1 INTRODUCTION

The Riley Group, Inc. (RGI) has performed this Phase I Environmental Site Assessment (ESA) for the Dominic's Plaza (SeaMar Community Health Centers) property located at 9635 Des Moines Memorial Drive South, Seattle, King County, Washington (hereafter referred to as the Site, Figure 1). The following historical addresses were identified for the Site: 9605, 9623, 9627, and 9649 Des Moines Way South.

The Site consists of a 3.49-acre tax parcel of land (parcel number 5624200371) and is occupied by a grocery store, a vacant single-family residence and a partially occupied commercial building. The owner of the Site is SeaMar Community Health Centers.

The Phase I ESA was performed on behalf of HomeStreet Bank (hereafter referred to as the Client), which authorized the Phase I ESA on February 9, 2016. RGI understands that the Client intends to provide funds for a construction loan. RGI understands that the current use of the Site will generally remain "as-is", although the commercial building will be expanded to include more office and community space.

1.1 PURPOSE

This Phase I ESA was performed to identify recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), controlled recognized environmental conditions (CRECs), and business environmental risks (BERs) associated with the Site in accordance with the scope of work and procedures included in the American Society for Testing and Materials Standard Practice E1527-13 (ASTM E1527-13) and the Code of Federal Regulations Title 40 Part 312 (40 CFR 312).

RECs, HRECS, CRECs, and BERs, as defined by ASTM E1527-13, are described below:

> [The term "recognized environmental condition" means] the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property 1) due to any release to the environment, 2) under conditions indicative of a release to the environment or 3) under conditions that indicate an existing release, a past release, or pose a material threat of a future release to the environment.
>
> [The term "historical recognized environmental condition" means] a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).
>
> [The term "controlled recognized environmental condition" means] a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).
>
> [The term "business environmental risk" means] a risk that can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

Other definitions used herein, as defined by ASTM E1527-13, are provided in Appendix B for reference.

This Phase I ESA was performed in compliance with the all appropriate inquiry (AAI) codified in 40 CFR 312. Completion of this Phase I ESA may qualify the Client for Landowner Liability Protections (LLP) from the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA).

1.2 SCOPE OF WORK

RGI's scope of work for this Phase I ESA included the following tasks:

- Review of state and federal databases of contaminated facilities and/or facilities that use hazardous materials in the vicinity of the Site.
- Submit the ASTM E1527-13 User Questionnaire to the Client and the owner of the Site and review any completed questionnaires.
- Review of building department records, health department records, fire department records, tax assessor records, city directories, historical aerial photographs, historical real estate and fire insurance plat maps, topographic maps, geologic maps, and water/resource protection well log records, where available and applicable.
- Review of an environmental lien search report and/or title report, if provided by the Client.
- Perform a reconnaissance of the Site and a cursory reconnaissance of adjoining properties.
- Comment on underground storage tanks (USTs), aboveground storage tanks (ASTs), polychlorinated biphenyls (PCBs), sumps, oil-water separators, hydraulic hoists, disposal pits, groundwater wells, drywells, septic tanks, drums or large chemical storage containers, hazardous materials, and other environmental conditions, as applicable.
- Interview knowledgeable persons regarding the Site and/or adjoining properties.
- Review of Washington State Department of Ecology (Ecology) files for the Site and/or adjoining properties, where applicable, available, and reasonably ascertainable.
- Review of any previous environmental reports and/or documentation prepared by others for the Site and/or adjoining properties (as provided to RGI by the Client or obtained by RGI).
- Prepare a final Phase I ESA, presenting RGI's findings, conclusions, and recommendations.

2 DESCRIPTION OF THE SITE

2.1 LOCATION

The Site is located on the United States Geologic Survey (USGS) Seattle South, Washington, 7.5-Minute Topographic Map (Figure 1) at an elevation of approximately 20 to 45 feet above mean sea level.

The Site is located in the Northeast quarter of Section 5 of Township 23 North, Range 4 East of

the Willamette Meridian. The King County tax parcel number for the Site is 5624200371.

2.2 CHARACTERISTICS

The Site and surrounding area slope slightly towards the northeast.

Typical property use in the surrounding area is a mixture of residential, commercial, and industrial properties.

2.3 GEOLOGY AND HYDROGEOLOGY

The *Geologic Map of Seattle – a Progress Report* (Troost, et al., 2005) maps the shallow soil beneath the Site as Vashon Till (map unit Qvt), pre-Olympia aged fine-grained deposits (map unit Qpof), and Hamm Creek formation (map unit Qhc). The till is described as compact silt, sand, and gravel. The pre-Olympia deposits are described as laminated to massive silt and clay with localized sandy interbeds. This unit is characterized as very dense and hard with occasional iron-oxide cemented layers. The Hamm Creek formation is described as interbedded gravel, sand, silt, clay, peat, and tephra beds.

Based on topography, the inferred groundwater flow direction beneath the Site is to the northeast. Based on a previous subsurface investigation on the Site by RGI, depth to groundwater ranges from 3 to 8.5 feet bgs.

2.4 CURRENT USE OF THE SITE

The Site is occupied by Dominic's Red Apple Market, a vacant single-family residence, and a commercial building that is occupied by the SeaMar accounting offices and youth boxing club, as well as two vacant spaces.

2.5 CURRENT USES OF ADJOINING PROPERTIES

Current uses of adjoining properties are summarized below:

North of the Site: Intersection of Des Moines Memorial Drive South and South 96th Street with a Shell Gasoline Station beyond (Photograph 2).

Northeast of the Site: Intersection of Des Moines Memorial Drive South and South 96th Street with Absolute German Autowrecking beyond (Photograph 3).

East of the Site: Des Moines Memorial Drive South with a McDonald's Restaurant and AAAA Mini-Storage beyond (Photograph 4).

South of the Site: Vacant land with power lines (Photograph 5).

Southwest of the Site: Wooldridge Boats (Photograph 6).

West of the Site: Beckwith and Kuffel (Photograph 7).

Northwest of the Site: South 96th Street with Graffix Integrative Signage beyond (Photograph 8).

The above adjoining properties are not likely to handle hazardous materials that could have an adverse effect on the Site, except for the following: Shell Gasoline Station and Absolute German Autowrecking. See Section 6.1.2 for details.

3 PROVIDED INFORMATION

Previous environmental reports, related documentation, or other pertinent information provided by the Client or the owner of the Site are either described below or described elsewhere in this Phase I ESA (as indicated). Copies of the provided information are included in Appendix C.

3.1 ENVIRONMENTAL LIEN SEARCH

No environmental lien records search was provided to RGI for the purposes of this Phase I ESA.

3.2 TITLE REPORT

No title records were provided to RGI for the purposes of this Phase I ESA.

3.3 PREVIOUS ENVIRONMENTAL REPORTS

RGI completed a Phase I ESA (Phase I) in October, 2007, and a Geophysical Survey and Limited Phase II Subsurface Investigation (Phase II) DRAFT letter report in November 2007, both on behalf of Frontier Bank.

Select portions of the above-referenced reports (as provided to us by the Client) are included in Appendix C. The above-referenced reports are discussed below.

3.3.1 2007 PHASE I ESA

The Phase I identified the following RECs for the Site:

- Historical gasoline service station on the northern portion of the Site from at least the 1960s to the 1970s. No information was found regarding the status of the former Underground Storage Tanks (USTs), or any other underground improvements (hoist, product piping, etc.)
- Heating oil UST used at the on-Site residence, which was likely in use since the 1950s.
- Contaminated groundwater on the west adjoining property (inferred up-gradient) impacted by diesel- and oil-range Total Petroleum Hydrocarbons (TPH), according to a 2003 report by Clayton Group Services.

3.3.2 2007 PHASE II

RGI completed a Geophysical Survey and Limited Phase II Subsurface Investigation DRAFT letter report (Phase II) report for the Site to address the RECs identified in the 2007 Phase I ESA. The geophysical survey was limited by the presence of several large storage containers on the northern portion of the Site in the vicinity of the former gasoline service station. A total of 10 test probes were advanced across the Site in areas of concern to depths between 11 and 14 feet bgs; two were intended to assess the heating oil UST in the vicinity of the single-family residence, three to assess potential impacts from the west-adjoining property, and five to assess the former gasoline service station. Samples were analyzed for gasoline-, diesel-, oil-range total petroleum hydrocarbons (TPH), benzene, toluene, ethylbenzene, and xylene (BTEX), and halogenated volatile organic compounds (HVOCs).

Soil samples in the vicinity of the heating oil UST, between depths of 5.5 and 8 feet contained diesel- and oil-range TPH at concentrations of 10,000 milligrams per kilograms (mg/kg) and

4,900 mg/kg, respectively, which exceeded the Model Toxics Control Act (MTCA) Method A Cleanup Levels. A groundwater grab sample collected from a test probe location next to the UST contained a concentration of 1,500,000 micrograms per liter (μg/L) diesel-range TPH and 37,000 μg/L oil-range TPH. These concentrations likely represented free product floating on the groundwater.

Four of the five test probes in the vicinity of the former gasoline station contained non-detectable concentrations, or concentrations below the applicable MTCA Method A Cleanup Levels, of the contaminants of concern. The fifth, located in the vicinity of the former pump island, contained concentrations of diesel- and oil-range TPH in the soil at a depth of 6 feet bgs at concentrations of 520 mg/kg and 4,200 mg/kg, respectively, and benzene in soil and/or groundwater, indicating a release from the former USTs had occurred.

Three test probes were completed along the western Site boundary to evaluate the possible migration of the known contamination from the west adjoining property. Shallow groundwater in the central of the three borings contained concentrations of diesel- and oil-range TPH, cis-1,2-dichloroethene (DCE), trichloroethene (TCE), and vinyl chloride (VC) at concentrations above the MTCA Method A Cleanup Levels. The extent of the groundwater plume intercepted along the western Site boundary was not defined.

No recommendations were provided in the draft report.

3.4 ASTM E1527-13 User Questionnaire

RGI provided an ASTM E1527-13 User Questionnaire to Ms. Beth Crocker of HomeStreet Bank. A completed copy has not been received prior to the date of this report.

4 Reconnaissance

RGI's Ms. Anna Jordan (Environmental Professional) performed a reconnaissance of the Site on February 19, 2016. Features of the Site and surrounding area observed during reconnaissance are illustrated on Figure 2. Photographs of the Site and adjoining properties are provided in Appendix A.

RGI was accompanied by Mr. Doug Dale and Mr. Jeff Neumann, both of SeaMar Community Health Centers, during the reconnaissance and had access to all interior and exterior areas of the Site, except for the interior of the single-family residence. Weather conditions during reconnaissance were rainy and cool.

4.1 Operations/Processes

The Site is occupied by Dominic's Red Apple Market, a vacant single-family residence, and a commercial building occupied by SeaMar Community Health Center offices, a SeaMar youth boxing club, and two vacant spaces.

4.2 Building Information

The Site is occupied by three buildings (Photograph 1). The first is a single-story, approximately 12,240-square-foot grocery store building, which was constructed in 1964. The second is a single-story, approximately 1,524-square-foot single-family residence with a full basement, which was constructed in 1950. The third is a single-story, approximately 16,800-square-foot commercial building, which was constructed in 1986.

The single-family residence is currently unheated, but was historically heated with an oil-burning furnace. The two commercial buildings are currently heated by natural gas, which is provided to the Site by the local power company. Sewer and water service is provided by the city.

4.3 OTHER OBSERVATIONS

Feature	Present on the Site? (Yes/No)	Further Discussed in Other Sections, as Noted Below (If Applicable)
Wells	Yes	Section 4.3.1
Sumps	No	
Stormwater catch basins	Yes	Section 4.3.1
Septic systems	No	
Oil-water separators	No	
Transformers	No	
Hoists	No	
USTs	Yes	Section 4.5
ASTs	No	
Suspect pavement patches	No	
Suspect floor drains	No	
Natural gas meter	No	
Surface water	No	
Fill or disturbed soils	No	
Hazardous materials	No	
Pesticides	No	
Drums or other large chemical storage containers	Yes	Section 4.3.1
Waste disposal	No	
Debris piles or dumping	No	
Adverse odors	No	
Staining	No	
Suspect stressed vegetation	No	

4.3.1 EXTERIOR OBSERVATIONS

RGI's exterior observation findings are illustrated on Figure 2 and are summarized below:

- The exterior areas of the Site primarily consisted of asphalt paving and landscaped vegetation.
- Three natural gas meters were observed on the west side of the commercial building (Photograph 16).

- Several stormwater catchbasins were observed in various locations across the Site (Photograph 17). No petroleum sheens or odors were observed.
- A moderate petroleum sheen was observed on a small area of dirt along the southern Site boundary (Photograph 19). Based on the small area, this sheen is considered a de minimis condition.
- Two metal drums, one 55-gallons in size, and one approximately 25-gallons in size were observed near the southwest corner of the Site (Photograph 20). The small drum was labeled, although the label had faded and was unreadable. The large drum did not appear to be labeled. No obvious indications of contamination (such as stressed vegetation, staining, sheen, or odor) were observed in the vicinity.
- A heating oil UST fill port and vent pipe were observed on the west side of the single-family residence (Photograph 21). The vent pipe was located on the northwest corner of the residence, and the fill port was located in the center of the walkway, approximately 6 feet west of the residence.
- Five groundwater monitoring wells were observed in various locations across the Site (Photograph 22). One of the wells was located on the west side of the residence, two were located in the parking and drive lane to the north and west of the residence, and the other four were observed on the northern portion of the Site.

In summary, based on our exterior observations during the reconnaissance, no staining, adverse odors, stressed vegetation, or any other indications of improper storage or release of hazardous substances or petroleum products was observed on the Site.

No suspect environmental conditions were observed on the adjoining properties (as viewed from the Site).

4.3.2 INTERIOR OBSERVATIONS

RGI was not provided access to the interior of the single-family residence. Representatives of SeaMar attempted to provide access, however, the keys did not work, and representatives indicated the contractors were in possession of the newest keys.

RGI's interior observation findings are summarized below:

- Typical restaurant and office furnishings and finishes were observed inside the commercial building and the grocery store (Photographs 9, 11, and 14).
- A floor drain was observed in the kitchen of one of the vacant units in the commercial building, a former restaurant and casino. The drain was observed in the kitchen (Photograph 10). No petroleum sheens or odors were observed in the floor drain. Water staining from a leaking roof was observed on the concrete floor near the drain.
- Washers, dryers, and stored office equipment were observed in one of the vacant units of the commercial building, formerly occupied by a coin-operated laundromat (Photograph 12).
- Retail-sized containers (less than 5-gallons in size) of paint and other stored items were observed in a storage room in the rear of the former laundromat.

- A hydraulic bailer was observed in the back room of the grocery store (Photograph 15). No staining was observed on the floor around the bailer.

In summary, based on our interior observations during reconnaissance, no staining, adverse odors, or any other indications of improper storage or release of hazardous substances or petroleum products was observed inside the inspected areas of the building.

4.4 POLYCHLORINATED BIPHENYLS (PCBS) OBSERVATIONS

The Environmental Protection Agency (EPA) considers PCBs to be a possible human carcinogen. The Toxic Substance Control Act of 1976 prohibited any manufacturing of PCBs in the United States after January 1, 1979.

PCBs have historically been used in the manufacture of electrical or other hydraulic equipment (for example, transformers, elevators, trash compactors, hoists), building materials (caulking, insulation), and building fixtures (for example, light ballasts, light bulbs, thermostats). Under 40 CFR 761.3, the mineral oil contained in untested transformers is assumed to be "PCB-contaminated" (50 to 499 parts per million PCB). The continued use of this equipment is authorized by the EPA. Per ASTM E1527-13, this section does not evaluate light ballasts.

One hydraulic bailer was observed in the back room of the grocery store. No labeling regarding the PCB containing hydraulic fluid was observed on the machinery. No staining was observed on the ground around the bailer.

No other indications of PCB-containing equipment or suspect electrical or hydraulic equipment were observed on the Site.

4.5 UNDERGROUND AND ABOVEGROUND STORAGE TANKS (USTS AND ASTS) OBSERVATIONS

RGI's UST and AST survey included a reconnaissance of the Site to identify indications of existing or former USTs or ASTs, such as vent pipes, fill pipes, product lines, concrete pads, or asphalt patches (see Section 6.2 for a discussion of municipal records).

No indications of existing or former ASTs were observed. One UST fill port and vent pipe were observed on the west side of the residence. RGI opened the fill port of the UST to measure the size of the UST and to check for any product remaining in the UST. The UST was slightly more than half full with product. RGI also used Kolor-Kut, a color-changing water finding paste, to determine if there was any water in the UST. No color change was observed. The UST was approximately 3 feet in diameter.

5 INTERVIEWS

RGI interviewed knowledgeable parties regarding the Site and its setting. Our interview findings are summarized below. Findings from the interview process may also be incorporated in other sections of this Phase I ESA.

5.1 CURRENT OWNER

RGI interviewed Mr. Doug Dale and Mr. Jeff Neumann, both of SeaMar Community Health Centers, owner of the Site, on February 19, 2016, and the pertinent results from the interview are summarized below:

- SeaMar Community Health Centers purchased the Site in approximately 2008.

- Mr. Neumann indicated that there were several groundwater monitoring wells on the Site and that he thought they had been sampled within the last year, although he did not have copies of the reports.
- The southern unit of the commercial building was formerly occupied by a coin-operated laundromat for approximately three to five years. No dry-cleaning was done at the Site to the best of Mr. Dale and Mr. Neumann's knowledge.
- Mr. Neumann indicated that the heating oil UST near the residence had been pumped out and was no longer in use.
- Mr. Levy and Mr. Dale did not have knowledge of any sumps, oil-water separators, vaults, hoists, hazardous materials, agricultural uses, or pesticide usage with regards to the Site.

Any other information provided to RGI by Mr. Dale or Mr. Neumann has been incorporated elsewhere in this Phase I ESA.

5.2 PREVIOUS OWNER(S)

Contact information for the previous owners of the Site was not provided to RGI.

6 GOVERNMENTAL REGULATORY AND MUNICIPAL RECORDS REVIEW

RGI's federal, state, and local governmental regulatory and municipal records review and discussion of findings are presented below.

6.1 FEDERAL AND STATE REGULATORY RECORDS SEARCH AND FILE REVIEW

RGI reviewed federal and state records in a search for properties with existing and/or potential environmental liabilities. Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut performed the records search on February 11, 2016. All records reviewed used search radii in accordance with ASTM E1527-13.

A copy of The EDR Radius Map™ Report is included in Appendix D.

6.1.1 THE SITE

RGI requested records from Ecology on December 28, 2015. However, the records were not provide to RGI prior to the date of this report.

The Site was listed on EDR's Proprietary Historical Dry Cleaners database. This database gathers information from city directory and phone book listings about possible former dry cleaning establishments. The database indicates that the Site was occupied by "The Laundromat" in at least 2005.

Based on the nature of the database listing, information from the Site Owner (coin-operated laundromat, short duration of approximately 5 years, and no dry cleaning activities), and the lack of reported releases, this listing is not considered a REC for the Site.

6.1.2 ADJOINING PROPERTIES

6.1.2.1 NORTH ADJOINING

South 96th Street and Des Moines Way

The exact location of this property listing is unknown, and could possibly be north adjoining. The property was listed on the Emergency Response Notification System (ERNS). The database indicates that a spill of grease and oil contaminated soil occurred in the ditch along the street, affecting water in the ditch. Reportedly, a road maintenance crew dug the sludge out of the ditch.

Based on the nature of this database and the limited area of the release, this listing is not considered a risk to the soil, soil vapor, and/or groundwater beneath the Site.

9525 14th Avenue South

The north adjoining property, formerly known as South Park Chevron and MKT South Park I LLC, was listed on Ecology's Underground Storage Tank (UST), Facility/Site Identification System Listing (ALLSITES), Facility Index System (FINDS), and Financial Assurance databases.

The FINDS and ALLSITES databases identify facilities and properties of interest to Ecology. It is our experience that the FINDS and ALLSITES listings are typically associated with the use and/or storage of hazardous materials. The database listing indicates a spill occurred on the property in 2008 and that the property was listed on the UST database as well.

The Financial Assurance database lists financial assurance information for underground storage tank facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of the facility of a regulated facility is unable or unwilling to pay.

According to Ecology's UST database, three USTs, each approximately 10,000- to 19,999-gallons in size and used for unleaded gasoline, were installed in 1999.

Based on the nature of these databases, the inferred groundwater flow direction (down-gradient relative to the Site), and the lack of reported releases, this listing is not considered a risk to the soil, soil vapor, and/or groundwater beneath the Site.

6.1.2.2 NORTHEAST ADJOINING

9510 14th Avenue South

The northeast adjoining property, occupied by Absolute German Autowrecking, located across the intersection of Des Moines Memorial Drive South and South 96th Street South, was listed on Ecology's ALLSITES, Spills (SPILLS), and Water Quality Permit System Data/National Pollutant Discharge Elimination System (NPDES) databases.

The ALLSITES database indicates that the property is a Hazardous Waste Generator and there is a industrial stormwater permit associated with the property, which was issued in 2010. The SPILLS database indicates that there was a spill of petroleum of an unknown quantity in 2007. No other information or details were provided. The NPDES database indicates that an industrial stormwater permit was issued for the property in 2014.

Based on the nature of the database listings and the inferred groundwater flow direction (down-gradient relative to the Site), this property is not considered a risk to the soil, soil vapor, and/or groundwater quality of the Site at this time.

6.1.2.3 EAST ADJOINING

1421 South 96th Street

One of the east adjoining properties, AAAA Mini-Storage was listed on Ecology's ALLSITES and FINDS databases, and the EPA's Resource Conservation and Recovery Act Non-Generator/No Longer Regulated (RCRA NonGen/NLR) database.

The ALLSITES and FINDS databases indicate the property is a hazardous waste generator. No other information was provided. No violations associated with the RCRA NonGen/NLR listing were reported.

Based on the nature of the database listings, the lack of reported releases, and the inferred groundwater flow direction (down-gradient relative to the Site), this property is not considered a risk to the soil, soil vapor, and/or groundwater quality of the Site at this time.

6.1.2.4 WEST ADJOINING

1313 South 96th Street

FMH Material Handling Solutions, a former tenant on the west adjoining property, located at 1313 South 96th Street, was listed on Ecology's ALLSITES, Hazardous Waste Manifest (MANIFEST), FINDS, UST, Leaking UST (LUST), Confirmed and Suspected Contaminated Sites List (CSCSL), and Voluntary Clean Program (VCP) databases, and the EPA's RCRA Non Gen/NLR database.

No details regarding the property was provided on the FINDS and ALLSITES databases. The MANIFEST database lists properties that create or dispose of hazardous waste.

According to Ecology's UST database, three former USTs were removed from the property in 1990 and 1999. Two of the USTs were 2,000-gallons in size and were used for storing used waste oil and diesel fuel. The third was approximately 4,000-gallons in size and used for storing diesel fuel. The releases from the USTs were reported to Ecology in 2005. Groundwater and soil contamination were reported.

A Remedial Investigation (RI) report was completed for the property in 2014 by Shannon and Wilson (S&W). The RI reported that diesel-range Total Petroleum Hydrocarbons (TPH) and polynuclear aromatic hydrocarbons (PAHs) were detected in soil samples collected on the property. Diesel-and gasoline-range TPH, naphthalene, and HVOCs were detected in groundwater grab samples in various locations on the property. The HVOCs were only detected on the southeast corner of the property in the vicinity of a former parts washing area. Elevated levels of heavy metals were also detected in the groundwater on the northern portion of the property in an area of cement kiln dust (CKD) fill material that had been encountered during previous investigations. Monitoring wells off the property indicate that the metals in the groundwater had not migrated off the property.

The RI also indicates that four of the wells on the Site (installed by RGI in 2008. See Section 7.1 for further details) were sampled in August, 2013 by S&W as part of the RI to determine if the

contaminates from the west adjoining property had migrated off the property. Vinyl chloride (VC), trichloroethene (TCE), and cis-1,2-dichloroethene(cis-1,2-DCE) were all detected in monitoring well OS-1 (RGI's MW-4, Figure 2), closest to the commercial building, at concentrations exceeding their respective MTCA Method A or Method B Cleanup Levels. No HVOCs were detected in the other three Site wells (RGI's MW-5 through MW-7, Figure 2).

S&W used enhanced bioremediation methods to remediate the HVOC contamination in the groundwater. As of the date of the report, S&W indicated that the enhanced bioremediation techniques appeared to be "having a beneficial effect, as the concentration of TCE [had] decreased" since the beginning of treatment. S&W proposed at least four additional quarters of sampling to "assess the effectiveness of this remedial effort before attempting any further remediation".

An opinion letter regarding the remedial action was issued by Ecology in March, 2015. The opinion letter indicated that additional investigation to fully characterize the extent of contamination was necessary before a final opinion letter could be issued.

Based on the known contamination that has migrated from the adjoining property onto the Site, this adjoining property is considered a REC.

6.1.2.5 NORTHWEST ADJOINING

1314 South 96th Street

The northwest adjoining property, formerly occupied by Nova Graphics and Pyrometric Company, located at 1314 South 96th Street, was listed on Ecology's ALLSITES database.

The ALLSITES database indicated that the property is a hazardous waste generator, although no additional details were provided.

Based on the nature of the database listing, the lack of reported releases, and the inferred groundwater flow direction (cross-gradient relative to the Site), this property is not considered a risk to the soil, soil vapor, and/or groundwater quality of the Site at this time.

6.1.3 OTHER PROPERTIES

Other properties within 1 mile of the Site were listed on various environmental regulatory databases. However, due to the nature of the database listings, media affected, contaminants of concern, property status, distance from the Site, and/or inferred groundwater flow direction relative to the Site, these other properties are not considered a risk to the soil, soil vapor, and/or groundwater quality of the Site at this time.

6.2 UNDERGROUND AND ABOVEGROUND STORAGE TANKS (USTS/ASTS) RECORDS

RGI contacted the local fire and building departments regarding records of USTs and ASTs associated with the Site. No records were found that document the existing or former presence of any USTs or ASTs on the Site.

6.3 ENVIRONMENTAL COMPLAINTS AND HAZARDOUS MATERIAL RESPONSES

RGI contacted the Public Disclosure Coordinator for Ecology to determine whether any Environmental Report Tracking System (ERTS) listings exist for the Site. The ERTS database tracks all environmental reports and complaints made to Ecology since 1990, including

clandestine drug labs and hazardous material responses. No ERTS listings were identified for the Site.

RGI also contacted the local health department regarding any clandestine drug labs or hazardous material responses associated with the Site. No records were found.

6.4 DRINKING WATER WELLS AND SEPTIC SYSTEMS RECORDS

RGI contacted the local health department regarding any existing or former septic systems or drinking water wells located on the Site. No records were found. Drinking water at the Site is currently a municipal source provided by the city.

6.5 WELL AND SOIL BORING LOGS

RGI reviewed Ecology's Well Log Viewer online database. The database provides logs for wells and soil borings. Numerous boring and well logs were found for the Site. Construction and decommissioning logs were found for eight resource protection wells (installed by RGI as part of the Preliminary Phase II Investigation in 2007). Water was encountered at depths ranging from 2 to 8 feet bgs. Additionally, well logs for seven wells installed in 2008 (by RGI as part of the Supplemental Phase II) were found. The wells were installed to depth of 10 to 12 feet bgs.

Boring logs for five geotechnical borings were found as well. The borings were completed to a depth of 30 feet by Geotech Consultants in 2014.

6.6 AREA-WIDE CONTAMINATION CONCERNS

Ecology's Facility/Site Atlas online database mapped the Site as within the area affected by the Tacoma Smelter Plume. Arsenic concentrations in soils in the vicinity were reported below 20 parts per million (ppm). The Model Toxics Control Act (MTCA) Method A Soil Cleanup Level for Unrestricted Land Uses for arsenic is 20 ppm. No known arsenic testing has been conducted at the Site. Based on the reported arsenic concentrations in the vicinity, this is not considered a REC or BER for the Site at this time.

7 PREVIOUS ENVIRONMENTAL REPORTS

The following previous environmental reports were competed by RGI regarding the Site:

- Supplemental Phase II and Geophysical Survey (Phase II); prepared for SeaMar Community Health Centers; prepared by RGI; dated January 30, 2008.

7.1 2008 SUPPLEMENTAL PHASE II

In 2008, RGI completed a Supplemental Phase II at the request of SeaMar Community Health Centers. The purpose of the Supplemental Phase II was to further assess the soil and groundwater contamination at the Site. The Supplemental Phase II included the installation of seven groundwater monitoring wells, two additional soil borings and a supplemental geophysical survey. An area on the northern portion of the Site was inaccessible due to large storage containers on the Site at the time of the Preliminary Phase II.

Three borings were advance in the vicinity of the former gasoline station. One of the borings encountered a band of black stained soils between depths of one and two feet bgs that contained oil- and gasoline-range TPH concentrations of 55,000 mg/kg and 16,000 mg/kg respectively. These concentrations exceeded the MTCA Method A Cleanup Levels. One

monitoring well was installed in one of the completed borings, up-gradient of the former gasoline station. Two additional monitoring wells were installed down-gradient of the former UST location.

One other monitoring well was installed along the western property boundary, to assess the west adjoining property. Shallow groundwater was generally encountered at depths between 1.3 and 8 feet bgs across the Site.

The Supplemental Geophysical Survey did not encounter any anomalies "suggestive of abandoned USTs" were found in the vicinity of the former gasoline service station. Three monitoring wells were installed in the vicinity of the single-family residence to define the nature and extent of the contamination from the heating oil UST.

The groundwater samples collected from the two wells located down-gradient of the former USTs (MW5 and MW6) did not contain detectable concentrations of TPH (non-detect). The groundwater sample collected from MW7, located in the interpreted former UST location, contained concentrations of gasoline- and diesel-range TPH and benzene at concentrations that exceeded the MTCA Method A Cleanup Levels. Arsenic was detected in the groundwater sample at a concentration above the cleanup level, however, the concentration was considered likely to represent naturally occurring or background concentrations.

The final well, MW4, was located along the western property line, and was intended to assess the groundwater impacts from the western adjoining property. Vinyl chloride (VC) and trichloroethene (TCE) were detected at concentrations exceeding their respective MTCA Method A Cleanup Levels. Cis-1,2-dichloroethene was also detected in the sample, although not at a concentration above the cleanup levels.

The three groundwater samples from the wells near the single-family residence (MW1, MW2, and MW3) to assess the heating oil UST, all contained non-detectable concentrations of TPH. The shallow groundwater impacts appeared to be limited to the immediate vicinity of the heating oil UST.

The Supplemental Phase II concluded the following:

- The soil and groundwater contamination in the vicinity of the heating oil UST appeared to be limited to the immediate vicinity of the building. Remediation recommendations included removing the UST and associated contaminated soil as well as periodic dewatering of contaminated water until acceptable levels of TPH were reached.
- Contamination of the shallow soils in the vicinity of the former gasoline service station appeared limited in vertical and horizontal extents. Shallow soils intercepted in two of the soil probes in the vicinity of the former gasoline service station contained two other soil probes in the vicinity contained non-detectable concentrations, or concentrations below the applicable cleanup levels, of the contaminants of concern. However, diesel- and oil-range TPH, as well as cadmium and lead were detected in two of the soil probes.
- Shallow groundwater in the vicinity of the former fuel pump islands and/or USTs contained concentrations of gasoline- and diesel-range TPH and benzene. "Based on the proximity of the well MW-7 to the subject property boundary, a groundwater flow direction to the east, and elevated TPH and benzene concentrations, the groundwater

contaminant plume may extend off-site." However, based on the lack of detection in a nearby well and the nearby soil probes, the groundwater contaminant plume appeared to be relatively limited in extent. Additional investigation to define the extent of groundwater contamination was recommended.

- The VOCs detected in the groundwater in MW4, along the western property boundary line, represented common constituents of cleaning solvents and associated degradation products. The groundwater flow direction on the northern portion of the Site was not well defined, and therefore the source of the contaminants was unknown at the time, and possibly from a parts washer associated with the former services station. Additional wells were recommended to better define the groundwater flow direction. The recommended remedial method for the groundwater in MW4 was in-situ chemical remediation. (Note: It has since been determined, based on reports by others, that the likely source was a former parts washing area on the southeast corner of the west adjoining property.)

8 HISTORICAL REVIEW

RGI's historical review of the Site and adjoining properties was based on an evaluation of the following:

- Historical aerial photographs (aerials) dated 1936, 1953, 1961, 1965, 1970, 1978, 1981, 1985, 1989, 1995, 2001, and 2013.
- Kroll Real Estate Plat Maps (Krolls) dated 1969 and 1997.
- Cole City Directories (Coles) dated 2000, 2005, 2010, and 2014.
- Kroll Tax Maps (Krolls) dated 1930, 1942, 1953, and 1973.
- County tax assessor current and historical records.
- Interviews with knowledgeable persons (see Section 5 for details).

In addition, RGI attempted to review Sanborn Fire Insurance Maps. However, no records were available for the Site according to EDR. RGI also attempted to review building department records. However, no records were available for the Site.

The current and historical addresses, as applicable, identified during this Phase I ESA were used during the historical records search.

Select historical documentation is provided in Appendix E. RGI's historical research findings are discussed below.

8.1 THE SITE

The Site was first developed with a former single-family residence on the central portion of the Site in 1900, according to historical tax assessor records. Two former sheds were also associated with the former residence. The 1936 aerial shows the three former buildings, and that the remainder of the Site was occupied by agricultural land, used for row crops.

Sometime between 1936 and 1953, the former residence and sheds were removed from the Site. Historical tax assessor records indicate that a former greenhouse and a former produce

stand ("Dominic's Produce Stand") were constructed in 1946 and 1948, respectively. The existing single-family residence and a former associated detached garage were constructed in 1950, according to tax assessor records. The 1953 aerial shows the former produce stand and greenhouse on the eastern portion of the Site, the existing single family residence and associated former detached garage on the southwest corner of the Site, and what appears to be a first generation, former gasoline station on the northern portion of the Site. The quality of the aerial makes it difficult to determine with certainlty, but a small former building is visible on the very north end of the Site with what appears to be three former fuel dispensers. The first generation former gasoline station is visible in aerials from 1953 and 1961. Between 1961 and 1963, it appears the first generation former gasoline station was removed. In 1962, the former produce stand and greenhouse were also removed, according to tax assessor records. Based on the redevelopment of the Site and subsequent grading and paving, the historical agricultural use is not considered a REC.

Historical tax assessor records note a former gasoline service station, including a lube room and a 4,000-gallon UST, according to historical tax assessor records was constructed in 1962, in approximately the same location on the northern portion of the Site. A photograph from historical tax assessor records dated 1963 shows the second generation former gasoline service station building and associated pump island. Tax assessor records also indicate the existing grocery store was constructed in 1964. The 1965 aerial shows the existing grocery store and single-family residence, the second generation former gasoline service station, the former detached garage, and another former outbuilding to the south of the residence. A large portion of the central portion of the Site had been paved for parking. The 1970 and 1978 aerials show the Site in generally the same configuration as it had been in 1965.

Between 1978 and 1981, the second generation gasoline service station was removed from the Site. The 1981 aerial shows the existing residence and grocery store buildings, as well as the former detached garage and former outbuilding. An area on the southwest corner of the Site appeared to be used for hay or pasture.

The 1985 aerial shows the same buildings as in 1981, although the western portion of the Site appeared to have been disturbed, possibly in preparation for construction. Tax assessor records indicate that the existing commercial building was constructed in 1986. The 1989 and 1995 aerials show the three existing buildings and paved parking lot as well as the former detached garage. Between 1995 and 2001, the former detached garage was removed.

The aerials from 2001 and 2013 show the Site in its current configuration with the three existing buildings.

The Site was occupied by Dominic's Red Apple Market, a commercial building with SeaMar offices, SeaMar youth boxing club, and two vacant units, and a vacant single-family residence at the time of reconnaissance.

8.2 ADJOINING PROPERTIES

The historical uses of adjoining properties are summarized below.

8.2.1 NORTH OF THE SITE (ACROSS SOUTH 96TH STREET AND DES MOINES MEMORIAL DRIVE SOUTH)

The north adjoining property, located across the intersection of Des Moines Memorial Drive South and South 96th Street, is visible as agricultural land in the 1936 and 1953 aerials. Between 1953 and 1961, the property was developed with a former commercial building. The building is also visible in the aerials from 1965 through 1995. The aerials from 1965 through 1995 also show the property around the building was filled with parked cars. It appears that the property was associated with the auto-wrecking business to the east.

The former building was removed between 1995 and 2000. Tax assessor records indicate the existing gasoline station was constructed in 2000. The existing building is visible in aerials from 2001 and 2013.

The property was occupied by a Shell Gasoline Station at the time of reconnaissance.

8.2.2 NORTHEAST OF THE SITE (ACROSS SOUTH 96TH STREET AND DES MOINES MEMORIAL DRIVE SOUTH)

The northeast adjoining property, located across the intersection of Des Moines Memorial Drive South and South 96th Street, is visible as agricultural land with a small, former building, possibly a barn or shed, on the southwest corner in the 1936 aerial. Between 1936 and 1953, the building was expanded. Between 1953 and 1961, it appears the former building was removed and replaced with a former single-family residence. Between 1961 and 1965, the former residence was removed, and the property was developed with what appears to be an auto-wrecking business and an associated office building. The auto-wrecking business is visible in aerials from 1965 through 1995. The aerials from 2001 and 2013 show only the fenced yard and office building, but no cars. Tax assessor records indicate the building was constructed in 2005, although this doesn't correspond with information in the aerials. It is possible the tax assessor records are incorrect. Between 2013 and the present, the office building was expanded to the east.

The property was occupied by Absolute German Autowrecking at the time of reconnaissance.

8.2.3 EAST OF THE SITE (ACROSS DES MOINES MEMORIAL DRIVE SOUTH)

The aerials from 1936 through 1978 show the properties were occupied by a former single-family residence and agricultural and vacant land. Tax assessor records indicate that the existing mini-storage buildings were constructed in 1979. The aerial from 1981 shows the former single-family residence with the existing mini-storage building to the east. The northern portion of the property appears to have been used as a storage area for trailers.

The aerials from 1981 through 1995 show the former single-family residence and the existing mini-storage buildings. The former residence was removed from the properties in 1995 or 1996. Tax assessor records indicate the existing McDonald's restaurant building was constructed in 1996. The existing McDonald's, associated parking lot, and mini-storage buildings are visible in aerials from 2001 and 2013.

The properties were occupied by a McDonald's Restaurant and AAAA Mini-Storage at the time of reconnaissance.

8.2.4 SOUTH OF THE SITE

The south adjoining property is visible in the 1936 aerial as agricultural land. Between 1936 and 1953, the property was developed with two former single-family residences. One of the residences had been removed between 1953 and 1961, and by 1965, both former residences had been removed and the property was developed with the existing power lines.

The power lines with vegetation beneath are visible in aerials from 1965 through 2013. Tax assessor records indicate that the property is occupied by a Seattle City Light right-of-way.

8.2.5 SOUTHWEST OF THE SITE

The southwest adjoining property was developed with four former commercial buildings prior to 1936. Krolls from 1930 through 1953 indicate the property was owned by Seattle Packaging Company. The buildings are visible in the aerials from 1936 and 1953. Between 1953 and 1961, the former building were removed. The property is visible as vacant land in the aerials from 1961 through 1970. Between 1965 and 1970, the property was cleared of vegetation, but remained vacant.

Tax assessor records indicate the existing commercial building was constructed in 1975. The building is visible in aerials from 1978 through 2013.

City directories indicate that the property has been occupied by businesses including (but not limited to): Wooldridge Boats and Pacific Utility Equipment.

The property was occupied by Wooldridge Boats at the time of reconnaissance.

8.2.6 WEST OF THE SITE

The west adjoining property is visible as vacant land with a driveway to the south adjoining Seattle Packaging property in the aerials from 1936 through 1965. Between 1965 through 1970, the property was cleared of vegetation, but was still vacant in aerials from 1970 and 1976.

Tax assessor records indicate the existing commercial building was constructed in 1977. The building is visible in aerials from 1978 through 2013.

City directories indicate that the property has been occupied by businesses including (but not limited to): Clarklift, Warehouse Equipment, Pacific Material Handling Solutions, Yale Pacific, and Beckwith and Kuffel.

The property was occupied by Beckwith and Kuffel at the time of reconnaissance.

8.2.7 NORTHWEST OF THE SITE (ACROSS SOUTH 96TH STREET)

The northwest adjoining property is visible as agricultural land in aerials from 1936 and 1953. The existing Des Moines Memorial Drive South is under construction along the northeastern portion of the property in the aerial from 1961. The aerials from 1961 through 1976 show the property was vacant, vegetated land. Tax assessor records indicate the existing commercial building was constructed in 1978. The existing building is visible in the aerials from 1978 through 2013.

City directories indicate that the property has been occupied by businesses including (but not limited to): The Pyrometric Company, Nova Graphics, and TekLine Construction.

The property was occupied by Graffix Integrative Signage at the time of reconnaissance.

9 DATA GAPS

9.1 DATA FAILURE

Data failure occurs when the information obtained from a review of the standard historical sources that are considered reasonably ascertainable still do not meet the objectives stated in ASTM E1527-13 Sections 8.3.1 through 8.3.2.2. Data failure is one type of data gap.

Data failure was encountered while conducting historical research for this Phase I ESA. The following data failure occurred:

- There have been several time periods since 1940 for which data could not be obtained at 5-year intervals. However, RGI does not consider this data failure to be a significant data gap given the known historical uses of the Site.

9.2 OTHER DATA GAPS

A data gap is a lack of, or inability to obtain, information required by ASTM E1527-13.

A data gap was encountered during this Phase I ESA. The following data gap occurred:

- RGI was not provided access to the interior of the single-family residence on the Site. However, RGI does not consider this data gap to be a significant data gap given the known historical residential use of the building and the known location of the heating oil UST.

9.3 SIGNIFICANT DATA GAPS

Significant data gaps are data gaps that impact the conclusion of this Phase I ESA.

Significant data gaps were not encountered during this Phase I ESA.

10 FINDINGS AND CONCLUSIONS

RGI has performed a Phase I ESA in conformance with the scope and limitations of ASTM E1527-13 and 40 CFR 312 for the Dominic's Plaza property located at 9635 Des Moines Memorial Drive South, Seattle, King County, Washington. Any exceptions to or deletions from ASTM E1527-13 are described in Section 8.

Based on our Phase I ESA findings, no evidence of HRECs or CRECs according to ASTM E1527-13 were identified in connection with the Site or its setting.

Based on our Phase I ESA findings, no evidence of RECs according to ASTM E1527-13 were identified in connection with the Site or its setting, except the following:

- **Historical Gasoline Service Station:** Two generations of former gasoline service stations occupied the Site between at least 1953 through 1978 (25 years). The historical use, handling, storage, and disposal of petroleum products, solvents, and other wastes typically associated with gasoline service stations are unknown. The USTs were likely removed sometime between 1978 and 2007, although the exact date is unknown. Based on RGI's previous subsurface investigations, a release from the former USTs was identified. The release impacted soil and groundwater. The release to the groundwater appeared limited, although the extent has not been well defined. The historical gasoline service station and associated soil and groundwater contamination is considered a REC.

- **Heating Oil UST:** A heating oil UST vent pipe and fill pipe were observed to the west of the residence. The UST is no longer in use. However, the UST is approximately half full with product. The UST is estimated to be 300-gallons in size. Previous sampling in the vicinity of the UST indicated that a release had occurred to the soil and groundwater. Based on groundwater samples collected from three monitoring wells in the vicinity of the UST, the contamination appeared to be limited to the immediate vicinity of the UST, although concentrations of TPH in the groundwater were quite high, possibly representing free product floating on the groundwater. The heating oil UST and known soil and groundwater contamination is considered a REC.
- **West-Adjoining Property:** A previous environmental report for the west adjoining (up-gradient) property identified groundwater contamination on the property. HVOCs, likely associated with a former parts washing area on the southeast corner of the west adjoining property, were detected in the groundwater monitoring well on the Site located closest to the west adjoining property. The HVOCs detected in the groundwater pose a potential risk to the groundwater and soil vapor beneath the Site.

Based on our Phase I ESA findings, no BERs according to ASTM E1527-13 were identified in connection with the Site or its setting, except the following:

- **Drums on southern portion of the Site:** Two soil drums were observed on the southwest corner of the Site. The 55-gallon drum was unlabeled and the 25-gallon drum was labeled, although the label was too faded to read. No staining, adverse odors, stressed vegetation, or other indications of a release of hazardous materials were observed in the vicinity of these drums.

11 RECOMMENDATIONS

RGI recommends conducting a Geophysical Survey to determine the orientation of the abandoned heating oil UST near the residence. RGI recommends the UST be properly decommissioned and removed in accordance with the applicable city, country, and/or state requirements.

RGI also recommends a Limited Phase II Subsurface Investigation be performed to evaluate soil and shallow groundwater quality in the vicinity of the former gasoline station. Additionally, RGI recommends that the existing groundwater monitoring wells be sampled and a soil vapor sample be collected from the vicinity of the former parts washing area on the west adjoining property.

RGI recommends that all abandoned drums be characterized and removed from the Site for proper disposal.

12 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

Any questions regarding the work within this Phase I ESA, the presentation of the information, or the interpretation of the data are welcome and should be referred to the undersigned.

Sincerely,

THE RILEY GROUP, INC.

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in 40 CFR §312.10. We have the specific qualifications, based on education, training, and experience, to assess a property of the nature, history, and setting of the Site. We have developed and performed AAI in conformance with the standards and practices set forth in 40 CFR 312.

Anna J. Jordan, LG
Project Geologist

13 RELIANCE

No reports or other information regarding the Site or its setting were provided to RGI other than those resources specifically mentioned herein. Reports relied upon by RGI are listed in Section 14 of this Phase I ESA.

This Phase I ESA should be considered effective on March 14, 2016. Based on the requirements of ASTM E1527-13, components of the Phase I ESA, including the reconnaissance, interviews, environmental database reviews, and environmental professional's declaration, will remain in effect for 180 days from the date of this report, for use by the Client and its authorized representatives only. If this Phase I ESA is transferred to any other user, additional information will be required from that user in order to maintain the viability of this Phase I ESA. No other party may rely on this Phase I ESA without specific written agreement. Remaining elements of the Phase I ESA remain effective until March 14, 2017.

14 ASSUMPTIONS AND LIMITATIONS

Assumptions and limitations for this Phase I ESA are provided below and are intended to help manage any risks associated with the use of this Phase I ESA.

14.1 ASSUMPTIONS

RGI has made the following significant assumptions while performing this Phase I ESA.

Groundwater

Detailed information regarding groundwater flow depth and direction beneath the Site was not available. Based on a review of available well logs and regional topography for the vicinity, RGI assumes that groundwater beneath the Site is as described in Section 2.3. If information

regarding groundwater that contradicts this assumption becomes available, the conclusions of this Phase I ESA may be impacted.

Historical Information

In evaluating the Site, RGI has relied upon information from individuals and agencies noted in the Phase I ESA. RGI assumes that the information provided by these third-party sources is accurate, and has no reason to suspect otherwise. RGI makes no warranty or guarantee regarding the accuracy and completeness of these resources.

14.2 LIMITATIONS

This Phase I ESA is intended for specific application to the Site, for the exclusive use of the Client and its authorized representatives. This Phase I ESA was prepared in a manner consistent with the level of skill and care ordinarily exercised by members of the profession currently practicing in the same locality and time, and under similar conditions. This Phase I ESA is based upon information obtained by RGI personnel and upon the condition of the Site and surrounding properties on the date of reconnaissance, supplemented by reasonably ascertainable information and data obtained by RGI. No other warranty or guarantee is implied or intended.

Content of Interviews

RGI accepts no responsibility for any deficiency, misstatements, or inaccuracies contained in this Phase I ESA as a result of misstatements, omissions, and misrepresentations or fraudulent acts of interviewees. In addition, potentially important interviewees are often unavailable or cannot be located within a reasonable project time frame.

Conflict of Interest

RGI has no present or contemplated future ownership interest or financial interest in the real estate that is the subject of this Phase I ESA. RGI has no personal interest with the subject matter of this Phase I ESA or the parties involved, which would prevent an independent analysis of the environmental conditions of the Site.

Uncertainty

No Phase I ESA can eliminate all uncertainty regarding potential RECs for the Site. This Phase I ESA is intended to identify potential RECs under the scope of work defined in Section 1 at the time this Phase I ESA was performed.

Changes in Site Conditions

Certain changes in the condition of the Site, including natural events (such as floods, earthquakes, and landslides), passage of time, changes in property use, and changes in occupancy, may affect the conclusions of this Phase I ESA. RGI is available to prepare a proposal to evaluate any changes, if needed.

Environmental Regulations

The conclusions of this Phase I ESA are based on local, state, and federal regulations in effect at the time the Phase I ESA was completed. Changes to applicable local, state, or federal

regulations following completion of the Phase I ESA may impact its conclusions. RGI is available to prepare a proposal to evaluate any changes, if needed.

Other Non-Scope Considerations

This Phase I ESA is not intended in any way to address possible concerns related to biological agents, mold, wetlands, ecological resources, endangered species, cultural and historic resources, radon gas, asbestos-containing materials (ACMs), lead-containing paint (LCP), or any other items not specifically identified in this Phase I ESA (which are not required to satisfy ASTM E1527-13).

16 QUALIFICATIONS

16.1 ANNA J. JORDAN, LG, RG, PROJECT GEOLOGIST

Education

B.Sc. Geology, Western Washington University, Bellingham, Washington, 2006

Field Geology: Conducted geologic mapping projects in the southwestern United States, focusing in the areas of structural and geomorphic processes.

Special Training, Licenses, and Certifications

Washington State Site Assessor

AHERA-Certified Asbestos Inspector

Washington State Lead-Based Paint Inspector (6594)

40-Hour Hazardous Waste Operations and Emergency Response (HAZWOPER)

Washington State Licensed Geologist (License No. 2939)

Oregon State Registered Geologist (License No. G2360)

Professional Experience

Ms. Jordan is a project level geologist with over nine years of experience in consulting for individual landowners and development companies throughout the Pacific Northwest. Ms. Jordan's experience includes conducting Phase I and Phase II ESAs, UST site assessments and hazardous materials surveys. Ms. Jordan has also conducted slope stability and slope monitoring surveys, as well as soil compaction testing projects.

Representative Project Experience

Various Banks and Lending Institutions: Performed Phase I ESAs for various properties throughout Washington and Oregon.

Seattle Housing Authority: Performed Phase I ESAs and provided oversight of limited Asbestos Containing Material (ACM) and Lead Based Paint (LBP) Surveys.

McDonald's Restaurant: Conducted pre-demolition and pre-renovation hazardous materials survey at several restaurants throughout Washington.

Bellevue Auto Phase II: Conducted subsurface soil and groundwater sampling by advancing test probes throughout a proposed commercial property in Bellevue, Washington.

Former Gasoline Service Station: Oversaw the removal of five USTs and performed soil characterization and directed segregation of contaminated soils as well as interim and final soil sample collection for a commercial property in Tacoma, Washington.

Belfair Chevron: Performed oversight of groundwater monitoring activities for an active gasoline station, enrolled the property in the Washington State Department of Ecology's Voluntary Cleanup Program (VCP) and ultimately obtained a No Further Action (NFA) determination from the Department of Ecology.

16.2 PAUL D. RILEY, LG, LHG, PRINCIPAL GEOLOGIST

Education

M.S., Geological/Geophysical Sciences, Western Washington University, 1991

B.S., Geological Sciences, Michigan State University, 1988

Licensed Well Driller, Washington State

Washington State Registered Geologist (License No. 1264)

Washington State Registered Hydrogeologist (License No. 1264)

Continuing Education

Professional Skills

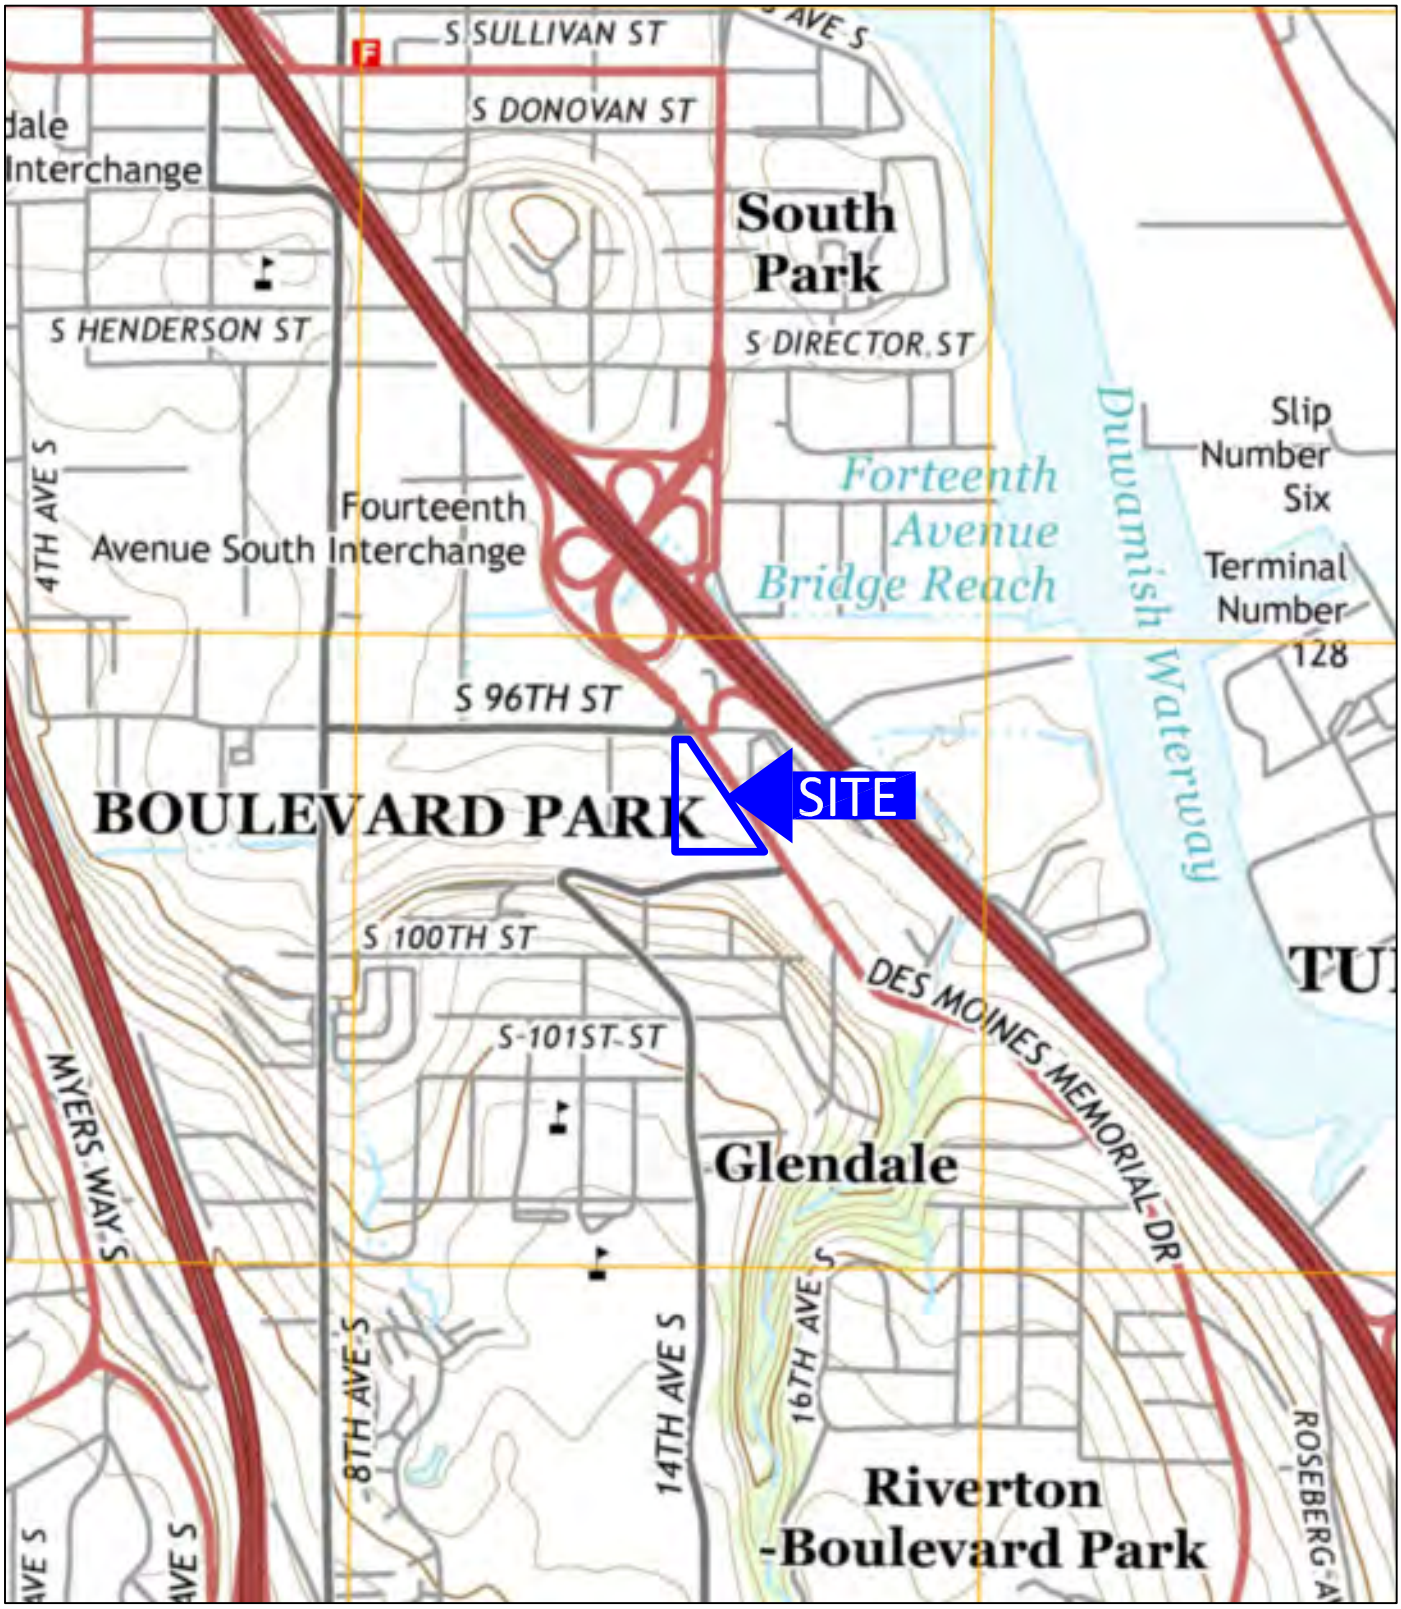

Principal, The Riley Group, Inc. (formerly Riley Environmental, LLC), Seattle, Washington. March 1996 to present.

Mr. Riley, the founding principal of RGI has professionally practiced as an environmental geologist and hydrogeologist in the Pacific Northwest since 1991. Mr. Riley has performed numerous Phase I and Phase II ESAs, risk-based site closures, aquifer pump tests, in-situ remediation system pilot studies, remediation system design, and remediation system installation and operations and maintenance for over 1,000 sites located in the Pacific Northwest.

Mr. Riley is responsible for all operations of RGI. Responsibilities include administrative and technical operations and business development. Mr. Riley manages Phase I and Phase II ESAs, risk-based closures, remediation system implementation (design, installation, and operation and maintenance), geotechnical engineering projects for commercial and mixed-use construction, and wetland delineation and mitigation projects with RGI's diverse technical staff serving a local and national clientele base.

Environmental Division Manager, Omega Environmental (formerly O'Sullivan Omega), Seattle, Washington. November 1992 to March 1996.

Mr. Riley was the environmental division manager for the Pacific Northwest for a national UST installation and removal contractor. Mr. Riley supervised a staff of geologists and environmental engineers performing UST site assessments, Phase I and Phase II ESAs, remediation projects, compliance groundwater monitoring projects, and ACM and LCP building surveys.

ASTM E1527-13 DEFINITIONS OF TERMS

activity and use limitations (AULs)

"[L]egal or physical restrictions or limitations on the use of, or access to [the Site] (1) to reduce or eliminate potential exposure to hazardous substances or petroleum products in the soil, soil vapor, ground water, and/or surface water on [the Site] (2) to prevent activities that could interfere with the effectiveness of a response action, in order to ensure maintenance of a condition of no significant risk to public health or the environment."

actual knowledge

"[T]he knowledge actually possessed by an individual who is a real person, rather than an entity."

adjoining properties

"Any real property or properties the border of which is contiguous or partially contiguous with that of [the Site], or that would be contiguous or partially contiguous with that of [the Site] but for a street, road, or other public thoroughfare separating them."

all appropriate inquiry (AAI)

"[T]hat inquiry constituting 'all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice' as defined in CERCLA 42 USC §9601 (35) (B), that will qualify a party to a commercial real estate transaction for the threshold criteria for satisfying the LLPs to CERCLA liability…"

asbestos-containing material (ACM)

Any material or product that contains more than one percent asbestos.

business environmental risks (BERs)

"[A] risk that can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice."

controlled recognized environmental condition (CREC)

"A recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

data gap

"[A] lack of or inability to obtain information required by [ASTM E1527-13] despite good faith efforts by the environmental professional to gather such information. Data gaps may result from incompleteness in any of the activities required by [ASTM E1527-13]," including, but not limited to conducting reconnaissance (for example, an inability to perform a complete reconnaissance) and interviews (for example, an inability to interview owners or regulatory officials).

data failure

"[A] failure to achieve historical research objectives… despite good faith efforts." A data failure is a type of data gap.

de minimus condition

"[A] condition that generally does not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis conditions are not recognized environmental conditions nor controlled recognized environmental conditions."

environmental professional

"[A] person meeting the education, training, and experience requirements as set forth in 40 CFR 312.10(b)."

good faith

"[T]he absence of any intention to seek an unfair advantage or to defraud another party; an honest and sincere intention to fulfill one's obligations in the conduct or transaction concerned."

hazardous substance

"A substance defined as a hazardous substance pursuant to CERCLA 42 USC §9601 (14), as interpreted by EPA regulations and the courts…"

historical recognized environmental condition (HREC)

"A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls)."

landowner liability protections (LLPs)

"[L]andowner liability protections under CERCLA; these protections include the *bona fide* prospective purchaser liability protection, contiguous property owner liability protection, and innocent landowner defense from CERCLA liability."

lead-based paint (LBP)

Paint with lead levels equal to or exceeding 1.0 milligram per square centimeter (mg/cm^2) or 0.5 percent by weight.

lead-containing paint (LCP)

Paint containing any detectable levels of lead.

practically reviewable

"[I]nformation that is practically reviewable means that the information is provided by the source in a manner and in a form that, upon examination, yields information relevant to [the Site} without the need for extraordinary analysis of irrelevant data."

reasonably ascertainable

"[I]nformation that is (1) publically available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable."

recognized environmental conditions (RECs)

"[T]he presence or likely presence of any hazardous substances or petroleum products in, on, or [the Site] 1) due to any release to the environment, 2: under conditions indicative of a release to the environment or 3) under conditions that indicate an existing release, a past release, or pose a material threat of a future release to the environment."

significant data gap

A significant data gap affects the ability of an Environmental Professional to identify a REC, and therefore, effects the conclusions of a Phase I ESA.

underground storage tank (UST)

"[A]ny tank, including underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10 percent or more beneath the surface of the ground."

user

"[T]he party seeking to use [ASTM E1527-13] to complete a [Phase I ESA] of [the Site]. A user may include, without limitation, a potential purchaser of [the Site], a potential tenant of [the Site]…. The user has specific obligations for completing a successful application of [ASTM E1527-13]…."

1 Introduction

The Riley Group, Inc. (RGI) conducted a Phase I Environmental Site Assessment (ESA) of the Dominic's Plaza Commercial Center located at 9635 Des Moines Memorial Drive, Seattle, King County, Washington (hereafter referred to as the Site), Figure 1. The Site consists of a 3.49 acre parcel that is currently occupied by two commercial buildings and a residence (Figure 2, Site Plan). Site photographs are included in Appendix A.

Ms. Rose Schmidt of Frontier Bank (Client) authorized the ESA on September 23, 2007. RGI understands that Client is considered the *user* of the report as defined by the American Society for Testing and Materials (ASTM), Standard Practice E 1527-05, and intends to provide financing for a purchase of the Site. It is our further understanding that no major redevelopment of the Site is anticipated.

1.1 Purpose

The purpose of the ESA was to identify any *recognized environmental conditions* (RECs) and/or *business environmental risks* (BERs) as defined by ASTM, Standard Practice E 1527-05.

The term "recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with current environmental regulations. The term is not intended to include de minimus conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The term "business environmental risks" are risks that can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

Definitions used herein, as defined by ASTM, are provided in Appendix B for reference.

1.2 Scope of Work

RGI's scope of work for this Phase I ESA included the following tasks:

- Performed a detailed inspection of the Site and a cursory inspection of the adjoining properties;
- Interviewed knowledgeable persons regarding Site and/or nearby properties;
- Described project area geology and Site location, Site vicinity characteristics and prepared a vicinity and Site map showing Site and nearby significant features;
- Commented on suspect polychlorinated biphenyls (PCBs), hazardous materials, aboveground storage tanks (ASTs), and underground storage tanks (USTs). This scope of work did not include sampling and/or analysis;
- Reviewed historical building department files, property tax records, Sanborn Fire Insurance Maps, city directories, aerial photographs and plat maps, where applicable and available;
- Reviewed previous environmental reports and documentation for the Site as provided by the Client and/or property owner;
- Reviewed State and Federal environmental regulatory databases per ASTM; and

- Prepared this final report presenting our findings and conclusions.

RGI was not provided a 50-year chain of title for the subject Site and one was not reviewed as part of this Phase I ESA.

1.3 Significant Assumptions

In evaluating the property, RGI has relied upon representations and information furnished by individuals and agencies noted in the report. RGI assumes that the information provided by these third party sources is accurate and has no reason to believe otherwise.

Based on a review of regional topography and surface water flow patterns, RGI infers groundwater beneath the Site may flow towards the northeast. Based on a review environmental investigations on a neighboring property and of water well logs for the Site vicinity, depth to groundwater is approximately eight feet below ground surface (bgs).

1.4 Limitations and Exceptions

This ESA report is based upon information obtained by RGI personnel and upon the condition of the Site and surrounding property on the dates of such visits, supplemented by readily available information and data obtained by RGI and described herein.

RGI accepts no responsibility for any deficiency, misstatements or inaccuracies contained in this report as a result of misstatements, omissions, and misrepresentations or fraudulent acts of persons interviewed. In addition, potentially important interviewees are often not available or cannot be located within a reasonable project time frame. In these instances, RGI accepts no responsibility for any environmental liability that later results from information not readily available during the assessment.

This report was prepared in a manner consistent with the level of skill and care ordinarily exercised by members of the profession currently practicing in the same locality and time, and under similar conditions. This report is intended for specific application to the existing property located at 9635 Des Moines Memorial Drive, Seattle, King County, Washington, for the exclusive use of the Client, Frontier Bank, and their authorized representative(s). No other warranty is implied or intended.

1.5 Reliance

No reports or other information regarding the Site or its setting were provided to RGI other than those resources specifically mentioned herein. Reports relied upon by RGI are listed in Section 9.0 of this report.

2 Site Description

2.1 Physical Setting Source(s), Location & Legal Description

The Site is located on the United States Geologic Survey (USGS) Seattle South, Washington, 7.5-Minute Topographic Maps (Figure 1), at an elevation of approximately 20 feet above mean sea level.

The King County tax identification number for the Site is 5624200371. The legal description and metes and bounds of the Site are included in the current King County Tax Assessor documentation, available on-file at the RGI office.

2.2 Site Vicinity Characteristics

The Site consists of an irregular-shaped lot covering approximately 3.49 acres of land. The Site is currently occupied by Dominic's Red Apple Market, Maytag Laundromat, and a single-family residence. Two commercial spaces are currently unoccupied with remodeling activities occurring. The Site is located within the South Park commercial and industrial district approximately five miles south of downtown Seattle and is surrounded by various commercial and industrial properties.

2.3 Site Geology and Hydrogeology

According to the *Geologic Map of King County, Washington* (Booth, Derek B., et al., 2002), shallow soils beneath the Site are mapped as Till (map unit Qvt), which is described as a compact diamict containing subrounded to well-rounded clasts, which was glacially transported and deposited by the overriding Vashon-age glacier. The unit includes minor stratified fluvial deposits and generally forms undulating layer a few meters to a few tens of meters thick. Other workers have documented the presence of soft layers of silt, clay, and fine sand in the Site vicinity.

As discussed above, depth to groundwater beneath the Site may occur at depths of approximately eight feet bgs and inferred groundwater flow direction is generally towards the northeast.

2.4 Description of Site Structures

The Site is currently occupied by a 1964-vintage supermarket building, a 1950-vintage single-family residence, and a 1986-vintage multi-tenant retail strip with three commercial tenant spaces.

2.5 Current Uses of the Site

The Site is currently occupied by Dominic's Plaza consisting of a complex of two commercial buildings and a residence. The commercial buildings are currently occupied by Dominic's Red Apple Grocery and Maytag Laundromat.

2.6 Current Uses of the Adjoining Properties

Current uses of surrounding properties are summarized as follows:

North: The Site is bounded on the north by South 96th Street. Land use across this arterial from west to east consists of a material and trailer storage yard, a small commercial building occupied by Pyrometric, Des Moine Memorial Drive, a Unocal-brand retail gasoline station, and Absolutely German Auto Wrecking (Washington Department of Ecology [Ecology]-listed Confirmed and Suspected Contaminated Sites [CSCSL] site).

South: The Site is bounded on the south by a BPA powerline right-of-way with a neighborhood of single-family residences located on a hilltop beyond.

West: Two larger industrial warehouses are located adjacent to the west. The northerly warehouse is currently occupied by Pacific Material Handling (Ecology-listed Leaking Underground Storage Tank [LUST] site) and the southerly warehouse is currently occupied by Woolridge Boats.

East: The Site is bounded on the east by Des Moines Memorial Drive South. Land use across this main arterial from south to north consists of the BPA powerlines, AAAA Mini-Storage facility, and a McDonald's Restaurant.

User Provided Information

2.7 Previous Reports and Records

RGI was advised that a Phase I Environmental Site Assessment was previously done for the Site and was provided with an environmental government agency database report prepared by EDR on July 26, 2005 for JMK ESI. No other information was contained in the file provided to us.

2.8 ASTM User Questionnaire

Mr. Young Chul Joe, the current property owner, was provided with the ASTM user questionnaire on September 25, 2007. Mr. Joe noted that he was unaware of any hazardous material or environmental conditions associated with the property. A copy of the completed ASTM questionnaire is included in Appendix D.

3 Site Reconnaissance

RGI performed a Site reconnaissance on September 27, 2007. Mr. Yuong Chul Joe, the property owner, provided site access. Appendix A presents photographs of the Site and vicinity. A summary of our findings is given below.

3.1 Exterior Observations

- No drinking water or groundwater monitoring wells were noted at the Site. Drinking water is available to the Site by the City of Seattle. Sanitary sewer services are provided by the Valley View Sewer District.
- Several shipping containers were present on the parking lot at the northern portion of the Site.
- A sewer pump station was located along the northern edge of the property by South 96th Street.
- A solid waste dumpster maintained by Waste Management was noted on the west side of the Site.
- We observed a fill port and a vent line for a heating oil underground storage tank (UST) proximal to the northwest corner of the on-site residence at the location depicted on figure 2, Site Sketch. We were advised by the selling property broker, Mr. Brain Petro that the UST is currently in use and serves an oil-fired forced air furnace in the basement

of the residence. The UST appears to be buried beneath a concrete sidewalk slab. Mr. Petro did not know the size or age of the heating oil UST.

3.2 INTERIOR OBSERVATIONS

- RGI was not provided access to the interior of the single-family residence on the southern portion of the site.
- Typical conditions inside the retail strip building were 12-inch square vinyl tile, ceramic tile, and carpet flooring, sheetrock walls, and either sheetrock or suspended panel ceilings. Fluorescent lighting was present in the tenant units. The building is served by several roof-mounted and natural gas fired HVAC systems.
- Conditions inside the grocery store consisted of 12-inch square vinyl tile floors, sheetrock walls, and wood ceilings with suspended fluorescent light fixtures. Heating is supplied by a natural gas fired and roof-mounted HVAC system.

3.3 POLYCHLORINATED BIPHENYLS (PCBS) SURVEY

The Environmental Protection Agency (EPA) considers PCBs to be a possible human carcinogen. The Toxic Substance Control Act of 1976 (15 USC, s/s 2601, et seq.) prohibited any manufacturing of PCBs in the United States after January 1, 1979. Under Federal Regulation (40 CFR 761.3), the mineral oil contained in untested transformers is assumed to be "PCB-contaminated" (50-499 parts per million PCB). The continued use of this equipment is authorized by the EPA.

RGI noted three pole-mounted main service electrical transformers on the Site. The transformers were clearly labeled "non-PCB". Liability for this equipment lies with the utility in any event. We observed older style fluorescent lighting fixtures inside the grocery store that may possibly contain PCBs based upon the date of building construction (1964).

3.4 UNDERGROUND AND ABOVEGROUND STORAGE TANK SURVEY (UST/AST)

RGI's UST and AST survey included an inspection, review of historical and regulatory documentation, and interviews with knowledgeable persons regarding the Site.

As noted earlier, we observed the vent line and fill port for a heating oil UST of undisclosed size along the northwest corner of the on-site 1950-vintage residence. The UST reportedly supplies heating fuel to a forced air furnace within that building. We measured approximately 22 inches of diesel fuel inside the UST. The diameter of the UST was not apparent. A sticker on the fill cap of the UST noted Glendale Heating. RGI called Glendale Heating and was advised that they have not provided service for the UST for at least five years.

Historical records reveal that a retail gasoline station operated on the Site from approximately 1962 until the mid-1970's and was served by at least one 4,000 gallon UST. No conclusive information was found in the public records regarding the contents or fate of the UST's likely associated with this historic gasoline station or the environmental condition of soils and/or groundwater.

4 Interviews

RGI contacted Ms. Tracie Walters, the Emergency Response Tracker (ERTS) for the Washington Department of Ecology (Ecology), to determine whether any ERTS listings existed for the Site. The ERTS database tracks all emergency responses and environmental complaints made to Ecology since 1990, including hazardous material responses. Ms. Walters indicated there were no ERTS listings for the Site address.

RGI also spoke with Mr. Yuong Joe, the property owner since 2005, regarding Site history. Mr. Joe related that no hazardous materials were stored, used, or disposed on the Site to the best of his knowledge.

RGI conducted a telephone interview with the former property owner, Mr. Joe Colello, on September 28, 2007. Mr. Colello advised us that his father purchased the Site in the 1940's and operated a small grocery store and greenhouse on the Site from the 1950's until 1964 when the existing larger grocery was built. Mr. Colello also related that Fletcher Oil Company operated a retail gasoline station on the northern part of the Site from the 1950's until the early 1970's after which time the USTs were reportedly removed. We were further advised that a construction contractor, Sato Corporation, conducted soil sampling and testing on the Site prior to development of the existing retail strip in 1986 and that no contamination was found. Mr.Colello told us that he does not have a copy of the sampling and testing report or any tank removal documents.

5 Environmental Regulatory Database Review

RGI's environmental regulatory records review consisted of a standard review of Federal and State record databases in a search for properties with existing and/or potential environmental liabilities. RGI and Environmental First Search (EFS) performed the records search. All records reviewed used search radii in accordance with ASTM parameters. A copy of the EFS database report is included in Appendix C.

5.1 Site

The Site is not listed on Federal or State environmental databases.

6.2 Adjoining/Nearby Properties

Adjoining Properties

Clarklift of Washington (currently Pacific Material Handling), 1313 South 96th Street appears on the Ecology LUST listing and is located adjacent to the west of the Site in an inferred up-gradient hydrologic position. Clayton Group Services (Clayton) completed an updated Phase I Environmental Site Assessment (ESA) of the Clarklift facility on March 13, 2003. That report documented the removal of three USTs (gasoline, diesel, and waste oil) from that property in 1990. Petroleum impacted soils were reportedly encountered surrounding the waste oil UST which were then excavated and stockpiled on-site for aeration. No information regarding groundwater quality was given in the report. The Phase I ESA report also discussed an earlier study completed by Hong West Associates that discovered impacts to sediments by total petroleum hydrocarbons in a ditch along South 96th Street adjacent to the north of the Clarklift facility. Clayton identified petroleum contaminated soils in the northern adjoining drainage ditch

as a REC for that site. Unknown character of imported fill materials was also noted as a REC for that property.

Clayton then conducted subsurface sampling and testing of groundwater in July of 2003 as documented in their Limited Phase II Subsurface Investigation completed for FMH Materials Handling Solutions. This report was focused on assessing groundwater conditions along the northern property margin proximal to the former ditch and made a passing reference to a different report which focused on evaluating environmental conditions at the former UST locations on the Clarklift property. A copy of the referenced UST assessment report was not contained in the Ecology file that we reviewed. Clayton advanced a line of three soil borings along the northern property line of the Clarklift parcel. Groundwater collected from the two easternmost of the three borings contained elevated concentrations of diesel-range TPH well above MTCA Method A Cleanup Levels of 500 parts per billion (ppb). The water obtained from the boring closest to the Site, B-10, contained 900 ppb diesel. The approximate location of boring B-10 is shown on the attached Figure 2, Site Plan. The extent and potential sources of the groundwater contamination were not defined in the Clayton report and a recommendation was made for further evaluation.

On March 31, 2006 Ecology received an UST notice of confirmed release which included comments regarding the elevated concentrations of diesel discovered by Clayton and notation was made of "high probability" for spreading off-site. Acknowledging the undefined nature of shallow groundwater impacts documented at the adjoining former Clarklift facility, it is our opinion this west adjoining property may pose a potential threat to Site soils and/or groundwater quality. Copies of relevant reports are included in Appendix E.

Hamm Creek appears on the Ecology CSCSL database for confirmed impacts to sediments, soil, and groundwater. As part of an evaluation of environmental conditions for an anticipated road re-alignment project, Hong West Associates (HWA) conducted an evaluation of soil, sediments, and groundwater along the Hamm Creek drainage ditch following the South 96th Street right-of-way for three years beginning in 1991. Soil samples were analyzed for TPH compounds, PCBs, volatile organic compounds (VOCs), pH, semi-volatile organic compounds (SVOCs), and metals. Elevated concentrations of TPH were detected in most of the drainage ditch sediments with values ranging between 1,200 parts per million (ppm) to 9,400 ppm. However, none of these contaminants were discovered in the soil samples proximal to the Site. HWA opined that while runoff from roadways may have contributed to the contamination, off-site sources likely accounted for most of the contaminated sediments.

Other Off-Site Properties

Several properties within one mile of the Site were listed on various Federal and/or State environmental regulatory databases. However, due to the nature of the database listings, media affected, property status, distance from the Site and/or assumed groundwater flow direction relative to the Site, these agency-listed off-Site properties are not considered a risk to Site soil and/or groundwater quality.

6 Historical Records Review

RGI's Site and adjoining properties historical records review included a review of the following:

- Historical aerial photographs dated 1961, 1965, 1970, 1983, 1995, and 2001.
- King County current and historic tax assessor records.

- Kroll Atlases, 1912, 1930, 1942, 1953, 1973, and 1997.
- Seattle Public Library Reverse Street directories dated 1962, 1968, 1973, 1978, 1983, 1989, and 1990.
- Interviews with knowledgeable persons.

Selected historical documentation is presented in Appendix D. RGI's historical research findings are discussed below.

6.1 SITE

A review of historical Kroll Maps reveals that the Site was developed as early as 1900 with a single-family residence. A "stove" heat source is noted for that structure. A small grocery store and a greenhouse were constructed on the central portion of the Site in 1948. The smaller 1948-vintage grocery and greenhouse were replaced by the existing larger grocery store in 1964

The existing single-family residence was constructed on the Site in 1950. Historical tax records reveal an oil-fired heating source for the 1950-vintage residence. It would appear that the existing heating oil UST has been in service since that time.

Archive tax records reveal that a retail gasoline station was developed on the northern portion of the Site in 1963 and continued operations through the mid-1970's. The station was operated by Fletcher Oil Company and was served with three motor fuel dispensers. The historical record shows a 4,000 gallon UST although the remainder of the UST section is obscured by a photograph. That station was removed from the Site by 1980. As discussed earlier in section 4 of this report, we were advised by the former property owner, Mr. Joe Colello, that the USTs were removed from this former gas station. An inspection of an archive photo of the station suggests that the motor fuel USTs for the station were located between the service building and the fuel dispenser island and that the station building was used for auto service. The environmental condition of subsurface soils and/or groundwater at this former retail gasoline station location appears unkown.

The existing retail building was constructed in 1986 and has been historically occupied by a video store, laundromat, restaurants, taverns, a hair salon, and a casino. No evidence was found in the public record of dry cleaning operations in this building.

6.2 ADJOINING AND NEARBY PROPERTIES

6.2.1 NORTH OF SITE

- The parcels across South 96th Street appear as vacant farmland in 1961. Filling activities are evident by 1970. The existing Pyrometrics warehouse building was erected sometime between 1970 and 1985. Historical records reveal that an auto wrecking yard identified as All City Auto Wrecking occupied the parcel across the intersection of Des Moines Memorial Drive South and South 96th Street from the mid-1960's until the 1990's. That historical use led to environmental impacts and listing on the Ecology CSCSL database. The former All City Auto Wrecking property is situated approximately 200 feet northeast of the Site in an inferred down-gradient hydrologic position and is not considered a risk to Site soils and/or groundwater.

6.2.2 SOUTH OF SITE

- The parcel adjacent to the south was vacant land until the existing powerline right-of-way was installed sometime prior to 1973. Residential land use has continued at the top of the slope farther to the south since the 1940's.

6.2.3 WEST OF SITE

- The parcels extending to the west of the Site have a continued history of industrial use extending from the 1970's to the present. As noted in section 6.2 of this report, the former Clarklift warehouse property adjacent to the west of the northern portion of the Site historically used USTs which led to adverse environmental impacts on that property and may present a threat to Site soil and/or groundwater quality.

6.2.4 EAST OF SITE

- The parcels across Des Moines Memorial Drive South were historically occupied by a single-family residence surrounded by vacant pasture until construction of the existing AAAA Mini-Storage complex by 1985 and the Mc Donald's Restaurant in 1996.

6.3 DATA GAPS

No readily available information was found for the time period prior to 1912. This data gap does not appear to materially affect the conclusions of this report.

7 Conclusions

RGI has performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-05 for the Dominic's Plaza Commercial Center, Seattle, Washington, the Site. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This assessment has revealed no evidence of RECs in connection with the Site with the exception of the following:

- Potential risks associated with the historical operation of a gasoline service station on the northern portion of the Site. Historical records document the presence of a gasoline service station which occupied the northern part of the subject parcel from approximately 1950 to the mid-1970's. The storage and dispensing of petroleum products associated with this past use are considered a potential risk to Site soils and/or shallow groundwater. No information was found in the public record regarding the fate of the former USTs or other subsurface improvements (hoists, product piping, etc.) associated with this historical gasoline service station. Considering the unknowns regarding the environmental condition of Site soils and groundwater along with the unknown fate of the USTs, RGI recommends conducting a geophysical survey in an effort to identify abandoned USTs (if any) followed by Phase 2 subsurface investigation.

- Potential risks to site soil and/or shallow groundwater regarding the long-term use of the existing single family residence heating oil UST. We were advised by the selling broker, Mr. Petro, that the heating oil UST remains in use and serves an oil-fired furnace within the basement of the house. The UST was likely installed at the time the residence was constructed in 1950 (and has thus been in service for nearly 60 years). Based on the long-term operation of the UST along with the noted shallow groundwater in the Site vicinity, RGI recommends a Phase 2 subsurface investigation.

- In 2003, Clayton Group Services documented impacts to groundwater by TPH as diesel and oil at the west adjoining and inferred upgradient Pacific Materials Handling (former Clarklift) property. The impacted shallow groundwater was discovered along the northern side of that property along South 96th Street. The aerial extent and source(s) of the impacted shallow groundwater was not defined. The Clayton Limited Phase 2 report referenced another Phase 2 report that was reportedly conducted around the former UST locations on the former Clarklift facility. A copy of that referenced report was not contained in the reviewed Ecology file. Acknowledging the potential risks posed by undefined impacts at this neighboring facility, RGI concludes that a Phase 2 subsurface investigation is necessary to assess whether or not the west adjoining property has adversely affected site soil and/or shallow groundwater .

9 Signatures of Environmental Professionals

Any questions regarding the work within this report, the presentation of the information, or the interpretation of the data are welcome and should be referred to the undersigned. We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professionals as defined by §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Sincerely,
THE RILEY GROUP, INC.

10 Qualifications of Environmental Professionals

11.1 Jason Cass L.G., Senior Geologist

Education

- B.Sc. Geology, Western Washington University, Bellingham, Washington, 1999
- Field Geology – Conducted geologic mapping projects in the southwestern United States, focusing in the areas of structural and petrologic processes. Washington State Department of Natural Resources, Division of Geology and Earth Resources, field internship conducting mapping of bedrock and Quaternary geology of the Anacortes South and La Conner 7.5 minute quadrangles, Washington.

Special Training, Licenses, and Certifications

Licensed professional geologist, License #2562 (Washington)

AHERA certified asbestos inspector

8-Hour Hazardous Waste Operations and Emergency Response (HAZWOPER) – 2006

Professional Experience

Mr. Cass is a senior level geologist with seven years of consulting experience for many local and national lending institutions, individual land owners, developers, and brokerage companies. Mr. Cass' experience includes conducting hundreds of Phase I Environmental Site Assessments throughout Washington and Oregon. Completing many Phase II soil and groundwater sampling and testing projects. Completion of several contaminated site characterization and remediation projects. Other work experience includes conducting asbestos surveys and seismic probable loss reports for commercial, residential, and industrial properties throughout the Pacific Northwest.

Representative Project Experience

- Various Banks and Lending Institutions – Performing Phase I environmental site assessments for multiple properties throughout the northwestern United States.
- Sterling Savings Bank – Performed Phase I ESA and UST site closure report. motel property in Sequim, Washington.
- T-Cast Communications – Performed preliminary subsurface soil assessment, site characterization, and geophysical survey at a former dry cleaning facility in Fircrest, Washington.
- Lake Tapps Plaza – Following completion of a Phase I ESA, conducted sampling of soils and groundwater including groundwater monitoring for releases from a retail gasoline station and dry cleaning facility in Pierce County, Washington.
- Glacier Real Estate/Symetra – Completed a Phase I ESA, Phase II soil and groundwater sampling and testing, UST site assessment and remediation, and groundwater treatment and monitoring, Bellingham, Washington.
- Kent Mini Mart – Conducted subsurface soil sampling, UST site assessment, soil remediation, and WDOE Voluntary Cleanup Program (VCP) process, Kent, Washington.
-

11.2 PAUL D. RILEY, PRINCIPAL GEOLOGIST

Education

M.S., Geological/Geophysical Sciences, Western Washington University, 1991

B.S., Geological Sciences, Michigan State University, 1988

Licensed Well Driller, Washington State

Washington State Registered Geologist (License #1264)

Washington State Registered Hydrogeologist (License #1264)

Continuing Education

Groundwater Remediation & Design, GNAW, 1994

Risk-Based Corrective Action – AST Seminar, 1996

Wetlands Delineation Workshop-Richard Chinn, 1999

Professional Skills

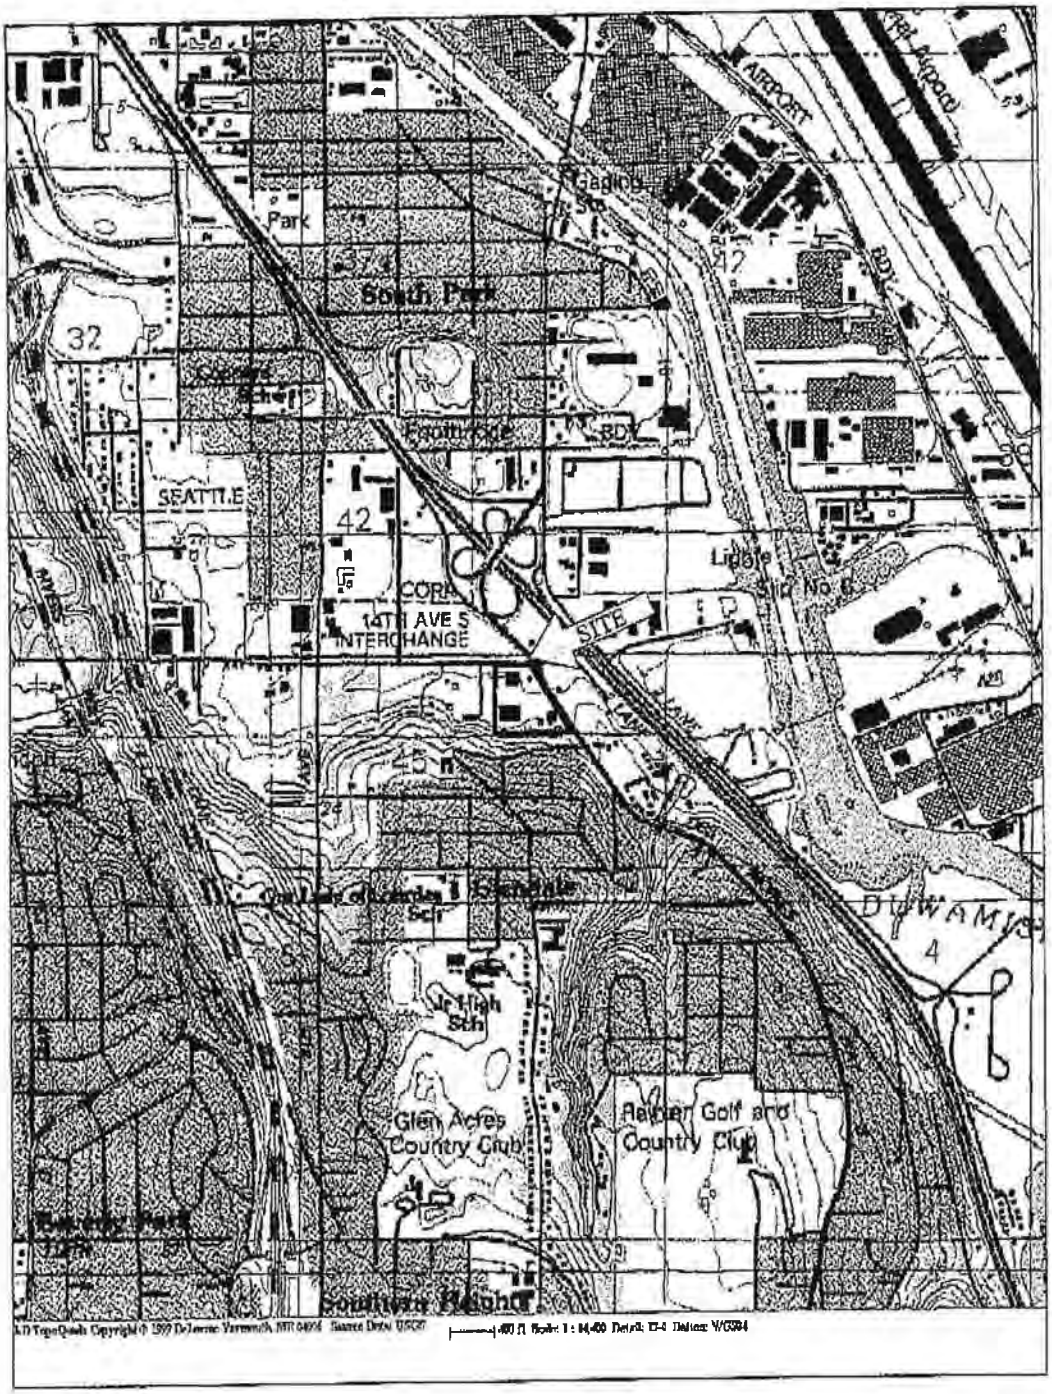

Principal, The Riley Group, Inc. (formerly Riley Environmental, LLC), Seattle, WA. 3/96 - present.

Mr. Riley, the founding principal of The Riley Group, Inc. has professionally practiced as an environmental geologist and hydrogeologist in the Pacific Northwest since 1991. Mr. Riley has performed numerous Phase I ESAs, Phase II subsurface characterization studies, risk based site closures, aquifer pump tests, in-situ remediation system pilot studies, remediation system design, and remediation system installation and operations & maintenance for over 1,000 sites located in the Pacific Northwest.

Mr. Riley is responsible for all operations of The Riley Group, Inc. Responsibilities include administrative and technical operations and business development. Mr. Riley manages Phase I ESA, Phase II investigations, risk-based closures, remediation system implementation (design, installation, and O&M), geotechnical engineering projects for commercial and mixed-use construction, and wetland delineation and mitigation projects with RGI's diverse technical staff serving a wide clientele base both locally and nationally.

Environmental Division Manager, Omega Environmental (formerly O'Sullivan Omega), Seattle, WA. 11/1992 to 3/1996

Mr. Riley was the environmental division manager for the Pacific Northwest for a national underground storage tank (UST) installation and removal contractor. Mr. Riley supervised a staff of geologists and environmental engineers performing UST site assessments, Phase I ESAs, Phase II subsurface soil and groundwater characterization studies, remediation projects, compliance groundwater monitoring projects, and asbestos and lead paint building surveys.

RE: Geophysical Survey & Limited Phase II Subsurface Investigation Letter DRAFT Report
Dominic's Plaza
9635 Des Moines Memorial Drive
Seattle, Washington
RGI Project#: 2007-234B

Dear Mr. Norman:

The Riley Group, Inc. (RGI) is pleased to present our Geophysical Survey & Limited Phase II Subsurface Investigation findings, conclusions, and recommendations (if any) for the above-referenced Site located at 9635 Des Moines Drive, Seattle, Washington (Figure 1). The subject Site is currently occupied by a single-story casino building, a residence, and a grocery store on a 3.49-acre property.

RGI understands that Frontier Bank (Client) intends to provide funds for their client's purchase of the subject Site.

PROJECT BACKGROUND

RGI conducted a Phase I Environmental Site Assessment of the Site, dated October 15, 2007. Based on our findings, the northern portion of the Site was occupied by a retail gasoline service station from approximately the 1960s to 1970s (Figure 2). During that time, several underground storage tanks (USTs) with associated fuel dispensers were utilized on-Site. Our Phase I ESA concluded that the location, status and subsurface conditions in the vicinity of the former UST system (USTs, pump islands, etc.) were unknown. In addition, the existing Site residence was served by a heating oil UST which was likely installed in 1950.

Our Phase I ESA also concluded that the west-adjoining former Clarklift property had documented impacts to shallow groundwater and a history of UST usage.

RGI concluded that the former on-Site former gasoline service station and heating oil UST and the off-site Clarklift property posed a risk to Site soils and/or shallow groundwater quality.

Main Office: 17522 Bothell Way NE, Bothell, WA 98011
Tel (425) 415-0551 • Fax (425) 415-0311

SCOPE OF WORK

The purpose of this investigation was an attempt to determine if abandoned USTs existed on the Site and to determine whether shallow subsurface conditions at the Site had been adversely affected by existing or former on-Site USTs and the west adjoining former Clarklift industrial facility. This preliminary scope of work proposed was not intended to fully delineate the nature and extent of contamination encountered during our subsurface investigation (if any).

The scope of work performed for this project was in general accordance with our Geophysical Survey & Limited Phase II Subsurface Investigation Proposal, dated October 17, 2007 and authorized by Frontier Bank on October 22, 2007.

PRIVATE AND PUBLIC UTILITY LOCATE

At least 48 hours prior to test probing, RGI contacted One-Call to locate known public underground utilities. RGI will also contracted with a private utility locate service to identify underground utilities not marked by the public locate service.

GEOPHYSICAL SURVEY

RGI attempted to locate any abandoned USTs or former UST locations associated with the former on-site gasoline service station by geophysical survey. RGI subcontracted and supervised the geophysical contractor to perform the survey using geophysical exploration methods. The survey utilized an electromagnetic (EM) and/or ground penetrating radar (GPR) units to traverse the suspect areas of the Site.

The EM and GPR survey technique typically provides good information on the location of possible USTs and other buried objects. However, because of the numerous variables involved in geophysical investigations, there is a possibility that some subsurface features may not be detected, including possible USTs. Other buried features, such as foundations, pipes, rubble, etc., may complicate the interpretation of the geophysical data.

The estimated cost for this task is approximately $850 and can be done independently of sampling and testing work.

SUBSURFACE INVESTIGATION AND SAMPLING

On October 26, 2007, RGI advanced a total of 10 test probes on the Site property (one full day of test probing) for soil and shallow groundwater grab sampling.. Test probes were advanced to approximately 11 to 14 feet below ground surface (bgs) by our drilling subcontractor using a truck-mounted strataprobe rig. A strataprobe is a hydraulic and percussion drive-point sampler.

Test probes were advanced in the vicinity of any suspect anomalies identified during the geophysical survey at the former gasoline service station location, proximal to the in-service signal family residential heating oil UST, and along the shared property line with the west adjoining former Clarklift property. Approximate test probe locations are shown on the attached Figure 2.

Due to a large storage container on-site at the time of our subsurface investigation, not all areas planned for the geophysical survey and/or our subsurface investigation were accessible.

Standard Sampling Protocols

Continuous soil samples were collected from all test probe locations, inspected and field screened for the presence of volatile organic compounds (VOCs) using water sheen tests and a portable gas analyzer equipped with a photo-ionization detector (PID). Up to four discrete soil samples were collected per test probe (a total of 32 discrete soil samples were collected for this project).

Soil conditions encountered were described using the Unified Soil Classification System (USCS). Soil samples collected for analysis of volatile organic compounds were collected using the Washington State Department of Ecology required 5035 sampling method.

Following soil sampling, shallow groundwater grab samples were collected at each test probe location where encountered. In general, shallow groundwater in the vicinity of the presumed former gasoline station USTs was encountered at a depth of 3 to 3.5 feet bgs. Shallow groundwater encountered elsewhere on the Site was at depths of 6 to 8.5 feet bgs. Groundwater grab samples were collected down hole (either through the drive rods or through a temporarily installed 1-inch PVC well screen) using a peristaltic pump and disposable polyvinyl tubing under low-flow conditions.

All samples were collected in accordance with our standard operating and decontamination procedures. Samples were placed in preconditioned sterilized-containers provided by an Ecology accredited analytical laboratory. All test probe holes were abandoned using hydrated bentonite chips and patched to match existing grade (gravel, ready mix concrete, or asphalt patch). All test probe and sampling equipment were decontaminated using Alconox® soap and tap water between sampling events.

Note: Groundwater grab samples may not be representative of groundwater conditions or quality (due to the increased sample turbidity associated with the sampling method). To obtain samples that are definitively representative of groundwater would require the installation, development, and sampling of groundwater monitoring wells, which is not the objective of this study. The objective of this study is to determine whether, and in relative terms, groundwater has been adversely affected by the potential contaminants of concern. Groundwater grab sampling will satisfy this project objective as well as provide useful information regarding where to locate groundwater monitoring wells should that be required.

Disposal of contaminated soil cuttings and/or groundwater (if any) were not included in our scope of work but can be provided upon request at additional cost.

ANALYTICAL LABORATORY ANALYSIS

Samples collected were submitted to an Ecology-accredited, third party analytical laboratory for analysis as outlined below. Groundwater samples and/or soil samples showing the highest field screening result or evidence of contamination were selected for one or more of the following laboratory analysis.

- Gasoline-range total petroleum hydrocarbons (TPH) using Ecology Test Method NWTPH-Gx.
- BTEX (benzene, ethylbenzene, toluene, xylenes) using EPA Test Method 8021.

- Diesel and oil-range TPH using Ecology Test Method NWTPH-Dx with silica gel cleanup[1].
- Halogenated Volatile Organic Compounds (HVOCs) using EPA Test Method 8260.

Laboratory analytical results will analyzed under normal turnaround times as requested by the client.

FINDINGS

Soil and groundwater grab samples analytical results and the applicable cleanup levels are summarized in Table 1 and 2, respectively and discussed below. Sample analytical results are compared to the Washington State Department of Ecology Model Toxics Control Act (MTCA) Method A Cleanup Levels for Unrestricted Land Use (WAC 173-340-900, Table 740-1) and the MTCA Method A Cleanup Levels for Groundwater (WAC 173-340-900, Table 720-1).

Single Family Residence Heating Oil UST

Test probes SP-01 and SP-02 advanced adjacent to the single family residence heating oil UST encountered diesel-affected soils and shallow groundwater. Soil samples collected at the 5.5 foot (SP-02) and 8-foot (SP-01) sampling depth intervals had diesel TPH concentrations of 10,000 mg/kg and 4,900 mg/kg, respectively. The MTCA Method A Soil Cleanup Level for diesel and oil TPH is 2,000 mg/kg.

The groundwater grab sample collected from test probe SP-01 had a diesel TPH concentration of 1,500,000 ug/L (and heavy oil TPH concentration of 37,000 ug/L). The MTCA Method A Groundwater Cleanup Level for diesel and oil TPH is 500 ug/L. The relatively high TPH concentration in groundwater may represent the presence of floating free product on top of the shallow groundwater. Based on our Phase II findings, the residential heating oil UST appears to have released petroleum to the subsurface environment. The nature and extent of contamination is not know at this time.

Former Site Gasoline Service Station

Test probes SP-07 to SP-10 were advanced in the approximately vicinity of the inferred former fuel USTs and pump island associated with the former gasoline service station on-site. Three of the four test probes (SP-08, SP-09, and SP-10) intercepted either non-detectable concentration of TPH and BTEX in soil or groundwater, or detected concentrations below the applicable MTCA Method A Cleanup Levels.

Test probe SP-07, located in the immediate vicinity of the former pump island, and inferred downgradient of the former fuel UST nest, intercepted shallow groundwater with a diesel TPH concentration of 740 ug/L, gasoline TPH of 1,200 ug/L, and benzene of 17 ug/kg (all above their respective MTCA Method A Groundwater Cleanup Levels).

Based on our preliminary Phase II findings, an apparent petroleum release from the site's former gasoline station's fuel USTs has occurred.

Former Clarklift Property (West Adjoining)

[1] Silica gel cleanup removes naturally occurring organics, which can give falsely elevated diesel/oil TPH readings.

Test probes SP-04 and SP-05 were advanced along the west property line and presumed downgradient of the west adjoining former Clarklift property. Test probe SP-04 intercepted shallow groundwater with elevated concentrations of diesel and oil TPH (3,700 ug/L and 2,900 ug/L, respectively), cis-1,2-Dichloroethene (18 ug/L), trichloroethene (1.9 ug/L), vinyl chloride (3.8 ug/L). Gasoline TPH and trace BTEX were also detected. The MTCA Method A Groundwater Cleanup Level for diesel/oil TPH is 500 ug/L. The MTCA Method A Groundwater Cleanup Level cis-1,2-Dichloroethene, trichloroethene, and vinyl chloride is ???? (CLARC database down at time of preparing this draft report), 5 ug/L, and 0.2 ug/L, respectively.

Based on a inferred groundwater flow direction (to the northeast-east), the potential exists that the west adjoining property has adversely affected shallow groundwater intercepted by test probes SP-04 and SP-05. The extent of the groundwater contaminant plume intercepted by these two test probes is not defined.

We appreciate the opportunity to work with you on this project. If you have any questions, or need additional information, please contact us at (425) 415-0551.

Sincerely,
THE RILEY GROUP, INC.

MTCA Method A or B^ Soil Cleanup Levels			**100/30[1]**	**0.03**	**7**	**6**	**9**	**2,000**	**2,000**

All soil samples collected by RGI field staff on October 26, 2007.

Unless otherwise noted, results are given in milligrams per kilogram (mg/kg), equivalent to parts per million (ppm).

Gas TPH, Gasoline total petroleum hydrocarbons determined using Ecology Test Method NWTPH-Gx.

BTEX, Benzene, Toluene, Ethyl Benzene, and Xylenes determined using EPA Test Method 8021.

Diesel and oil TPH, diesel and oil range total petroleum hydrocarbons (TPH) determined using Ecology Test Method NWTPH-Dx with silica gel cleanup.

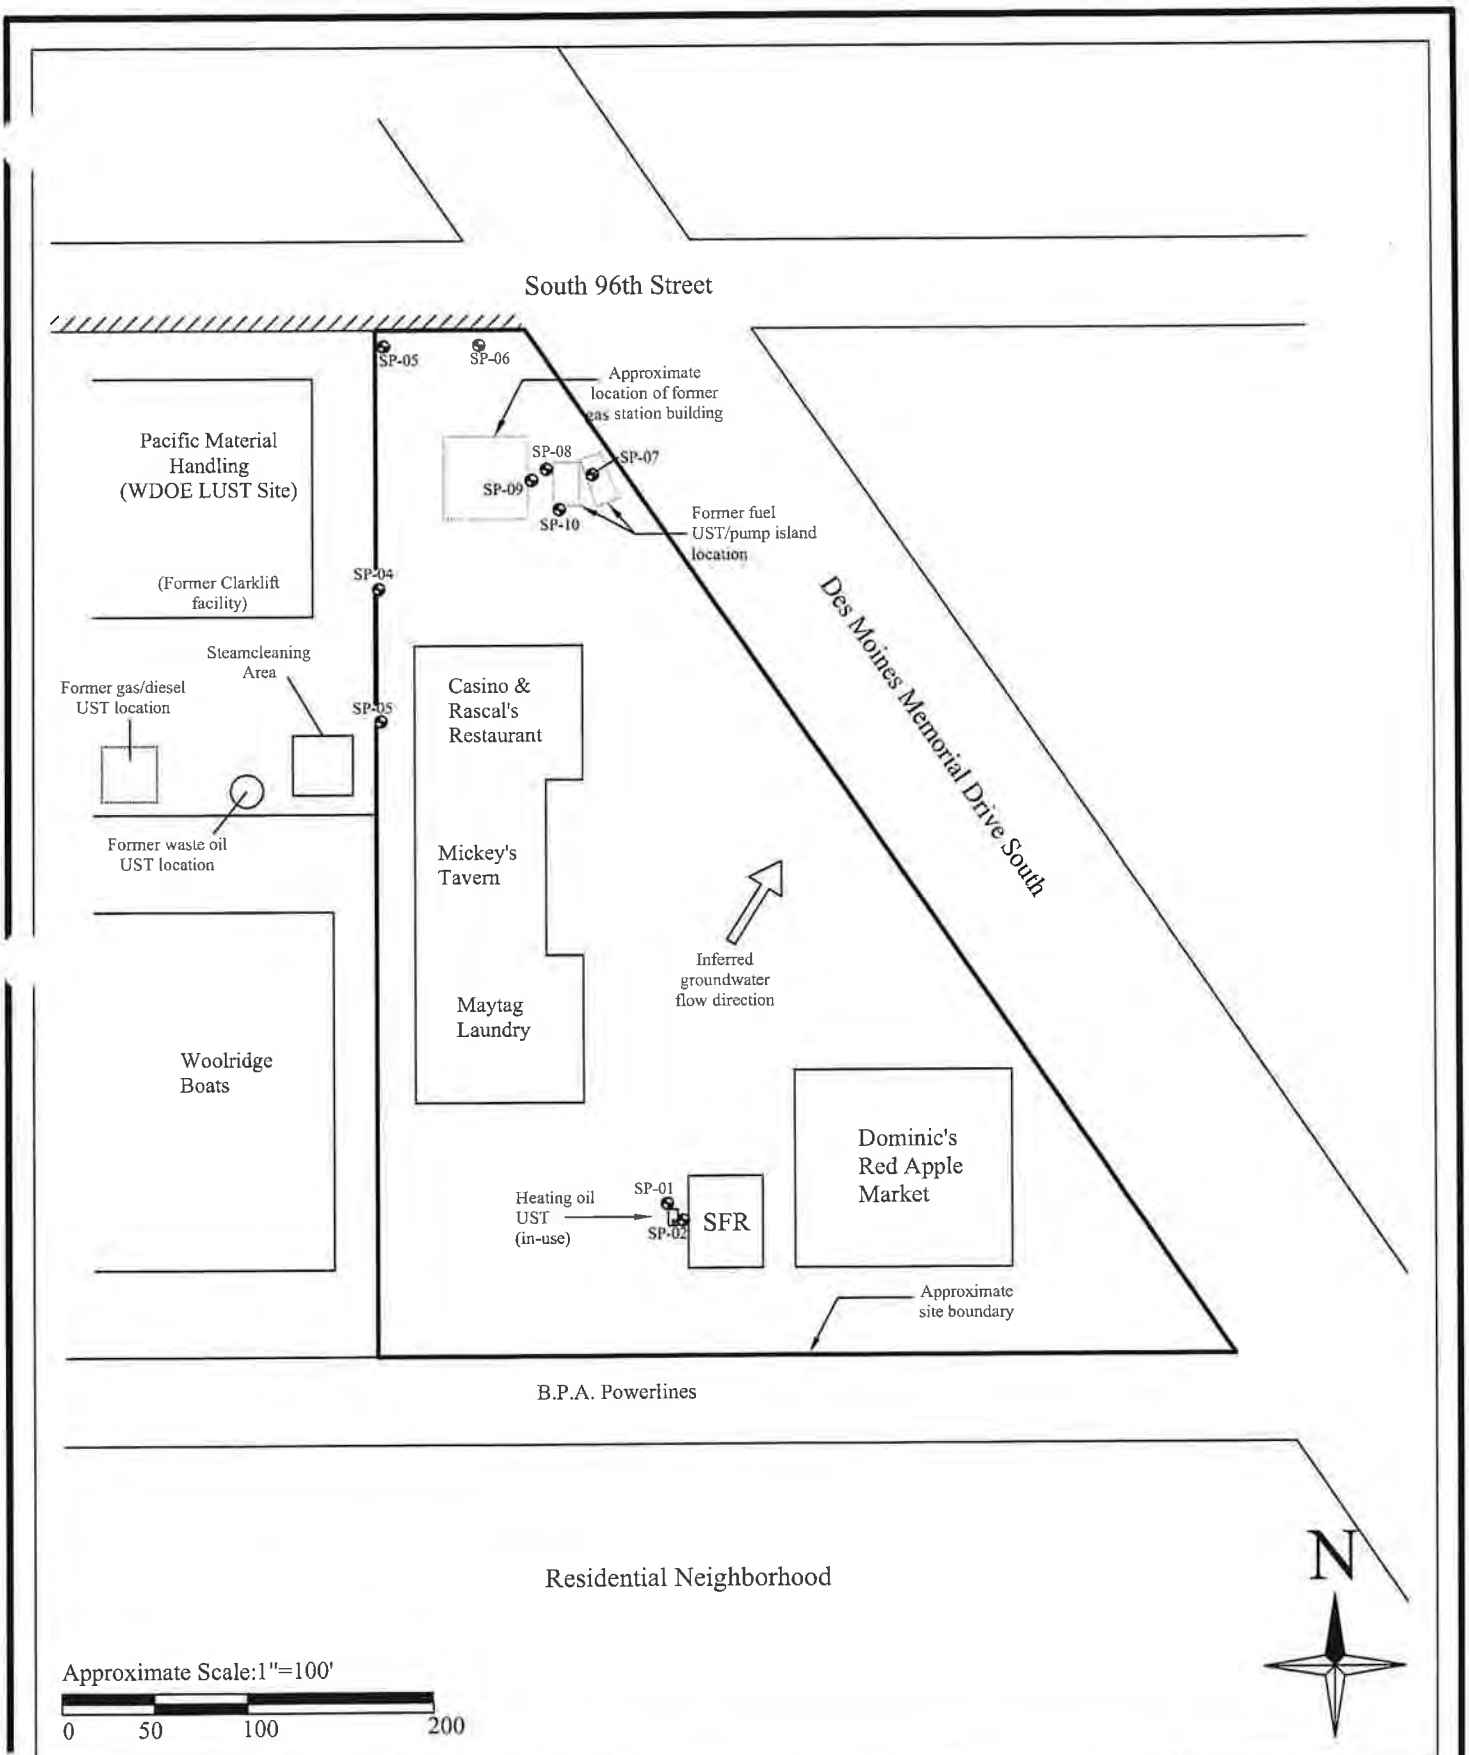

*, TPH results based on Ecology's petroleum hydrocarbon qualitative test method NWTPH-HCID.

ND, non-detect, contaminant not detected at noted analytical detection limit.

---, Not analyzed or not applicable.

[1] The higher cleanup level is allowed if no benzene is detected in the sample and the total of toluene, ethylbenzene and xylenes is less than 1% of the gasoline mixture.

MTCA Cleanup Level, Ecology Model Toxics Control Act Method A Soil Cleanup Levels for Unrestricted Land Use (WAC 173-340-900, Table 740-1). Bold & yellow highlighted results indicate concentrations (if any) that exceed MTCA Method A Soil Cleanup Levels.

Groundwater grab samples collected by RGI field staff on October 26, 2007 using a peristaltic pump under low flow conditions.

Unless otherwise noted, all analytical results are given in micrograms per liter (ug/L), equivalent to parts per billion (ppb).

Gas TPH, Gasoline total petroleum hydrocarbons determined using Ecology Test Method NWTPH-Gx

BTEX, Benzene, Toluene, Ethyl Benzene, and Xylenes determined using EPA Test Method 8021.

Diesel and oil TPH, diesel and oil range total petroleum hydrocarbons determined using Ecology Test Method NWTPH-Dx with silica gel cleanup.

HVOCs, Halogenated Volatile Organic Compounds determined using EPA Test Method 8260. Only detected chemicals and their result are shown in table, all other HVOCs were not detected at the analytical detection limit.

VC = vinyl chloride.

cis-1,2-Dichloroethene.

TCE = Trichloroethene.

*, TPH results based on Ecology's petroleum hydrocarbon qualitative test method NWTPH-HCID.

ND, non-detect, contaminant not detected at noted analytical detection limit.

---, Not analyzed or not applicable.

[1] the higher cleanup level is applicable if no benzene is detected in groundwater.

MTCA, Washington State Department of Ecology Model Toxics Control Act. **Bold** and shaded (in yellow) concentrations, if any, are above MTCA Method A or B Cleanup Levels for Groundwater (WAC 173-340-900, Table 720-1). MTCA Method B Standard Formula Values are used where no Method A values are published by Ecology.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard

associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERCLIS-NFRAP list, as provided by EDR, and dated 10/25/2013 has revealed that there are 2 CERCLIS-NFRAP sites within approximately 0.5 miles of the target property.

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 06/09/2015 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 06/09/2015 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

Federal ERNS list

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA.

A review of the ERNS list, as provided by EDR, and dated 06/22/2015 has revealed that there is 1 ERNS site within approximately 0.001 miles of the target property.

WA HSL: The Hazardous Sites List is a subset of the CSCSL Report. It includes sites which have been assessed and ranked using the Washington Ranking Method (WARM).

A review of the WA HSL list, as provided by EDR, and dated 08/28/2015 has revealed that there are 22 WA HSL sites within approximately 1 mile of the target property.

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 10/20/2015 has revealed that there are 33 WA CSCSL sites within approximately 1 mile of the target property.

State and tribal landfill and/or solid waste disposal site lists

WA SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Ecology's Solid Waste Facilities Handbook.

A review of the WA SWF/LF list, as provided by EDR, and dated 12/08/2015 has revealed that there is 1 WA SWF/LF site within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 10/20/2015 has revealed that there are 10 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 06/09/2015 has revealed that there are 15 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 6 EDR Hist Auto sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 18500.6

Waste code: D035
Waste name: METHYL ETHYL KETONE
Amount (Lbs): 18500.6

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL

SHERWIN WILLIAMS STORE 4317 (Continued) **1005445118**

BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 18500.6

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.
Amount (Lbs): 18500.6

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the

DELTA MARINE INDUSTRIES INC (Continued) **1000395279**

Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA Assessment, Cleanup and Redevelopment Exchange System (ACRES) is an federal online database for Brownfields Grantees to electronically submit data directly to EPA.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

21 ft.

ALLSITES:
Facility Name: SEATTLE CITY DOT 14TH ST PROJECT
Facility Id: 6791835

. Interaction: I
. Interaction 1: HWOTHER
. Interaction 2: Haz Waste Management Activity
. Ecology Program: HAZWASTE
. Program Data: TURBOWASTE
. Facility Alt.: Seattle City DOT 14th St Project
. Program ID: WAH000030586
. Date Interaction: 2008-12-31 00:00:00
. Date Interaction 3: 2014-12-31 00:00:00
. Latitude: 47.614962382000002
. Longitude: -122.330430104

. Interaction: I
. Interaction 1: HWG
. Interaction 2: Hazardous Waste Generator
. Ecology Program: HAZWASTE
. Program Data: TURBOWASTE
. Facility Alt.: Not reported
. Program ID: WAH000030586
. Date Interaction: 2007-03-09 00:00:00
. Date Interaction 3: 2008-12-31 00:00:00
. Latitude: 47.614962382000002
. Longitude: -122.330430104

WA MANIFEST:
Facility Site ID Number: 6791835
EPA ID: WAH000030586
NAICS: 92119
SWC Desc: Not reported
FWC Desc: F002
Form Comm: This waste was generated from ground corings, a ground sampling process.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

ECOLIGHTS NORTHWEST LLC (Continued) **1005445002**

Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource

GARY MERLINO CONSTRUCTION COMPANY (Continued) **1000660229**

Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Event: Date For Remedy Selection (CM Imposed)

Event date: 08/08/2002
Event: RFI Supplemental Information Received

Event date: 09/04/2002
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event date: 09/04/2002
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Environmental Interest/Information System

WARNERS FOREIGN AUTO REPAIR (Continued) **1004794180**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste Stream Comments:

Facility ID: 97263627
Data Year: 2011
Comments: spent abrasive blast media contaminated with cadmium and chromium from sandblasting painted items

Facility ID: 97263627
Data Year: 2013
Comments: filters contaminated with zinc dust from zinc metallizing (flame spray) coating operation.

Facility ID: 97263627
Data Year: 2013
Comments: Used sandblast media contaminated with chromium, cadmium and filters used to capture bag house dust created from this sandblasting activity (paint being removed from parts contained cadmium & chromium).

Facility ID: 97263627
Data Year: 2014
Comments: Box of broken mercury containing lamp tubes.

Facility ID: 97263627
Data Year: 2014
Comments: zinc dust and filters contaminated with zinc dust from zinc metallizing (flame spray) coating operation.

Facility ID: 97263627
Data Year: 2014
Comments: Managed as special waste per WAC 173-303-073. Metal scale, blast media dusts, paint dust.

Facility ID: 97263627
Data Year: 2014
Comments: Used sandblast media contaminated with chromium, cadmium and filters used to capture bag house dust created from this sandblasting activity (paint being removed from parts contained cadmium & chromium).

Waste Stream Comments:
Facility ID: 97263627
Data Year: 2011
Comments: spent abrasive blast media contaminated with cadmium and chromium from sandblasting painted items

Facility ID: 97263627
Data Year: 2013
Comments: filters contaminated with zinc dust from zinc metallizing (flame spray) coating operation.

Facility ID: 97263627

PUGET SOUND COATINGS MACHINISTS INC (Continued) **1000223613**

Data Year: 2013
Comments: Used sandblast media contaminated with chromium, cadmium and filters used to capture bag house dust created from this sandblasting activity (paint being removed from parts contained cadmium & chromium).

Facility ID: 97263627
Data Year: 2014
Comments: Box of broken mercury containing lamp tubes.

Facility ID: 97263627
Data Year: 2014
Comments: zinc dust and filters contaminated with zinc dust from zinc metallizing (flame spray) coating operation.

Facility ID: 97263627
Data Year: 2014
Comments: Managed as special waste per WAC 173-303-073. Metal scale, blast media dusts, paint dust.

Facility ID: 97263627
Data Year: 2014
Comments: Used sandblast media contaminated with chromium, cadmium and filters used to capture bag house dust created from this sandblasting activity (paint being removed from parts contained cadmium & chromium).

Waste Stream Comments:
Facility ID: 97263627
Data Year: 2011
Comments: spent abrasive blast media contaminated with cadmium and chromium from sandblasting painted items

Facility ID: 97263627
Data Year: 2013
Comments: filters contaminated with zinc dust from zinc metallizing (flame spray) coating operation.

Facility ID: 97263627
Data Year: 2013
Comments: Used sandblast media contaminated with chromium, cadmium and filters used to capture bag house dust created from this sandblasting activity (paint being removed from parts contained cadmium & chromium).

Facility ID: 97263627
Data Year: 2014
Comments: Box of broken mercury containing lamp tubes.

Facility ID: 97263627
Data Year: 2014
Comments: zinc dust and filters contaminated with zinc dust from zinc metallizing (flame spray) coating operation.

Facility ID: 97263627
Data Year: 2014
Comments: Managed as special waste per WAC 173-303-073. Metal scale, blast media dusts, paint dust.

Facility ID: 97263627
Data Year: 2014
Comments: Used sandblast media contaminated with chromium, cadmium and filters used to capture bag house dust created from this sandblasting activity (paint being removed from parts contained cadmium & chromium).

Waste Stream Comments:
Facility ID: 97263627
Data Year: 2011
Comments: spent abrasive blast media contaminated with cadmium and chromium from sandblasting painted items

Facility ID: 97263627
Data Year: 2013
Comments: filters contaminated with zinc dust from zinc metallizing (flame spray) coating operation.

Facility ID: 97263627
Data Year: 2013
Comments: Used sandblast media contaminated with chromium, cadmium and filters used to capture bag house dust created from this sandblasting activity (paint being removed from parts contained cadmium & chromium).

Facility ID: 97263627
Data Year: 2014
Comments: Box of broken mercury containing lamp tubes.

Facility ID: 97263627
Data Year: 2014
Comments: zinc dust and filters contaminated with zinc dust from zinc metallizing (flame spray) coating operation.

Facility ID: 97263627
Data Year: 2014
Comments: Managed as special waste per WAC 173-303-073. Metal scale, blast media dusts, paint dust.

Facility ID: 97263627
Data Year: 2014
Comments: Used sandblast media contaminated with chromium, cadmium and filters used to capture bag house dust created from this sandblasting activity (paint being removed from parts contained cadmium & chromium).

Waste Stream Comments:

Facility ID: 97263627
Data Year: 2011
Comments: spent abrasive blast media contaminated with cadmium and chromium from sandblasting painted items

Facility ID: 97263627
Data Year: 2013
Comments: filters contaminated with zinc dust from zinc metallizing (flame spray) coating operation.

Facility ID: 97263627
Data Year: 2013
Comments: Used sandblast media contaminated with chromium, cadmium and filters used to capture bag house dust created from this sandblasting activity (paint being removed from parts contained cadmium & chromium).

Facility ID: 97263627
Data Year: 2014
Comments: Box of broken mercury containing lamp tubes.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a

CAROLYN M BURKE SITE (Continued) **1005445348**

means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:
Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 14720

Waste code: D005
Waste name: BARIUM
Amount (Lbs): 4716

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA’s programs. The vision for ICIS is to replace EPA’s independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

SOUTH PARK MARINA (Continued) **1004794412**

Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Event date:	12/04/2002
Event:	Stabilization Measures Implemented, Groundwater extraction and treatment (e.g., to achieve groundwater containment, to achieve MCL).
Event date:	12/04/2002
Event:	Stabilization Measures Implemented, Primary measure is exposure control by barrier and/or institutional control (e.g., capping, fencing, deed restrictions).
Event date:	06/18/2003
Event:	Igration of Contaminated Groundwater under Control, Unacceptable

CONTAINER PROPERTIES LLC (Continued) **1000311727**

migration of contaminated groundwater is observed or expected.

Event date: 09/27/2004
Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Waste Stream Comments:
Facility ID: 2150
Data Year: 2006
Comments: A-7. Soil cuttings generated by monitoring well abandonment.

Facility ID: 2150
Data Year: 2010
Comments: A-7 Ongoing groundwater remediation- treatment of groundwater by GAC before groundwater discharged to POTW. Groundwater is not reportable per 173-303-071 (3)(a)(ii) B-4-H129 Management Method Code Details- spent carbon received on 08/20/2010 was reactivated in accordance with 40 CFR part 265 adn part 61 regulations. B-5-H129 Management Method Code Details- spent carbon received on 08/20/2010 was reactivated in accordance with 40 CFR part 265 adn part 61 regulations.

Facility ID: 2150
Data Year: 2011
Comments: A-7 Soils are investigation derived waste from drilling/coring investigation managed under US EPA.

Facility ID: 2150
Data Year: 2011
Comments: a-7 Investigation derived waste from drilling/coring under EPA managed investigation.

Facility ID: 2150
Data Year: 2012
Comments: a-7 Investigation dervied waset from drilling/coring under EPA managed investigation.

Facility ID: 2150
Data Year: 2013
Comments: A-7 Soils are investigation derived waste from drilling/coring investigation managed under US EPA

Facility ID: 2150
Data Year: 2013
Comments: A-7- ongoing groundwater remediation- filter bags are from the first step of treatment. A-9- ongoing groundwater remediation, filter bags are produced annually and stored in satellite accumulation area for disposal.

Waste Stream Comments:
Facility ID: 2150
Data Year: 2006
Comments: A-7. Soil cuttings generated by monitoring well abandonment.

Facility ID: 2150
Data Year: 2010
Comments: A-7 Ongoing groundwater remediation- treatment of groundwater by GAC before groundwater discharged to POTW. Groundwater is not reportable per 173-303-071 (3)(a)(ii) B-4-H129 Management Method Code Details- spent carbon received on 08/20/2010 was reactivated in accordance with 40 CFR part 265 adn part 61 regulations. B-5-H129 Management Method Code Details- spent carbon received on 08/20/2010 was reactivated in accordance with 40 CFR part 265 adn part 61 regulations.

Facility ID: 2150
Data Year: 2011
Comments: A-7 Soils are investigation derived waste from drilling/coring investigation managed under US EPA.

Facility ID: 2150
Data Year: 2011
Comments: a-7 Investigation derived waste from drilling/coring under EPA managed investigation.

Facility ID: 2150
Data Year: 2012
Comments: a-7 Investigation dervied waset from drilling/coring under EPA managed investigation.

Facility ID: 2150
Data Year: 2013
Comments: A-7 Soils are investigation derived waste from drilling/coring investigation managed under US EPA

Facility ID: 2150
Data Year: 2013
Comments: A-7- ongoing groundwater remediation- filter bags are from the first step of treatment. A-9- ongoing groundwater remediation, filter bags are produced annually and stored in satellite accumulation area for disposal.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each

BOEING ISAACSON THOMPSON (Continued) **1000145041**

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 19703

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 23018

Waste code: D004
Waste name: ARSENIC
Amount (Lbs): 35387

Event date: 10/15/1993
Event: CA770GW

Event date: 06/01/1994
Event: RFA Initiation

Event date: 09/21/1994
Event: RFI Imposition, Focused data collection required for stabilization evaluation.

Event date: 09/21/1994
Event: Stabilization Measures Implemented, Groundwater extraction and treatment (e.g., to achieve groundwater containment, to achieve MCL).

Event date: 09/21/1994
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 09/21/1994
Event: RFA Determination Of Need For An RFI, RFI is Necessary;

Event date: 09/21/1994
Event: RFA Completed, Assessment was an RFA.

Event date: 09/21/1994
Event: Stabilization Measures Evaluation,This facility is amenable to stabilization activity based on the status of corrective action work at the facility, technical factors, the degree of risk, timing considerations and administrative considerations.

Event date: 09/21/1994
Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

BOEING A&M DEVELOPMENTAL CENTER (Continued) **1000922442**

Event date:	09/21/1994
Event:	Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.
Event date:	09/26/1997
Event:	Igration of Contaminated Groundwater under Control, More information is needed to make a determination.
Event date:	09/26/1997

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water

CLIFF HOUSERS AUTOMOTIVE (Continued) **1000659993**

Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/09/2015

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

CSCSL: Confirmed and Suspected Contaminated Sites List

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

State and tribal Brownfields sites

BROWNFIELDS: Brownfields Sites Listing
A listing of brownfields sites included in the Confirmed & Suspected Sites Listing. Brownfields are abandoned, idle or underused commercial or industrial properties, where the expansion or redevelopment is hindered by real or perceived contamination. Brownfields vary in size, location, age, and past use -- they can be anything from a five-hundred acre automobile assembly plant to a small, abandoned corner gas station.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Other Ascertainable Records

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 07/20/2015

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Gas Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

COUNTY RECORDS

KING COUNTY:

Abandoned Landfill Study in King County

The King County Abandoned Landfill Survey was conducted from October through December 1984 by the Health Department's Environmental Health Division at the request of the King County Council. The primary objective of the survey was to determine if any public health problems existed at the predetermined 24 sites.

Date of Government Version: 04/30/1985

TACOMA/PIERCE COUNTY:

Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

SM 2-61

2-65- This is a good new very plain building - nothing extra good but ma floors cover. color is income - There is a small, ~~one~~ used for simple office ~~did not get in to this but if so~~ like rest of building its cheap - ~~walls not finished on outside~~ - Elmwood

6-65- ~~No more have all of the block to be for the market.~~

Elmwood

EDR Inquiry # 4536529.5

Contact: Anna Jordan

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by The Riley Group, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Site Name: 9635 Des Moines Memorial Drive South
Address: 9635 Des Moines Memorial Drive South
City, State, Zip: Seattle, WA 98108

P.O. # 2016-023
Project: NA
Certification # F5BB-4AF7-92B5

UNMAPPED PROPERTY

This report certifies that the complete holdings of the Sanborn Library, LLC collection have been searched based on client supplied target property information, and fire insurance maps covering the target property were not found.

Sanborn® Library search results
Certification # F5BB-4AF7-92B5

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ✓ Library of Congress
- ✓ University Publications of America
- ✓ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

The Riley Group, Inc. (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.
