Vancouver, Washington 98677

Re: Semi-Annual Groundwater Monitoring Report  
January through June 2017  
NuStar Vancouver Facility  
Vancouver, Washington  
1126-20

Dear Mr. Rankine:

Enclosed, please find the *Semi-Annual Groundwater Monitoring Report: January through June 2017*. The report was prepared on behalf of NuStar Terminals Services, Inc. (NuStar) by Apex Companies, LLC (Apex) and presents data collected from January through June 2017.

If you have any questions or would like to discuss this further, please contact me at (503) 924-4704 ext. 1925.

Sincerely,

A handwritten signature in blue ink that reads "Stephanie Bosze Salisbury".

Stephanie Bosze Salisbury, L.G.  
Associate Geologist

## **1.0 Introduction**

This semi-annual groundwater monitoring report was prepared by Apex Companies, LLC (Apex) on behalf of NuStar Terminals Services, Inc. (NuStar) for the NuStar Vancouver Facility (Facility) in Vancouver, Washington (Figure 1). This report presents the results of the groundwater monitoring activities completed at the Facility during the first and second quarters of 2017. Additionally, the report includes a summary and evaluation of interim action monitoring data for the reporting period.

The Facility is located at the Port of Vancouver (POV) Terminal No. 2 in Vancouver, Washington (Figure 1). The Facility Site Plan is shown on Figure 2. The property address is 2565 NW Harborside Drive, Port of Vancouver, Vancouver, Washington 98660 (Latitude: N45° 38.26', Longitude: W122° 42.20'). The property is owned by the POV and leased by NuStar. Until 2006, NuStar consisted of a roughly rectangular area with nominal dimensions of 600 by 1,300 feet. In 2006, the leasehold was expanded to include additional area to the north (see Figure 2). The total area is approximately 19 acres, which includes the leasehold extent up to 2006, and the additional leased area after 2006. The NuStar facility is on the north shore of the Columbia River. Land on all other sides is industrial property also owned by the POV. The NuStar facility is located on Clark County Tax Lot Nos.: 151979-000, 502010-002, 502010-000, and a portion of 502020-000, as well as a portion of the Washington Department of Natural Resources tideland area managed by the POV.

## **2.0 Groundwater Monitoring Field Activities**

The groundwater monitoring was performed in accordance with the *Groundwater Monitoring Plan* (GWMP; Ash Creek, 2008), which was approved by the Washington State Department of Ecology (Ecology) in a letter to NuStar dated July 30, 2009. The monitoring program for January through June 2017 is summarized in Table 1.

Two monitoring events were conducted during this period: the first quarter 2017 groundwater monitoring event was conducted from March 27 through 31, 2017 and the second quarter 2017 event was conducted from June 12 through 15, 2017.

### **2.1 Water Level Measurements**

First quarter 2017 groundwater levels were measured on March 27, 2017 and second quarter 2017 groundwater levels were measured on June 12, 2017. Monitoring well locations are shown on the Figure 2. Depth to groundwater and groundwater elevation data are summarized on Table 2. The wells are screened in three different groundwater zones: Shallow, Intermediate, and Deep. The depth to groundwater was measured at Facility monitoring wells, multi-level groundwater monitoring (MGMS) wells, and selected off-site wells (MW-14, MW-17, MW-23i, MW-25i, MW-26, MW-30i, MW-31i, MW-F, MW-G, S-1, and S-2).

---

## **2.2 Monitoring Well Sampling and Analysis**

The sampling and analysis program for first and second quarter 2017 is summarized in Table 1. Groundwater monitoring data sheets for the sampling events are included in Appendix A. For quality assurance/quality control (QA/QC), field blanks, and equipment blanks were prepared and sample duplicates were collected from wells MGMS3-40, MW-7, MW-12, and MW-19 during first quarter 2017 and wells MW-7, MW-12, and MW-19 during second quarter 2017.

For both sampling events, the samples were uniquely labeled, stored in insulated coolers with ice, and transported under chain-of-custody protocol to Pace Analytical Laboratory (Pace) in Davis, California for laboratory analysis. Samples were analyzed for halogenated volatile organic compounds (HVOCs) by U.S. Environmental Protection Agency (EPA) Method 8260B. Groundwater analytical results for both events are shown in Table 3. Historical data are tabulated in Appendix B.

## **3.0 Groundwater Elevations**

Groundwater elevations and estimated elevation contours for the Shallow and Intermediate Zone wells for the second quarter 2017 are shown on Figures 3 and 4, respectively. Groundwater elevations and estimated elevation contours for the Shallow and Intermediate Zone wells for the second quarter 2017 are shown on Figures 5 and 6, respectively.

### **3.1 First Quarter 2017**

**Shallow Zone.** On March 27, 2017, depth-to-groundwater measurements were made at Shallow Zone monitoring wells in accordance with the groundwater monitoring plan provided in Table 1. The observed depths to groundwater in these wells ranged from 12.64 to 23.45 feet below the ground surface (bgs), and the corresponding groundwater elevations in these wells ranged from 10.89 to 18.76 feet above mean sea level (MSL; Figure 3).

During the first quarter 2017 monitoring event, gauging of the Shallow Zone wells was completed between 9:40 am and 12:09 p.m. During the time interval in which Shallow Zone monitoring wells were gauged, the water level in the adjacent Columbia River decreased by 0.066 feet. River stage data were obtained from the nearest National Oceanographic and Atmospheric Administration (NOAA) tide station (Columbia River – Vancouver), which is located approximately 0.5 mile upstream of the Facility.

As shown on Table 2, groundwater elevations increased about ten feet on average from December 2016 to March 2017, reflecting the above average amount of precipitation experienced in the Pacific Northwest during this period. Groundwater elevations in the Shallow Zone were variable, with groundwater highs adjacent to the Columbia River and the typically observed groundwater divide was not evident. The overall groundwater

---

flow direction was generally towards the north with a northwestern component inland. The hydraulic gradient varied between 0.003 and 0.007 ft/ft.

**Intermediate Zone.** On March 27, 2017, depth-to-groundwater measurements were made at Intermediate Zone monitoring wells in accordance with the groundwater monitoring plan provided in Table 1. Groundwater levels in Intermediate Zone wells were measured collectively during a predicted tidal inflection to minimize the magnitude of tidal influence on water levels during the gauging event. Water levels were collected from Intermediate Zone wells within 2 hours (between 11:20 a.m. and 12:49 p.m.). During the time interval in which Intermediate Zone wells were gauged, water levels in the adjacent Columbia River decreased by 0.046 feet.

The observed depths to groundwater in the Intermediate Zone wells ranged from 11.42 to 16.15 feet bgs, and groundwater elevations in these wells ranged from 18.33 to 18.57 feet above MSL (Figure 4). Similar to the shallow zone, groundwater elevations in the Intermediate Zone rose approximately 10 feet from December 2016 to March 2017 (Table 2). During the March 27, 2017 gauging event, groundwater flow was towards the northeast with a generally flat gradient of approximately 0.0003 ft/ft.

**Deep Zone.** Depth to groundwater was measured in well MW-24d, which is screened from 210 to 230 feet bgs, within the Troutdale Formation. Depth to water in well MW-24d was 15.53 feet bgs, corresponding to an elevation of 18.38 feet above MSL. A groundwater potentiometric map was not prepared for Deep Zone groundwater.

### 3.2 Second Quarter 2017

**Shallow Zone.** On June 12, 2017, depth-to-groundwater measurements were made at Shallow Zone monitoring wells in accordance with the groundwater monitoring plan provided in Table 1. The observed depths to groundwater in these wells ranged from 16.15 to 24.08 feet bgs, and groundwater elevations in these wells ranged from 12.38 to 15.59 feet above MSL (Figure 5).

During the second quarter 2017 monitoring event gauging of the Shallow Zone wells was completed between 09:08 a.m. and 11:01 a.m., with the exception of the multi-port wells which were gauged shortly thereafter. During the gauging activities, the water level in the adjacent Columbia River decreased by 0.08 feet.

Groundwater elevations were typically two to four feet lower than during the March 2017 event and, as shown on Figure 5, a northwest to southeast trending groundwater divide was observed across the property, with groundwater flow to the northeast on the northern side of the divide and toward the river on the southern side of the divide.

**Intermediate Zone.** During the June 12, 2017 gauging event, depth-to-groundwater measurements were collected from Intermediate Zone wells within 45 minutes (between 03:15 p.m. and 03:54 p.m.), with the exception of the multi-port wells, which were gauged earlier, and water levels in the adjacent Columbia River

---

decreased by 0.05 foot. The observed depths to groundwater in Intermediate Zone wells ranged from 15.55 to 20.32 feet bgs, and groundwater elevations in these wells ranged from 14.14 to 14.45 feet above MSL (Figure 6). The groundwater flow during the June gauging event was generally to the northeast with a gradient ranging between 0.0001 and 0.001 ft/ft.

**Deep Zone.** Depth to water in Deep Zone well MW-24d was 19.45 feet bgs, corresponding to an elevation of 14.46 feet above MSL.

## **4.0 Groundwater Sample Analytical Results**

Complete copies of the laboratory reports for the first and second quarter 2017 groundwater monitoring events, including the quality assurance evaluation report and chain-of-custody documentation, are included in Appendix C.

### **4.1 First Quarter 2017**

The March 2017 monitoring program included the collection of groundwater samples from the wells listed in the first column of Table 1. The sample results for first quarter 2017 are summarized in Table 3 and select VOCs are shown on Figure 7.

### **4.2 Second Quarter 2017**

The June 2017 monitoring program included the collection of groundwater samples from the wells listed in the second column of Table 1. The sample results for second quarter 2017 are summarized in Table 3 and select VOCs are shown on Figure 8.

### **4.3 Evaluation of Results**

VOC concentration trend plots for each monitoring well are provided in Appendix D. Monitoring results demonstrate decreasing VOC concentration trends in Shallow and Intermediate Zone groundwater in 32 of 33 monitoring wells, the exception being well MGMS3-132, which exhibits a slightly increasing concentration trend. The concentrations in this deeper well have always been variable and relatively low (i.e. PCE ranging from 1 microgram per liter [ $\mu\text{g/L}$ ] to 13  $\mu\text{g/L}$ ) and it is difficult to identify a discernable concentration trend for the well. Monitoring wells in the source area exhibit concentration decreases of over 97% for tetrachloroethene (PCE) and trichloroethene (TCE) since initiating interim actions in 2008. VOCs in monitoring wells on the periphery or outside of the source area also reflect historical decreasing trends.

---

## **5.0 Interim Action Measure Activities**

Several interim actions have been implemented at the Facility, including:

- Bioremediation injections for remediation of Facility groundwater and the installation of a soil vapor extraction (SVE) system for the remediation of VOCs in vadose-zone soils in the spring/summer of 2008. These activities are herein referred to as the 2008 interim action.
- Expanding the SVE system and performing additional bioremediation injections during the summer of 2011, which is referred to herein as the 2011 interim action. The 2011 interim action included 17 additional SVE well locations (involving shallow and deeper SVE well pairs at each location) for a total of 34 wells and additional bioremediation injections in and around the 2008 interim action area (shown on Figure 9). Details of the 2008 and 2011 interim actions are provided in the *Interim Action Installation Report* (Ash Creek, 2009b) and the *2011 Interim Action Evaluation Report* (Ash Creek, 2012), respectively.
- Performed additional bioremediation injections adjacent to the riverbank at the Facility in accordance with the *2015 Interim Action Work Plan* (Apex, 2016). This work is referred to as the 2016 interim action and an *Interim Action Summary Report* (Apex, 2017) describes the scope and preliminary results.

These interim actions and results to date are described in the following subsections.

### **5.1 Summary of 2008 Interim Action**

The 2008 interim action consisted of SVE in the vadose zone and enhanced anaerobic bioremediation of the Shallow Zone groundwater. The 2008 enhanced bioremediation locations and the SVE system layout are provided in Appendix E. The 2008 SVE system removed approximately 3,150 pounds of VOCs between startup in September 2008 and the expansion in 2011. The mass removal rate at startup in 2008 was 58.8 pounds per day (lbs/day), and had decreased to an average of 1.7 lbs/day by the third quarter of 2011. Historical monitoring tables and a mass removal chart are provided in Appendix E.

### **5.2 Summary of 2011 Interim Action**

A soil and groundwater investigation in 2010 indicated that the 2008 interim action had reduced VOCs in vadose-zone soils by 90 percent for PCE and 98 percent for TCE, and had reduced total molar ethene concentrations in source area groundwater by 77 percent (Ash Creek, 2011). The investigation results were summarized in an appendix to the *2011 Interim Action Work Plan* (Work Plan; Ash Creek, 2011) that was submitted to Ecology on March 25, 2011. The Work Plan included a proposal for the expansion of the SVE system to include 17 additional SVE well locations, additional bioremediation injections in the 2008 interim action area, and bioremediation injections in an expanded interim action area. On May 23, 2011, Ecology approved the Work Plan. The bioinjection activities were conducted from July 21 through August 31, 2011,

---

and the SVE installation activities were conducted from August 2 through 5, 2011 and August 29 through October 3, 2011. The 2008 and 2011 bioremediation injection locations are shown on Figure 9.

The initial Facility SVE system installed in 2008, herein referred to as the 2008 SVE system, was comprised of 17 wells, divided among five branches, which were connected by a network of underground piping as shown on drawings provided in Appendix E. As part of the 2011 SVE system expansion, Branches 4 and 5 were disconnected from the other System branches and were connected to a new blower unit located approximately 150 feet to the northeast of the railroad tracks (Figure 11). The wells and piping associated with Branches 4 and 5 and the associated blower unit are herein referred to as the "North System".

From August 2 through 5, 2011, 17 additional SVE well pairs (for a total of 34 additional SVE wells) were installed within and to the south of Warehouse No. 13 (a.k.a. the Butler building), in general accordance with the *2011 Interim Action Work Plan* (Ash Creek, 2011; Figure 11). For each well pair, one well is screened in vadose-zone soils from 10 to 15 feet bgs and the second well is screened in vadose-zone soils from 15 to 25 feet bgs. These 17 well pairs, along with the Branch 1 through 3 wells from the 2008 SVE system, are piped underground to a blower unit located outside of the southeast corner of Warehouse No. 13. These SVE wells, associated underground piping, and the blower unit are herein referred to as the "South System". Effluent from the South System is treated with a series of two carbon vessels prior to discharge. Monitoring of the North and South Systems occurs on a monthly basis as described in Section 5.4.2.

### **5.3 Summary of 2016 Interim Action**

NuStar and the Port of Vancouver originally submitted a joint Feasibility Study (FS) to Ecology in March 2014 (Apex and Parametrix, 2014). The FS approval process is ongoing. To avoid potential delays in groundwater treatment while working through the FS and the associated regulatory approval process, NuStar proposed to implement a portion of the recommended remedial action for the NuStar source area as an interim action. The details of the proposed interim action were submitted to Ecology in an *Interim Action Work Plan* on September 15, 2015. After a 30-day public comment period from May 12 to June 10, 2016, the work plan was approved on June 14, 2016. The interim action consisted of bioremediation injections along the southern portion of the NuStar terminal near the seawall. Per Ecology's request, the interim action also included baseline sediment and surface water sampling in the Columbia River. Additionally, enhanced bioremediation injections were implemented in an isolated area to the northwest of the NuStar terminal which has been less responsive to monitored natural attenuation than the VOCs at the NuStar terminal. The "NW Area bioremediation injections" were completed as a joint project between NuStar and the Port of Vancouver.

The NW Area injections were implemented in July 2016 and included the injection of 52,000 gallons of bioremediation oil substrate (EosPro; diluted with water) into the shallow zone groundwater through 30 boreholes in the vicinity of and between (NuStar) monitoring wells MW-14 and MW-26. Figure 10 illustrates the approximate boring locations in the "NW Area". The same substrate material was injected at the NuStar terminal in August and September 2016 and included the injection of 100,000 gallons of EosPro substrate

---

(diluted with water) into 72 borings along the southern portion of the NuStar facility, adjacent to the seawall. Figure 10 identifies the approximate locations of the injection borings near the NuStar seawall. In accordance with the approved *Interim Action Work Plan*, a summary of the groundwater injection and surface/water sampling activities was provided to Ecology in an *Interim Action Summary Report* on June 29, 2017 (Apex, 2017). The report included the results of the baseline surface water and sediment sampling as well as the results of two quarters of post interim action groundwater monitoring. A brief evaluation of the groundwater monitoring results from the interim action area is summarized in Section 5.4 below.

## 5.4 Interim Action Monitoring and Evaluation

### 5.4.1 Enhanced Bioremediation Injections

Groundwater samples collected from wells MP-1, MW-24i, MW-12, MW-13, MW-14, MW-19, MW-26, EX, MGMS3-40, and MGMS1-43 during the first quarter 2017 monitoring event, and from wells MP-1, MW-7, MW-24i, MW-12, EX, and MGMS2-40 during the second quarter 2017 event were analyzed for total organic carbon (TOC) by EPA Method 5310 D and ethene by EPA Method RSK-175M, to evaluate the performance of the bioremediation injections. The TOC and ethene analyses were performed by Pace Analytical.

In addition to the laboratory analysis of groundwater samples, field measurements of oxidation-reduction potential (ORP) and dissolved oxygen (DO) were collected from the monitoring wells during the first and second quarter 2017 monitoring events. Table 4 shows the results of interim action groundwater monitoring from the February 2007 baseline event through the second quarter 2017 monitoring event. Wells MW-24i and MGMS2-40 were not located within the 2008 interim action injection area but are located within the footprint of the 2011 and 2016 interim action areas; therefore, interim action monitoring data for these wells are only presented from the second quarter 2011 baseline event through second quarter 2017. Wells MW-13, MW-14, MW-19, MW-26, MGMS-1, and MGMS-3 were not located within the 2008 or 2011 interim action areas, but are located in the 2016 interim action area; therefore, monitoring data for those wells are only presented beginning September 2016.

A discussion of reductive dechlorination of VOCs in groundwater from prior to the 2008 interim action through second quarter 2017 is provided below.

**VOC Concentrations Evaluation.** Bioremediation injections in the primary source area at the Facility were initiated in 2008 and expanded in 2011; bioremediation injections along the riverbank and in the NW Area were initiated in 2016; however, seven injection borings were also installed in the area of wells MP-1 and EX located on the western side of the primary source area in 2016. VOC concentrations are generally decreasing at the Facility and rebound is not occurring in the area of the 2008/2011 interim action. VOC concentrations are also decreasing in the 2016 interim action area. The following paragraphs evaluate the results to date in each of these areas.

---

**Primary Source Area.** Concentration trend plots for PCE, TCE, total dichloroethenes (DCE), and vinyl chloride (VC) in 2008/2011 interim action area wells MW-7, EX, MP-1, and MGMS2-40 are provided in Appendix F. VOC data are included from the baseline event prior to the 2008 interim action (first quarter 2007; second quarter 2007 for well MGMS2-40) through June 2016. The concentration of PCE and TCE has decreased in each well, with observed reductions through June 2017 exceeding 97 percent in each of the four wells, with three of the wells exceeding 99 percent. It should be noted that well MW-7 is not in the 2016 interim action area; however, the groundwater concentrations in well MW-7 have decreased dramatically since the 2008 interim action and, to date, there is no indication of concentrations rebounding.

Another indicator of effective reduction of chlorinated ethenes is a decrease in the total molar chloroethene concentration (the molar concentration of PCE, TCE, DCE, and VC combined). The use of total molar concentrations allows an assessment of changes in the total number of related contaminant molecules as the reductive dechlorination process transitions from the relatively heavy PCE to the progressively lighter TCE, DCE, and VC. Molar concentration trend plots for wells MW-7, EX, MP-1, and MGMS2-40 are provided in Appendix F. Between the February 2007 baseline event and the June 2017 monitoring event, the decrease in total molar concentration in the interim action monitoring wells MP-1, MW-7, EX and MGMS2-40 ranged from 87 percent in well MP-1 to over 99 percent in wells EX, and MW-7.

**Riverbank Area.** Wells MW-12, MW-13, MW-19, and MGMS3-40 are located within the 2016 riverbank interim action area and concentration trend plots for PCE, TCE, total DCE, and VC in these wells are provided in Appendix F. As shown on the trend plots, preliminary monitoring results from the 2016 interim action area indicate reductions in concentrations of PCE and TCE of up to two orders of magnitude at MW-12, MW-13, MW-19, and MGMS1-43 after the 2016 enhanced bioremediation injections. DCE trends are typically flat to increasing following the 2016 interim action and support that dichlorination of PCE and TCE is occurring and causing a temporary increase in DCE. Future quarterly monitoring will be utilized to further evaluate these concentration trends, both in the Shallow Zone source area as well as outside of the source area treatment zone and in Intermediate Zone groundwater.

**NW Area.** Wells MW-14 and MW-26 are located within the 2016 NW Area interim action area and concentration trend plots for PCE, TCE, total DCE, and VC in these wells are provided in Appendix F. The trend plots for MW-14 and MW-26 show stable to slight decreasing VOC trends and decreasing molar ethene trends, but to date have not shown a significant response to the 2016 interim action injections. Groundwater gradient is typically flat or to the north/northwest in this interim action area, and the groundwater flow may be slowing the spread of the oil substrate around wells MW-14 and MW-26.

**Total Organic Carbon Evaluation.** The presence of elevated TOC indicates that the bioremediation injections have increased the electron donor carbon source needed to reductively dechlorinate the VOCs present in groundwater at the Facility. While a baseline monitoring event was not intentionally conducted prior to the 2016 injection event, data are available for wells MP-1 and MW-12 for the event prior to the

---

injections (June 2016) and the two events concurrent with and following the injections (September and December 2016). TOC was further analyzed during the March and June 2017 events at select wells. A discussion of the TOC results is provided below.

**Primary Source Area.** Seven bioremediation injections were located near well MP-1 during the 2016 interim action. In well MP-1, TOC values increased by over three orders of magnitude between June and September 2016, with concentrations remaining elevated during the December 2016 event. During the March 2017 event, the TOC value remained similar to the December 2016 value at MP-1; however, in the June 2017 event, the TOC value decreased by an order of magnitude. At well EX, the TOC concentration increased by two orders of magnitude following the 2016 interim action and then decreased an order of magnitude during the June 2017 event. These results indicate utilization of the oil substrate in the dechlorination of VOCs, supporting the significant decreases in VOC concentrations observed following the 2016 bioremediation injections in this area.

Bioremediation injections were not performed near wells MW-7 or MGMS2 during the 2016 interim action. At well MW-7, TOC concentrations decreased by an order of magnitude since the June 2016 sampling event. The oil substrate around well MW-7 appears to be depleted; however, VOC concentrations have been stable. The well will continue to be monitored for possible rebound. TOC values at MGMS2-40 have been stable between 2014 and the present.

**Riverbank Area.** In well MW-12, TOC values increased by over 3 orders of magnitude between June and September 2016, with concentrations remaining elevated during the December 2016 monitoring event. The TOC value in March 2017 decreased by an order of magnitude from the December 2016 event and remained stable for the June 2017 event. At well MW-13, TOC concentrations were high during the September 2016 sampling event, and decreased by two orders of magnitude through the March 2017 event. At well MW-19, TOC values are low and stable, and one to two orders of magnitude below concentrations observed in wells MP-1 and MW-12. Although this well does not have a measurable increase in TOC, concentrations of PCE and TCE are decreasing at this location. At MGMS3-40, TOC concentrations increased during the September and December 2016 groundwater monitoring events, and then decreased by an order of magnitude during the March 2017 event. Concentrations of PCE and TCE are decreasing at this location.

**NW Area.** At wells MW-14 and MW-26, TOC values are low and stable, and one to two orders of magnitude below concentrations observed in wells MP-1 and MW-12. Concentrations have remained consistent before and after the 2016 interim action injections.

**Summary of Enhanced Bioremediation Results Following the 2016 Interim Action.** The 2016 groundwater interim action was implemented in July through September 2016 and included over 72 bioremediation injections across the NuStar source area and 30 bioremediation injections at the off-site Northwest Area. Since implementation, groundwater in the 2016 interim action area has been monitored for

---

three quarters for indicators of reductive dechlorination. The results from the first and second quarter 2017 events provide preliminary indication that enhanced reductive dechlorination is occurring at the Facility in response to the interim action, as follows:

- Observed trends in breakdown product concentrations are consistent with reductive dechlorination of chlorinated ethene compounds
- PCE and TCE concentrations in wells located within the 2016 treatment area show steady and significant decreases. DCE and VC concentrations generally increased or stayed approximately the same in these wells, supporting that dechlorination of PCE and TCE is occurring and has led to an anticipated short-term increase in the daughter product concentrations in the wells within the treatment zone.
- Total molar ethene concentrations from wells located within the 2016 treatment area have also decreased, indicating that VOC mass is being significantly reduced.
- Up to one to two order of magnitude reductions of PCE and TCE concentrations in the 2016 interim action area have been observed between the September 2016 and June 2017 monitoring events.

#### **5.4.2 SVE Monitoring Evaluation**

The following paragraphs summarize the monitoring and analytical results as well as the total VOC mass removal for the North and South SVE Systems at the Facility. Field vapor measurements were collected with a photoionization detector (PID). Effluent vapor samples from the SVE systems were collected into Summa™ canisters and submitted to TestAmerica Laboratories (Test America) in Los Angeles, California, for analysis of VOCs by method TO-15.

Monthly SVE monitoring events occurred on January 30, February 28, March 28, April 24, and May 24 during this reporting period. North SVE System operating and analytical data are provided in Tables 5 and 6, respectively. South SVE System operating data and analytical are provided in Tables 7 and 8, respectively.

During the December 28, 2016 monitoring event, a valve on the South SVE system was observed as damaged, prohibiting the field staff from taking accurate effluent measurements and samples. The South SVE system was shut down and the part was repaired during the month of January 2017. During the January 30, 2017 monitoring event, the system was restarted and sampled; results from the sampling are included on Table 8.

During the second quarter 2017, the south SVE system was not operational because the knockout drum and associated valve were not functioning. Therefore, SVE effluent samples were not collected during this period. A replacement stainless steel knockout drum was fabricated in June 2017 and was installed on July 6, 2017.

---

During the May 24 monitoring event, the north SVE system was not operating because the blower motor failed. The rotor is locked and blown fuses were noted on two of the three legs. A replacement blower is required to return the North SVE system to operation. The terminal is planning modifications to the rail alignment at the Facility to accommodate modifications to one of its storage areas; part of the planned work will require the abandonment and potential relocation of several of the SVE wells in the north system. The project is anticipated to be initiated in third quarter 2017 and repair of the north SVE system will be incorporated into this work.

**SVE System Mass Removal.** The approximate VOC mass removed by the North and South SVE Systems through June 2017 is presented in Tables 9 and 10 and on Figures 11 and 12, respectively. The North and South Systems have removed approximately 232 and 2,886 pounds of VOCs, respectively, since startup in October 2011. Including the mass removed from the 2008 SVE System, the total mass removal by SVE at the Facility to date is approximately 6,268 pounds.

## **6.0 Future Activities**

Quarterly groundwater monitoring for the third and fourth quarters of 2017 will be conducted in September and December, respectively. The proposed sampling will be completed in accordance with the GWMP (Ash Creek, 2008). SVE operations and maintenance will occur monthly in accordance with the schedule proposed in the *2011 Interim Action Evaluation Report* (Ash Creek, 2012) at the South SVE system only until the North SVE system is repaired.

A Draft Revised NuStar – Port of Vancouver Feasibility Study (FS) was submitted to Ecology on January 19, 2017. Comments on the FS were received from Ecology on April 12, 2017 and revisions to the FS are in discussion.

	12/12/16	24.77	6.73
	03/27/17	13.92	17.58
	06/12/17	17.99	13.51

**Notes:**

1. TOC = Top of casing; BTOC = Below top of casing.
2. Utilizes new survey information from June 2010. NGVD29 datum (ft MSL).
3. \* Water levels measurement points are located at the top of the plastic fittings mounted on the well covers.
4. NM = Not measured.
5. The casing has been modified at Port of Vancouver wells MW-E and MW-31i. The TOC elevation has not yet been re-surveyed, so groundwater elevation data for these wells is likely inaccurate.

**Notes:**

1. µg/L (ppb) = Micrograms per liter (parts per billion).
2. Bold values represents detected concentration of listed analyte.
3. < = Not detected at or above the specified laboratory method reporting limit (MRL).
4. E = Analyte concentration exceeded the calibration range. Reported result is estimated.
5. D = Relative percent difference (RPD) between sample and duplicate is outside of the acceptable range of +/- 30%.
6. J = Result is estimated based on review of laboratory data quality.

Notes:

1. µg/L (ppb) = Micrograms per liter (parts per billion).

2. NA = Not analyzed.

3. Ethene is analyzed by EPA Method RSK-175M. All other VOCs were analyzed by EPA Method 8260

4. Boldface value represents detected concentration of listed analyte.

5. J = Result is estimated based on review of laboratory data quality

6. E = Analyte concentration exceeded the calibration range. Reported result is estimated

4/24/2017	0.8	-20.0	0.0	-20.0	2.0	0.10	Used APEX PID #3.

**Notes:**

1. PID readings in parts per million (ppm), calibrated to 100 ppm isobutylene.
2. Pressure readings in inches of water, measured with magnahelic gauge.
3. NM = Not measured.
4. -- = Not available; branch not in use or no measurement collected during the site visit.
5. NA = Not available; photoionization detector (PID) malfunction.
6. \* = During the 11/2/2011 monitoring event, PID malfunctioned while monitoring Branch 4. Instrument readings would not stabilize.

**Notes:**

1.  $\mu\text{g}/\text{m}^3$  = Micrograms per cubic meter.
2. Samples analyzed by Modified EPA Method TO-15.
3. Only analytes detected in at least one sample are presented in this table.
4. Bold values represents detected concentration of listed analyte.

Table 8  
 South SVE System – Analytical Results  
 NuStar Vancouver Facility  
 Vancouver, Washington

Sampling Location	Sample ID	Date	1,1-Dichloroethane	1,1-Dichloroethene	cis-1,2-Dichloroethene	trans-1,2-Dichloroethene	Methylene Chloride	Tetrachloroethene	1,1,1-Trichloroethane	Trichloroethene	Vinyl chloride	Total Xylenes
			Concentrations in $\mu\text{g}/\text{m}^3$									
Pre Carbon	SVE_SOUTH_PRE CARBON_013017	1/30/2017	<260	<690	660	<340	<300	61,000	<330	400	2,400	<220
Post Carbon	SVE_SOUTH_POST CARBON_013017	1/30/2017	<1.2	<3.2	<1.6	<1.6	<1.4	24	1.8	<1.6	<2.1	<1.0
												<5.2

*Notes:*

1.  $\mu\text{g}/\text{m}^3$  = Micrograms per cubic meter.
  2. Samples analyzed by Modified EPA Method TO-15.
  3. Only analytes detected in at least one sample are presented in this table.
  4. S= Surrogate recoveries were above acceptable recovery limits. Results may be biased high.
  5. **Bold** values represents detected concentration of listed analyte.
- 13,717 = average PCE post carbon last 6 months ( $\mu\text{g}/\text{m}^3$ ).  
 16,981 = average PCE pre carbon since January 2015 ( $\mu\text{g}/\text{m}^3$ ).

Table 10  
 South SVE System – VOC Mass Removal  
 NuStar Vancouver Facility  
 Vancouver, Washington

Date	Activity	VOC Removal Rate (lb/day)	Days of Operation	Approximate VOCs Removed (lbs)	Approximate Cumulative VOCs Removed (lbs)
7/26/2016	Sample	1.1	62	36	2437
9/29/2016	Sample	1.6	65	89	2526
10/25/2016	Sample	2.0	26	47	2573
11/28/2016	Sample	3.3	34	90	2663
1/30/2017	Sample	3.8	63	223	2886

*Notes:*

1. Air flow rate read from system gauge.
2. cfm = cubic feet per minute.
3. mg/m<sup>3</sup> = Milligrams per cubic meter.
4. lb/day = Pounds per day.
5. lbs = Pounds.
6. Flow rate was not measured on dates with dashes. For calculations, rate is assumed to be the same as measured the date before.
7. System was down during the October 27, 2014 monitoring event and was restarted on October 29, 2014. It is assumed that the system was down for a total of four days, although the exact duration of shutdown is unknown.
8. \* = system was off for part replacement.

Base map prepared from USGS 7.5-minute quadrangles as provided by Topozone.

DATE 3/27/17

PROJECT	<u>Mustar Van Gwm</u>	ARRIVAL TIME	<u>0650</u>
LOCATION	<u>Mustar Vancouver</u>	DEPARTURE TIME	<u>1600</u>
CLIENT	<u>Mustar Vancouver</u>	WEATHER	<u>Rain</u>
PURPOSE OF OBSERVATIONS			
APEX REPRESENTATIVE	<u>K.K., MM</u>	APEX PROJECT MANAGER	<u>S. Satisfactory</u>
CONTRACTOR	<u>=</u>	PERMIT NO.	<u>245259</u>
CONTRACTOR REP.	<u>=</u>	H&S REVIEW	<u>yes</u>

Our firm's professionals are represented on site solely to observe operations of the contractor identified, to form opinions about the adequacy of those operations, and to report those opinions to our client. The presence and activities of our field representative do not relieve any contractor from its obligation to meet contractual requirements. The contractor retains sole responsibility for site safety and the methods, operations, send sequence of construction. Unless signed by the Ash Creek Associates Project Manager, this report is preliminary. A preliminary report is provided solely as evidence that field observation was performed. Observations and/or conclusions and/or recommendations conveyed in the final report may vary from and shall take precedence over those included in a preliminary report.

0650 - On site, sign in, Safety meeting, Safety training  
Get permit  
0800 - Start to pop well caps for gauging  
0940 - Start gauging wells  
1250 - Finish gauging wells  
1321 - At well 251, a Sharpie fell out of my pocket and went down the hole. The lid was on.  
1340 - Start setting up to sample wells, call 4SI  
1325 - Start sampling first well  
1530 - Finish sampling last well of the day.  
1550 - dump purge water into Drum  
1600 - Sign out turn in permit OFF site

**COMMENTS**

\* Parameters would not stabilize, took sample after 10 Readings  
During testing could not set DTW, water level gauge wouldn't work

PROJECT NUMBER 102017 GWM FIELD REPORT NUMBER 1126-20  
PAGE 1 OF 1  
DATE 3/29/17

PROJECT	<u>102017 GWM</u>	ARRIVAL TIME	<u>0652</u>
LOCATION	<u>Vancouver, WA</u>	DEPARTURE TIME	<u>1600</u>
CLIENT	<u>Nustar Vancouver</u>	WEATHER	<u>Rain</u>
PURPOSE OF OBSERVATIONS	<u>Groundwater sampling</u>		
APEX REPRESENTATIVE	<u>KK</u>	APEX PROJECT MANAGER	<u>S. Salisbury</u>
CONTRACTOR	<u>—</u>	PERMIT NO.	<u>245060</u>
CONTRACTOR REP.	<u>—</u>	H&S REVIEW	<u>yes</u>

Our firm's professionals are represented on site solely to observe operations of the contractor identified, to form opinions about the adequacy of those operations, and to report those opinions to our client. The presence and activities of our field representative do not relieve any contractor from its obligation to meet contractual requirements. The contractor retains sole responsibility for site safety and the methods, operations, send sequence of construction. Unless signed by the Ash Creek Associates Project Manager, this report is preliminary. A preliminary report is provided solely as evidence that field observation was performed. Observations and/or conclusions and/or recommendations conveyed in the final report may vary from and shall take precedence over those included in a preliminary report.

0652 - On site, sign in, safety meeting, get permit  
0730 - Set up for day, cal YSI  
0830 - Start Sampling 1st well of the day.  
1530 - Finish sampling last well of the day.  
  
1540 - Clean up van, put away gear, dump purge water into Drum.

1600 Sign out, turn in permit, OFF site

PURPOSE OF OBSERVATIONS Ground water Sampling  
APEX REPRESENTATIVE KK APEX PROJECT MANAGER S. Salisbury  
CONTRACTOR \_\_\_\_\_ PERMIT NO. 245368  
CONTRACTOR REP. \_\_\_\_\_ H&S REVIEW yes

Our firm's professionals are represented on site solely to observe operations of the contractor identified, to form opinions about the adequacy of those operations, and to report those opinions to our client. The presence and activities of our field representative do not relieve any contractor from its obligation to meet contractual requirements. The contractor retains sole responsibility for site safety and the methods, operations, send sequence of construction. Unless signed by the Ash Creek Associates Project Manager, this report is preliminary. A preliminary report is provided solely as evidence that field observation was performed. Observations and/or conclusions and/or recommendations conveyed in the final report may vary from and shall take precedence over those included in a preliminary report.

0656 - on site, sign in, safety meeting, set permit  
0730 - setup for sampling, cal YSI  
0810 - Start sampling First well of day  
1530 - Finish sampling  
1540 - clean up van, dump purge water into drum  
1610 - OFF site, sign out, turn in permit

*Notes:*

1. HVOCs = Halogenated volatile organic compounds analysis by U.S. Environmental Protection Agency (EPA) Method 8260B; results reported in micrograms per liter ( $\mu\text{g}/\text{L}$ ).
2. TPH = Total petroleum hydrocarbons in the diesel and heavy oil range analysis by Washington Department of Ecology (WDOE) Method TPH-418.1 Results reported in milligrams per liter (mg/L).
3. -- = Not sampled or not analyzed.
4. < = Not detected at or above the specified laboratory method reporting limit (MRL).
5. B = Estimated concentration based on data quality review - similar detection in associated equipment blank (less than 5x difference).
6. J = Estimated concentration based on data quality review.
7. n-Propylbenzene, 1,1,1,2-Tetrachloro-ethane, and 1,1,2-Trichloroethane were detected during the first semi-annual 2008 monitoring event. Refer to Table 3 of the *First Semi-Annual 2008 Groundwater Monitoring Report* for detection concentrations.
8. ND = Not detected and no reporting limit specified.
9. B = Chloroform was detected in one or more field blank during the March 2009 and September 2009 sampling events. Chloroform was flagged with a "B" in samples where the concentration was five times or less than the maximum detection in the field blank.
10. E = Chloroform was detected in the equipment blank during the March 2009 and September 2009 sampling events. Chloroform was flagged with an "E" in samples where the concentration was five times or less than the maximum detection in the equipment blank.

## ***Appendix C – Laboratory Analytical Reports and Data Quality Review***

---

### **1.0 Introduction**

This appendix documents the results of a quality assurance/quality control (QA/QC) review of the analytical data for groundwater samples collected during the March and June 2017 groundwater sampling events and air samples collected during the January through April 2017 soil vapor extraction (SVE) effluent sampling events for the NuStar Terminals Services, Inc. (NuStar) Vancouver Facility (Facility) in Vancouver, Washington. TestAmerica Laboratories in West Sacramento, California and Pace Analytical (Pace) in Davis, California performed the analyses. A copy of each analytical laboratory report is included in this appendix.

Report	Report Date	Sampling Event
1285102	April 4, 2017	First Quarter Groundwater Monitoring
320-25383-1	February 7, 2017	January SVE Monitoring
320-26384-1	March 17, 2017	February SVE Monitoring
320-27201-1	April 19, 2017	March SVE Monitoring
320-27847-1	May 11, 2017	April SVE Monitoring
1289722	June 28, 2017	Second Quarter Groundwater Monitoring

### **2.0 Data Validation**

The QA review outlines the applicable quality control criteria utilized during the data review process, as well as any deviations from those criteria. Examination and validation of the laboratory summary reports include:

- Analytical preparation and quantitation methods
- Analytical method holding times
- Sample handling
- Chain of custody handling
- Detection and reporting limits
- Method blank, field blank, equipment blank and trip blank detections
- Laboratory control samples, matrix spikes and surrogates to assess laboratory accuracy
- Laboratory control sample duplicates, matrix spike duplicates and laboratory duplicates to assess laboratory precision
- Field duplicates to assess sampling and laboratory precision

## ***Appendix C – Laboratory Analytical Reports and Data Quality Review***

---

The QA review did not include a review of raw data.

### **3.0 Analytical Methods**

Chemical analyses on collected water samples consisted of volatile organic compounds (VOCs) by U.S. Environmental Protection Agency (EPA) Method 8260B. Select groundwater samples were also analyzed for total organic carbon (TOC) by EPA Method 5310B and ethene by EPA Method RSK-175M. SVE effluent vapor samples were analyzed for VOCs using EPA Method TO-15.

### **4.0 Quality Assurance Objectives and Review**

The general QA objectives for this project were to develop and implement procedures for obtaining, evaluating, and confirming the usability of data of a specified quality for monitoring groundwater quality trends and SVE monitoring data at the Facility. To collect such information, analytical data must have an appropriate degree of accuracy and reproducibility, samples collected must be representative of actual field conditions, and samples must be collected and analyzed using unbroken chain-of-custody procedures.

Reporting limits and analytical results were compared to action levels for each parameter in the media of concern. Precision, accuracy, representativeness, completeness, and comparability parameters used to indicate data quality are defined below.

**Reporting Limits.** Detection limits are set by the laboratory and are based on instrumentation abilities, sample matrix, and suggested detection limits by the EPA or the Washington State Department of Ecology (Ecology). In some cases, the detection limits may be raised due to high concentrations of analytes in the samples or matrix interferences. Detection limits were generally consistent with industry standards and below promulgated regulatory standards when possible (if not raised, as previously discussed). Reporting limits were reviewed and are generally acceptable for this project. Reporting limits for individual samples are varied based on the magnitude of the chemical impact. It is not expected that any of the raised detection limits compromise the usability of the data.

**Holding Times.** Samples MW-14 and MGMS3-40 from the March 2017 sampling event were insufficiently acid preserved for VOC analysis. There is potential that these results are biased low since MW-14 and MGMS3-40 were analyzed outside of 7-days.

**Method Blanks.** A method, or laboratory, blank is a sample prepared in the laboratory along with the actual samples and analyzed for the same parameters at the same time. It is used to assess if detected

## **Appendix C – Laboratory Analytical Reports and Data Quality Review**

---

contaminants may have been the result of contamination of the samples in the laboratory. No analytes were detected in the laboratory method blanks for the groundwater or air analyses.

**Laboratory Control Samples and Laboratory Control Sample Duplicate.** Laboratory Control Samples (LCS) were also analyzed by the laboratories to assess the accuracy of the analytical equipment. LCS are prepared from an analyte-free matrix that is then spiked with known levels of the constituents of interest (COI; i.e., a standard). The concentrations are measured and the results compared to the known spiked levels. This comparison is expressed as percent recovery.

The LCSD recovery associated with the air samples collected during the January 2017 SVE monitoring event was outside control limits for benzyl chloride. This analyte was biased high in the LCSD but because the analyte was not detected in the associated project samples, no data were flagged.

The LCSD recovery for vinyl acetate was below the lower control limit for air samples collected during the March 2017 air samples. This analyte is biased low in the LCSD but because the analyte is not part of the monitoring program analytes, no data was flagged in the data table.

Multiple VOC analytes were above the control limit for the LCS from the June 2017 laboratory report. Because none of these analytes were detected in the associated batch samples, no data was flagged in the data table.

In addition, a second laboratory control sample (the Laboratory Control Sample Duplicate [LCSD]) is prepared as above and analyzed. This is compared to the initial laboratory control sample to assess the precision of the analytical method (RPD). The RPD between LCS and LCSDs are within the control limit.

**Matrix Spike Analyses.** A matrix spike QC sample is used to assess the performance of the analytical method by determining potential matrix interferences. Matrix spike (MS) and matrix spike duplicate (MSD) analyses are performed on one environmental sample per analytical batch. A matrix spike sample uses an environmental sample that is spiked with known concentrations of analytes of interest. The matrix spike is then prepared and analyzed with the same analytical procedures as environmental samples in the analytical batch. The resulting concentration of the matrix spike is then compared to the known - or true - values plus the non-spiked environmental sample concentration. This comparison is expressed as a percent recovery. The matrix spike duplicate is then compared to the matrix spike of the same batch and expressed as a RPD value. The percent recovery and RPD values are then compared to control limits to assess data quality.

Several MS and MS duplicates (MSD) were analyzed during the batch analyses for both groundwater monitoring events. Percent recoveries and RPD values were within control limits for quality control samples associated with samples collected during the March 2017 groundwater monitoring event.

## **Appendix C – Laboratory Analytical Reports and Data Quality Review**

---

For the June 2017 groundwater monitoring event, the recovery of trichloroethene in batch 117005 was above the upper control limit for the matrix spike duplicate. Since the source sample (MW-26) had a detectable concentration of trichloroethene, the result is J-flagged in the data table as an estimated value because of possible matrix interference.

For batch 117047 and 117173 from the June 2017 data, the recovery for cis-1,2-dichloroethene was below the lower control limit. The cis-1,2-dichloroethene result for MW-12 may have potential matrix interference and is J-flagged in the data table as an estimated value.

For batch 117288, multiple analytes were below the lower control limit and had RPD exceedances. Since the source sample was not part of the lab report 1289722 and the LCS and LCSD recoveries were within control limits, no data was flagged.

No MS or MSD samples were analyzed as part of the air sample QC batch.

**Surrogate Recovery.** Surrogates are organic compounds that are similar in chemical composition to the COI and spiked into environmental and batch quality control samples prior to sample preparation and analysis. Surrogate recoveries for environmental samples are used to evaluate matrix interference on a sample-specific basis. Surrogate recoveries were within acceptable control limits.

**Laboratory Duplicate.** A laboratory duplicate is a second analysis of an environmental sample received by the laboratory, which serves as an internal check on laboratory quality as well as potential variability of the sample matrix. The laboratory duplicate is analyzed and compared to the primary sample analysis to assess the precision of the analytical method. This comparison can be expressed by the RPD between the original and duplicate samples.

RPD values were outside of the control limit methane and ethene for batch 467360 of report 1285102. The higher of the two results for ethene were included in the data table.

The TOC RPD value was outside of the control limit for the laboratory duplicate of batch 82886. The source sample for the laboratory duplicate was not a sample included in the June 2017 sampling event and no data was flagged.

**Field Duplicate.** A field duplicate is a second field sample collected from a selected monitoring well. Field duplicate samples serve as a check on laboratory quality as well as potential variability of the sample matrix. The field duplicate is analyzed and compared with the second sample to assess the precision of the analytical method. This comparison can be expressed by the RPD between the original and duplicate samples. The

## **Appendix C – Laboratory Analytical Reports and Data Quality Review**

---

analytes in the groundwater samples were within the RPD limit of 30 percent. Field duplicates were not collected for air samples.

**Field Blank.** A field blank is a sample of analyte-free water poured into a clean sample container in the field, preserved, and shipped to the laboratory with field samples. Field blanks assess the potential for contamination from field conditions during sampling. No analytes were identified in the field blanks collected during the first and second quarter 2017 monitoring events. Field blank air samples were not collected.

**Equipment Blank.** An equipment blank is a sample of analyte-free water poured over or through decontaminated field sampling equipment during a sampling event. Equipment blanks assess the potential for contamination from the total sampling, sample preparation, and measurement process when decontaminated sampling equipment is used to collect groundwater samples. No analytes were identified in the equipment blanks collected during the first and second quarter 2017 monitoring events.

**Trip Blank.** A trip blank is a sample of analyte free water that is taken from the laboratory to the sampling site and transported back to the laboratory without having been exposed to sampling procedures. Trip blanks assess contamination introduced during shipping and field-handling activities. A trip blank was not analyzed for the first and second quarter 2017 monitoring event.

**Conclusion.** In conclusion, the overall QA objectives have been met, and the data are of adequate quality for use in this project.

RE: Project: NuStar Vancouver GWM  
Pace Project No.: 1285102

Dear Stephanie Bosze-Salisbury:

Enclosed are the analytical results for sample(s) received by the laboratory on April 04, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

The analysis for methane, ethane, and ethene by method RSK 175, could not be completed within hold time. The data will be compared against historical values, and is considered to be represesentable for this purpose.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Scott M Forbes

## QUALIFIERS

Project: NuStar Vancouver GWM

Pace Project No.: 1285102

---

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### LABORATORIES

PASI-DAV Pace Analytical Services - Davis

PASI-M Pace Analytical Services - Minneapolis

PASI-N Pace Analytical Services - New Orleans

### BATCH QUALIFIERS

Batch: 110023

- [1] Field preservation was insufficient for samples 1285102002 and 1285102011. Analysis conducted outside the recognized method holding time.
- [2] The recovery of the second source standard used to verify the initial calibration curve for Bromomethane is outside the laboratory's control limits. The Bromomethane result is estimated.

Batch: 110090

- [1] The recovery of the second source standard used to verify the initial calibration curve for Bromomethane is outside the laboratory's control limits. The Bromomethane result is estimated.

### ANALYTE QUALIFIERS

E Analyte concentration exceeded the calibration range. The reported result is estimated.

R1 RPD value was outside control limits.

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

## Qualifiers

### Air - GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.

## Glossary

### Abbreviation **These commonly used abbreviations may or may not be present in this report.**

<input checked="" type="checkbox"/>	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

# Case Narrative

Client: Apex Companies LLC  
Project/Site: NuStar Vapor REM

TestAmerica Job ID: 320-25383-1

## Job ID: 320-25383-1

### Laboratory: TestAmerica Sacramento

#### Narrative

#### Job Narrative 320-25383-1

#### Comments

No additional comments.

#### Receipt

The samples were received on 1/31/2017 10:00 AM; the samples arrived in good condition, properly preserved and, where required, on ice.

#### Air - GC/MS VOA

Method(s) TO-15: The laboratory control sample duplicate (LCSD) for analytical batch 320-148872 recovered outside control limits for the following analytes: Benzyl chloride. These analytes were biased high in the LCSD and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Detection Summary

Client: Apex Companies LLC  
Project/Site: NuStar Vapor REM

TestAmerica Job ID: 320-25383-1

**Client Sample ID: SVE\_South\_PreCarbon\_013017**

**Lab Sample ID: 320-25383-1**

Analyte	Result	Qualifier	RL	MDL	Unit	Dil Fac	D	Method	Prep Type
cis-1,2-Dichloroethene	170		87		ppb v/v	217		TO-15	Total/NA
Tetrachloroethene	8900		87		ppb v/v	217		TO-15	Total/NA

## Login Sample Receipt Checklist

Client: Apex Companies LLC

Job Number: 320-25383-1

**Login Number:** 25383

**List Source:** TestAmerica Sacramento

**List Number:** 1

**Creator:** Nelson, Kym D

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	N/A	
Cooler Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

TestAmerica Job ID: 320-26384-1

## Glossary

**Abbreviation** These commonly used abbreviations may or may not be present in this report.

□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

# Case Narrative

TestAmerica Job ID: 320-26384-1

## Job ID: 320-26384-1

### Laboratory: TestAmerica Sacramento

#### Narrative

#### Receipt

The sample was received on 3/8/2017 9:30 AM; the sample arrived in good condition.

#### Air - GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Login Sample Receipt Checklist

Client: Apex Companies LLC

Job Number: 320-26384-1

**Login Number:** 26384

**List Source:** TestAmerica Sacramento

**List Number:** 1

**Creator:** Nelson, Kym D

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	N/A	
Cooler Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

TestAmerica Job ID: 320-27201-1

## Qualifiers

### Air - GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
D	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

# Case Narrative

Client: Apex Companies LLC

Project/Site: NuStar Vancouver REM

TestAmerica Job ID: 320-27201-1

## Job ID: 320-27201-1

### Laboratory: TestAmerica Sacramento

#### Narrative

#### Receipt

The sample was received on 4/5/2017 10:00 AM; the sample arrived in good condition, properly preserved and, where required, on ice.

#### Air - GC/MS VOA

Method(s) TO-15: The following analyte recovered outside control limits for the LCSD associated with analytical batch 320-160049: Vinyl acetate. This is not indicative of a systematic control problem because these were random marginal exceedances. Qualified results have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

#### VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

# Detection Summary

**Creator:** Nelson, Kym D

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	N/A	
Cooler Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

## Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.	1
%	Listed under the "D" column to designate that the result is reported on a dry weight basis	2
%R	Percent Recovery	3
CFL	Contains Free Liquid	4
CNF	Contains No Free Liquid	5
DER	Duplicate Error Ratio (normalized absolute difference)	6
Dil Fac	Dilution Factor	7
DL	Detection Limit (DoD/DOE)	8
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample	9
DLC	Decision Level Concentration (Radiochemistry)	10
EDL	Estimated Detection Limit (Dioxin)	11
LOD	Limit of Detection (DoD/DOE)	12
LOQ	Limit of Quantitation (DoD/DOE)	13
MDA	Minimum Detectable Activity (Radiochemistry)	14
MDC	Minimum Detectable Concentration (Radiochemistry)	15
MDL	Method Detection Limit	16
ML	Minimum Level (Dioxin)	
NC	Not Calculated	
ND	Not Detected at the reporting limit (or MDL or EDL if shown)	
PQL	Practical Quantitation Limit	
QC	Quality Control	
RER	Relative Error Ratio (Radiochemistry)	
RL	Reporting Limit or Requested Limit (Radiochemistry)	
RPD	Relative Percent Difference, a measure of the relative difference between two points	
TEF	Toxicity Equivalent Factor (Dioxin)	
TEQ	Toxicity Equivalent Quotient (Dioxin)	

# Case Narrative

Project/Site: NuStar Vapor Testing

TestAmerica Job ID: 320-27847-1

## Job ID: 320-27847-1

### Laboratory: TestAmerica Sacramento

#### Narrative

#### Receipt

The sample was received on 5/1/2017 9:00 AM; the sample arrived in good condition, properly preserved and, where required, on ice.

#### Air - GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

#### VOA Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

## Login Sample Receipt Checklist

Client: Apex Companies LLC

Job Number: 320-27847-1

**Login Number:** 27847

**List Source:** TestAmerica Sacramento

**List Number:** 1

**Creator:** Nelson, Kym D

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	N/A	
Sample custody seals, if present, are intact.	N/A	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	N/A	
Cooler Temperature is acceptable.	N/A	
Cooler Temperature is recorded.	N/A	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	N/A	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

RE: Project: NuStar Vancouver GWM  
Pace Project No.: 1289722

Dear Stephanie Bosze-Salisbury:

Enclosed are the analytical results for sample(s) received by the laboratory on June 16, 2017. The results relate only to the samples included in this report. Results reported herein conform to the most current, applicable TNI/NELAC standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Scott M Forbes

### DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to dilution of the sample aliquot.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine decomposes to and cannot be separated from Azobenzene using Method 8270. The result for each analyte is a combined concentration.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

### LABORATORIES

PASI-DAV Pace Analytical Services - Davis

PASI-V Pace Analytical Services - Virginia

### BATCH QUALIFIERS

Batch: 117005

[1] Samples 10392389007, 10392389008, 10392389009 were decanted prior to analysis due to levels of sediment in the sample containers.

Batch: 117047

[1] The continuing calibration for Dichlorodifluoromethane, Dichlorofluoromethane, Chloromethane, Vinyl Chloride, Bromomethane, Chloroethane, Trichlorofluoromethane, 2-Hexanone, and Naphthalene is outside of Pace Analytical acceptance limits. The results for the listed analytes may be biased high.

[2] Results for samples 1289722004 and 1289722005 are from a previously used sample container.

### ANALYTE QUALIFIERS

D6 The precision between the sample and sample duplicate exceeded laboratory control limits.

E Analyte concentration exceeded the calibration range. The reported result is estimated.

L1 Analyte recovery in the laboratory control sample (LCS) was above QC limits. Results for this analyte in associated samples may be biased high.

M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.

M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.

M6 Matrix spike and Matrix spike duplicate recovery not evaluated against control limits due to sample dilution.

R1 RPD value was outside control limits.
