RE: Underground Storage Tanks - Abandonment
ARCO ampm Fueling Facility
13948 N.E. 20th Street, Bellevue, WA 98005
ARCO Fac. No. TBD / Our Job No. 18235

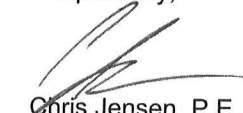

Dear Chris:

On behalf of BP West Coast Products LLC, Barghausen Consulting Engineers, Inc. is submitting the following letter detailing the specific reasons that require the existing Underground Storage Tanks (USTs) at the above referenced location be decommissioned and abandoned in place rather than removed from the ground.

Regarding the Fuel System Replacement Project at the ARCO am/pm location listed above, it is necessary for the three (3) existing USTs at the project site closest to the building to be decommissioned and abandoned in place. It may also be necessary to abandon in place the fourth tank at the project site, depending on the conditions of the site. The location of the tanks is too close to the existing building for safe removal of the tanks. It is not known if the proper structural shoring is located underground to prevent damage to the existing buildings/structures which could occur if the tanks were removed from the ground. We have applied for and received a permit from the City of Bellevue Fire Department for UST tank decommissioning; the Permit Number is 18 112018 FR.

Should you need more information or require additional materials for your review, please contact me at cjensen@barghausen.com or (425) 251-6222. Thank you for your attention to this matter.

Respectfully,

Chris Jensen, P.E.
Senior Project Engineer
