All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |

# ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** September 22, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** August 28-29, 2017 – Soil Samples

**LAB:** ESC Lab ID L932876

---

Fifteen (15) soil samples and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 28-29, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. One soil sample was placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L932876. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in X# ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and). The quality assurance review of the sample data associated with SDG L932876 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on August 28-29, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 1.7 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. Holding time criteria were not met:

- Soil samples were collected on August 28-29, 2017 and measured for percent solids on September 6, 2017. This is slightly beyond the recommended seven day hold. No action is taken in this case as samples were appropriately preserved and it is unlikely that the holding time exceedances significantly impacted sample results.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, n-hexane, and methylene chloride associated with analytical batch WG1015700 (analyzed on August 31, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs) with the following exception:

- Analytical batch WG1018274: A low level of methylene chloride was detected below the reporting limit in the method blank analyzed on September 8, 2017. No action is taken as methylene chloride was not detected in the associated sample.

*NWTPH-Gx Method:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDL.

*Total Solids by SM 2540 G 2011:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (% solids) were not detected at a significant level in the method blank and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C and NWTPH-Gx:*
A trip blank was collected and submitted for analysis. The target analytes (VOCs) were not detected in the trip blank at or above the reported detection limits (RDLs) with the following exception:

- A low level of acetone was detected below the reporting limit in the trip blank. **All associated acetone detections are less than respective reporting limits and are qualified as not detected (U) due to trip blank contamination.**

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate (MW-134-80 and B-903-100) results are comparable and less than 30% RPD with the following exceptions:

- Field duplicate RPD results for cis-1,2-dichloroethene, tetrachloroethene, trichloroethene, and vinyl chloride are greater than 30%. **Samples MW-134-80 and B-903-100 results for the above mentioned compounds are estimated and qualified (J).**

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to LCS/LCSDs or MS/MSDs results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on a non-client sample, and client samples B-219-80 and MW-134-70. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSD, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils.

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPDs for the control analyte (gasoline) are within the laboratory control criteria for soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on a non-client sample within one of the analytical batches. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils with the following exceptions:

- MS/MSD (Batch WG1015700) RPDs and % Rs are outside of laboratory criteria for multiple compounds. Since this spike was performed on a non-client sample within one of the analytical batches no action will be taken. Refer to LCS/LCSD results for accuracy and precision data.

*NWTPH-Gx Method:*
MS/MSDs were analyzed by the NWTPH-Gx method on a non-client sample within the analytical batches. The MS/MSD %Rs and RPDs for the control analyte (gasoline) are within the laboratory control criteria for soils.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- Samples B-219-80 and MW-136-50 were not reanalyzed at a lower dilution as there were no low level sodium bisulfite vials remaining for these samples. No action was taken other than to note this.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

## Total Solids by Method 2540 G-2011

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Brian Ford
Technical Service Representative

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |
| V | The sample concentration is too high to evaluate accurate spike recoveries. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

## State Accreditations

# MEMORANDUM

**TO:** Project File **DATE:** September 21, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** August 30, 2017 – Soil and Groundwater Samples

**LAB:** ESC Lab ID L933267

---

Twelve (12) soil samples including a field duplicate, one (1) groundwater sample, and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 30, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L933267. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L933267 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

### Sample Collection and Preservation

Samples were collected on August 30, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 5.7 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

### Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. Holding time criteria were not met:

- Soil samples were collected on August 30, 2017 and analyzed for percent solids on September 7, 2017 slightly beyond the recommended seven day hold. No action is taken in this case as samples were appropriately preserved and it is unlikely that the holding time exceedances significantly impacted sample results.

### Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable and ESC's notes do not indicate any calibration issues.

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs) with the following exception:

- Analytical batch WG1015996: Low levels of carbon disulfide and iodomethane were detected below the reporting limit in the method blank analyzed on September 1, 2017. No action is taken as these compounds were not detected in the associated sample.

*NWTPH-Gx Method:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDL.

*Total Solids by SM 2540 G 2011:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was collected and submitted for analysis. The target analytes (VOCs) were not detected in the trip blank at or above the reported detection limits (RDLs) with the following exception:

- A low level of acetone was detected below the reporting limit in the trip blank. No action was taken since acetone was not detected in the associated samples.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate (B-205-75 and B904-50) results are comparable and less than 30% RPD with the following exception:

- Field duplicate RPD result for tetrachloroethene is greater than 30%. **Sample B-205-75 and B904-50 results for the above mentioned compounds are estimated and qualified (J).**

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to LCS/LCSDs or MS/MSDs results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on a client sample from another SDG, and client sample B-904-50. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSDs were analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters.

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPDs for the control analyte (gasoline) are within the laboratory control criteria for soils and waters.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on client sample B-205-10. The MS/MSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils with the following exceptions:

- MS/MSD (Batch WG1016266) RPD values for compounds bromodichloromethane, bromomethane, iodomethane, dibromomethane, 1,2-dichloroethane, 1,3-dichloropropane, cis-1,3-dichloropropene, 2-hexanone, and styrene are above laboratory acceptance criteria and qualified by the laboratory (J3). No action is taken in these cases since the spikes were within criteria but recovered wide. MS/MSD % Rs for carbon disulfide and n-hexane are low and below acceptance criteria. **Associated parent sample B-205-10 result for carbon disulfide and n-hexane are estimated and qualified (UJ).** MS/MSD % R's for 1,2,4-trimethylbenzene were not recovered because the sample amount is greater than four times the spike concentration and was qualified (V) by the laboratory. No action taken in this case. Refer to LCS/LCSD results for accuracy and precision data.

- For the water sample refer to LCS/LCSD results for accuracy and precision data.

*NWTPH-Gx Method:*
MS/MSDs were analyzed by the NWTPH-Gx method on a non-client sample within the analytical batches. The MS/MSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for waters. For soils refer to LCS/LCSD results for precision and accuracy results.

**Other Quality Control Issues**

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- Samples B-205-55 and MW-140-75 were not reanalyzed at a lower dilution as there were no low level sodium bisulfite vials remaining for these samples. No action was taken other than to note this.

**Compound Identification and Quantitation Limits**

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

**Data Assessment**

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Brian Ford
Technical Service Representative

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| ND | Not detected at the Reporting Limit (or MDL where applicable). |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** October 12, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** August 30-31, 2017 – Soil and Groundwater Samples

**LAB:** ESC Lab ID L933455

---

Seven (7) soil samples and two (2) groundwater samples including a field duplicate were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 30 and 31, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L933455. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L933455 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

### Sample Collection and Preservation

Samples were collected on August 30 and 31, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 2.0 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

### Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. Holding time criteria were not met:

- Soil samples were collected on August 30 and 31, 2017 and analyzed for percent solids on September 8, 2017 slightly beyond the recommended seven day hold. No action is taken in this case as samples were appropriately preserved and it is unlikely that the holding time exceedances significantly impacted sample results.

### Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C (soil):* Continuing calibration verification (CCV) issues are noted by ESC for acetone, bromobenzene, chloroethane, chloromethane, trans-1,4-dichloro-2-butene, di-isopropyl ether, n-hexane, and 2-butanone (MEK) associated with analytical batch WG1016411 (analyzed on September 6, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **The associated sample MW-140-140 result laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDL.

*Total Solids by SM 2540 G 2011:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate (MW-137-76-W and B-905-60-W) results are comparable and less than 30% RPD.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*NWTPH-Gx Method:*
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSDs and MS/MSDs results for precision data on soils and waters.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on client samples MW-140-90 and MW-137-75. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSDs were analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with one exception:

- LCS (Batch WG1016411) % recoveries for compounds sec-butylbenzene and n-propylbenzene are recovered above criteria. LCSD % recovery results for these compounds are acceptable. No action was taken since these compounds were not detected in the associated soil samples.

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPDs for the control analyte (gasoline) are within the laboratory control criteria for soils and waters.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses on soils were performed on non-client sample within the analytical batch. Refer to LCS/LCSD results for accuracy and precision data since MS/MSD analyses were not performed on the analytical batch associated with the water samples. The MS/MSD %Rs and RPDs for the all target compounds are NOT within the laboratory control criteria for soils with the following discussion:

- MS/MSD (Batch WG1016411) RPD values for multiple compounds are above laboratory acceptance criteria and qualified by the laboratory (J3). MS/MSD recoveries are low and qualified by the laboratory (J6) for multiple compounds due to matrix interference. No

action is taken as the spike was performed on a non-client sample within the analytical batch. Refer to LCS/LCSD results for accuracy and precision data.

*NWTPH-Gx Method:*
MS/MSDs were analyzed by the NWTPH-Gx method on a non-client samples within the analytical batches. The MS/MSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for waters and soils.

**Other Quality Control Issues**

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- Sample MW-137-45 was not reanalyzed at a lower dilution due to an insufficient number of low level sodium bisulfite vials. No action was taken other than to note this.

**Compound Identification and Quantitation Limits**

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

**Data Assessment**

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Brian Ford
Technical Service Representative

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** October 12, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** September 1, 2017 – Soil and Groundwater Samples

**LAB:** ESC Lab ID L933742

---

Eleven (11) soil samples, one (1) groundwater sample, and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 1, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. One soil and one groundwater sample were placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L933742. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L933742 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested with the following discussion:

- ESC Non-Conformance Form indicates that one of the VOC vials for sample B-216-85 (L933742-09) was broken. ESC proceeded with the requested analysis after confirmation with PES. No action was taken other than to note this.

### Sample Collection and Preservation

Samples were collected on September 1, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 2.0 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

### Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved water from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils and preserved water from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. Holding time criteria were met.

### Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C (soil):* Continuing calibration verification (CCV) issues are noted by ESC for trans-1,4-dichloro-2-butene associated with analytical batch WG1017429 (analyzed on September 7, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ).**

- *USEPA Method 8260C (soil):* Continuing calibration verification (CCV) issues are noted by ESC for acetone, acrylonitrile, chloromethane, dichlorodifluoromethane, 2-hexanone, n-hexane, 2-butanone (MEK), and 4-methyl-2-pentanone (MIBK) associated with analytical batch WG1017434 (analyzed on September 7, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **The associated sample B-216-95 result laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDL.

*Total Solids by SM 2540 G 2011:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was collected and submitted for analysis. The target analytes (VOCs) were not detected in the trip blank at or above the reported detection limits (RDLs).

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate samples were not collected. Refer to spike data for accuracy and precision data.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*NWTPH-Gx Method:*
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSDs and MS/MSDs results for precision data on soils and waters.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analysis was performed on client samples MW-137-85. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS and LCS/LCSDs were analyzed by USEPA Method 8260C method. The LCS and LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with one exception:

- LCS/LCSD (Batch WG1017434) RPD result for acetone is above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as MS/MSD percent recovery results are recovered wide but are within control limits.

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPDs for the control analyte (gasoline) are within the laboratory control criteria for soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses on soils were performed on non-client

sample within the analytical batch. Refer to LCS results for accuracy data since MS/MSD analyses were not performed on the analytical batch associated with the water (trip blank) sample. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils with the following discussion:

- MS/MSD (Batch WG1017434) recoveries for chloroethane are low, below laboratory acceptance criteria, and qualified (J6) by the laboratory to indicate matrix interference. No action is taken since this spike was performed on a non-client sample within the analytical batch and LCS/LCSD results for chloroethane are acceptable.

*NWTPH-Gx Method:*
MS/MSDs were analyzed by the NWTPH-Gx method on a non-client sample within the analytical batch. The MS/MSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for soils.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Brian Ford

**Sample Narrative:**

OS: Stir bars received improperly prepped.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J1 | Surrogate recovery limits have been exceeded; values are outside upper control limits. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |

# ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

## Brian Ford

**From:** Bill Haldeman <bhaldeman@pesenv.com>
**Sent:** Thursday, September 07, 2017 6:11 PM
**To:** Brian Ford
**Subject:** RE: ESC Lab Sciences Login for 1413.001.02.602 American Linen Project L934130

Brian, we mistakenly labeled the depth for sample L934130-10 as 65 feet. It should be 75 feet, resulting in a sample designation of B-213-75. Can you make that change? I apologize for our error. Thanks! -Bill

# MEMORANDUM

**TO:** Project File **DATE:** October 12, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** September 5, 2017 – Soil Samples

**LAB:** ESC Lab ID L934130

---

Thirteen (13) soil samples were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 5, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Two soils were placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L934130. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L934130 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested with the following discussion:

- Chain of custody sample B-213-**65** (collected on September 5, 2017 at 15:45) was corrected to read B-213-**75** per PES's request.

## Sample Collection and Preservation

Samples were collected on September 5, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 0.8 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, acrylonitrile, chloromethane, dichlorodifluoromethane, 2-hexanone, n-hexane, 2-butanone (MEK), and 4-methyl-2-pentanone (MIBK) associated with analytical batch WG1017434 (analyzed on September 7, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs).

*Total Solids by SM 2540 G 2011:*
Laboratory method blank was included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate samples were not collected. Refer to spike data for precision and accuracy data.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on two non-client samples, and on client sample B-213-55. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses with the following exception:

- Surrogate 4-bromofluorobenzene percent recovery for sample B-213-21.5 is above laboratory acceptance criteria. **For sample B-213-21.5 all detected halogenated benzene results associated with the surrogate are estimated and qualified (J) due to the elevated surrogate recovery.**

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils with the following exception:

- LCS/LCSD (Batch WG1017434) RPD result for acetone is above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as MS/MSD percent recovery results are recovered wide but are within control limits.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on a non-client sample within one of the analytical batches. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils with the following exceptions:

- MS/MSD (Batch WG1017434) recoveries for chloroethane are low, below laboratory acceptance criteria, and qualified (J6) by the laboratory to indicate matrix interference. No action is taken since this spike was performed on a non-client sample within the analytical batch and LCS/LCSD results for chloroethane are acceptable.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

## Total Solids by Method 2540 G-2011

| Analyte | Result | Qualifier | Dilution | Analysis | Batch |

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Brian Ford
Technical Service Representative

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** September 21, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.002

**TASK:** September 5-6, 2017 – Soil and Groundwater Samples

**LAB:** ESC Lab ID L934673

---

Thirteen (13) soil samples including a field duplicate, one (1) groundwater sample and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 5-6, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. One soil sample was placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L934673. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in X# ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and ). The quality assurance review of the sample data associated with SDG L934673 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on September 5-6, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 2.9 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved water from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of 7 days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable and ESC's notes do not indicate any issues.

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*
A laboratory method blank was included with the analytical batch per method requirement. The target analyte (gasoline) was detected between the method detection limit and the reporting detection limit. No action was taken as the associated gasoline sample result is far greater than the established action criteria.

*Total Solids by SM 2540 G 2011:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected at significant levels in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was collected and submitted for analysis. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs).

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate (B-213-105 and B-906-110) results are comparable and less than 30% RPD.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results and/or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to LCS/LCSD and/or MS/MSD results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on client samples B-213-85 and B-906-110 within the analytical batches. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSD, MS/MSD, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSD, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters.

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for water.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
MS/MSD analysis was performed on client sample B-217-106. MS/MSD % Rs and RPD were within the laboratory control criteria for soils. A matrix spike was not performed on the water sample. Refer to LCS/LCSD results for precision data.

*NWTPH-Gx Method:*
MS/MSD analysis was performed on a non-client sample within the analytical batch. MS/MSD % Rs and RPD were within the laboratory control criteria for soils.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

## Total Solids by Method 2540 G-2011

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by ESC is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

| Volatile Organic Compounds (GC/MS) by Method 8260C | WG1018559 | 1 | 09/09/17 16:21 | 09/09/17 16:21 | BMB |

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| MDL | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

Please log off hold label 8-218. Log as R5 due 09/15.

MW-137-107-W for V8260LLC and NWTPHGX.

This sample was accidentally listed on the COC as MW-147-107-W. MW-137-107-W is the correct sample ID and the containers should be labeled correctly.

Thanks,

Brian Ford

# MEMORANDUM

**TO:** Project File **DATE:** September 21, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.002

**TASK:** September 1, 2017 – Groundwater Sample

**LAB:** ESC Lab ID L934916

---

One (1) groundwater sample was collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 1, 2017. The sample was shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;

The results are reported in ESC Sample Delivery Group (SDG) L934916. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in X# ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and ). The quality assurance review of the sample data associated with SDG L934916 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

The sample was collected and analyzed as requested with the following discussion:

- Chain of custody and a communication record (9/8/2017) between PES and ESC indicate that sample MW-147-107-W (L934916-01) should be corrected to read MW-1**3**7-107-W.

- Chain of custody shows that nine soil samples were collected and submitted. It appears that the samples were received on September 2, 2017. ESC was contacted and confirmed that soil results are associated with SDG L933742.

## Sample Collection and Preservation

Samples were collected on September 1, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 2.0 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for preserved water from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for preserved waters from the date of sample collection. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable and ESC does not indicate any calibration issues.

## Method Blank Results

*USEPA Method 8260C:*
A laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*
A laboratory method blank was included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blank at or above the RDL.

## Trip Blank Results

*USEPA Method 8260C and NWTPH-Gx:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicates were not collected.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to LCS/LCSD and/or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSD, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSD, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for water.

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for water.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
MS/MSD analysis was not performed. Refer to LCS/LCSD results for accuracy and precision data.

*NWTPH-Gx Method:*
MS/MSD analysis were performed on a non-client sample. MS/MSD % Rs and RPD were within the laboratory control criteria for waters.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

## Volatile Organic Compounds (GC) by Method NWTPHGX

| Analyte | Result ug/l | Qualifier | MDL ug/l | RDL ug/l | Dilution | Analysis date / time | Batch |

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** October 13, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** September 7 and 8, 2017 – Soil Samples

**LAB:** ESC Lab ID L935150

---

Ten (10) soil samples were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 7 and 8, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L935150. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L935150 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on September 7 and 8, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 2.1 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. Holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for trans-1,4-dichloro-2-butene and di-isopropyl ether associated with analytical batch WG1018676 (analyzed on September 9, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*

Laboratory method blanks were included with the analytical batch per method requirement. The target analyte (gasoline) was detected below the RDL of 0.100 mg/kg at a low level of 0.0348 mg/kg in the associated method blank and detections in associated samples are qualified as follows:

- **Gasoline result for sample B-212-35 was detected below the RDL and due to associated blank contamination is qualified as not detected (U).**

- **Gasoline results for samples B-212-45 and B-212-55 are qualified as estimated (J) due to blank contamination.**

*Total Solids by SM 2540 G 2011:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate (sample B-212-45 from SDG L935150; and sample B-907-25 from SDG L935266) results are comparable and less than 30% RPD. Refer to SDG L935266 for additional discussion on analysis issues associated with sample B-907-25.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to LCS/LCSDs or MS/MSDs results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on client samples B-214-25 and B-212-35. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSDs were analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils with the following exception:

- LCSD (Batch WG1018676) percent recovery for compounds cis-1,2-dichloroethene and 1,2,3-trimethylbenzene are slightly below laboratory criteria and qualified by the laboratory (J4). **All associated cis-1,2-dichloroethene and 1,2,3-trimethylbenzene results are estimated and qualified (UJ/J).**

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPDs for the control analyte (gasoline) are within the laboratory control criteria for soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS/LCSD results for precision and accuracy results.

*NWTPH-Gx Method:*
MS/MSD analyses were not performed. Refer to LCS/LCSD results for precision and accuracy results.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- *USEPA Method 8260C:* The method blank and LCS/LCSD for Batch WG1018676 were analyzed on September 9, 2017 and samples were analyzed September 17, 2017. ESC confirmed that the samples were analyzed on a different date than the method QC. ESC

indicated that the instrument was verified to be within calibration using the CCV and following standard operating procedures prior to analysis of the samples.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

## Total Solids by Method 2540 G-2011

| Analyte | Result | Qualifier | Dilution | Analysis | Batch |

**To:** 'J Compeau'
**Subject:** RE: American Linen Project SDG L935150

Jessie,

The samples ran on a different day than the method QC. The instrument was verified to be within calibration using the CCV prior to analysis of the samples. Let me know if you need any further information.

Thanks,

Brian Ford

**Subject:** American Linen Project SDG L935150

Hello Brian,
Reports look good so far. I have about 9 left to review. Am looking over the SDG L935150 results and have the following question:

*USEPA Method 8260C:* The method blank/LCS/LCSD for WG1018676 was analyzed on September 9, 2017 but samples were analyzed September 17, 2017. Can ESC please confirm the date of analysis on the MB/LCS/LCSD?

Thanks

Jessie Compeau

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

**Sample Narrative:**

L935266-09 WG1020390: Elevated RL. IS failed in both 1x analysis due to matrix interference. Reported from MEOH vial.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| ND | Not detected at the Reporting Limit (or MDL where applicable). |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |

# ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** October 13, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** September 8, 2017 – Soil Samples

**LAB:** ESC Lab ID L935266

---

Nine (9) soil samples and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on September 8, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L935266. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in 27 ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L933742, L934130, L934673, L934916, L935150, L935266, L936064, L936401, L937125, L937802, L938165, L938636, L938873, and L939416). The quality assurance review of the sample data associated with SDG L935266 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on September 8, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 1.7 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, 1,2-dichloroethane, trans-1,4-dichloro-2-butene, and 2-butanone (MEK) associated with analytical batch WG1019379 (analyzed on September 12, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, bromobenzene, chloroethane, chloromethane, trans-1,4-dichloro-2-butene, and n-hexane, 2-butanone (MEK), 1,2,4-trimethylbenzene, and 1,2,3-trimethylbenzene associated with analytical batch WG1020390 (analyzed on September 14, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for chloromethane, trans-1,4-dichloro-2-butene, and di-isopropyl ether associated with analytical batch WG1019379 (analyzed on September 18, 2017). These results are

qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for chloromethane, trans-1,4-dichloro-2-butene, and di-isopropyl associated with analytical batch WG1020390 (analyzed on September 18, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analyte (gasoline) was detected in the method blank between the method detection limit (MDL) and the RDL with the following discussion:

- **Gasoline results for samples B-212-65 and B-907-25 were detected below the RDL and due to associated blank contamination are qualified as not detected (U).**

*Total Solids by SM 2540 G 2011:*
Laboratory method blank was included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was collected and submitted for VOC analysis. The target analytes were not detected in the trip blank at or above the RDL.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Two pairs of field duplicate (sample B-212-45 from SDG L935150/sample B-907-25 from SDG L935266 AND samples B-214-85/B-908-100 from SDG L935266) results are comparable for VOCs and/or gasoline and less than 30% RPD. Refer to the section on other laboratory control issues for additional discussion on sample B-907-25.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*NWTPH-Gx Method:*
Laboratory duplicate samples were not analyzed. Refer to LCS/LCSDs and MS/MSDs results for precision data on soils and waters.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on a non-client sample, and on two client samples B-212-75 and B-214-65. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils with the following exception:

- LCS/LCSD (Batch WG1019379) RPD result for acetone is above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as MS/MSD percent recovery results are recovered wide but are within control limits.

- LCS/LCSD (Batch WG1019379) % recoveries for trans-1,4-dichloro-2-butene are low, below laboratory criteria, and qualified by the laboratory (J4). **All associated results are estimated and qualified (UJ or J).**

- LCS (Batch WG1019379) % recovery for 1,2-dichloroethane is low, below laboratory criteria, and qualified by the laboratory (J4). **All associated results are estimated and qualified (UJ or J).**

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPDs for the control analyte (gasoline) are within the laboratory control criteria for soils and waters.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on a non-client sample within one of the analytical batches. Refer to LCS/LCSD results for accuracy and precision water data. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils with the following exceptions:

- MS/MSD (Batch WG1019379) recoveries for multiple compounds are low, below laboratory acceptance criteria, and qualified (J6) by the laboratory to indicate matrix interference. No action is taken since this spike was performed on a non-client sample within the analytical batch and LCS/LCSD results are generally acceptable. Refer to LCS/LCSD discussion for more information.

*NWTPH-Gx Method:*
MS/MSDs were analyzed by the NWTPH-Gx method on a non-client samples within the analytical batches. The MS/MSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for waters and soils.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following exception:

- Sample B-907-25 (Batch WG1020390) has an elevated reporting limit due to matrix interference the internal standards failed to recover in both undiluted vials. The sample was reanalyzed at a twenty-five fold dilution from the methanol vial. No action was taken in this case since this sample is a field duplicate and results are comparable. Refer to the field duplicate section for more information.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

# ANALYTICAL REPORT

September 20, 2017

## PES Environmental, Inc.- WA

| | |
|---|---|
| Sample Delivery Group: | L936064 |
| Samples Received: | 09/13/2017 |
| Project Number: | 141-001-02-602 |
| Description: | American Linen Project |
| Site: | 1413-001-02-602 |
| Report To: | Bill Haldeman |
| | 1215 Fourth Ave., Suite 1350 |
| | Seattle, WA 98161 |

Entire Report Reviewed By:

Brian Ford

Technical Service Representative

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by ESC is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

| Volatile Organic Compounds (GC/MS) by Method 8260C | WG1020322 | 1 | 09/14/17 12:47 | 09/14/17 12:47 | BMB |

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.
