All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

| U | Not detected at the Reporting Limit (or MDL where applicable). |
| RPD | Relative Percent Difference. |
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| Rec. | Recovery. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** September 21, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.002

**TASK:** August 15, 2017 – Soil and Groundwater Samples

**LAB:** ESC Lab ID L929881

---

Six (6) soil samples and one (1) groundwater sample were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 15, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L929881. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in X# ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and ). The quality assurance review of the sample data associated with SDG L929881 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested with the following discussion:

- Review of the chain of custody indicates that sample MW-133-75 (L929881-08) was not included. PES confirmed the sample identification and request for analysis with ESC on August 17, 2017.

## Sample Collection and Preservation

Samples were collected on August 15, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 1.7 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved water from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of 7 days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C for soils:* Continuing calibration verification (CCV) issues were noted by ESC for hexachloro-1,3-butadiene, 1,2,3-trichlorobenzene, and 1,2,4-trichlorobenzene associated with analytical batch WG1010895 (analyzed on August 22, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C for soils:* Continuing calibration verification (CCV) issues were noted by ESC for bromomethane, 2,2-dichloropropane, 1,1,2-trichlorotrifluoroethane, and tetrachloroethene associated with analytical batch WG1011219 (analyzed on August 19, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **Sample MW-133-75 results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C for water:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, dichlorodifluoromethane, 2-butanone (MEK) associated with analytical batch WG1010972 (analyzed on August 18 and 22, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **Sample MW-133-80-W results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDL.

*Total Solids by SM 2540 G 2011:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected at significant levels in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C and NWTPH-Gx:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicates were not collected.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results and/or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on a non-client sample and on sample MW-133-55 within the analytical batches. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSD, MS/MSD, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following discussion:

- LCS/LCSD (Batch WG1010895) RPD value for compound 1,2-dibromo-3-chloropropane is above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as LCS/LCSD percent recovery results are recovered wide but are within control limits.

- LCS (Batch WG1011219) percent recovery for compound tetrachloroethene is slightly above laboratory criteria and qualified by the laboratory (J4). **Sample MW-133-75 tetrachloroethene result is estimated and qualified (J).**

- LCSD (Batch WG1010972) RPD value for compound acetone is above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as LCS/LCSD percent recovery results are recovered wide but are within control limits.

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for water and soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analysis were performed on non-client samples. MS/MSD % Rs and RPD were within the laboratory control criteria for soils with one exception:

- MS/MSD (Batch WG1010895) spike recovery results for compound acetone were recovered above the control limit criteria. No action is taken since the spike was performed on a non-client sample and associated LCS/LCSD recoveries are acceptable.

- MS/MSD (Batch WG1011219) RPD result for trichlorofluoromethane is above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as MS/MSD percent recovery results are recovered wide but are within control limits.

*NWTPH-Gx Method:*
MS/MSD analysis was not performed. Refer to LCS/LCSD results for accuracy and precision data.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following exception:

- ESC notes indicate that Sample MW-133-35 was not reanalyzed at a lower dilution (for PCE) as there was no low level sodium bisulfite vials remaining. No action is taken other than to note this.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

PES requested and ESC confirmed that there does not appear to be a gasoline chromatographic pattern in selected samples, and in "all likelihood the gasoline values are in the fact the high levels of chlorinated VOCs." **Gasoline range organic results for samples MW-133-45, MW-133-55, MW-133-58, MW-133-65, and MW-133-80-W are qualified as estimated (J) based on chromatographic patterns in the samples and elevated chlorinated VOCs (CVOCs).**

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

## Total Solids by Method 2540 G-2011

| Analyte | Result | Qualifier | Dilution | Analysis | Batch |
|---|---|---|---|---|---|
| | % | | | date / time | |
| Total Solids | 84.9 | | 1 | 08/21/2017 09:43 | WG1011911 |

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Brian Ford
Technical Service Representative

## Abbreviations and Definitions

| | |
|---|---|
| SDG | Sample Delivery Group. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| RDL | Reported Detection Limit. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| RPD | Relative Percent Difference. |
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| Rec. | Recovery. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |

# ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** September 12, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** August 14, 2017 – Soil and Groundwater Samples

**LAB:** ESC Lab ID L929901

---

Nine (9) soil samples and a trip blank sample were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 14, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L929901. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in X# ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and). The quality assurance review of the sample data associated with SDG L929901 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on August 14, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped by courier to ESC. The laboratory reported that the cooler and samples were received at 1.7 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved water from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils and preserved water from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of 7 days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C for soils:* Continuing calibration verification (CCV) issues were noted by ESC for hexachloro-1,3-butadiene, 1,2,3-trichlorobenzene, and 1,2,4-trichlorobenzene associated with analytical batch WG1010895 (analyzed on August 22, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C for soils:* Continuing calibration verification (CCV) issues were noted by ESC for bromomethane, 2,2-dichloropropane, 1,1,2-trichlorotrifluoroethane, and tetrachloroethene associated with analytical batch WG1011219 (analyzed on August 19, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*

Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs) with the following exception:

- Analytical batch WG1012508: A low level of iodomethane was detected in the method blank analyzed on August 23, 2017. No action was necessary as iodomethane was not detected in associated samples.

*NWTPH-Gx Method:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDL.

*Total Solids by SM 2540 G 2011:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected at significant levels in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C and NWTPH-Gx:*
A trip blank was collected and analyzed. The target analytes (VOCs and gasoline) were not detected in the method blanks at or above the RDL.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicates were not collected.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results and/or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) and/or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on a non-client sample and on a client sample from a different SDG within the analytical batches. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following discussion:

- LCS/LCSD (Batch WG1010895) RPD value for compound 1,2-Dibromo-3-Chloropropane is above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as LCS/LCSD percent recovery results are recovered wide but are within control limits.

- LCS (Batch WG1011219) percent recovery for compound tetrachloroethene is slightly above laboratory criteria and qualified by the laboratory (J4). **Associated sample results with detections (B-206-56, B-206-70, B-206-80, and B-206-59) are estimated and qualified (J).**

- LCSD (Batch WG1010972) RPD value for compound acetone is above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as LCS/LCSD percent recovery results are recovered wide but are within control limits.

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for water and soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on non-client samples. MS/MSD % Rs and RPD were within the laboratory control criteria for soils with the following exceptions:

- MS/MSD (Batch WG1010895) spike recovery results for compound acetone were recovered above the control limit criteria. No action is taken since the spike was performed on a non-client sample and associated LCS/LCSD recoveries are acceptable. It should be noted that notes indicate sample was run at a dilution (25X) due to anticipated elevated concentrations.
- MS/MSD (Batch WG1011219) RPD result for compound trichlorofluoromethane is above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as MS/MSD percent recovery results are recovered wide but are within control limits.

*NWTPH-Gx Method:*
MS/MSD analyses were performed on a non-client sample and on sample B-206-70. MS/MSD % Rs and RPDs were within the laboratory control criteria for soils.

**Other Quality Control Issues**

No laboratory quality control issues were identified in the laboratory report with the following exception:

- ESC notes indicate that Sample B-206-52 was not reanalyzed at a lower dilution (for cis-1,2-DCE) as there was no low level sodium bisulfite vials remaining. No action is taken other than to note this.

**Compound Identification and Quantitation Limits**

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

PES requested and ESC confirmed that there does not appear to be a gasoline chromatographic pattern in selected samples, and in "all likelihood the gasoline values are in the fact the high levels of chlorinated VOCs." **Gasoline range organic results for samples B-206-30, B-206-49, and B-206-56, are qualified as estimated (J) based on chromatographic patterns in the samples and elevated chlorinated VOCs (CVOCs).**

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

**Data Assessment**

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

## Total Solids by Method 2540 G-2011

All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Abbreviations and Definitions

| | |
|---|---|
| SDG | Sample Delivery Group. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| RDL | Reported Detection Limit. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| RPD | Relative Percent Difference. |
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| Rec. | Recovery. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** September 18, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** August 15-16, 2017 – Soil and Groundwater Samples

**LAB:** ESC Lab ID L930317

---

Six (6) soil samples, two (2) groundwater samples, and a trip blank sample were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 15-16, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. One groundwater sample was placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L930317. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in X# ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and). The quality assurance review of the sample data associated with SDG L930317 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on August 15-16, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 1.3 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved water from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils and preserved water from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of 7 days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable and ESC notes do not indicate there were any calibration issues.

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs) with the following exception:

- Analytical batch WG1011540 (waters): Low levels of naphthalene and 1,2,4-trimethylbenzene were detected between the MDL and the RDL in the method blank analyzed on August 19, 2017. Low levels of naphthalene and 1,2,4-trimethylbenzene were detected below the RDLs in sample MW-133-90-W and qualified (JB) by ESC to indicate an estimated concentration and blank contamination. **Naphthalene and 1,2,4-trimethylbenzene results for sample MW-133-90-W are qualified as not detected (U) due to method blank contamination.**

*NWTPH-Gx Method:*

Laboratory method blanks were included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDL with the following exception:

- Analytical batch WG1012776 (soil): A low level of gasoline range organics were detected between the MDL and the RDL in the method blank analyzed on August 23, 2017. Low levels of gasoline were detected below RDLs in samples MW-133-95, MW-133-105, MW-133-120, and MW-133-130. These were qualified (BJ) by ESC to indicate an estimated concentration (below RDL) and blank contamination. **Samples MW-133-95, MW-133-105, MW-133-120, and MW-133-130 gasoline results are qualified as not detected (U) due to blank contamination. Sample MW-133-135 result for gasoline is estimated and qualified (J) due to low level blank contamination.**

*Total Solids by SM 2540 G 2011:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected at significant levels in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C and NWTPH-Gx:*
A trip blank was collected and analyzed. The target analytes (VOCs and gasoline) were not detected in the method blanks at or above the RDL with the following exception:

- Analytical batch WG1011540: A low level of naphthalene was detected between MDL and the RDL in the trip blank analyzed on August 19, 2017. No action was taken on this basis. Refer to the discussion under the method blank since naphthalene was also detected in the method blank at a low level.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicates were not collected.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) and/or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on a non-client sample within the analytical batch. The primary/duplicate RPD for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters. with the following discussion:

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPDs for the control analyte (gasoline) are within the laboratory control criteria for water and soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS/LCSD results for accuracy and precision data.

*NWTPH-Gx Method:*
MS/MSD analyses were performed on soil sample MW-133-105 and on water sample MW-133-90-W. MS/MSD % Rs and RPDs for gasoline were within the laboratory control criteria for soils.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following exceptions:

- Samples MW-133-85 and MW-133-120 were not reanalyzed at a lower dilution as there was no low level sodium bisulfite vials remaining. No action was taken other than to note this.

**Compound Identification and Quantitation Limits**

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

PES requested and ESC confirmed that there does not appear to be a gasoline chromatographic pattern in selected samples, and in "all likelihood the gasoline values are in the fact the high levels of chlorinated VOCs." **Gasoline range organic results for samples MW-133-85 and MW-133-90-W are qualified as estimated (J) based on chromatographic patterns in the samples and elevated chlorinated VOCs (CVOCs).**

ESC review indicates that sample MW-133-135 did not have high levels of CVOCs and that the gasoline appears to be eluting in the C8-C9 range. The pattern appears to be consistent with gasoline range organics and not due to CVOC overlap. No action is taken on this basis.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

**Data Assessment**

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Abbreviations and Definitions

| | |
|---|---|
| SDG | Sample Delivery Group. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| RDL | Reported Detection Limit. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| RPD | Relative Percent Difference. |
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| Rec. | Recovery. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** September 18, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** August 16-17, 2017 – Soil Samples

**LAB:** ESC Lab ID L930670

---

Four (4) soil samples were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 16-17, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L930670. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in X# ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and). The quality assurance review of the sample data associated with SDG L930670 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on August 16-17, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 1.5 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of 7 days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable and ESC notes do not indicate there were any calibration issues.

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs) with the following exception:

- Analytical batch WG1012508 (soils): A low level of iodomethane was detected between the MDL and the RDL in the method blank analyzed on August 23, 2017. No action was taken since iodomethane was not detected in the associated samples**.**

*NWTPH-Gx Method:*
A laboratory method blank was included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blank at or above the RDL.

*Total Solids by SM 2540 G 2011:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected at significant levels in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C and NWTPH-Gx:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicates were not collected.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) and/or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on non-client samples within the analytical batches. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, matrix spike/matrix spike duplicates (MS/MSDs), and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils.

*NWTPH-Gx Method:*
LCS/LCSD was analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

**Matrix Spike/Matrix Spike Duplicates**

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS/LCSD results for accuracy and precision data.

*NWTPH-Gx Method:*
MS/MSD analyses were performed on a non-client sample within the analytical batch. MS/MSD % Rs and RPD for gasoline were within the laboratory control criteria for soils.

**Other Quality Control Issues**

No laboratory quality control issues were identified in the laboratory report.

**Compound Identification and Quantitation Limits**

The RDLs used for this sample group were acceptable for the project.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

**Data Assessment**

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

| Sample Delivery Group: | L930884 |
| Samples Received: | 08/19/2017 |
| Project Number: | 1413.001.02.602 |
| Description: | American Linen Project |
| Site: | 1413.001.02.602 |
| Report To: | Bill Haldeman<br>1215 Fourth Ave., Suite 1350<br>Seattle, WA 98161 |

Entire Report Reviewed By:

Mark W. Beasley
Technical Service Representative

Results relate only to the items tested or calibrated and are reported as rounded values. This test report shall not be reproduced, except in full, without written approval of the laboratory. Where applicable, sampling conducted by ESC is performed per guidance provided in laboratory standard operating procedures: 060302, 060303, and 060304.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Abbreviations and Definitions

| | |
|---|---|
| SDG | Sample Delivery Group. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| RDL | Reported Detection Limit. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| RPD | Relative Percent Difference. |
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| Rec. | Recovery. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |

# ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** September 19, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** August 17-18, 2017 – Soil Samples

**LAB:** ESC Lab ID L930884

---

Four (4) soil samples and one (1) groundwater sample were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 17-18, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L930884. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in X# ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and). The quality assurance review of the sample data associated with SDG L930884 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested with one exception:

- Groundwater sample B-211-85-W was collected and submitted for analysis. No results are reported. PES was contacted to confirm requested analysis. PES indicated that the request for analysis was cancelled based on reported turbidity of the groundwater sample.

## Sample Collection and Preservation

Samples were collected on August 17-18, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 3.0 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C for soils:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, 2,2-dichloropropane, and 2-butanone (MEK) associated with analytical batch WG1012951 (analyzed on August 26, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs).

*Total Solids by SM 2540 G 2011:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (% solids) were not detected at a significant level in the method blank and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicates were not collected.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analysis was performed on client sample B-211-57. The primary/duplicate RPD for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were not performed. Refer to LCS/LCSD results for accuracy and precision data.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes. ESC notes indicate that for samples B-211-70, B-211-80, and B-211-90 the target compounds were too high to run the sample at a lower dilution.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

## Total Solids by Method 2540 G-2011

| Analyte | Result | Qualifier | Dilution | Analysis date / time | Batch |
|---|---|---|---|---|---|
| | % | | | | |
| Total Solids | 84.8 | | 1 | 08/24/2017 10:10 | WG1013068 |

## Volatile Organic Compounds (GC/MS) by Method 8260C

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Jason Romer
Technical Service Representative

## Abbreviations and Definitions

| | |
|---|---|
| SDG | Sample Delivery Group. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| RDL | Reported Detection Limit. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| RPD | Relative Percent Difference. |
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| Rec. | Recovery. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** September 19, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** August 21-22, 2017 – Soil and Groundwater Samples

**LAB:** ESC Lab ID L931390

---

Twelve (12) soil samples, two (2) groundwater samples, and a trip blank sample were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 21-22, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. One groundwater sample was placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L931390. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in X# ESC SDGs (L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and). The quality assurance review of the sample data associated with SDG L931390 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on August 21-22, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 1.6 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved water from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of 7 days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C for soils:* Continuing calibration verification (CCV) issues were noted by ESC for chloromethane and dichlorodifluoromethane associated with analytical batch WG1013442 (analyzed on August 24, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample chloromethane and dichlorodifluoromethane results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C for water:* Continuing calibration verification (CCV) issues were noted by ESC for 2-butanone (MEK) associated with analytical batch WG1013682 (analyzed on August 25, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **Sample B-211-120 2-butanone (MEK) result with the laboratory qualified J0 result is estimated and qualified (J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs) with the following exception:

- Analytical batch WG1013682 (waters): Low levels of naphthalene and 1,2,4-trimethylbenzene were detected in the method blank analyzed on August 25, 2017. Napthalene and 1,2,4-trimethylbenzene were both detected at low levels in the associated sample B-211-120-W and in the Trip Blank. **Sample B-211-120-W results for naphthalene and 1,2,4-trimethylbenzene are qualified as not detected (U) due to blank contamination.**

*NWTPH-Gx Method:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDL.

*Total Solids by SM 2540 G 2011:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected at significant levels in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was collected and analyzed. The target analytes (VOCs) were not detected in the method blanks at or above the RDL with the following exceptions:

- Analytical batch WG1013682 (waters): Low levels of acetone, benzene, naphthalene, and 1,2,4-trimethylbenzene were detected in the trip blank analyzed on August 25, 2017. For naphthalene, and 1,2,4-trimethylbenzene refer to the discussion under the method blank. Acetone was detected at low levels in soil sample B-210-6 and in groundwater sample B-211-120-W. Benzene was detected at a low level in groundwater sample B-211-120-W but no action is taken for benzene since 2X the blank detection (0.155 µg/L) is less than the detection in sample B-211-120-W (benzene was detected at 1.65 µg/L and RDL is 0.500 µg/L). **Acetone results in soil sample B-210-6 and in groundwater sample B-211-120-W are qualified as not detected (U) due to trip blank contamination.**

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate (B-210-80 and B-900-20) results are comparable and less than 30% RPD.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results and/or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) and/or MS/MSD results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on client samples B-210-20 and B-210-35. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5% with one exception:

- Sample B-210-35 total solid RPD result was 6%. No action was taken other than to note that since the RPD criteria is fairly stringent at 5% and sample results are not significantly impacted by the percent solid results.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following discussion:

- LCS/LCSD (Batch WG1013442 - soils) RPD values for compounds bromomethane, carbon disulfide, chloroethane, chloromethane, dichlorodifluoromethane, n-hexane, trichlorofluoromethane, and vinyl chloride are above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as LCS/LCSD percent recovery results are recovered wide but are within control limits with two exceptions. Refer to the discussion below for additional information.

- LCS (Batch WG1013442 - soils) percent recovery for compound dichlorodifluoromethane is slightly below laboratory criteria and qualified by the laboratory (J4). All a**ssociated sample results are estimated and qualified (UJ).**

- LCSD (Batch WG1013442 - soils) percent recovery for compound vinyl chloride is slightly above laboratory criteria and qualified by the laboratory (J4). All a**ssociated sample results with detections are estimated and qualified (J).**

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for water and soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

**Matrix Spike/Matrix Spike Duplicates**

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed client sample B-210-70. MS/MSD % Rs and RPD were within the laboratory control criteria for soils. An MS/MSD was not performed on the water sample. Refer to LCS/LCSD results for accuracy and precision data.

*NWTPH-Gx Method:*
MS/MSD analyses were performed on a non-client sample and on sample B-210-60. MS/MSD % Rs and RPDs were within the laboratory control criteria for soils. Laboratory notes indicate that the results have an elevated RDL as they were reported from a vial preserved with methanol and that vials (for lower level gasoline analysis) preserved with bisulfates were all used up. No action was taken other than to note that this and associated quality control samples are within laboratory criteria.

**Other Quality Control Issues**

No laboratory quality control issues were identified in the laboratory report with the following exceptions:

- ESC notes indicate that no stir bars remain for VOC analysis on samples B-210-15 and B-210-60 (Batch WG1013442). ESC was unable to analyze these samples at a lower level of analyses. No action was taken other than to note this.

- Laboratory notes indicate that the gasoline results for soil samples B-210-15 and B-210-60 have an elevated RDL as they were reported from a vial preserved with methanol and that vials for lower level analyses, preserved with bisulfates, were used in prior runs. No action was taken other than to note this.

**Quantitation Limits**

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Jason Romer

## Abbreviations and Definitions

| | |
|---|---|
| SDG | Sample Delivery Group. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| RDL | Reported Detection Limit. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| RPD | Relative Percent Difference. |
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| Rec. | Recovery. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** September 19, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** August 22-23, 2017 – Soil Samples

**LAB:** ESC Lab ID L931655

---

Five (5) soil samples were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 22-23, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L931655. The quarterly monitoring round occurred August and September of 2017. Associated sample data are reported in X# ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and). The quality assurance review of the sample data associated with SDG L931655 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on August 22-23, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 4.3 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of 7 days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C for soils:* Continuing calibration verification (CCV) issues were noted by ESC for carbon disulfide associated with analytical batch WG1013822 (analyzed on August 26, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (J).**

## Method Blank Results

*USEPA Method 8260C:*
A laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*
A laboratory method blank was included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blank at or above the RDL.

*Total Solids by SM 2540 G 2011:*

Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected in the method blanks.

## Trip Blank Results

*USEPA Method 8260C and NWTPH-Gx:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate were not collected.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on client samples MW-132-50 and MW-132-55. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds (VOCs) are within the laboratory control criteria for soils with the following exceptions:

- LCS (Batch WG1013822) percent recovery for compound 1,2-dichloroethane is slightly above laboratory criteria and qualified by the laboratory (J4). No action was taken as this compound is not detected in the associated samples.

- LCSD (Batch WG1013822) percent recovery for compounds bromobenzene and 4-chlorotoluene are slightly above laboratory criteria and qualified by the laboratory (J4). No action was taken as this compound is not detected in the associated samples.

*NWTPH-Gx Method:*
LCS/LCSD was analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

**Matrix Spike/Matrix Spike Duplicates**

*USEPA Method 8260C:*
MS/MSD analyses were not performed. Refer to LCS/LCSD results for accuracy and precision data.

*NWTPH-Gx Method:*
MS/MSD analyses were not performed. Refer to LCS/LCSD results for accuracy and precision data.

**Other Quality Control Issues**

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- ESC notes indicate that no stir bars remain for VOC and gasoline analysis on samples MW-132-70 and MW-132-83 (Analytical Batch WG1013822). ESC was unable to analyze samples submitted for gasoline and VOCs at a lower dilution factor due to an insufficient number of vials preserved with sodium bisulfite. No action was taken other than to note this. ESC is taking steps to minimize this occurrence by providing additional sodium bisulfite vials per sample.

**Compound Identification and Quantitation Limits**

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

## Total Solids by Method 2540 G-2011

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |

| Qualifier | Description |
|---|---|
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** September 20, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** August 24, 2017 – Soil Samples

**LAB:** ESC Lab ID L932059

---

Ten (10) soil samples were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 24, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L932059. The quarterly monitoring round occurred August and September of 2017. Associated sample data are reported in X# ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and). The quality assurance review of the sample data associated with SDG L932059 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on August 24, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 1.3 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of 7 days for total solids. All holding time criteria were met.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C for soils:* Continuing calibration verification (CCV) issues were noted by ESC for acetone associated with analytical batch WG1014254 (analyzed on August 28, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*
A laboratory method blank was included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blank at or above the RDL.

*Total Solids by SM 2540 G 2011:*

Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected at significant levels in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C and NWTPH-Gx:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate (B-208-35 and B-901-50) results are comparable and less than 30% RPD with the following exception:

- **The RPD for tetrachloroethene exceeds criteria and field duplicate results are estimated and qualified (J).**

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) and/or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on client sample B-208-20 and a non-client samples within the analytical batches. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds (VOCs) are within the laboratory control criteria for soils.

*NWTPH-Gx Method:*
LCS/LCSD was analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
MS/MSD analyses were performed on a non-client sample within the analytical batch. MS/MSD % Rs and RPDs for target compounds are within laboratory control limit criteria for soils.

*NWTPH-Gx Method:*
MS/MSD analyses were performed on a non-client sample within the analytical batch. MS/MSD % Rs and RPD for gasoline were within the laboratory control criteria for soils.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- ESC notes indicate that no stir bars remain for VOC analysis on sample B-208-20 (Analytical Batch WG1014254). ESC indicated that samples were field preserved with low level sodium bisulfite (stir bars) and high level methanol vials. All targets were run undiluted (1X) except for tetrachloroethene (PCE) which was run at a 25X dilution factor. ESC was unable to analyze tetrachloroethene at a lower dilution factor due to an insufficient number of vials preserved with sodium bisulfite. No action was taken other than to note that PCE is still under the screening criteria. ESC is taking steps to minimize this occurrence by providing additional sodium bisulfite vials per sample.

## Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

## Total Solids by Method 2540 G-2011

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Brian Ford
Technical Service Representative

Sample Narrative:

OS: Cannot analyze at a lower dilution. No more low level sodium bisulfite vials remaining.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J5 | The sample matrix interfered with the ability to make any accurate determination; spike value is high. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |
| V3 | The internal standard exhibited poor recovery due to sample matrix interference. The analytical results will be biased high. BDL results will be unaffected. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** September 22, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** August 24-25, 2017 – Soil Samples

**LAB:** ESC Lab ID L932260

---

Twenty-two (22) soil samples and one (1) groundwater sample were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 24-25, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Two soil samples and one groundwater sample were placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L932260. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in X# ESC SDGs (SDGs L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and). The quality assurance review of the sample data associated with SDG L932260 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on August 24-25, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 2.6 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, bromoform, trans-1,4-dichloro-2-butene, 2-hexanone, and 2-butanone (MEK) associated with analytical batch WG1015912 (analyzed on August 31, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blank at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blanks at or above the RDL with the following exception:

- Analytical batch WG1014832: A low level of gasoline range organics was detected at 0.0423 mg/kg above the method detection limit (0.0339 mg/kg) and below the reporting limit (0.100 mg/kg) in the method blank analyzed on August 29, 2017. Gasoline was detected at low levels in the associated samples but sample concentrations exceed established action criteria for contamination in the blank. No action is taken.

*Total Solids by SM 2540 G 2011:*
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (% solids) were not detected at a significant level in the method blank and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C and NWTPH-Gx:*
A trip blank was not collected.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicates were not collected.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

*NWTPH-Gx Method:*
A laboratory duplicate sample was not analyzed. Refer to LCS/LCSD or MS/MSD results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on a non-client sample, a client sample from another SDG, and client samples B-208-50 and B-209-80. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*

The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils with the following discussions:

- LCSD (Batch WG1014887) RPD values for compound acetone, 1,2-dibromo-3-chloropropane, hexachloro-1,3-butadiene, 2-butanone (MEK), naphthalene, 1,2,3-trichlorobenzene, and 1,2,4-trichlorobenzene are above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as LCS/LCSD percent recovery results are recovered wide but are within control limits.

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPDs for the control analyte (gasoline) are within the laboratory control criteria for soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on a non-client sample within one of the analytical batches and on client sample B-207-30. The MS/MSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils with the following discussions:

- MS/MSD (Batch WG1014887) RPDs and % Rs are outside of laboratory criteria for multiple compounds due, in part, to matrix interference. Since this spike was performed on a non-client sample within one of the analytical batches no action will be taken. Refer to spike results on sample B-207-30 and LCS/LCSD results for accuracy and precision data.

*NWTPH-Gx Method:*
MS/MSDs were analyzed by the NWTPH-Gx method on non-client samples within the analytical batches. The MS/MSD %Rs and RPDs for the control analyte (gasoline) are within the laboratory control criteria for soils.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report with the following discussion:

- Sample B-207-30 was not reanalyzed at a lower dilution as there were no low level sodium bisulfite vials remaining for this sample. No action was taken other than to note this.

**Compound Identification and Quantitation Limits**

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

**Data Assessment**

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

## Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

## Abbreviations and Definitions

| | |
|---|---|
| (dry) | Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils]. |
| MDL | Method Detection Limit. |
| MDL (dry) | Method Detection Limit. |
| RDL | Reported Detection Limit. |
| RDL (dry) | Reported Detection Limit. |
| Rec. | Recovery. |
| RPD | Relative Percent Difference. |
| SDG | Sample Delivery Group. |
| (S) | Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media. |
| U | Not detected at the Reporting Limit (or MDL where applicable). |
| Analyte | The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported. |
| Dilution | If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor. |
| Limits | These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges. |
| Original Sample | The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG. |
| Qualifier | This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable. |
| Result | The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte. |
| Case Narrative (Cn) | A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report. |
| Quality Control Summary (Qc) | This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material. |
| Sample Chain of Custody (Sc) | This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis. |
| Sample Results (Sr) | This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported. |
| Sample Summary (Ss) | This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis. |

| Qualifier | Description |
|---|---|
| B | The same analyte is found in the associated blank. |
| J | The identification of the analyte is acceptable; the reported value is an estimate. |
| J0 | J0: Calibration verification outside of acceptance limits. Result is estimated. |
| J3 | The associated batch QC was outside the established quality control range for precision. |
| J4 | The associated batch QC was outside the established quality control range for accuracy. |
| J6 | The sample matrix interfered with the ability to make any accurate determination; spike value is low. |

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
***** Not all certifications held by the laboratory are applicable to the results reported in the attached report.

# MEMORANDUM

**TO:** Project File **DATE:** September 21, 2017

**FROM:** Jessie Compeau

**SUBJECT:** Laboratory Data Validation Review

**PROJECT:** Former American Linen Supply Site, Seattle WA

**PROJECT #:** 1413.001.02.604

**TASK:** August 25, and August 28, 2017 – Soil Samples

**LAB:** ESC Lab ID L932611

---

Eight (8) soil samples and a trip blank sample were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on August 25 and 28, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C;
- Total petroleum hydrocarbons as gasoline range organics (TPH-Gx) by NWTPH-Gx per analytical methods stipulated by Washington State Department of Ecology;
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L932611. The quarterly monitoring round occurred between August and September of 2017. Associated sample data are reported in X# ESC SDGs (L929881, L929901, L930317, L930670, L930884, L931390, L931655, L932059, L932260, L932611, L932876, L933267, L933455, L934130, L934673, L934916, and). The quality assurance review of the sample data associated with SDG L932611 is summarized below.

## DATA QUALIFICATIONS

Guidelines established by USEPA for review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017) and USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

## DATA VALIDATION

### Completeness

All samples were collected and analyzed as requested.

## Sample Collection and Preservation

Samples were collected on August 25 and 28, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 4.7 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information.

## Holding Times

*USEPA Method 8260C:*
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved water from the date of sample collection. All holding time criteria were met.

*NWTPH-Gx Method:*
All samples were analyzed within the WA State recommended holding time of fourteen days for soils and preserved waters from the date of sample collection. All holding time criteria were met.

*General Chemistry (Total Solids):*
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. Holding time criteria were not met:

- Soil samples were collected on August 25 and 28, 2017 and analyzed for percent solids on September 5, 2017 slightly beyond the recommended seven day hold. No action is taken in this case as samples were appropriately preserved and it is unlikely that the holding time exceedances significantly impacted sample results.

## Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, trans-1,4-dichloro-2-butene, di-isopropyl ether, n-hexane, and vinyl acetate associated with analytical batch WG1015673 (analyzed on September 1, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

## Method Blank Results

*USEPA Method 8260C:*

Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs).

*NWTPH-Gx Method:*
Laboratory method blank was included with the analytical batch per method requirement. The target analyte (gasoline) was not detected in the method blank at or above the RDL with the following exception:

- Analytical batch WG1015199: A low level of gasoline range organics was detected at 0.0427 mg/kg above the method detection limit (0.0339 mg/kg) and below the reporting limit (0.100 mg/kg) in the method blank analyzed on August 31, 2017. Gasoline was detected at low levels in the associated sample but sample concentrations exceed established action criteria for contamination in the blank. No action is taken.

*Total Solids by SM 2540 G 2011:*
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (% solids) were not detected at significant levels in the method blanks and sample results are not impacted.

## Trip Blank Results

*USEPA Method 8260C:*
A trip blank was collected and analyzed. The target analytes (VOCs) were not detected in the method blanks at or above the RDL with the following exceptions:

- Analytical batch WG1015444: A low level of acrolein was detected in the trip blank analyzed on August 30, 2017. No action is taken since acrolein was not analyzed for in associated samples.

## Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

## Field Duplicate Analyses

Field duplicate (MW-136-35 and B-902-15) results are comparable and less than 30% RPD.

## Laboratory Duplicate Analyses

*USEPA Method 8260C:*
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) results and/or matrix spike/matrix spike duplicate (MS/MSD) results for precision data.

*NWTPH-Gx Method:*

A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) and/or MS/MSD results for precision data.

*Total Solids by SM 2540 G 2011:*
Laboratory duplicate sample analyses were performed on client sample from another SDG and client sample B-902-15. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

## Surrogate Recoveries

*USEPA Method 8260C:*
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

*NWTPH-Gx Method:*
The surrogate recovery results for the samples, LCS/LCSD, and the method blank are within the laboratory surrogate control limits for all of the analyses.

## Laboratory Control Samples

*USEPA Method 8260C:*
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following discussion:

- LCS/LCSD (Batch WG1015444 - water) percent recovery for compound acrolein is above laboratory criteria and qualified by the laboratory (J4). No action was taken as acrolein was not on the target compound list for soils.

- LCSD (Batch WG1015673 – soil) RPD values for compounds carbon disulfide, and 1,1,2-trichlorotrifluoroethane are above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as LCS/LCSD percent recovery results are recovered wide but are within control limits.

- LCS/LCSD (Batch WG1015673 - soils) percent recoveries for compound trans-1,4-dichloro-2-butene are slightly below laboratory criteria and qualified by the laboratory (J4). **All associated sample results are estimated and qualified (UJ).**

*NWTPH-Gx Method:*
LCS/LCSDs were analyzed by the NWTPH-Gx method. The LCS/LCSD %Rs and RPD for the control analyte (gasoline) are within the laboratory control criteria for water and soils.

*Total Solids by SM 2540 G 2011:*
The LCS %Rs for total solids are within the laboratory control criteria for soils.

## Matrix Spike/Matrix Spike Duplicates

*USEPA Method 8260C:*
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed non-client sample within the analytical batch. MS/MSD % Rs and RPDs for a number of analytes were outside of laboratory control criteria due, in part, to matrix interference. No action was taken as the spike was performed on a non-client sample. Refer to LCS/LCSD results for accuracy and precision data. An MS/MSD was not performed on the water sample. Refer to LCS/LCSD results for accuracy and precision data.

*NWTPH-Gx Method:*
MS/MSD analyses was not performed. Refer to LCS/LCSD results for accuracy and precision data.

## Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

## Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

**Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.**

## Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017); and
- USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data are judged to be acceptable for their intended use.
