EXECUTIVE SUMMARY

This report documents the results of our Phase I Environmental Site Assessment (ESA) of the roughly 2.8-acre block of land in the South Lake Union neighborhood in Seattle, Washington, bound by Roy Street to the north, Mercer Street to the south, Dexter Avenue North to the west, and 9th Avenue North to the east (Property). The Property is located in the northeast quarter, Section 30, Township 25, and Range 4 of King County, and contains King County tax parcels 2249000003, 2249000040, 2249000055, and 2249000080. A Vicinity Map is included as Figure 1, and a Site Plan is included as Figure 2. Historical features of concern can be seen in Figure 3.

Recognized Environmental Conditions (RECs)

Based upon the information obtained in connection with this Phase I ESA, our opinion is that the following 15 RECs are associated with the Property:

1. A gas station previously operated in the southwest corner of the Property. This is a REC for the Property.
2. A second gas station previously operated in the northwest corner of the Property. One fuel underground storage tank (UST) remains on the site and one fuel UST has been removed. This is a REC for the Property.
3. A building on the northwest corner of the eastern half of the Property was previously used for soap and chemical manufacturing and had a boiler room, suggesting a UST with heating fuel was present at some point. This site is a REC for the Property.
4. A building on the northeast corner of the Property previously was used by multiple auto wrecking companies. The building had a large parking lot covering the east side of the Property, which was used for the storage of wrecked cars. This site is a REC for the Property.
5. A building on the southwest corner of the eastern half of the site referenced to as 800 Mercer was previously used by multiple tenants. The 800 Mercer building had a 1,000-gallon diesel UST. This is a REC for the Property.
6. Fill material from unknown sources was used on site to fill in a previous ramp to an underpass on the site, as well as where Lake Union used to reside on the northeast corner of the site.
7. Parcel 2249000100, adjacent to the west of the Property, has previously been occupied by a gas station and a drycleaner. Multiple USTs containing solvents, heating oil, and bunker fuel have been present in the alleyway to the north of this parcel. This site is upgradient and is a REC to the Property. More information can be seen in Section 2.6.1.

8. Parcel 2249000285, adjacent to the north of the Property, has previously been occupied by a very large laundry/dry-cleaning facility, as well as a gas station. Contamination on this site is well documented, and a tetrachloroethylene plume has been mapped to be onto the Property from the site. This site is a REC to the Property. More information can be seen in Section 4.4.2.
9. Parcel 4088803435, adjacent to the north of the Property, was shown by the Environmental Data Resources, Inc. data report to have petroleum contamination in soil and groundwater, as well as halogenated solvents suspected in groundwater. This site was not listed in any other records, and the contamination may be due to contamination from parcels 2249000285 or 4088803530. This site is a REC for the Property. More information can be seen in Section 2.6.6.
10. Parcel 1988201215, adjacent to the southwest of the Property, has previously been occupied by a gas station. This site is upgradient and is a REC to the Property. More information can be seen in Section 2.6.12.
11. Parcel 4088803530, adjacent to the north of the Property, has documentation showing multiple USTs and leaking USTs (LUSTs) existed on the site. Petroleum contamination in soil and groundwater has been present on the site. This site is a REC to the Property. More information can be seen in Section 4.4.4.1.
12. Parcel 4088803385, adjacent to the east of the Property, has previously been occupied by multiple dry cleaners, gas stations, auto repair shops, auto wreckers, and more. Contamination of soil and shallow groundwater with petroleum and metals has been well documented. Cleanup efforts have been made; however, some contamination still remains on the site. This site is a REC to the Property. More information can be seen in Section 4.4.4.7.
13. Parcel 1988201410, adjacent to the south of the Property, has previously been occupied by a bank building, which had a boiler and an oil burner for heat. This suggests a heating oil UST was present at the site. Due to this site being adjacent to the Property and upgradient, this is a REC. More information is in Section 4.4.6.12.
14. The Property has a high potential for vapor intrusion due to the American Linen site to the north, as well as multiple gas stations being on the site. The potential for vapor intrusion is a REC. More information is in Section 4.5.
15. The 1917 Sanborn map shows Mutual Laundry, a dry-cleaning facility, roughly 200 feet downgradient of the Property to the southwest. This is a REC for the Property.

Historical Recognized Environmental Conditions (HRECs)

Based upon the information obtained in connection with this Phase I ESA, our opinion is that two HRECs are associated with the Property.

Parcel 1988201480, adjacent to the south of the Property, was previously used by Washington Natural Gas for the manufacturing of coal gas until the mid-1950s. The site had multiple USTs,

as well as two roughly 1-million-gallon aboveground storage tanks. Contamination due to site use was present on this site, and the Washington State Department of Ecology (Ecology) issued a no further action (NFA) letter to the site in 2012 (Ecology, 2012). Due to the historical contamination and NFA letter, this site is a HREC for the Property. More information can be seen in Section 4.4.4.10.

Parcel 1983200065, adjacent to the southeast of the Property, previously contained a 2,500-gallon LUST. The UST was removed in 2013, and Ecology issued the site an NFA in 2014. Due to the historical contamination and the NFA letter, this site is an HREC for the Property. More information can be seen in Section 4.4.4.11.

PHASE I ENVIRONMENTAL SITE ASSESSMENT
MERCER CORRIDOR PROJECT WEST
BROAD MEGABLOCK SITE
SEATTLE, WASHINGTON

1.0 INTRODUCTION

This report documents the results of our Phase I Environmental Site Assessment (ESA) prepared for the roughly 2.8-acre block of land in the South Lake Union neighborhood in Seattle, Washington. The block is bound by Roy Street to the north, Mercer Street to the south, Dexter Avenue North to the west, and 9th Avenue North to the east (Property) (Figure 1).

1.1 Purpose

The purpose of this Phase I ESA is to identify, to the extent feasible pursuant to the process described in the ASTM Practice E1527-13 (ASTM, 2013), recognized environmental conditions (RECs), controlled RECs (CRECs), or historical RECs (HRECs) associated with the Property. The term REC means:

> The presence or likely presence of hazardous substances or petroleum products in, on, or at a property: (a) due to a release to the environment, (b) under conditions indicative of a release to the environment, or (c) under conditions that pose a material threat of a future release to the environment.

The term CREC means:

> A REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a No Further Action (NFA) letter or equivalent or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example: property use restrictions, activity and use limitations [AULs], institutional controls, or engineering controls).

The term HREC means:

> A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority **without** subjecting the property to **any required controls**.

The terms REC, CREC, and HREC are not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not RECs, CRECs, or HRECs.

The U.S. Environmental Protection Agency (EPA) has determined that the Phase I ASTM Standard is consistent with and meets the requirements for performing All Appropriate Inquiry (AAI) and may be used to comply with federal AAI regulations at 40 Code of Federal Regulations (CFR) Part 312.

KPFF Consulting Engineers, Inc. (Client) did not request Shannon & Wilson determine whether additional inquiry requirements may exist to potentially qualify for similar landowner liability protection under state law. KPFF is contracted by the Seattle Department of Transportation (Owner) to complete the Mercer Corridor Project West Phase.

1.2 Scope of Services

The Phase I ESA was prepared for the Client. This work was performed in accordance with our Subcontract Agreement/Amendment 8. A notice to proceed was received from John McMillan of the Client on February 23, 2017, in the form of an email. The Subconsultant Agreement/Amendment followed on March 23, 2017.

The scope of a Phase I ESA under the Phase I ASTM standard does not include an evaluation of all environmental considerations that may be relevant to a particular transaction, such as testing for radon, lead-based paint, mold, and asbestos; or evaluation of indoor air quality, potential wetlands, regulatory compliance, and health/safety matters. A Phase I ESA also does not include any sampling or testing of air, soil, water, or building materials. Limited Phase II sampling of soil and groundwater is provided under a separate cover. The Client did not request that we inquire into sampling of air or building materials, or other non-scope considerations.

1.3 Significant Assumptions

Information collected for this Phase I ESA was collected from numerous sources, including interviews with occupants of the Property. The sources are identified in the body of this report. The information obtained from these sources, to the extent relied upon in forming our opinions, is assumed to be accurate and complete. Persons who were interviewed are assumed to have answered all questions in good faith, accurately, and to the extent of their knowledge.

1.4 Limitations, Exceptions, and Data Gaps

As discussed in the Phase I ASTM standard, performance of a Phase I ESA, even in compliance with the Phase I ASTM standard, cannot eliminate uncertainty regarding the potential for hazardous substances or petroleum to exist at a property.

The use of this Phase I ESA is strictly limited to the scope set forth in the Subcontractor Agreement. Certain environmental conditions may exist on a property that are beyond the scope of this Phase I ESA but may still warrant consideration by parties to a commercial real estate transaction. For example, a site with contamination remaining may have been approved by regulatory authorities for closure and is not a REC presently, but if the remaining contamination is disturbed during future site development work, environmental regulations may require testing and off-site disposal of such soil.

Per the Phase I ASTM standard, a Phase I ESA is presumed to be valid if completed less than 180 days prior to the date the property is acquired or for transactions not involving an acquisition (the date of the intended transaction). If within this 180-day period the Phase I ESA will be used by someone other than the Client, then the subsequent user must also satisfy the User's Responsibilities set forth in Section 6 of the Phase I ASTM standard. Certain portions of the Phase I ESA are valid for a period of up to one year; however, several components must be updated by an environmental professional within 180 days of the purchase or the date of the intended transaction.

The findings, opinions, and recommendations contained in this report are based on information provided from the observed site conditions, personal interviews, and other sources identified herein. The data presented in this report should be considered representative of the time of our site assessment. Changes due to natural processes or human activity could have occurred after the date of our site reconnaissance and interviews but before the issuance of this report. In addition, changes in government codes, regulations, or laws may occur in the future, which could alter the opinions formed at the time of this assessment.

The following list identifies the deviations and exceptions from the standard requirements of the Phase I ASTM standard and any data gaps encountered in performing the Phase I ESA despite our good faith efforts to gather such information. In our opinion, none of these impacted our ability to identify RECs associated with the Property.

The following list contains the exceptions/deviations and data gaps encountered during this ESA:

- The following Standard Historical Sources listed in Phase I ASTM Section 8.3.4 were not reviewed for this Phase I ESA, because they do not exist or were not obtainable at the time of this site assessment:
  - Interview with the Washington State Department of Health. The Washington State Department of Health was contacted multiple times and did not return any calls.
  - Phase I User Reliance Form. The form was submitted to the Client and Owner; however, the form has not been returned at the time of this draft.
  - Previous ESAs were not available for this site.
- The Owner did not identify a Key Site Manager to answer questions concerning the Property. A Superintendent with Shimmick Construction, the current tenant, was available for an interview.
- The Phase I ASTM standard Section 6 requires that the User review judicial records for evidence of environmental liens and AULs that are imposed by judicial authorities, if such records are applicable. To our knowledge, judicial records were not reviewed by the User in connection with this Phase I ESA.

1.5 Special Terms and Conditions

None were applicable to this ESA.

1.6 User Reliance

The Phase I ASTM standard defines "User" as the party seeking to use the standard to complete an ESA of the property and may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. The information and opinions in this report are exclusively for the use of and reliance by the Client and their respective affiliates, representatives, and agents. Reliance on this Phase I ESA by all authorized persons or entities is subject to the terms and conditions set forth in the Subcontractor Agreement. No other persons or entities are entitled to rely on this report without prior written approval from Shannon & Wilson, which consent may be conditioned upon, among other things, payment of a fee. In any event, such third-party's reliance would be limited to the same extent of Client's reliance and subject to the same contractual, technological, and other limitations to which the Client has agreed. A questionnaire has been submitted to, but not completed by, the User.

This Phase I ESA is valid for a period of 180 days. Its use after 180 days is subject to the limitations and requirements in the Phase I ASTM standard, including but not limited to Section 4.7. The services provided by Shannon & Wilson were performed consistent with the

standards of the profession and Shannon & Wilson provides no other warranty of any kind, whether express or implied.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The Property contains King County Parcels 2249000080, 2249000055, 2249000040, and 2249000006. The Property does not have any permanent structures; however, 801 Roy Street is identified as the Property address on the online King County Parcel Viewer. The Property encompasses approximately 2.8 acres and is in a mixed commercial area of Seattle's South Lake Union neighborhood. The Property contains King County combined sewer overflow (CSO) infrastructure, which includes a CSO drop structure, CSO overflow pipes, and the King County Mercer Tunnel. A Vicinity Map showing the Property and surrounding area is included as Figure 1. Figure 2 is a Site Map depicting the current features of the Property and adjoining parcels. Historical features of concern can be seen in Figure 3.

2.2 Site and Vicinity Characteristics

The western half of the Property is currently occupied by Shimmick Construction Company, who uses it as a staging facility for construction equipment, parking, and stockpiles. The eastern half of the site is grass covered and contains two temporary sediment ponds for site stormwater collection. The site contains a CSO drop structure near the center of the north boundary, as well as subgrade CSO overflow pipes that extend west, northeast, and south from the structure. The CSO infrastructure also includes a tunnel, which extends southwest from the drop structure. The Property is relatively flat on the west side and generally slopes down toward the east on the east side.

Surface water on the west side of the Property would generally tend to pool and infiltrate through exposed soil and quarry spalls. Some paved sections exist on the west side of the Property. Surface water would flow off of the paved sections onto exposed soil or quarry spalls. The east side is graded to cause groundwater to flow eastward over grass into two engineered temporary sediment ponds. The temporary sediment ponds drain into the public stormwater system on the west side of 9th Avenue North. The east side of the Property is vacant.

Studies completed on nearby sites show groundwater flowing generally to the east-northeast toward Lake Union (Sound Earth Strategies, Inc. [SES], 2016). Temporary dewatering from remediation and construction sites nearby may have changed groundwater flow direction temporarily (SES, 2013). Upgradient sites located to the west and southwest included multiple

commercial buildings, including warehouses, offices, gyms, and major roadways. The adjoining parcel to the northwest has one large office building. Adjoining parcels to the north included a construction site and multiple vacant commercial spaces. The adjoining parcel to the northeast included a vacant commercial space in a large building. The adjoining parcel to the east is the Allen Institute of Brain Science (AIBS). The adjoining parcel to the southeast is occupied by an Amazon building. The adjoining parcel to the south was occupied by University of Washington Medicine.

In a 2016 report on the adjacent north parcel, SES describes geological and hydrogeological settings encountered. Soil consists of artificial fill, post-Vashon lacustrine deposits, Vashon glacial till or Vashon age ice-contact deposits, and advance sand deposits and glacial till or drift of either Vashon age or pre-Fraser age (SES, 2016).

The nearby site shows multiple water-bearing zones. The first zone is an unconfined perched shallow water-bearing zone from depths of 10 to 20 feet below ground surface (bgs) and is largely in fill material. An intermediate water-bearing zone is found in dense soils from approximately 35 to 80 feet bgs. A deep outwash aquifer is confined from approximately 90 to 125 feet bgs. A lower aquitard of fine-grained glacial drift confines the groundwater (SES, 2016).

2.3 Current Use of the Property

The west half of the Property was in use as parking and a staging area for heavy machinery and equipment for ongoing construction nearby. The east half was vacant and had two temporary sediment ponds. King County CSO infrastructure includes a drop structure, piping, and a tunnel exists on the Property.

2.4 Description of Improvements on the Property

The west side of the Property was partially paved or covered by quarry spalls and is undeveloped. Underground site improvements include a drop structure, subgrade piping, and a tunnel associated with the CSO. The east side of the Property had two temporary sediment ponds and was grass covered. The sediment ponds are designed to remove sediment from stormwater before discharging into the public stormwater system. See Section 2.5 for a detailed site history.

2.5 Past Use of the Property

The Property was previously used for multiple dwellings as early as 1893. The 1893 Sanborn fire map shows Lake Union covering the northeast corner of the Property. The 1905 Sanborn fire map also shows dwellings, as well as Lake Union on the northeast corner of the Property. By 1917, a Sanborn map shows multiple businesses, including a commercial sash and door company, horse boarding service, and bakery moved into large buildings on the northeast quadrant of the Property. The 1917 Sanborn map shows Lake Union is no longer on the Property. By 1936, the western half of the Property was split diagonally by Broad Street, and by 1950, more businesses were present, including multiple auto repair shops, a restaurant, a paint and sign painting company, and a garment factory. By 1960, all of the buildings besides two buildings in the northwest corner and one building (800 Mercer, Figure 3) on the southwest corner of the east half had been demolished, likely due to an expansion of Broad Street. Aerial photography shows that by 1965, Broad Street had dissected the whole Property, not only the west side. Aerial photography shows that by 1974, the buildings in the northwest corner of the Property have been demolished, and by 2011, the 800 Mercer building had been demolished and the site was vacant.

City of Seattle (City) directories ranging from 1920 to 2013 give more detail on tenants who may be an environmental concern to the properties. The building on the northern central portion of the Property was occupied by Erickson Painting/Graves Bros Sign Painters and Riebe Soap & Chemical Works in the years of 1925 to 1955. In 1935 and 1940, a gas station was present on the southwest portion of the Property at 610 Dexter Avenue North. In 1940, West Coast Junk Co. was present at 807 Roy Street. In 1951 and 1960, a gas station was present on the northwest portion of the Property at 650 Dexter Avenue North. In a drawing provided by the Client, two buried fuel tanks are shown near the northwest corner of the Property. One fuel tank is labeled as being removed, and one 6-foot-diameter buried fuel tank remains on the site. A 2007 boring log by CH2M Hill in this area shows a hydrocarbon odor in soil at a depth of roughly 27 feet. In 1930, 1935, 1951, and 1955, Newton Auto Wrecking or Schucks Auto Wrecking was present and likely used a large parking lot south of the building on the eastern portion of the Property for wrecked vehicle storage. By 1969, an automotive upholstery business in the northwest portion of the Property and the garment factory on the north eastern portion of the Property were the only businesses that remained. The garment factory building (800 Mercer, Figure 3) had a wide variety of tenants, including a costume shop, a sign company, refrigerator sales and service, sign painting, and a hang gliding shop.

2.6 Past and Current Use of Adjoining Parcels

2.6.1 Adjacent West (Parcel 2249000100, South)

Sanborn maps from 1893, 1905, and 1917 show no development on the site besides one small storage shed in 1905. King County tax assessor records show the current warehouse building was built in 1919, with the offices built in 1962. According to archived records, a boiler was installed in 1928 for laundry services. City directories show Modern Automobile and Tractor School as a tenant in 1920; Dexter Cabinet Works in 1925; Sanitary Laundry as a tenant in 1930 and 1935; Colotyle Corporation in 1940, 1951, and 1955; and Electrol Oil Burner Co. in 1944. The City directory states a gas station was present in 1935 and 1940; an aerial photograph from 1941 shows a small building in the southeast corner of the parcel, which may be a small gas station. Archived records show the gas station was built in 1930. The 1950 Sanborn fire map shows the site covered by one building and parking and a solvent underground storage tank (UST) is present in the alleyway to the north of the building. The 1969 Sanborn fire map shows the site used as an electric appliance warehouse. City directories show Copiers Northwest being a tenant of the building since 2008. A Seattle Fire Department document shows three heating oil and one bunker fuel USTs were present in the alleyway on the north side of this site. At the time of the site visit, the site adjacent to the south contained one building and a parking lot occupied by Copiers Northwest as a storefront for copiers, printing machines, and printing services.

2.6.2 Adjacent West (Parcel 2249000120, North)

The parcel was previously used as multiple dwellings by 1893. In 1926, the southern half of the current building was constructed, and in 1945, the northern half of the current building and presumably the east portion of the building was constructed. The earliest records of tenants were found in a 1935 City directory, stating the building was occupied by a restaurant, Rix Sandpaper, and Seattle Hardwood Floor Co. By 1940, Brown Bridge Mills had also moved onto the parcel. In a 1950 Sanborn fire map, Colotyle Corporation is shown to have moved into the northern portion of the building, with Seattle Hardwood Floor still in the southern portion. The east portion of the building shows plastic mixing, Masonite storage, and storage activities. In 1951, a City directory shows Parker Henry Glass Company to be present on the parcel. In a 1955 City directory, Acme Restaurant Supply Company and Pac Bowling and Billiard Company are present on the parcel. In a 1960 City directory, Jr. Achievement of Seattle is present on the parcel. In 1966, a City directory shows Contour Laminates Inc. Manufacturing being present on the parcel. A 1969 Sanborn fire map shows woodworking on the site, which includes a plywood staging area; this may still be Contour Laminates Inc. Manufacturing. In a 1980 City directory, "Domestic Supply Whee" is present on the site; tenant site use is not known. The Environmental

Data Resources, Inc. (EDR) report shows a company named Zig Zag present in 1992 and 1994; tenant site use is not known. In 2002, a fire department document shows Dress for Success as the building tenant. A 2005 City directory shows Gusto Furniture was present on the parcel. Copiers Northwest, the current tenant, occupied the building after Dress for Success. While speaking to a tenant of the building during a separate Phase I at this parcel, it was revealed that the east half of the building burned down around 2005 (Shannon & Wilson, 2018).

2.6.3 Adjacent Northwest (Parcel 2249000245)

The earliest record of the site is an 1893 Sanborn Fire map, which shows two dwellings on the parcel. A 1905 Sanborn fire map shows four dwellings on the parcel, as well as some smaller buildings, which are presumably storage sheds. A 1917 Sanborn fire map shows the same four main buildings without any storage sheds. A 1920 and 1925 City directory lists individuals as tenants. A 1940 and 1944 City directory show the Aurora Tavern/Café present. A 1950 Sanborn fire map shows a restaurant as the only building on the parcel. A 1951 City directory shows Kirkpatrick's Coach Inn present on the parcel. A 1955 and 1960 City directory shows Tallers Restaurant present on the parcel. A 1969 Sanborn fire map shows the restaurant building as the only building on the parcel. Aerial photographs from 1974, 1977, and 1980 also show the restaurant being the only building on the parcel. The large office building currently on the parcel was built in 1980. City directories from 2008 and 2013 show multiple businesses occupying tenant space in the large office building. At the time of the site visit, the four-story office building built in 1980 with parking occupied this parcel.

2.6.4 Adjacent North (Parcel 2249000285, West)

This parcel was used as a laundry facility by Maryatt Electric Laundry and American Linen Supply Co. A 2016 report by SES states four buildings were demolished in 2013 and were built in 1925, 1947, and 1966. The same report gives the background of the site occupancy.

From 1893 to 1925 the site was residential. In 1925, a building was constructed on the southeast corner of the parcel, and in 1930, the site was equipped with a small gas station. In 1947, four 6,000-gallon heating oil USTs were installed under the 1925 building. In 1947, another building was constructed on the parcel and was used as a garage and an auto repair shop. Between 1947 and 1966, a fuel dispenser with up to three USTs was built. In 1986, the garage and auto repair shop building was in use as a wastewater treatment facility for the water generated from laundering. In 1966, a third building was constructed and the 1930 gas station was demolished. The 1966 building was used for laundry, offices, and a garage. By 1990, dry-cleaning services were no longer operating on the site and the wastewater system was

removed. The buildings were then leased out to businesses, including auto shops, a bakery, and a car rental office (SES, 2016). At the time of the site visit, the adjoining parcel to the north was a construction site, which contained a mostly demolished, large building. More about this parcel can be read about in Section 4.4.4.2.

2.6.5 Adjacent North (Parcel 408883530, Center)

The earliest record of this parcel was an 1893 Sanborn fire map that shows one cabin and the northern half of the parcel covered by Lake Union. The 1905 Sanborn map is unchanged for the parcel; however, the cabin appears to have been expanded. By 1917, the Sanborn maps shows no developments on the parcel, and the parcel has been divided by Broad Street. An assessor's record from the Puget Sound Regional Archive (PSRA) shows a warehouse built in 1924 owned by Puget Sound Power and Light Co. present on the parcel. The 1950 Sanborn map shows Puget Sound Power and Light Co. present on the parcel. A 1955 record from the PSRA shows the site has multiple 4,000- and 5,000-gallon tanks, likely USTs. City directories show Puget Sound Power and Light Co. present in 1940 through 1975. In 1980, City Parks and Recreation Facilities and Maintenance is on the parcel until 1990. More about this parcel can be read in Section 4.4.4.1.

2.6.6 Adjacent North (Parcel 4088803435, East)

The earliest record of this parcel was an 1893 Sanborn fire map that shows the parcel is beneath Lake Union. A 1905 Sanborn fire map shows no change. A 1917 Sanborn map shows the lake is no longer covering the parcel, but there is no development. Mack International Motor Truck Corp. is a tenant of the parcel from 1925 to 1951. In 1955 and 1960, Seattle City Light is listed as a tenant of the parcel. In 1966, an auto upholstery and glass shop was a tenant. In 1970, Truckweld was a tenant. In 1980, the site was vacant. In 1986 and 1990, car dealerships were on the parcel. In 1996, Pedersens Ski and Sport was on the parcel. In 2005, restaurant Buca Di Beppo was on the site. The EDR data report shows Seattle Motorsports as a tenant at 701 9th Avenue North and details petroleum contamination in soil and groundwater, as well as suspected halogenated solvents in groundwater.

2.6.7 Adjacent Northeast (Parcel 4088803495)

The first record of this site is in 1917, where a small building was on the northwest corner. A 1941 assessor's record shows a new, larger building was built in 1941 and was occupied by an auto rebuild shop, and the 1917 building is no longer present. A 1950 Sanborn fire map shows a machine shop on the parcel. A 1969 Sanborn fire map shows an auto service

company. No information on this parcel was available in the City directories. At the time of the site visit, a coffee shop sign was on the building; however, the space appeared to be vacant.

2.6.8 Adjacent East (Parcel 4088803385)

The Sanborn fire maps provided by EDR only show the western portion of the parcel. The first record of this site is a 1905 Sanborn fire map, which shows the parcel covered by Lake Union. By 1917, the parcel is a lumber yard with auto shops and a drycleaner named Central Wet Wash. 1937 assessor's records show that a large building was built on the parcel in 1922 and was occupied by a car dealership. A 1936 aerial photo shows the parcel mostly used as parking with one large building on the southeast side. By 1943, buildings cover the southern half of the parcel. By 1953, an alleyway is going down the center of the parcel north to south, with large rectangular buildings on each side. In the northeast corner, there is a "V" shaped building. In 1965, only the large buildings remain. In 1950, William O. McKay auto repair is on the parcel, as well as auto cleaning and a restaurant. In 1969, William O. McKay and the auto cleaning facility are still present. Aerial photos of the parcel do not change until 1980 when the small autocleaning building is no longer present. Aerial photos show the site is unchanged until 2011, where all of the buildings are demolished and the site appears to be unpaved. The current building is the AIBS, which was built in 2015. More about this site can be seen in Section 4.4.4.7.

2.6.9 Adjacent Southeast (Parcel 1983200065)

The Sanborn fire maps for this parcel only show its western portion. In the 1893 Sanborn map, one small dwelling is on the southwest corner of the parcel, with another very small building toward the middle. By 1905, the southwest dwelling is slightly larger and a building is in the northwest corner of the parcel. On the 1917, 1950, and 1969 Sanborn fire maps, the west side of the parcel is empty. PSRA assessor's records from 1948 and 1956 show the parcel was used as a car dealership by William O. McKay Co. with a very small office in the middle of the parcel. Aerial photography available from 1936 to 2011 shows the parcel being used as a lot to stage or park cars. Tax assessor records show the current building was constructed in 2013 and is occupied by Amazon. It has multiple stories of office space, as well as underground parking. More about this site can be seen in Section 4.4.4.11.

2.6.10 Adjacent South (Parcel 1988201480, East)

The earliest record of this parcel is an 1893 Sanborn fire map that shows four cabins on the parcel. The 1905 Sanborn fire map shows a fifth cabin built, as well as a small building near it. In the 1917 Sanborn fire map, the Seattle Lighting Co. is on the parcel and has two

80,000-gallon gas aboveground storage tanks (ASTs), as well as five buildings. In the 1950 Sanborn fire map, the Seattle Lighting Co. is still present and six small sheds have been constructed on the north boundary of the parcel. PSRA's assessor records from 1962 and 1964 show Washington Natural Gas present on the parcel, with multiple storage tanks as well as one large office building and an auto repair area. Another 1964 record from the PSRA shows a small gas station owned by Washington Natural Gas on the parcel. Aerial images show that by 1965, the Seattle Lighting Co. buildings and ASTs have been demolished and a new large building has been built on the parcel. In the 1969 Sanborn fire map, Washington Natural Gas Co. is still an occupant of the parcel. City directories show Washington Natural Gas as well as other businesses as tenants of the parcel until 1996. In 2005 City directories, Washington Natural Gas Co. is no longer a tenant and multiple other businesses are in the building. Tax records show the Washington Natural Gas Co. building was demolished in 2006 and the current building was built. The current building is used as a medical laboratory and offices. 2008 City directories show Washington Energy Services Co as a tenant, as well as the South Lake Union Group and some individuals. Recently, new zoning made a small section of parcel 1988201485 replace a small section of parcel 1988201480, and the history is detailed in parcel 1988201480 research. More about this site can be seen in Section 4.4.4.10.

2.6.11 Adjacent South (Parcel 1988201410, West)

Sanborn fire maps from 1893, 1905, and 1914 show the parcel is vacant. Aerial photography from 1936 and 1943 possibly shows a small building; however, the photo is blurry. The 1950 Sanborn fire map shows the parcel is used as lumber storage. Aerial photography from 1953 shows the parcel is undeveloped. A PSRA tax assessor record from 1956 shows a Peoples National Bank building built in 1956 on the parcel. The building is three stories and equipped with an oil burner. A 1965 aerial photo shows the building on the northwest corner of the parcel. The 1969 Sanborn fire map shows the building labeled as a bank. Aerial photography shows no changes to the parcel until 2011, when construction begins near the southern border of the parcel. King County tax assessor's records show the building was demolished in 2012 and confirms its previous use as a bank. The parcel is currently being used as a staging facility for nearby construction.

2.6.12 Adjacent Southwest (Parcel 1988201215)

Sanborn fire maps from 1893, 1905, and 1917 show the parcel is vacant. Aerial photography from 1936 shows one small building on the parcel and in 1943 aerial photography shows the building is gone. The EDR data report shows a gas station on the parcel at 537 Dexter Avenue in 1930; this is likely the small building in the aerial photos. Tax assessor records show

the current building on the site was built in 1948. PSRA records show the building occupied by Peoples National Bank and the building is equipped with an oil burner. The 1950 Sanborn fire map shows the parcel with a bank occupying the building. A 1951 and 1955 City directory shows Peoples National Bank is occupying the building. Records from the PSRA, City directories, and Sanborn fire maps show Seattle Seamen's Center as the tenant from 1961 to 1970. City directories from 1975 to 1990 show Ramco Electronics Equipment and Supply shop as the occupant. In a 1996 City directory, Bozotronics is an occupant of the building, likely an electronics store. Google street images show Goods for the Planet, a retailer of natural products, as an occupant from 2007 to 2011. Google street images show Seattle Strength and Performance as a tenant in 2014. The building is currently occupied by Seattle Strength and Performance.

3.0 USER-PROVIDED INFORMATION

The User has not provided information in the form of a returned and completed formal questionnaire.

3.1 Title Records

The User did not provide a legal description of the Property for review.

3.2 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanups, or other remediation of hazardous substances or petroleum products upon a property, including but not limited to, liens imposed pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and similar state law.

A user questionnaire requesting if environmental liens were to be researched was submitted to the User and was not returned. Shannon & Wilson did not arrange for a search of land title records (or judicial records) for environmental liens.

3.3 Activity and Use Limitations (AULs)

As stated in the Phase I ASTM standard, AULs are one indication of a past or present release of a hazardous substance or petroleum products. AULs may consist of institutional controls such as a prohibition on certain use of the property or engineered controls such as an engineered barrier or cap-over contamination. AULs are explicit recognition by a federal, tribal, state, or local regulatory agency that residual levels of hazardous substances or petroleum may be present on

the property. If AULs are in place, the User must comply with them in order to maintain landowner liability protections under CERCLA.

A user questionnaire requesting if land title (or judicial records) for AULs were to be researched was submitted to the User and has not been returned. The User Representative did not indicate awareness of any AULs in place, filed, or recorded under federal, tribal, state, or local law or in judicial records.

3.4 Specialized Knowledge

The current tenant, who was available for an interview, did not indicate they have specialized knowledge about or experience with the Property or nearby properties relating to chemicals or processes used by the current occupants of the Property.

3.5 Relationship of Purchase Price to Fair Market Value

This transaction may involve a purchase price. The User Representative did not indicate that the purchase price being paid for the Property reasonably reflected the fair market value of the Property if the property were not contaminated.

3.6 Owner/Occupant and Property Manager Information

Nonila Masmela with the City was provided as a contact for site access and management questions. Shimmick Construction Company was onsite and occupied the Property.

3.7 Reason for Performing Phase I Environmental Site Assessment (ESA)

Shannon & Wilson understands the purpose of this Phase I ESA is to evaluate potential concerns that could affect property value and sale price in anticipation of the Seattle Department of Transportation selling the Property.

3.8 Previous Environmental Site Assessments (ESAs) and Reports

No previous ESAs or environmental site reports were available from the Client.

4.0 RECORDS REVIEW

The purpose of the records review is to obtain and review records concerning the Property and properties in the vicinity that will help identify RECs in connection with the Property. Availability of record information varies from information source to information source, including governmental agencies. Unless otherwise noted in Section 1.4, we have reviewed the

standard historical sources, standard federal and state environmental record sources, and physical setting sources required by the Phase I ASTM standard. In addition, we reviewed certain additional environmental record sources to supplement the standard environmental sources when such records were reasonably ascertainable and determined to be potentially useful.

4.1 Historical Use Information

The objective of consulting historical sources is to develop a history of the previous uses of the Property and surrounding area in order to help identify the likelihood of past uses having led to RECs in connection with the Property. We reviewed the following standard historical sources that were both reasonably ascertainable and likely to be useful. Selected historical documents are provided in Appendix B.

4.1.1 Aerial Photographs

Three sets of aerial photographs were obtained for the subject site and can be seen in Appendix B. Photographs obtained from EDR included satellite images from 1936, 1943, 1953, 1956, 1965, and 1969. EDR also provided aerial photographs from 1977, 1980, 1985, 1990, 2006, 2009, and 2011. For additional aerial imagery, we received aerial photographs from Quantum Spatial for 1936, 1941, 1953, 1956, 1960,1969, 1974, 1977, 1980, 1985, 1989, 1990, 1992, 1997, 1999, 2000, 2002, and 2004.

4.1.2 U.S. Geological Survey Topographic Maps

In the EDR records search, ten historic topographic maps were provided. Maps were provided for 1894, 1895, 1897, 1908, 1909, 1949, 1968, 1973, 1983, and 2014. The topographic maps did not provide any information on the site use or development.

4.1.3 City of Seattle (City) Directories

City directories were reviewed starting from as early as 1920 to as late as 2013.

4.2 Physical Setting

Site conditions noted during our visit of March 21, 2017, included the following:

- The western half of the Property was occupied by Shimmick Construction Company and was paved on the northwest section of the Property. The unpaved portion was mostly covered by quarry spalls, gravel, and soil;
- The eastern half was covered by grass and had two temporary sediment ponds;
- The site gently sloped eastward toward 9th Avenue North;

- A utility corridor was present along Roy Street and Mercer Avenue North;
- Surface drainage in the vicinity of the site was eastward; and
- Groundwater direction of flow was estimated to be similar to the surface topography at the site, draining eastward (downslope) toward 9th Avenue North. Studies on adjacent sites show groundwater flowing toward the east-northeast (SES, 2016). Overall, groundwater is estimated to move toward Lake Union to the east-northeast.

4.3 Regulatory Database Search

Standard federal and state environmental records were researched consistently with the approximate minimum search distance set forth in Section 8.2.1 of the Phase I ASTM standard for pertinent information regarding the environmental condition of the Property, adjoining parcels, and properties in the vicinity. These records were searched electronically through EDR. In addition to the standard environmental record sources, additional sources were contacted or reviewed in an effort to determine whether any other information existed relevant to identification of RECs in connection with the Property. Listed sites can be seen in Table 1. Regulatory documents can be seen in Appendix C.

4.3.1 Standard Federal Records Sources

4.3.1.1 Superfund Sites (Including National Priorities List Sites, Delisted National Priorities List Sites, Comprehensive Environmental Response Compensation and Liability Information System [CERCLIS] Sites, and CERCLIS No Further Remedial Action Plan Sites)

Four sites within the federal CERCLIS No Further Remedial Action Plan search radius were listed by EDR. The closest is Jarvie Paint Manufacturing Co., which is 704 feet to the north. The next closest is Mastercraft Metal Finishing, which is 1,935 feet to the southeast. The next closest is ABC Metal Finishing, which is 2,104 feet to the east-southeast, and the furthest site away is Daniel Boone Paint Co., which is 2,283 feet to the north. These sites are cross- or downgradient, fairly distant from the Property.

4.3.1.2 Resource Conservation and Recovery Act Facilities (RCRA) (Including Treatment, Storage, and Disposal Facilities Subject and Not Subject to Corrective Action and RCRA Generators)

Fifteen sites within the federal RCRA generators search radius were listed by EDR. Three of these sites are adjacent to the Property, including American Linen (adjacent north), the University of Washington at 815 Mercer (adjacent south), and the AIBS (adjacent east). Eleven of the sites are cross- or downgradient from the Property. Interstate Brands Corp

Hostess is downgradient and 737 feet to the southwest. More information is available on these properties in Table 1 and below.

4.3.1.3 Institutional Control/Engineering Control Registries

No sites were identified within the ASTM-prescribed radius for the database listed above.

4.3.1.4 Emergency Response Notification System

No sites were identified within the ASTM-prescribed radius for the database listed above.

4.3.2 Standard State Records

The following standard state lists were reviewed for this Phase I ESA:

4.3.2.1 Hazardous Waste Site Lists for Investigation/Remediation, National Priorities List-Equivalent Lists, Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS)-equivalent Lists, and Landfill and/or Solid Waste Disposal Sites Lists

One hundred sixty-two sites were identified within the prescribed search radius for the databases listed above. One hundred of those sites are greater than a ½ mile away. Details on listed sites with potential to impact the Property can be seen in Table 1. The EDR data report can be seen in Appendix C.

4.3.2.2 Registered Storage Tank Sites

Thirty-four registered storage tanks were listed within the ASTM-prescribed search radius for the database listed above. Details can be seen in Table 1 and Appendix C.

4.3.2.3 Leaking Underground Storage Tank (LUST) Sites

Twenty-six LUST sites were listed within the ASTM-prescribed search radius for the database listed above. Details can be seen in Table 1 and Appendix C.

4.3.2.4 Institutional Control/Environmental Control Registries

Four sites were identified within the ASTM-prescribed radius for the database listed above. Three of the sites are downgradient and over 800 feet away. One site is crossgradient and 701 feet away. Details can be seen in Appendix C.

4.3.2.5 Voluntary Cleanup Sites

Forty-three sites were identified within the ASTM-prescribed radius for the database listed above. Details can be seen in Table 1 and Appendix C.

4.3.2.6 Brownfield Sites

No sites were identified within the ASTM-prescribed radius for the database listed above.

4.4 Additional Sources

4.4.1 Seattle Department of Construction and Inspections

Multiple addresses associated with the Property were searched for in the Seattle Department of Construction and Inspections online records.

Documentation for 800 Mercer Street was returned; however, it appears that the 800 Mercer address is being used as the default address for the Mercer Corridor construction project, and not all of the documents have to do with the Property. Applicable documents include a demolition permit dated February 10, 2010, requesting to demolish the large building on the Property; a 2009 Seattle Department of Planning and Development document stating the plan to demolish the building; and a 2008 pre-application site visit report. These documents are included in Appendix C.

4.4.2 Public Health – Seattle and King County

Washington State's Seattle & King County Public Health office was contacted via telephone multiple times over the course of roughly three weeks and they did not return any phone calls or voicemails.

4.4.3 Seattle Fire Department

The King County Fire Marshall's office was contacted about the Property and requested public records requests to be submitted. Multiple public records requests were submitted for addresses on the Property. Documentation was returned for some fuel spills from vehicles in the

surrounding intersections, as well as documentation of a natural gas leak in March 2016. Documents provided for the 800 Mercer Street building include multiple notices of violations from the fire department, as well as a UST decommissioning permit for one 1,000-gallon diesel UST; however, the copies of notices of violations provided are illegible.

4.4.4 Washington State Department of Ecology (Ecology) Records

After initial review of the listed sites, available files for 15 sites were reviewed at Ecology. Sites were chosen based upon their distance and direction from the Property, as well as which databases they were listed in. Many of the sites are identified in Figure 3.

4.4.4.1 802 Roy Street – Roy Shops 89

802 Roy Street is adjacent to the north of the Property on parcel 4088803530. File review at Ecology revealed that the site has had multiple USTs and LUSTs in the past.

The most recent report found on the site is a 1995 report by Remediation Technologies, Inc. (1995). The report details soil and groundwater contamination found during the removal of two USTs in 1993. Remedial activities then took place, including UST decommissioning, multiple site investigations, contaminated soil excavation, and a supplementary site investigation. The report concludes that though remedial activities removed substantial amounts of contamination, contaminated soil still remained on the site. After excavation, total petroleum hydrocarbons (TPH) and benzene, toluene, ethylbenzene, and xylenes (BTEX) contamination existed in soil from 20 to 25 feet bgs, as well as to the east and north of the excavation. TPH and BTEX is also found exceeding Model Toxics Control Act (MTCA) criteria in groundwater. Groundwater flowing onto the site was seen to not be a source of contamination. Groundwater was shown to flow predominantly east toward Lake Union at a gradient of approximately 0.02 foot per foot (Remediation Technologies, Inc., 1995).

802 Roy Street does have contamination in soil and groundwater and is adjacent to the Property.

4.4.4.2 700 Dexter Avenue North – American Linen

700 Dexter Avenue North is adjacent to the north of the Property on parcel 2249000285. File review at Ecology revealed the site has a history of contamination resulting from the former operation of a commercial laundry facility, dry-cleaning facility, and gas station on the site. American Linen and Maryatt Industries operated commercial laundries on this site.

The most recent available report reviewed was a March 2016 Interim Action Work Plan by SES prepared for Frontier Environmental Management LLC. The report concludes that tetrachloroethylene (PCE) and trichloroethylene (TCE) in both soil and groundwater are chemicals of concern. A 2013 report also by SES included a figure, which shows a plume map coming from the American Linen site.

In soil, gasoline-range petroleum hydrocarbons and PCE are reported above MTCA Method A cleanup criteria in soil results from 1989 to 2014 (SES, 2016). The 2013 figure shows soil being affected on the northern half of the Property, but no concentration is given (SES, 2013).

In groundwater, PCE concentrations were as high as 230 milligrams per liter on the American Linen site. PCE concentrations that high are a characteristic of groundwater from 10 to 45 feet bgs. The highest concentrations of TPH are seen in the northeastern portion of the site. (SES, 2016).

The 2013 SES figure shows a PCE plume in groundwater leaving the American Linen site and going on to the Property. The plume shows a concentration of 1,000 micrograms per liter on the north boundary of the Property, roughly in the middle of the American Linen site. The plume shows a concentration of 5 micrograms per liter throughout the northern half of the Property, with a parabolic shape.

Groundwater is mapped to flow to the east-northeast in the northwest portion of the American Linen site. A figure shows groundwater flowing to the northwest on the site during dewatering activities. (SES, 2013)

In 2013, a remedial design system using electrical resistance heating/soil vapor extraction was installed to remediate PCE contamination onsite. Monitoring well data from wells installed on the Property show PCE contamination coming from American Linen onto the Property. Multiple monitoring wells were installed on the Property to monitor the PCE plume from American Linen and results have shown levels of PCE as high as 8,400 micrograms per liter in December 2013 (SES, 2016).

700 Dexter Avenue North has significant levels of contamination in soil and groundwater, is directly adjacent to the Property, and has monitoring well data showing contamination has extended onto the Property.

4.4.4.3 771, 773 Valley Street – Maryatt Industries

See Section 4.4.4.2; Maryatt Industries operated a laundry facility on the same facility as American Linen.

4.4.4.4 701 9th Avenue North – Seattle Motorsports

While requested, no files were available for review. This site was in the EDR report and can be seen in Table 1. This site is downgradient of the Property.

4.4.4.5 710 9th Avenue North – Seattle Department of Transportation Right-of-Way

710 9th Avenue North is 176 feet northeast of the Property, making this site downgradient from the Property on the non-adjacent parcel 4088803500. The most recent report found at Ecology is a September 2011 UST removal site assessment prepared by PI Resources, LLC for HTNB Corporation and the Seattle Department of Transportation.

The report details a waste oil UST found and removed during excavation activities associated with the Mercer Corridor Improvement Project in August 2011. Roughly 350 gallons of liquid were removed from the tank and the tank was excavated. One sidewall sample from the north sidewall of the excavation had oil- and gasoline-range TPH (TPH-G) above MTCA cleanup criteria. The report concludes that TPH contamination still exists within the City's right-of-way extending north of the former UST (PI Resources, LLC, 2011).

710 9th Avenue North does have contamination in soil; however, the site is downgradient and non-adjacent to the Property.

4.4.4.6 739 9th Avenue North – Maaco Auto Painting

While requested, no files were available for review. This site is upgradient on the non-adjacent parcel 4088803485 to the north.

4.4.4.7 601 Westlake Avenue North – Allen Institute of Brain Science (AIBS) Building

The AIBS building is on parcel 4088803385, adjacent to the east of the Property. The site is commonly referred to as "Block 43" in previous reports available for review. A 2015 Soil Cleanup Report prepared by HWA Geosciences Inc. (HWA) for Washington Builders, LLC, details the site history.

Previous site uses include an auto wrecking yard, a gas station, auto sales, biofuel station, steam laundry, and auto repair. Four USTs ranging from 500 to 1,000 gallons in size and six ASTs ranging from 150 to 300 gallons in size have been found on the site. The USTs contained heating oil or bunker oil, and the ASTs contained water, new or used motor oil, and common vehicle fluids. Phase II ESAs were conducted in 2000, 2003, 2009, and 2012. These studies showed the site had petroleum and metals contamination in soil and shallow groundwater, with highest concentrations in the northeast in the location of the former gas station (HWA, 2015).

In October 2013 and February 2014, GLY Construction and Northwest Construction performed remedial soil excavation underneath the current building's footprint. During excavation and contamination characterization, 12 abandoned USTs were discovered, decommissioned, and removed. Eight of these tanks were unknown and likely associated with auto fueling or heating oil. Dewatering took place on the site, and over 120,000 tons of soil was excavated and disposed of. Of 24 soil samples taken from the base of excavations, none came back with analytical results above regulatory criteria. Excavation sidewall samples from the northeast corner of the site showed soil exceeding MTCA Method A criteria (HWA, 2015). Remedial actions including in situ treatment were underway for the northeast corner at the time of this report.

The AIBS building is adjacent to the Property, downgradient, and has undergone extensive remedial activity. The site has not received a NFA from Ecology and does have contamination on the northeast side of the parcel.

4.4.4.8 Conoco Phillips 255353

The Conoco Phillips site is located at 600 Westlake Avenue North, 356 feet to the east of the Property. A 2008 UST removal report by Stantec details the site history.

In 1980, approximately 80,000 gallons of unleaded gasoline leaked from USTs over the course of four months. The LUSTs were replaced and two recovery trenches and numerous recovery wells were installed. By October 1982, roughly 41,900 gallons of gasoline had been extracted. Another spill occurred in May 2001 when a gasoline line ruptured during UST removal on the site. Six hundred gallons of unleaded gasoline were spilled and a vacuum truck immediately removed about 500 gallons of the gasoline. A new air sparge/soil vapor extraction system was installed in 2003 and by 2008, approximately 43,632 gallons of gasoline had been extracted since 1982. In 2006 and 2007, a major remedial excavation took place, and roughly 16,000 tons of soil was removed from the site (Stantec, 2008).

Stantec oversaw the removal of four 10,000-gallon fiberglass USTs in 2008. Confirmation samples taken from the UST removal area, stockpiles, and gas pump area exceeded MTCA Method A criteria. The site is undergoing groundwater monitoring, and the most recent report available from Ecology was for the first quarter of 2015 by Cardno ATC. The report showed TPH-G results as high as 10,700 micrograms per liter. Detectable levels of BTEX below MTCA Method A criteria was also present (Cardno ATC, 2015).

The Conoco Phillips site has a history of a large spill of gasoline and has had high levels of contamination in soil and groundwater. However, the site is downgradient and over 300 feet away from the Property.

4.4.4.9 630 Westlake Avenue North – Auto Service Co.

The Auto Service Co. site is 356 feet to the east at 630 Westlake Avenue North, making this site downgradient of the Property. The most recent document available from Ecology was a July 2004 Site Hazard Assessment prepared by Seattle & King County Public Health, which details the site background. The Auto Service Co. site is on the same block as Conoco Phillips 255353 above (Section 4.4.4.8) and was the building adjacent to the north of the Conoco Phillips site.

In 1996, a complaint was filed by the EPA to Ecology about the improper discharge of oil into soil from the auto service company on the southeast corner of Westlake Avenue North and Valley Street. Multiple investigations were carried out that year, which revealed mishandling of oils and other fluids. Observations by inspectors included oily water flowing into storm drains and waste oil on the ground of a changing bay thick enough that it could not be determined if the bay had a floor. By 2003, monitoring wells had been installed at the site. Soil sampling results from 2003 show TPH-G and BTEX contamination above MTCA Method A cleanup levels. In April 2003, 28.5 tons of contaminated soil were removed from the site; however, confirmation samples were not taken from excavation sidewalls or bottom of excavation (Seattle & King County Public Health, 2004).

Auto Service Co. site has a history of mishandling oil and has had high levels of contamination. However, the site is downgradient and over 300 feet away from the Property. Due to the distance and downgradient location, Auto Service Co. is not a REC for the Property.

4.4.4.10 815 Mercer Street – Washington Natural Gas

Washington Natural Gas was located at 815 Mercer Street and was adjacent to the south of the Property on parcel 1988201480. In 2012, Ecology issued the site an NFA for

gasoline-, diesel-, and oil-range hydrocarbons, BTEX, and carcinogenic polyaromatic hydrocarbons in soil. The NFA also includes diesel-range petroleum hydrocarbons and BTEX in groundwater. That NFA letter details the site's cleanup background.

From the early 1900s to 2000, the site was used by Puget Sound Energy. The site was used for manufacturing coal gas until the mid-1950s. Two very large (roughly 1-million-gallon) ASTs were on the site and were removed around 1964 when the site was developed to include a parking area and an auto maintenance garage. In 1992, five 150-gallon lube oil USTs and one 300-gallon waste oil UST was excavated from the site, as well as petroleum-contaminated soils. Due to the presence of utilities, not all of the contamination was excavated. In 1998, two 6,000 gasoline USTs, a fuel island, contaminated soil, and associated piping was removed from the site. In 2006, one 1,000-gallon gasoline UST was removed. Dewatering took place in 2006. In 2007, remaining contamination from previous UST excavations had been removed from the site (Ecology, 2012).

The Washington Natural Gas site has a history of contamination due to the site's previous use. However, cleanup actions have taken place, and Ecology has issued an NFA letter for the site.

4.4.4.11 515 Westlake Avenue North – Amazon VI

The Amazon VI site is located at 515 Westlake Avenue North and is adjacent to the southeast of the Property on parcel 1983200065. The site received an NFA from Ecology in October 2014 based on an April 2013 UST Site Assessment Report by HWA for City Place VI, LLC. The report details the site history.

In October 2012, one 2,500-gallon UST was identified on the site. In 2013, the UST was decommissioned and removed. Holes were seen in the UST during removal, and contaminated soils were excavated near the removal. One sidewall sample from the excavation returned results above MTCA Method A cleanup criteria. Additional excavation took place, and samples from that removal activity returned non-detectable levels of TPH, benzene, and carcinogenic polynuclear aromatic hydrocarbons (PAHs). Groundwater was not encountered during the soil excavation and UST removal. (HWA, 2013).

The Amazon VI site has a history of contamination due to a LUST. However, cleanup actions have taken place and Ecology has issued an NFA letter for the Amazon VI site.

4.4.4.12 520 5th Avenue North – Mercer Operating Base/Seattle Center

520 5th Avenue North is 1,267 feet southwest of the Property, making this site upgradient of the Property. The most recent report found at Ecology was a May 2015 Draft Post-Construction Environmental Management Plan prepared by GeoEngineers, Inc. (GeoEngineers) for IRIS Holdings, LLC.

The report detailed that the Bill & Melinda Gates Foundation bought land from the Seattle Center in 2006 and is making efforts to obtain an environmental covenant for the site. The site is in the voluntary cleanup program and remedial activities have taken place; however, residual contamination remains in place. The soil contaminants of concern include TPH, PAHs, Stoddard solvents, and metals. The contaminants of concern in groundwater include petroleum hydrocarbons, benzene, and metals (GeoEngineers, 2015).

An April 2011 letter from Ecology to Ms. Bonnie Pendergrass on the opinion of proposed cleanup includes a site description, which also states that contaminated fill is found on the site from 5 to 20 feet thick. The enclosure also states that the groundwater flows toward the southeast on the site despite the local groundwater trend of flowing toward the northeast. Attached figures to both reports show groundwater plumes moving toward the south-southeast, away from the Property.

A Groundwater Monitoring Report from October 2011 by GeoEngineers prepared for IRIS Holdings, LLC, details an active in situ groundwater treatment system through air sparging and soil vapor extraction. Three groundwater monitoring wells were sampled quarterly in 2011, and both dissolved and total arsenic and total chromium were reported above MTCA Method A criteria. There were not any detectable concentrations of TPH (GeoEngineers, 2012).

Though contamination above MTCA criteria has existed in both soil and groundwater at the site, groundwater has been mapped to be flowing away from the Property.

4.4.4.13 325 Aurora Avenue North – Vagabond Motel

325 Aurora Avenue North is 1,125 feet to the south of the Property. The most recent report available at Ecology was an April 2003 work plan concerning PCE-impacted soil delineation prepared by Kleinfelder, Inc. for RPD Hotel 18.

The report gives the background of the site. From 1933 to 1946, the site was occupied by a gas station, and from 1946 to 1957 (possibly 1958), the site was occupied by a dry-cleaning facility. PCE, TCE, and petroleum contamination in soil was found during a 1998

investigation above Ecology cleanup levels. In 2000 and 2001, investigations found PCE and TCE in perched groundwater at depths of 51 to 55 and 70 feet bgs (Kleinfelder, Inc., 2003).

Though contamination has existed above MTCA criteria on the site, the site is 1,125 feet away from the Property and records did not indicate the presence of a far-reaching plume.

4.4.4.14 Interstate Brands Hostess

434 Aurora Avenue North is 737 feet south of the Property. The most recent document available was a 2003 letter from Ecology to Environmental Management Services, Inc. (Ecology, 2003). The site had four LUSTs that resulted in petroleum contamination on the site. The USTs included one 750-gallon diesel tank (UST number [#]1), one 10,000-gallon diesel tank (UST #2), one 5,000-gallon diesel tank (UST #3), and one 4,000-gallon bunker oil tank (UST #4).

Remedial action included removal of UST #1 and UST #2, and decommissioning UST #3 and UST #4 in place. Soil samples taken during excavation and decommissioning did not exceed 1997 MTCA Method A criteria. In March 2003, Ecology issued an NFA letter for the site. (Ecology, 2003).

4.4.5 Sanborn Fire Maps

Sanborn fire maps were available through EDR for the following years: 1893, 1905, 1917, 1950, and 1969. The 1893 and 1905 Sanborn maps show Lake Union on the northeast corner of the Property.

In 1917, a Sanborn map shows a company named Mutual Laundry moved into the parcel at 705 Mercer roughly 200 feet southwest of the Property. This site was not seen in other records.

4.4.6 Puget Sound Regional Archives (PSRA)

Files at the PSRA were reviewed for the Property and adjacent parcels. Kroll maps were also reviewed at the PSRA. The findings of the review can be seen below.

4.4.6.1 MegaBlock Property (Parcels 2249000080, 2249000055, 2249000040, and 2249000006)

One assessor's record from 1923 shows a house built in 1900 that was connected to the sewer and had a stove for heating. A photo of the house shows it was equipped with a

lower-level garage. Another assessor's record for the 800 Mercer building shows the building built in 1924 with an addition in 1962. The building had an oil burner with the boiler room in the northwest corner of building.

4.4.6.2 Adjacent West (Parcel 2249000100, South)

Multiple records show photographs of a small gas station on the northwest corner of Mercer Street and Dexter Avenue North and a building with a sign reading "Sanitary Laundry" on the parcel. The record shows the gas station built in 1930 and the Sanitary Laundry building built in 1919. One record details the Sanitary Laundry building as a "heating plant" that had a boiler installed in 1928 for steam heating.

4.4.6.3 Adjacent West (Parcel 2249000120, North)

The assessor's record showed "Building B" was built in 1945, was owned by Colotyle Corporate, and had electric heating. No tanks were noted in the record. A separate record shows the building equipped with industrial hot water or steam heater.

4.4.6.4 Adjacent Northwest (Parcel 2249000245)

One assessor's record updated through 1973 gives no description of any building on the parcel besides that the parcel has City water and sewer.

4.4.6.5 Adjacent North (Parcel 2249000285, West)

Records from 1947 and 1966 show American Linen Supply Co. present on the parcel. The building has gas heating and two oil burners. Another record shows two gasoline fueling pumps and Maryatt Electric Laundry on the parcel. The photo also shows a large smokestack emitting black smoke. No USTs are mentioned in the record; however, it can be assumed that the site had USTs for gasoline and heating oil.

4.4.6.6 Adjacent North (Parcel 4088803530, Center)

One assessor's record shows an open warehouse built in 1924 on the site. Another record from 1955 shows Seattle City Light present on the parcel with multiple buildings and tanks, whether they are above or below ground is unspecified.

4.4.6.7 Adjacent North (Parcel 4088803435, East)

No records were available for this parcel. This parcel seems to have been divided from parcel 4088803440 directly to the north. That parcel showed one record of an auto shop on the parcel equipped with a sawdust burner for heat.

4.4.6.8 Adjacent Northeast (Parcel 4088803495)

One 1941 assessor's record shows the current building built in 1941 with a stove heater and no mention of tanks. William O. McKay was the fee owner at this time.

4.4.6.9 Adjacent East (Parcel 4088803385)

One 1937 assessor's record shows one large building present on the parcel and has a photo of Lincoln and Ford automobile sales or repairs. The building was built in 1922 and the record has no mention of tanks.

4.4.6.10 Adjacent Southeast (Parcel 1983200065)

Assessor records from 1948 and 1956 show William O. McKay as the fee owner for this site. The site is shown being used as a used car dealership in photos. One small office is present on the site with a stove for heating.

4.4.6.11 Adjacent South (Parcel 1988201480, East)

Two assessor's records from 1936 show "Building E" built in 1909 with suspended gas heaters and another building built near 1-million-gallon ASTs in 1918, also with suspended gas heaters. Two assessor's records from 1962 and 1964 show a building built in 1964 for the Washington Natural Gas Company with multiple USTs. The 1962 record was likely updated at a later time after the building was constructed. Another 1964 record shows a small gas station on the site.

4.4.6.12 Adjacent South (Parcel 1988201410, West)

Two assessor's records show Peoples National Bank on the parcel in a building built in 1956-1957. A 1956 record shows the building was built with an oil burner and a boiler room in the northeast corner of the building.

4.4.6.13 Adjacent Southwest (Parcel 1988201215)

One photograph available shows the Seattle Seamen's Center on the parcel in 1961.

4.4.6.14 Kroll Maps

Kroll maps for the area were reviewed for 1926, 1940, 1960, and 1998. The Kroll maps did not reveal any information for determining a REC.

4.4.7 Summary of Additional Sources Reviewed

Additional sources reviewed included Seattle Department of Construction and Inspections documents, Seattle Fire Department documents, Ecology records, PSRA records, Sanborn fire maps, and Kroll maps.

4.5 Potential for Vapor Intrusion

State and federal regulatory agencies do not regulate indoor air quality except to the extent that indoor air impacts are caused by releases of hazardous substances into subsurface soil or groundwater (vapor intrusion).

The ASTM E2600-10 vapor encroachment screening standard was published in June 2010 and provides guidance on evaluating vapor migration from contaminated properties and media. The standard specifically focuses on screening for the likelihood of migrating vapors from nearby contaminated properties and media, such as soil and groundwater, to encroach upon the subsurface of a property involved in a real estate transaction.

The first check in the screening process is a search distance test to identify if there are any known or suspected contaminated sites with volatile or semi-volatile hazardous chemicals of concern (COCs) in the area of concern (AOC). If there are none, no further action is required. The AOC for contaminated sites with non-petroleum hydrocarbon COCs, such as chlorinated solvents, is 1,760 feet around a target property. For sites with petroleum hydrocarbon COCs, the AOC is 528 feet.

Based on our knowledge of where sites are in relation to the Property, the review of the records above revealed the presence of multiple known contaminated sites within the applicable distances from the site boundaries, including the site adjacent to the northeast. According to the EDR VEC (vapor encroachment risk) App™, when adjusted for groundwater flow direction, over 50 sources are within the AOC.

The site adjacent to the north, American Linen, was previously a large laundromat and gas station. A PCE plume has been documented to be on the Property from the American Linen site.

The potential for vapor intrusion is high on the site due to nearby contamination and potential contamination, as well as many sites in the AOC.

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The objective of the site reconnaissance is to obtain information indicating the likelihood of identifying RECs in connection with the Property. A Shannon & Wilson representative assessed the Property and surrounding area on March 21, 2017, to visually observe the Property for evidence of confirmed and potential impacts of hazardous substances or petroleum resulting from historical or current use of the Property. Photographs taken during the site reconnaissance are included in Appendix A.

The site visit consisted of (a) observation of the periphery of the Property and structures on the Property and (b) observation of the Property from public thoroughfares.

5.2 General Site Setting

5.2.1 Current Use of the Property

The Property is divided by a fence into a western half and an eastern half, with a small fully fenced-off grassy area in the middle. The western half was being used as a staging area for construction and equipment by Shimmick Construction Company. On this half, the northern area is mostly parking, and soil is stockpiled in the southern portion of the site. The remainder of the west half is largely taken up by construction equipment and Conex boxes. The east half of the Property is grass covered and has two temporary sediment ponds.

5.2.2 Past Uses of the Property

The Property has a history of commercial buildings, including gas station, auto shops, manufacturing, and more. Broad Street previously dissected the west portion diagonally from the southwest corner to the northeast corner. Broad Street was later changed to dissect the whole site from the southwest to the northeast, and an underpass was constructed extending southwest under Mercer and Dexter. Based on photos, excavations may have extended greater than 20 feet. Pavement from the roadway still exists on the Property. See Section 2.5 for a detailed site history.

5.2.3 Potable Water Supply and Sewage Disposal System

Potable water supply and sewage disposal service at the site would be provided by the City. Currently, domestic water is supplied to the interior and exterior of the CSO drop structure. The two temporary sediment ponds drain into the public storm drain system. No buildings are on the Property.

5.3 Site Observations

Observations were limited to areas that were not covered by construction staging equipment. Features such as stains and stressed vegetation may have been concealed underneath construction equipment, quarry spalls, or Conex boxes.

5.3.1 Pits, Ponds, and Lagoons

Two temporary sediment ponds are on the east side of the Property.

5.3.2 Septic Systems

No septic systems were observed on the Property.

5.3.3 Stained Soil or Pavement

No stained soils or stained pavement was observed. The ground on the western half of the Property was largely covered by quarry spalls and construction equipment, which may have concealed stains. The temporary sediment ponds had water in them, and the base of the ponds could not be observed. Areas that may have contained stained soil or stained pavement may have been concealed by equipment and stormwater on the Property.

5.3.4 Stressed Vegetation

No stressed vegetation was observed. The base of the temporary sediment ponds could not be seen, as well as any vegetation that may have existed beneath construction equipment.

5.3.5 Aboveground and Underground Storage Tanks (ASTs and USTs)

No evidence of ASTs or USTs was observed on the Property.

5.3.6 Odors

No odors were noted on the Property.

5.3.7 Pools of Liquid

Both temporary sediment ponds had stormwater in them. No sheen was noted.

5.3.8 Drums or Hazardous Substances/Petroleum Products Containers

Solvent drums, paint, three flammables lockers, and compressed gas cylinders were seen near the center of the western half of the Property. Multiple solvent drums and other chemicals were stored in secondary containment. Compressed gas cylinders were likely acetylene for welding or compressed air.

5.3.9 Unidentified Substance Containers

No such containers were observed on the Property.

5.3.10 Electrical or Hydraulic Equipment with Polychlorinated Biphenyls (PCBs)

No potential PCB-containing equipment or vessels were noted on the Property. West of the Property, one telephone pole-mounted transformer was observed in the sidewalk. North of the Property across Roy Street, a newer, street-level transformer was observed, which is possibly PCB-free.

5.3.11 Wastewater or Stormwater Discharges

Two temporary sediment ponds were observed on the site. Stormwater from the west side of the site flows via overland runoff into storm drains or the temporary sediment ponds. Stormwater from the west side of the Property may also pool. Stormwater from the east side of the Property enters the temporary sediment ponds. The sediment ponds drain into the public storm drain system on the west side of 9th Avenue North.

5.3.12 Unidentified Fill Material and Debris

Soil stockpiles were seen on the southern border of the west half of Property. This soil is for or from other Shimmick Construction Company projects, which are close by. The soil is said to be "clean." Lake Union used to cover the northeast corner of the Property, and fill material was likely placed in the area where Lake Union was. Fill is also located where Broad Street used to exist as it declined into an underpass on the Property. The Property is now level, so a significant amount of fill must have been used.

5.3.13 Evidence of Solid Waste Disposal or Other Dumping Onsite

No evidence of solid waste disposal was noted on the site. Some piles of construction equipment on the eastern border of the west half of the Property could have been used materials that are destined for disposal (Appendix A, photo 7). Materials include some litter that was seen on the east side of the Property.

5.4 Adjoining and Surrounding Properties Evaluation

5.4.1 Properties to the East

At the time of the site visit, the AIBS building was observed to the east of the Property. The site is fully developed.

5.4.2 Properties to the Northeast

A sign for a coffee shop named Urban City Coffee was on the building; however, the space appeared to be vacant. The site is fully developed.

5.4.3 Properties to the North

At the time of the site visit, the sites/buildings directly to the north were vacant. From west to east, the sites included a fenced-in construction site with privacy sheeting where the American Linen site was located, a seemingly vacant building space at 802 Roy Street, and another vacant space in a brick building at 701 9th Avenue North. Some drums were stored at the American Linen site, and monitoring wells could be seen. The sites to the north were fully paved or developed.

5.4.4 Properties to the Northwest

At the time of the site visit, the site was a large office building with four floors on top of two levels of parking. The site was fully paved.

5.4.5 Properties to the West

At the time of the site visit, the sites include two buildings occupied by Copiers Northwest. The buildings are used as warehouses, offices, printing facilities, and the storefronts for selling printing equipment. The sites to the west were fully developed.

5.4.6 Properties to the Southwest

At the time of the site visit, the building was occupied by Seattle Strength & Performance, a gym. The site was fully paved or developed.

5.4.7 Properties to the South

The sites to the south include multiple large buildings. The western property to the south was a vacant site used as staging by Sellen Construction. The eastern property to the south was two large buildings occupied by University of Washington Medicine. The sites to the south were developed; however, construction equipment and staging concealed the ground surface at the Sellen site.

5.4.8 Properties to the Southeast

The site has a large six-story office building with underground parking occupied by Amazon. The site is fully developed.

6.0 INTERVIEWS

Interviews with site contacts were conducted by Blaine Nesbit and David Randall of the Shannon & Wilson staff.

6.1 Interview with Tenant

On March 21, 2017, André Gano (Mr. Gano) with Shimmick Construction Company was interviewed on the Property. Mr. Gano is the site Superintendent and was present on the Property at the time of the field visit. Mr. Gano has been working on the Property for about one year. Mr. Gano knew that the site had Broad Street running through it at one point and before Shimmick Construction Company moved onto the site it was vacant, only occupied by a small homeless population. He informed us of the chemicals stored onsite, which include about eight pallets worth of paint thinners, solvents, and paint. When questioned about the soil on Property, Mr. Gano told us the quarry spalls and stockpiled soil were all brought onto the Property and should be from clean sources. He was not aware of any stained soil, USTs or ASTs, dry wells, vent, or fill pipes present on the Property.

6.2 Interview with Local Government Officials

Seattle & King County Public Health was contacted multiple times via telephone for an interview. After leaving multiple voicemails, the department did not return any calls and was ultimately not reached for an interview.

6.3 Interviews with Others

No others were identified to be interviewed about the Property.

7.0 FINDINGS AND OPINIONS

We have performed a Phase I ESA in conformance with the scope and limitations of the Phase I ASTM standard of the Property located within the area bound by Roy Street to the north, 9th Avenue North to the east, Mercer Street to the south, and 8th Avenue North to the west. Any exceptions to or deletions from the Phase I ASTM standard are described in Section 1.4 of this report. Data gaps, if any, are also described in Section 1.4 of this report. This assessment has revealed evidence of 15 RECs and 2 HRECs in connection with the Property.

7.1 Recognized Environmental Conditions (RECs)

This assessment revealed evidence of the following 15 RECS in connection with the Property.

1. A gas station previously operated in the southwest corner of the Property.
2. A second gas station previously operated in the northwest corner of the Property. One fuel UST remains on the site and one fuel UST has been removed.
3. A building on the northwest corner of the eastern half of the Property was previously used for soap and chemical manufacturing and had a boiler room, suggesting a UST with heating fuel was present at some point.
4. A building on the northeast corner of the Property previously was used by multiple auto wrecking companies. The building had a large parking lot covering the east side of the Property, which was used for the storage of wrecked cars.
5. A building on the southwest corner of the eastern half of the site referenced to as 800 Mercer was previously used by multiple tenants. The 800 Mercer building had a 1,000-gallon diesel UST.
6. Fill material from unknown sources was used on Property to fill in a previous ramp to an underpass, as well as where Lake Union used to reside on the northeast corner of the Property.
7. Parcel 2249000100, adjacent to the west of the Property, has previously been occupied by a gas station and a dry cleaner. Multiple USTs containing solvents, heating oil, and bunker fuel have been present in the alleyway to the north of this parcel. This site is upgradient to the Property.
8. Parcel 2249000285, adjacent to the north of the Property, has previously been occupied by a very large laundry/dry-cleaning facility, as well as a gas station. Contamination on this site is well documented and a PCE plume has been mapped to be on the Property from the parcel.

9. Parcel 4088803435, adjacent to the north of the Property, was shown by the EDR data report to have petroleum contamination in soil and groundwater, as well as halogenated solvents suspected in groundwater. This site was not listed in any other records, and the contamination may be due to contamination from parcels 2249000285 or 4088803530.
10. Parcel 1988201215, adjacent to the southwest of the Property, has previously been occupied by a gas station. This site is upgradient of the Property.
11. Parcel 4088803530, adjacent to the north of the Property, has documentation showing multiple USTs and LUSTs existed on the site. Petroleum contamination in soil and groundwater has been present on the parcel.
12. Parcel 4088803385, adjacent to the east of the Property, has previously been occupied by multiple dry cleaners, gas stations, auto repair shops, auto wreckers, and more. Contamination of soil and shallow groundwater with petroleum and metals has been well documented. Cleanup efforts have been made; however, some contamination remains on the site.
13. Parcel 1988201410, adjacent to the south of the Property, has previously been occupied by a bank building, which had a boiler and an oil-burner for heat. This suggests a heating oil UST was present at the site. This site is adjacent and upgradient to the Property.
14. The Property has a high potential for vapor intrusion due to the American Linen site to the north, as well as multiple gas stations previously being on the Property.
15. The 1917 Sanborn map shows Mutual Laundry, a dry-cleaning facility, roughly 200 feet upgradient of the Property to the southwest.

7.2 Controlled Recognized Environmental Conditions (CRECs)

This assessment revealed no evidence of CRECs in connection with the Property.

7.3 Historical Recognized Environmental Conditions (HRECs)

This assessment revealed two HRECs in connection with the Property.

Parcel 1988201480, adjacent to the south of the Property, was previously used by Washington Natural Gas for the manufacturing of coal gas until the mid-1950s. The site had multiple USTs, as well as two roughly 1-million-gallon ASTs. Contamination due to site use was present on this site, and Ecology issued an NFA letter to the site in 2012.

Parcel 1983200065, adjacent to the southeast of the Property, previously contained a 2,500-gallon LUST. The UST was removed in 2013, and Ecology issued the site an NFA in 2014.

7.4 Recommendations

Our professional opinion is that a Phase II ESA is warranted for this Property.

8.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Mr. Blaine Nesbit compiled this Phase I ESA. Mr. Nesbit is an Engineer-in-Training with a degree in Environmental Engineering. Mr. Nesbit has been employed in the environmental field for two years. He has worked for government environmental regulatory agencies and as a consultant.

Ms. Agnes Tirao, an Associate at Shannon & Wilson, reviewed this Phase I ESA for completeness and technical accuracy. Ms. Tirao is a professional engineer with over 20 years of experience conducting Phase I ESAs and other environmental assessments. The environmental professional resumes can be seen in Appendix D.

Shannon & Wilson has prepared the enclosed Appendix E, "Important Information About Your Environmental Site Assessment/Evaluation Report," to assist you and others in understanding the use and limitations of our reports.

9.0 LIMITATIONS AND RISK

This Phase I ESA was conducted to render a professional opinion about the likelihood of regulated contaminants being present on, in, or beneath the Property at the time services were conducted. No matter how thorough a Phase I ESA study may be, findings derived from its conduct are limited, and Shannon & Wilson cannot know or state for an absolute fact that a site is unaffected by reportable quantities of regulated contaminants. Furthermore, even if Shannon & Wilson believes that reportable quantities of regulated contaminants are not present, the User still bears the risk that such contaminants may be present or may migrate to the site after the study is complete.

Shannon & Wilson has reviewed historical records and conducted an on-site visual inspection of the Property. We have examined and relied on documents referenced in the report and on oral statements made by certain individuals. We have not conducted an independent examination of the facts contained in referenced materials and statements. We have assumed that these documents are genuine and that the information provided in these documents and statements is true and accurate. We have no knowledge or indication to the contrary unless otherwise stated in the body of the report.

Data generated from the site reconnaissance reflect that which can be reasonably inferred or is obvious by direct visual observation. Shannon & Wilson assumes no responsibility for identifying characteristics of the Property that were not readily identifiable by visual reconnaissance at the time of our site visit.

Shannon & Wilson has prepared this report in a professional manner, using that level of skill and care normally exercised for similar projects under similar conditions by reputable and competent environmental consultants currently practicing in the area, and in accordance with the terms and conditions set forth in our contract. Shannon & Wilson is not responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the report was prepared. Also note that the facts and conditions referenced in this report may change over time and that the conclusions set forth here are applicable to the facts and conditions as described only at the time of this report. Conclusions were made within the operative constraints of the scope, budget, and schedule for this project. We believe that the conditions stated here are factual, but no guarantee is made or implied.

10.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the Property. I have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

SHANNON & WILSON, INC.

Notes:
This table includes selected information for sites with known or suspected contamination located within approximately ¼ mile upgradient of the subject parcel or within approximately 400 feet in any direction.
Environmental Data Resources, Inc. (EDR) Hist Auto and EDR Hist Cleaner only sites are not listed in the Washington State Department of Ecology (Ecology) database.
(GW) = in groundwater
(S) = in soil
ALLSITES = information on facilities and sites of interest to Ecology
AVE = Avenue
CESQG = conditionally exempt small-quantity generator
CO = Company
City = City of Seattle
CSCSL = Confirmed and Suspected Contaminated Sites List
ECHO = Enforcement & Compliance History Information
EDR = Environmental Data Report
EPA = U.S. Environmental Protection Agency
FTTS = Federal Insecticide, Fungicide, and Rodenticide Act and Toxic Substances Control Act
FINDS = Facility Index System/Facility Registry System
HREC = historical recognized environmental condition
ICR = independent cleanup report
LQG = large quantity generator

TABLE 1
LISTED SITES WITH POTENTIAL TO IMPACT SUBJECT PROPERTY

Site Name	List	Address	Status (According to EDR)	EDR Estimated Distance From Subject Property (feet)	Approximate Direction From Subject Property	Estimated Upgradient/ Downgradient	Listed on Ecology Website	REC from EDR?	REC From Other Source?

LUST = leaking underground storage tank
MANIFEST = Hazardous Waste Manifest Data
MGP = manufactured gas plant
NFA = No Further Action
NLR = no longer regulated
NonGen/NLR = NonGenerator/no longer regulated
OFC = Office
PSE = Puget Sound Energy
PSRA = Puget Sound Regional Archives
RCRA = Resource Conservation and Recovery Act
REC = recognized environmental conditions
SDOT = Seattle Department of Transportation
TPH-D = Total Petroleum Hydrocarbons-Diesel-range
UST = underground storage tank
VCP = Volunteer Cleanup Program

APPENDIX A

SITE PHOTOGRAPHS

Photo 1: The northwest corner of the site shows the storage of construction materials on pavement and gravel. Looking northwest, the large building in the background is the parcel adjacent to the northwest.

Photo 2: From the northwest corner looking east. Cars are parked on the paved section of the site in the northwest.

Photo 3 – Conex containers on the west property boundary, looking east. Orange paint is also seen being stored in buckets, with some drips coming down the sides.

Photo 4: Shimmick Construction has solvents, paints, and other chemicals stored under cover, multiple in secondary containment near the middle of their site. Three flammables lockers are also seen in this area. Some orange paint drippings are seen.

Photo 5: Soil is stockpiled on the south boundary of the western half of site. The soil is from other Shimmick Construction sites for temporary holding. The soil is reportedly "clean." Looking southeast, the University of Washington Medical building to the south can be seen in the background.

Photo 6: Looking northeast from the south boundary, two stormwater detention ponds are seen on the east half of the site. The east half of the site is fenced in and covered by grass and soil.

Photo 7: Construction debris stored on the eastern border of the Shimmick Construction side. A fence divides the property from east to west, with Shimmick Construction on the west and retention ponds on the east. The Allen Institute of Brain Science building (left), Amazon VI Building (center), and University of Washington Medical building (right) can be seen in the background.

Photo 8: The southwest corner of the American Linen site, which is adjacent to the north of the subject property.

Photo 9: Looking south across Mercer street. Sellen and McKinstry Construction are using the parcel to the south of the subject property as a staging and parking area.

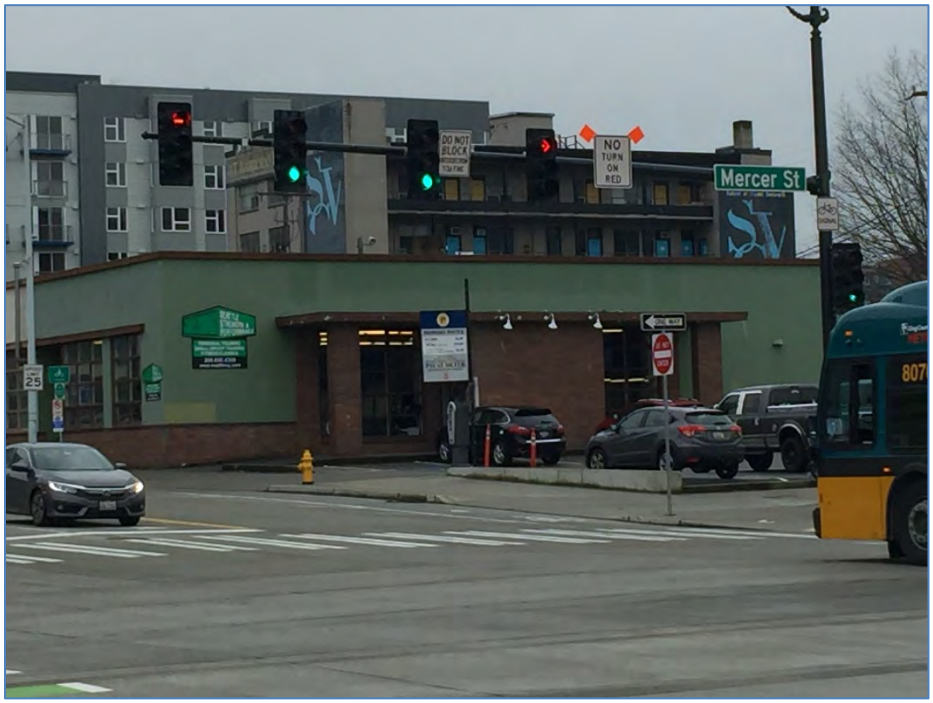

Photo 10: Looking southwest across in intersection of Dexter and Mercer streets. The parcel to the southwest includes a gym.

Photo 11: Looking north onto the American Linen site, adjacent north of the subject property.

Photo 12: Looking west across Dexter Avenue North. Adjacent west of the property includes two buildings occupied by Copiers Northwest.

Photo 13: Looking north across Roy street. The building adjacent to the north appeared to be vacant.

Photo 14: Looking north across Roy street. Another building adjacent to the north appeared to be vacant.

Photo 15: Looking northeast across the intersection of Roy street and 9th Ave N. The building adjacent to the northeast was vacant, with a sign for Urban City Coffee, which is no longer an occupant of the space.

Photo 16: Utilities on the sidewalk west of the site, looking south. An overhead transformer is visible on a telephone pole.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Shannon & Wilson, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

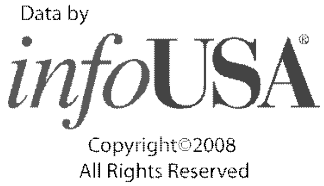
Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR is licensed to reproduce certain City Directory works. Reproduction of City Directories without permission of the publisher may be a violation of copyright.



RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL ---------- National Priority List
Proposed NPL ---------- Proposed National Priority List Sites

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes

available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/10/2016 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/12/2016 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/12/2016 has revealed that there are 7 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/12/2016 has revealed that there are 3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 10/18/2016 has revealed that there are 131 WA CSCSL sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

WA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the WA LUST list, as provided by EDR, has revealed that there are 26 WA LUST sites within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 10/18/2016 has revealed that there are 47 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/12/2016 has revealed that there are 57 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

WASHINGTON NATURAL G	815 MERCER ST	SE 0 - 1/8 (0.013 mi.)	C19	118

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 46 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 7 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No

WA UW 815 MERCER (Continued) **1000455962**

Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

SEATTLE MOTOR SPORTS (Continued) **1000838996**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110005397043

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

SEATTLE CITY SDOT BROAD ST (Continued) **1011924890**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110005380051

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

WESCOR GRAPHICS CORP (Continued) **1000473813**

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

ANTIQUE LIQUIDATORS (Continued) **1001806963**

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.
