRICTIVE COVENANT

COSTCO WHOLESALE STORE AND GASOLINE RETAIL FACILITY
5601 EAST SPRAGUE AVENUE, SPOKANE, WASHINGTON

This Restrictive Covenant is made pursuant to RCW 70.105D.030(1)(f) and (g) and WAC 173-140-440 by Costco Wholesale Corporation, its successors and assigns (collectively, "Costco").

Costco is the fee owner of the real property (the "Property") in the County of Spokane, State of Washington, which is subject to this Restrictive Covenant. The legal description of the Property is as follows:

"That portion of the SE ¼ Section 14, T.25 N., R.43 E., W.M., Spokane County, Washington, described as follows: Commencing at the southeast corner of said Section 14; thence N.00°00'08"W., along the east line of said Section 14, 794.09 feet; thence S.89°28'34"W., 1418.50 feet, to the true point of beginning of this description; thence continuing S.89°28'34"W., 899.82 feet; thence S.00°00'36"E., 500.00 feet; thence S.89°28'35"W., 321.00, foot to the centerline of said Section 14; thence S.00°00'36"E., along said centerline, 100.00 feet to the northwest corner of the Plat of Williams and Lute's Addition according to plat recorded in Volume 5 of Plats, page 13, Spokane County, Washington; thence N.89°28'35"E., along the north line of said Plat 1477.24 feet; thence N.00°31'20"W., 44.08 feet; thence N.89°28'34"E., 9.30 feet; thence N.00°31'20"W., 413.92 feet; thence S.89°28'34"W., 260.34 feet; thence N.00°31'20"W., 141.98 feet, to the point of beginning.

Together with Lots 22 and 23, Block 1, Williams and Lute's Addition, according to plat recorded in Volume 5 of Plats, page 13, in Spokane County, Washington."

An independent remedial action (the "Remedial Action") occurred at the Property. The Remedial Action is described in the following document: Report, Independent Remedial Action, Costco Wholesale Store and Gasoline Retail Facility, East Sprague Facility, Spokane County,

This Restrictive Covenant is required by Ecology to be recorded against the Property because the Remedial Action resulted in residual concentrations of lead, cadmium, zinc, mercury, total petroleum hydrocarbons and carcinogenic polynuclear aromatic hydrocarbons which exceed the Model Toxics Control Act Method A and Method B Residential Cleanup Levels for soil established under WAC 173-340-740.

Costco makes the following declaration as to limitations, restrictions, and uses to which the Property may be put and specifies that such declarations shall constitute covenants to run with the land, as provided by law and shall be binding on all parties and all persons claiming under them, including all current and future owners of any portion of or interest in the Property (collectively, “Owner”):

Section 1. Any activity on that portion of the Property that includes the two (2) encapsulation areas depicted in the Report and on Exhibit A attached hereto that might result in the release or exposure to the environment of the contaminated soil that was contained as part of the Remedial Action, or create a new exposure pathway, is prohibited. Examples of activities that are prohibited in the two (2) encapsulation areas include, without limitation, drilling, digging, placement of any objects or use of any equipment which deforms or stresses the surface beyond its load bearing capacity, piercing the surface with a rod, spike or similar item, and/or bulldozing or earthwork.

Section 2. Any activity on the Property that may interfere with the integrity of the Remedial Action and continued protection of human health and the environment is prohibited.

Section 3. Any activity on the Property that might result in the release or exposure to the environment of a hazardous substance that remains on the Property as part of the Remedial Action, or creates a new exposure pathway, is prohibited without prior written approval from Ecology.

Section 4. Owner must give thirty (30) days advance written notice to Ecology of Owner’s intent to convey any interest in the Property. Owner shall not consummate any conveyance of title, easement, lease, or other interest in the Property without adequate and complete provision for continued monitoring, operation, and maintenance of the Remedial Action.

Section 5. Owner must restrict leases to uses and activities consistent with the Restrictive Covenant and notify all lessees of the restrictions on the use of the Property.

Section 6. Owner must notify and obtain approval from Ecology prior to any use of the Property that is inconsistent with the terms of this Restrictive Covenant. Ecology may approve any inconsistent use only after public notice and comment.
Section 7. Owner shall allow authorized representatives of Ecology the right to enter the Property at reasonable times for the purpose of evaluating the Remedial Action, to take samples, to inspect remedial actions conducted at the Property, and to inspect records that are related to the Remedial Action.

Section 8. Owner reserves the right under WAC 173-340-440 to record an instrument that provides that this Restrictive Covenant shall no longer limit use of the Property or be of any further force or effect. However, such an instrument may be recorded only if Ecology, after public notice and opportunity for comment, concurs.

DATED as of this 3rd of May, 2006.

COSTCO WHOLESALE CORPORATION
