## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |

# ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**

***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** October 13 and 16, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** September 11-12, 2017 – Soil Samples

**LAB:** ESC Lab ID L936064

---

Seventeen (17) soil samples and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 11-12, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L936064. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L936064 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

### Sample Collection and Preservation

Samples were collected on September 11-12, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 3.3 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

### Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met with the following exceptions:

- Holding time criteria were not met for soil samples B-212-85, B-212-95, and B-212-100. These soil samples were collected on September 11, 2017 and measured for percent solids on September 19, 2017 which is slightly beyond the recommended seven day hold. No action is taken in this case as samples were appropriately preserved and it is unlikely that the holding time exceedances significantly impact the sample results.

### Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, bromoform, and 2-butanone (MEK) associated with analytical batch WG1020560 (analyzed on September 14, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for chloromethane, trans-1,4-dichloro-2-butene, and di-isopropyl ether associated with analytical batch WG1030390 (analyzed on September 18, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, bromobenzene, chloroethane, chloromethane, trans-1,4-dichloro-2-butene, n-hexane, 2-butanone (MEK), 1,2,4-trimethylbenzene, and 1,2,3-trimethylbenzene associated with analytical batch WG1020390 (analyzed on September 14, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

**Method Blank Results**

*USEPA Method 8260C:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*
Laboratory method blank was included with the analytical batch per method requirement. The target analyte (gasoline) was not detected at or above the RDL.

*Total Solids by SM 2540 G 2011:*
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

**Trip Blank Results**

*USEPA Method 8260C:*
A trip blank was collected and submitted for VOC analysis. The target analytes were not detected in the trip blank at or above the RDL.

**Field, Rinsate, or Equipment Blank Results**

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate samples were not collected.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*NWTPH-Gx Method:*
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSDs and MS/MSDs results for precision data on soils and waters.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on client samples B-212-85 B-214-115 and B-215-55. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blank are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters.

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPDs for the control analyte (gasoline) are within the laboratory control criteria for soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on a non-client sample

within one of the analytical batches. Refer to LCS/LCSD results for accuracy and precision on water data and soil data associated with Batch WG1020390. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils.

*NWTPH-Gx Method:*
MS/MSDs were analyzed by the NWTPH-Gx method on a non-client samples within the analytical batch. The MS/MSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for soils.

**Other Quality Control Issues**

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- Sample B-212-85 was not reanalyzed at a lower dilution for hexachloro-1,3-butadiene as there were no low level sodium bisulfite vials remaining for these samples. No action was taken other than to note this.

**Compound Identification and Quantitation Limits**

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

**Data Assessment**

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| ND | Not detected at the Reporting Limit (or MDL where applicable). |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** October 16, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** September 13, 2017 – Soil Samples

**LAB:** ESC Lab ID L936401

---

Nine (9) soil samples were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 13, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L936401. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L936401 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on September 13, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 2.3 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for trans-1,4-dichloro-2-butene associated with analytical batch WG1020800 (analyzed on September 15, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acrylonitrile associated with analytical batch WG1020800 (analyzed on September 20, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs) with the following discussion:

- Methylene chloride was detected at a low level below the RDL and above the method detection limit. No action was necessary as methylene chloride was not detected in the associated samples.

*Total Solids by SM 2540 G 2011:*
Laboratory method blank was included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Two sets of field duplicate (samples MW-138-65/B-910-90 and samples B-215-85/B-909-115) results are comparable. Refer to matrix spike results for further discussion regarding estimated (UJ) and rejected (R) VOC results for field duplicate pair samples MW-138-65 and B-910-90.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on two non-client samples, and on client sample B-910-90. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs

for the all target compounds are within the laboratory control criteria for soils with the following exception:

- LCSD (Batch WG1020800) recoveries for three spiking compound (1,2-dibromoethane, 1,1,2-trichloroethane, and 1,2,3-trichloropropane) results are above laboratory acceptance criteria and qualified by the laboratory (J4). No action was taken on this basis since these compounds were not detected in the associated samples.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses was performed client sample B-910-90. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils with the following exceptions:

- MS/MSD (Batch WG1020800) recoveries for multiple spiking compounds are low and in many cases were recovered below 10% and are qualified as follows:
    - MS/MSD RPD values dichlorodifluoromethane and n-hexane were recovered wide, above laboratory acceptance criteria, and qualified (J3) by the laboratory. No action is taken on this basis. Refer to the discussion below on low spike recoveries for additional details.
    - MS/MSD spike compound results for bromochloromethane were slightly below laboratory acceptance criteria and qualified (J6) by the laboratory to indicate matrix interference. **Bromochloromethane results for sample B-910-90 and parent sample MW-138-65 are estimated and qualified (UJ).**
    - MS/MSD recoveries for twelve compound (bromomethane, carbon disulfide, chloroethane, chloromethane, dichlorodifluoromethane, trans-1,2-dichloroethene, 1,1-dichloroethene, 1,1-dichloropropene, n-hexane iodomethane, and methylene chloride) results are below 10% and are qualified (J6) by the laboratory to indicate matrix interference. **Results (bromomethane, carbon disulfide, chloroethane, chloromethane, dichlorodifluoromethane, 1,1-dichloroethene, 1,1-dichloropropene, trans-1,2-dichloroethene, n-hexane, iodomethane, methylene chloride, and vinyl chloride) for sample B-910-90 and parent sample MW-138-65 <u>detects</u> (carbon disulfide and n-hexane) are estimated, qualified (J), and <u>non-detects</u> are rejected (R) due to low spike recoveries.**

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use with the following exceptions:

- **Non-detected results (bromomethane, chloroethane, chloromethane, dichlorodifluoromethane, 1,1-dichloroethene, trans-1,2-dichloroethene 1,1-dichloropropene, iodomethane, methylene chloride, and vinyl chloride) for sample B-910-90 and parent sample MW-138-65 are rejected (R) due to low spike recoveries.**

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| ND | Not detected at the Reporting Limit (or MDL where applicable). |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** October 17, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** September 13-14, 2017 – Soil and Groundwater Samples

**LAB:** ESC Lab ID L937125

---

Eight (8) soil samples, one (1) groundwater sample, and one trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 13-14, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L937125. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L937125 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on September 13-14, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 2.1 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acrylonitrile, chloromethane, 1,2-dibromoethane, di-isopropyl ether, and 4-methyl-2-pentanone (MIBK) associated with analytical batch WG1022131 (analyzed on September 24, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, bromoform, trans-1,4-dichloro-2-butene, and hexachloro-1,3-butadiene associated with analytical batch WG1022131 (analyzed on September 19, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs) with the following exception:

- Batch WG1021889 (waters): Acetone and hexachloro-1,3-butadiene were detected above the method detection limit (MDL) and below the RDL in the method blank. **Acetone was detected below the RDL in the associated sample and this result is qualified as not detected (U) due to blank contamination.** No action was taken for hexachloro-1,3-butadiene as it was not detected in the associated sample.

*Total Solids by SM 2540 G 2011:*
Laboratory method blank was included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was collected and submitted for VOC analysis. The target analytes (VOCs) were not detected in the trip blank at or above the reported detection limits (RDLs) with the following exception:

- Acetone was detected below the RDL and was also detected in the method blank. Associated sample acetone result is qualified as not detected (U) due to blank contamination.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate samples were not collected.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on a non-client sample, and on client sample MW-139-41. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS and LCS/LCSDs were analyzed by USEPA Method 8260C method. The LCS and LCS/LCSDs %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on client sample MW-141-85 and a non-client sample within the analytical batches. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils and waters with the following exceptions:

- MS/MSD (Batch WG1022131 for soils) RPDs and % recoveries for multiple compounds exceed laboratory RPD criteria and are qualified (J3 and/or J6) by the laboratory. No action is taken since the spike was performed on a non-client sample within the analytical batch and LCS/LCSD results are acceptable. Refer to LCS data for more information.
- MS/MSD (Batch WG1021889 for waters) RPDs and % recoveries for multiple compounds exceed laboratory criteria due to matrix interference and are qualified (J3 and/or J6) by the laboratory. No action is taken since the spike was performed on a non-client sample within the analytical batch and LCS/LCSD results are acceptable. Refer to LCS data for more information.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- *USEPA Method 8260C:* ESC (SDG L937125-01 and 07) footnotes for soil samples MW-139-20 and MW-139-80 indicated "Elevated RL Bisulfate vials overweight, reported from ME0H vial." In both cases the elevated reporting limit (RL) applies to two compounds (trans-1,4-dichloro-2-butene and tetrachloroethene). ESC was contacted to clarify the footnote. Per ESCs response one of the vials for each sample had greater than 7.5 grams of soil and was therefore unusable. The two compounds were not reportable on the undiluted initial run due to failing CCV and reporting level checks. Both samples were reanalyzed at a higher dilution for these two compounds using the methanol preserved vials. No action was taken other than to note this.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

**Subject:** RE: American Linen L937125

Jessie,

We received (2) low level sodium bisulfite preserved vials per sample. In this case, one of the vials for each sample had >7.5g of soil and was therefore unusable. This can be caused by dense matrix, soil extending beyond the sample T and not removed prior to addition to vials, or adding more than one plug of soil to the vial. The plug of soil should weigh about 5g.

These two compounds were not reportable from the initial 1x analysis due to failing CCV/RL checks, and had to be reanalyzed from the high level MeOH preserved vial. Let me know if you need any additional information.

Thanks,

Brian Ford

**Subject:** American Linen L937125

Hello,

Can you please elaborate on footnotes for ESC SDG L937125-01 and 07? Elevated RL Bisulfate vials overweight, reported from ME0H. The elevated RL only applies to two compounds (trans-1,4-dichloro-2-butene and tetrachloroethene).

Thanks!

Jessie

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Brian Ford
Technical Service Representative

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** October 16, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** September 18-19, 2017 – Soil and Groundwater Samples

**LAB:** ESC Lab ID L937802

---

Nine (9) soil samples and one (1) groundwater sample were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 18-19, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L937802. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L937802 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on September 18-19, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 0.8 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, 2-hexanone, and 2-butanone (MEK) associated with analytical batch WG1023207 (analyzed on September 21, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acrylonitrile, 2,2-dichloropropane, 4-methyl-2-pentanone (MIBK), and methyl tert-butyl ether associated with analytical batch WG1023207 (analyzed on September 26, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs) with the following exception:

- Batch WG1023529 (waters): Hexachloro-1,3-butadiene, naphthalene, and 1,2,3-trichlorobenzene were detected above the method detection limit (MDL) and below the RDL in the method blank. These compounds were not detected in the associated sample and no action is required.

*Total Solids by SM 2540 G 2011:*
Laboratory method blank was included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate samples were not collected.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on a non-client sample and on client sample MW-141-65. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS and LCS/LCSDs were analyzed by USEPA Method 8260C method. The LCS and LCS/LCSDs %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following exceptions:

- LCSD (Batch WG1023207 for soils) RPDs for acetone and 2-butanone (MEK) exceed laboratory RPD criteria and are qualified (J3) by the laboratory. No action is taken since the spike recoveries are both within criteria.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on client sample MW-141-85 and a non-client sample within the analytical batches. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils and waters with the following exceptions:

- MSD (Batch WG1023207 for soils) RPDs for 1,2-dichlorobenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, naphthalene, 1,2,3-trichlorobenzene, and 1,2,4-trichlorobenzene exceed laboratory RPD criteria and are qualified (J3) by the laboratory. No action is taken since the spike recoveries are within but recovered wide. Refer to LCS/LCSD data for more information.
- MSD (Batch WG1023529 for waters) RPDs for multiple compounds exceed laboratory criteria and are qualified (J3) by the laboratory. No action is taken since the spike was performed on a non-client sample within the analytical batch and LCS/LCSD results are acceptable. Refer to LCS data for more information.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

## Total Solids by Method 2540 G-2011

| Analyte | Result | Qualifier | Dilution | Analysis | Batch |
|---|---|---|---|---|---|
| | % | | | date / time | |

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Brian Ford
Technical Service Representative

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |
| V3 | The internal standard exhibited poor recovery due to sample matrix interference. The analytical results will be biased high. BDL results will be unaffected. |

# ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** October 17, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** September 19-20, 2017 – Soil Samples

**LAB:** ESC Lab ID L938165

---

Thirteen (13) soil samples including two field duplicates, and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 19-20, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. One soil sample was placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L938165. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L938165 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on September 19-20, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 4.1 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for carbon disulfide, chloromethane, dichlorodifluoromethane, and trans-1,4-dichloro-2-butene associated with analytical batch WG1023237 (analyzed on September 22, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, carbon disulfide, chloromethane, dichlorodifluoromethane, and trans-1,4-dichloro-2-butene associated with analytical batch WG1023237 (analyzed on September 22, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs).

*Total Solids by SM 2540 G 2011:*
Laboratory method blank was included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was collected and submitted for VOC analysis. The target analytes were not detected in the trip blank at or above the RDL.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Two sets of field duplicate (samples B-218-50/ B-913-70 and samples B-220-50/ B-914-75) results are comparable for VOCs and less than 30% RPD with the following exceptions:

- Field duplicate sample pair (B-218-50 and B-913-70) RPDs are greater than 30% for cis-1,2-dichloroethene, tetrachloroethene, trichloroethene, and vinyl chloride. **Sample field duplicate (B-218-50 and B-913-70) results for cis-1,2-dichloroethene, tetrachloroethene, trichloroethene, and vinyl chloride are estimated and qualified (J) due to poor field precision.**

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on two client samples B-218-19 and B-220-29. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS and LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS and LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following exception:

- LCS (Batch WG1023237 for soils) % recovery for trans-1,4-dichloro-2-butene is low, below laboratory criteria, and qualified by the laboratory (J4). **All associated results for trans-1,4-dichloro-2-butene are estimated and qualified (UJ) due to the low LCS recovery and CCV recovery outside of acceptance limits.**

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS/LCSD results for more information.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following exception:

- Sample B-218-19 VOC results are footnoted to indicate that there is an elevated reporting limit for trichloroethene because ESC used up all of the low level sodium bisulfite preserved vials (no stir bars) and used a methanol preserved vial to analyze for trichloroethene. No action was taken other than to note this.

- One of the VOC internal standards for sample B-220-29 exhibited poor recovery due to sample matrix interference. Associated analytical results are biased high and qualified by the laboratory (V3). ESC indicated that results below the detection limit (BDL), the method detection limit, are unaffected. **Sample B-220-29 results for acetone, carbon disulfide, chloroform, 1,1-dichloroethene, trans-1,2-dichloroethene, 2-butanone (MEK), 1,2,4-trimethylbenzene, and vinyl chloride are estimated with high bias and qualified (J+).**

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

## Total Solids by Method 2540 G-2011

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** October 17, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** September 20-21, 2017 – Soil and Groundwater Samples

**LAB:** ESC Lab ID L938636

---

Fifteen (15) soil samples including two field duplicates, one (1) groundwater sample, and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 20-21, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L938636. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L938636 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

### Sample Collection and Preservation

Samples were collected on September 20-21, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 0.9 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

### Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

### Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, trans-1,4-dichloro-2-butene, 2,2-dichloropropane, di-isopropyl ether, n-hexane, and 4-methyl-2-pentanone (MIBK) associated with analytical batch WG1026247 (analyzed on October 1, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All**

**associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, acrylonitrile, bromomethane, 2-hexanone, 2-butanone, 4-methyl-2-pentanone, and methyl tert-butyl ether associated with analytical batch WG1026247 (analyzed on September 29, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for 2,2-dichloropropane, and tetrachloroethene associated with analytical batch WG1024032 (analyzed on September 24, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for 2,2-dichloropropane associated with analytical batch WG1024032 (analyzed on September 24, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

**Method Blank Results**

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs) with the following discussion:

- Batch WG1024893 (for waters): Hexachloro-1,3-butadiene, naphthalene and 1,2,3-trichlorobenzene were detected above the method detection limit (MDL) and below the RDL in the method blank. No action was taken since these compounds were not detected in the associated sample.

*NWTPH-Gx Method:*
Laboratory method blank was included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blank at or above the RDL.

*Total Solids by SM 2540 G 2011:*
Laboratory method blank was included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was collected and submitted for VOC analysis. The target analytes were not detected in the trip blank at or above the RDL.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Two pairs of field duplicate (samples B-221-37/ B-915-80 and samples B-222-50/B-916-30) results are comparable for VOCs and less than 30% RPD with the following exceptions:

- Field duplicate sample pair (B-222-50 and B-916-30) RPDs are greater than 30% for cis-1,2-dichloroethene, and trichloroethene. **Sample field duplicate (B-222-50 and B-916-30) results for cis-1,2-dichloroethene and trichloroethene are estimated and qualified (J) due to poor field precision.**

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*NWTPH-Gx Method:*
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSD and MS/MSD results for precision data on waters.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on two client samples B-221-16 and B-221-45. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS, LCS/LCSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS and LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS and LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following exceptions:

- LCS/LCSD (Batch WG1026247 for soils) RPD result for acetone is above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as LCS/LCSD percent recovery results are recovered wide but are within control limits.

- LCSD (Batch WG1024032 for soils) recovery for cis-1,3-dichloropropene is above laboratory acceptance criteria, and qualified by the laboratory (J4). No action was necessary as this compound was not detected in the associated samples.

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for waters.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS/LCSD results for accuracy and precision water and soil data.

*NWTPH-Gx Method:*
MS/MSDs were analyzed by the NWTPH-Gx method on a non-client sample within the analytical batch. The MS/MSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for waters with the following exception:

- MSD (Batch WG1024796 for waters) spike recovery is above laboratory control criteria and qualified by the laboratory (J5) to indicate that there was matrix interference. Gasoline MS/MSD RPD is above laboratory criteria and qualified by the laboratory (J3). No action is taken since the spike was performed on a non-client sample and LCS/LCSD RPD and percent recoveries are acceptable.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following exceptions:

- *USEPA Method 8260C:* VOC results for soil samples B-221-37 including field duplicate B-915-80, B-221-16, B-221-22, B-221-33, B-221-45, B-221-50, B-221-60, and B-222-50

are footnoted by ESC to indicate that the target compound(s) were too high to run the sample at a lower dilution. No action is taken other than to note this.

- *USEPA Method 8260C:* VOC result for water sample MW-138-092117 is footnoted to indicate that due to sediment in the vial the sample was diluted two fold. No action is taken other than to note this.

**Compound Identification and Quantitation Limits**

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

**Data Assessment**

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

**To:** 'J Compeau'
**Subject:** RE: American Linen L938636

Jessie,

These samples had very large hits for PCE and daughter compounds which prevented analysis at a lower dilution. These samples were never analyzed from the low level vial or at a lower dilution. Let me know if you need any additional info.

Thanks,

Brian Ford

**Subject:** American Linen L938636

Hi Brian,
Thanks for your last response. I am working on the final two SDGs and have a question on L938636 :

VOC results for soil samples B-221-37 (including field duplicate B-915-80), B-221-16, B-221-22, B-221-33, B-221-45, B-221-50, B-221-60, and B-222-50 are footnoted by ESC to indicate that target compound(s) are too high to run the sample at a lower dilution. No action is taken other than to note this.

- It appears that one sample, sample B-221-16 (L938636-02), does not appear to have elevated targets. Hard to say from this. Did matrix interference result in the dilution?

- For most if not all of the above mentioned samples did the laboratory run out of bisulfate preserved vials to analyze these at a LL?

Thanks

Jessie Compeau

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** October 18, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** September 21-22, 2017 – Soil and Groundwater Samples

**LAB:** ESC Lab ID L938873

---

Six (6) soil samples including one field duplicate, four (4) groundwater samples including one field duplicate, and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 21-22, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L938873. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L938873 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested with the following comment:

- The chain of custody shows a soil matrix (SS) for all four groundwater samples. The chain of custody should show groundwater (GW) under the matrix column for samples MW-140-092217, MW-134-092217, MW-141-092217, and B-917-100-W.

## Sample Collection and Preservation

Samples were collected on September 21-22, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 2.8 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for bromomethane and 4-methyl-2-pentanone (MIBK) associated with analytical batch WG1024797 (analyzed on September 26, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acrylonitrile, 1,2-dibromo-3-chloropropane, and 4-methyl-2-pentanone (MIBK) associated with analytical batch WG1024797 (analyzed on October 2, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for trans-1,4-dichloro-2-butene associated with analytical batch WG1025164 (analyzed on September 27, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All**

**associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs) with one exception:

- Batch WG1025164 (waters): Acetone and hexachloro-1,3-butadiene are detected above the method detection limit (MDL) and below the RDL in the method blank. **Associated acetone detections in samples MW-140-092217, MW-134-092217, MW-141-092217 and B-917-100-W are qualified as not detected (U) due to blank contamination.** No action was taken for hexachloro-1,3-butadiene as it was not detected in the associated samples.

*Total Solids by SM 2540 G 2011:*
Laboratory method blank was included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was collected and submitted for VOC analysis. The target analytes were not detected in the trip blank at or above the RDL.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Two sets of field duplicate (samples B-223-47 / B-917-57 and samples MW-140-092217 / B-917-100-W) results are comparable for VOCs and less than 30% RPD with the following exception:

- Field duplicate sample pair (B-223-47 / B-917-57) RPD is greater than 30% for tetrachloroethene. **Sample field duplicate (B-223-47 / B-917-57) results for tetrachloroethene are estimated and qualified (J) due to poor field precision.**

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample

duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on a non-client sample within the analytical batch. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS, LCS/LCSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS and LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS and LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following exception:

- LCS (Batch WG1025164 for waters) % recovery for acetone is above laboratory criteria and qualified by the laboratory (J4). No action was taken on this basis since acetone was also detected at a low level in the method blank and in the associated samples. Refer to the blank section for further discussion.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS/LCSD results for more information.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following exception:

- Soil samples B-223-16, B-223-22, B-223-30, B-223-39, and groundwater sample MW-134-092217 VOC results are footnoted by ESC to indicate that target compounds are too high to re-analyze at a lower dilution. No action was taken other than to note this.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Brian Ford
Technical Service Representative

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| MDL | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** October 18, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** September 25, 2017 –Groundwater Samples

**LAB:** ESC Lab ID L939416

---

Six (6) groundwater samples and an equipment blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 25, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology.

The results are reported in ESC Sample Delivery Group (SDG) L939416. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L939416 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on September 25, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 1.2 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for trans-1,4-dichloro-2-butene associated with analytical batch WG1025567 (analyzed on September 28, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone and trans-1,4-dichloro-2-butene associated with analytical batch WG1025567 (analyzed on October 3, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J) with the exception of acetone results for sample MW-137-092517.** For sample MW-137-092517 refer to the discussion under the equipment blank for further information.

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*

Laboratory method blanks were included with the analytical batch per method requirement. The target analyte (gasoline) was detected in the method blank below the RDL and qualified (J) by the laboratory for the following samples:

- **A low level of gasoline was detected in the method blank. Associated gasoline results MW-139-092517, MW-132-092517, MW-133-092517, MW-136-092517, and MW-137-092517 are qualified as not detected (U) due to blank contamination.** No action was taken for sample MW-135-092517 because the sample gasoline concentration was far greater than the gasoline detection in the associated method blank.

## Trip Blank Results

*USEPA Method 8260C and NWTPH-Gx:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

An equipment blank was collected after collecting sample MW-137-092517 and analyzed for VOCs and gasoline. The target analytes (VOCs and gasoline) were not detected in the equipment blanks at or above the reported detection limits (RDLs) with two exceptions:

- Low levels of acetone and 2-butanone were detected below the RDL in the equipment blank. No action was necessary for 2-butanone (MEK) as it was not detected in the associated sample. **Acetone was detected at a low level in the associated sample MW-137-092517 and is qualified (U) as not detected due to associated blank contamination.**

## Field Duplicate Analyses

A field duplicate sample was not collected.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) and/or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for waters with the following exceptions:

- LCSD (Batch WG1025567 for waters) % recovery for acetone is above laboratory criteria and qualified by the laboratory (J4). **All associated detected results are estimated and qualified (J) due to elevated spike recovery with the exception of sample MW-137-092517.** Refer to the discussion under the equipment blank for further information.

- LCS/LCSD (Batch WG1025567 for waters) % recoveries for trans-1,4-dichloro-2-butene are below laboratory criteria and qualified by the laboratory (J4). **Associated sample results are estimated and qualified (UJ) due to low LCS/LCSD recoveries and a CCV recovery outside of laboratory acceptance limits.**

- LCS (Batch WG1025567 for waters) % recovery for vinyl chloride is above laboratory criteria and qualified by the laboratory (J4). **All associated detected vinyl chloride results are estimated and qualified (J) due to elevated spike recovery.**

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for waters.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS/LCSD results for more information.

*NWTPH-Gx Method:*
MS/MSD analyses were performed on a non-client sample. MS/MSD % Rs and RPDs were within the laboratory control criteria for waters.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following exception:

- Water sample MW-132-092517 VOC results are footnoted by ESC to indicate that target compounds are too high to re-analyze at a lower dilution. No action was taken other than to note this.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

## Volatile Organic Compounds (GC) by Method NWTPHGX

| Analyte | Result ug/l | Qualifier | MDL ug/l | RDL ug/l | Dilution | Analysis date / time | Batch |
