Comments:

Chris,

Enclosed is the electronic copy of the Phase II Environmental Site Assessment for the Pacific Right Bank Levee Setback Project.

If you have any questions or require anything further, please don't hesitate to contact me at 206-695-6704.

Thank you for allowing Shannon & Wilson to assist with this project.

Regards,

-Ed

EXECUTIVE SUMMARY

Shannon & Wilson, Inc. (S&W) has completed a Phase II Environmental Site Assessment (ESA) for the proposed Pacific Right Bank Levee Setback Project (Site) located at 600 3rd Avenue SE in the city of Pacific, Washington. The assessment was conducted for the King County River and Floodplain Management Section, Water and Land Resources Division in support of the Pacific Right Bank Levee Setback Project.

The Site is approximately 43 acres and is located in a residential area along the right (western) bank of the White River in Pacific, Washington, at 600 3rd Avenue SE. The Site is owned by King County and is leased to the City of Pacific for use as a park that is closed for flood control from about October to March.

The objective of this Phase II ESA was to evaluate the recognized environmental conditions (RECs) identified during the Phase I ESA (S&W, 2015a). Field activities were performed as described in the Phase II ESA Work Plan (S&W, 2015b) dated June 2015.

The Phase II ESA tasks include soil sampling and analysis from 28 geoprosbes (GP-1-15 through GP-22-15 and MW-1-15 through MW-6-15) and test pit explorations (TP-1-15 through TP-4-15), and groundwater sampling and analysis from three geoprosbes (GP-12-15, GP-13-15, and GP-21-15) and six monitoring wells (MW-1-15 through MW-6-15). Geoprobe and monitoring well locations were chosen based on the review of historical records of the Site and through an evaluation of historical aerial photographs.

Shallow and deep soil samples were collected from each geoprobe location. Soil samples collected from the geoprosbes and test pits were analyzed for petroleum hydrocarbons (gasoline, diesel, and oil ranges); total Resource Conservation and Recovery Act (RCRA)-8 metals; volatile organic compounds (VOCs); semi-volatile organic compounds (SVOCs); polynuclear aromatic hydrocarbons (PAHs); herbicides; and pesticides. Follow-up analyses based on initial soil sampling results included polychlorinated biphenyls (PCBs) and toxicity characterization leachate procedure.

Groundwater samples collected from the geoprosbes and monitoring wells were analyzed for petroleum hydrocarbons (gasoline, diesel, and oil ranges), total and dissolved priority pollutant metals, VOCs, SVOCs, and PAHs.

A total of 64 soil samples were analyzed during the Phase II ESA work. Thirty-four (34) percent of the soil samples, or 22 of the 64 samples analyzed, detected chemicals in excess of the Model Toxics Control Act (MTCA) cleanup criteria (Ecology, 2013). The contaminants detected in the

analyzed shallow and deep samples include gas, diesel, and lube oil-range petroleum hydrocarbons, PAHs, metals and low concentrations of herbicides and pesticides. The majority of the cleanup criteria exceedances were SVOCs and, in particular, PAHs. Exceedances of the PAHs cleanup criteria were present in both shallow and deep samples. Metals were also identified in excess of the cleanup criteria. The majority of the cleanup criteria exceedances for metals were identified in the analyzed shallow samples. Petroleum hydrocarbons were also detected in excess of the MTCA cleanup criteria in two samples: one in the northern and one in the southern portions of the Site. Low concentrations of herbicides and pesticides were also identified in the northern and southern portions of the Site.

A total of 13 groundwater samples were analyzed for the Phase II ESA work. Contaminants that were detected include lube oil-range petroleum hydrocarbons and metals. Of these detections, total and dissolved arsenic and total cadmium and lead were in excess of the MTCA cleanup criteria.

Based on the results of the soil samples collected during the Phase II ESA investigative fieldwork, contaminated soils will likely be encountered during excavation activities for the levee setback project. Contaminated soils will need to be handled and disposed of in compliance with state, federal, and local regulations pertaining to worker health and safety, environmental protection, and landfill treatment and disposal. Characterization for soil disposal was estimated based on the results of the soil samples analyzed and the comparison of those results to the correlating regulatory cleanup criteria. Soil volumes for disposal purposes were estimated based on a grid system overlay for soil sample locations. The estimated total volume of soil contained within the grids is 336,000 cubic yards with 156,000 estimated in the shallow zone and 180,000 estimated in the deep zone. Of the total estimated soil volume, 30 percent (%) is clean and can be disposed of at an inert or Non-RCRA landfill, 24% is Category II/III and will require disposal at an inert facility or RCRA Subtitle D landfill, 42% is Problem Waste and will require disposal at an RCRA Subtitle D landfill, and 2% is considered Dangerous Waste and will require disposal at an RCRA Subtitle C landfill.

Under the strictest interpretation of Washington Administrative Code 173-340, the Site could be viewed as having a reportable release. However, the Site was closed prior to 1972 and at the time, was under jurisdiction of the Public Health - Seattle and King County and not subject to monitoring requirements, provided that it does not pose a threat to human health and/or the environment. Although contaminants were identified in soil in excess of the regulatory cleanup criteria, these contaminants appear to be confined to the landfill and do not appear to pose a threat to the public given the current land use. Groundwater contamination appears to be largely an artifact of the probe sampling approach, which usually results in more turbid samples and is

not likely an indication of the presence of a plume. The groundwater contaminant identified in excess of the MTCA cleanup criterion is dissolved arsenic, which is likely a function of the redox conditions associated with the landfill. Elevated concentrations of naturally occurring arsenic are also common in organic-rich soils, which manifest similar redox conditions to a landfill.

In the effort to evaluate potential off-site impacts, we recommend off-site sediment and pore water sampling along the adjacent White River and in the wetland to the south of the Site. Consideration should also be given to sampling groundwater during the wet season to determine if the current results are representative of the site or if the increase in groundwater elevation increases the potential contaminant loading to groundwater. We also recommend groundwater sampling of the on-site monitoring wells throughout the year to evaluate seasonal influences on groundwater chemistry and to further evaluate seasonal groundwater flow direction.

**PHASE II ENVIRONMENTAL SITE ASSESSMENT
PACIFIC RIGHT BANK LEVEE SETBACK PROJECT
PACIFIC, WASHINGTON**

1.0 INTRODUCTION

Shannon & Wilson, Inc. (S&W) has completed a Phase II Environmental Site Assessment (ESA) for the Pacific Park property (Site) located along the west (right) bank of the Lower White River in the City of Pacific, Washington (Figure 1). This Phase II ESA was prepared in accordance with our scope of work for environmental services dated September 11, 2015. Authorization to proceed was received on September 28, 2015, in the form of the signed Amendment 2 to the Professional Services Agreement under the King County Contract No. E00201E10, Work Order E00201-11.

1.1 Purpose of Phase II Environmental Site Assessment (ESA)

The purpose of this Phase II ESA was to evaluate the recognized environmental conditions (RECs) identified during the Phase I ESA (S&W, 2015a). It was also intended to help guide the decision-making process for the design and construction of the proposed Pacific Right Bank Levee Setback project. This Phase II ESA provides disposal characterization assistance through the identification of contaminated soil and groundwater.

1.2 Scope of Services

The scope of services included the following tasks:

- Preparation of a Phase II Work Plan.
- Advancement of 22 geoprobe explorations (GP-1-15 through GP-22-15) to document subsurface materials and to collect soil and groundwater samples for chemical analysis.
- Advancement of six geoprobe explorations (MW-1-15 through MW-6-15) to install monitoring wells and to collect groundwater samples for chemical analysis.
- Completion of four test pit explorations (TP-1-15 through TP-4-15) to observe and document subsurface conditions and materials.
- Analysis of up to two soil samples from each geoprobe exploration.
- Well development of six monitoring wells (MW-1-15 through MW-6-15).
- Sampling of groundwater from each monitoring well (MW-1-15 through MW-6-15) for chemical analysis.

- Sampling of groundwater from three geoprobe explorations for chemical analysis (GP-12-15, GP-13-15, and GP-21-15).
- Preparation of this Phase II ESA report.

2.0 PREVIOUS STUDIES

2.1 Abandoned Landfill in King County, 1985

An Abandoned Landfill Study was conducted by the Seattle-King County Health Department in 1985 on 20 sites in King County to determine if there were any public health problems associated with these sites (Seattle King County Department of Health, 1985). The study involved research of geographical and historical data to help guide sampling efforts at the abandoned dumpsites. The sampling efforts consisted of a survey screening of methane and non-specific organics/inorganics and water quality parameters of conductivity, dissolved oxygen, pH, turbidity, and temperature. In the event the initial screening survey revealed any environmental issues, funds would be allocated for additional work.

In October 1984, fifteen boreholes were advanced at the Pacific City Park and methane and non-specific trace gas concentrations were recorded. Water quality measurements were recorded at a sample location along the southeast perimeter of the site on the right bank of the White River. According to the report, low concentrations of methane were observed throughout the Site with the highest being 0.4 percent. Non-specific trace gas levels were also low with the exception of 5.6 parts per million in one location. A water sample tested for water quality parameters was determined to not be indicative of leachate.

The report indicated that a refuse dump was located in the area of the present-day Pacific City Park according to maps dated as early as 1921 and possibly in 1914. There was no information regarding the use or type of waste disposed in available records. The report indicates that individuals who remember the operation of the dumpsite recall that it was 10 to 12 feet deep. The toe of the fill bordered the river and most of the refuse was burned.

2.2 Geotechnical Evaluation Report

A geotechnical evaluation of the adjoining parcel to the northeast of the subject property in support of a proposed new mobile home was conducted in 2008 (E3RA, 2008). Three test pits were excavated on the site to a maximum depth of 10.5 feet. Test pit logs of the subsurface reveal the presence of fill material mixed with solid waste consisting of pieces of concrete, wood, shards of glass and china, and bits of metal debris to an approximate depth of 5 feet below ground surface (bgs).

2.3 Memorandum for Stormwater Quality Sampling Results from the Pacific Right Bank Wetland

In 2010 and 2011, King County collected stormwater samples from locations within the vicinity of the Pacific City Park (King County, 2015). The purpose of the stormwater sampling was to determine if the quality of stormwater entering the wetland to the south posed a concern for aquatic life and to determine if the water quality of the wetland indicated an impact from the subject property. Baseline and storm event surface water samples were collected at three separate locations. The sample to characterize stormwater entering the wetland was collected at the western boundary of the park, within the vicinity of the driveway for the apartments at the end of 4th Avenue SE. The samples collected to characterize the wetland were located in the wetland, south of the Site. In addition, field parameters were also collected consisting of dissolved oxygen, pH, water temperature, turbidity, and conductivity.

Stormwater samples were analyzed under U.S. Environmental Protection Agency (EPA) method 8270D for semi-volatile organic compounds (SVOCs); EPA method 8260C for volatile organic compounds (VOCs); EPA method 200.8 for metals; EPA method 351.2 for Kjeldahl nitrogen, phosphorous, and orthophosphate phosphorus; and EPA method 8151A for chlorinated herbicides. Samples had detections of nitrogen, various metals, SVOCs, and VOCs.

2.4 Phase I Environmental Site Assessment (ESA) Results

S&W conducted a Phase I ESA in May of 2015 for the Pacific City Park Site (S&W, 2015a). The following recognized environmental conditions (RECs) have been identified in connection with the Site:

- **Indiscriminate Dumping:** According to the review of historical records, previous reports, and historic aerial photographs, the Site was previously used as a dumpsite prior to it being the current Pacific City Park. It is likely that indiscriminate dumping occurred on the property, as no records have been located that document dumpsite activities.
- **Undocumented Fill:** Based on the comparison between historical survey data and historical aerial photographs for the Site and current elevations and ground conditions, it is likely that portions of the Site were filled after it was converted to a park. There are no available records documenting the placement or source of this fill.
- **Use of Pesticides/Herbicides:** According to the review of early maps and documents prior to development, the adjacent properties contained orchards and were used primarily for agriculture. It is likely that surface water runoff impacted by the use of pesticides and/or herbicides drained to low-lying areas on the northern portion of the Site, potentially impacting soil and/or groundwater.

- **Potential Presence of Treated Wood:** A review of a series of historical photos revealed the use of wood for structures associated with riverbank stabilization and river channelization efforts conducted during the early 1900s. There is the potential that the wood used for these efforts was treated. In addition to the wood used for riverbank stabilization, there is the potential that treated wood was also used in the construction of the former Northern Pacific Railroad Bridge that was located approximately 1,500 feet upstream to the northeast of the subject property. There is the potential for treated wood to be present on the Site from dumping activities related to bank stabilization and the railroad.

2.5 Cultural Resources Literature Review, 2014

In May 2014, a cultural resources literature review for the proposed Pacific Right Bank Levee Setback Project was conducted by Environmental Science Associates (Environmental Science Associates, 2014). This review was conducted to identify the presence of properties, and structures with potential cultural resources significance within the project area. Based on the review of cultural and environmental documents, there is a high potential for subsurface precontact archaeological resources to be encountered within the project area. The literature review also revealed the very high potential for historic archaeological resources to be present within the project area. The existing White River Right Bank Levee and associated revetment are aboveground historic properties. There is the potential for cultural resources associated with the construction of the levee and revetment to be present. The buried remains of the abandoned landfill and archaeological resources related to agriculture are also expected to be present within the project area.

2.6 Pacific Park Archaeological Memo, November 2015 Draft

Based on the high potential for cultural resources and the very high potential for historic archaeological resources to be present within the project area, Environmental Science Associates conducted archaeological monitoring on September 23, 2015, during the Phase II Environmental Site Assessment field exploration test pits (Environmental Science Associates, 2015). These explorations were conducted for the purpose of documenting environmental conditions and identifying the presence and extent of potential refuse material. Refuse material associated with the abandoned Pacific City dumpsite was encountered and recorded as a historic archaeological site (45-KI-1258). Environmental Science Associates conducted supplemental historic background research related to the Pacific City dumpsite. According to the evaluation of potential eligibility under the federal criteria, Environmental Science Associates recommended archaeological site 45-KI-1258 not eligible for inclusion on the National Register of Historic Places.

3.0 BACKGROUND

3.1 Site Description

The Site is 43 acres and is located in a residential area along the right bank of the White River in Pacific, Washington, at 600 3rd Avenue SE. The Site is currently a park that is closed for flood protection purposes from about October to March.

The Site is approximately 2,000 feet north of the King/Pierce County line. The property is relatively flat. Contours on the U.S. Geological Survey (USGS) topographic map (Auburn Quadrangle) indicate that the ground surface elevation is approximately 79 to 87 feet (NAVD88).

3.2 Site History

King County has owned the property since 1921. Historical records and maps indicate that the subject property was used as a dumpsite as early as the 1920s or possibly earlier. The site was closed for use as a city dump in 1965 and it stayed abandoned until the early 1970s. King County leased the subject property to the City of Pacific for use as a park that was opened and dedicated in 1972.

The subject property is located in an area that has historically been agricultural and has historically been, and is still, prone to frequent flooding by the White River. According to historical photos and maps, flood-control measures were taken that included the construction of a concrete revetment and the rechanneling of the former Stuck River.

4.0 GEOLOGIC AND HYDROGEOLOGIC SETTING

This section describes the general geologic setting of the site vicinity and discusses the subsurface conditions. The geologic and hydrogeologic summaries below are based on a review of previous explorations logs and S&W's environmental explorations conducted at the Site.

4.1 Geologic Setting

Geologists generally agree that the Puget Lowland area has been subjected to six or more major glaciations during the Pleistocene Epoch (2 million years to about 10,000 years ago). The ice sheet of each glaciation overrode and compacted (overconsolidated) underlying soils to a very dense or hard state. During the most recent ice coverage of the central Puget Lowland (Vashon Stade of Fraser Glaciation), the thickness of ice is estimated to have been about 3,000 feet at the Site. The last ice covering the Site receded about 13,500 years ago, leaving a landscape sculpted

into a series of north-trending ridges and valleys. These deep valleys were partially or completely filled with recessional glacial deposits and recent Holocene deposits. As the last ice sheet retreated, sea level changed as a result of isostatic readjustment of the land and rising water levels from the melting of ice worldwide. During the last recession, sea level was considerably lower than the present sea level and did not reach equilibrium at present levels until about 5,000 years ago.

Subsequent to glaciation, a series of lahars and mudflows associated with volcanism from Mt. Rainier occurred which contributed to the deposition of sediments in the White River valley. The most significant of these volcanic events was the Osceola mudflow that diverted the White River and initiated the deposition of the White River alluvial fan. During the Sumerland age volcanism approximately 2,500 years ago, the White and Green Rivers extended 20 miles north to Elliott Bay. During a large flood that occurred in 1906, the White River was re-diverted to the south and avulsed to the Stuck River.

The Geologic Map of the Auburn 1:24,000 Quadrangle (Mullineaux, 1965) maps the site as artificial fill (af) with the surrounding area as alluvium (Qaw). The map indicates that the alluvium consists of mostly gravel and sand deposits of the White River and boulder cobble and pebble-cobble gravel and sand in the White River valley.

The USGS topographic map (Auburn Quadrangle) indicates that the general topography of the White River valley slopes toward the south or southwest. The U.S. Department of Agriculture Soil Conservation Service, "Soil Survey of King County Area Washington," (1973) indicates that the predominant soil at the site is map as follows:

- Oridia silt loam with surface slopes less than 2 percent consisting of silt loam to a depth of approximately 42 inches with an underlying layer of silty clay loam. Oridia silt loam has very slow infiltration rates with a high water table.
- Mixed alluvial land with surface slopes less than 2 percent consisting of a variety of alluvial soils from sand and gravelly sand to silty clay loam. Mixed alluvial land soil is well drained and has generally low infiltration rates with a high water table.
- Puyallup fine sandy loam with surface slopes less than 2 percent consisting of fine sandy and very fine sandy loam to approximately 34 inches, with an underlying layer of medium sand, loamy sand, and sand.

A geotechnical evaluation was conducted on the adjoining northeast residential parcel (E3RA, 2008). Test pits were performed as part of the geotechnical evaluation to characterize the subsurface. Test pit logs from this report reveal the upper 1 to 5 feet bgs being roadway ballast consisting of cobbles with some sand and gravel. Bits of inert trash consisting of shards

of glass and china, and bits of metal debris were mixed in with the ballast and fill. Underlying the fill material from approximately 5 to 8 feet bgs was alluvium consisting of loose, moist to wet gravelly sand with some silt was encountered. Underlying the sandy alluvium was gravelly alluvium with trace silt was encountered. According to the report, rapid groundwater flow was observed at 9 to 9.5 feet bgs in two of the three test pits.

4.2 Site Geology

Soil classifications during the environmental explorations were based on field observations alone. Geotechnical analyses of soils were not conducted for this Site. Soil descriptions are presented in the exploration geoprobe and test pit logs in Appendix A.

Fill material was encountered in each of the geoprobe explorations across the Site. Fill material was identified based on soil with a disturbed appearance and from the presence of unnatural debris such as glass shards and bottles, brick, cement, organics, wood, paper, rubber, and ceramic. Fill consisted of gravelly silt, silty sand, and sandy gravel to gravelly sand. Based on observations from the geoprosbes and test pit explorations, fill is generally 2 to 12 feet thick across the Site, with fill being thicker in the central/south central portion of the Site.

The fill is underlain by alluvial overbank deposits consisting mostly of poorly graded sand with gravel to sandy gravel interbedded with backwater lacustrine deposits consisting of silt with organics and interbeds of silty sand. Alluvium and lacustrine deposits were encountered from 2 to 12 feet bgs. Large cobbles to small boulders were not observed in the geoprobe explorations due to sampler size limitations, but were encountered in the test pit explorations. Fill material and alluvial deposits were loose, causing caving and collapse that limited excavation depths in some of the test pits. Loose soils and refuse debris limited the recovery of the geoprobe core samples at some locations.

4.3 Hydrogeologic Setting

The Site is located on the right bank of the White River. Lidar indicates low-flow water surface of the White River ranging from 76 to 82 feet (NAVD88).

Information regarding groundwater depth and flow data was obtained from several sources. Logs of registered wells within approximately one-half mile of the site were obtained from the Washington State Department of Ecology (Ecology) web page (Ecology, 2015). Well logs indicate that groundwater in the site vicinity has been encountered in wells between 5 and 7 feet bgs. According to the geotechnical subsurface investigations conducted on the northeast

adjacent parcel, rapid groundwater flow was observed at 9 to 9.5 feet below surface during test pit excavation activity (E3RA, 2008).

According to the a regional groundwater piezometric surface map contained in the, “Occurrence and Quality of Ground Water in Southwestern King County, Washington,” USGS Water-Resources Investigations Report 92-4098 (Woodward and others, 1995) groundwater flow direction in general, is south-to-southeasterly toward the White River.

The Water-Supply Bulletin No. 28, “Geology and Ground-Water Resources of Southwestern King County, Washington,” (Luzier, 1969) indicates a general groundwater flow direction towards the south-southeast with groundwater elevation within the vicinity of the site at 75 to 80 feet (NAVD88).

According to a report conducted by S&W (2014) for a site located approximately 2,000 feet to the southeast and on the left bank of the White River, groundwater flow direction has a fluctuation that is affected by river stage. Groundwater flow direction changes from a southerly direction in the dry season to a southeasterly direction in the wet season. Based on the proximity of the study area to the subject property, it is likely that similar groundwater conditions exist at the subject property.

Based on the data reviewed, it appears that the depth to groundwater is approximately 5 to 9.5 feet bgs in the vicinity of the site, and that groundwater flow direction is toward the south or southeast. On a local scale, the depth to groundwater and flow direction may vary from the regional depth to groundwater and flow direction based on river stage and seasonal groundwater fluctuations.

4.4 Site Hydrogeology

Groundwater was encountered in each of the geoprobe and test pit explorations with the exception of the southernmost test pit and geoprobe GP-22-15 that was advanced to characterize the soil mounds in the southern portion of the site. Groundwater depths ranged from 4 to 9 feet bgs. In general, groundwater was encountered between 4 and 6 feet bgs, with deeper groundwater depths encountered in areas of higher relief, such as explorations located on the existing levee and in terraced fill areas in the southern portion of the Site.

Groundwater observed in test pits was rapid flowing, causing caving and collapse that limited the excavation with the exception of the southernmost test pit. Soils with generally high-permeability were observed in the test pits, which facilitated a rapid movement of groundwater into the excavation.

5.0 FIELD EXPLORATIONS

S&W developed a Phase II ESA Work Plan (S&W, 2015b) that outlines soil and groundwater sampling protocols for geoprosbes and monitoring wells to investigate RECs identified in the Phase I ESA. The results of the geoprobe soil and groundwater samples, and monitoring well samples are summarized below. A summary of the field explorations and analytical testing are presented in Table 1.

5.1 Locations Rationale

S&W observed the completion of 28 geoprosbes, the installation of 6 monitoring wells in those geoprosbes, and the excavation of 4 test pits (Figure 2). Exploration locations were selected based on the review of historical records of the Site and through an evaluation of historic aerial photographs. Areas where dumping likely occurred, as revealed on historic aerial photographs, were targeted for geoprobe and test pit explorations (Figure 3). Exploration locations were also selected in the effort to obtain a general site-wide characterization of environmental conditions.

5.2 Sampling Activities

Soil and groundwater samples were collected to address RECs identified in the Phase I ESA, to generally characterize site-wide environmental conditions, and to assist with planning for potential handling and disposal. Prior to conducting the field explorations, pre-sampling preparation work was completed as outlined in the Work Plan. Soil and groundwater samples were collected in general accordance with the Work Plan.

Environmental Services Northwest, under subcontract to S&W, completed geoprosbes GP-1-15 through GP-11-15 on September 17, 2015; GP-12-15 and monitoring wells MW-1-15, MW-2-15, and MW-3-15 on September 18, 2015; GP-13-15 through GP-21-15 on September 21, 2015; and GP-22-15 and monitoring wells MW-4-15, MW-5-15, and MW-6-15 on September 22, 2015. Kelly's Excavating Inc., under subcontract to S&W, completed test pits TP-1-15 through TP-4-15 on September 23, 2015. Monitoring wells MW-1-15 through MW-6-15 were sampled on October 5 and 6, 2015. An S&W field representative was joined by a King County representative to observe the geoprosbes, monitoring well installations, and test pit excavations. A King County representative was also onsite to observe S&W conduct the groundwater sampling of the monitoring wells that occurred on October 5 and 6, 2015.

A total of 64 soil and 13 groundwater samples were collected from the environmental explorations in general accordance with our Work Plan. Of the 64 soil samples, 62 were collected from the geoprobe explorations, and two were collected from the test pits excavations.

Of the 13 groundwater samples, 7 were collected from temporary geoprobe wells and 6 were collected from the monitoring wells.

5.2.1 Geoprobe Soil Sampling

Two soil samples were collected from each geoprobe. In general, one soil sample was collected from the upper 0 to 5 feet bgs or at the groundwater interface, and a second sample was collected in the lower 10 to 15 feet bgs. Select samples were collected below the 0 to 5 feet groundwater interface zone based on field observations indicating the presence of refuse material and/or indications of contamination. Geoprosbes were advanced to a target depth of 15 feet bgs with the exception of GP-3-15, where poor recovery warranted advancement to 19 feet bgs. Soil samples were collected in general accordance with the Work Plan.

5.2.2 Geoprobe Groundwater Sampling

A total of three groundwater samples were collected from the geoprosbes, and four were collected from the monitoring wells. Groundwater samples were collected from a temporary screen installed in the open hole once the targeted depth was reached in the geoprobe. Additional groundwater samples were collected from the permanent monitoring wells at a later date that is discussed below. Groundwater was encountered in each of the geoprosbes advanced at the Site, with the exception of GP-22-15 that was used to characterize the above-ground debris mounds in the southern portion of the Site.

5.2.3 Monitoring Well Groundwater Sampling

Groundwater samples were collected from each of the six monitoring wells after well development had occurred. The groundwater samples were collected in general accordance with the Work Plan.

5.2.4 Pressure Transducers

Pressure transducers were installed in MW-1-15, MW-3-15, MW-4-15, MW-5-15, and MW-6-15. A barologger was installed after well development in one of the wells to account for atmospheric pressure compensation and was removed during the groundwater sampling event. Pressure transducers were installed for King County to record future groundwater elevations and to evaluate seasonal groundwater elevations and flow direction. Groundwater elevations are presented in Figure 7 and reflect data from October 2 through 6, 2015.

5.3 Investigation-derived Waste (IDW)

IDW generated during sampling included soil cuttings, decontamination fluids, purge water, used personal protection equipment (PPE), and disposable sampling equipment. Soil cuttings, decontamination fluids, and purge water were contained in labeled Washington State Department of Transportation-approved drums temporarily stored on the northeast corner of the site on the outside of the flood control barrier. PPE and disposable sampling equipment were placed in a plastic bag and disposed as solid waste. Offsite disposal of drums generated from September 2015 activities are pending.

6.0 ANALYTICAL METHODS

Samples were submitted to Fremont Analytical, Inc. in Seattle, Washington, for chemical analysis. Soil and groundwater samples were tested for analytical methods in accordance with the Work Plan. Based on initial results, follow-up analyses on initial soil samples were completed in accordance with the Work Plan.

Soil samples were tested using the following analytical methods:

- Gasoline by Washington State Northwest Total Petroleum Hydrocarbon – Gasoline Range Method (NWTPH-Gx).
- Diesel and oil by Washington State Northwest Total Petroleum Hydrocarbon – Diesel-Range Extended Method (NWTPH-Dx).
 - Follow-up analysis for polychlorinated biphenyls (PCBs) by EPA Method 8082 were conducted based on oil-range petroleum hydrocarbons detections in the soil samples.
- Polycyclic aromatic hydrocarbons (PAHs) by EPA Method 8270D-Selective Ion Monitor (SIM).
- VOCs by EPA Method 8260C.
- Resource Conservation and Recovery Act (RCRA) 8 metals (arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver) by EPA Method 6000/7000 series.
 - Follow-up analysis for metal leachability waste characterization using the Toxicity Characteristic Leachate Procedure (TCLP) by EPA Method 1311/6010B was conducted for metals detections in soil samples with concentrations in excess of the Dangerous Waste Screening Level (i.e., the concentrations exceeds 20 times the Washington State Designation Criteria, Washington Administrative Code (WAC) Chapter 173-303).
- SVOCs by EPA Method 8270/SIM.

- Herbicides by EPA Method 8151A.
- Pesticides by EPA Method 8081B.

Groundwater samples were tested using the following analytical methods:

- Gasoline-range petroleum hydrocarbons using Method NWTPH-Gx.
- Diesel- and oil-range petroleum hydrocarbons using Method NWTPH-Dx with silica gel cleanup.
- Total and dissolved Priority Pollutant metals by EPA Method 6000/7000 series.
- VOCs by EPA Method 8260C.
- PAHs by EPA Method 8310.0.

7.0 QUALITY ASSURANCE/QUALITY CONTROL (QA/QC)

Laboratory QA/QC procedures included analyzing surrogate recoveries, method blanks, laboratory control sample recoveries, matrix spike recoveries, and duplicates. Trip blanks were submitted with groundwater samples intended for VOC testing. Equipment and/or field blanks were not specified for this project.

None of the analyzed parameters, with the exception of silver, were detected in their respective method blanks. In some cases, relative percent difference limits were high due to suspected sample inhomogeneity but the method was in control based on the laboratory control sample results. Several parameters had surrogate, duplicate, and matrix spike recoveries that fell outside of laboratory control limits.

Field duplicates samples for soil were collected from geoprosbes GP-5-15, GP-8-15, GP-14-15, GP-14-17, GP-22-15, and MW-6-15 (ten percent of the total number of soil samples). A field duplicate for groundwater was collected from monitoring well MW-3-15 (14 percent of the total number of groundwater samples). In general, the soil duplicates showed good reproducibility with the exception of the sample from GP-17-15 and MW-6-15 for lube oil-range petroleum hydrocarbons. Due to the inherent variability in contaminants associated with the dumpsite debris, it is not unreasonable to observe poor reproducibility. The groundwater duplicate sample showed good reproducibility.

Based on our review of the QA/QC data and associated issues, the data are acceptable.

8.0 PHYSICAL CONDITIONS

In general, refuse debris was encountered at the shallowest in geoprobe exploration GP-8-15 at 1.5 feet and at the deepest in geoprobe exploration GP-4-15 at 8 feet bgs. The zone of refuse debris that was encountered in the test pits ranged from 1.8 to 6 feet bgs. Given the nature of the poor recovery observed at the site, which is common with the geoprobe sample methodology, the test pit excavations are a more reliable source for estimates of refuse debris thickness at the Site. Refuse debris consisted of glass shards and bottles, brick and wood fragments, cement, organics, newspaper, burnt debris, rubber, ceramic plates, tea/coffee cups, personal items (shoe soles), and general household refuse. The thickness of the fill material in which the refuse debris was encountered generally ranges from about 4 to 10 feet.

In general, the thinnest portion of the cover is approximately 1.5 feet and the thickest portion is approximately 8 feet as identified through the geoprosbes and test pit explorations. Cover material consisted of silty sand with gravel to sandy silt with gravel with scattered organics.

9.0 ANALYTICAL RESULTS

A summary of detected analytical soil results are presented in Table 2. A summary of detected analytical groundwater results are presented in Tables 3 and 4. A toxicity equivalency factor (TEF) analysis of the individual carcinogenic polynuclear aromatic hydrocarbons (cPAHs) constituents in soil is presented in Table 5. The TEF method is used to adjust the concentrations of individual cPAHs such that they are relative in toxicity to benzo(a)pyrene, which is the most carcinogenic of the PAHs. The individual cPAH concentrations are then summed for comparison with the MTCA Method A cleanup criterion for benzo(a)pyrene. Soil and groundwater results are also compared to the MTCA Method A cleanup criterion for the analytes where applicable. Analytical data for shallow and deep soil and groundwater samples are presented in Figures 4 and 5. Analytical laboratory reports are contained in Appendix B.

9.1 Soil Results

Analytical results for soil samples collected from the geoprosbes and monitoring wells are summarized below. The analytical results are presented in Table 2 and displayed in Figure 4.

- Diesel-range petroleum hydrocarbons were detected in 1 of 64 samples analyzed. Sample GP-16-15:8.0 had a detection of 72 milligrams per kilogram (mg/kg), which is below the MTCA Method A cleanup criterion of 2,000 mg/kg.
- Gasoline-range petroleum hydrocarbons were detected in 1 of the 64 samples analyzed. Sample GP-21-15:4.0 had a detection of 3.7 mg/kg, which is below the MTCA Method A cleanup criterion of 2,000 mg/kg.

- Lube oil-range petroleum hydrocarbons were detected in 19 of 64 samples analyzed. The sample collected from GP-10-15:4.5 had a detection of 3,840 mg/kg and the sample from MW-6-15:DUP had a detection of 4,080 mg/kg, both of which exceeded the MTCA Method A cleanup criterion of 2,000 mg/kg.
- Arsenic was detected in each of the 64 samples analyzed. Of these detections, samples GP-3-15:12.5, GP-6-15:7.5, and GP-10-15:4.5 exceeded the MTCA Method A cleanup criterion of 20 mg/kg.
- Barium was detected in 64 of the 64 samples analyzed. Sample detections ranged from 15 to 631 mg/kg. Cleanup criteria for this analyte has not been established.
- Cadmium was detected in 20 of the 64 samples analyzed. Sample detections ranged from 0.19 to 37 mg/kg. Of these detections, samples GP-3-15:12.5, GP-6-15:7.5, GP-10-15:4.5, GP-17-15:DUP, and MW-5-15:5.0 exceeded the MTCA Method A cleanup criterion of 2 mg/kg.
- Chromium was detected in 64 of 64 samples analyzed. Sample detections ranged from 9.6 to 314 mg/kg. The detections are below the MTCA Method A cleanup criterion of 2,000 mg/kg.
- Lead was detected in 64 of the 64 samples analyzed. Sample detections ranged from 1.2 to 3,320 mg/kg. Of these detections, samples GP-3-15:12.5, GP-6-15:7.5, GP-8-15:5.0, GP-10-15:4.5, GP-13-15:4.5, GP-16-15:8.0, and TP-3-15:6.0 exceeded the MTCA cleanup criterion of 250 mg/kg.
- Mercury was detected in 4 of 64 samples analyzed. Sample detections ranged from 0.38 to 9.1 mg/kg. Of these detections, samples GP-6-15:7.5 and GP-7-15:5.0 exceeded the MTCA Method A cleanup criterion of 2 mg/kg.
- Selenium was detected in 63 of 64 samples analyzed. Sample detections ranged from 0.66 to 3.2 mg/kg. A cleanup criterion for this analyte has not been established.
- Silver was detected in 8 of 64 samples analyzed. Sample detections ranged from 0.12 to 2.6 mg/kg. A cleanup criterion for this analyte has not been established.
- Follow-up analyses for metal leachability waste characterization using TCLP was performed on samples with concentrations of arsenic, cadmium, lead, and mercury that exceeded the Dangerous Waste Screening Levels of 100 mg/kg for arsenic and lead, 20 mg/kg for cadmium, and 4 mg/kg for mercury. Of these analyses, cadmium and lead were detected leachable with sample GP-16-15:8.0 for lead being characterized as Dangerous Waste with a concentration of 13 milligrams per liter (mg/L).
- VOCs (tetrachloroethene and methylene chloride) were detected at low concentrations in 3 of 64 samples analyzed. Trichloroethene was detected at low levels in two of the four samples analyzed. Toluene, m,p-Xylene, and p-Isopropyltoluene were detected at low levels in 1 of the 64 samples analyzed. Of these detections, no VOCs exceeded the MTCA Method A cleanup criterion, where established.

- SVOCs were detected in 52 of 64 samples analyzed. Of the detected parameters, only naphthalenes and cPAHs have established cleanup criteria. Naphthalene detections are below the MTCA cleanup criterion of 5 mg/kg. Based on the TEF evaluation for cPAHs (Table 2), 18 of the 51 detections exceeded the MTCA Method A cleanup criterion of 0.1 mg/kg.
- PCBs were analyzed in 14 of the 64 samples based on initial petroleum hydrocarbon concentrations. Of the 14 samples analyzed, 2 were detected. The detections are below the MTCA Method A cleanup criterion of 1 mg/kg.
- Herbicides were detected in 9 of the 64 samples analyzed and pesticides were detected in 3 of the 64 samples analyzed. Cleanup criteria for these analytes have not been established.

9.2 Groundwater Results

Groundwater analytical results from samples collected from the geoprosbes and monitoring wells are summarized below. The analytical results are presented in Tables 3 and 4 and displayed in Figure 5.

- Lube oil-range petroleum hydrocarbons were detected in 1 of the 14 samples analyzed. The sample from GP-21-15:GW had a detections of 171 micrograms per liter ($\mu\text{g/L}$). Gasoline- and diesel-range hydrocarbons were not detected in the samples analyzed.
- Total antimony was detected in 6 of the 14 samples analyzed. Sample detections ranged from 0.21 to 0.41 $\mu\text{g/L}$. Dissolved antimony was detected in 6 of the 14 samples analyzed. Sample detections ranged from 0.33 to 0.78 $\mu\text{g/L}$. A cleanup criterion for this analyte has not been established.
- Total arsenic was detected in each of the 14 samples analyzed. Sample detections ranged from 1.1 to 21 $\mu\text{g/L}$. Of these detections, 8 exceed the MTCA Method A cleanup criteria of 5 $\mu\text{g/L}$. Dissolved arsenic was detected in 11 of the 14 samples analyzed. Sample detections ranged from 1.2 to 9.8 $\mu\text{g/L}$. Of these 11 detections, 2 exceed the MTCA Method A cleanup criterion of 5 $\mu\text{g/L}$.
- Total chromium was detected in 13 of the 14 samples analyzed. Sample detections ranged from 0.52 to 22 $\mu\text{g/L}$. Dissolved chromium was detected in 7 of the 14 samples analyzed. Sample detections ranged from 0.97 to 1.6 $\mu\text{g/L}$. Total and dissolved chromium were detected below the MTCA Method A cleanup criteria of 50 $\mu\text{g/L}$.
- Total beryllium was detected in 5 of the 14 samples analyzed. Sample detections ranged from 0.20 to 0.98 $\mu\text{g/L}$. Dissolved beryllium was not detected in the samples analyzed. A cleanup criterion for this analyte has not been established.
- Total cadmium was detected in 6 of the 14 samples analyzed. Sample detections ranged from 0.20 to 5.3 $\mu\text{g/L}$. Dissolved cadmium was not detected in the samples

analyzed. One of these detections exceeds the MTCA Method A cleanup criterion of 5 µg/L.

- Total copper was detected in 13 of the 14 samples analyzed. Sample detections ranged from 0.83 to 94 µg/L. Dissolved copper was detected in 8 of the 14 samples analyzed. Sample detections ranged from 0.66 to 13 µg/L. The cleanup criterion for this analyte has not been established.
- Total lead was detected in 9 of the 14 samples analyzed. Sample detections ranged from 1.1 to 65 µg/L. Of these 9 detections, 3 exceed the cleanup criterion of 15 µg/L. Dissolved lead was not detected in the samples analyzed.
- Total nickel was detected in 13 of the 14 samples analyzed. Sample detections ranged from 0.76 to 19 µg/L. Dissolved nickel was detected in 13 of the 14 samples analyzed. Sample detections ranged from 0.57 to 4.1 µg/L. A cleanup criterion for this analyte has not been established.
- Total selenium was detected in 7 of the 14 samples analyzed. Sample detections ranged from 1.1 to 5.8 µg/L. Dissolved selenium was detected in 4 of the 14 samples analyzed. Sample detections ranged from 1.1 to 1.8 µg/L. A cleanup criterion for this analyte has not been established.
- Total silver was not detected in the samples analyzed. Dissolved silver was detected in 2 of the 14 samples analyzed. A cleanup criterion for this analyte has not been established.
- Total zinc was detected in 13 of the 14 samples analyzed. Sample detections ranged from 2.7 to 1200 µg/L. Dissolved zinc was detected in 10 of the 14 samples analyzed. Sample detections ranged from 4.3 to 87 µg/L. A cleanup criterion for this analyte has not been established.
- VOCs were detected at low levels in 2 of 14 samples analyzed. Chlorobenzene was detected at 5.7 µg/L in sample MW-4-15:GW and chloromethane was detected at 2 µg/L in sample GP-12-15:GW. Cleanup criteria have not been established for these analytes.

10.0 CONCLUSIONS

This Phase II ESA investigation has revealed contaminants in soil and groundwater in excess of the MTCA regulatory cleanup criterion. These contaminants appear to be confined to the landfill and do not appear to pose a threat to the public based on the current land use. An effort needs to be made to ensure that the public continue to be protected from contaminated soil and groundwater by implementing an operations and maintenance plan that would limit ground disturbance to less than one foot bgs. In the event ground disturbance or excavation work will occur, a plan needs to be in place to outline the handling and disposal of contaminated soil in compliance with federal, state, and local regulations pertaining to worker health and safety, environmental protection, and landfill treatment and disposal. The plan should also include a

site-specific Health and Safety Plan describing monitoring requirements and the use of personal protective equipment for worker protection.

10.1 Soil

Lube oil-range petroleum hydrocarbons are present in the soil at concentrations below the MTCA Method A cleanup criteria with the exception of sample GP-10-15:4.5 and MW-6-15:DUP. Of these two MTCA Method A cleanup criteria exceedances, indications of contamination that include soil staining and hydrocarbon odors were observed at GP-10-15. The majority of detections for petroleum hydrocarbons were present in shallow samples within the groundwater interface (from 3 to 8 feet bgs). Based on the low solubility of heavy range petroleum hydrocarbons and the lower density as compared to water, it is expected that these contaminants would occur at the groundwater interface. Lube oil was detected in samples within relative close proximity to one another in the northeast, central baseball field, and southern portions of the Site. Other detections appear to be random in nature and likely associated with isolated pockets of historical surface spills and leakage from containers dumped at the Site.

In general, VOCs were detected in low concentrations in corresponding samples where petroleum hydrocarbons were also detected. VOCs were detected below MTCA Method A cleanup criteria where established. Tetrachloroethene and trichloroethene were detected in GP-10-15:4.5 and MW-1-15:6.0 above the MTCA Method A cleanup criteria, and tetrachloroethene was detected in GP-7-15:5.0 at concentrations below the MTCA Method A cleanup criteria. These contaminants are commonly associated with solvents and are likely present due to the disposal of automotive related containers such as engine degreasers.

SVOCs are present in the soil at concentrations above and below the MTCA Method A cleanup criteria, where established. Of these SVOCs detected, PAHs appear to be the most common occurring. The occurrence of PAHs across the Site is to be expected based on the fact that refuse debris was burned at the Site and PAHs are commonly associated with burnt debris. PAHs are also associated with treated wood, and it is possible that treated wood was disposed of at the Site. Detections below and above the cleanup criteria for PAHs appear to occur in as many deep as shallow samples.

Metals were detected in each of the samples analyzed, which is a common occurrence, as certain metals are naturally occurring. Arsenic, cadmium, lead, and mercury were detected above the MTCA Method A cleanup criteria. Of these exceedances, lead appears to be the most frequently occurring. TCLP analyses revealed the detection of cadmium in sample GP-6-15:7.5. TCLP lead was detected in samples GP-3-15:12.5, GP-6-15:7.5, GP-10-15:4.5, and GP-16-15:8.0 with

the concentration in sample GP-16-15:8.0 exceeding the Dangerous Waste criterion of 5 mg/L. It is likely that the occurrence of elevated lead at the Site is associated with refuse debris containing lead-based paint and/or other household contaminants. Elevated concentrations of arsenic are common in a reducing environment associated with organic soils that are present at the Site.

The most uniformly identified contaminant at the Site is SVOCs, in particular PAHs. PAHs were found to be the contaminant where the most MTCA Method A cleanup criteria exceedances at the Site were identified. These exceedances were identified in as many shallow as deep samples analyzed. The second most uniformly identified contaminant at the Site is metals. The majority of MTCA cleanup criteria exceedances for metals were identified in shallow soil samples. In general, metals contamination was identified in the shallow samples analyzed. The two exceedances of MTCA cleanup criteria for petroleum hydrocarbons were encountered in the shallow samples analyzed in the northern and southern portions of the Site. In general, low concentrations of herbicides and pesticides appear to be present in the northern and central portions of the site, with the exception of detections at MW-6-15. MTCA cleanup criteria have not been established for herbicides and pesticides.

A total of 64 soil samples were analyzed during the Phase II ESA work. Thirty-four (34) percent of the total soil samples, or 22 of the 64 samples analyzed, were detected in excess of the MTCA cleanup criteria (Ecology, 2013).

10.2 Groundwater

Arsenic, cadmium, and lead are the contaminants that were detected in the groundwater samples in excess of the MTCA Method A cleanup criteria. Arsenic was detected in excess of the cleanup criteria in the total and dissolved analyses in six samples and lead was detected in excess of the cleanup criteria in the total analyses for three samples. It is common that elevated concentrations of metals tend to occur in the total analyses versus the dissolved analyses due to the lack of turbidity, as the dissolved samples are laboratory filtered. In samples of high turbidity, metals that adhere to soil particles elevate concentrations. Elevated metal concentrations associated with high turbidity is also a common occurrence with groundwater samples collected from geoprobe explorations as compared to monitoring wells. In general, metals concentrations at the Site are higher in the samples collected from the geoprosbes.

VOCs were not detected in the groundwater samples analyzed with the exception of chloromethane and chlorobenzene, which were detected in GP-12-15 and MW-4-15, respectively. MTCA Method A cleanup criteria have not been established for these analytes.

Lube oil-range petroleum hydrocarbons were detected below the MTCA Method A cleanup criteria in the groundwater sample collected from geoprobe GP-21-15. Lube oil-range petroleum hydrocarbons were also detected below the cleanup criteria in the shallow soil sample from this same geoprobe.

SVOCs, herbicides, and pesticides were not detected in the groundwater samples analyzed.

11.0 DISPOSAL CHARACTERIZATION

11.1 Soil

Characterization for soil disposal is based on the results of the soil samples analyzed and the comparison of those results to the correlating regulatory cleanup criteria. A site-wide grid was generated in GIS (geographic information systems) using the Thiessen-polygon method, where perpendicular lines equidistant from each geoprobe sampling point were drawn and extrapolated. Boundaries of grid cells were manually adjusted along the perimeter of the site to account for the lack of geoprobe explorations at the perimeter. Estimated soil volumes for each disposal option are based on the dimensions of each grid cell and the depth at which the sample was collected. In general, shallow soil volumes are estimated from samples collected from 0-10 feet bgs and deep soil volumes are estimated from 10-15 feet bgs. Total soil volumes are estimates and are based on the results of the samples analyzed within each disposal characterization grid and do not represent a site-wide characterization of environmental conditions. Due to the variability of contaminants associated with the refuse debris, concentrations of contaminants will likely change within relative close proximity to the location of the sample collected. A map showing a grid-wide representation of the disposal characterization of contaminated soils is presented in Figure 6. A summary of the disposal characterization of contaminated soils is presented in Table 6.

The following section describes soil disposal options that are based on the levels of contamination encountered during the Phase II investigative work. Based on the results of the samples collected during the Phase II ESA investigative fieldwork, contaminated soils will likely be encountered during excavation activities for the levee setback project. Contaminated soils need to be handled and disposed of in compliance with state, federal, and local regulations pertaining to worker health and safety, environmental protection, and landfill treatment and disposal. Contaminated soils identified during the Phase II fieldwork fall into the following categories:

- **Clean:** Soil containing no detectable petroleum hydrocarbons, VOCs, PAHs, or PCBs, and no metals at levels exceeding the MTCA Method A cleanup criteria. (Ecology, 2013)

- **Category II/III Impacted:** Soil containing detectable levels of petroleum hydrocarbons, VOCs, PCBs, PAHs, and/or metals that are below the MTCA Method A cleanup levels, or a pH below 6.5 or above 8.5.
- **Problem Waste:** Soil containing one or more contaminant(s) at concentrations exceeding the MTCA Method A cleanup levels and wood waste, consisting of timbers, sawdust, or other abundant organics.
- **Dangerous Waste:** This category includes a wide range of contaminant-, source-, and concentration-specific criteria designated in WAC 173-303-070 through 173-303-100. For the project area, the most likely types of Dangerous Waste that could be encountered would be soil that leaches lead at greater than 5 mg/L or that contains spent solvents such as trichloroethene (TCE) and tetrachloroethylene (PCE) from a known source such as a dry cleaner or from a non-defined source that leaches TCE or PCE above 0.7 mg/L, respectively (except those considered “Contained-out” wastes as described below).

11.2 Soil Quantities

The estimated total volume of soil contained within the grids and calculated for disposal purposes is 336,000 cubic yards with 156,000 from shallow excavation and 180,000 from deep excavation. The table below summarizes the estimated soil volumes for disposal characterization. In general, shallow soil volumes are estimated from samples collected from 0 to 10 feet bgs and deep soil volumes are estimated from 10-15 feet bgs. A more detailed summary of the disposal characterization is listed in Table 6.

Disposal Characterization	Estimated Soil Volume (yd³)		Percentage of Total Estimated Volume	
	Shallow	Deep	Shallow	Deep
Petroleum hydrocarbons, PAHs, and SVOCs not detected - Clean	25,000	76,000	7	23
Petroleum hydrocarbons, PAHs, metals, or SVOCs detected below MTCA Method A - Category II/III	59,000	23,000	17	7
Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA Method A - Problem Waste	63,000	81,000	18	24
Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA Method A - Dangerous Waste	9,000	0	2	0
Estimated Total Soil Volume (yd³)	156,000	180,000	336,000	

Notes:

Soil volumes are based on limited sampling described herein and are subject to change.

MTCA = Model Toxics Control Act (Ecology, 2013)

PAHs = Polyaromatic Hydrocarbons

SVOCs = Semi-volatile Organic Compounds

yd³ = cubic yards

11.3 Soil Disposal Options

11.3.1 Option 1 – Inert Landfill

Inert landfill facilities can accept “Clean” and “Category II” soil with low concentrations of petroleum hydrocarbons. These facilities can also accept material that consists of less than 5 to 15 percent non-native organic debris/wood waste with the wood waste being less than or equal

to one cubic foot in size. The level of concentrations of petroleum hydrocarbons in soil that an inert landfill facility can accept is based on the landfill's permit requirements.

11.3.2 Option 2 – Subtitle D Landfill

Soil characterized as Problem Waste and Category II/III may be disposed of at an RCRA Subtitle D landfill, such as Rabanco's Roosevelt Landfill in eastern Washington or Chemical Waste Management's Columbia Ridge Landfill in Arlington, Oregon. Under this option, the contaminated soil and debris would be trucked to a local transfer station where it would be loaded into rail cars for shipment to landfill. The range of acceptable concentrations at a Subtitle D Landfill is specific for each contaminant. In general, these facilities accept Category 2/3 soil contaminated at concentrations greater than the levels established for land reclamation facilities, but below the "Dangerous Waste" criteria.

11.3.3 Option 3 – Subtitle C Landfill (for Dangerous Waste)

"Dangerous Waste" require disposal at a Subtitle C landfill permitted to accept hazardous materials (such as that operated by Waste Management in Arlington, Oregon), treatment by bioremediation, with subsequent disposal at a Subtitle C landfill, or incineration at a licensed facility.

11.4 Estimated Soil Disposal Costs

The following table presents estimated disposal costs per ton to dispose the different waste types at the required facilities. The costs are the tipping fees at the facility and do not include excavation and transportation costs. Estimated unit weights for dry and saturated soils would need to be applied to convert the disposal volumes reported above into tons before calculating disposal costs at a particular facility.

Disposal Facility	Accepted Waste Class	Facility Location	Facility Acceptance Criteria	Disposal Cost per Ton*
Republic	Non-RCRA Waste “Clean” Category II and Category III	Seattle, Washington	No Limitations	\$45.00
Waste Management (RCRA Subtitle D Landfill)	Non-RCRA Waste Category II/III	Seattle – Washington Street Transfer Station	Up to 10% Construction Debris/Truck	\$44.20
sChemical Waste Management (RCRA Subtitle C Landfill)	Problem & Dangerous Waste (Ecology, 1995)	Arlington, Oregon	Up to 10% Construction Debris/Truck	\$100 +
CEMEX (Inert Landfill)	“Clean” Category II (Inert Waste)	Everett, Washington	Up to 15% Wood Waste/Truck	\$31.50
	Category III		Up to 15% Wood Waste/Truck	\$43.75
Reserve Silica Inert Landfill	“Clean” Category II (Inert Waste)	Black Diamond, Washington	Up to 5% Wood Waste/Truck	\$15.00

Notes:

% = percent

* Tipping fees in 2015 dollars; does not include transportation.

Ecology = Washington State Department of Ecology

RCRA = Resource Conservation and Recovery Act

11.5 Groundwater Disposal Options

Concentrations of arsenic, cadmium, and lead were detected above the MTCA Method A cleanup criteria in the groundwater samples collected from the geoprobe explorations and the monitoring wells. Lube oil-range petroleum hydrocarbons were detected below the cleanup criteria in one of the geoprobe explorations. Based on the results of the groundwater sampling and the overall shallow depth of groundwater at the Site, it is likely that contaminated groundwater will be encountered during excavation activities for the levee setback project.

Depending upon whether or not the Site will be dewatered for construction, disposal options may vary based on the anticipated volume of water and what is cost effective. It is likely that large volumes of water will be anticipated due the site being hydraulically connected to the adjacent White River. The least cost effective method for groundwater disposal is to containerize onsite and haul off-site to an RCRA Subtitle D disposal facility. Based on the contaminants identified however, treatment and disposal to sanitary sewer or storm is likely a more cost effective method. Water quality permit requirements will have to be met for discharge to both the sanitary sewer and storm. The contaminants identified in excess of the MTCA cleanup criteria are metals

that can be treated by settlement through a baffled Baker tank and a series of in-line bag filters. A final groundwater polishing step consisting of in-line carbon vessels could also be implemented to treat the identified lube oil-range petroleum hydrocarbons. Depending upon the volume, disposal options could include discharge to sanitary sewer or storm drain. If a large volume is anticipated, discharge to sanitary sewer may not be feasible as there will likely be limitations of volume discharge. Discharge to storm drain may be feasible for larger volumes of water if the water quality permit requirements for surface water are met.

12.0 RECOMMENDATIONS

Based on the review of the soil and groundwater data collected during the Phase II ESA, we offer the following recommendations:

- Include in the Contract Language for any Site work, a General Special Provision/Special Provisions indicating the possibility of encountering soil and groundwater contamination and develop requirements associated with handling/disposal/management and health and safety. Require the contractor to develop submittals demonstrating an understanding of site conditions and regulatory requirements.
- Include this Phase II ESA as a reference document to the design documents for any Site work. Include contingency funds in construction cost estimates to manage unexpected conditions that may be observed during construction.
- Given the historical land use of the site and the nature of the contaminants encountered during this Phase II ESA, assume soil generated during construction will require offsite disposal at a permitted facility.
- Generate an Operations and Maintenance Plan for the Site that limits ground disturbance to less than 1 foot, as outlined in the Conclusions section, 10.0.
- Under the strictest interpretation of WAC 173-340, the Site could be viewed as having a reportable release. However, the Site was closed prior to 1972 and it is under jurisdiction of the King County Health Department and not subject to monitoring requirements provided that it does not pose a threat to human health and/or the environment. Although contaminants were identified in soil and groundwater in excess of the regulatory cleanup criteria were encountered, these contaminants appear to be confined to the landfill and do not appear to pose a threat to human health or the environment. Groundwater contamination appears to be largely an artifact of the sampling approach and not an indication of a plume. Overall, Site investigations to date have found the presence of contamination within the landfill cell and do not appear to pose a threat to the public given the current land use. Based on data collected during the Phase II ESA, we do not believe notification to Ecology is warranted at this time. However, notification may be required based on

the opinion of the King County Health Department and/or the results of future off-site sampling of sediment and pore water.

- In an effort to evaluate off-site impact for potential regulatory agency notification, we recommend collecting eight total sediment and pore water samples along the adjacent river bank and in the wetland to the south of the Site. Consideration should be given to sampling off-site groundwater during the wet season to evaluate if the increase in groundwater elevation increases the potential contaminant loading to groundwater.
- We recommend groundwater sampling of the on-site monitoring wells throughout the year to evaluate the seasonal effects on groundwater chemistry and groundwater flow direction to further assist with future project planning.

Based on the results of the Phase II ESA, it is likely that contaminated soil and/or groundwater will be encountered during excavation activities at the Site. Contaminated soils need to be handled and disposed of in compliance with federal, state, and local regulations pertaining to worker health and safety, environmental protection, and landfill treatment and disposal. A site-specific Health and Safety Plan describing monitoring requirements and the use of personal protective equipment is recommended. During excavation activities, soil will need to be screened for indications of contamination by trained environmental personnel. Soil screening involves the use of a photoionization detector and visual and olfactory observations of the soil.

During excavation activities, additional soil samples will need to be collected for disposal characterization. The total number of soil samples that will need to be collected is based on the volume of excavated material as outlined in Table 6.9 of the Guidance for Remediation of Petroleum Contaminated Sites (Ecology, 2011). This document also provides guidance for the reuse of petroleum-contaminated soil that may be an option for Site soils.

13.0 LIMITATIONS

Within the limitations of scope, schedule, and budget, S&W has prepared this report in a professional manner, using the level of skill and care normally exercised for similar projects under similar conditions by reputable and competent environmental consultants currently practicing in this area.

The scope of services was intended to address only those environmental concerns with significant potential to result in contamination of the Site. The sampling effort was considered limited in extent and served as a screening effort only. It was not intended to define the lateral or vertical extent of soil and/or groundwater contamination.

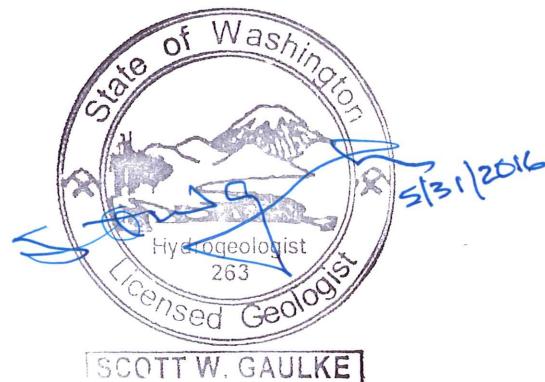

The data presented in this report are based on limited research and sampling at the site and should be considered representative at the time of our observations. Other areas of contamination that were not obvious during our site work could be present at the site. S&W is not responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the report was prepared. We also note that the facts and conditions referenced in this report may change over time, and that the conclusions and recommendations set forth here are applicable to the facts and conditions as described only at the time of this report. S&W believe that the conclusions stated here are factual; but no guarantee is made or implied.

This report was prepared for the exclusive use of King County, and their representatives, and in no way guarantees that any agency or its staff will reach the same conclusions as S&W. To help you and others in understanding the limitations of our report, S&W has prepared Appendix C, "Important Information About Your Environmental Site Assessment/Evaluation Report."

Notes:

* = no criteria established for this analyte

Criteria for gasoline-range petroleum in soil are 800 micrograms per liter (µg/L) when benzene is present and 1,000 µg/L when benzene is not present.

Bold values indicate a detection

Shaded values indicate a Model Toxics Control Act Method A exceedance.

E = the value was above the quantitative range

MTCA = Model Toxics Control Act

U = the analyte was not detected above the laboratory reporting limit shown

SUMMARY OF ADJUSTED TOXICITY EQUIVALENCE
FACTOR CONCENTRATIONS

ADJUSTED TEF CONCENTRATION FOR SAMPLE TP-3-15:6.0
Soil

Analyte	Sample Result (mg/kg)	Method Detection Limit (mg/kg)	Toxic Equivalency Factor	Adjusted Concentration ¹ (mg/kg)
Benzo(a)anthracene	ND	0.097	0.1	0.00485
Chrysene	ND	0.097	0.01	0.000485
Benzo(b)fluoranthene	0.022	0.097	0.1	0.00215
Benzo(k)fluoranthene	ND	0.097	0.1	0.00485
Benzo(a)pyrene	ND	0.097	1	0.0485
Indeno(1,2,3-c,d)pyrene	0.184	0.097	0.1	0.0184
Dibenzo(a,h)anthracene	ND	0.097	0.4	0.0194
Sum²				0.099
MTCA Method A Cleanup Level for Unrestricted Land Use				0.10
MTCA Method A Cleanup Level for Industrial Land Use				2.00

Notes:

¹ Calculated as the detected concentration times the toxicity equivalence factor (TEF), or as half the method detection limit (if analyte is not detected) times the TEF.

² Sum of the TEF for each carcinogenic polynuclear aromatic hydrocarbon (cPAH).

Shaded values indicate a Model Toxics Control Act (MTCA) Method A exceedance.

Bold values indicated a detection.

mg/kg = milligrams per kilogram

ND = not detected

TABLE 6
DISPOSAL CHARACTERIZATION SUMMARY

Sample Grid	Characterization Depth Range (feet)		Environmental Characterization		Disposal Characterization		Estimated Soil Volume (yds ³)	
	Shallow	Deep	Shallow	Deep	Shallow	Deep	Shallow	Deep
GP-1-15	0-15		Petroleum hydrocarbons, PAHs, and SVOCs not detected		Clean - Inert Landfill		9357	9357
GP-2-15	0-5	5-15	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected below MTCA.	Petroleum hydrocarbons, PAHs, or SVOCs not detected.	Category II/III Impacted	Clean - Inert Landfill	4850	9700
GP-3-15	0-10	10-15	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected below MTCA.	Petroleum hydrocarbons, PAHs, metals or SVOCs detected above MTCA	Category II/III Impacted	Problem Waste	6420	3210
GP-4-15	0-15		Petroleum hydrocarbons, PAHs, metals, or SVOCs detected below MTCA.	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected below MTCA.	Category II/III Impacted		4327	4327
GP-5-15	0-15		Petroleum hydrocarbons, PAHs, metals, or SVOCs detected below MTCA.	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected below MTCA.	Category II/III Impacted		7280	7280
GP-6-15	0-10	10-15	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA	Petroleum hydrocarbons, PAHs, or SVOCs detected below MTCA.	Problem Waste	Clean - Inert Landfill	9867	4933
GP-7-15	0-5	5-15	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected below MTCA.	Problem Waste	Clean - Inert Landfill	4637	9474
GP-8-15	0-15		Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Problem Waste		6570	6570
GP-9-15	0-5	5-15	Petroleum hydrocarbons, PAHs, metals or SVOCs detected below MTCA.	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Category II/III Impacted	Problem Waste	4524	9050
GP-10-15	0-15		Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Problem Waste		5035	5035
GP-11-15	0-5	5-15	Petroleum hydrocarbons, PAHs, metals or SVOCs detected below MTCA.	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Category II/III Impacted	Problem Waste	3467	6934
GP-12-15	0-15		Petroleum hydrocarbons, PAHs, and SVOCs not detected	Clean - Inert Landfill			3163	3163
GP-13-15	0-16		Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Problem Waste			5727	5727
GP-14-15	0-5	5-15	Petroleum hydrocarbons, PAHs, metals or SVOCs detected below MTCA.	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Category II/III Impacted	Problem Waste	5218	10437
GP-15-15	0-15		Petroleum hydrocarbons, PAHs, and SVOCs not detected	Clean - Inert Landfill			4361	4361
GP-16-15	0-10	10-15	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA and Dangerous Waste Criteria.	Petroleum hydrocarbons, PAHs, metals or SVOCs detected below MTCA.	Dangerous Waste	Category II/III Impacted	8742	4370
GP-17-15	0-10	10-15	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Petroleum hydrocarbons, PAHs, metals or SVOCs detected below MTCA.	Problem Waste	Category II/III Impacted	5663	2832
GP-18-15	0-5	5-15	Petroleum hydrocarbons, PAHs, metals or SVOCs detected below MTCA.	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Category II/III Impacted	Problem Waste	3517	7035
GP-19-15	0-5	5-15	Petroleum hydrocarbons, PAHs, metals or SVOCs detected below MTCA.	Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Category II/III Impacted	Problem Waste	3052	6105
GP-20-15	0-5	5-15	Petroleum hydrocarbons, PAHs, metals or SVOCs detected below MTCA.	Petroleum hydrocarbons, PAHs, and SVOCs not detected	Category II/III Impacted	Clean - Inert Landfill	3037	6074
GP-21-15	0-15		Petroleum hydrocarbons, PAHs, metals or SVOCs detected below MTCA.	Category II/III Impacted			3988	3988
GP-22-15	0-5		Petroleum hydrocarbons, PAHs, and SVOCs not detected	Clean - Inert Landfill			461	461

TP-1-15	0-10		Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Problem Waste		1663	1663	
TP-2-15	*		Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Problem Waste		2460	2460	
TP-3-15	0-11		Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Problem Waste		3186	3186	
TP-4-15	*		Petroleum hydrocarbons, PAHs, metals, or SVOCs detected above MTCA.	Problem Waste		4044	4044	

Notes:

Soil volumes are estimates and are based on limited sampling described herein and are subject to change.

* = not sampled

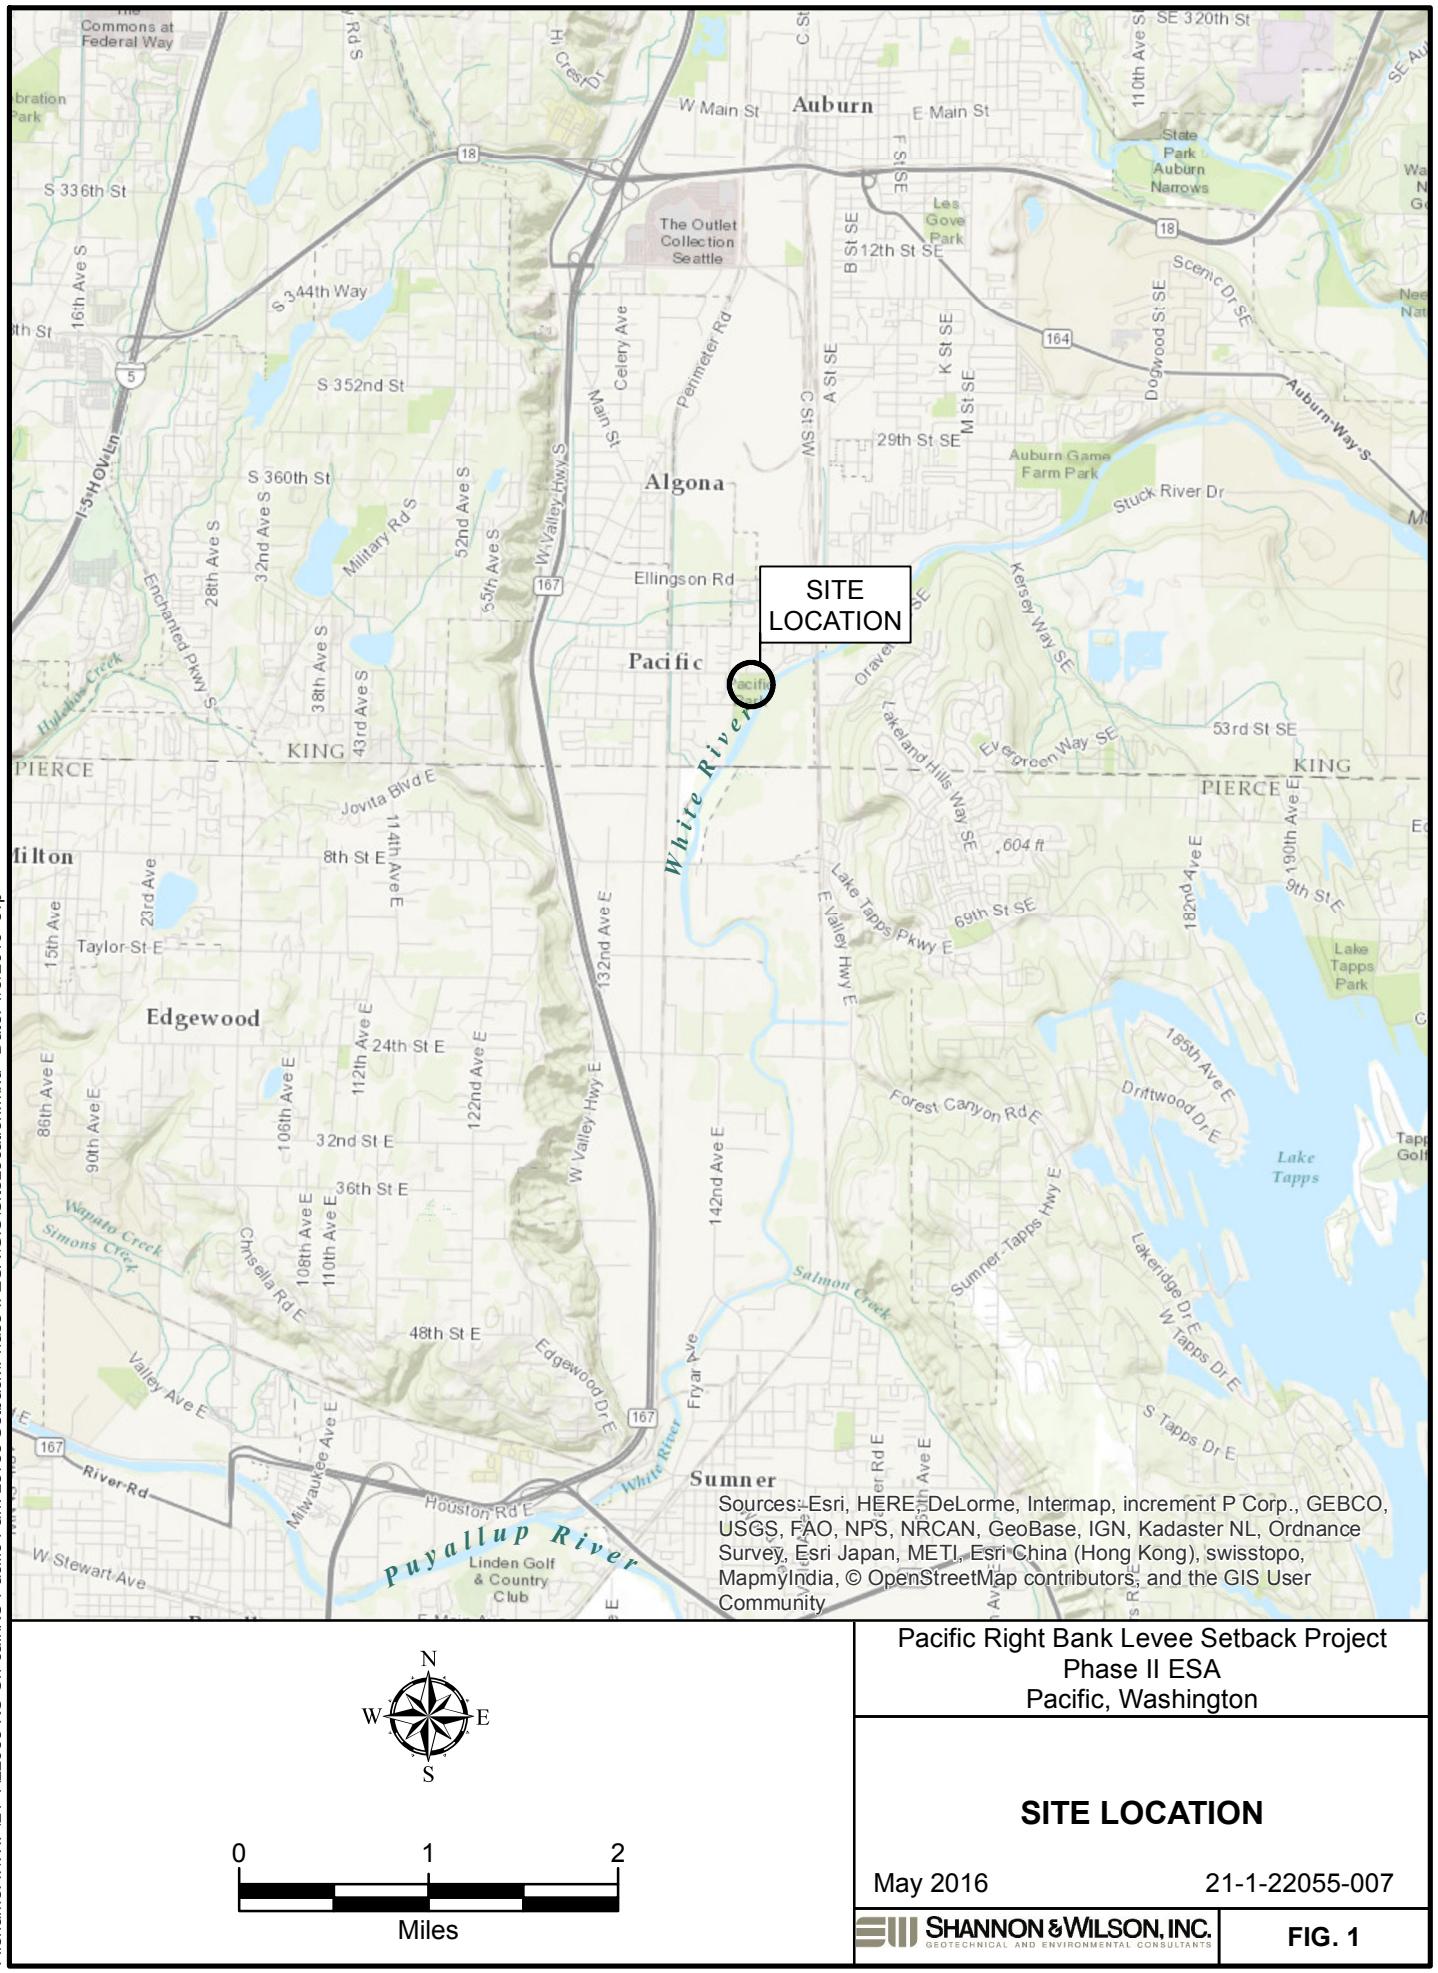

MTCA = Model Toxics Control Act

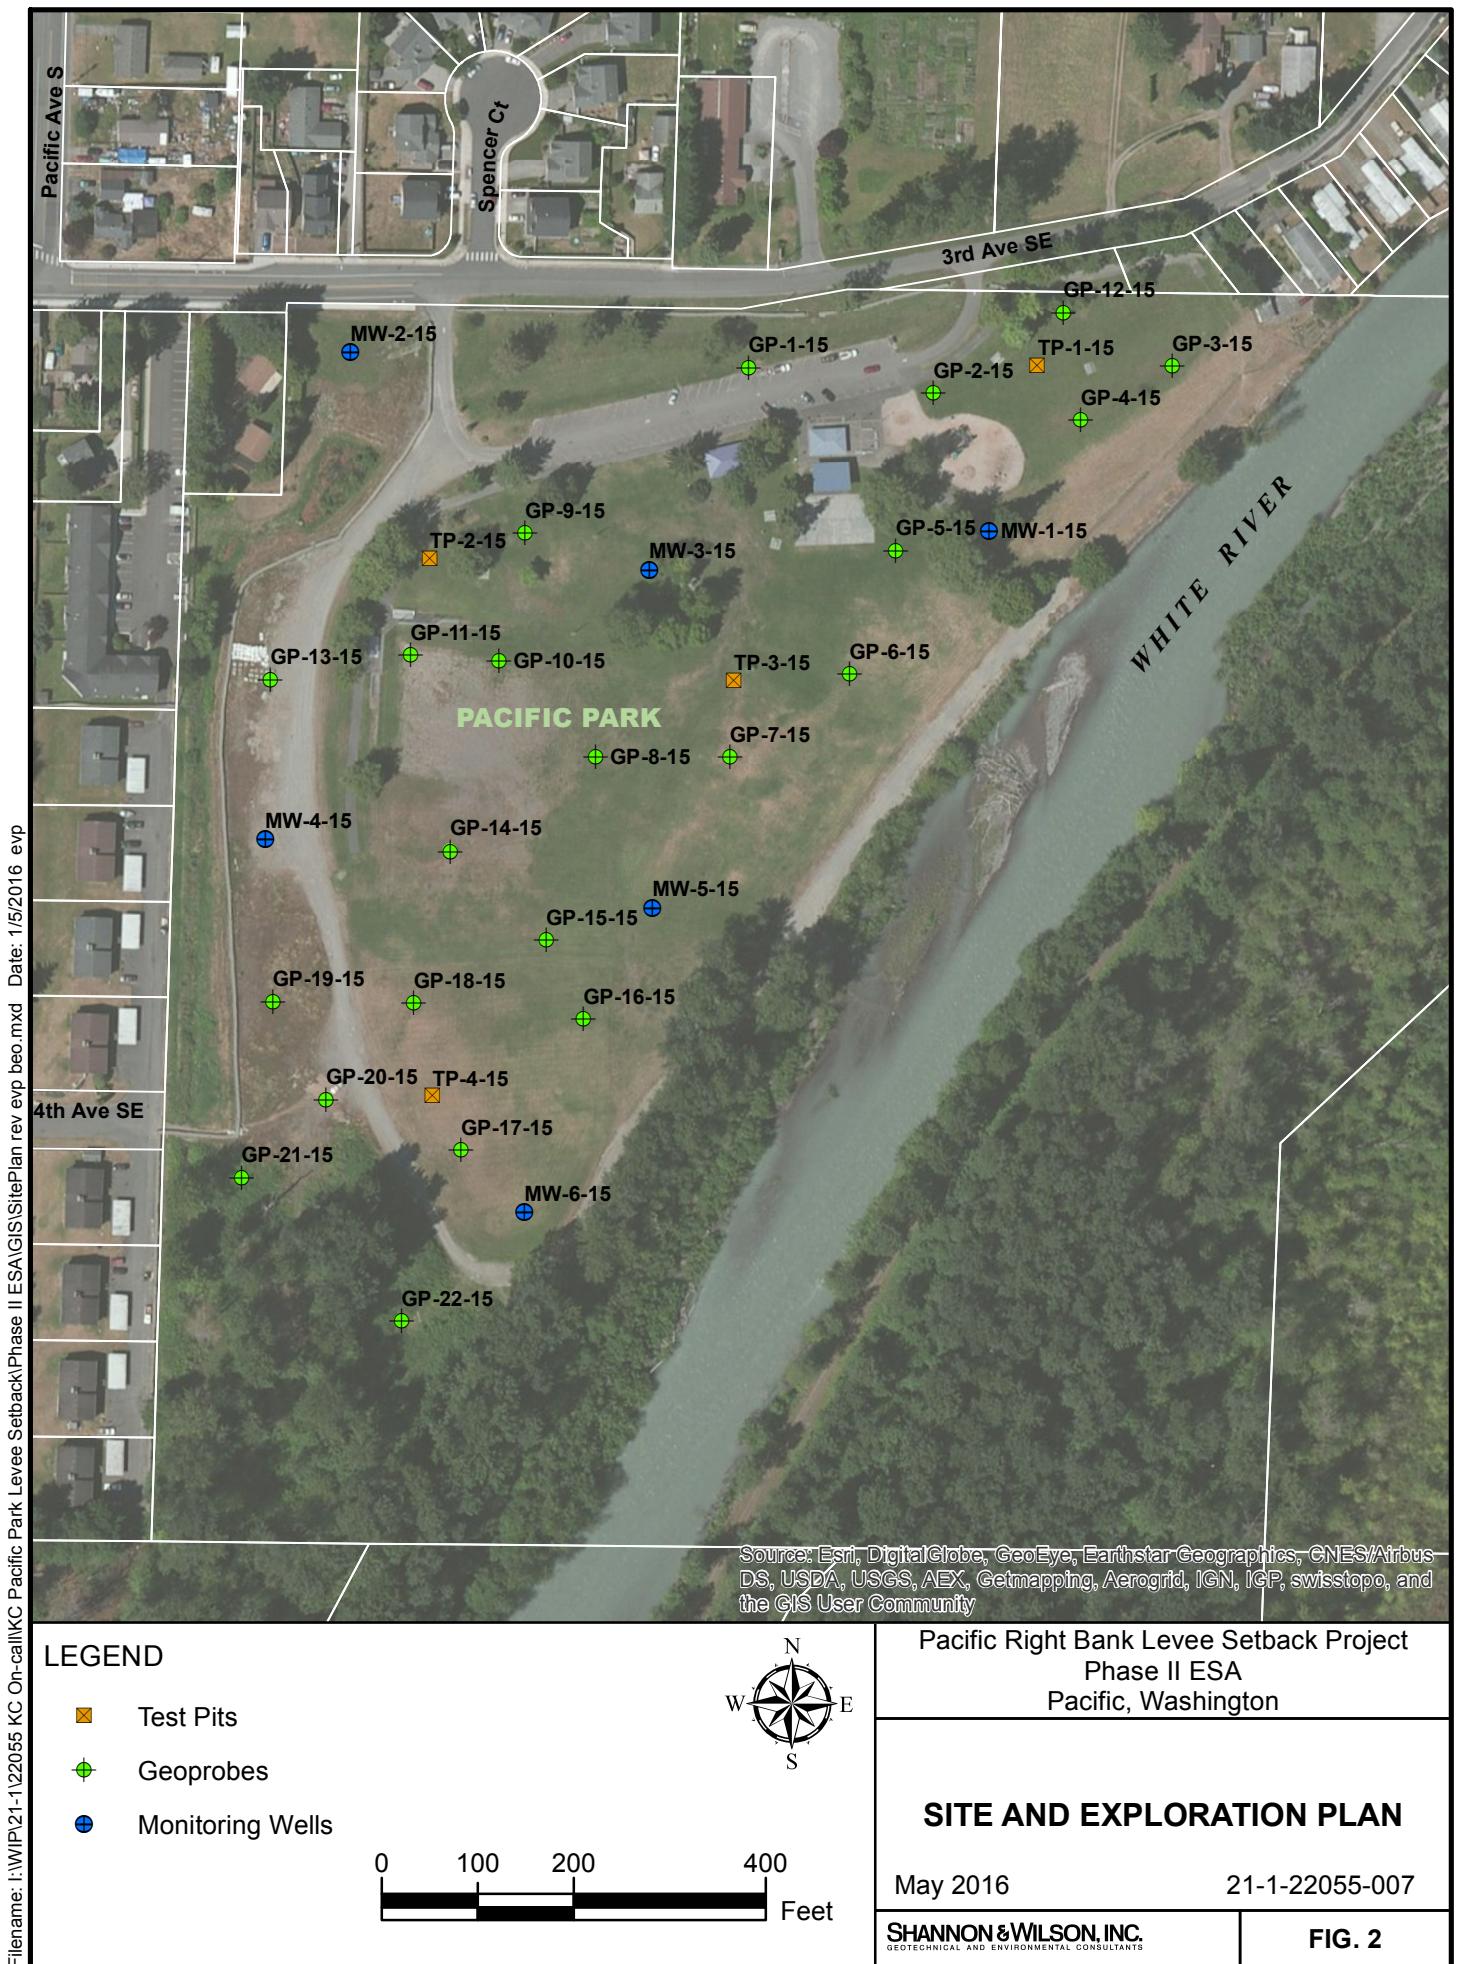

PAHs = Polycyclic Aromatic Hydrocarbons

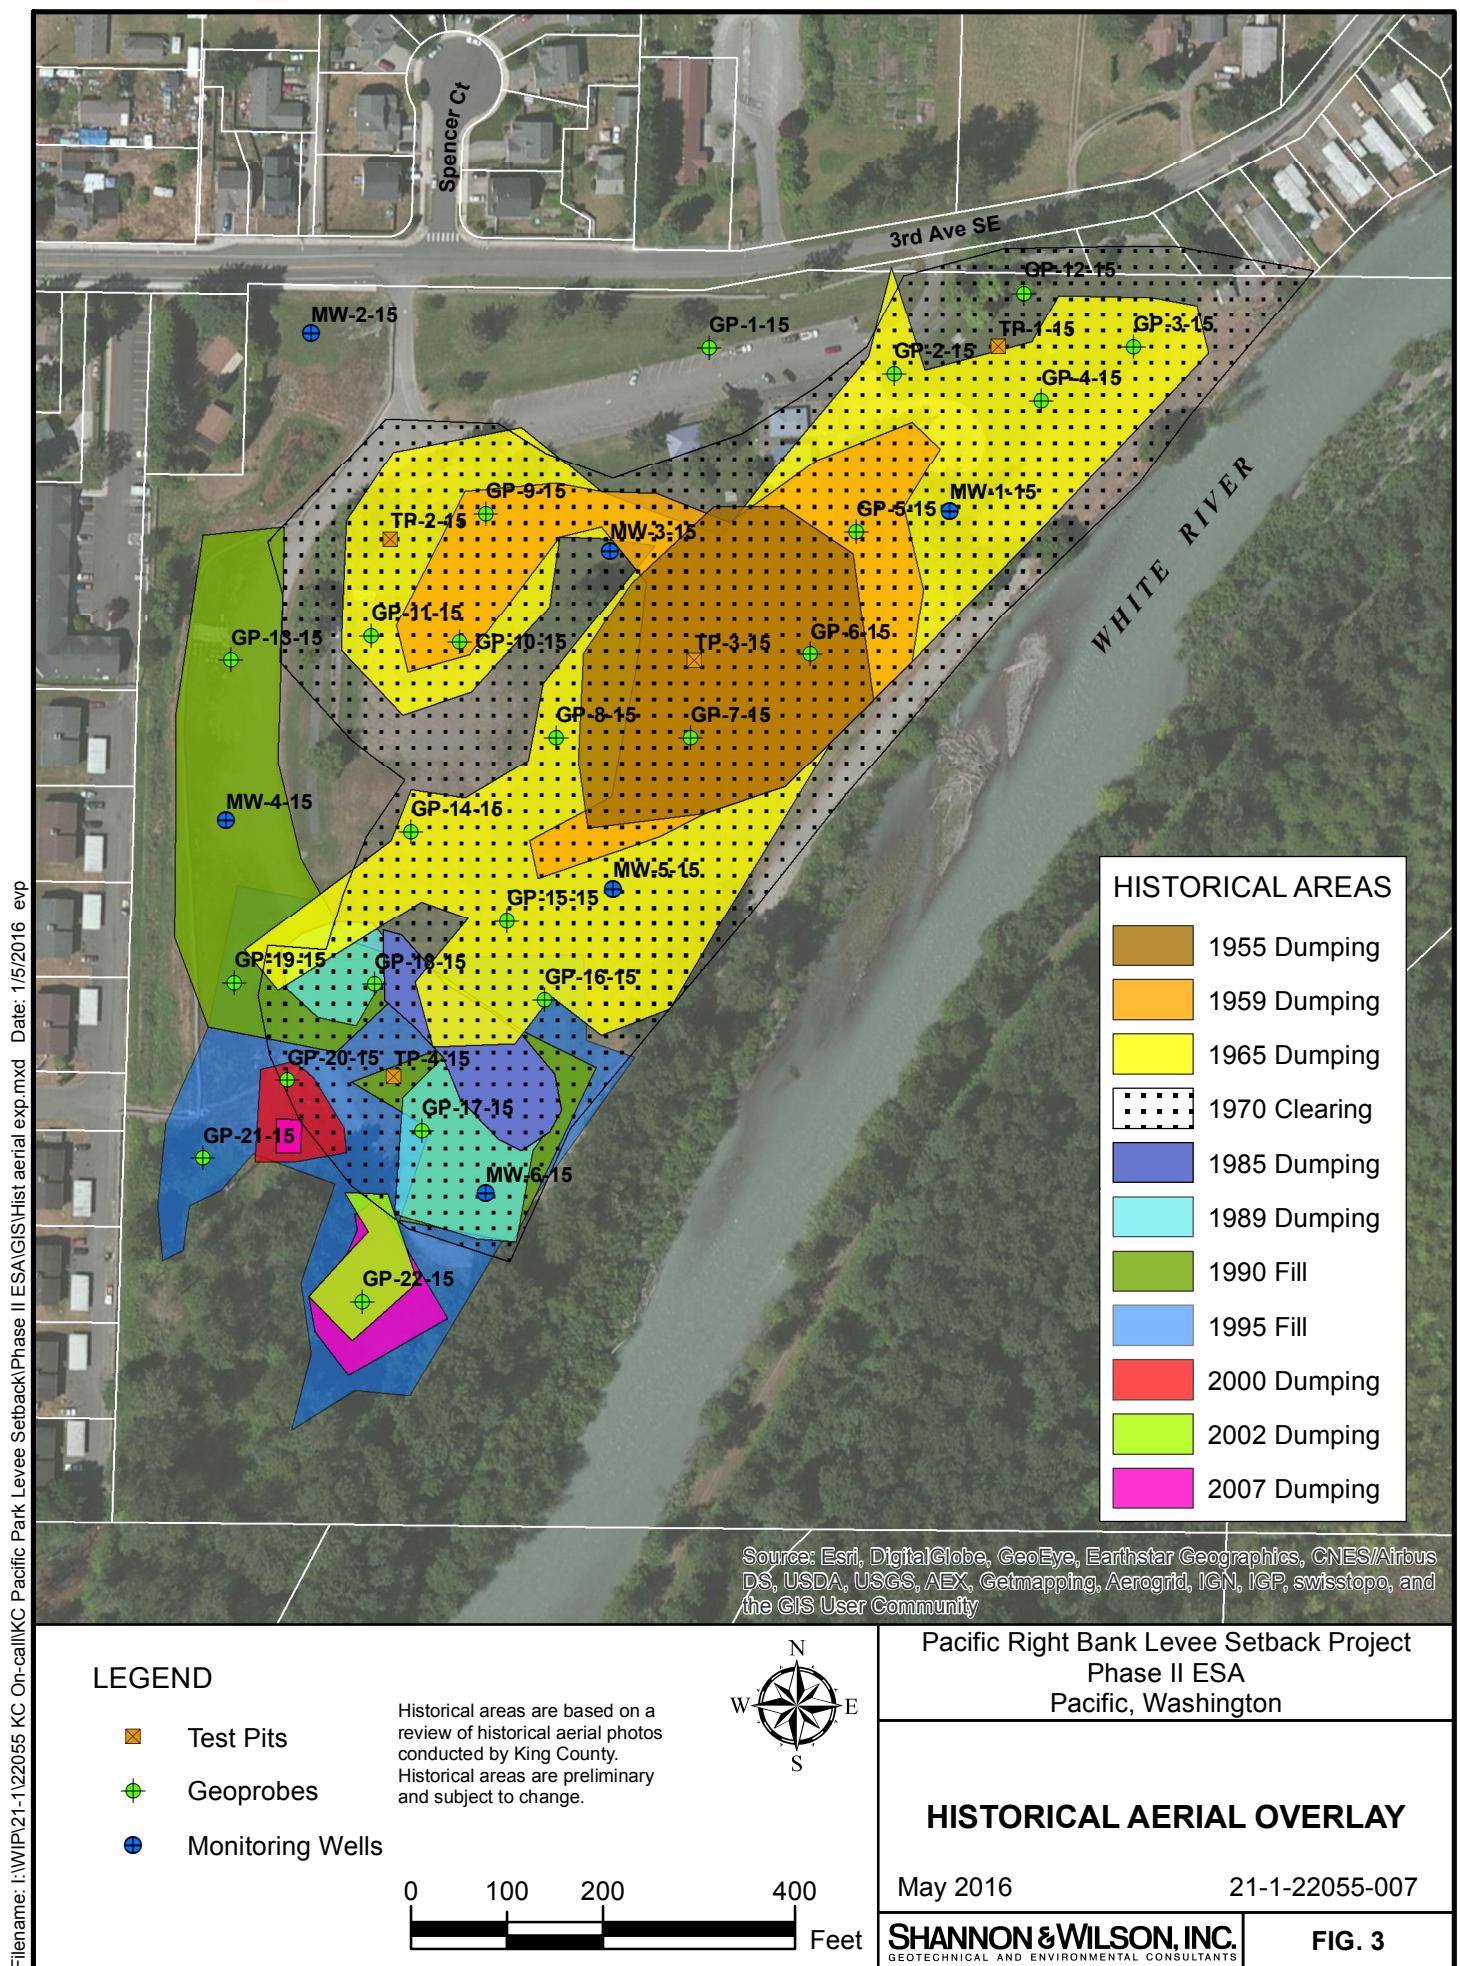

SVOCs - Semi-volatile Organic Compounds

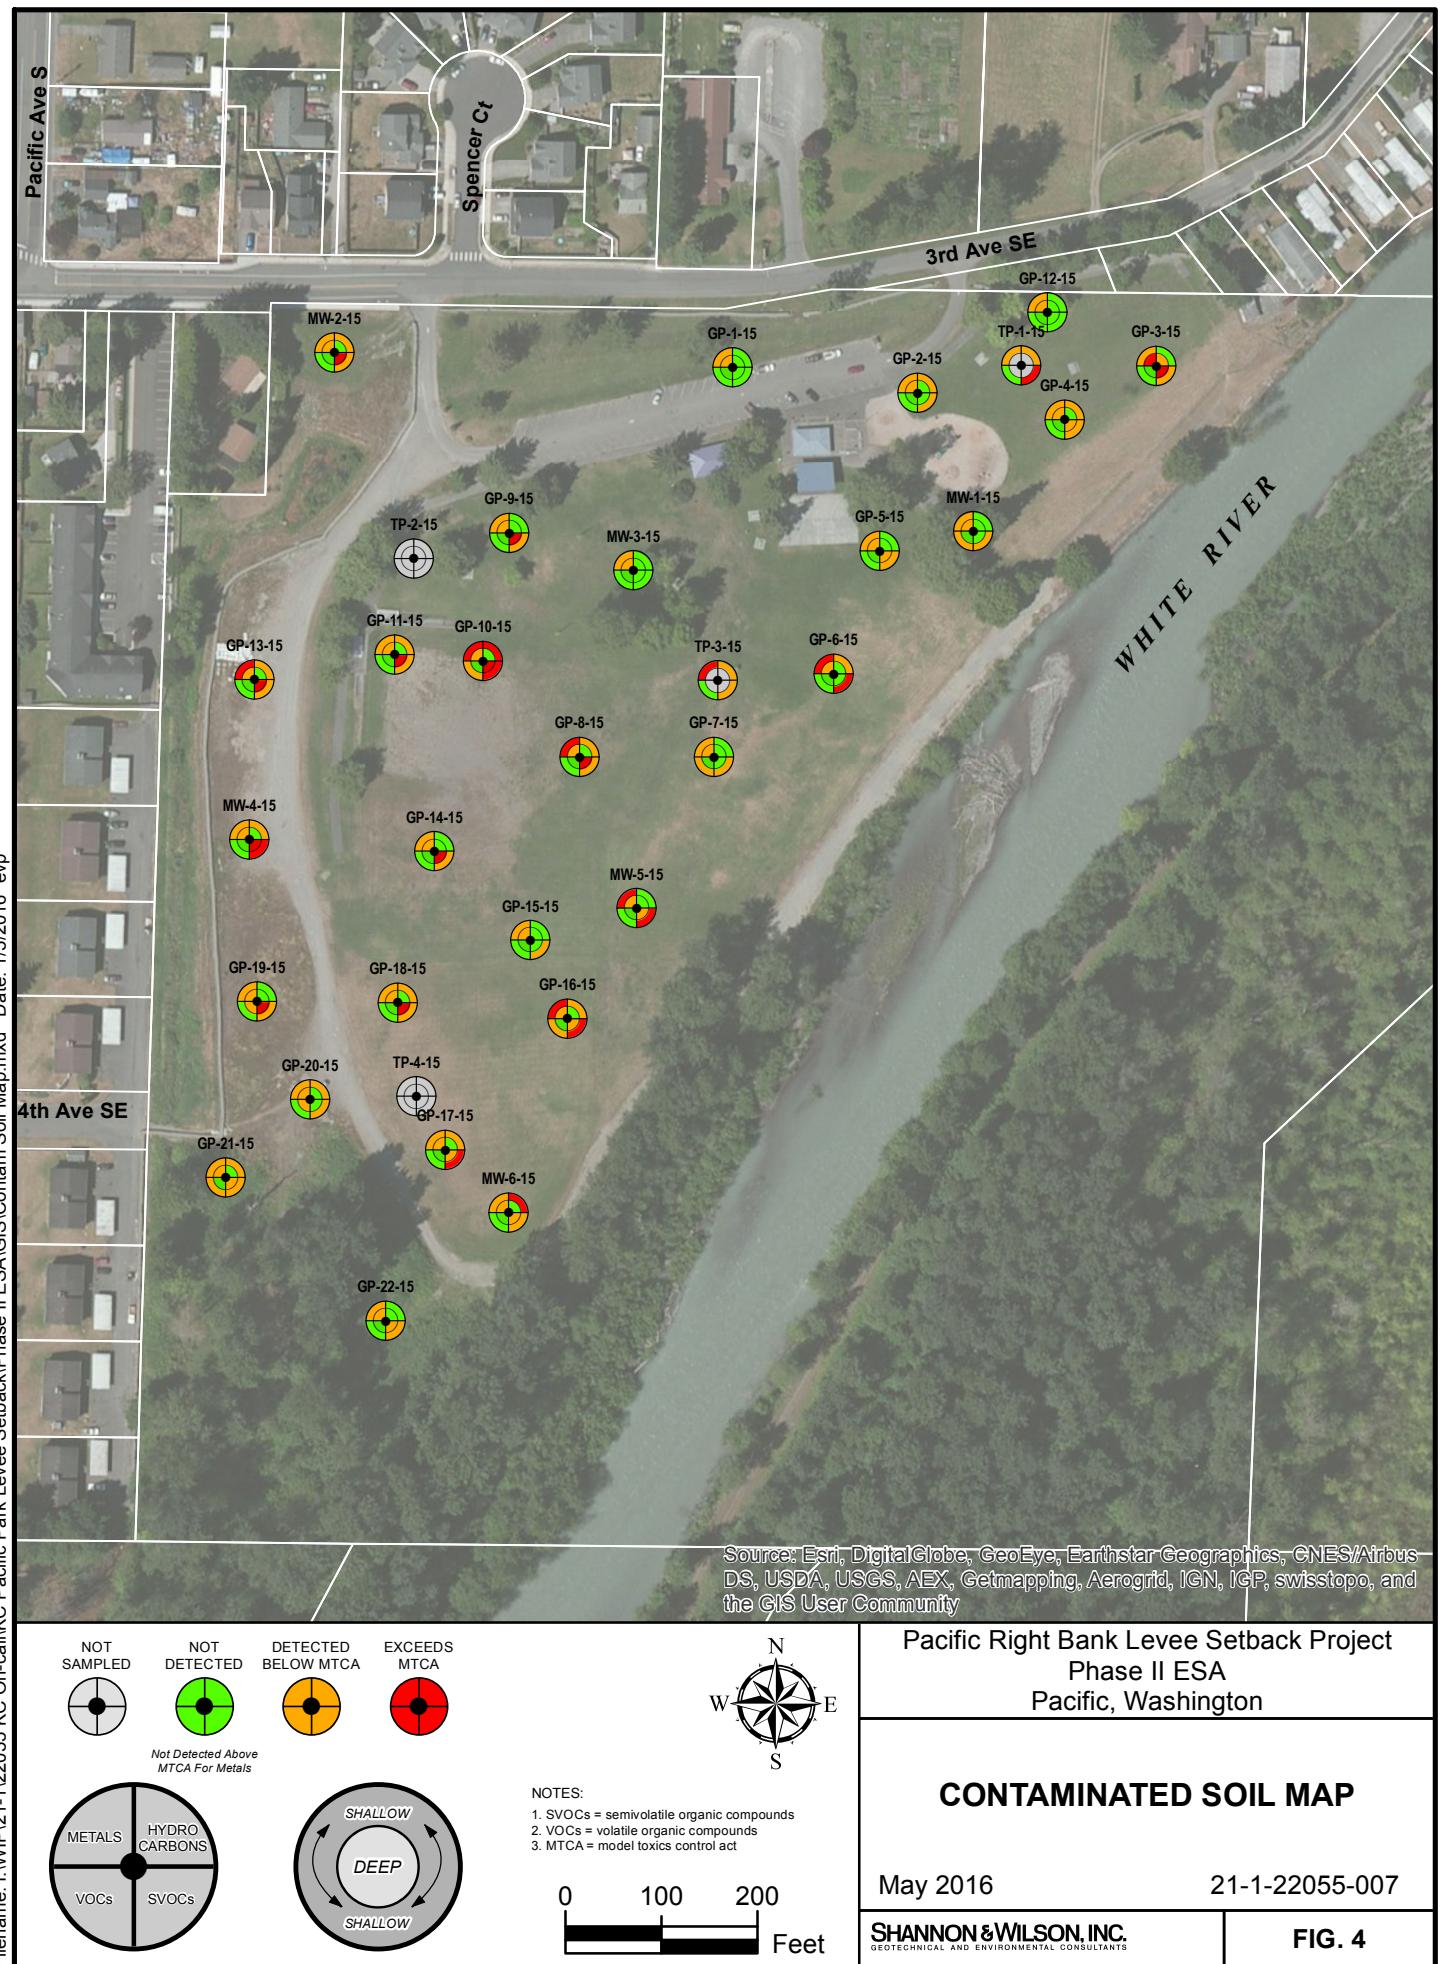

VOCs = volatile organic compounds

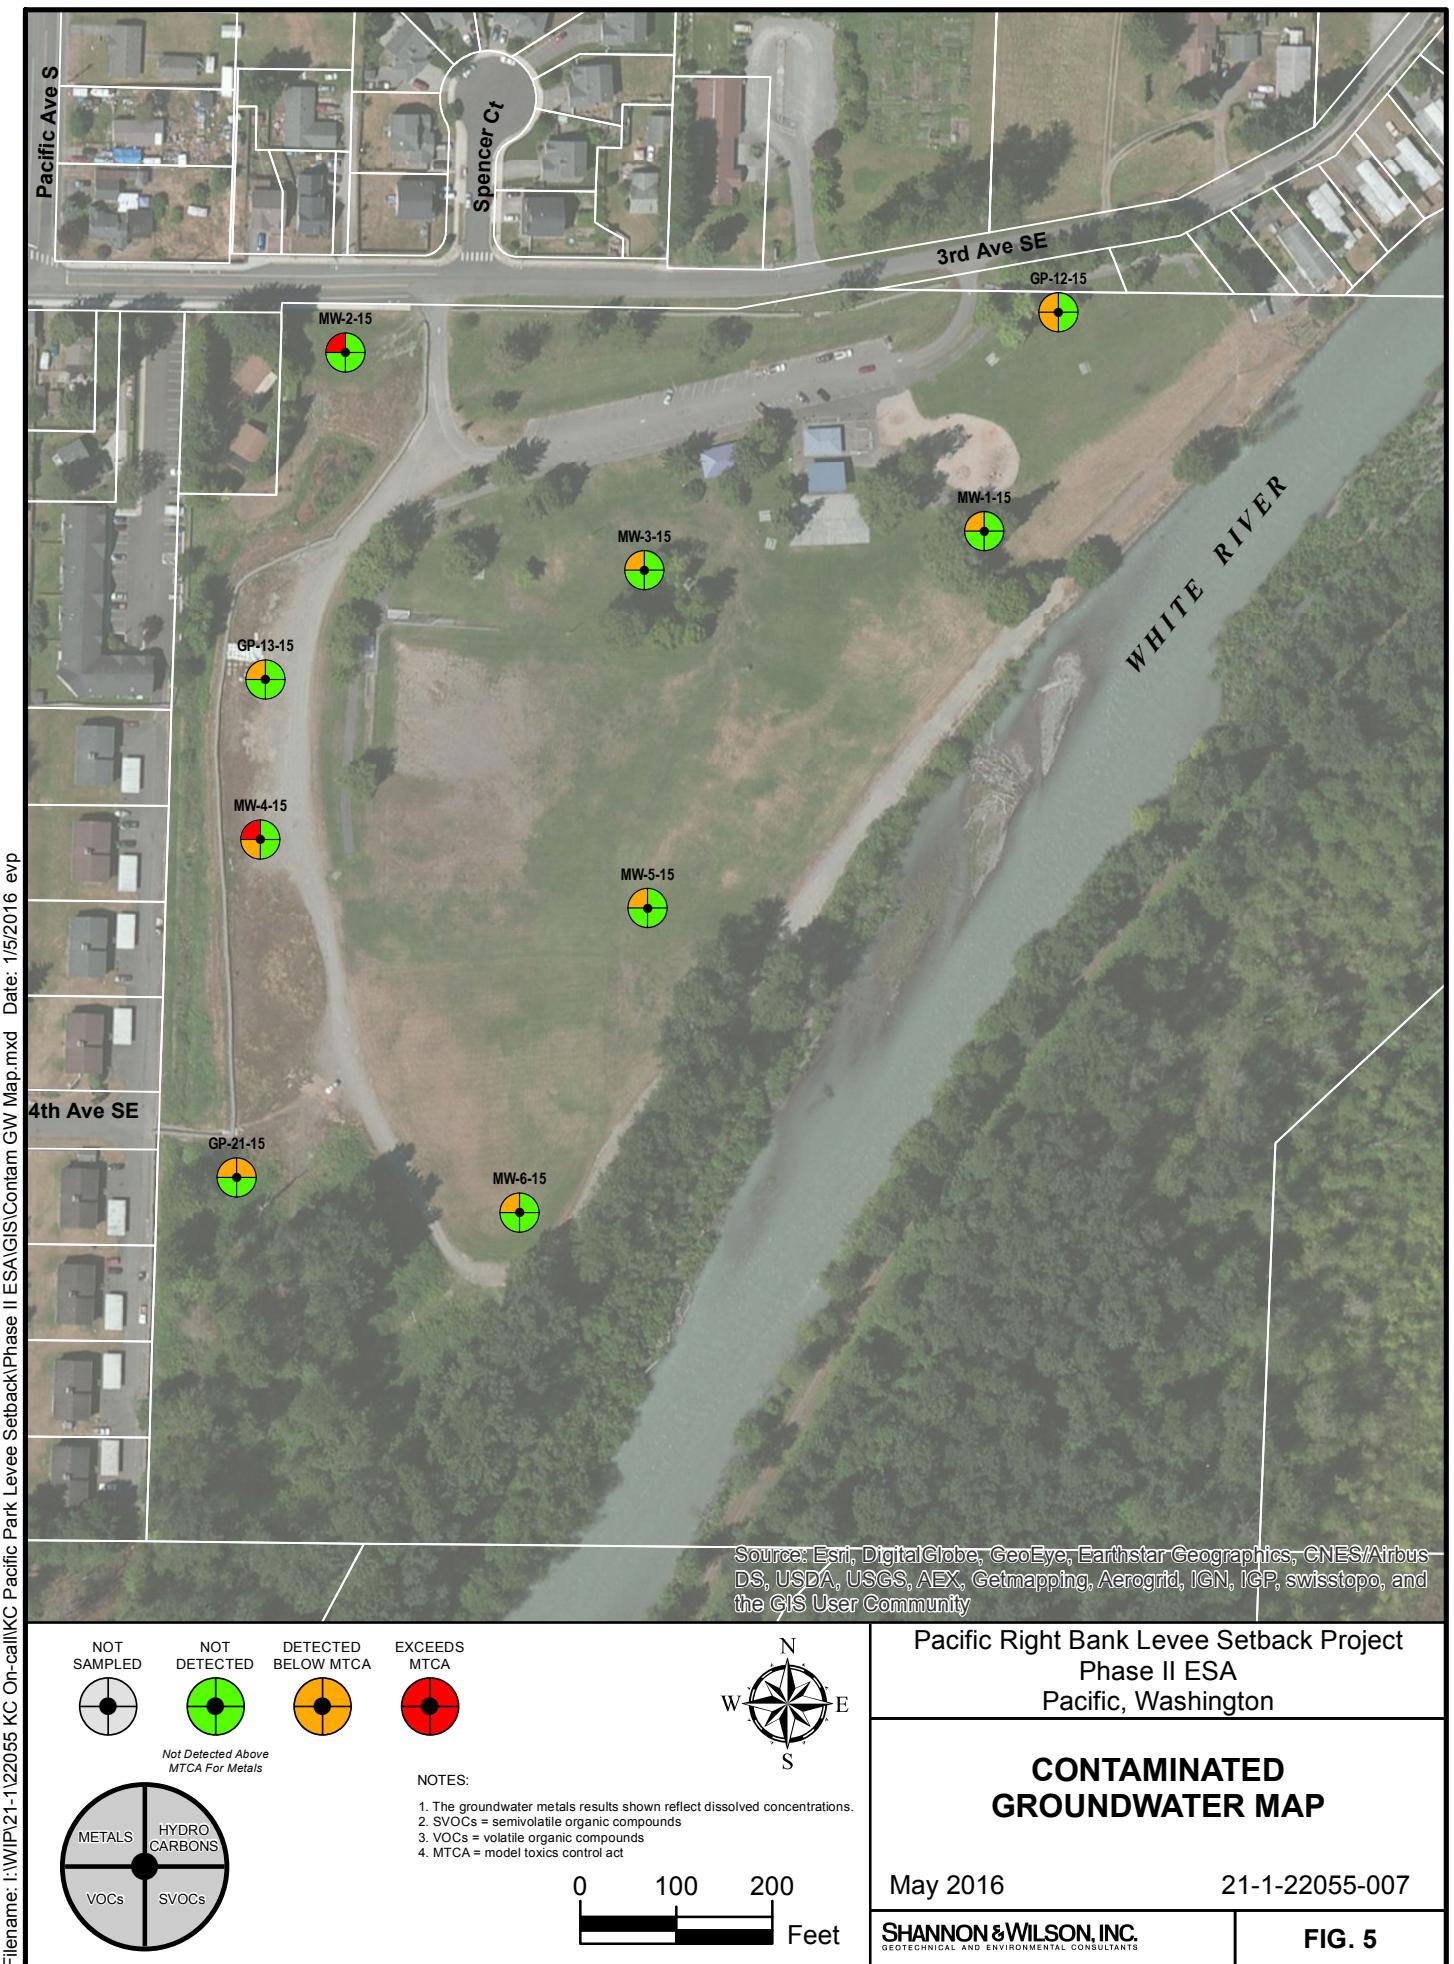

yds³ = cubic yards

PARTICLE SIZE DEFINITIONS

DESCRIPTION	SIEVE NUMBER AND/OR APPROXIMATE SIZE	
FINES	< #200 (0.075 mm = 0.003 in.)	
SAND	Fine Medium Coarse	#200 to #40 (0.075 to 0.4 mm; 0.003 to 0.02 in.) #40 to #10 (0.4 to 2 mm; 0.02 to 0.08 in.) #10 to #4 (2 to 4.75 mm; 0.08 to 0.187 in.)
GRAVEL	Fine Coarse	#4 to 3/4 in. (4.75 to 19 mm; 0.187 to 0.75 in.) 3/4 to 3 in. (19 to 76 mm)
COBBLES	3 to 12 in. (76 to 305 mm)	
BOULDERS	> 12 in. (305 mm)	

S&W INORGANIC SOIL CONSTITUENT DEFINITIONS

CONSTITUENT ²	FINE-GRAINED SOILS (50% or more fines) ¹	COARSE-GRAINED SOILS (less than 50% fines) ¹
Major	<i>Silt, Lean Clay, Elastic Silt³, or Fat Clay</i>	<i>Sand or Gravel⁴</i>
Modifying (Secondary) Precedes major constituent	30% or more coarse-grained: <i>Sandy or Gravelly</i> ⁴	More than 12% fine-grained: <i>Silty or Clayey</i> ³
Minor Follows major constituent	15% to 30% coarse-grained: <i>with Sand or with Gravel</i> ⁴	5% to 12% fine-grained: <i>with Silt or with Clay</i> ³
	30% or more total coarse-grained and lesser coarse- grained constituent is 15% or more: <i>with Sand or with Gravel</i> ⁵	15% or more of a second coarse- grained constituent: <i>with Sand or with Gravel</i> ⁵

¹All percentages are by weight of total specimen passing a 3-inch sieve.

²The order of terms is: *Modifying Major with Minor*.

³Determined based on behavior.

⁴Determined based on which constituent comprises a larger percentage.

⁵Whichever is the lesser constituent.

MOISTURE CONTENT TERMS

Dry	Absence of moisture, dusty, dry to the touch
Moist	Damp but no visible water
Wet	Visible free water, from below water table

STANDARD PENETRATION TEST (SPT) SPECIFICATIONS

Hammer:	140 pounds with a 30-inch free fall. Rope on 6- to 10-inch-diam. cathead 2-1/4 rope turns, > 100 rpm
	NOTE: If automatic hammers are used, blow counts shown on boring logs should be adjusted to account for efficiency of hammer.
Sampler:	10 to 30 inches long Shoe I.D. = 1.375 inches Barrel I.D. = 1.5 inches Barrel O.D. = 2 inches
N-Value:	Sum blow counts for second and third 6-inch increments. Refusal: 50 blows for 6 inches or less; 10 blows for 0 inches.
	NOTE: Penetration resistances (N-values) shown on boring logs are as recorded in the field and have not been corrected for hammer efficiency, overburden, or other factors.

RELATIVE DENSITY / CONSISTENCY			
COHESIONLESS SOILS		COHESIVE SOILS	
N, SPT, BLOWS/FT.	RELATIVE DENSITY	N, SPT, BLOWS/FT.	RELATIVE CONSISTENCY
< 4	Very loose	< 2	Very soft
4 - 10	Loose	2 - 4	Soft
10 - 30	Medium dense	4 - 8	Medium stiff
30 - 50	Dense	8 - 15	Stiff
> 50	Very dense	15 - 30	Very stiff
		> 30	Hard

WELL AND BACKFILL SYMBOLS	
	Bentonite Cement Grout
	Bentonite Grout
	Bentonite Chips
	Silica Sand
	Perforated or Screened Casing
	Vibrating Wire Piezometer
	Surface Cement Seal
	Asphalt or Cap
	Slough
	Inclinometer or Non-perforated Casing

PERCENTAGES TERMS ^{1,2}	
Trace	< 5%
Few	5 to 10%
Little	15 to 25%
Some	30 to 45%
Mostly	50 to 100%

¹Gravel, sand, and fines estimated by mass. Other constituents, such as organics, cobbles, and boulders, estimated by volume.

May 2016

21-1-22055-007

SHANNON & WILSON, INC.
Geotechnical and Environmental Consultants

FIG. A-1
Sheet 1 of 3

UNIFIED SOIL CLASSIFICATION SYSTEM (USCS) (Modified From USACE Tech Memo 3-357, ASTM D2487, and ASTM D2488)				
MAJOR DIVISIONS		GROUP/GRAFIC SYMBOL	TYPICAL IDENTIFICATIONS	
COARSE-GRAINED SOILS (more than 50% retained on No. 200 sieve)	Gravels (more than 50% of coarse fraction retained on No. 4 sieve)	GW		Well-Graded Gravel; Well-Graded Gravel with Sand
		GP		Poorly Graded Gravel; Poorly Graded Gravel with Sand
		GM		Silty Gravel; Silty Gravel with Sand
		GC		Clayey Gravel; Clayey Gravel with Sand
	Sands (50% or more of coarse fraction passes the No. 4 sieve)	SW		Well-Graded Sand; Well-Graded Sand with Gravel
		SP		Poorly Graded Sand; Poorly Graded Sand with Gravel
		SM		Silty Sand; Silty Sand with Gravel
		SC		Clayey Sand; Clayey Sand with Gravel
FINE-GRAINED SOILS (50% or more passes the No. 200 sieve)	Silts and Clays (liquid limit less than 50)	ML		Silt; Silt with Sand or Gravel; Sandy or Gravelly Silt
		CL		Lean Clay; Lean Clay with Sand or Gravel; Sandy or Gravelly Lean Clay
		OL		Organic Silt or Clay; Organic Silt or Clay with Sand or Gravel; Sandy or Gravelly Organic Silt or Clay
	Silts and Clays (liquid limit 50 or more)	MH		Elastic Silt; Elastic Silt with Sand or Gravel; Sandy or Gravelly Elastic Silt
		CH		Fat Clay; Fat Clay with Sand or Gravel; Sandy or Gravelly Fat Clay
		OH		Organic Silt or Clay; Organic Silt or Clay with Sand or Gravel; Sandy or Gravelly Organic Silt or Clay
HIGHLY-ORGANIC SOILS	Primarily organic matter, dark in color, and organic odor	PT		Peat or other highly organic soils (see ASTM D4427)

NOTE: No. 4 size = 4.75 mm = 0.187 in.; No. 200 size = 0.075 mm = 0.003 in.

NOTES

- Dual symbols (*symbols separated by a hyphen, i.e., SP-SM, Sand with Silt*) are used for soils with between 5% and 12% fines or when the liquid limit and plasticity index values plot in the CL-ML area of the plasticity chart. Graphics shown on the logs for these soil types are a combination of the two graphic symbols (e.g., SP and SM).
- Borderline symbols (*symbols separated by a slash, i.e., CL/ML, Lean Clay to Silt; SP-SM/SM, Sand with Silt to Silty Sand*) indicate that the soil properties are close to the defining boundary between two groups.

FIG. A-1
Sheet 2 of 3

GRADATION TERMS			ACRONYMS AND ABBREVIATIONS					
Poorly Graded	Narrow range of grain sizes present or, within the range of grain sizes present, one or more sizes are missing (Gap Graded). Meets criteria in ASTM D2487, if tested.			ATD	At Time of Drilling			
Well-Graded	Full range and even distribution of grain sizes present. Meets criteria in ASTM D2487, if tested.			Diam.	Diameter			
CEMENTATION TERMS¹			Elev.					
Weak	Crumbles or breaks with handling or slight finger pressure.			ft.	Feet			
Moderate	Crumbles or breaks with considerable finger pressure.			FeO	Iron Oxide			
Strong	Will not crumble or break with finger pressure.			gal.	Gallons			
PLASTICITY²			Horiz.					
DESCRIPTION		VISUAL-MANUAL CRITERIA	APPROX. PLASTICITY INDEX RANGE	Horizontal				
Nonplastic	A 1/8-in. thread cannot be rolled at any water content.			HSA	Hollow Stem Auger			
Low	A thread can barely be rolled and a lump cannot be formed when drier than the plastic limit.			I.D.	Inside Diameter			
Medium	A thread is easy to roll and not much time is required to reach the plastic limit. The thread cannot be rerolled after reaching the plastic limit. A lump crumbles when drier than the plastic limit.			in.	Inches			
High	It takes considerable time rolling and kneading to reach the plastic limit. A thread can be rerolled several times after reaching the plastic limit. A lump can be formed without crumbling when drier than the plastic limit.			lbs.	Pounds			
ADDITIONAL TERMS			MgO					
Mottled	Irregular patches of different colors.			mm	Millimeter			
Bioturbated	Soil disturbance or mixing by plants or animals.			MnO	Manganese Oxide			
Diamict	Nonsorted sediment; sand and gravel in silt and/or clay matrix.			NA	Not Applicable or Not Available			
Cuttings	Material brought to surface by drilling.			NP	Nonplastic			
Slough	Material that caved from sides of borehole.			O.D.	Outside Diameter			
Sheared	Disturbed texture, mix of strengths.			OW	Observation Well			
PARTICLE ANGULARITY AND SHAPE TERMS¹			pcf					
Angular	Sharp edges and unpolished planar surfaces.			PID	Photo-Ionization Detector			
Subangular	Similar to angular, but with rounded edges.			PMT	Pressuremeter Test			
Subrounded	Nearly planar sides with well-rounded edges.			ppm	Parts per Million			
Rounded	Smoothly curved sides with no edges.			psi	Pounds per Square Inch			
Flat	Width/thickness ratio > 3.			PVC	Polyvinyl Chloride			
Elongated	Length/width ratio > 3.			rpm	Rotations per Minute			
STRUCTURE TERMS¹			SPT					
Interbedded	Alternating layers of varying material or color with layers at least 1/4-inch thick; singular: bed.			USCS	Unified Soil Classification System			
Laminated	Alternating layers of varying material or color with layers less than 1/4-inch thick; singular: lamination.			q _u	Unconfined Compressive Strength			
Fissured	Breaks along definite planes or fractures with little resistance.			VWP	Vibrating Wire Piezometer			
Slickensided	Fracture planes appear polished or glossy; sometimes striated.			Vert.	Vertical			
Blocky	Cohesive soil that can be broken down into small angular lumps that resist further breakdown.			WOH	Weight of Hammer			
Lensed	Inclusion of small pockets of different soils, such as small lenses of sand scattered through a mass of clay.			WOR	Weight of Rods			
Homogeneous	Same color and appearance throughout.			Wt.	Weight

Refuse Debris from 3.0' to 6.0'

Sketch of West Pit Side:

The sketch shows a cross-section of the test pit. The vertical axis is labeled "Depth, Ft." with values 0, 2, 4, 6, 8, 10, and 12. The horizontal axis is labeled "Horizontal Distance in Feet" with values 0, 2, 4, 6, 8, 10, and 12. The pit profile starts at 0 ft depth and slopes down to about 6.5 ft at 10 ft distance. Between 3 ft and 6 ft depth, there is a layer of debris indicated by various symbols like diamonds, circles, and rectangles. A vertical arrow on the left points to this debris layer with the label "Refuse Debris from 3.0' to 6.0'". The surface elevation is shown as a flat line at approximately 11.5 ft elevation across the 12 ft distance.

Shannon & Wilson

Ed Ptak
400 N. 34th Street, Suite 100
Seattle, WA 98103

RE: Pacific Park

Lab ID: 1509270

October 03, 2015

Attention Ed Ptak:

Fremont Analytical, Inc. received 36 sample(s) on 9/18/2015 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Dissolved Mercury by EPA Method 245.1

Dissolved Metals by EPA Method 200.8

Gasoline by NWTPH-Gx

Herbicides by EPA Method 8151A

Mercury by EPA Method 245.1

Mercury by EPA Method 7471

Organochlorine Pesticides by EPA Method 8081

Polyaromatic Hydrocarbons by EPA Method 8270 (SIM)

Sample Moisture (Percent Moisture)

Semi-Volatile Organic Compounds by EPA Method 8270

Total Metals by EPA Method 200.8

Total Metals by EPA Method 6020

Volatile Organic Compounds by EPA Method 8260

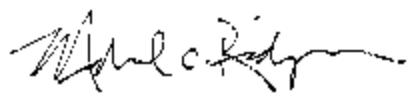

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Mike Ridgeway
President

Date: 10/05/2015

CLIENT: Shannon & Wilson
Project: Pacific Park
Lab Order: 1509270

Case Narrative

WO#: 1509270

Date: 10/3/2015

CLIENT: Shannon & Wilson
Project: Pacific Park

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below LOQ
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Ed Ptak
400 N. 34th Street, Suite 100
Seattle, WA 98103

RE: Pacific Park

Lab ID: 1509270

October 29, 2015

Attention Ed Ptak:

Fremont Analytical, Inc. received 36 sample(s) on 9/18/2015 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Dissolved Mercury by EPA Method 245.1

Dissolved Metals by EPA Method 200.8

Gasoline by NWTPH-Gx

Herbicides by EPA Method 8151A

Mercury (SW7470) with TCLP Extraction (EPA 1311)

Mercury by EPA Method 245.1

Mercury by EPA Method 7471

Metals (SW6020) with TCLP Extraction (EPA 1311)

Organochlorine Pesticides by EPA Method 8081

Polyaromatic Hydrocarbons by EPA Method 8270 (SIM)

Polychlorinated Biphenyls (PCB) by EPA 8082

Sample Moisture (Percent Moisture)

Semi-Volatile Organic Compounds by EPA Method 8270

Total Metals by EPA Method 200.8

Total Metals by EPA Method 6020

Volatile Organic Compounds by EPA Method 8260

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike Ridgeway".

Mike Ridgeway

Case Narrative

WO#: 1509270

Date: 10/29/2015

CLIENT: Shannon & Wilson
Project: Pacific Park

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Sample Log-In Check List

Client Name: **SW**

Work Order Number: **1509270**

Logged by: **Clare Griggs**

Date Received: **9/18/2015 5:55:00 PM**

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >0°C to 10.0°C * Yes No NA
Please refer to item information.
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

Person Notified:	Ed Ptak	Date	9/22/2015
By Whom:	Clare Griggs	Via:	<input type="checkbox"/> eMail <input checked="" type="checkbox"/> Phone <input type="checkbox"/> Fax <input type="checkbox"/> In Person
Regarding:	Confirming analyses.		
Client Instructions:	Add PAH to water the 3 water samples.		

19. Additional remarks:

Ed Ptak
400 N. 34th Street, Suite 100
Seattle, WA 98103

RE: Pacific Park

Lab ID: 1509270

October 29, 2015

Attention Ed Ptak:

Fremont Analytical, Inc. received 36 sample(s) on 9/18/2015 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Dissolved Mercury by EPA Method 245.1

Dissolved Metals by EPA Method 200.8

Gasoline by NWTPH-Gx

Herbicides by EPA Method 8151A

Mercury (SW7470) with TCLP Extraction (EPA 1311)

Mercury by EPA Method 245.1

Mercury by EPA Method 7471

Metals (SW6020) with TCLP Extraction (EPA 1311)

Organochlorine Pesticides by EPA Method 8081

Polyaromatic Hydrocarbons by EPA Method 8270 (SIM)

Polychlorinated Biphenyls (PCB) by EPA 8082

Sample Moisture (Percent Moisture)

Semi-Volatile Organic Compounds by EPA Method 8270

Total Metals by EPA Method 200.8

Total Metals by EPA Method 6020

Volatile Organic Compounds by EPA Method 8260

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike Ridgeway".

Case Narrative

WO#: 1509270

Date: 10/29/2015

CLIENT: Shannon & Wilson
Project: Pacific Park

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Sample Log-In Check List

Client Name: **SW**

Work Order Number: **1509270**

Logged by: **Clare Griggs**

Date Received: **9/18/2015 5:55:00 PM**

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
 4. Shipping container/cooler in good condition? Yes No
 5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
 6. Was an attempt made to cool the samples? Yes No NA
 7. Were all items received at a temperature of >0°C to 10.0°C * Yes No NA
- Please refer to item information.**
8. Sample(s) in proper container(s)? Yes No
 9. Sufficient sample volume for indicated test(s)? Yes No
 10. Are samples properly preserved? Yes No
 11. Was preservative added to bottles? Yes No NA
 12. Is there headspace in the VOA vials? Yes No NA
 13. Did all samples containers arrive in good condition(unbroken)? Yes No
 14. Does paperwork match bottle labels? Yes No
 15. Are matrices correctly identified on Chain of Custody? Yes No
 16. Is it clear what analyses were requested? Yes No
 17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

Person Notified:	Ed Ptak	Date	9/22/2015
By Whom:	Clare Griggs	Via:	<input type="checkbox"/> eMail <input checked="" type="checkbox"/> Phone <input type="checkbox"/> Fax <input type="checkbox"/> In Person
Regarding:	Confirming analyses.		
Client Instructions:	Add PAH to water the 3 water samples.		

19. Additional remarks:

Item Information

Item #	Temp °C
Cooler 1	6.2
Cooler 2	8.8
Cooler 3	10.1
Sample 1	8.1
Sample 2	6.1

RE: Pacific Park

Lab ID: 1509300

October 06, 2015

Attention Ed Ptak:

Fremont Analytical, Inc. received 22 sample(s) on 9/21/2015 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Dissolved Mercury by EPA Method 245.1

Dissolved Metals by EPA Method 200.8

Gasoline by NWTPH-Gx

Herbicides by EPA Method 8151A

Mercury by EPA Method 245.1

Mercury by EPA Method 7471

Organochlorine Pesticides by EPA Method 8081

Polyaromatic Hydrocarbons by EPA Method 8270 (SIM)

Sample Moisture (Percent Moisture)

Semi-Volatile Organic Compounds by EPA Method 8270

Total Metals by EPA Method 200.8

Total Metals by EPA Method 6020

Volatile Organic Compounds by EPA Method 8260

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Mike Ridgeway
President

Case Narrative

WO#: 1509300

Date: 10/6/2015

CLIENT: Shannon & Wilson
Project: Pacific Park

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below LOQ
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Shannon & Wilson

Ed Ptak
400 N. 34th Street, Suite 100
Seattle, WA 98103

RE: Pacific Park

Lab ID: 1509300

October 28, 2015

Attention Ed Ptak:

Fremont Analytical, Inc. received 22 sample(s) on 9/21/2015 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Dissolved Mercury by EPA Method 245.1

Dissolved Metals by EPA Method 200.8

Gasoline by NWTPH-Gx

Herbicides by EPA Method 8151A

Mercury by EPA Method 245.1

Mercury by EPA Method 7471

Metals (SW6020) with TCLP Extraction (EPA 1311)

Organochlorine Pesticides by EPA Method 8081

Polyaromatic Hydrocarbons by EPA Method 8270 (SIM)

Polychlorinated Biphenyls (PCB) by EPA 8082

Sample Moisture (Percent Moisture)

Semi-Volatile Organic Compounds by EPA Method 8270

Total Metals by EPA Method 200.8

Total Metals by EPA Method 6020

Volatile Organic Compounds by EPA Method 8260

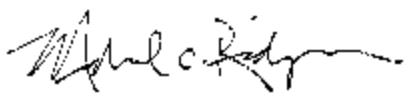

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Mike Ridgeway
President

Case Narrative

WO#: 1509300

Date: 10/28/2015

CLIENT: Shannon & Wilson
Project: Pacific Park

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers & Acronyms

WO#: 1509300

Date Reported: 10/28/2015

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

NOTES:

S - Outlying QC recoveries were observed. The method is in control as indicated by the LCS.

Q - Indicates an analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF).

Seattle, WA 98103

RE: Pacific Park

Lab ID: 1509311

October 06, 2015

Attention Ed Ptak:

Fremont Analytical, Inc. received 13 sample(s) on 9/22/2015 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Dissolved Mercury by EPA Method 245.1

Dissolved Metals by EPA Method 200.8

Gasoline by NWTPH-Gx

Herbicides by EPA Method 8151A

Mercury by EPA Method 245.1

Mercury by EPA Method 7471

Organochlorine Pesticides by EPA Method 8081

Polyaromatic Hydrocarbons by EPA Method 8270 (SIM)

Sample Moisture (Percent Moisture)

Semi-Volatile Organic Compounds by EPA Method 8270

Total Metals by EPA Method 200.8

Total Metals by EPA Method 6020

Volatile Organic Compounds by EPA Method 8260

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Mike Ridgeway
President

Case Narrative

WO#: 1509311

Date: 10/6/2015

CLIENT: Shannon & Wilson
Project: Pacific Park

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below LOQ
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

NOTES:

S - Outlyingspike recovery(ies) observed for Benzyl alcohol and 4-Nitrophenol - High Bias. There were no detections of these analytes in the samples. No further action is required.

S - Outlyingspike recovery(ies) observed for Hexachlorocyclopentadiene and 2,4-Dinitrophenol. Samples will be qualified with an *.

Sample Log-In Check List

Client Name: **SW**

Work Order Number: **1509311**

Logged by: **Clare Griggs**

Date Received: **9/22/2015 3:55:00 PM**

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
 4. Shipping container/cooler in good condition? Yes No
 5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
 6. Was an attempt made to cool the samples? Yes No NA
 7. Were all items received at a temperature of >0°C to 10.0°C * Yes No NA
- Please refer to item information.**
8. Sample(s) in proper container(s)? Yes No
 9. Sufficient sample volume for indicated test(s)? Yes No
 10. Are samples properly preserved? Yes No
 11. Was preservative added to bottles? Yes No NA
 12. Is there headspace in the VOA vials? Yes No NA
 13. Did all samples containers arrive in good condition(unbroken)? Yes No
 14. Does paperwork match bottle labels? Yes No
 15. Are matrices correctly identified on Chain of Custody? Yes No
 16. Is it clear what analyses were requested? Yes No
 17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

October 29, 2015

Attention Ed Ptak:

Fremont Analytical, Inc. received 13 sample(s) on 9/22/2015 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Dissolved Mercury by EPA Method 245.1

Dissolved Metals by EPA Method 200.8

Gasoline by NWTPH-Gx

Herbicides by EPA Method 8151A

Mercury by EPA Method 245.1

Mercury by EPA Method 7471

Organochlorine Pesticides by EPA Method 8081

Polyaromatic Hydrocarbons by EPA Method 8270 (SIM)

Polychlorinated Biphenyls (PCB) by EPA 8082

Sample Moisture (Percent Moisture)

Semi-Volatile Organic Compounds by EPA Method 8270

Total Metals by EPA Method 200.8

Total Metals by EPA Method 6020

Volatile Organic Compounds by EPA Method 8260

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

Mike Ridgeway
President

Date: 10/29/2015

CLIENT: Shannon & Wilson
Project: Pacific Park
Lab Order: 1509311

Work Order Sample Summary

Lab Sample ID	Client Sample ID	Date/Time Collected	Date/Time Received

Case Narrative

WO#: 1509311

Date: 10/29/2015

CLIENT: Shannon & Wilson
Project: Pacific Park

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

NOTES:

S - Outlyingspike recovery(ies) observed for Benzyl alcohol and 4-Nitrophenol - High Bias. There were no detections of these analytes in the samples. No further action is required.

S - Outlyingspike recovery(ies) observed for Hexachlorocyclopentadiene and 2,4-Dinitrophenol. Samples will be qualified with an *.

NOTES:

S - Outlying QC recoveries were observed. The method is in control as indicated by the LCS.

Q - Indicates an analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF).

Sample Log-In Check List

Client Name: **SW**

Work Order Number: **1509311**

Logged by: **Clare Griggs**

Date Received: **9/22/2015 3:55:00 PM**

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
 4. Shipping container/cooler in good condition? Yes No
 5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
 6. Was an attempt made to cool the samples? Yes No NA
 7. Were all items received at a temperature of >0°C to 10.0°C * Yes No NA
- Please refer to item information.**
8. Sample(s) in proper container(s)? Yes No
 9. Sufficient sample volume for indicated test(s)? Yes No
 10. Are samples properly preserved? Yes No
 11. Was preservative added to bottles? Yes No NA
 12. Is there headspace in the VOA vials? Yes No NA
 13. Did all samples containers arrive in good condition(unbroken)? Yes No
 14. Does paperwork match bottle labels? Yes No
 15. Are matrices correctly identified on Chain of Custody? Yes No
 16. Is it clear what analyses were requested? Yes No
 17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

Person Notified:	<input type="text"/>	Date:	<input type="text"/>
By Whom:	<input type="text"/>	Via:	<input type="checkbox"/> eMail <input type="checkbox"/> Phone <input type="checkbox"/> Fax <input type="checkbox"/> In Person

RE: Pacific Park

Lab ID: 1509353

October 09, 2015

Attention Ed Ptak:

Fremont Analytical, Inc. received 2 sample(s) on 9/25/2015 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Gasoline by NWTPH-Gx

Herbicides by EPA Method 8151A

Mercury by EPA Method 7471

Organochlorine Pesticides by EPA Method 8081

Sample Moisture (Percent Moisture)

Semi-Volatile Organic Compounds by EPA Method 8270

Total Metals by EPA Method 6020

Volatile Organic Compounds by EPA Method 8260

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike Ridgeway".

Mike Ridgeway
President

Work Order Sample Summary

Lab Sample ID	Client Sample ID	Date/Time Collected	Date/Time Received
1509353-001	TP-1:5.5	09/23/2015 9:00 AM	09/25/2015 12:20 PM
1509353-002	TP-3:6.0	09/23/2015 11:30 AM	09/25/2015 12:20 PM

Note: If no "Time Collected" is supplied, a default of 12:00AM is assigned

Case Narrative

WO#: 1509353

Date: 10/9/2015

CLIENT: Shannon & Wilson
Project: Pacific Park

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below LOQ
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >0°C to 10.0°C* Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

Shannon & Wilson

Ed Ptak
400 N. 34th Street, Suite 100
Seattle, WA 98103

RE: Pacific Park

Lab ID: 1509353

October 21, 2015

Attention Ed Ptak:

Fremont Analytical, Inc. received 2 sample(s) on 9/25/2015 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Gasoline by NWTPH-Gx

Herbicides by EPA Method 8151A

Mercury by EPA Method 7471

Organochlorine Pesticides by EPA Method 8081

Sample Moisture (Percent Moisture)

Semi-Volatile Organic Compounds by EPA Method 8270

Total Metals by EPA Method 6020

Volatile Organic Compounds by EPA Method 8260

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike Ridgeway".

Mike Ridgeway
President

Work Order Sample Summary

Lab Sample ID	Client Sample ID	Date/Time Collected	Date/Time Received
1509353-001	TP-1-15:5.5	09/23/2015 9:00 AM	09/25/2015 12:20 PM
1509353-002	TP-3-15:6.0	09/23/2015 11:30 AM	09/25/2015 12:20 PM

Note: If no "Time Collected" is supplied, a default of 12:00AM is assigned

Case Narrative

WO#: 1509353

Date: 10/21/2015

CLIENT: Shannon & Wilson
Project: Pacific Park

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >0°C to 10.0°C* Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

RE: Pacific Park

Lab ID: 1509353

October 29, 2015

Attention Ed Ptak:

Fremont Analytical, Inc. received 2 sample(s) on 9/25/2015 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Gasoline by NWTPH-Gx

Herbicides by EPA Method 8151A

Mercury by EPA Method 7471

Metals (SW6020) with TCLP Extraction (EPA 1311)

Organochlorine Pesticides by EPA Method 8081

Polychlorinated Biphenyls (PCB) by EPA 8082

Sample Moisture (Percent Moisture)

Semi-Volatile Organic Compounds by EPA Method 8270

Total Metals by EPA Method 6020

Volatile Organic Compounds by EPA Method 8260

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike Ridgeway".

Mike Ridgeway

Note: If no "Time Collected" is supplied, a default of 12:00AM is assigned

Case Narrative

WO#: 1509353

Date: 10/29/2015

CLIENT: Shannon & Wilson
Project: Pacific Park

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >0°C to 10.0°C* Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

RE: Pacific Park

Lab ID: 1510048

October 14, 2015

Attention Ed Ptak:

Fremont Analytical, Inc. received 8 sample(s) on 10/6/2015 for the analyses presented in the following report.

Diesel and Heavy Oil by NWTPH-Dx/Dx Ext.

Dissolved Mercury by EPA Method 245.1

Dissolved Metals by EPA Method 200.8

Gasoline by NWTPH-Gx

Mercury by EPA Method 245.1

Polyaromatic Hydrocarbons by EPA Method 8270 (SIM)

Total Metals by EPA Method 200.8

Volatile Organic Compounds by EPA Method 8260

This report consists of the following:

- Case Narrative
- Analytical Results
- Applicable Quality Control Summary Reports
- Chain of Custody

All analyses were performed consistent with the Quality Assurance program of Fremont Analytical, Inc. Please contact the laboratory if you should have any questions about the results.

Thank you for using Fremont Analytical.

Sincerely,

A handwritten signature in black ink, appearing to read "Mike Ridgeway".

Mike Ridgeway

Case Narrative

WO#: 1510048

Date: 10/14/2015

CLIENT: Shannon & Wilson
Project: Pacific Park

I. SAMPLE RECEIPT:

Samples receipt information is recorded on the attached Sample Receipt Checklist.

II. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report ("mg/kg-dry" or "ug/kg-dry").

Matrix Spike (MS) and MS Duplicate (MSD) samples are tested from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. The sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The LCS and the MB are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

III. ANALYSES AND EXCEPTIONS:

Exceptions associated with this report will be footnoted in the analytical results page(s) or the quality control summary page(s) and/or noted below.

Qualifiers:

- * - Flagged value is not within established control limits
- B - Analyte detected in the associated Method Blank
- D - Dilution was required
- E - Value above quantitation range
- H - Holding times for preparation or analysis exceeded
- I - Analyte with an internal standard that does not meet established acceptance criteria
- J - Analyte detected below Reporting Limit
- N - Tentatively Identified Compound (TIC)
- Q - Analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20%RSD, <20% Drift or minimum RRF)
- S - Spike recovery outside accepted recovery limits
- ND - Not detected at the Reporting Limit
- R - High relative percent difference observed

Acronyms:

- %Rec - Percent Recovery
- CCB - Continued Calibration Blank
- CCV - Continued Calibration Verification
- DF - Dilution Factor
- HEM - Hexane Extractable Material
- ICV - Initial Calibration Verification
- LCS/LCSD - Laboratory Control Sample / Laboratory Control Sample Duplicate
- MB or MBLANK - Method Blank
- MDL - Method Detection Limit
- MS/MSD - Matrix Spike / Matrix Spike Duplicate
- PDS - Post Digestion Spike
- Ref Val - Reference Value
- RL - Reporting Limit
- RPD - Relative Percent Difference
- SD - Serial Dilution
- SGT - Silica Gel Treatment
- SPK - Spike
- Surr - Surrogate

Sample Log-In Check List

Client Name: **SW**

Work Order Number: **1510048**

Logged by: **Chelsea Ward**

Date Received: **10/6/2015 12:15:00 PM**

Chain of Custody

1. Is Chain of Custody complete? Yes No Not Present
2. How was the sample delivered? Client

Log In

3. Coolers are present? Yes No NA
4. Shipping container/cooler in good condition? Yes No
5. Custody Seals present on shipping container/cooler?
(Refer to comments for Custody Seals not intact) Yes No Not Required
6. Was an attempt made to cool the samples? Yes No NA
7. Were all items received at a temperature of >0°C to 10.0°C * Yes No NA
8. Sample(s) in proper container(s)? Yes No
9. Sufficient sample volume for indicated test(s)? Yes No
10. Are samples properly preserved? Yes No
11. Was preservative added to bottles? Yes No NA
12. Is there headspace in the VOA vials? Yes No NA
13. Did all samples containers arrive in good condition(unbroken)? Yes No
14. Does paperwork match bottle labels? Yes No
15. Are matrices correctly identified on Chain of Custody? Yes No
16. Is it clear what analyses were requested? Yes No
17. Were all holding times able to be met? Yes No

Special Handling (if applicable)

18. Was client notified of all discrepancies with this order? Yes No NA

19. Additional remarks:

Item Information

Item #	Temp °C
Cooler 1	8.2
Cooler 2	7.8
Sample 1	7.5
Sample 2	8.2

* Note: DoD/ELAP and TNI require items to be received at 4°C +/- 2°C

APPENDIX C

**IMPORTANT INFORMATION ABOUT YOUR
ENVIRONMENTAL SITE ASSESSMENT/EVALUATION REPORT**

Date: May 31, 2016
To: Mr. Chris Brummer
River and Floodplain Management Section
King County Water and Land Resources
Division

IMPORTANT INFORMATION ABOUT YOUR GEOTECHNICAL/ENVIRONMENTAL REPORT

CONSULTING SERVICES ARE PERFORMED FOR SPECIFIC PURPOSES AND FOR SPECIFIC CLIENTS.

Consultants prepare reports to meet the specific needs of specific individuals. A report prepared for a civil engineer may not be adequate for a construction contractor or even another civil engineer. Unless indicated otherwise, your consultant prepared your report expressly for you and expressly for the purposes you indicated. No one other than you should apply this report for its intended purpose without first conferring with the consultant. No party should apply this report for any purpose other than that originally contemplated without first conferring with the consultant.

THE CONSULTANT'S REPORT IS BASED ON PROJECT-SPECIFIC FACTORS.

A geotechnical/environmental report is based on a subsurface exploration plan designed to consider a unique set of project-specific factors. Depending on the project, these may include: the general nature of the structure and property involved; its size and configuration; its historical use and practice; the location of the structure on the site and its orientation; other improvements such as access roads, parking lots, and underground utilities; and the additional risk created by scope-of-service limitations imposed by the client. To help avoid costly problems, ask the consultant to evaluate how any factors that change subsequent to the date of the report may affect the recommendations. Unless your consultant indicates otherwise, your report should not be used: (1) when the nature of the proposed project is changed (for example, if an office building will be erected instead of a parking garage, or if a refrigerated warehouse will be built instead of an unrefrigerated one, or chemicals are discovered on or near the site); (2) when the size, elevation, or configuration of the proposed project is altered; (3) when the location or orientation of the proposed project is modified; (4) when there is a change of ownership; or (5) for application to an adjacent site. Consultants cannot accept responsibility for problems that may occur if they are not consulted after factors which were considered in the development of the report have changed.

SUBSURFACE CONDITIONS CAN CHANGE.

Subsurface conditions may be affected as a result of natural processes or human activity. Because a geotechnical/environmental report is based on conditions that existed at the time of subsurface exploration, construction decisions should not be based on a report whose adequacy may have been affected by time. Ask the consultant to advise if additional tests are desirable before construction starts; for example, groundwater conditions commonly vary seasonally.

Construction operations at or adjacent to the site and natural events such as floods, earthquakes, or groundwater fluctuations may also affect subsurface conditions and, thus, the continuing adequacy of a geotechnical/environmental report. The consultant should be kept apprised of any such events, and should be consulted to determine if additional tests are necessary.

MOST RECOMMENDATIONS ARE PROFESSIONAL JUDGMENTS.

Site exploration and testing identifies actual surface and subsurface conditions only at those points where samples are taken. The data were extrapolated by your consultant, who then applied judgment to render an opinion about overall subsurface conditions. The actual interface between materials may be far more gradual or abrupt than your report indicates. Actual conditions in areas not sampled may differ from those predicted in your report. While nothing can be done to prevent such situations, you and your consultant can work together to help reduce their impacts. Retaining your consultant to observe subsurface construction operations can be particularly beneficial in this respect.

A REPORT'S CONCLUSIONS ARE PRELIMINARY.

The conclusions contained in your consultant's report are preliminary because they must be based on the assumption that conditions revealed through selective exploratory sampling are indicative of actual conditions throughout a site. Actual subsurface conditions can be discerned only during earthwork; therefore, you should retain your consultant to observe actual conditions and to provide conclusions. Only the consultant who prepared the report is fully familiar with the background information needed to determine whether or not the report's recommendations based on those conclusions are valid and whether or not the contractor is abiding by applicable recommendations. The consultant who developed your report cannot assume responsibility or liability for the adequacy of the report's recommendations if another party is retained to observe construction.

THE CONSULTANT'S REPORT IS SUBJECT TO MISINTERPRETATION.

Costly problems can occur when other design professionals develop their plans based on misinterpretation of a geotechnical/environmental report. To help avoid these problems, the consultant should be retained to work with other project design professionals to explain relevant geotechnical, geological, hydrogeological, and environmental findings, and to review the adequacy of their plans and specifications relative to these issues.

BORING LOGS AND/OR MONITORING WELL DATA SHOULD NOT BE SEPARATED FROM THE REPORT.

Final boring logs developed by the consultant are based upon interpretation of field logs (assembled by site personnel), field test results, and laboratory and/or office evaluation of field samples and data. Only final boring logs and data are customarily included in geotechnical/environmental reports. These final logs should not, under any circumstances, be redrawn for inclusion in architectural or other design drawings, because drafters may commit errors or omissions in the transfer process.

To reduce the likelihood of boring log or monitoring well misinterpretation, contractors should be given ready access to the complete geotechnical engineering/environmental report prepared or authorized for their use. If access is provided only to the report prepared for you, you should advise contractors of the report's limitations, assuming that a contractor was not one of the specific persons for whom the report was prepared, and that developing construction cost estimates was not one of the specific purposes for which it was prepared. While a contractor may gain important knowledge from a report prepared for another party, the contractor should discuss the report with your consultant and perform the additional or alternative work believed necessary to obtain the data specifically appropriate for construction cost estimating purposes. Some clients hold the mistaken impression that simply disclaiming responsibility for the accuracy of subsurface information always insulates them from attendant liability. Providing the best available information to contractors helps prevent costly construction problems and the adversarial attitudes that aggravate them to a disproportionate scale.

READ RESPONSIBILITY CLAUSES CLOSELY.

Because geotechnical/environmental engineering is based extensively on judgment and opinion, it is far less exact than other design disciplines. This situation has resulted in wholly unwarranted claims being lodged against consultants. To help prevent this problem, consultants have developed a number of clauses for use in their contracts, reports, and other documents. These responsibility clauses are not exculpatory clauses designed to transfer the consultant's liabilities to other parties; rather, they are definitive clauses that identify where the consultant's responsibilities begin and end. Their use helps all parties involved recognize their individual responsibilities and take appropriate action. Some of these definitive clauses are likely to appear in your report, and you are encouraged to read them closely. Your consultant will be pleased to give full and frank answers to your questions.
