Subject: Phase II Evaluation Sears Auto Center Seattle, Washington

Dear Mr. Daniels:

A Phase I Environmental Site Assessment prepared by SEACOR on December 9, 1993 (4) raised environmental concerns in regards to the presence of a three-celled tank located at the site of the current Sears Auto Center at 2759 First Avenue South, Seattle, Washington. This letter is to address the concerns raised in that report and fulfill the work proposed by Earth Consultants, Inc., Project No. E-5370-3, March 8, 1994.

A review has been completed of associated reports (1, 2, 3, 4) and historical maps (5, 6) for the subject area. An attached figure (Plate 1), overlays the position of the existing building structure on historical structure locations. The positions of soil borings performed by Earth Consultants, Inc. under project number E-5730 in August of 1991 (1) are also indicated.

A review of historical records and reports indicate the following:

- A three-celled tank or vault was identified on circa 1940/1950 Sanborn Fire Insurance maps (5). It could not be determined whether this was a tank structure, a vault for oil/water separation, or a vault to hold three separate steel tanks and to keep them from sitting in the rather shallow water table.
- There have been various structures on the facility and the land surface has been both paved and unpaved at various times from the early 1900s until the present. Indications are that there has been some cutting to accommodate construction, but mostly filling at various times since the area was originally tide flats in the early 1900s.

Mr. Kevin Daniels First & Utah Street Associates, LP April 28, 1994

- Review of field notes for soil boring logs in August 1991 (1) indicates that the soils are fill material with fairly universal composition over the first eight to ten feet. A review of the logs indicated that the location for boring number five was directly through the area of the subject vault or tank (1). A review of the log for Boring 5 (attached) indicated that, at the time, no odors or visual indications of any type of petroleum release were detected; fill materials of sand and brick were found; and at approximately five feet below the surface, a hard surface was penetrated, presumably the bottom of the old vault. The vault appears to have been constructed of concrete, or brick and concrete, and collapsed and filled quite some time ago.
- The northeast corner of the current structure for the Sears Auto Center is located over what would have been the western end of the subject vault. During construction of the current building, the existing building perimeter was overexcavated to four and one-half feet below grade and extending at least four feet beyond the perimeter (3). If a vault or tank was present, it would have been encountered at that time. No structure was encountered.
- In January, 1992, an underground tank for heating oil was discovered and removed from under a warehouse building located at the south end of the subject site (ECI, Project E-5370-1). No leakage or soil contamination from the tank was detected (2). Per conversation between Joe Nessel, of Earth Consultants, Inc. and Gerald Eilers, of SODO Center, Seattle, Washington, April 21, 1994, this appears to be the only tank that has been discovered and removed from this site, and there is no knowledge of any other recently removed or encountered tanks.

Based upon the review of referenced documents and records, ECI believes that the threecelled structure no longer exists and has not existed for a considerable time. Per conversation between Joe Nessel, of Earth Consultants, Inc. and Doug Knowlton, of the Washington State Department of Ecology, Underground Storage Tank Section, April 20, 1994, it appears that the structure was closed in accordance with the regulatory requirements of the time, there has been no release of contaminants and no release is to be expected; and in the absence of the structure and any release, UST issues are not involved and no further action is required with respect to the three-celled tank. Mr. Kevin Daniels First & Utah Street Associates, LP April 28, 1994
