EXECUTIVE SUMMARY

This report documents the results of our Phase I Environmental Site Assessment of 615 Dexter Avenue North in Seattle, Washington (Property). The Property is located in the northeast quarter, Section 30, Township 25, and Range 4 of King County and is on King County tax parcel 2249000120. A Vicinity Map is included as Figure 1 and a Site Plan is included as Figure 2. Historical features of concern can be seen in Figure 3.

Multiple recognized environmental conditions (RECs) were found in connection to the Property and are listed below.

The parcel adjacent to the northeast has been occupied by American Linen and Maryatt Electric Laundry, as well as a small gas station. This site has a history of tetrachloroethylene, trichloroethylene, and petroleum contamination. Due to the proximity and confirmed contamination, this site is a REC for the Property, and more detail is provided in Section 4.4.2.2 below.

The 1917 Sanborn fire map shows Mutual Laundry 200 feet south of the property. Due to the proximity of the site and high risk of contaminant release associated with cleaners, this site is a REC for the Property. More detail is provided in Section 4.4.2 below.

The 1950 Sanborn fire map shows a 2,000-gallon solvent storage tank in the alley south of the Property. Due to the unknown status and condition of the tank, this is a REC for the Property.

The 1950 Sanborn fire map shows a plastic mixing room in the Property building while occupied by Colotyle Corporation. This previous use of the building is a REC for the Property.

The 1950 Sanborn fire map shows an oil burner sales and facilities business on the adjacent west parcel. The previous use of this upgradient building is a REC.

A 1997 document from the Seattle Fire Department shows three 1,000-gallon heating oil underground storage tanks (USTs) and one 1,000-gallon bunker oil UST existed in the alley directly south of the Property building. The status of these USTs is unknown and is a REC for the Property.

The parcel directly adjacent to the south was once occupied by a drycleaner and a gas station and is a REC for the Property. More detail is provided in Section 4.4.4.2 below.

There is a high risk of vapor intrusion on the site due to multiple nearby petroleum and solvent USTs, historical drycleaners, gas stations, and sites with confirmed contamination. Vapor intrusion is a REC for the Property. More detail is provided in Section 4.5 below.

The east half of the current building burned down in roughly 2005. This event may have resulted in polycyclic aromatic hydrocarbon or metal contamination and is a REC for the Property. More detail is provided in Section 5.3.22 below.

An old boiler and coal appeared to have been used on the site for heating or manufacturing. The use of coal and a boiler close to the floor drain is a REC.

Floor drains were seen in the building. Floor drains provide a pathway for contamination to leak onto the property through leaking or broken pipes. Onsite use of chemicals may have resulted in chemicals entering the floor drains. Floor drains being present in the building is a REC.

**PHASE I ENVIRONMENTAL SITE ASSESSMENT
MERCER CORRIDOR PROJECT WEST
615 DEXTER AVENUE NORTH
SEATTLE, WASHINGTON**

1.0 INTRODUCTION

This report documents the results of our Phase I Environmental Site Assessment (ESA) of 615 Dexter Avenue North in Seattle, Washington (Property). We understand that the Seattle Department of Transportation (Client) is interested in selling this property.

1.1 Purpose

The purpose of this Phase I ESA is to identify, to the extent feasible pursuant to the process described in the ASTM International (ASTM) Practice E1527-13 (Phase I ASTM standard, 2013), recognized environmental conditions (RECs), controlled RECs (CRECs), or historical RECs (HRECs) associated with the Property. The term REC means:

The presence or likely presence of hazardous substances or petroleum products in, on, or at a property: (a) due to a release to the environment, (b) under conditions indicative of a release to the environment, or (c) under conditions that pose a material threat of a future release to the environment.

The term CREC means:

A REC resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a No Further Action letter or equivalent or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example: property use restrictions, activity and use limitations [AULs], institutional controls, or engineering controls).

The term HREC means:

A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority **without** subjecting the property to **any required controls**.

The terms REC, CREC, and HREC are not intended to include de minimis conditions that generally do not present a threat to human health or the environment and that generally would

not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The U.S. Environmental Protection Agency has determined that the Phase I ASTM Standard is consistent with and meets the requirements for performing All Appropriate Inquiry (AAI) and may be used to comply with federal AAI regulations at 40 Code of Federal Regulations (CFR) Part 312.

The Client did not request Shannon & Wilson to determine whether additional inquiry requirements may exist to potentially qualify for similar landowner liability protection under state law.

1.2 Scope of Services

The Phase I ESA was prepared for the Client. This work was performed in accordance with our subcontract agreement/amendment 8. An informal notice to proceed was received from John McMillan of KPFF Consulting Engineers on February 23, 2017, in the form of an email. Formal authorization to proceed with the Phase I ESA was received on March 23, 2017.

The scope of a Phase I ESA under the Phase I ASTM Standard does not include an evaluation of all environmental considerations that may be relevant to a particular transaction, such as testing for radon, lead-based paint, mold, and asbestos or evaluation of indoor air quality, potential wetlands, regulatory compliance, and health/safety matters. A Phase I ESA also does not include any sampling or testing of air, soil, water, or building materials. The Client did not request that we inquire into these or other non-scope considerations as a part of this Phase I ESA.

1.3 Significant Assumptions

Information collected for this Phase I ESA was collected from numerous sources, including interviews with tenants. The sources are identified in the body of this report. The information obtained from these sources, to the extent relied upon in forming our opinions, is assumed to be accurate and complete. Persons who were interviewed are assumed to have answered all questions in good faith, accurately, and to the extent of their knowledge.

1.4 Limitations, Exceptions, and Data Gaps

As discussed in the Phase I ASTM Standard, performance of a Phase I ESA, even in compliance with the Phase I ASTM Standard, cannot eliminate uncertainty regarding the potential for hazardous substances or petroleum to exist at a property.

The use of this Phase I ESA is strictly limited to support property evaluation in anticipation of selling the property. Certain environmental conditions may exist on a property that are beyond the scope of this Phase I ESA, but may still warrant consideration by parties to a commercial real estate transaction. For example, a site with contamination remaining may have been approved by regulatory authorities for closure and is not a REC presently, but if the remaining contamination is disturbed during future site development work, environmental regulations may require testing and off-site disposal of such soil.

Per the Phase I ASTM Standard, a Phase I ESA is presumed to be valid if completed less than 180 days prior to the date the property is acquired, or for transactions not involving an acquisition (the date of the intended transaction). If within this 180-day period the Phase I ESA will be used by someone other than the Client, then the subsequent user must also satisfy the User's Responsibilities set forth in Section 6 of the Phase I ASTM Standard. Certain portions of the Phase I ESA are valid for a period of up to one year; however, several components must be updated by an environmental professional within 180 days of the purchase or the date of the intended transaction.

The findings, opinions, and recommendations contained in this report are based on information provided from the observed site conditions, personal interviews, and other sources identified herein. The data presented in this report should be considered representative of the time of our site assessment. Changes due to natural processes or human activity could have occurred after the date of our site reconnaissance and interviews but before the issuance of this report. In addition, changes in government codes, regulations, or laws may occur in the future, which could alter the opinions formed at the time of this assessment.

The following list identifies the deviations and exceptions from the standard requirements of the Phase I ASTM Standard and any data gaps encountered in performing the Phase I ESA despite our good faith efforts to gather such information. In our opinion, none of these impacted our ability to identify RECs associated with the Property.

The following list contains the exceptions/deviations and data gaps encountered during this ESA:

- The following Standard Historical Sources listed in Phase I ASTM Section 8.3.4 were not reviewed for this Phase I ESA because they do not exist for sites in this portion of King County, were unobtainable, or were not provided:
 - Interview with the Washington State Department of Health. The Washington State Department of Health was contacted multiple times and did not return any calls.

- Phase 1 User Reliance Form
- Previous ESAs.
- The Phase I ASTM Standard Section 6 requires that the User review judicial records for evidence of environmental liens and AULs that are imposed by judicial authorities, if such records are applicable. To our knowledge, judicial records were not reviewed by the User in connection with this Phase I ESA.

1.5 Special Terms and Conditions

None were applicable to this ESA.

1.6 User Reliance

The Phase I ASTM Standard defines “User” as the party seeking to use the standard to complete an environmental site assessment of the property and may include, without limitation, a potential purchaser of property, a potential tenant of property, an owner of property, a lender, or a property manager. The information and opinions in this report are exclusively for the use of and reliance by the Client and their respective affiliates, representatives, and agents. Reliance on this Phase I ESA by all authorized persons or entities is subject to the terms and conditions set forth in the Proposal. No other persons or entities are entitled to rely on this report without prior written approval from Shannon & Wilson, which consent may be conditioned upon, among other things, payment of a fee. In any event, such third-party’s reliance would be limited to the same extent of Client's reliance and subject to the same contractual, technological, and other limitations to which the Client has agreed. A questionnaire has been submitted to, but not completed by, the User.

This Phase I ESA is valid for a period of 180 days. Its use after 180 days is subject to the limitations and requirements in the Phase I ASTM Standard, including but not limited to Section 4.7. The services provided by Shannon & Wilson were performed consistent with the standards of the profession and Shannon & Wilson provides no other warranty of any kind, whether express or implied.

2.0 SITE DESCRIPTION

2.1 Location and Legal Description

The street address for the Property is 615 Dexter Avenue North. The Property encompasses approximately 0.56-acre and is located in a commercial area. A Vicinity Map showing the Property and surrounding area is included as Figure 1. Figure 2 is a Site Map depicting the current site features of the Property and adjoining parcels. The site is bound by Aurora Avenue

to the west, Roy Street to the north, Dexter Avenue North to the east, and an alley to the south. The parcel number is 2249000120.

2.2 Site and Vicinity Characteristics

The Property contains one warehouse-style building and two parking lots. The Property is currently occupied by Copiers Northwest, who uses it as a large-scale printing facility, storage warehouse, and offices. The Property slopes downwards towards the east. The Property has been excavated on the east side so the current building sits at a higher elevation than the parking area.

Groundwater is presumed to flow towards Lake Union to the northeast. Upgradient sites located to the west and southwest included multiple large commercial buildings including auto shops, offices, and major roadways. Adjoining properties to the north included a large office building with on-grade parking. The adjoining parcel to the northeast included a construction site with a large building demolished to the concrete foundation and walls. The adjoining parcel to the east was being used as a staging area associated with nearby roadwork. The adjoining parcel to the south was also occupied by Copiers Northwest, with a narrow alley between the two buildings. The adjoining properties to the west across Aurora Avenue North included one vacant space and Emerald City Tint, a window tinting business. The adjoining parcel to the northwest was an empty, fenced in paved lot.

In a 2016 report on the adjacent northeast parcel, Sound Earth Strategies, Inc. (SES) describes geological and hydrogeological settings encountered. Soil consists of artificial fill, post-Vashon lacustrine deposits, Vashon glacial till or Vashon age ice-contact deposits, and advance sand deposits and glacial till or drift of either Vashon age or pre-Fraser age (SES, 2016).

The nearby site shows multiple water-bearing zones. The first zone is an unconfined perched shallow bearing water zone from depths of 10 to 20 feet below ground surface (bgs), and is largely in fill material. An intermediate water-bearing zone is found in dense soils from approximately 35 to 80 feet bgs. A deep outwash aquifer is confined from approximately 90 to 125 feet bgs. A lower aquitard of fine-grained glacial drift confines the groundwater (SES, 2016).

2.3 Current Use of the Property

The site was in use as a large-scale printing facility, storage warehouse, and offices for Copiers Northwest.

2.4 Description of Improvements on the Property

There were multiple single-family dwellings on the parcel as early as 1893. King County parcel records show the southern half existing building was built in 1926, and the northern half of the existing building was built in 1945. The building was expanded to cover the east half of the parcel sometime between 1943 and 1953, likely in 1945 at the same time the northern portion of the current building was constructed. Multiple underground storage tanks (USTs) were installed in the alley to the south of the building, possibly during the expansion. According to an interview with the current tenant, the east portion of the building burned down around 2005, and the foundation of the burnt portion of the building is now used as a multi-level parking area.

2.5 Past Use of the Property

The Property was previously used as multiple dwellings by 1893. In 1926, the southern half of the current building was constructed, and in 1945, the northern half of the current building and presumably the east portion of the building was constructed. The earliest records of tenants were found in a 1935 City of Seattle (City) directory, stating the building was occupied by a restaurant, Rix Sandpaper, and Seattle Hardwood Floor Co. By 1940, Brown Bridge Mills had also moved onto the parcel. In a 1950 Sanborn fire map, Colotyle Corporation is shown to have moved into the northern portion of the building, with Seattle Hardwood Floor still in the southern portion. The east portion of the building shows plastic mixing, Masonite storage, and storage activities. In 1951, a City directory shows Parker Henry Glass Company to be present on the parcel. In a 1955 City directory, Acme Restaurant Supply Company and Pac Bowling and Billiard Company are present on the parcel. In a 1960 City directory, Jr. Achievement of Seattle is present on the parcel. In 1966, a City directory shows Contour Laminates Inc. Manufacturing being present on the parcel. A 1969 Sanborn fire map shows woodworking on the site, which includes a plywood staging area; this may still be Contour Laminates Inc. Manufacturing. In a 1980 City directory, “Domestic Supply Whee” is present on the site; tenant site use is not known. The Environmental Data Resources, Inc. (EDR) report shows a company named Zig Zag present in 1992 and 1994; tenant site use is not known. A fire department document from 2002 shows Dress for Success as the building tenant. A 2005 City directory shows Gusto Furniture was present on the parcel. Copiers Northwest was a tenant after Dress for Success.

2.6 Past and Current Use of Adjoining Parcels

2.6.1 Adjacent North (Parcel 2249000245)

The earliest record of the site is an 1893 Sanborn Fire map, which shows two dwellings on the parcel. A 1905 Sanborn fire map shows four dwellings on the parcel, as well as some

smaller buildings which are presumably storage sheds. A 1917 Sanborn fire map shows the same four main buildings without any storage sheds. A 1920 and 1925 City directory lists individuals as tenants. A 1940 and 1944 City directory shows the Aurora Tavern/Café present. A 1950 Sanborn fire map shows a restaurant as the only building on the parcel. A 1951 City directory shows Kirkpatrick's Coach Inn present on the parcel. A 1955 and 1960 City directory shows Tallers Restaurant present on the parcel. A 1969 Sanborn fire map shows the restaurant building as the only building on the parcel. Aerial photographs from 1974, 1977, and 1980 also show the restaurant being the only building on the parcel. City directories from 2008 and 2013 show multiple businesses occupying tenant space in the large office building. At the time of the site visit, a four-story office building built in 1980 with parking occupied this parcel.

2.6.2 Adjacent Northeast (Parcel 2249000285)

The parcel was used as a laundry facility by Maryatt Electric Laundry and American Linen Supply Co. A 2016 report by SES states four buildings were demolished in 2013 and were built in 1925, 1947, and 1966. The same report gives the background of the site occupancy.

From 1893 to 1925 the site was residential. In 1925, a building was constructed on the southeast corner of the parcel, and in 1930, the site was equipped with a small gas station. In 1947, four 6,000-gallon heating oil USTs were installed under the 1925 building. In 1947, another building was constructed on the parcel and was used as a garage and an auto repair shop. Between 1947 and 1966, a fuel dispenser with up to three USTs was built. In 1986, the garage and auto repair shop building was in use as a wastewater treatment facility for the water generated from laundering. In 1966, a third building was constructed and the 1930 gas station was demolished. The 1966 building was used for laundry, offices, and a garage. By 1990, drycleaning services were no longer operating on the site and the wastewater system was removed. The buildings were then leased out to businesses including auto shops, a bakery, and a car rental office (SES, 2016). At the time of the site visit, the adjoining parcel to the northeast was a construction site, which contained a large building demolished down to its concrete foundation and walls.

2.6.3 Adjacent East (Parcel 2249000080 and 2249000055)

The site was largely unpaved and stored construction equipment, including multiple conex containers, heavy equipment storage, employee parking, and soil stockpiles. The earliest record of the site is an 1893 Sanborn fire map, which shows a single dwelling and a smaller building. The 1905 and 1917 Sanborn fire maps show the site developed to contain 11 dwellings. By 1950, the parcel was split diagonally by Broad Street. The 1950 Sanborn map

shows multiple auto service businesses, paint shops, a restaurant, and three dwellings. The EDR report shows two gas stations on this site: Harder S Shell Service and Rogge Otto. Harder S Shell Service is visible in the 1950 Sanborn map. City directories show companies including Erickson Painting & Decorating, Riebe Soap & Chemical Works, and Graves Bros. Sign Painters present on the site. By 1969, only two buildings were on the site, both used for auto upholstery. At this time, Broad Street was changed to be an underpass and the road started declining on the parcel. By 1980, aerial photography shows the buildings were demolished. Aerial photography up to 2004 shows that site has been used exclusively as parking. Black and white aerial photography suggests the parking lots were paved; however, it is not certain. At the time of the site visit, the adjoining parcels to the east across Dexter Avenue North were being used as a construction staging area.

2.6.4 Adjacent South (Parcel 2249000100)

A narrow alleyway separates this site from the Property. Sanborn maps from 1893, 1905, and 1917 show no development on the site, besides one small storage shed in 1905. King County tax assessor records show the current warehouse building was built in 1919, with the offices built in 1962. According to archived records, a boiler was installed in 1928 for laundry services. City directories show Modern Automobile and Tractor School as a tenant in 1920; Dexter Cabinet Works in 1925; Sanitary Laundry as a tenant in 1930 and 1935; Colotyle Corporation in 1940, 1951, and 1955; and Electrol Oil Burner Co. in 1944. The City directory states a gas station was present at in 1935 and 1940; an aerial photograph from 1941 shows a small building in the southeast corner of the parcel, which may be a small gas station. Archived records show the gas station was built in 1930. The 1950 Sanborn fire map shows the site covered by one building and parking. The 1969 Sanborn fire map shows the site used as an electric appliance warehouse. City directories show Copiers Northwest being a tenant of the building since 2008. At the time of the site visit, the site adjacent to the south contained one building and a parking lot occupied by Copiers Northwest as a storefront for copiers, printing machines, and printing services.

2.6.5 Adjacent West (Parcel 2249000170)

Sanborn fire maps from 1893, 1905, and 1917 show no development on the site. Aerial photography from 1936 shows the parcel undeveloped, but cleared of trees. The King County tax assessor record shows the current building was built in 1941. The 1950 Sanborn fire map shows the building on the parcel is used as an oil trucks garage, oil burners sales, and service, as well as offices. A 1951 City directory shows the tenant Electrowatt Inc. Fuel distributors, which is likely the same tenant as in 1950. The City directory in 1951 lists Frye Louise Property Management. The City directory in 1966 lists Frye Louise and the Seattle Symphony Orchestra

office. The 1969 Sanborn fire map shows an addition to the northern end of the building and the building being used as an electronics school. The 1970 and 1975 City directory lists Frye Louise Property Management, Stewart Hubert Architect, and Roxebury Construction Corp. The City directory shows the Church of Scientology, AlphaGraphics, and Citizens Commission on Human Rights being tenants in 2008 and Rhino Linings being a tenant in 2013. At the time of the site visit, the sites adjacent to the west across Aurora Avenue North included a building which appeared to have been vacant for a long time and Emerald City Tint.

2.6.6 Adjacent Northwest (Parcel 2249000190)

The lot was fully fenced in. Sanborn fire maps from 1893 show one dwelling on the parcel. The Sanborn fire map from 1905 shows the same dwelling, with the addition of another dwelling and a small building in the southern portion of the parcel. By 1917, the dwellings remain, but the small building is gone. The 1950 Sanborn fire map shows the parcel containing one large building with four apartments, as well as a separate single apartment building. The 1969 Sanborn map shows the same apartments. All listings in the City directory include years between 1944 to 1960 list residents or Rob Roy Apartments. In 1970, the site was vacant. Sometime between 1969 and 1974, the structures on the site were demolished. Aerial photos show the lot since then has been used as parking and staging, presumably for nearby construction. At the time of the site visit, the parcel adjacent to the northwest is a small, paved, fenced in lot owned by the Client.

3.0 USER-PROVIDED INFORMATION

The User has not provided information in the form of a returned and completed formal questionnaire.

3.1 Title Records

The User did not provide a legal description of the Property for review.

3.2 Environmental Liens

An environmental lien is a charge, security, or encumbrance upon title to a property to secure the payment of a cost, damage, debt, obligation, or duty arising out of response actions, cleanups, or other remediation of hazardous substances or petroleum products upon a property, including but not limited to, liens imposed pursuant to the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and similar state law.

A User questionnaire requesting if environmental liens were to be researched was submitted to the User and was not returned. Shannon & Wilson did not arrange for a search of land title records (or judicial records) for environmental liens.

3.3 Activity and Use Limitations (AULs)

As stated in the Phase I ASTM Standard, AULs are one indication of a past or present release of a hazardous substance or petroleum products. AULs may consist of institutional controls such as a prohibition on certain use of the property or engineered controls such as an engineered barrier or cap-over contamination. AULs are explicit recognition by a federal, tribal, state, or local regulatory agency that residual levels of hazardous substances or petroleum may be present on the property. If AULs are in place, the User must comply with them in order to maintain landowner liability protections under CERCLA.

A User questionnaire requesting if land title or judicial records for AULs were to be researched was submitted to the User and was not returned. The user representative did not indicate awareness of any AULs in place, filed or recorded under federal, tribal, state, or local law or in judicial records.

3.4 Specialized Knowledge

The current tenant did not indicate they have specialized knowledge about or experience with the Property or nearby properties relating to chemicals or processes used by the current occupants of the Property.

3.5 Relationship of Purchase Price to Fair Market Value

This transaction may involve a purchase price. The user representative did not indicate any information about the purchase price being paid for the Property reasonably reflecting the fair market value of the Property if the property were not contaminated.

3.6 Owner/Occupant and Property Manager Information

Russ Funk and Kevin Webb of Copiers Northwest were identified as occupant contacts for the Property.

3.7 Reason for Performing Phase I Environmental Site Assessment (ESA)

Shannon & Wilson assumed the purpose of this Phase I ESA is in anticipation of the Client selling the Property.

3.8 Previous Environmental Site Assessments (ESAs) and Reports

No previous ESAs or environmental site reports were available from the Client.

4.0 RECORDS REVIEW

The purpose of the records review is to obtain and review records concerning the Property and properties in the vicinity that will help identify RECs in connection with the Property. Availability of record information varies from information source to information source, including governmental agencies. Unless otherwise noted in Section 1.4, we have reviewed the standard historical sources, standard federal and state environmental record sources, and physical setting sources required by the Phase I ASTM Standard. In addition, we reviewed certain additional environmental record sources to supplement the standard environmental sources when such records were reasonably ascertainable and determined to be potentially useful.

4.1 Historical Use Information

The objective of consulting historical sources is to develop a history of the previous uses of the Property and surrounding area in order to help identify the likelihood of past uses having led to RECs in connection with the Property. We reviewed the following standard historical sources that were both reasonably ascertainable and likely to be useful. Historical research information can be seen in Appendix B.

4.1.1 Aerial Photographs

Three sets of aerial photographs were obtained for the subject site. Photographs obtained from EDR included satellite images from 1936, 1943, 1953, 1956, 1965, and 1969. EDR also provided aerial photographs from 1977, 1980, 1985, 1990, 2006, 2009, and 2011. For additional aerial imagery, we received aerial photographs from Quantum Spatial for 1936, 1941, 1953, 1956, 1960, 1969, 1974, 1977, 1980, 1985, 1989, 1990, 1992, 1997, 1999, 2000, 2002, and 2004.

4.1.2 U.S. Geological Survey Topographic Maps

In the EDR records search, ten historic topographic maps were also provided. These maps dated from 1894 to 2014. The topographic maps did not provide any information on the site use or development.

4.1.3 City of Seattle (City) Directories

City directories were reviewed starting from as early as 1920 to as late as 2013.

4.2 Physical Setting

Site conditions noted during our visit of March 21, 2017, included the following:

- The site was occupied by Copiers Northwest and was fully paved;
- The site sloped eastward towards Dexter Avenue North;
- A utility corridor was present along Aurora Avenue North, which includes underground and aboveground utilities;
- Surface drainage in the vicinity of the site was eastward; and
- Groundwater direction of flow was estimated to be similar to the surface topography at the site, draining eastward (downslope) towards Dexter Avenue North; overall, groundwater is estimated to move towards Lake Union to the northeast.

4.3 Regulatory Database Search

Standard federal and state environmental records were researched consistently with the approximate minimum search distance set forth in Section 8.2.1 of the Phase I ASTM Standard for pertinent information regarding the environmental condition of the Property, adjoining parcels, and properties in the vicinity. These records were searched electronically through EDR. In addition to the standard environmental record sources, additional sources were contacted or reviewed in an effort to determine whether any other information existed relevant to identification of RECs in connection with the Property. Listed sites can be seen in Table 1. Regulatory documents can be seen in Appendix C.

4.3.1 Standard Federal Records Sources

4.3.1.1 Superfund Sites (Including National Priorities List Sites, Delisted National Priorities List Sites, Comprehensive Environmental Response Compensation and Liability Information System [CERCLIS] Sites, and CERCLIS No Further Remedial Action Plan Sites)

Three sites within the federal CERCLIS No Further Remedial Action Plan search radius were listed by EDR. The closest is Jarvie Paint Manufacturing Co., which is 781 feet to the northeast. The next closest is 1401 Dexter Avenue North, which is 2,306 feet to the north. The third and furthest listed site is 1175 Harrison street, which is 2,575 feet to the southeast. All of these sites are downgradient and fairly distant from the Property and do not constitute a REC.

4.3.1.2 Resource Conservation and Recovery Act Facilities (Including Treatment, Storage, and Disposal Facilities Subject and Not Subject to Corrective Action, and Resource Conservation and Recovery Act Generators)

Eleven (11) sites on the federal Resource Conservation and Recovery Act generators list were within the quarter-mile search radius. Three of these sites are upgradient from the Property and include 500 5th Avenue North (1,180 feet southwest), Interstate Brands Corp Hostess (842 feet to the south), and Pacific Rim Diesel Inc. (479 feet to the southwest). Eight sites are downgradient of the Property. American Linen is included on this list, which is a REC. Additional information is provided in Section 4.4.2.2 below.

4.3.1.3 Institutional Control/Engineering Control Registries

No sites were identified within the ASTM-prescribed radii for the database listed above.

4.3.1.4 Emergency Response Notification System

No sites were identified within the ASTM-prescribed radius for the database listed above.

4.3.1.5 Summary of Federal Records

In summary, one site listed in the federal databases discussed above constituted a REC in connection with the Property. Details can be seen in Table 1 as well as in Section 4.4.2 below for sites further researched at the Washington State Department of Ecology (Ecology).

4.3.2 Standard State Records

The following standard state lists were reviewed for this Phase I ESA:

4.3.2.1 Hazardous Waste Site Lists for Investigation/Remediation, National Priorities List-equivalent Lists, Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS)-equivalent Lists, and Landfill and/or Solid Waste Disposal Sites Lists

One hundred fifty-five (155) sites were identified within one mile for the databases listed above. Ninety-seven (97) of these sites are greater than a half-mile away. Details on listed sites with potential to impact the Property can be seen in Table 1. The EDR data report can be seen in Appendix C.

4.3.2.2 Registered Storage Tank Sites

Twenty-six (26) registered storage tanks were listed within the ASTM-prescribed search radius for the database listed above. Details can be seen in Table 1.

4.3.2.3 Leaking Storage Tank Sites

Twenty-four (24) leaking UST sites were listed in the database within the ASTM-prescribed search radius for the database listed above. Details can be seen in Table 1.

4.3.2.4 Institutional Control/Environmental Control Registries

Three sites were identified within the ASTM-prescribed radius for the database listed above. Details can be seen in Table 1.

4.3.2.5 Voluntary Cleanup Sites

Thirty-six (36) sites were identified within the ASTM-prescribed radius for the database listed above. Details can be seen in Table 1.

4.3.2.6 Brownfield Sites

No sites were identified within the ASTM-prescribed radius for the database listed above.

4.3.2.7 Summary of State Records

In summary, in our opinion, multiple items listed in the records discussed above constituted a REC in connection with the Property. Details can be seen in Table 1.

4.4 Additional Sources

4.4.1 Seattle Department of Construction and Inspections

Permit and property records were searched for. No results regarding historical use or construction of the building were returned for the Property.

4.4.2 Washington State Department of Ecology (Ecology) Records

After initial review of the listed sites, the available files for eight sites were reviewed at Ecology.

4.4.2.1 802 Roy Street – Roy Street Shops 89

802 Roy Street is roughly 391 feet northeast of the Property, making this site downgradient from the Property. File review at the Ecology revealed that the site has had multiple USTs and leaking USTs in the past.

The most recent report found on the site is a 1995 report by Remediation Technologies, Inc. (1995). The report details soil and groundwater contamination found during the removal of two USTs in 1993. Remedial activities then took place, including UST excavation, multiple site investigations, contaminated soil excavation, and a supplementary site investigation. The report concludes that though remedial activities removed substantial amounts of contamination, contaminated soil still remained on the site. After excavation, total petroleum hydrocarbons (TPH) and benzene, toluene, ethylbenzene, and xylenes (BTEX) contamination existed in soil from 20 to 25 feet bgs, as well as to the east and north of the excavation. TPH and BTEX is also found exceeding Model Toxics Control Act (MTCA) criteria in groundwater. Groundwater flowing onto the site was seen to not be a source of contamination.

802 Roy Street does have contamination in soil and groundwater; however, the site is downgradient from the Property. Due to the location of this site, **802 Roy Street is a low environmental risk to the Property and is not a REC.**

4.4.2.2 700 Dexter Avenue North – American Linen

700 Dexter Avenue North is the parcel adjacent to the northeast to the Property, making this site downgradient from the Property. File review at Ecology shows the site has a history of contamination resulting from the former operation of a commercial laundry facility, drycleaning facility, and gas station on the site. American Linen and Maryatt Industries operated commercial laundries on this site.

The most recent available report reviewed was a March 2016 Interim Action Work Plan by SES prepared for Frontier Environmental Management LLC. The report concludes that tetrachloroethylene (PCE) and trichloroethylene (TCE) in both soil and groundwater are chemicals of concern. PCE concentrations were as high as 230 milligrams per liter, which is a characteristic concentration of groundwater from 10 to 45 feet bgs. The highest concentrations of petroleum hydrocarbons are seen in northeastern portion of the site.

In 2013, a remedial design system using electrical resistance heating/soil vapor extraction was installed to remediate PCE contamination onsite. Monitoring well data from

MW117, which is in the Dexter Avenue North right-of-way directly east of the Property, shows non-detectable levels of TPH, BTEX, PCE, and TCE.

700 Dexter Avenue North does have significant levels of contamination in soil and groundwater; however, the site is downgradient from the Property and a nearby monitoring well associated with 700 Dexter Avenue North shows non-detectable levels of TPH, BTEX, PCE, and TCE. Though downgradient from the Property due to previous uses of the site and being an adjacent parcel, **700 Dexter Avenue North is a moderate environmental risk to the Property and is a REC.**

4.4.2.3 771, 773 Valley Street – Maryatt Industries

See Section 4.4.2.2 above; Maryatt Industries operated a laundry facility as American Linen.

4.4.2.4 701 9th Avenue North – Seattle Motor Sports

When requested, no files were available for review.

4.4.2.5 710 9th Avenue North – Seattle Department of Transportation (Client) Right-of-Way

710 9th Avenue North is 742 feet northeast of the Property, making this site downgradient from the Property. The most recent report found at Ecology is a September 2011 UST removal site assessment prepared by PI Resources, LLC for HTNB Corporation and the Client (PI Resources, LLC, 2011).

The report details a waste oil UST found and removed during excavation activities associated with the Mercer Corridor Improvement Project in August 2011. Roughly 350 gallons of liquid were removed from the tank and the tank was excavated. One sidewall sample from the north sidewall of the excavation had oil-range petroleum hydrocarbons and gasoline-range petroleum hydrocarbons above MTCA cleanup criteria. The report concludes that TPH contamination still exists within the City right-of-way extending north of the former UST.

710 9th Avenue North does have contamination in soil; however, the site is downgradient from the Property. **710 9th Avenue North is a low environmental risk to the Property and is not a REC.**

4.4.2.6 520 5th Avenue North – Mercer Operating Base

520 5th Avenue North is 1,031 feet southwest of the Property, making this site upgradient of the Property. The most recent report found at Ecology was a May 2015 Draft Post-construction Environmental Management Plan prepared by GeoEngineers, Inc. (GeoEngineers) for IRIS Holdings, LLC (GeoEngineers, 2015).

The report detailed that the Bill & Melinda Gates Foundation bought land from the Seattle Center in 2006 and is making efforts to obtain an environmental covenant for the site. The site is in the voluntary cleanup program and remedial activities have taken place; however, residual contamination remains in place. The soil contaminants of concern include petroleum hydrocarbons, polycyclic aromatic hydrocarbons (PAHs), Stoddard solvents, and metals. The contaminants of concern in groundwater include petroleum hydrocarbons, benzene, and metals.

An April 2011 letter from Ecology to Ms. Bonnie Pendergrass on the opinion of proposed cleanup includes a site description which also states that contaminated fill is found on the site from 5 to 20 feet thick. The enclosure also states that the groundwater flows towards the southeast on the site despite the local groundwater trend of flowing towards the northeast. Attached figures to both reports show groundwater plumes moving towards the southeast away from the Property.

The most recent Groundwater Monitoring Report at Ecology was from October 2011 by GeoEngineers prepared for IRIS Holdings, LLC. The report details an active in situ groundwater treatment system through air sparging and soil vapor extraction. Three groundwater monitoring wells were sampled quarterly in 2011, and both dissolved and total arsenic and total chromium were reported above MTCA Method A criteria. There were not any detectable concentrations of petroleum hydrocarbons.

Though contamination above MTCA criteria has existed in both soil and groundwater at the site, groundwater has been mapped to be flowing away from the Property. **520 5th Avenue North is a low environmental risk and is not a REC to the Property.**

4.4.2.7 325 Aurora Avenue North – Seattle Vagabond Inn

325 Aurora Avenue North is 1,206 feet to the south of the Property. The most recent report available at Ecology was an April 2003 workplan concerning PCE-impacted soil delineation prepared by Kleinfelder, Inc. for RPD Hotel 18 (Kleinfelder, Inc., 2003).

The report gives the background of the site. From 1933 to 1946, the site was occupied by a gas station and from 1946 to 1957 (possibly 1958), the site was occupied by a drycleaning facility. PCE, TCE, and petroleum contamination in soil was found during a 1998 investigation. In 2000 and 2001, investigations found PCE and TCE in perched groundwater at depths of 51 to 55 and 70 feet bgs.

Though contamination has existed above MTCA criteria on the site, the site is 1,206 feet away from the property, and records did not indicate the presence of a far-reaching plume. **325 Aurora Avenue North is a low environmental risk and is not a REC to the Property.**

4.4.2.8 434 Aurora Avenue North – Interstate Brands Company

434 Aurora Avenue North is 842 feet south of the Property. The site had four leaking USTs, which resulted in petroleum contamination on the site. The USTs included one 750-gallon diesel tank (UST number [#]1), one 10,000-gallon diesel tank (UST #2), one 5,000-gallon diesel tank (UST #3), and one 4,000-gallon bunker oil tank (UST #4).

Remedial action included removal of UST #1 and UST #2, and decommissioning UST #3 and UST #4 in place. Soil samples taken during excavation and decommissioning did not exceed 1997 MTCA Method A criteria. In March 2003, Ecology issued a No Further Action (NFA) letter for the site (Ecology for Environmental Management Services, Inc., 2003).

Due to the NFA letter from the site and the distance from the Property, **434 Aurora Avenue North is a low environmental risk and is not a REC to the Property.**

4.4.2.9 Summary of Washington State Department of Ecology (Ecology) File Review

In summary, the Ecology file review produced one REC. This REC is from the American Linen and Maryatt Industries site.

4.4.3 Sanborn Fire Maps

Sanborn fire maps were available through EDR for the following years – 1893, 1905, 1917, 1950, and 1969. The 1893 and 1905 maps show no buildings directly upgradient of the Property and two buildings on the Property.

In the 1917, a Sanborn map shows a company named Mutual Laundry moved in to the parcel at 705 Mercer, roughly 200 feet south of the Property. This site has not been seen in other

records. Due to historical patterns of laundromats and drycleaners contributing to groundwater contamination with PCE and TCE and the close proximity upgradient to the Property, **Mutual Laundry, as seen in the 1917 Sanborn map, is a high risk to the Property and is a REC.**

In the 1950 Sanborn map, a 2,000-gallon solvent tank is listed in the west end of the alley south of the site. Colotyle Corporation is occupying the building, and there is a plastic mixing and storage area in the central portion of the building. The map shows Oil Burners Sales and Service on the parcel adjacent to the west, and a building labeled “Gas & Oil” roughly 300 feet south (where Mutual Laundry previously was). **The plastic mixing operations inside of the Property, the 2,000-gallon solvent storage tank abutted to the Property, and the Oil Burners Sales and Service building are RECs.**

In the 1969 Sanborn map, the RECs identified in the previous Sanborn maps are no longer present.

4.4.4 Seattle Fire Department

The City Fire Marshal’s office was contacted by phone on March 6, 2017. The office stated they need public records requests to give out documents and information. Multiple public records requests were filed, and one document came back concerning four 1,000-gallon USTs, which were pumped and rinsed by WesPac Environmental, Inc. in 1997. Three of the USTs were for heating oil and one UST was for bunker oil. The tanks are located in the alley south of the Property building. These USTs were not documented in any other source reviewed for this Phase I ESA. These tanks were likely installed for the Property or the adjacent parcel to the south for heating. The current status of these four USTs is unknown.

Due to their unknown status, the four documented USTs in the alleyway are considered a REC.

4.4.5 Puget Sound Regional Archives

Files at the Puget Sound Regional Archives were reviewed for the Property and adjacent parcels. Kroll maps were also reviewed at the Puget Sound Regional Archives. The findings of the review can be seen below.

4.4.5.1 Subject Property – Parcel 2249000120

The assessors record showed “Building B” was built in 1945, was owned by the Colotyle Corporate, and had electric heating. No tanks were noted in the record. A separate record shows the building equipped with industrial hot water or steam heater.

4.4.5.2 Adjacent South – Parcel 2249000100

Multiple records show photographs of a small gas station on the northwest corner of Mercer Street and Dexter Avenue North and a building with a sign reading “Sanitary Laundry” on the parcel. The record shows the gas station built in 1930 and the Sanitary Laundry building built in 1919. One record details the Sanitary Laundry building as a “heating plant” that had a boiler installed in 1928 for steam heating. **The historical gas station and laundry services on this parcel are likely to have associated USTs and/or releases of contamination, and therefore, are considered a REC.**

4.4.5.3 Adjacent West – Parcel 2249000170

A 1962 record shows the site as a parking lot with a small office. Another record shows the site used as a material yard with a small office. Other records show the site being residential.

4.4.5.4 Adjacent Northwest – Parcel 2249000190

A 1934 record shows a building built in 1917 being connected to the sewer and city water. The building has central heating, but no record of a UST.

4.4.5.5 Adjacent North – Parcel 2249000245

One assessors record updated through 1973 gives no description of any building on the parcel besides that the parcel has city water and sewer.

4.4.5.6 Adjacent Northeast – Parcel 2249000285

Records from 1947 and 1966 show American Linen Supply Co. present on the parcel. The building has gas heating, and two oil burners. Another record shows two gasoline fueling pumps and Maryatt Electric Laundry on the parcel. The photo also shows a large smoke stack emitting black smoke. No USTs are mentioned in the record; however, it can be assumed that the site had USTs for gasoline and heating oil. This site has been stated to be a REC above in section 4.4.2.2.

4.4.5.7 Adjacent East – Parcel 2249000055

One assessors record from 1923 shows a house built in 1900 that was connected to the sewer and had a stove for heating. A photo of the house shows it was equipped with a lower-level garage.

4.4.5.8 Additional Adjacent East – Parcel 2249000080

No assessor records described any building on the parcel.

4.4.5.9 Kroll Maps

Kroll maps for the area were reviewed for 1926, 1940, 1960, and 1998. The Kroll maps did not reveal any information for determining a REC.

4.4.6 Summary of Additional Sources Reviewed

In summary, multiple RECs were found during review of additional historical sources including Ecology records, Sanborn Fire Maps, Seattle Fire Department records, and Puget Sound Regional Archive records. The Kroll maps did not reveal any RECs.

4.5 Potential for Vapor Intrusion

State and federal regulatory agencies do not regulate indoor air quality except to the extent that indoor air impacts are caused by releases of hazardous substances into subsurface soil or groundwater (vapor intrusion).

The ASTM E2600-10 vapor encroachment screening standard was published in June 2010 and provides guidance on evaluating vapor migration from contaminated properties and media. The standard specifically focuses on screening for the likelihood of migrating vapors from nearby contaminated properties and media, such as soil and groundwater, to encroach upon the subsurface of a property involved in a real estate transaction.

The first check in the screening process is a search distance test to identify if there are any known or suspected contaminated sites with volatile or semi-volatile hazardous chemicals of concern (COCs) in the area of concern (AOC). If there are none, no further action is required. The AOC for contaminated sites with non-petroleum hydrocarbon COCs, such as chlorinated solvents, is 1,760 feet around a target property. For sites with petroleum hydrocarbon COCs, the AOC is 528 feet.

Based on our knowledge of where sites are in relation to the Property, the review of the records above revealed the presence of multiple known contaminated sites within the applicable distances from the site boundaries, including the site adjacent to the northeast. According to the EDR VEC App™, when adjusted for groundwater flow direction, roughly 58 sources are within the AOC.

The site adjacent to the south was previously a laundromat and gas station. Additionally, there are records of four petroleum USTs and one solvent UST in the alleyway south of the building on the Property.

The potential for vapor intrusion is high on the Property due to nearby contamination and potential contamination, as well as many sites in the AOC. **The high potential for vapor intrusion is a REC.**

5.0 SITE RECONNAISSANCE

5.1 Methodology and Limiting Conditions

The objective of the site reconnaissance is to obtain information indicating the likelihood of identifying RECs in connection with the Property. Shannon & Wilson representatives assessed the Property and surrounding area on March 21, 2017, to visually observe the Property for evidence of potential impacts of hazardous substances or petroleum resulting from historical or current use of the Property. Photographs taken during the site reconnaissance are included in Appendix A.

The site visit consisted of (a) observation of the periphery of the Property and structures on the Property and (b) observation of the Property from public thoroughfares.

5.2 General Site Setting

5.2.1 Current Use of the Property

The site was being used by Copiers Northwest as a printing facility, storage warehouse, and offices.

5.2.2 Potable Water Supply and Sewage Disposal System

Potable water supply and sewage disposal service at the site is be provided by the City. A restroom in the southwest corner of the building was disconnected from city water due to it being incorrectly connected to the water main, according to the current tenant in an interview. The sewer card associated with the site shows side sewers coming off of the building on the north and west sides of the Property.

5.3 Site Observations

Site observations were made on the interior and exterior of the Property. A photolog of the site visit can be seen in Appendix A.

5.3.1 Pits, Ponds, and Lagoons

No pits, ponds, or lagoons were observed.

5.3.2 Septic Systems

No septic systems were observed on the site.

5.3.3 Stained Soil or Pavement

A previous paint spill stained about 10 square feet of exterior pavement near the loading dock. Spilled paint was also observed inside the warehouse near where paint was being stored on pallets, as well as outside near the loading dock.

5.3.4 Stressed Vegetation

No stressed vegetation was observed.

5.3.5 Aboveground and Underground Storage Tanks (USTs)

No evidence of aboveground tanks was observed on the site. A retired boiler was in the basement which was connected to an oil pump, the pump may have been pumping oil from a heating oil UST.

5.3.6 Unidentified Pipes

Some unidentified pipes were seen on the eastern half of the parcel in the parking lot. The pipes were towards the north and south ends of the site and may be associated with the building which used to be there. Another unidentified pipe was seen on the corner of the building east of the loading dock, which may have been used as a vent pipe for a UST.

5.3.7 Odors

No odors were noted on the site.

5.3.8 Pools of Liquid

No pools of liquid were observed on the site besides rain puddles in the lower parking lot.

5.3.9 Drums or Hazardous Substances/Petroleum Products Containers

One 55-gallon drum was stored in the basement of the site; the drum appeared to be empty, but the lid was not removed.

5.3.10 Unidentified Substance Containers

No such containers were observed on the site.

5.3.11 Electrical or Hydraulic Equipment with Polychlorinated Biphenyls

Overhead transformers were seen on a utility pole in the utilities right-of-way on the west end of the parcel.

5.3.12 Wastewater or Stormwater Discharges

Stormwater drains are throughout the exterior of the site. The alleyway south of the building contained two catch basins with large grates covering them.

5.3.13 Unidentified Fill Material and Debris

No fill materials were observed on the site; however, the South Lake Union area has historical use of unidentified fill. There is potential for fill to have been used on Aurora Avenue North directly west of the site.

5.3.14 Evidence of Solid Waste Disposal or Other Dumping Onsite

No evidence of solid waste disposal was noted on the site.

5.3.15 Building Materials

Building materials observed include concrete, concrete masonry units, drywall, and wood. The foundation is multi-leveled, slab-on-grade in good condition with minor cracks. The roof is flat with built-up tar with a roughly 3-foot vertical rise in the middle. Fluorescent lights exist throughout the building and extra tubes are stored inside of an interior area.

5.3.16 Evidence for Asbestos

Two fire-doors, which may contain asbestos cores, exist in the basement. Floor tiles, which may contain asbestos, were observed underneath carpet and exposed throughout the building. Pipe and boiler insulation was seen in the basement and in parts of the building, which may contain asbestos. Other building materials observed that may contain asbestos include window caulking/glazings, roof vapor barriers, drywall systems, and exterior wall surface texturing. Sampling for asbestos is not within the scope of this site assessment.

5.3.17 Lead Paint

Some paints may contain lead. Sampling for lead in paint is not within the scope of this site assessment.

5.3.18 Heating System

Wall-mounted gas heaters were observed inside the building. A retired boiler was observed in the basement, which was connected to an oil pump. An old coal chute was seen going from the alleyway south of the building into the basement. This suggests coal used to be used for heating.

5.3.19 Hazardous Material Storage

Typical cleaning chemicals were stored onsite. Flammable lockers, compressed gas, oil, and biological waste were not observed to be stored on the Property. Paint was stored in the warehouse in various locations.

5.3.20 Floor Drains

One floor drain was observed in the basement. It is unknown where the drain leads. The basement floor drain is close to a coal chute door and an old boiler. Significant portions of the warehouse were covered by pallets and carpeting, and drains may have been hidden beneath those items. Another floor drain was seen in the burned down section of the building. **Floor drains being present in the building are a potential pathway for contamination to be transported into soil or groundwater by leaking or broken pipes and connections. Floor drains in the building is a REC.**

5.3.21 Sinks

Sinks were observed in the bathrooms.

5.3.22 Evidence of Fires

The east half of the site is bare foundation due to that portion of the building burning down around 2005. **The documented on-site fire is a REC due to incomplete combustion creating PAHs and possible metals contamination.**

5.3.23 Other Features Observed

A coal chute was observed on the southern wall of the building, which leads into the basement, suggesting the building used to burn coal for heat or manufacturing. A boiler with an

oil pump was observed where coal was likely previously used. Cars parked throughout the lots on the Property made parts of the exterior pavement covered. Dirt and debris in the basement made the basement floor difficult to see. **The use of coal and a boiler with an oil pump in the basement of the building is a REC.**

5.4 Adjoining and Surrounding Properties Evaluation

5.4.1 Properties to the East

Given the surficial drainage at the site, properties to the east would be downgradient. The site was being used as a staging area for nearby construction.

5.4.2 Properties to the Northeast

Properties to the northeast would be downgradient to the Property. The site was a construction site containing a demolished building that was demolished down to subgrade slab and concrete walls.

5.4.3 Properties to the North

Properties to the north would be downgradient to crossgradient to the Property. The site was a large office building with on-grade parking being used by multiple businesses.

5.4.4 Properties to the Northwest

Properties to the northwest would be crossgradient to the Property. The site was an empty parking lot that was fully fenced off. On the west side of the lot was an automotive repair company, and to the north of the lot was a large apartment complex.

5.4.5 Properties to the West

Properties to the west would be upgradient to crossgradient to the Property. The site was a building that was partially vacant and partially occupied by Emerald City Tint, a car window tinting company.

5.4.6 Properties to the South

Properties to the south would be downgradient to crossgradient to the Property. The site is also occupied by Copiers Northwest.

6.0 INTERVIEWS

Interviews with site contacts were conducted by Blaine Nesbit and David Randall of Shannon & Wilson.

On March 21, 2017, Shannon & Wilson representatives interviewed the current facilities manager of the site, Russ Funk. Mr. Funk has been associated with the building since 1989. Mr. Funk told Shannon & Wilson that before Copiers Northwest was a tenant, a non-profit called Dress for Success was a tenant for about ten years. Mr. Funk was not aware of any flammable materials stored onsite besides paint and household cleaners. Mr. Funk mentioned there is a chance there was a UST somewhere associated with the old boiler in the basement, but he did not know where it would be. Mr. Funk was not aware of any septic system, dry wells, fill pipes, or vent tubes on the site. Mr. Funk stated that the eastern half of the building burned down around 2005, and the whole east parking areas are on the foundation of the building that burned.

7.0 FINDINGS AND OPINIONS

7.1 Recognized Environmental Conditions (RECs)

Multiple RECs were found in connection to the Property and are listed below.

The parcel adjacent to the northeast has been occupied by American Linen and Maryatt Electric Laundry, as well as a small gas station. This site has a history of PCE, TCE, and petroleum contamination. Due to the proximity and confirmed contamination, this site is a REC for the Property.

The 1917 Sanborn fire map shows Mutual Laundry 200 feet south of the Property. Due to the proximity of the site and high risk of contaminant release associated with cleaners, this site is a REC for the Property.

The 1950 Sanborn fire map shows a 2,000-gallon solvent storage tank in the alley south of the Property. Due to the unknown status and condition of the tank, this is a REC for the Property.

The 1950 Sanborn fire map shows a plastic mixing room in the Property building while occupied by Colotyle Corporation. This previous use of the building is a REC for the Property.

The 1950 Sanborn fire map shows an oil burner sales and facilities business on the adjacent west parcel. The previous use of this building is a REC.

A 1997 document from the Seattle Fire Department shows three 1,000-gallon heating oil USTs and one 1,000-gallon bunker oil UST existed in the alley directly south of the Property building. The status of these USTs is unknown and is a REC for the Property.

The parcel directly adjacent to the south was once occupied by a drycleaner and a gas station, and is a REC for the Property.

There is a high risk of vapor intrusion on the site due to multiple nearby petroleum and solvent USTs, historical drycleaners, gas stations, and sites with confirmed contamination. Vapor intrusion is a REC for the Property.

The east half of the current building burned down in roughly 2005. This event may have resulted in PAH or metals contamination and is a REC for the Property.

An old boiler and coal appeared to have been used on the Property for heating or manufacturing. The use of coal and a boiler close to the floor drain is a REC.

Floor drains were seen in the building. Floor drains provide a pathway for contamination to leak onto the Property through leaking or broken pipes. Onsite use of chemicals may have resulted in chemicals entering the floor drains. Floor drains being present in the building is a REC.

7.2 Controlled Recognized Environmental Conditions (CRECs)

This assessment revealed no evidence of CRECs in connection with the Property.

7.3 Historical Recognized Environmental Conditions (HRECs)

This assessment revealed no evidence of HRECs in connection with the Property.

8.0 CONCLUSIONS AND RECOMMENDATIONS

We have performed a Phase I ESA in conformance with the scope and limitations of the Phase I ASTM Standard of the Property located at 615 Dexter Avenue North in Seattle, Washington. Any exceptions to or deletions from the Phase I ASTM Standard are described in Section 1.4 of this report. Data gaps, if any, are also described in Section 1.4 of this report. This assessment has revealed evidence of RECs in connection with the Property.

Our professional opinion is that additional investigations for environmental issues are warranted for this site.

9.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Mr. Blaine Nesbit, a member of the environmental staff at Shannon & Wilson, conducted research for this Phase I ESA. Mr. Nesbit has two years of experience in environmental consulting and research, and has performed multiple Phase I and Phase II ESAs in the Puget Sound area.

Ms. Agnes Tirao, an Associate at Shannon & Wilson, reviewed this Phase I ESA for completeness and technical accuracy. Ms. Tirao is a professional engineer with over 20 years of experience conducting Phase I ESAs and other environmental assessments. The environmental professional resumes can be seen in Appendix D.

Shannon & Wilson has prepared the enclosed Appendix E, "Important Information About Your Environmental Site Assessment/Evaluation Report," to assist you and others in understanding the use and limitations of our reports.

10.0 LIMITATIONS AND RISK

This Phase I ESA was conducted to render a professional opinion about the likelihood of regulated contaminants being present on, in, or beneath the Property at the time services were conducted. No matter how thorough a Phase I ESA study may be, findings derived from its conduct are limited, and Shannon & Wilson cannot know or state for an absolute fact that a site is unaffected by reportable quantities of regulated contaminants. Furthermore, even if Shannon & Wilson believe that reportable quantities of regulated contaminants are not present, the User still bears the risk that such contaminants may be present or may migrate to the site after the study is complete.

Shannon & Wilson has reviewed historical records and conducted an on-site visual inspection of the Property. We have examined and relied on documents referenced in the report and on oral statements made by certain individuals. We have not conducted an independent examination of the facts contained in referenced materials and statements. We have assumed that these documents are genuine and that the information provided in these documents and statements is true and accurate. We have no knowledge or indication to the contrary unless otherwise stated in the body of the report.

Data generated from the site reconnaissance reflect that which can be reasonably inferred or is obvious by direct visual observation. Shannon & Wilson assumes no responsibility for identifying characteristics of the Property that were not readily identifiable by visual reconnaissance at the time of our site visit.

Shannon & Wilson has prepared this report in a professional manner, using that level of skill and care normally exercised for similar projects under similar conditions by reputable and competent environmental consultants currently practicing in the area, and in accordance with the terms and conditions set forth in our contract. Shannon & Wilson is not responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time the report was prepared. Also note that the facts and conditions referenced in this report may change over time and that the conclusions set forth here are applicable to the facts and conditions as described only at the time of this report. Conclusions were made within the operative constraints of the scope, budget, and schedule for this project. We believe that the conditions stated here are factual, but no guarantee is made or implied.

11.0 SIGNATURES OF ENVIRONMENTAL PROFESSIONALS

I declare that, to the best of my professional knowledge and belief, I meet the definition of environmental professional as defined in Section 312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, History, and setting of the Property. I have developed and performed the all-appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Notes:

This table includes selected information for sites with known or suspected contamination located within approximately ¼ mile upgradient of the subject parcel or within approximately 400 feet in any direction.

Environmental Data Resources, Inc. (EDR) Hist Auto and EDR Hist Cleaner only sites are not listed in the Washington State Department of Ecology (Ecology) database.

(GW) = in groundwater

(S) = in soil

ALLSITES = information on facilities and sites of interest to Ecology

AVE = Avenue

CESQG = conditionally exempt small-quantity generator

CO = Company

CSCSL = Confirmed and Suspected Contaminated Sites List

ECHO = Enforcement & Compliance History Information

FINDS = Facility Index System/Facility Registry System

ICR = independent cleanup report

LQG = large quantity generator

LUST = leaking underground storage tank

MANIFEST = Hazardous Waste Manifest Data

NFA = No Further Action

NLR = no longer regulated

NonGen/NLR = NonGenerator/no longer regulated

OFC = Office

PSE = Puget Sound Energy

PSRA = Puget Sound Regional Archives

RCRA = Resource Conservation and Recovery Act

REC = recognized environmental conditions

SDOT = Seattle Department of Transportation

TPH-D = diesel-range petroleum hydrocarbons

UST = underground storage tank

VCP = Voluntary Cleanup Program

APPENDIX A
SITE PHOTOGRAPHS

Photo 1: 615 Dexter Avenue North, Seattle, Washington – The north side of the building, including the entrance of the building and loading dock. Some spilled paint is visible in the loading dock area.

Photo 2: 615 Dexter Avenue North, Seattle, Washington – The east side of the building looking northwest.

Photo 3: 615 Dexter Avenue North, Seattle, Washington – The west side of the building looking north.

Photo 4: 615 Dexter Ave N, Seattle, Washington – The south side of the building looking east.

Photo 5: 615 Dexter Avenue North, Seattle, Washington – The southern exterior wall has a window, door, and coal chute leading to the basement. The door is framed closed and does not provide access to the basement.

Photo 6: 615 Dexter Avenue North, Seattle, Washington – The alleyway south of the building has a large drain. Documentation shows multiple underground storage tanks may exist in the alley.

Photo 7: 615 Dexter Avenue North, Seattle, Washington – The parking area on the east side of the parcel looking west. This area used to be a part of the building but burned down around 2005. The building foundation is used as parking.

Photo 8: 615 Dexter Avenue North, Seattle, Washington – Old paint stored on a pallet in the warehouse.

Photo 9: 615 Dexter Avenue North, Seattle, Washington – More paint stored on pallets. A paint spill can be seen in the bottom of the photo.

Photo 10: 615 Dexter Avenue North, Seattle, Washington – An old drum is stored in the basement. Tapping the drum produced a hollow sound, but it is not known whether the drum contains any material.

Photo 11: 615 Dexter Avenue North, Seattle, Washington – Insulation is seen on the piping and boiler in the basement. This insulation may contain asbestos.

Photo 12: 615 Dexter Avenue North, Seattle, Washington – Old oil pump in the basement, which indicates the presence of an oil tank being used at some point on the property.

Photo 13: 615 Dexter Avenue North, Seattle, Washington – A floor drain was found underneath dirt and debris in the basement. It is not known where this drain leads.

Photo 14: 615 Dexter Avenue North, Seattle, Washington – Copiers northwest uses the building as a warehouse and offices for large-scale printing operations.

Photo 15: 615 Dexter Avenue North, Seattle, Washington – The warehouse looking towards the loading dock.

Photo 16: 615 Dexter Avenue North, Seattle, Washington – One of multiple printing areas in the building.

Photo 17: Adjacent west – Emerald City Tint and vacant building.

Photo 18: Adjacent northwest – Empty fenced lot.

Photo 19: Adjacent north – Large office building.

Photo 20: Adjacent northeast – Construction site.

Photo 21:

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Shannon & Wilson, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR is licensed to reproduce certain City Directory works. Reproduction of City Directories without permission of the publisher may be a violation of copyright.

RECORDED IN ACCESS
APPLICATION FOR TEMPORARY PERMIT

Permit Code No.: 7908 Title: FLAMMABLE/COMBUSTIBLE LIQUID COMMERCIAL TANK DECOMMISSIONING

Fee: \$28.00 (No Renewal) Code Reference: SEC 7901.3 Date Received: 7/1/97 Date Issued: 7/1/97 Expires: 7/2/97

Firm Name: WEST PAC ENVIRONMENTAL Phone: 206 762-1190

Firm Address: 54 S. DAWSON ST. City: SEATTLE State: WA Zip: 98134

Job Site: 601 DEXTER AVE N. (ALLEY NORTH OF CORNERS NW)
Person In Charge: PAUL GURNETT Phone: 206 762-1190

Number of Tank(s): (4) Tank Size(s): 1,000 each PAGER 583-1496

Product(s) Previously Contained: HEATING OIL Hot Work: Yes No

Removal Abandonment-in-Place

REMITTANCE FOR PERMIT FEE AS SHOWN ABOVE MUST BE RETURNED WITH THIS APPLICATION TO:

SEATTLE FIRE DEPARTMENT HEADQUARTERS
HAZARDOUS MATERIAL PERMITS
301 Second Avenue South
Seattle, WA 98104-2618

Checks Payable To: CITY OF SEATTLE

PERMIT CONDITIONS:

- TANKS MAY BE REMOVED ONLY AFTER FIRE DEPARTMENT INSPECTION.
- Two (2) portable fire extinguishers with a minimum rating of 40 BC shall be on site within 50 feet of the operation.
- Rope or ribbon barricades must be provided circling 10' from the operation or be enclosed in a fenced yard.
- "No Smoking" signs must be posted in readily visible locations. *OK to pull 4 fuel oil tanks @ ~ 1,000 gal each*
- No hot work is allowed on a tank unless the tank is certified "safe for hot work" by a marine chemist. A separate Fire Department permit (Code 4913) is required for cutting and welding operations.

PROCEDURES: *West Pac Pump & Rinse cert OK East - 38% LEL Middle West - 70% LEL*

- Call 233-7106, a minimum of 24 hours prior to removal or abandonment to arrange for an inspection appointment. *Appointments must be confirmed by an inspector.*
- Permits may cover multiple tanks located at the same address. If additional tanks are to be removed or abandoned at later dates, separate permits shall be obtained. Each address location requires a separate permit application regardless of whether multiple address locations are physically next to one another. *Middle 39% LEL*
- Additional fees will be charged if inspectors are required to work other than normal business hours. (Normal business hours are Monday through Friday, 7:30 a.m. to 4:30 p.m.)

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes

EXECUTIVE SUMMARY

available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/10/2016 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 12/12/2016 has revealed that there are 3 RCRA-CESQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 10/18/2016 has revealed that there are 125 WA CSCSL sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

WA LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Department of Ecology's Leaking Underground Storage Tanks Site List.

A review of the WA LUST list, as provided by EDR, has revealed that there are 24 WA LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

WA UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Department of Ecology's Statewide UST Site/Tank Report.

A review of the WA UST list, as provided by EDR, and dated 08/29/2016 has revealed that there are 26

EXECUTIVE SUMMARY

WA UST sites within approximately 0.25 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 10/18/2016 has revealed that there are 37 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/12/2016 has revealed that there are 42 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the EDR MGP list, as provided by EDR, has revealed that there is 1 EDR MGP site within approximately 1 mile of the target property.

WASHINGTON NATURAL G	815 MERCER ST	ESE 0 - 1/8 (0.110 mi.)	L58	258

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 32 EDR Hist Auto sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

. Waste code: F002
. Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F003
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS, AND A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F005
. Waste name: THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

WA MANIFEST:

Facility Site ID Number: 84512858
EPA ID: WAD009490343
NAICS: 311812
SWC Desc: Not reported
FWC Desc: D001
Form Comm: Not reported
Data Year: 2011
Permit by Rule: False
Treatment by Generator: False
Mixed radioactive waste: False
Importer of hazardous waste: False
Immediate recycler: False
Treatment/Storage/Disposal/Recycling Facility: False
Generator of dangerous fuel waste: False
Generator marketing to burner: False
Other marketers (i.e., blender, distributor, etc.): False
Utility boiler burner: False
Industry boiler burner: False
Industrial Furnace: False
Smelter defferal: False
Universal waste - batteries - generate: False
Universal waste - thermostats - generate: False
Universal waste - mercury - generate: False
Universal waste - lamps - generate: False
Universal waste - batteries - accumulate: False
Universal waste - thermostats - accumulate: False
Universal waste - mercury - accumulate: False
Universal waste - lamps - accumulate: False
Destination Facility for Universal Waste: False
Off-specification used oil burner - utility boiler: False
Off-specification used oil burner - industrial boiler: False
Off-specification used oil burner - industrial furnace: False
Tax Reg #: 601047351

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2013

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 20137.1

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Amount (Lbs): 2691.2

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility ID: 15199671
Data Year: 2008
Description: bulked non-flammable liquids
Mix: False
Reported Qty: 233.19999999999999 K
Kilo Qty: 233.19999999999996
Density No: 0
Density Qty: Not reported

Facility ID: 15199671
Data Year: 2008
Description: Expired Non-DEA pharmaceuticals
Mix: False
Reported Qty: 1278.0999999999999 K
Kilo Qty: 1278.0999999999999
Density No: 0
Density Qty: Not reported

Facility ID: 15199671
Data Year: 2008
Description: Labpack-EHW
Mix: False
Reported Qty: 3.6000000000000001 K
Kilo Qty: 3.6000000000000001
Density No: 0
Density Qty: Not reported

Facility ID: 15199671
Data Year: 2008
Description: Labpack-DW
Mix: False
Reported Qty: 1754.45 K
Kilo Qty: 1754.45
Density No: 0
Density Qty: Not reported

Facility ID: 15199671
Data Year: 2008
Description: Mercury contaminated debris
Mix: False
Reported Qty: 5.929999999999997 K
Kilo Qty: 5.929999999999997
Density No: 0
Density Qty: Not reported

Facility ID: 15199671
Data Year: 2008
Description: Mixed Alcohol Solvent waste DW
Mix: False
Reported Qty: 6557.1000000000004 K
Kilo Qty: 6557.1000000000004
Density No: 0
Density Qty: Not reported

Facility ID: 15199671
