ANALYTICAL REPORT

December 07, 2017

PES Environmental, Inc.- WA

Sample Delivery Group:	L953811
Samples Received:	11/29/2017
Project Number:	1413.001.02.602
Description:	American Linen Project
Site:	1413.001.02.602
Report To:	Bill Haldeman 1215 Fourth Ave., Suite 1350 Seattle, WA 98161

Entire Report Reviewed By: Brian Ford

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J0	J0: Calibration verification outside of acceptance limits. Result is estimated.
J4	The associated batch QC was outside the established quality control range for accuracy.
V	The sample concentration is too high to evaluate accurate spike recoveries.

ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

MEMORANDUM

TO: Project File **DATE:** December 22, 2017

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: Former American Linen Supply Site, Seattle WA

PROJECT #: 1413.001.02.604

TASK: November 27 and 28, 2017 – Soil Samples

LAB: ESC Lab ID L953811

Twenty-seven (27) soil samples and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on November 27 and 28, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Five soil samples were placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L953811. The quarterly monitoring round occurred between November and December of 2017. Associated sample data are reported in 5 ESC SDGs (SDGs L953811, L954448, L954694, L955420, and L956226). The quality assurance review of the sample data associated with SDG L953811 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017).

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested.

Sample Collection and Preservation

Samples were collected on November 27 and 28, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 2.3 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information with the following discussion:

- Trip Blank collection date and time are not listed on the chain of custody. No action is taken other than to note this. The laboratory listed a default collection time of November 27, 2017.

Holding Times

USEPA Method 8260C:
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved water (trip blank) from the date of sample collection. All holding time criteria were met.

General Chemistry (Total Solids):
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for vinyl acetate associated with analytical batch WG1048101 (analyzed on December 1, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, dichlorodifluoromethane, and vinyl acetate associated with analytical batch WG1047838 (analyzed on November 30, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **The associated sample (Trip Blank) results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

Method Blank Results

USEPA Method 8260C:

Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs) with the following discussion:

- Tetrachloroethene was detected between the method detection limit (MDL) and the RDL in the method blank associated with the Trip Blank. Refer to the discussion under Trip Blank results for additional information.

Total Solids by SM 2540 G 2011:
Laboratory method blank was included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

Trip Blank Results

USEPA Method 8260C:
A trip blank was collected and analyzed. The target analytes (VOCs) were not detected in the trip blank at or above the reported detection limits (RDLs) with the following exceptions:

- Tetrachloroethene (PCE) was detected in the Trip Blank slightly above the RDL. PCE was also detected in the associated method blank at 0.324 µg/L which suggests that the source of contamination may be in the analytical system. No action was taken with the associated soil samples since tetrachloroethene was not detected in associated method blanks for soils.

- Acetone was detected in the Trip Blank between MDL and the RDL. **Sample B-224-6, B-224-11, and B-226-11 results for acetone are less than the RDL and per NFG guidelines qualified as not detected (U) due to contamination in the Trip Blank.**

Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

Field Duplicate Analyses

Field duplicate (samples B-226-16/ B-920-35) VOC and percent solid results are comparable and less than 30% RPD with the following exceptions:

- Field duplicate sample pair RPDs are greater than 30% for cis-1,2-dichloroethene, tetrachloroethene, trichloroethene and vinyl chloride. **Sample field duplicate (B-228-16/ B-921-22) results for cis-1,2-dichloroethene, tetrachloroethene, trichloroethene, and vinyl chloride are estimated and qualified (J) due to poor field precision.**

Laboratory Duplicate Analyses

USEPA Method 8260C:
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample

duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

Total Solids by SM 2540 G 2011:
Laboratory duplicate sample analyses were performed on client samples B-224-60.5 and B-226-16 and on a non-client sample. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

Surrogate Recoveries

USEPA Method 8260C:
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

Laboratory Control Samples

USEPA Method 8260C:
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils with the following exception:

- LCSD/LCSD (Batch WG1047838 associated with the Trip Blank) recoveries for spike compound (vinyl acetate) results are above laboratory acceptance criteria and qualified by the laboratory (J4). No action was taken on this basis since these compounds were not detected in the associated sample.

Total Solids by SM 2540 G 2011:
The LCS %Rs for total solids are within the laboratory control criteria for soils.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260C:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on client sample B-225-16. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils with the following exceptions:

- MS/MSD spike compound results for tetrachloroethene are recovered low or not recovered and did not meet laboratory acceptance criteria. The tetrachloroethene result was qualified (V and E) by the laboratory to indicate that the sample concentration was greater than four times the spike amount. No action is taken in this case. Refer to LCS/LCSD results for precision and accuracy results.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

Compound Identification and Quantitation Limits

The RDLs used for this sample group are acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes. ESC notes indicate that for soil samples B-225-16, B-225-21, and B-226-16 the target compounds were too high to run the sample at a lower dilution.

Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.

Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

ANALYTICAL REPORT

December 07, 2017

PES Environmental, Inc.- WA

Sample Delivery Group:	L954448
Samples Received:	12/01/2017
Project Number:	1413.001.02.602
Description:	American Linen Project
Site:	1413.001.02.602
Report To:	Bill Haldeman 1215 Fourth Ave., Suite 1350 Seattle, WA 98161

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J0	J0: Calibration verification outside of acceptance limits. Result is estimated.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.

ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

MEMORANDUM

TO: Project File **DATE:** December 22, 2017

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: Former American Linen Supply Site, Seattle WA

PROJECT #: 1413.001.02.604

TASK: November 28 and 29, 2017 – Soil Samples

LAB: ESC Lab ID L954448

Twenty-six (26) soil samples and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on November 28 and 29, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Two soil samples were placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L954448. The quarterly monitoring round occurred between November and December of 2017. Associated sample data are reported in 5 ESC SDGs (SDGs L953811, L954448, L954694, L955420, and L956226). The quality assurance review of the sample data associated with SDG L954448 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory’s performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017).

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested.

Sample Collection and Preservation

Samples were collected on November 28 and 29, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped on November 30, 2017 overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 3.0 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information with the following discussion:

- Trip Blank collection date and time are not listed on the chain of custody. No action is taken other than to note this. The laboratory listed a default collection time of November 29, 2017.

- Sample B229-21 was listed on the chain of custody but was not included in the cooler. ESC proceeded without sample B229-21 after confirming with PES on December 1, 2017.

Holding Times

USEPA Method 8260C:
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved water (trip blank) from the date of sample collection. All holding time criteria were met.

General Chemistry (Total Solids):
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for carbon disulfide, chloroethane, chloromethane, n-hexane, and n-propylbenzene associated with analytical batch WG1048646 (analyzed on December 2, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

Method Blank Results

USEPA Method 8260C:
Laboratory method blanks are included with each analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs).

Total Solids by SM 2540 G 2011:
Laboratory method blanks are included with each analytical batch per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

Trip Blank Results

USEPA Method 8260C:
A trip blank was collected and analyzed. The target analytes (VOCs) were not detected in the trip blank at or above the reported detection limits (RDLs).

Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

Field Duplicate Analyses

Field duplicate (samples B-228-16/B-921-22) results are comparable and less than 30% RPD with the following exceptions:

- Field duplicate sample pair RPDs are greater than 30% for cis-1,2-dichloroethene, tetrachloroethene, and trichloroethene. **Sample field duplicate (B-228-16/B-921-22) results for cis-1,2-dichloroethene, tetrachloroethene, and trichloroethene are estimated and qualified (J) due to poor field precision.**

Laboratory Duplicate Analyses

USEPA Method 8260C:
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

Total Solids by SM 2540 G 2011:
Laboratory duplicate sample analyses were performed on client field duplicate samples B-228-16, B-921-22, and on a non-client sample within the analytical batch. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

Surrogate Recoveries

USEPA Method 8260C:
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses with the following exceptions:

- Sample B-229-45 surrogate 4-bromofluorobenzene (associated with initial analysis on December 2, 2017) recovery is above the laboratory control limit criteria. **Sample B-**

229-45 positive detections associated with the December 2, 2017 analysis date are estimated (J+) since the percent recovery is above criteria.

Laboratory Control Samples

USEPA Method 8260C:
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following exception:

- LCS (Batch WG1048646) % recovery for 1,2-dibromoethane is above control limit criteria and qualified by the laboratory (J4). No action was taken since 1,2-dibromoethane is not detected in the associated soil samples.

- LCSD (Batch WG1048646) RPD result for 2-hexanone is above laboratory acceptance criteria (20%) and qualified by the laboratory (J3). No action was taken on this basis as LCS/LCSD percent recovery results are recovered wide but are within control limits.

- LCS (Batch WG1048623 associated with the Trip Blank) recovery for one spike compound (vinyl acetate) result is above laboratory acceptance criteria and qualified by the laboratory (J4). No action was taken on this basis since this compound was not detected in the associated sample.

Total Solids by SM 2540 G 2011:
The LCS %Rs for total solids are within the laboratory control criteria for soils.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260C:
Matrix spike/matrix spike duplicate (MS/MSD) analyses was performed on client sample B-227-6 (Batch WG1048646). The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils. Matrix spike analysis was not performed on soil samples associated with analytical batch WG104880. Refer to LCS/LCSD results for precision and accuracy data.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes.

Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.

Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

ANALYTICAL REPORT

December 08, 2017

PES Environmental, Inc.- WA

Sample Delivery Group:	L954694
Samples Received:	12/02/2017
Project Number:	1413.001.02.602
Description:	American Linen Project
Site:	1413.001.02.602
Report To:	Bill Haldeman 1215 Fourth Ave., Suite 1350 Seattle, WA 98161

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
B	The same analyte is found in the associated blank.
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J0	J0: Calibration verification outside of acceptance limits. Result is estimated.
J4	The associated batch QC was outside the established quality control range for accuracy.
V	The sample concentration is too high to evaluate accurate spike recoveries.
V3	The internal standard exhibited poor recovery due to sample matrix interference. The analytical results will be biased high. BDL results will be unaffected.

ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

MEMORANDUM

TO: Project File **DATE:** December 22, 2017

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: Former American Linen Supply Site, Seattle WA

PROJECT #: 1413.001.02.604

TASK: November 30 and December 1, 2017 – Soil Samples

LAB: ESC Lab ID L954694

Thirty-six (36) soil samples and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on November 28 and 29, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Six soil samples were placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L954694. The quarterly monitoring round occurred between November and December of 2017. Associated sample data are reported in 5 ESC SDGs (SDGs L953811, L954448, L954694, L955420, and L956226). The quality assurance review of the sample data associated with SDG L954694 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017).

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested.

Sample Collection and Preservation

Samples were collected on November 30 and December 1, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped on December 1, 2017 overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 5.4 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information with the following discussion:

- Trip Blank collection date and time are not listed on the chain of custody. No action is taken other than to note this. The laboratory listed a default collection time of November 30, 2017.

Holding Times

USEPA Method 8260C:
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved water (trip blank) from the date of sample collection. All holding time criteria were met.

General Chemistry (Total Solids):
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for bromomethane, 2,2-dichloropropane, and hexachloro-1,3-butadiene associated with analytical batch WG1050240 (analyzed on December 6, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

Method Blank Results

USEPA Method 8260C:
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs) with the following exception:

- Tetrachloroethene (Batch WG1049340) was detected at a low level below the RDL and above the method detection limit. **Sample B-232-11 tetrachloroethene result is slightly above the RDL and per NFG guidelines estimated with high bias and qualified (J+)**

due to contamination in the method blank. Refer to the discussion under compound identification and quantitation for additional information about this sample. **Sample B-232-16 tetrachloroethene result is below the RDL and per NFG guidelines qualified as not detected (U) due to contamination in the method blank.**

Total Solids by SM 2540 G 2011:
Laboratory method blank was included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

Trip Blank Results

USEPA Method 8260C:
A trip blank was collected and analyzed. The target analytes (VOCs) were not detected in the trip blank at or above the reported detection limits (RDLs).

Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

Field Duplicate Analyses

Field duplicate (samples B-230-21/ B-922-15) results are comparable and less than 30% RPD with the following exceptions:

- Field duplicate sample pair RPDs are greater than 30% for cis-1,2-dichloroethene, tetrachloroethene, and trichloroethene. **Sample field duplicate (B-230-21/B-922-15) results for cis-1,2-dichloroethene, tetrachloroethene, and trichloroethene are estimated and qualified (J) due to poor field precision.**

Laboratory Duplicate Analyses

USEPA Method 8260C:
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

Total Solids by SM 2540 G 2011:
Laboratory duplicate sample analyses were performed on non-client samples within the analytical batches. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

Surrogate Recoveries

USEPA Method 8260C:
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

Laboratory Control Samples

USEPA Method 8260C:
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following exceptions:

- LCS/LCSD (Batch WG1050240) % recoveries for 2,2-dichloropropane are above control limit criteria and qualified by the laboratory (J4). No action was taken since 2,2-dichloropropane is not detected in the associated soil samples.

- LCS (Batch WG1049615 associated with the Trip Blank) recovery for acetone is above laboratory acceptance criteria and qualified by the laboratory (J4). No action was taken on this basis since this acetone was not detected in the Trip Blank.

Total Solids by SM 2540 G 2011:
The LCS %Rs for total solids are within the laboratory control criteria for soils.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260C:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on client samples B-231-16 and B-233-21. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils with the following exception:

- MS/MSD (Batch WG1050240) sample B-233-21 tetrachloroethene spike compound recoveries are not recovered and did not meet laboratory acceptance criteria. Tetrachloroethene result was qualified (V and E) by the laboratory to indicate that the sample concentration was too high to evaluate accurate spike recoveries and exceeded the upper limit of the calibration range. No action is taken in this case. Refer to LCS/LCSD results for precision and accuracy results.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes. ESC notes indicate that for soil samples B-230-16, B-230-21, B-230-26, B-233-21, B-230-31, B-922-15, B-230-35, B-230-55, B-231-16, B-231-21, B-232-26, B-233-21, B-233-26, B-233-31, and B-233-36 the target compounds were too high to run the sample at a lower dilution.

Selected compounds in samples B-232-11 and B-233-11 are qualified (V3) by ESC to indicate that “the internal standard exhibited poor recovery due to sample matrix interference”. Positively detected results will be biased high. These compounds are estimated and qualified (J+) to indicate a high bias.

Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.

Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J0	J0: Calibration verification outside of acceptance limits. Result is estimated.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.

ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

MEMORANDUM

TO: Project File **DATE:** December 21, 2017

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: Former American Linen Supply Site, Seattle WA

PROJECT #: 1413.001.02.604

TASK: December 4 and 5, 2017 – Soil Samples

LAB: ESC Lab ID L955420

Twenty-eight (28) soil samples and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on December 4 and 5, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Eleven soil samples were placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L955420. The quarterly monitoring round occurred between November and December of 2017. Associated sample data are reported in 5 ESC SDGs (SDGs L953811, L954448, L954694, L955420, and L956226). The quality assurance review of the sample data associated with SDG L955420 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017).

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested.

Sample Collection and Preservation

Samples were collected on November 30 and December 1, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped on December 1, 2017 overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 0.5 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information with the following discussion:

- Trip Blank collection date and time are not listed on the chain of custody. No action is taken other than to note this. The laboratory listed a default collection time of December 4, 2017.

Holding Times

USEPA Method 8260C:
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved water (trip blank) from the date of sample collection. All holding time criteria were met.

General Chemistry (Total Solids):
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for trans-1,4-dichloro-2-butene, naphthalene, 1,1,2,2-tetrachloroethane, 1,2,3-trichloropropane, and vinyl acetate associated with analytical batch WG1050481 (analyzed on December 6, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

Method Blank Results

USEPA Method 8260C:
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs) with the following exception:

- Low levels of 1,1,2-trichlorotrifluoroethane and trichloroethene were detected in the method blank (Batch WG1050647) associated with the Trip Blank. No action was taken since this appears to be an isolated incident as these compounds are not detected in the Trip Blank or the in the method blanks associated with the soil samples.

Total Solids by SM 2540 G 2011:
Laboratory method blank was included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

Trip Blank Results

USEPA Method 8260C:
A trip blank was collected and analyzed. The target analytes (VOCs) were not detected in the trip blank at or above the reported detection limits (RDLs) with the following exception:

- Acetone was detected in the trip blank at a low level and also detected at a low level in soil sample B-234A-45. **Sample B-234A-45 acetone result is qualified as not detected (U) due to blank contamination.**

Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

Field Duplicate Analyses

Field duplicate (samples B-234A-42/B-924-30) results are comparable and less than 30% RPD with the following exceptions:

- Field duplicate sample pair RPDs are greater than 30% for cis-1,2-dichloroethene and vinyl chloride. **Sample field duplicate (B-230-21/B-922-15) results for cis-1,2-dichloroethene and vinyl chloride are estimated and qualified (J) due to poor field precision.**

Laboratory Duplicate Analyses

USEPA Method 8260C:
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

Total Solids by SM 2540 G 2011:
Laboratory duplicate sample analyses were performed on sample B-236-20 and on a non-client sample within the analytical batches. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

Surrogate Recoveries

USEPA Method 8260C:
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

Laboratory Control Samples

USEPA Method 8260C:
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following exceptions:

- LCSD (Batch WG1050481) RPD results for 2-butanone (MEK) and vinyl acetate are above control limit criteria and qualified by the laboratory (J3). No action was taken on this basis as LCS/LCSD percent recovery results are recovered wide but are within control limits.

Total Solids by SM 2540 G 2011:
The LCS %Rs for total solids are within the laboratory control criteria for soils.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260C:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on client sample B-236-45. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes. ESC notes indicate that for soil samples B-235-42.5, B-236-42.5, and B-236-45 the target compounds were too high to run the sample at a lower dilution.

Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.

Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. All MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state “ND” (Not Detected) or “BDL” (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
E	The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL).
J	The identification of the analyte is acceptable; the reported value is an estimate.
J0	J0: Calibration verification outside of acceptance limits. Result is estimated.
J1	Surrogate recovery limits have been exceeded; values are outside upper control limits.
J4	The associated batch QC was outside the established quality control range for accuracy.
V3	The internal standard exhibited poor recovery due to sample matrix interference. The analytical results will be biased high. BDL results will be unaffected.

ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our "one location" design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be **YOUR LAB OF CHOICE.**
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.

Subject: ESC Lab Sciences ALP L956226

Bill,

See attached COC for reference. The trip blank was not logged for analysis as it is not marked on the COC. Let me know if we need to proceed otherwise.

Thanks,

Brian Ford

MEMORANDUM

TO: Project File **DATE:** December 21, 2017

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: Former American Linen Supply Site, Seattle WA

PROJECT #: 1413.001.02.604

TASK: December 6, 2017 – Soil Samples

LAB: ESC Lab ID L956226

Nineteen (19) soil samples and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on December 6, 2017. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Six soil samples were placed on hold. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L956226. The quarterly monitoring round occurred between November and December of 2017. Associated sample data are reported in 5 ESC SDGs (SDGs L953811, L954448, L954694, L955420, and L956226). The quality assurance review of the sample data associated with SDG L956226 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for this limited data validation review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017).

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested.

Sample Collection and Preservation

Samples were collected on December 6, 2017 in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped on December 6, 2017 overnight by courier to ESC. The laboratory reported that the cooler and samples were received at 0.7 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition. No data were qualified based upon the sample collection and preservation information with the following discussion:

- Trip Blank collection date and time are not listed on the chain of custody. No action is taken other than to note this. The laboratory listed a default collection time of December 6, 2017.

Holding Times

USEPA Method 8260C:
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and preserved water (trip blank) from the date of sample collection. All holding time criteria were met.

General Chemistry (Total Solids):
Samples were analyzed within the USEPA recommended holding time of seven days for total solids. All holding time criteria were met.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for trans-1,4-dichloro-2-butene, naphthalene, and 1,2,3-trichloropropane associated with analytical batch WG1051921 (analyzed on December 11-13, 2017). These results are qualified by the laboratory "J0" to indicate that percent difference CCV is outside of laboratory acceptance criteria. **All associated sample results with laboratory qualified J0 results are estimated and qualified (UJ or J).**

Method Blank Results

USEPA Method 8260C:
Laboratory method blank was included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs).

Total Solids by SM 2540 G 2011:

Laboratory method blank was included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

Trip Blank Results

USEPA Method 8260C:
A trip blank was collected and analyzed. The target analytes (VOCs) were not detected in the trip blank at or above the reported detection limits (RDLs) with the following exception:

- Acetone was detected in the trip blank at a low level and also detected at a low level in soil samples B-237-5, B-237-45, and B-238-11. **Samples B-237-5, B-237-45, and B-238-11 acetone results are qualified as not detected (U) due to blank contamination.**

Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

Field Duplicate Analyses

Field duplicate (samples B-237-42/B-925-41) results are comparable and less than 30% RPD with the following exceptions:

- Field duplicate sample pair RPDs are greater than 30% for 1,1-dichloroethene, cis-1,2-dichloroethene, trans-1,2-dichloroethene, tetrachloroethene, trichloroethene, and vinyl chloride. **Sample field duplicate (B-237-42/B-925-41) results for 1,1-dichloroethene, cis-1,2-dichloroethene trans-1,2-dichloroethene, tetrachloroethene, trichloroethene, and vinyl chloride are estimated and qualified (J) due to poor field precision.**

Laboratory Duplicate Analyses

USEPA Method 8260C:
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

Total Solids by SM 2540 G 2011:
Laboratory duplicate sample analyses were performed on sample B-238-16 and on a non-client sample within the analytical batches. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

Surrogate Recoveries

USEPA Method 8260C:
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses with the following exception:

- Sample B-238-11 surrogate 4-bromofluorobenzene (associated with initial analysis on December 11, 2017 at 4:05) was recovered above the laboratory control limit criteria. **Sample** B-238-11 **positive detections associated with the December 11, 2017 (at 4:05) analysis date are estimated (J+) since the percent recovery is above criteria.**

Laboratory Control Samples

USEPA Method 8260C:
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following exceptions:

- LCS/LCSD (Batch WG1050481) RPD results for 2,2-dichloropropane are above control limit criteria and qualified by the laboratory (J4). No action was taken on this basis since this compound was not detected in the associated samples.

- LCS (Batch WG1053020) trans-1,4-dichloro-2-butene was recovered low and below laboratory control limit criteria. No action was taken on this basis since this LCS is associated with the trip blank and soil LCS/LCSD results for trans-1,4-dichloro-2-butene are within control limit criteria. Refer to the discussion under initial and continuing calibration for additional information.

Total Solids by SM 2540 G 2011:
The LCS %Rs for total solids are within the laboratory control criteria for soils.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260C:
Matrix spike/matrix spike duplicate (MS/MSD) analyses were performed on client sample B-236-45. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils.

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

Compound Identification and Quantitation Limits

The RDLs used for this sample group were acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes. ESC notes indicate that for soil samples B-925-41, B-238-16, and B-238-21 the target compounds were too high to run the sample at a lower dilution.

Selected compounds in sample B-238-11 are qualified (V3) by ESC to indicate that “the internal standard exhibited poor recovery due to sample matrix interference”. **Positively detected results are biased high and are estimated and qualified (J+).** Refer to the discussion under surrogates for further information on this sample.

Sample B-237-42 vinyl chloride result is 0.290 µg/L and was qualified (E) by the laboratory to indicate that the concentration exceeded the upper calibration limit. ESC confirmed the detection and also confirmed that the 200X dilution on this sample was too high for this compound. ESC was unable to analyze the sample at a lower dilution factor due to elevated VOCs in the sample. **Sample B-237-42 vinyl chloride result is estimated and qualified (J) to indicate that the concentration exceeded the upper calibration limit.**

Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.

Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use.

Subject: RE: SDG L956226 EASY Question

Jessie,

You are correct, the vinyl chloride detection in -04 (B-237-42) is slightly above the upper calibration limit at a 1x dilution. The sample could not be re-analyzed at a dilution lower than 200x due to the large amounts of target analytes which would cause significant instrument contamination issues. Vinyl chloride was not-detect at the 200x dilution. Let me know if you need any additional information.

Thanks,

Brian Ford

Subject: SDG L956226 EASY Question

Hello Brian,

I am looking at L956226-04 sample result for VOCs. Vinyl chloride is E qualified by ESC – this seems like a pretty low level detection however ESC's RDLs are also very low. Just wanted to confirm that this detection exceeds ICAL range. I note that trichloroethene was reported with a 200X DF. In this case… was the 200X too big a dilution for VC?

Best wishes to ESC this holiday season!

Thanks,

Jessie Compeau

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.

GLOSSARY OF TERMS

Guide to Reading and Understanding Your Laboratory Report

The information below is designed to better explain the various terms used in your report of analytical results from the Laboratory. This is not intended as a comprehensive explanation, and if you have additional questions please contact your project representative.

Abbreviations and Definitions

(dry)	Results are reported based on the dry weight of the sample. [this will only be present on a dry report basis for soils].
MDL	Method Detection Limit.
MDL (dry)	Method Detection Limit.
RDL	Reported Detection Limit.
RDL (dry)	Reported Detection Limit.
Rec.	Recovery.
RPD	Relative Percent Difference.
SDG	Sample Delivery Group.
(S)	Surrogate (Surrogate Standard) - Analytes added to every blank, sample, Laboratory Control Sample/Duplicate and Matrix Spike/Duplicate; used to evaluate analytical efficiency by measuring recovery. Surrogates are not expected to be detected in all environmental media.
U	Not detected at the Reporting Limit (or MDL where applicable).
Analyte	The name of the particular compound or analysis performed. Some Analyses and Methods will have multiple analytes reported.
Dilution	If the sample matrix contains an interfering material, or if concentrations of analytes in the sample are higher than the highest limit of concentration that the laboratory can accurately report, the sample may be diluted for analysis. If a value different than 1 is used in this field, the result reported has already been corrected for this factor.
Limits	These are the target % recovery ranges or % difference value that the laboratory has historically determined as normal for the method and analyte being reported. Successful QC Sample analysis will target all analytes recovered or duplicated within these ranges.
Original Sample	The non-spiked sample in the prep batch used to determine the Relative Percent Difference (RPD) from a quality control sample. The Original Sample may not be included within the reported SDG.
Qualifier	This column provides a letter and/or number designation that corresponds to additional information concerning the result reported. If a Qualifier is present, a definition per Qualifier is provided within the Glossary and Definitions page and potentially a discussion of possible implications of the Qualifier in the Case Narrative if applicable.
Result	The actual analytical final result (corrected for any sample specific characteristics) reported for your sample. If there was no measurable result returned for a specific analyte, the result in this column may state "ND" (Not Detected) or "BDL" (Below Detectable Levels). The information in the results column should always be accompanied by either an MDL (Method Detection Limit) or RDL (Reporting Detection Limit) that defines the lowest value that the laboratory could detect or report for this analyte.
Case Narrative (Cn)	A brief discussion about the included sample results, including a discussion of any non-conformances to protocol observed either at sample receipt by the laboratory from the field or during the analytical process. If present, there will be a section in the Case Narrative to discuss the meaning of any data qualifiers used in the report.
Quality Control Summary (Qc)	This section of the report includes the results of the laboratory quality control analyses required by procedure or analytical methods to assist in evaluating the validity of the results reported for your samples. These analyses are not being performed on your samples typically, but on laboratory generated material.
Sample Chain of Custody (Sc)	This is the document created in the field when your samples were initially collected. This is used to verify the time and date of collection, the person collecting the samples, and the analyses that the laboratory is requested to perform. This chain of custody also documents all persons (excluding commercial shippers) that have had control or possession of the samples from the time of collection until delivery to the laboratory for analysis.
Sample Results (Sr)	This section of your report will provide the results of all testing performed on your samples. These results are provided by sample ID and are separated by the analyses performed on each sample. The header line of each analysis section for each sample will provide the name and method number for the analysis reported.
Sample Summary (Ss)	This section of the Analytical Report defines the specific analyses performed for each sample ID, including the dates and times of preparation and/or analysis.

Qualifier	Description
J	The identification of the analyte is acceptable; the reported value is an estimate.
J0	J0: Calibration verification outside of acceptance limits. Result is estimated.
J3	The associated batch QC was outside the established quality control range for precision.
J4	The associated batch QC was outside the established quality control range for accuracy.
J6	The sample matrix interfered with the ability to make any accurate determination; spike value is low.

ACCREDITATIONS & LOCATIONS

ESC Lab Sciences is the only environmental laboratory accredited/certified to support your work nationwide from one location. One phone call, one point of contact, one laboratory. No other lab is as accessible or prepared to handle your needs throughout the country. Our capacity and capability from our single location laboratory is comparable to the collective totals of the network laboratories in our industry. The most significant benefit to our one location design is the design of our laboratory campus. The model is conducive to accelerated productivity, decreasing turn-around time, and preventing cross contamination, thus protecting sample integrity. Our focus on premium quality and prompt service allows us to be YOUR LAB OF CHOICE.
* Not all certifications held by the laboratory are applicable to the results reported in the attached report.
* Accreditation is only applicable to the test methods specified on each scope of accreditation held by ESC Lab Sciences.

MEMORANDUM

TO: Project File **DATE:** April 19, 2018

FROM: Jessie Compeau

SUBJECT: Laboratory Data Validation Review

PROJECT: Former American Linen Supply Site, Seattle WA

PROJECT #: 1413.001.05.304

TASK: March 2 and 6, 2018 – Soil Samples

LAB: ESC Lab ID L975879

Twelve (12) soil samples and a trip blank were collected as part of a sampling event at the Former American Linen Supply Site, in Seattle, Washington, on March 2 and March 6, 2018. The samples were shipped and delivered to ESC Lab Sciences (ESC) of Mount Juliet, TN for laboratory analysis. Selected samples were analyzed for the following:

- Volatile organic compounds (VOCs) by United States Environmental Protection Agency (USEPA) Method 8260C; and
- Total Solids by Standard Methods 2540 G-2011.

The results are reported in ESC Sample Delivery Group (SDG) L975879. The sampling event occurred between March 2 and March 27, 2018. Associated sample data are reported in ten ESC SDGs (SDGs L975879, L977245, L977743, L979219, L979234, L980300, L980719, L980722, L980954, and L980958). The quality assurance review of the sample data associated with SDG L975879 is summarized below.

DATA QUALIFICATIONS

Guidelines established by USEPA for a limited data validation review of analytical data along with ESC control limit criteria were used to validate the data. The comments presented in this memorandum refer to the laboratory's performance in meeting the quality control criteria outlined in the USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017).

DATA VALIDATION

Completeness

All samples were collected and analyzed as requested.

Sample Collection and Preservation

Samples were collected in laboratory-supplied sample containers preserved as appropriate for the individual analyses conducted. The samples were packed on ice and shipped by courier to ESC.

The laboratory reported that the cooler and samples were received at 1.0 degrees Centigrade (°C) and below the recommended temperature preservation of 6°C. The laboratory indicated that the samples were received in good condition with the following discussion:

- Review of ESC's Lab Sciences Non-Conformance Form indicates that the chain of custody showed no analysis request for samples IW-21B-60, IW-21B-67, and the trip blank. ESC notes indicate that PES confirmed the analysis request on March 12, 2018.

No data were qualified based upon the sample collection and preservation information.

Holding Times

USEPA Method 8260C:
All samples were analyzed for VOCs within the USEPA recommended holding time of fourteen days for soils and waters from the date of sample collection. All holding time criteria were met.

Total Solids by SM 2540 G 2011:
Samples were analyzed within the USEPA recommended holding time of seven days for total solids with the following exceptions:

- Soil samples IW-27B-5, IW-27B-15, IW-27B-25, and IW-27B-35 were analyzed four days past the recommended holding time. No action is taken since % solid results are not expected to be significantly changed thus final reported results are not significantly impacted.

Initial and Continuing Calibration

Calibration data for this project are not required for this deliverable however ESC's notes indicate the following:

- *USEPA Method 8260C:* Continuing calibration verification (CCV) issues were noted by ESC for acetone, bromoform, carbon disulfide, and dichlorodifluoromethane associated with soil analytical batch WG1082449 (analyzed on March 15, 2018). These results are qualified by the laboratory "J0" to indicate that percent difference CCVs are outside of laboratory acceptance criteria. **Sample IW-21B-60 results with laboratory qualified (J0) results are estimated and qualified (J/UJ).**

Method Blank Results

USEPA Method 8260C:
Laboratory method blanks were included with the analytical batch per method requirement. The target analytes (VOCs) were not detected in the method blanks at or above the reported detection limits (RDLs).

Total Solids by SM 2540 G 2011:
Laboratory method blanks were included with the analytical batches per method requirement. The target analytes (% solids) were not detected at a significant level in the method blanks and sample results are not impacted.

Trip Blank Results

USEPA Method 8260C:
A trip blank was collected and analyzed. The target analytes (VOCs) were not detected in the trip blank at or above the RDLs. Refer to the discussion under Laboratory Control Samples for additional information regarding precision and accuracy.

Field, Rinsate, or Equipment Blank Results

Field, rinsate, or equipment blanks were not collected.

Field Duplicate Analyses

Field duplicate samples were not collected with this SDG. Refer to laboratory quality control results for precision data.

Laboratory Duplicate Analyses

USEPA Method 8260C:
A laboratory duplicate sample was not analyzed. Refer to laboratory control sample/sample duplicate (LCS/LCSD) or matrix spike/matrix spike duplicates (MS/MSDs) results for precision data.

Total Solids by SM 2540 G 2011:
Laboratory duplicate sample analyses were performed on client sample IW-27B-35 and on a non-client sample within the analytical batch. The primary/duplicate RPDs for total solids analyses are within the laboratory control limit of 5%.

Surrogate Recoveries

USEPA Method 8260C:
The surrogate recovery results for the samples, LCS/LCSDs, MS/MSDs, and the method blanks are within the laboratory surrogate control limits for all of the analyses.

Laboratory Control Samples

USEPA Method 8260C:
LCS/LCSD was analyzed by USEPA Method 8260C method. The LCS/LCSD %Rs and RPDs for the all target compounds are within the laboratory control criteria for soils and waters with the following exceptions:

- Water LCS/LCSD (analytical batch WG1082568): Recoveries for spike compound (vinyl acetate) results are above laboratory acceptance criteria and qualified by the laboratory (J4). No action was taken on this basis since this compound was not detected in the associated sample (trip blank).

- Water LCS/LCSD (analytical batch WG1082568): RPD value for compound trichlorofluoromethane is above laboratory acceptance criteria and qualified (J3) by the laboratory. No action is taken as LCS/LCSD percent recovery results are within control limits but are recovered wide.

Total Solids by SM 2540 G 2011:
The LCS %Rs for total solids are within the laboratory control criteria for soils.

Matrix Spike/Matrix Spike Duplicates

USEPA Method 8260C:
Matrix spike/matrix spike duplicate (MS/MSD) analyses was performed on client soil sample IW-21B-67. The MS/MSD %Rs and RPDs for all target compounds are within the laboratory control criteria for soils with the following exceptions:

- Analytical batch WG1082449: MS/MSD recoveries for multiple spiking compounds are low and in many cases were recovered below 10%. Results are qualified as follows:
  - MS and/or MSD recoveries for eight spiking compound (n-butylbenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, cis-1,2-dichloroethene, naphthalene, styrene, 1,2,3-trichlorobenzene, and 1,2,4-trichlorobenzene) results are below 10% and are qualified (J6) by the laboratory to indicate matrix interference. It should be noted that ESC matrix spike control limits are wide (e.g. 10-150%) and in two cases spike recoveries (n-butylbenzene and styrene) are just above and below 10%. S**ample IW-21B-67 result for cis-1,2-dichloroethene is estimated and qualified (J). Sample IW-21B-67 results for n-butylbenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, naphthalene, styrene, 1,2,3-trichlorobenzene, and 1,2,4-trichlorobenzene are rejected (R) and are not usable due to low spike recoveries.**

Other Quality Control Issues

No laboratory quality control issues were identified in the laboratory report.

Compound Identification and Quantitation Limits

The RDLs used for this sample group are acceptable for the project. Several samples were diluted due to elevated concentrations of various target analytes. ESC sample narrative notes indicate that for soil sample IW-21B-60 the target compounds were too high to run the sample at a lower dilution.

Detections between the MDL and RDL are estimated (J) by the laboratory and qualified (J) by the data validator to re-emphasize that the detection is estimated.

Data Assessment

The laboratory data reported for this project were reviewed based on laboratory control limit acceptance criteria and criteria outlined in:

- USEPA Contract Laboratory Program National Functional Guidelines for Organic Superfund Methods Data Review (USEPA, 2017).

Data qualifiers were assigned and laboratory report pages with qualifiers are attached. All data, including qualified data, are judged to be acceptable for their intended use with the following exceptions:

- **Non-detected results (n-butylbenzene, 1,3-dichlorobenzene, 1,4-dichlorobenzene, cis-1,2-dichloroethene, naphthalene, styrene, 1,2,3-trichlorobenzene, and 1,2,4-trichlorobenzene) for sample IW-21B-67 are rejected (R) due to low spike recoveries.**

Bill/Brian,

You will be receiving this lab report shortly. Just a heads up…there is a detection in the trip blank for cis-12-DCE. The lab double checked the results and they are legitimate and there is no evidence of carryover from a previous sample. Let me know if you need any other info.

Thanks,

Brian Ford

All sample aliquots were received at the correct temperature, in the proper containers, with the appropriate preservatives, and within method specified holding times, unless qualified or notated within the report. Where applicable, all MDL (LOD) and RDL (LOQ) values reported for environmental samples have been corrected for the dilution factor used in the analysis. All radiochemical sample results for solids are reported on a dry weight basis with the exception of tritium, carbon-14 and radon, unless wet weight was requested by the client. All Method and Batch Quality Control are within established criteria except where addressed in this case narrative, a non-conformance form or properly qualified within the sample results. By my digital signature below, I affirm to the best of my knowledge, all problems/anomalies observed by the laboratory as having the potential to affect the quality of the data have been identified by the laboratory, and no information or data have been knowingly withheld that would affect the quality of the data.
