**EXECUTIVE SUMMARY**

Rothman & Associates has prepared this Cleanup Action Report for East Parcel – North Lot Property located at 255 South King Street in Seattle, Washington (the Property), on behalf of 255 S King Street LP to demonstrate compliance with the specific requirements of a cleanup action as defined by the Washington State Model Toxics Control Act in chapters 173-340-350 through 173-340-410 of the Washington Administrative Code. The cleanup action was conducted in accordance with the Cleanup Action Plan Addendum under Exhibit C of the 2014 Consent Decree No. 11-2-27892-1.

Based on a review of historical records and the findings of the Remedial Investigation completed by Landau Associates in 2011, the Property was originally undeveloped tideflats of Elliott Bay. The Property was filled in the late 1890s and early 1900s and operated as a rail yard from the late 1800s until the late 1960s. The fill material underlying the Property is composed of remnants of the former rail yard operations and construction debris (i.e., brick, metal, and concrete). Prior to filling, the area that includes the Property was initially developed with streets, buildings, and railroad tracks elevated on and supported by pilings. Several sets of railroad tracks were formerly present on the Property. Structures associated with the rail yard included engine maintenance buildings, sand houses, coal houses, oil houses, and materials storage areas. King County purchased the Property in the 1970s to facilitate construction of the Kingdome stadium to the south of the Property, which was later demolished and replaced with the current CenturyLink Field and Event Center development. The Property was used as a parking lot since the 1970s. 255 S. King Street LP purchased the Property from North Lot Development (NLD) in August 2013 and redeveloped it with a high-rise hotel and commercial/retail building with one level of belowground parking in 2016.

Several subsurface investigations were conducted at the Property between 2008 and 2014. Heterogeneous fill material was observed across the Property to depths up to approximately 20 feet below ground surface. Concentrations of total petroleum hydrocarbons, benzene, arsenic, and carcinogenic polycyclic aromatic hydrocarbons (PAHs) exceeded Site-Specific Cleanup Levels throughout the fill material, with the highest concentrations of cPAHs observed near the northern Property boundary in a creosote layer observed at depths of approximately 20 feet.

According to Landau (2011, 2014), the extent of impacts to groundwater as a result of the soil contamination is limited, and no evidence of soil contamination leaching to groundwater—or of groundwater contamination migrating off-Property—was observed. With the exception of arsenic, groundwater contamination was limited to the immediate vicinity of the creosote layer. The arsenic was determined to be the result of migration on-Property from off-Property sources (Landau 2014).

As a result, the nature and extent of contamination on the Property prior to remedial excavation activities can be summarized as follows:

- Creosote-like material was encountered at the base of the fill material in the northern portion of the Property.

- cPAHs, arsenic, and petroleum hydrocarbons were detected throughout the fill material placed across the Property. Based on the results of the RI and observations made during construction excavation activities, the fill materials included Seattle fire debris and coal ash/cinders from former coal storage beneath the northwestern portion of the Property, wood waste beneath the

southern half of the Property, and various construction debris and wood piles placed prior to and during the operation of the former rail yard.

An underground storage tank was discovered during remedial excavation activities; however, none of the soil samples collected surrounding the tank contained detectable concentrations of petroleum hydrocarbons.

Rothman & Associates observed remedial excavation activities at the Site between February and September 2015. The remedial excavation was conducted concurrent with the construction excavation. In accordance with the consent decree, contaminated soil was excavated from within the confines of the shoring for the building to depths between 17.5 and 22 feet below ground surface. Soil that exhibited concentrations of chemicals of concern in excess of the Site-specific or MTCA Method A cleanup levels was disposed of accordingly. Laboratory and field screening techniques were used to direct excavation activities and segregate contaminated soil and debris. During the cleanup activities, 57,009 tons of contaminated soil and debris was excavated from the Property and transported to Republic Service's Regional Disposal Intermodal at 3rd & Lander, AAA Monroe Rock, and Waste Management's Alaska Street facility for permitted landfill disposal.

A protective cap was constructed across the Property to prevent contact with any contaminated soil remaining in place at the Property following the cleanup and construction activities. The cap consists primarily of the building foundations. In areas outside of the footprint of the building foundations, but within the Property boundary that will not be landscaped, an impermeable concrete cap was installed. In the planned landscaped areas (where exposure to soil is not prevented by a concrete cap or building foundation), soil was excavated to 5 feet below ground surface, a geotextile fabric barrier was placed at the bottom of the excavation, and the excavated area was backfilled with clean soil.

To mitigate any potential risks associated with vapor intrusion, the water barrier included with the foundation design also serves as a barrier to soil vapor intrusion. The foundation was constructed with a 26-inch-thick impermeable seal-slab concrete floor slab system and a completely integrated, contained, and welded steel sheetpile wall. The top 12 inches of the seal-slab system consists of an impermeable Hycrete concrete floor slab that connects to the perimeter sheetpile walls and forms an impermeable seal using bentonite plugs and bands.

Compliance groundwater and indoor air sampling will be conducted in accordance with the compliance monitoring plan under the 2014 Cleanup Action Addendum.

This executive summary was prepared for introductory purposes only, and the information provided should be used only in conjunction with the full text of this report. A complete description of the project, remedial methods, and results of the remedial actions are contained within this report.

## 1.0 INTRODUCTION

Rothman & Associates has prepared this Cleanup Action Report (CAR) for the East Parcel – North Lot Property located at 255 South King Street in Seattle, Washington (the Property), on behalf of 255 S. King Street LP to demonstrate compliance with the specific requirements of a cleanup action as defined by the Washington State Model Toxics Control Act (MTCA) in chapters 173-340-350 through 173-340-410 of the Washington Administrative Code (WAC). The cleanup action was conducted in accordance with the Cleanup Action Plan Addendum under Exhibit C of the 2014 Consent Decree No. 11-2-27892-1.

As established in WAC 173-340-200, the Site is defined by the full vertical and lateral extent of soil and groundwater contamination:

- Metals, carcinogenic polycyclic aromatic hydrocarbons (cPAHs), and naphthalene were primarily located within the top 5 feet of soil across much of the Property. cPAHs were also identified at depths of approximately 18 to 22 feet across much of the Property, and petroleum hydrocarbons were generally located in soil beneath the northeastern Property boundary, at depths of approximately 18 to 22 feet.

- Groundwater impacted by diesel-range petroleum hydrocarbons (DRPH), oil-range petroleum hydrocarbons (ORPH), gasoline-range petroleum hydrocarbons (GRPH), benzene, and cPAHs was identified near the northeast corner of the Property. Arsenic was detected in groundwater collected from wells installed within the northeast quadrant of the Property. The chemicals of concern (COCs) are associated with the placement of heterogeneous fill at and near the Property, as well as the former operation of a rail yard in the late 1800s and early 1900s. According to Landau, arsenic in groundwater may be associated with an off-Property source.

This CAR summarizes the cleanup actions undertaken in accordance with the East Parcel Engineering Design Report (EDR; Landau 2014). The selected and approved cleanup elements include the following:

- Excavation and off-Property disposal of soil from 0 to 17.5 feet below ground surface (bgs) within the building footprint. Localized areas extended to approximately 22 feet bgs for the installation of pile caps, elevator pits, grade beams, and other building components.

- Installation of a vapor barrier with the building foundation to address potential vapor intrusion into the belowground parking garage.

- Capping of the majority of the Property surface by the building foundation.

- Additional capping measures consisting of concrete pavement on walkways and driveways, excavation to 5 feet bgs, and soil cover in landscaped areas to prevent contact with shallow contaminated soil in areas outside the footprint of the building foundation.

- Implementation of institutional controls.

- Implementation of the groundwater compliance monitoring plan.

- Implementation of the vapor intrusion compliance monitoring plan.

- Recording of an environmental covenant.

## 2.0 BACKGROUND

This section provides a description of the Property features and location, a summary of historical land use, and a description of the local geology and hydrogeology of the Property and adjoining parcels.

### 2.1 Property Location and Description

The following subsections present the current land use practices on the Property and surrounding parcels.

#### 2.1.1 Property

The Property, which is located at 255 South King Street in the Pioneer Square neighborhood of Seattle, Washington, includes one generally square-shaped tax parcel (King County Parcel No. 766620-4878) that covers approximately 65,352 square feet (1.5 acres) of land. According to King County, prior to redevelopment, the Property was located at an elevation of 20 feet above mean sea level.

The location of the Property is shown on Figure 1. Figure 2 depicts a plan view/layout of the Property and exploration locations prior to redevelopment, and Figure 3 depicts historical Property features.

#### 2.1.2 North-Adjoining Property

South King Street provides the northern Property boundary (Figure 2). The property across South King Street (King County Parcel No. 524780-0795) covers approximately 57,437 square feet (1.32 acres) and is occupied by King Street Center, a 1998-vintage mixed-use office building with three levels of parking, two of which are belowground (King County iMAP 2018). King Street Center has a foundation drain system that passively collects groundwater along the building foundation. The water that collects in the drain system is pumped to the sanitary sewer system for disposal (Landau 2013).

#### 2.1.3 South-Adjoining Property

The parcel south of Property (King County Parcel No. 766620-4876) is occupied by the 1999-vintage CenturyLink Field and Event Center and associated parking.

#### 2.1.4 East-Adjoining Property

King County Parcel No. 766620-4886 adjoins the Property to the east and is occupied by an underground vault owned and operated by King County Wastewater. King Street Station (King County Parcel No. 524780-1160), which was constructed as a railroad passenger terminal in 1906, is located adjacent to the northeast of the Property.

#### 2.1.5 West-Adjoining Property

West Parcel – North Lot Property adjoins the Property to the west. The West Parcel (King County Parcel No. 795200-0000) was recently redeveloped as Stadium Place, a 2013-vintage mixed-use apartment/condominium building with ground floor commercial and four levels of aboveground parking.

## 2.2 Land Use History of the Property

Based on a review of historical records and the findings of the Remedial Investigation completed by Landau Associates in 2011, the Property was originally undeveloped tideflats of Elliott Bay. The Property was filled in the late 1890s and early 1900s and operated as a rail yard from the late 1800s until the late 1960s. The fill material underlying the Property is composed of remnants of the former rail yard operations and construction debris (i.e., brick, metal, and concrete). Prior to filling, the area that includes the Property was initially developed with streets, buildings, and railroad tracks elevated on and supported by pilings. Several sets of railroad tracks were formerly present on the Property. Structures associated with the rail yard included engine maintenance buildings, sand houses, coal houses, oil houses, and materials storage areas. King County purchased the Property in the 1970s to facilitate construction of the Kingdome stadium to the south of the Property, which was later demolished and replaced with the current CenturyLink Field and Event Center development. The Property was used as a parking lot since the 1970s. 255 S. King Street LP purchased the Property from NLD in August 2013 and redeveloped it with a high-rise hotel and commercial/retail building with one level of belowground parking in 2016.

Historical Property features are presented on Figure 3. Current and archived Property records are included in Appendix A.

## 2.3 Future Land Use of the Property

The Property is undergoing redevelopment as a high-rise hotel and commercial/retail building with one level of belowground parking.

## 2.4 Environmental Setting

The following subsections describe the environmental setting of the Property.

### 2.4.1 Land Use

Surrounding land use is primarily commercial and multi-family residential; the Property is located adjacent to the King Street Station, Stadium Place, and CenturyLink Field and Event Center in the Pioneer Square neighborhood of downtown Seattle, Washington.

### 2.4.2 Climate

Climate in the Seattle area is generally mild, and the area experiences moderate seasonal fluctuations in temperature. Average temperatures range from the 60s in the summer to the 40s in the winter. The warmest month of the year is August, which has an average maximum temperature of 75 degrees Fahrenheit (°F), while the coldest month of the year is January, which has an average minimum temperature of 36°F.

The annual average rainfall in the Seattle area is 38 inches. The wettest month of the year is December, when the area receives an average rainfall total of 6 inches (IDcide 2016).

### 2.4.3 Groundwater Use

According to Ecology Water Well Logs, no active water supply wells are located within a 1-mile radius of the Property (Ecology 2014). Seattle Public Utilities provides drinking water to the City residents via two water collection facilities: one in the Cedar River watershed, which supplies 70 percent of the drinking water used by 1.4 million people in Seattle and surrounding suburbs, and the other in the Tolt River watershed which supplies the other 30 percent (primarily the portions of the city north of the Lake Washington Ship Canal) (Seattle Public Utilities 2016).

## 2.5 Geologic and Hydrogeologic Setting

The following sections discuss the topography and the regional and Property hydrogeology and geology.

### 2.5.1 Topography

The topography of the Property is relatively flat. Prior to redevelopment, the elevation of the Property was approximately 20 feet above mean sea level (King County iMAP 2016).

### 2.5.2 Regional Hydrogeology

The geology of the region is generally characterized by a thick sequence of glacial soil overlying tertiary bedrock, with local areas of exposed surficial bedrock. In general, the glacial stratigraphic sequence of the Puget Lowland consists of generally fine-grained, low-energy, non- glacial and glacial lacustrine and fluvial deposits overlain by glacial advance sand. The advance sand is overlain by glacial till, which, in turn is locally overlain by glacial recessional sand, where present, as well as organic-rich peat, lacustrine, and alluvial deposits. Where exposed, the glacial soil has been modified by mass wasting, stream erosion and deposition, and anthropogenic modifications (Booth et al. 2009).

The hydrogeology of the Puget lowland and Quaternary glacial soil includes near-surface, non-glacial alluvial deposits, perched water-bearing zones atop and within the glacial till soil or other consolidated fine-grained or cemented glacial deposits, and more persistent and higher yielding water-bearing zones present within the underlying glacial advance sands and older granular glacial and non-glacial deposits. The advance sands can be an important source of potable water supplies, particularly in suburban and rural locations within the Puget Lowland, while the water-bearing zones within the glacial till are not often exploited as a potable source as a result of significant seasonal fluctuations, low yield, and susceptibility to water quality degradation (Booth et al. 2009).

### 2.5.3 Property Geology

The Geologic Map of Seattle—A Progress Report (Troost et al. 2005) indicates that the Property is underlain by modified land/regraded fill material. As discussed in greater detail below, the results of the investigations conducted by others and the observations made during excavation activities are consistent with published data.

The upper 0 to 25 feet of soil beneath the Property and within the footprint of the building foundation is interpreted to be anthropogenic fill material associated with at least five separate sources:

- Upper Layer/Soil Fill Unit. The upper 2 to 5 feet was comprised of silt, sand, and gravel fill across the entire Property.
- Coal Ash Unit. Beneath the upper layer and on the northern portion of the Property, significant quantities of coal, coal ash, cinders, and sedimentary rock boulders that were likely associated with debris from the Great Seattle Fire in 1889 were observed during the mass excavation.
- Wood Waste Unit. Significant quantities of wood waste, including large logs, cut timbers, and small lumber, were located in a broad band across the northeastern portion of the Property through the southwest quadrant of the Property.
- Sawdust Unit. Large quantities of sawdust were observed beneath the central, eastern, and southern portions of the Property.
- Creosote Unit. According to the RI, one distinct, localized area of creosote-like material present at the base of the fill material in the northeastern corner of the Property. This layer was only encountered near the northern Property boundary, which suggests that the majority of the creosote layer is located below the final elevation of the excavation and remains in place.

Native, dark gray marine silt (Marine Sediment Unit) with shells was encountered beneath the fill material, from approximately 25 feet bgs to 80.5 bgs, the maximum depth explored during previous investigations.

The lateral and vertical distribution of the fill materials are presented on Figures 4 through 11.

### 2.5.4 Property Hydrogeology

Depth to groundwater beneath the Property measured during the RI ranged from 5 and 11 feet bgs, and the thickness of the uppermost hydrostratigraphic unit generally ranges from 11 to 25 feet.

Average hydraulic gradients were calculated based on the water levels measured at the Property in 2009 with a gradient ranging from 0.0025 to 0.0122 feet per foot between MW-4 and MW-6 (Landau 2011). Groundwater flows were highly variable between monitoring events. In addition, the lowest elevation measured was on the northeastern portion of the Property, suggesting a general gradient toward the east or northeast, which is inconsistent with regional flow toward Elliot Bay and Puget Sound (Landau 2011). However, variable flow and gradient are common within shallow, unconfined aquifers that consist of fill material, especially in urban areas where subgrade constructed features, such as the King Street Center foundation drain system, can affect the immediately surrounding groundwater table.

## 2.6 Previous Environmental Investigations

Several environmental investigations have been conducted on the Property since 2008, as described in the Cleanup Action Plan Addendum (Landau 2013) and summarized below.

Between 2008 and 2011, soil and groundwater samples were collected from more than 70 soil borings and 20 groundwater monitoring wells. The soil and groundwater samples collected during the investigations were submitted for selected laboratory analysis for the following parameters:

- Total petroleum hydrocarbons (TPH)
- GRPH
- DRPH

- ORPH
- Metals, including arsenic, cadmium, chromium, copper, lead, mercury, and zinc
- Benzene, toluene, ethylbenzene, and total xylenes (BTEX)
- cPAHs
- Semivolatile organic compounds (SVOCs)
- Volatile organic compounds (VOCs)
- Polychlorinated biphenyls (PCBs)
- Dioxins and furans

Based on the results of the investigations, COCs identified in the RI for the Property include TPH, benzene, metals, cPAHs, and naphthalene in soil, as well as TPH, cPAHs, benzene, and arsenic in groundwater. Mercury, dioxins/furans, and naphthalene were also identified at concentrations above the cleanup levels; however, these constituents were identified in relatively few of the samples analyzed and within the bounds of the COCs listed above.

The analytical data suggested that the extent of impacts to groundwater from soil contamination is limited and that the groundwater contamination did not pose a risk to human health or the environment (Landau 2013). Groundwater impacted by arsenic is limited to the northeast quadrant of the Property, and groundwater impacted by cPAHs, TPH, and benzene is limited to the northern Property boundary, in the immediate vicinity of the creosote material present at the base of the fill in the northern corner.

Soil contamination on the Property can generally be defined according to geologic unit:

- The Upper Layer/Soil Fill Unit contains concentrations of cPAHs across much of the top 1 to 2 feet of the Property surface. Arsenic was also confirmed at concentrations above the cleanup level on across the western half of the Property.
- The Coal Ash Unit exhibited widespread distribution of cPAHs at relatively low concentrations.
- Concentrations of cPAHs exceeded the cleanup level within soil collected from the Wood Waste Unit.
- The Sawdust Unit exhibited widespread distribution of cPAHs at relatively low concentrations.
- The Creosote Unit at the base of the fill material in the northern portion of the Property contains elevated concentrations of cPAHs, benzene, and TPH.

### 2.7 Pathways and Receptors

The following subsections describe the media of concern and potential exposure pathways at the Property.

#### 2.7.1 Media of Concern

The following media of concern were identified at the Property:

- Soil contaminated with arsenic, cPAHs, TPH, and benzene, which appears to be the result of anthropogenically-sourced, heterogeneous fill material.
- Groundwater near the northern corner of the Property appears to have been impacted by cPAHs, TPH, and benzene in the immediate vicinity of the Creosote Unit.

- Groundwater beneath the northeast quadrant of the Property contains elevated concentrations of arsenic.

### 2.7.2 Exposure Pathways

The following pathways were reviewed for the Property.

#### 2.7.2.1 Soil Pathway

Potential exposure pathways for soil contamination include only the direct contact pathway, which comprises direct contact via dermal contact with and/or ingestion of soil beneath the Property. Protection from direct contact exposure to affected soil would require capping or excavation; because all contaminated soil was excavated or capped during the cleanup action, the direct contact exposure pathway has been eliminated.

The leaching pathway was evaluated in the CAP Addendum prepared for the Property. The extent of impacts to groundwater from soil contamination appears to be limited, and there is no evidence of soil contaminants leaching to groundwater, or of contaminants in groundwater migrating off the Property at concentrations exceeding the cleanup levels (Landau 2013). In addition, the presence of a cap above the soil limits any future leaching of water from the ground surface through any contaminated material. The building foundation includes a foundation drain system further limit the introduction of water into the subsurface. Therefore, the leaching pathway appears to be insignificant.

#### 2.7.2.2 Groundwater Pathway

Groundwater is affected by releases directly into a groundwater-bearing zone or by unsaturated soil contamination desorbed from the soil particles by infiltrating surface water or seasonally high groundwater conditions. Potential exposure pathways for groundwater contamination include volatilization into soil vapor and subsequent exposure through the vapor pathway or via the direct contact pathway, which comprises both the dermal contact and ingestion pathways. No groundwater supply wells at or in the vicinity of the Site are used for potable water supply. The primary water-bearing zone underlying the Site may qualify as a potential future source of potable water; however, because of the availability of municipal water supplies in the Property vicinity, there is a low probability that groundwater in the primary water-bearing zone at the Property or adjoining parcels would be used as a potable water source. In addition, in accordance with the Landau RI, FS, and CAP Addendum, it has been confirmed that impacts to groundwater from the contaminated soil is limited and that contamination in groundwater does not pose a threat to human health or the environment (Landau 2011a, 2011b, 2013).

#### 2.7.2.3 Vapor Pathway

The air-filled pore space between soil grains in the unsaturated zone or partially saturated zone is referred to as soil gas or soil vapor. Soil vapor can become contaminated from volatilization of a certain chemicals in the subsurface. An impermeable barrier was installed as part of the building foundation as a result of concerns of potential vapor intrusion from the contamination remaining

beneath the Property. Vapor monitoring will be conducted to ensure that the vapor risk is fully mitigated.

### 2.8 Terrestrial Ecological Evaluation

A Terrestrial Ecological Evaluation (TEE) is required by WAC 173-340-7940 at locations where a release of a hazardous substance to soil has occurred. The TEE is intended to assess potential risk to plants and animals that live entirely or primarily on affected land. A simplified TEE was required under MTCA to assess the potential ecological risks posed by contamination at the Site, and to evaluate whether a more detailed investigation of potential ecological risk would be required. Rothman & Associates conducted a simplified TEE in accordance with Table 749-1 of WAC 173-340-900 and the protocols established in WAC 173-340-7492 to assess the potential ecologic risk associated with the presence of COCs at the Site.

The Site qualifies for a TEE exclusion based on WAC 173-340-7491. The results of ranking for the simplified TEE under Table 749-1 of WAC yields a score of 11, which qualifies the Site for the TEE exclusion per WAC 173-340-7492(2)(a)(ii) on the basis that land use at the Site and surrounding area makes substantial wildlife exposure unlikely (Appendix D). The TEE considers Site area, Site land use, Site habitat quality, likelihood that the Site will attract wildlife, and COCs occurring in Site soil. No further consideration of ecological impacts is required under MTCA.

### 2.9 Cleanup Levels

Cleanup levels were developed for the Property in the RI, FS, and CAP and have been applied to the cleanup action on the Property.

#### 2.9.1 Cleanup Levels for Soil

For all constituents except lead and petroleum hydrocarbons, MTCA Method B soil cleanup levels were developed based on the most stringent of the constituent concentrations in soil protective of groundwater as drinking water and marine surface water, and protective of human health based on direct contact (Method B standard formula values for carcinogens and non-carcinogens). In accordance with MTCA, the MTCA Method A soil cleanup levels were used for lead, GRPH, DRPH, and ORPH. Cleanup levels for arsenic, copper, and mercury were adjusted upward to the natural background concentration in soil. Cleanup levels for non-carcinogens were evaluated based on total Property risk and were adjusted downward, where necessary, to achieve a hazard index for the Property equal to or less than 1. Cleanup levels for carcinogens were also evaluated based on total Property risk; adjustment of the cleanup levels for carcinogens for total Property risk was not necessary. Additional information regarding cleanup level development is provided in Appendix F of the FS report (Landau Associates 2011c).

#### 2.9.2 Cleanup Levels for Groundwater

The Property is located within 1,100 feet of Elliott Bay and groundwater at the Property, where not affected by the King Street Center foundation drains, generally flows west toward Elliott Bay. As noted above, groundwater in the Property area is not used as a potable water source and the City of Seattle would require connection to the city water system as part of Property development. However, the MTCA Method B groundwater cleanup levels based on drinking water use and discharge to marine surface water, or the MTCA Method A groundwater cleanup levels for petroleum hydrocarbons, were used to identify

groundwater cleanup levels for constituents detected at the Property. The MTCA Method B groundwater cleanup levels were developed based on the most stringent of the federal or state maximum contaminant levels (MCLs), state primary and secondary MCLs, protection of marine surface water, and the MTCA Method B standard formula values. The MTCA Method A groundwater cleanup levels were used for GRPH, DRPH, and ORPH. Cleanup levels for non-carcinogens were evaluated based on total Property risk and were adjusted downward, where necessary, to achieve a hazard index for the Property equal to or less than 1. Adjustment of cleanup levels for carcinogens for total Property risk was not necessary. Total risk adjustment tables are provided in Appendix F of the FS report (Landau Associates 2011c).

### 2.9.3 Cleanup Levels for Indoor Air

Because benzene is present at elevated concentrations in deeper soil, the building construction includes measures to address potential vapor intrusion into the below-ground garage. Additionally, compliance monitoring will be conducted (see Appendix C of the CAP Addendum [Landau 2013]) to document indoor air quality within the garage and to allow for evaluation of potential mitigation measures, if warranted, to protect users of the below-ground garage. Indoor air analytical results will be compared to the MTCA Method B cleanup level of 0.32 $\mu g/m^3$ (Landau 2012 and 2013).

## 3.0 CLEANUP ACTION

This section provides a detailed description of the pre-field and field components of the remedial activities conducted at the Site between November 2014 and September 2015. The cleanup action was designed to coincide with redevelopment activities at the Property. Construction activities were coordinated by 255 S King St LP, the general contractor for the project.

### 3.1 Health & Safety Plan

Before the commencement of construction activities, a health and safety plan (HASP) was prepared in accordance with Part 1910.120 of Title 29 of the Code of Federal Regulations and provided as an appendix to the EDR Addendum (Landau 2014). In accordance with project contractual agreements, 255 S King St LP was responsible for the health and safety of all workers on the Property.

### 3.2 Site Preparation

In November 2014, 255 S King St LP secured the perimeter of the Property with an 8-foot-high temporary chain-link fence prior to staging equipment and preparing for redevelopment of the Property.

### 3.3 Dewatering System Installation

Although not part of the remediation, a dewatering system was installed prior to excavation to final construction grade. As described in the RI and briefly summarized above, groundwater was encountered beneath the Property at depths ranging from 5 to 11 feet bgs and extending beyond the anticipated base of the excavation and shoring. The entire excavation footprint had to be dewatered/controlled in order to complete construction excavation and avoid a bathtub effect. Dewatering wells were installed in general accordance with the layout developed by GeoEngineers, Inc. and provided with the King County Dewatering Request form in Appendix E.

### 3.4 Pre-Excavation Soil Sampling Activities

After the Property was secured, 255 S King St LP excavated 73 test pits in accessible areas on a predetermined 20'x20' grid within the shoring boundaries on November 6 and 7, 2014. Soil samples were collected at priority and secondary grid points at depths of 1 and 5 feet bgs (Figures 12 and 13). Depending on results of previous investigations and field observations, as well as incoming data from this effort, selected samples were analyzed for cPAHs, naphthalene, arsenic, and mercury. Samples were labeled according to the closest grid intersection and depth, e.g., G2-5.

Based on the results of the shallow soil sampling, most of the soil at depths between 0 and 5 feet contained elevated concentrations of cPAHs and required disposal as contaminated material. The majority of the samples collected at 5 feet did not contain concentrations of COCs in excess of the cleanup levels (Rothman & Associates 2014).

The soil sample collected from D11 at 1 foot contained a concentration of arsenic of 113 milligrams per kilogram (mg/kg). The sample was subsequently analyzed according to the Toxicity Characteristic Leaching Procedure to verify that the arsenic-contaminated soil could be disposed of as non-hazardous waste (Appendix F).

### 3.5 Excavation Activities

The on-Property remedial excavation activities were conducted between February 25 and September 25, 2015. Additional excavation of contaminated soil from around the perimeter of the Property was completed as the construction schedule allowed to address landscaped areas and utilities: March 14 and 15, 2017, between July 1 and 15, 2017, between September 19 and 26, 2017, and on January 17 and 18, 2018. Rothman & Associates provided soil characterization oversight during the excavation activities performed by 255 S King St LP. Excavation and sampling activities were initiated in accordance with the EDR Addendum (Landau 2014). Additional on-Property soil sampling was conducted on the same 20'x20' grid applied during pre-excavation sampling (Figure 2). Prior to the construction excavation, the top 1.5 to 5 feet of soil (including asphalt, associated subgrade, and shallow soil/fill) was removed and disposed of in order to prepare the parcel for redevelopment. The final construction excavation extended to approximately 17.5 feet bgs. Localized areas extended to approximately 22 feet bgs for the installation of pile caps, elevator pits, grade beams, and other building components.

To further characterize soil for disposal, samples were collected at 5-foot depths along the north and east excavation boundaries, which were inaccessible during the November sampling event. During the remainder of the excavation, in areas where obvious contamination was identified, soil samples were collected and/or soil and debris was directed to be disposed of as contaminated and placed either in a designated stockpile or directly loaded into a truck-and-pup for disposal via Republic Service's Regional Disposal Intermodal at 3rd & Lander, Waste Management's Alaska Street facility, and AAA Monroe Rock. In addition, 4-ounce jars were collected at each grid intersection where the soil quality could not be confirmed visually. Samples were labeled according to the closest grid intersection and depth, e.g., G2-5. Samples were analyzed according to field indications of contamination, e.g., odor or discoloration, and based in part on the results of previous analyses. Shallow soil sample locations are provided on Figures 12 and 13, and soil analytical data are included in Table 1.

In addition to the metal, petroleum, and cPAH contamination identified in the fill material, the following

discoveries were made during the excavation:

- The results of excavation and sampling activities suggest that the Creosote Unit extends along the entire northern Property boundary and approximately 40 feet south of the northern boundary beneath the Property (Figure 4). Elevated concentrations of cPAHs, as well as creosote free product, were observed in the north core excavation area and near the northwestern corner of the excavation. Some spots of sheen were observed groundwater located on the southern half of the Property, suggesting that the creosote layer extends south of that observed during excavation activities.
- The Coal Ash Unit extended across much of the northern Property boundary above the Creosote Unit (Figures 4 through 11). cPAHs detected within this unit exceeded the disposal limits set by waste management facilities, so the bulk of the material was disposed of as contaminated.
- The Wood Waste Unit trended in a broad, irregular band across from the northeast quadrant of the Property to the southwest quadrant of the Property (Figures 4 through 11); some of the piles found within the unit were coated with creosote. All wood debris was disposed of via Republic Services.
- The Sawdust Unit covered the bulk of the southern two-thirds of the Property (Figures 4 through 11) and exhibited elevated concentrations of cPAHs. The sawdust was disposed of via Republic Services.
- A brown sandy silt and gravel was interspersed throughout these units, primarily on the western half of the Property. Samples collected from this visually distinctive unit did not contain elevated concentrations of COCs.
- Coal ash surrounding a former UST system, the decommissioning and assessment of which is discussed in Section 3.7, below, was not impacted by a release from the UST.

Soil was excavated from the Property under the oversight of Rothman & Associates for the purposes of characterizing and directing soil for proper disposal. As discussed above, laboratory and field screening techniques were used to direct excavation activities.

Approximately 57,009 tons of contaminated materials were excavated from the Property and disposed of at regulated facilities. This translates to the excavation and disposal of approximately:

- 11,000 cubic yards (cy) of upper unit fill material
- 7,333 cy of coal ash
- 1,711 cy of wood waste
- 18,222 cy of sawdust

Disposal tickets with the facility name and volume received are provided in Appendix G.

Groundwater encountered during excavation activities was either dewatered and discharged in accordance with Construction Stormwater General Permit No. WAR301510 or, in cases where creosote product interfered with the pumping system, it was pumped out via vac truck and disposed of off-site by Emerald Services. Creosote-impacted groundwater was observed throughout the northern half of the Property; some limited spots of sheen was observed on portions of the southern half of the Property.

### 3.6 UST Site Assessment

A UST associated with the former operations was identified during excavation activities on February 26, 2015 (Figure 14). On February 27, 2015, a Washington State Certified UST Site Assessor (ICC# 8173992) observed the decommissioning and removal of one 1,750-gallon UST containing 18 inches of Bunker C heating oil by Diane's Tank Service (ICC# 8057526-U2 and -U7) and Northwest Construction. Decommissioning and removal activities were overseen by the Seattle Fire Marshal. Marine Vacuum Services, Inc. of Seattle, Washington, triple-rinsed the UST. Copies of the UST decommissioning and site assessment documents are provided in Appendix H.

Sound Testing, Inc. personnel rendered the UST inert by displacing the oxygen and petroleum vapors inside the UST with an inert gas until less than 10 percent oxygen was measured within the UST. The UST was then removed from the tank hold and examined for indications of wear. The UST appeared to be rusted but in generally good condition.

Coal ash surrounding the UST and the associated piping was sampled and stockpiled prior to disposal. Five soil samples were collected from the bottom and sidewalls of the UST excavation (Figure 14). The samples were analyzed for DRPH and ORPH by Northwest Total Petroleum Hydrocarbon (NWTPH) Method NWTPH-Dx, GRPH by NWTPH-Gx, BTEX by U.S. Environmental Protection Agency (EPA) Method 8021B, and cPAHs by EPA Method 8270C SIM. None of the samples contained detectable concentrations of petroleum hydrocarbons (Table 1). The sample collected from the south sidewall at a depth of approximately 10 feet contained concentrations of cPAHs in excess of the disposal limits, but the contamination was likely associated with the fill material and not a release from the UST. No evidence of a release was observed. The UST excavation reached a total depth of approximately 12 feet bgs. The cPAHs identified in the south sidewall were overexcavated and disposed of as contaminated material as part of the overall excavation for the future building. The total depth of excavation in the vicinity of the UST was 17.5 feet bgs.

### 3.7 Vapor Intrusion Mitigation

As outlined in the CAP Addendum and the EDR Addendum, the hycrete water barrier included with the foundation design also serves as a barrier to vapor intrusion. The foundation was constructed with a 26-inch-thick impermeable seal-slab concrete floor slab system and a completely integrated, contained, and welded steel sheetpile wall that extends to 40 feet bgs. The top 12 inches of the seal-slab system consists of an impermeable Hycrete concrete floor slab that connects to the perimeter sheetpile walls and forms an impermeable seal using bentonite plugs and bands. Specifications for the system are provided in Appendix I, which details the installation and construction of the barrier system.

The ventilation system for the underground parking garage was designed to allow for proper ventilation and to allow the space to be operated under positive pressure. The compliance monitoring plan (Appendix C of the CAP Addendum) includes baseline indoor air sampling and analysis to document conditions following construction and to assess the need for additional mitigation or monitoring, as warranted, to protect users of the underground parking garage and associated uses (see Appendix C of the CAP Addendum).

### 3.8 Protective Surface Cap

A protective cap was constructed across the Property to prevent contact with any contaminated soil remaining in place at the Property following the cleanup and construction activities. The cap consists primarily of the building foundations. In areas outside of the footprint of the building foundations, but within the Property boundary that will not be landscaped, an impermeable concrete cap was installed.

In the planned landscaped areas (where direct exposure to soil is not prevented by a concrete cap or building foundation), soil was excavated to 5 feet bgs, a geotextile fabric barrier was placed at the bottom of the excavation, and the excavated area was backfilled with clean soil. The landscaped areas where soil was excavated to 5 feet bgs and the areas where protective pavement was placed is shown in Figure 16. The excavation and capping activities were conducted along 2nd Avenue South, for the purposes of installing sewer/water utilities and grease interceptors. Details regarding the operation and maintenance procedures developed to maintain the protective surface cap are provided in the EDR Addendum (Landau 2014).

The final, post-remediation Property layout is presented on Figure 16.

### 3.9 Environmental Covenant

An environmental covenant limiting access to soil and groundwater beneath the Property will be recorded following Ecology's approval of the Final CAR and as-builts.

## 4.0 COMPLIANCE MONITORING

There are three types of compliance monitoring identified for remedial cleanup actions performed under MTCA (WAC 173-340-410): protection, performance, and confirmational monitoring. A paraphrased definition for each is presented below (WAC 173-340-410[1]):

- **Protection Monitoring**: To evaluate whether human health and the environment are adequately protected during construction and the operation and maintenance period of an interim action or cleanup action.
- **Performance Monitoring**: To document that the cleanup action has attained cleanup standards.
- **Confirmational Monitoring**: To evaluate the long-term effectiveness of the cleanup action once cleanup standards or other performance standards have been attained.

### 4.1 Protection Monitoring

A Health and Safety Plan (HASP) that meets the minimum requirements for such a plan identified in federal (Title 29 of the Code of Federal Regulations, Parts 1910.120 and 1926) and state regulations (WAC 296) was prepared for the cleanup action (Landau 2014). The HASP identifies the known physical, chemical, and biological hazards; hazard monitoring protocols; and administrative and engineering controls required to mitigate the identified hazards. Protection monitoring was performed using a 4-gas meter to measure LEL and to ensure that personnel were not subject to unsafe conditions while working on the Property. The results of the protection monitoring confirmed that human health and the environment were adequately protected during the excavation activities.

### 4.2 Performance Monitoring

Soil performance monitoring was conducted during remedial excavation activities in an effort to characterize soil for disposal. Performance monitoring included the collection of soil samples throughout the excavation activities for waste profiling and off-Site disposal. Laboratory analytical reports are provided in Appendix F.

All performance monitoring results were compared to applicable MTCA Method A or site-specific cleanup levels for soil.

Concentrations of chemicals of concern quantified in the samples were identified in the following areas of contamination:

- cPAH- and metal-contaminated shallow (between 0 and 5 feet bgs) fill material across the entire Property.
- Limited arsenic contamination in soil within the shallow fill material.
- cPAH- and petroleum hydrocarbon-contaminated soil from a creosote layer approximately 20 feet bgs below the northern portion of the Property.
- cPAH contamination in the sawdust unit and in soil immediately surrounding creosote-treated wood waste and debris throughout the Property.

Soil analytical results from samples collected during remedial activities are attached to this report as Appendix F.

### 4.3 Confirmational Soil Sampling

In accordance with the EDR Addendum, no confirmational soil samples were collected during excavation activities. All soil samples collected during excavation activities were analyzed for waste disposal characterization purposes only.

### 4.4 Compliance Monitoring

Compliance indoor air and groundwater monitoring will be completed following construction of the building. Results of each will be submitted under separate cover, as described below.

#### 4.4.1 Compliance Vapor Sampling

The compliance monitoring plan to evaluate vapor intrusion into the belowground parking garage is included as Appendix C of the CAP Addendum, and it incorporates baseline indoor air sampling and analysis to document conditions following construction and to assess the need for additional mitigation or monitoring, as warranted, to protect users of the belowground garage and associated uses (see Appendix C of the CAP Addendum, Landau 2011). Vapor intrusion monitoring will be initiated following the completion of the belowground garage (Ecology 2014). Quarterly monitoring results will be submitted to Ecology via email and summarized in an annual report, which will provide an evaluation of the sample results.

#### 4.4.2 Compliance Groundwater Sampling

Two groundwater monitoring wells, MW-21 and MW-22, were installed on July 28, 2017, following completion of the majority of the Property construction activities. The wells were installed in accordance with Appendix C of the EDR Addendum (Landau 2014) to complete the compliance monitoring well network.

MW-21 was installed along the east Property boundary, near the northeastern corner of the Property, hydraulically upgradient of the Property, and hydraulically downgradient of off-Property areas with elevated concentrations of arsenic in groundwater.

MW-22 was installed along the east Property boundary, near the southeastern corner of the Property, hydraulically upgradient of the Property, and hydraulically downgradient of off-Property areas with elevated concentrations of arsenic in groundwater.

Prior to drilling, a public utility located was conducted, and the well locations were air-knifed to 5 feet bgs to prevent impacts to belowground utilities. Wells MW-21 and MW-22 were completed by Holt Drilling using a hollow-stem auger drill rig. A licensed geologist oversaw the drilling and well installation activities, and maintained a detailed record of the geology encountered and the final well construction (Appendix K).

The soil encountered during drilling was field-screened for evidence of contamination, and soil samples were collected and archived for laboratory analysis if evidence of contamination was encountered. Soil

was comprised primarily of fill material consistent with that encountered during excavation activities. No evidence of petroleum hydrocarbon contamination (e.g., odors or staining) was observed, and no elevated readings were recorded on the PID. Samples collected from each well at a depth of 10 feet were therefore submitted for analysis of PAHs and metals for purposes of characterizing the waste for disposal. PAHs exceeded the cleanup level in the sample collected from MW-21 at 10 feet; all other analytes were below their respective cleanup levels.

Following drilling, the wells were installed to a depth of 15 feet bgs. Well casings were constructed with 2-inch-diameter, flush-threaded, Schedule 40 polyvinyl chloride (PVC) pipe and 10-foot screens with 0.020-inch machine-slotted casing, and filter pack material consisting of pre-washed, pre-sized number 10/20 silica sand. The well screens were placed from 5 to 15 feet bgs to intersect the water table. The filter pack was placed from the bottom of the well to approximately 2 ft above the top of the screen and sealed with bentonite before the monuments were completed.

Water was encountered at 9.5 feet bgs in MW-21 and at 8 feet bgs in MW-22. To ensure hydraulic connection with the aquifer, the groundwater monitoring wells were developed 3 days following completion using a combination of surging and pumping.

Groundwater samples will be collected from each of the compliance monitoring wells (MW-16D, MW-18D, MW-19, MW-20, MW-21, and MW-22; Figure 15) on a quarterly basis using a peristaltic pump and single-use polyethylene tubing using low-flow sampling techniques in accordance with *Low Stress (low flow) Purging and Sampling Procedure for the Collection of Groundwater Samples from Monitoring Wells* (U.S. EPA 2017). Samples will be collected directly from the sampling equipment and stored on ice in a cooler. Groundwater samples collected from monitoring wells will be designated with the well number (e.g., MW-19) and date, and the samples were logged on a chain-of-custody form and submitted to Friedman & Bruya, Inc. in Seattle, Washington, following proper chain-of-custody protocols.

In accordance with the Compliance Monitoring Plan (Appendix C of the CAP, Landau 2013), groundwater samples will be analyzed for BTEX by EPA Method 8021; GRPH and DRPH by Method NWTPH-Gx and NWTPH-Dx; low-level PAHs by EPA Method 8270D SIM; and dissolved metals (arsenic, cadmium, chromium, lead, mercury, copper, and zinc) by EPA Method 200.8 or EPA Method 7471 (mercury). Groundwater samples collected for analysis of dissolved metals will be field-filtered using a 0.45-micron membrane filter. A blind duplicate sample will be collected for quality control purposes.

The results of the groundwater monitoring events will be submitted under separate cover.

Analytical data presented in milligrams per kilogram.
*Italic* concentrations exceed the site-specific cleanup levels.
**Bold** concentrations exceed the disposal limits.

cPAHs = carcinogenic polycyclic aromatic hydrocarbons
EPA = U.S. Environmental Protection Agency
ft = feet
– = not measured/analyzed

[1]Analyzed by EPA Method 8270. Includes benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene.

LABORATORY NOTES

[x]The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

**Table 1**
**Soil Analytical Results**
**King Street Property**
**255 South King Street**
**Seattle, Washington**

| Sample ID | Sample Depth (ft) | Sample Date | cPAHs[1] | Naphthalene[1] | Arsenic[2] | Mercury[3] | DRPH[4] | ORPH[4] | GRPH[5] | Benzene[6] | Toluene[6] | Ethylbenzene[6] | Total Xylenes[6] |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|

[2]Analyzed by EPA Method 6020.

[3]Analyzed by EPA Method 200.1. Reporting limits exceed cleanup levels (0.2 mg/kg for protection of groundwater; 0.07 for site-specific levels); the laboratory is working on reducing the reporting limits.

[7]Site-Specific Cleanup Levels established in Cleanup Plan Addendum, North Lot Property, Seattle, Washington. Prepared by Landau Associates on September 18, 2013.

[8]PAH-contaminated soil with concentrations between 0.1 and 2 mg/kg can be used as paving base material and road construction, and it may be possible to reduce the costs associated with disposal of this soil, depending on the receiving facility. Soil containing concentrations of arsenic above 20 mg/kg (near samples B-65, D8-1, D11-1, and D12-1) must be disposed of as contaminated material.

[a]The total concentration that all cPAHs meet using the toxicity equivalency methodology in WAC 173-340-708(8).

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Rothman and Associates were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Sanborn® Library search results

Certification #: 746B-4E16-8E8F

The Sanborn Library includes more than 1.2 million fire insurance maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow and others which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

*The Sanborn Library LLC Since 1866™*

### Limited Permission To Make Copies

Rothman and Associates (the client) is permitted to make up to FIVE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.

**Disclaimer - Copyright and Trademark Notice**

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

# APPENDIX D

## Simplified Terrestrial Ecological Evaluation

# Table 749-1

## Simplified Terrestrial Ecological Evaluation-Exposure Analysis Procedure

| | |
|---|---|
| Estimate the area of contiguous (connected) undeveloped land on the site or within 500 feet of any area of the site to the nearest 1/2 acre (1/4 acre if the area is less than 0.5 acre). | |
| 1) From the table below, find the number of points corresponding to the area and enter this number in the field to the right. | 7 |
| Area (acres) / Points<br>0.25 or less / 4<br>0.5 / 5<br>1.0 / 6<br>1.5 / 7<br>2.0 / 8<br>2.5 / 9<br>3.0 / 10<br>3.5 / 11<br>4.0 or more / 12 | |
| 2) Is this an industrial or commercial property? If yes, enter a score of 3. If no, enter a score of 1 | 3 |
| 3)[a] Enter a score in the box to the right for the habitat quality of the site, using the following rating system[b]. High=1, Intermediate=2, Low=3 | 3 |
| 4) Is the undeveloped land likely to attract wildlife? If yes, enter a score of 1 in the box to the right. If no, enter a score of 2.[c] | 2 |
| 5) Are there any of the following soil contaminants present: Chlorinated dioxins/furans, PCB mixtures, DDT, DDE, DDD, aldrin, chlordane, dieldrin, endosulfan, endrin, heptachlor, benzene hexachloride, toxaphene, hexachlorobenzene, pentachlorophenol, pentachlorobenzene? If yes, enter a score of 1 in the box to the right. If no, enter a score of 4. | 4 |
| 6) Add the numbers in the boxes on lines 2-5 and enter this number in the box to the right. If this number is larger than the number in the box on line 1, the simplified evaluation may be ended. | 11 |

**Notes for Table 749-1**

[a] It is expected that this habitat evaluation will be undertaken by an experienced field biologist. If this is not the case, enter a conservative score of (1) for questions 3 and 4.

[b] **Habitat rating system.** Rate the quality of the habitat as high, intermediate or low based on your professional judgment as a field biologist. The following are suggested factors to consider in making this evaluation:

> **Low:** Early successional vegetative stands; vegetation predominantly noxious, nonnative, exotic plant species or weeds. Areas severely disturbed by human activity, including intensively cultivated croplands. Areas isolated from other habitat used by wildlife.

**High:** Area is ecologically significant for one or more of the following reasons: Late-successional native plant communities present; relatively high species diversity; used by an uncommon or rare species; priority habitat (as defined by the Washington Department of fish and Wildlife); part of a larger area of habitat where size or fragmentation may be important for the retention of some species.

**Intermediate:** Area does not rate as either high or low.

[c] Indicate "yes" if the area attracts wildlife or is likely to do so. Examples: Birds frequently visit the area to feed; evidence of high use b mammals (tracks, scat, etc.); habitat "island" in an industrial area; unusual features of an area that make it important for feeding animals; heavy use during seasonal migrations.

**APPENDIX E**

**Groundwater Control Plan – Construction Document**

# Industrial Waste Program
# Construction Dewatering Request Form

Submit to the King County Industrial Waste Program
130 Nickerson Street, Suite 200, Seattle, WA 98109-1658
Phone: 206-263-3000
Fax: 206-263-3001

- Submit one application for each construction site.
- Answer all questions and include ALL required exhibits. **Incomplete applications will be returned to you.**
- If you do not have an answer for the requested information, indicate so and explain why.
- Indicate "NA" if a section does not apply to your site.
- Use additional pages, if needed.
- Discharge approval will be issued to the owner of the site. As such, this form must be signed by the site owner, or their authorized representative, as defined by King County Code (KCC) 28.82.050. A King County Delegation of Signature Authority form can be completed to delegate signature authority and can be found at:

www.kingcounty.gov/environment/wastewater/IndustrialWaste/~/media/environment/wastewater/IndustrialWasteProgram/docs/Forms/OtherForms/sigauth.ashx

| | |
|---|---|
| **Applicant / Project Name** | 255 South King Street LP |
| **Project Location (address, city and zip code)** | 255 South King Street, Seattle, WA 98134 |

**NOTE: Site owner information must be provided. The site owner will be issued the discharge approval. Contractor or consultant will be sent a copy.**

| | Site / Project Owner | Contractor / Consultant |

| **Primary person to be contacted about this application** | Patrick Nickerson | |

| | | | |
|---|---|---|---|
| **Provide detailed project description** | Construction of 23-story hotel and 18-story office towers will require excavation and disposal of soil from approximately 0' - 17.5' below ground surface (BGS) within the building footprint. Groundwater is anticipated 8'-10' BGS, with dewatering expected within the footprint and within the 40' tall permanent steel sheet pile shoring walls. | | |
| **Start Date of Dewatering** | 9/1/14 | **End Date of Dewatering** | 6/1/15 |
| **Size of Area** | 1.48 acres | **Environmental Permits Issued for Applicant Site (example: NPDES permit)** | WAR301510 |

**List construction processes and activities generating wastewater**

- *Process/Activity Generating Wastewater: Enter a brief description and assign a process number for each process and activity (e.g., well dewatering, wheel wash, equipment cleaning, concrete curing, jet grouting, contaminated stormwater runoff)*
- *Substances and/or Pollutants: List all substances contained in these wastewaters (e.g., sediment/solids, caustic and/or acidic, oil and grease, other contaminants if groundwater or soil is contaminated).*
- *Type of Pretreatment: Identify the type of wastewater pretreatment provided for each wastestream (e.g., filtration, chemical precipitation, settling, pH neutralization, electrocoagulation, chitosan). King County policy requires that, at a minimum, an appropriately sized settling tank (weir-tank preferred) must be installed to provide gravity separation.*
- *Frequency of Discharge: Indicate the frequency of discharge. Enter "continuous" if you discharge wastewater continuously to the sewer as the wastewater is generated, or "batch" if you store wastewater and discharge it to the sewer in batches.*
- *Daily Quantity Discharged: Calculate the projected daily average and maximum discharge volume. In the space provided directly below the table, provide thorough documentation of the information, methods, and assumptions used to calculate the discharge volume values provided in this table.*

| Process Number | Process or Activity that Generates Wastewater | Substances and/or Pollutants in Wastewater | Type of Pretreatment | Frequency of Discharge (continuous or batch) | Daily Quantity Discharged in Gallons | |
|---|---|---|---|---|---|---|
| | | | | | Average | Maximum |
| 01 | Excavation Dewatering | TPH, metals, BTEX, PAHs | Settling tank | continuous | 25k GPD | 75k GPD |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

**Documentation of Water Balance Calculations**

*For each process listed in the table above, provide thorough documentation of the information, methods, and assumptions used to calculate your site's water quantity balance. For the purpose of calculating the maximum daily stormwater runoff volume, use a rainstorm event of two inches per 24 hours.*

See Jacobs Associates Water Balance Calculations dated 5/8/14; attached as Exhibit C2.

**If you are requesting to discharge greater than 25,000 gallons per day during November through April, you must submit a detailed explanation for why discharge to surface water is not feasible.**

Not planned.

**Is there known groundwater or soil contamination on site?**

Yes.

**If yes, provide a summary of the contamination and site history clarifying source of contamination.**

*(If known groundwater or soil contamination is present on site, additional exhibits must be submitted. (See Exhibit D below in the EXHIBITS section of this application form.)*

See Exhibit D.

**Describe the site's temporary erosion and sediment control (TESC) best management practices (BMPs) that will be implemented at the site.**

To prevent erosion and sediment transport from the site, the following shall be implemented onsite:

- sediment trap, straw wattles, compost socks, and/or compost berms, water bars
- street sweeping and vacuuming, cleaning inlets and catch basins

clear plastic covering, storm drain inlet and outlet protection

**You must contact the local sewer agency (city or sewer district) to receive instructions on discharge conditions such as maximum discharge rate, discharge point, and discharge volume reporting procedures for assessment of sewer fees. Maps of King County's wastewater treatment service area and local sewer agency contact information can be found at:**
**www.kingcounty.gov/environment/wtd/About/SewerAgencies.aspx**

**Provide the name and phone number of the local city or sewer district personnel you contacted.**

Lan Chau, 206-733-9795

**Provide the maximum discharge rate (gallons per minute [gpm]) specified by the local city or sewer district contact.**

50 gpm

**Provide sewer account number or billing method that will be used by the local city or sewer district to assess sewer fees.**

Account set up confirmed via Daniela Schwedas at 206-684-7817 on 5/20/14

*Discharge to the sanitary sewer will require a temporary sewer connection that must be approved by the local city or sewer district. The approved temporary sewer connection (point of discharge) must be clearly indicated in your facility site plan. (See Exhibit A in the EXHIBITS section of this application form.)*

# EXHIBITS

**Required exhibits for all sites:**

A. Site Plan – Provide a site plan indicating location of activities and processes generating wastewater, settling ponds/tanks, or other wastewater treatment system components, wastewater conveyance lines, point(s) of discharge (as approved by the local city or sewer utility), groundwater and/or sediment sampling locations, streets, and public sewer and storm drainage utilities.

B. Wastewater Treatment System – Description of proposed wastewater treatment facilities including:

1. Diagrams/specification sheets and basic design data for wastewater treatment system components (for example, pumps, tanks, mixers).
2. Schematic flow diagram of the treatment process, illustrating the system piping, tanks, and control features.
3. Maximum flow rate for wastewater treatment system.

Please note that King County may require that you provide engineering justification and/or other evidence demonstrating that the discharge from the site will meet applicable permit effluent limitations.

**Required exhibit for sites requesting discharge approval for longer than six months:**

C. Dewatering Schedule – Provide a wastewater discharge schedule indicating when each process can be expected to generate wastewater for the duration of the project. For each process and discharge period, indicate the projected maximum daily discharge volume.

| Project Name: | 255 S King St | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Project Timeline | | | | | | | | |
| Process Generating Wastewater | Start Date | | | | | | | | End Date |
| | Sep-14 | Oct-14 | Nov-14 | Dec-14 | Jan-15 | Feb-15 | Mar-15 | Apr-15 | May-15 |
| Excavation dewatering | max 75k gpd | | max 25k gpd | | | | | | |

**Required exhibit for sites where known groundwater or sediment contamination is present:**

D. Description of contamination source(s) and chemical characteristics: Submit a summary (preferably table form) of all available groundwater and/or sediment quality data. Indicate groundwater and/or sediment sample locations on the site plan.

*I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.*

# EXHIBIT A

# SITE PLAN

SDOT NOTES:

1. NO CONSTRUCTION DEWATERING IS ALLOWED OUTSIDE THE SHORING WALL CONFINES.
2. WATER LEVEL WITHIN THE SHORING WALL CONFINES AFTER DEWATERING SHALL NOT BE LOWER THAN 2 FEET BELOW BOTTOM OF EXCAVATION.
3. DISCHARGE TO SANITARY SEWER REQUIRES KING COUNTY METRO PERMIT.

WELLPOINT DETAIL

NOTES:

1. WELLPOINTS WILL BE INSTALLED 8' ON CENTER.
2. WELL POINTS ALONG THE SHEET PILES WILL EXTEND APPROXIMATELY 20 FEET DOWN FROM THE HEADER PIPE.
3. TYPICAL GPM OF 50 FOR 9 MONTHS.
4. ADDITIONAL BAKER TANK MAY BE REQUIRED.
5. ADDITIONAL DEWATERING MAYBE REQUIRED FOR ELEVATOR CORE LOCATIONS. IF REQUIRED, A SEPARATE HEADER PIPE AND WELL POINT SYSTEM WITH SEPARATE PUMPS WILL BE REQUIRED.

# EXHIBIT B

# GROUNDWATER TREATMENT PROCESS

**6" Piston Wellpoint Pump**
Transfer pump lifts water approximately 20 feet and transfers to the settling tank

**Baker Tank Fixed Axle 21,000 Gal**
Tank provides enough residence time for solids to settle out

**Combined Sewer Connection**

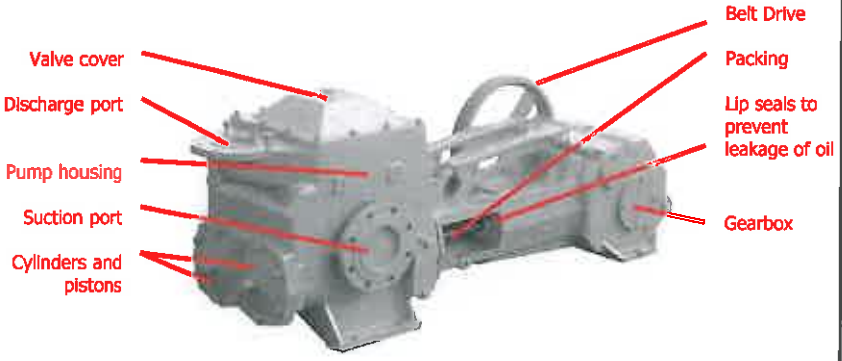

# 6” Piston Wellpoint Pump
# 6PW-EBS-10

Thompson’s Piston Wellpoint Pump combines excellent fuel efficiency and a sound attenuated package for use in wellpoint and sock dewatering applications. The sound-attenuated enclosure reduces sound levels to <64 dB(A) @ 23-feet.

## Features

- 10 Hp electric motor, 230/460vac, M3714T
- Discharge head of 66 feet
- Maximum flows to 400 gpm
- Self-priming, positive displacement pump
- Operates unattended; can run dry for extended periods of time
- High air-handling capability: 53 CFM
- Up to 92% efficiency
- Robust construction for durability
- On-board stone catcher to protect the internal pump housing
- Double-sealing piston rod prevents oil leakage
- Parts are lasting and inexpensive to replace

## Applications

- Wellpoint dewatering
- Underdrain sock dewatering
- Acceptable to all soil conditions
- Filtered water transfer
- Remediation and reclamation

## Working Principle

The double acting piston pump converts the pulley’s rotational energy to linear motion via two conically milled gears that are mounted on either side of the crankshaft. A vacuum is created inside the cylinders from the motion o the pistons.

On the piston upstroke, the suction valve opens and the delivery valve closes allowing water to be drawn into the cylinder. On the down stroke, the piston’s force causes the suction valve to close and the delivery valve to open forcing the fluid in the cylinder out through the discharge.

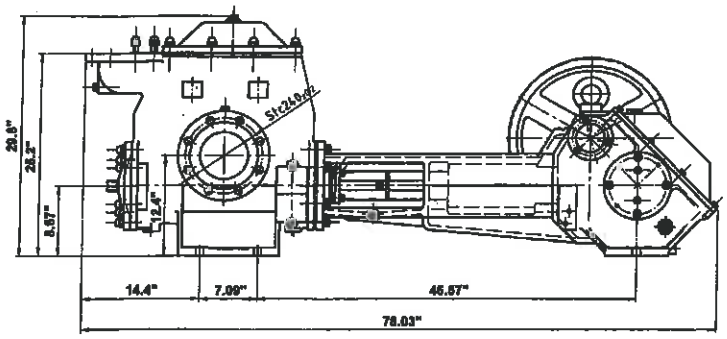

The double-sealing piston rod prevents environmental oil leakage and water from entering the drive. Packing is installed along the shaft to prevent leakage of fluid from the cylinders.

## Materials of Construction

**Type:** Positive displacement, self-priming, double acting piston
**Casing:** Rugged, heavy-duty class 30 cast-iron
**Cylinder:** Stainless Steel
**Piston:** Leather
**Piston Diameter:** 175mm
**Covers:** Cast iron
**Suction & Discharge Tank:** Galvanized steel with stone catcher on suction side
**Crankshaft:** Forged steel
**Spring Cup:** Brass
**Gears:** Oil lubricated, hardened steel

## Motor Specifications

**Motor:** Baldor, TEFC M3714T
**Voltage:** 230/460
**Frequency:** 60 Hz
**Speed:** 1,775 rpm
**Full Load Torque:** 29.5 ft-lbf
**Full Load Current:** 27/13.5 amps
**Efficiency:** 89.5%
**Safety Shutdowns:** High temperature

## Unit Specifications

**Maximum Operating Speed:** 1,750 rpm
**Maximum Operating Temperature:** 200°F
**Maximum Working Pressure:** 28.5 psi
**Maximum Suction Pressure:** 12.78 psi
**Maximum Casing Pressure:** 45 psi

In the interest of product improvement, Thompson Pump & Manufacturing (ISO 9001:2008) reserves the right to change specifications without incurring any obligation for equipment previously or subsequently sold. Capacity, Head and Pump Curve are for comparative purposes. We certify that this product meets or exceeds any applicable design or performance standards prescribed by the Contractors Pump Bureau. This product has been tested in accordance with the procedures defined by the Hydraulic Institute. Fuel consumption may vary depending on particular engine configuration. Consult engineering data for exact capabilities.

# MODERN FIXED AXLE TANK

## (500 BBL ROUND BOTTOM VERSION)

### GENERAL INFORMATION

This tank has a smooth interior wall and round bottom for easy cleaning.

### WEIGHTS AND MEASURES

| | |
|---|---|
| » Capacity: | 500 BBL (21,000 gallons) |
| » Height: | 10'-8" (grade to roof plate)<br>13'-4" (grade to upright guardrail |
| » Width : | 8'-6" |
| » Length: | 47'-2" (nose to tail)<br>42'-11" (end wall to end wall) |
| » Weight: | 29,000 lbs. (est.) |

### STRUCTURAL DESIGN

| | |
|---|---|
| » Floor: | ¼"thick ASTM A36 carbon steel round bottom |
| » Sides/Ends: | ¼" thick ASTM A36 carbon steel |
| » Top Deck: | ¼" thick ASTM A36 carbon steel |
| » Wall Frame: | 6" wide channel-shaped steel (on exterior side of walls) |
| » Roof Frame: | 3" wide x 1½" tall channel-shaped steel (on exterior side of roof deck) |
| » Internal Cross Bracing: | None |

### FEATURES

| | |
|---|---|
| » Valves: | 2-Front &1-Rear: 4"- wafer butterfly valve. Cast iron body, Buna-N seat & seals, 416 SS stem, Nylon 11 coated ductile iron disk w/ plug and chain. |
| » Relief Valve: | 16 oz./in$^2$ pressure setting, 0.4 oz./in$^2$ vacuum setting; Buna-N seal |
| » Front Inlet: | 8" connection, flanged on the inside and outside of the tank |
| » Front Drain: | 4"-150# flanged connection with butterfly valve |
| » Rear Drain: | 4"-150# flanged connection with butterfly valve and remote operation handle |

### FEATURES – cont.

| | |
|---|---|
| » Fill Line: | 3" pipe, top of tank, with cap and chain |
| » Gel Line: | 4" sch. 40 pipe; flanged with butterfly valve |
| » Top Vapor Connection: | 4"-150# weld neck flange with blind flange (chained) and Buna N gasket |
| » Top Manway: | One - 21½" I.D. domed lid w/anti-personnel bars, slotted hinges and 5 - ¾" T or eye bolt with wing nut fasteners, hinged to side of tank. Buna-N (NBR) gasket. |
| » Front Manway: | One - 21½" I.D. domed lid, slotted hinges and 5 - ¾" T or eye bolt with wing nut fasteners,, hinged away from stairs. Buna-N (NBR) gasket. |
| » Side Manway: | One - 21½" I.D. domed lid, slotted hinges and 5 - ¾" T or eye bolt with wing nut fasteners,, mounted on passenger side and hinged to front of tank. Buna-N (NBR) gasket. |
| » Stairway: | Front-mounted with access from driver's side of tank |
| » Level Gauge: | Ball style with 2-8" 304 SS floats. Floor supports hold floats ½" off floor. |
| » Tires: | 11.00 x 22.5 (nylon tubeless) |
| » Axles: | 25K axle, automatic slack adjusters, top mounted 30 service chambers, outboard drums |

### SURFACE DETAILS

| | |
|---|---|
| » Exterior Coating: | High gloss polyurethane paint |
| » Interior Coating: | Chemical resistant lining |
| » Safety Paint: | Safety yellow – handrails, hatch covers and trip hazard surfaces |
| » Placard Mounts: | Removable 10-gauge steel, 48"x48", both sides of tank at top rear. Secured with nylock nuts or bolts with lock washers. |

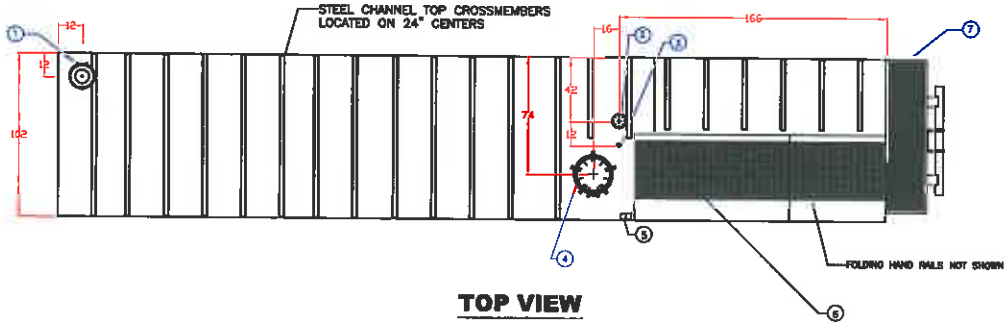

### TESTS/CERTIFICATIONS

| | |
|---|---|
| » Test Performed: | 100% water tested to full capacity, 3 psi – 20 min test; Level I, II and III inspections on a scheduled basis |

# WATER BALANCE CALCULATIONS

JACOBS ASSOCIATES

**Engineers/Consultants**

8May14
#JA P2308

To: Steve Fors / DGS

From: Frank Pita, PE, LHG

**RE: SODO Builders Site / Approximate Estimate of Total Water to be Pumped from the Excavation at the North End Parking Lot of Century Link Field, Seattle, WA**

At the request of Steve Fors, I had a Jacobs Associates (JA) staff member perform a calculation using different permeabilities as a means to predict the total volume of water that will enter the excavation from the bottom and beneath the interlocking sheetpiles. I also asked him to calculate what the volume would be if the sheets were approximately 10 feet longer so that they reached a less permeable layer and cut off the flow more.

The geotechnical report is a quite good document in its discussion of the shoring and foundation needs but it gives little data related to site's groundwater properties. All that is provided is the type of material, which JA has put on the attached XSs. From this data, a groundwater control designer must estimate which unit dominates and then assign aquifer parameters to it. JA estimates that the SM material is the most productive aquifer unit recorded on the attached cross sections and plan. Then JA went to following published table from the Powers text book to obtain a typical value, where we used the highest in that range ($5x10^{-5}$ m/sec)

**Table 3.5 Range of Hydraulic Conductivity of Natural Soils**

| Soil type | Hydraulic conductivity range gpd/ft² (m/sec) | Permeability description |
|---|---|---|
| Openwork gravel (GP) | 20,000 ($1 \times 10^{-2}$) or higher | Very high |
| Uniform gravel (GP) | 4000 to 20,000 ($2 \times 10^{-3}$ to $1 \times 10^{-2}$) | High |
| Well-graded gravel (GW) | 1000 to 6000 ($5 \times 10^{-4}$ to $3 \times 10^{-3}$) | Moderate to high |
| Uniform sand (SP) | 100 to 4000 ($5 \times 10^{-5}$ to $2 \times 10^{-3}$) | Moderate to high |
| Well-graded sand (SW) | 20 to 2000 ($1 \times 10^{-5}$ to $1 \times 10^{-3}$) | Low to moderate |
| Silty sand (SM) | 20 to 100 ($1 \times 10^{-5}$ to $5 \times 10^{-5}$) | Low |
| Clayey sand (SC) | 2 to 20 ($1 \times 10^{-6}$ to $1 \times 10^{-5}$) | Low to very low |
| Silt (ML) | 1 to 2 ($5 \times 10^{-7}$ to $1 \times 10^{-6}$) | Very low |
| Clay (CL) | $2 \times 10^{-4}$ to 0.2 ($1 \times 10^{-10}$ to $1 \times 10^{-7}$) | Very low to practically impermeable |

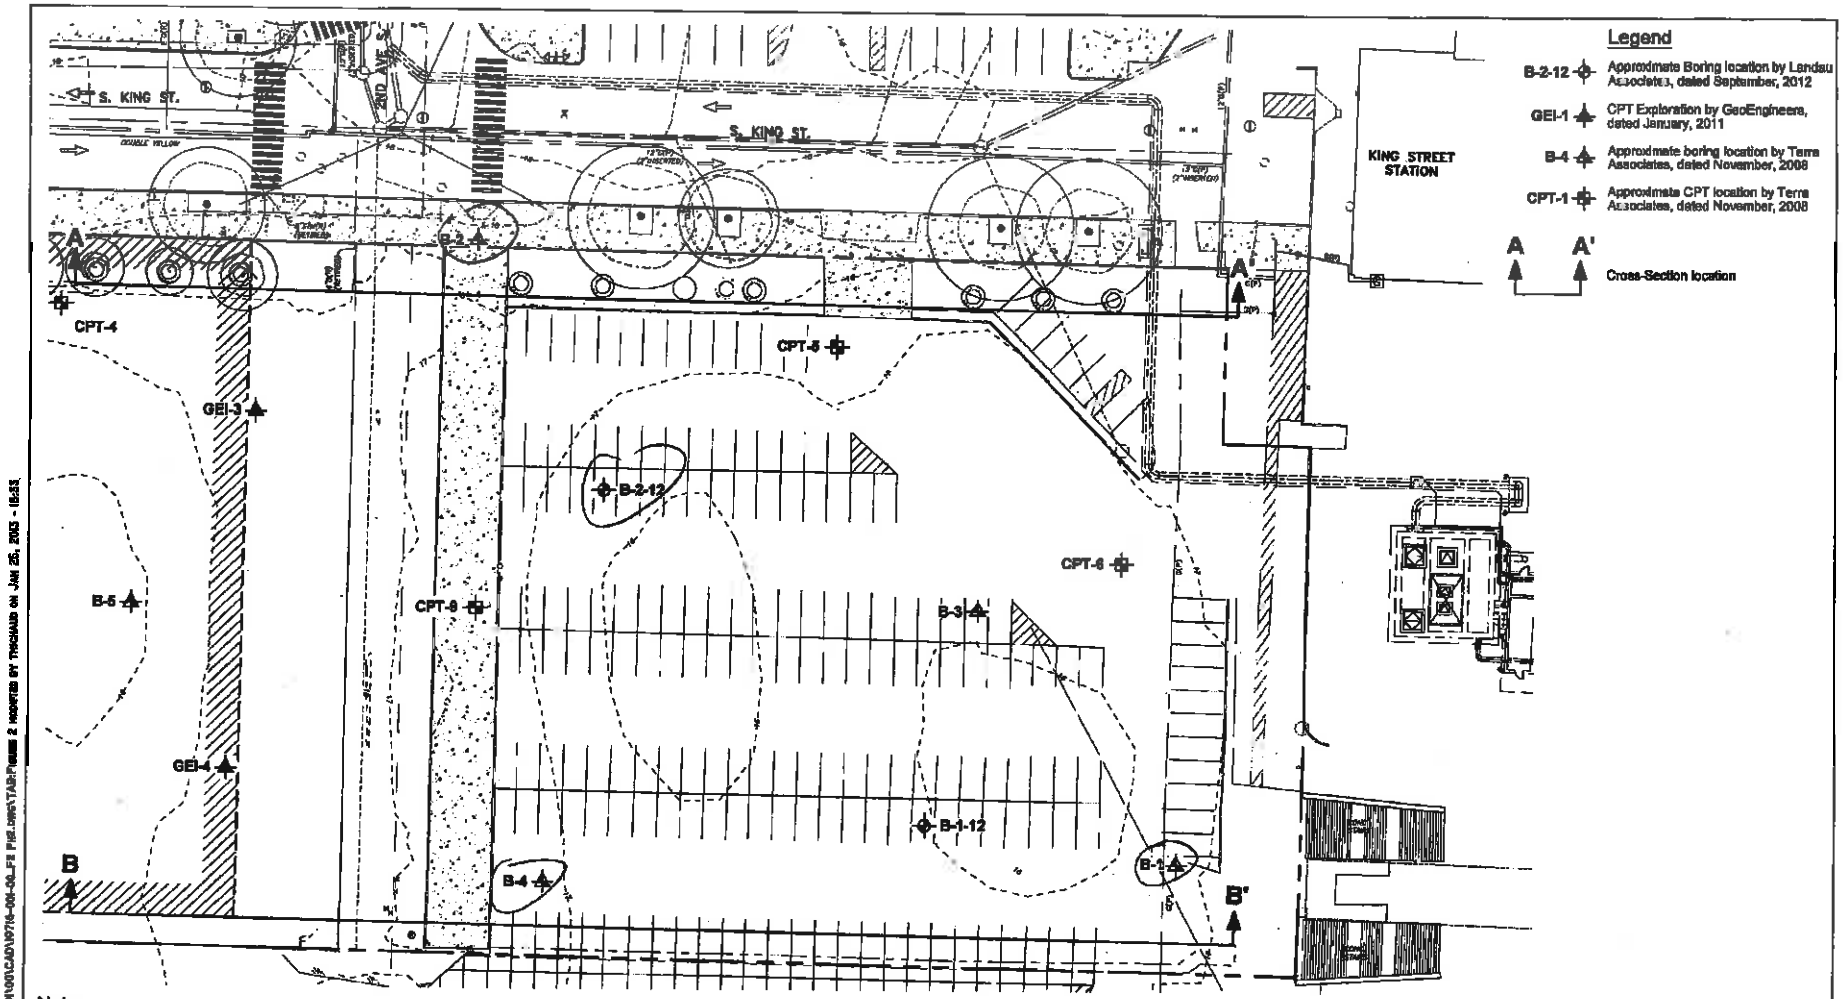

The attached hand calculations show that for this permeability, that the total inflow that must be removed is estimated to be 44 gpm.

Also, in a calculation not provided, if the sheetpiles are made 10 feet longer all around the excavation, then the inflow is nearly cut off to nearly nothing. This results in a quantity of 1 to 5 gpm in total.

**Closure**

Please use this memo in conjunction with the original submittal. Contact me if you have any questions.

$Q_{RD\ bottom} = 5 * 10^{-5}\ m/s * 0.125 * 48,400\ ft^2 * 2.12 * 10^6 \frac{gpd/A}{m/s}$

$\approx 641,300$ gpd

$Q_{2\ sides} = 5 * 10^{-5}\ m/s * 0.125 * 8,800\ ft^2 * 2.12 * 10^6 \frac{gpd/ft^2}{m/s}$

$\approx 116,600$ gpd

$Q_{TOT} = 757,900$ gpd $\triangleq 440$ gpm (524 gpm)

2) with $K = 5 * 10^{-6}$ m/s

$Q_{bottom} = 5 * 10^{-6}\ m/s * 0.125 * 48,400\ ft^2 * 2.12 * 10^6 \frac{gpd/ft^2}{m/s}$

$\approx 64,130$ gpd

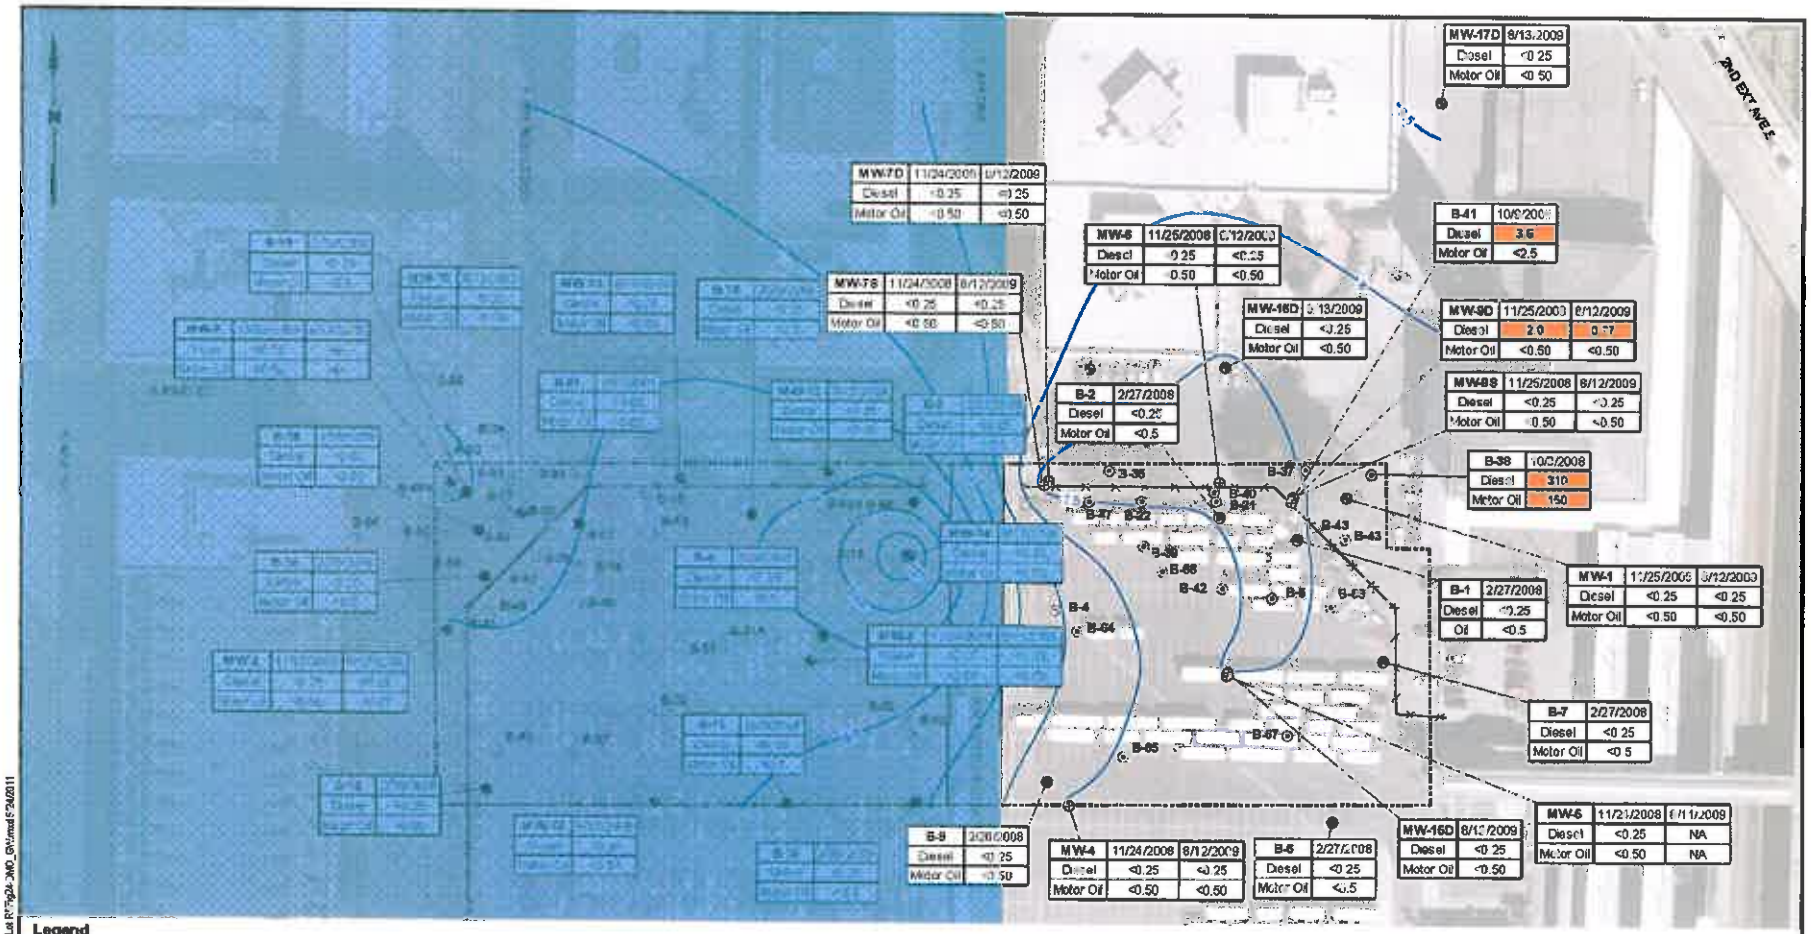

$Q_{sides} = 5 * 10^{-6}\ m/s * 0.125 * 8,800\ ft^2 * 2.12 * 10^6 \frac{gpd/ft^2}{m/s}$

$\approx 11,660$ gpd

$Q_{TOT} = 75,790$ gpd $\approx 44$ gpm (÷ 144 min/d = 53 gpm)

# DOE CONSTRUCTION STORMWATER GENERAL PERMIT APPLICATION (COPY)

DEPARTMENT OF ECOLOGY
State of Washington

# NOTICE OF INTENT (NOI) APPLICATION FORM

## Construction Stormwater General Permit

**Check if applicable:**
☐ **Change or Update Permit Information**
☐ **Modification of Permit Coverage**
**Permit #WAR_____**

***Please print or type all sections of this application. All fields are required unless otherwise marked.***

**I. Operator/Permittee** (Party with operational control over plans and specifications or day-to-day operational control of activities which ensure compliance with Stormwater Pollution Prevention Plan (SWPPP) and permit conditions. Ecology will send correspondence and permit fee invoices to the permittee on record.)

| | | | | |
|---|---|---|---|---|
| Name: Patrick Nickerson | | Company: Sodo Builders, LLC | | |
| Business Phone: 206-971-7899 | Ext. 221 | Unified Business Identifier (UBI): 602814466 *(UBI is a nine-digit number used to identify a business entity. **Write "none" if you do not have a UBI number.**)* | | |
| Cell Phone (Optional): 206-349-4050 | Fax (Optional): 206-623-0338 | | | |
| E-mail: Pat@sodobuilders.net | | | | |
| Mailing Address: 270 S. Hanford St #100 | | City: Seattle | State: WA | Zip + 4: 98134 |

**II. Property Owner** (The party listed on the County Assessor's records as owner and taxpayer of the parcel[s] for which permit coverage is requested. Ecology will not send correspondence and permit fee invoices to the Property Owner. The Property Owner information will be used for emergency contact purposes.)

| | | | | |
|---|---|---|---|---|
| Name: Gregory Steinhauer | | Company (if applicable): 255 South King Street LP | | |
| Business Phone: 206-381-1690 | Ext. 117 | Unified Business Identifier (UBI): 603166219 *(UBI is a nine-digit number used to identify a business entity. **Write "none" if you do not have a UBI number.**)* | | |
| Cell Phone (Optional): | Fax (Optional): 206-631-2166 | | | |
| E-mail: Greg@americanlifeinc.com | | | | |
| Mailing Address: 270 S. Hanford St #100 | | City: Seattle | State: WA | Zip + 4: 98134 |

**III. On-site Contact Person** (Typically the Certified Erosion & Sediment Control Lead or Operator/Permittee)

| | | | | |
|---|---|---|---|---|
| Name: Patrick Nickerson | | Company: Sodo Builders, LLC | | |
| Business Phone: 206-971-7899 | Ext. 221 | Mailing Address: 270 S. Hanford St #100 | | |
| Cell Phone (Optional) 206-349-4050 | Fax (Optional): 206-623-0338 | City: Seattle | State: WA | Zip + 4: 98134 |
| E-mail: Pat@sodobuilders.net | | | | |

**IV. WebDMR (Electronic Discharge Monitoring Reporting)**

**You must submit monthly discharge monitoring reports using Ecology's WebDMR system.** To sign up for WebDMR, or to register a new site, go to www.ecy.wa.gov/stormwater, and click on the "Construction Stormwater" link. You will find information on WebDMR under the "WebDMR and PARIS" link on the right-hand side. If you are unable to submit your DMRs electronically, you may contact Ecology to request a waiver. Ecology will generally only grant waiver requests to those permittees without internet access. Only a permittee or representative, designated in writing, may request access to or a waiver from WebDMR. To have the ability to use the system immediately, **you must submit the Electronic Signature Agreement with your application.** If you have questions on this process, contact Ecology's WebDMR staff at WAWebDMR-Stormwater@ecy.wa.gov or 360-407-7097.

## V. Site Information

**Site or Project Name**
North Lot Development

**Street Address or Location Description** (*If the site lacks a street address, list its specific location. For example, Intersection of Highway 61 and 34.*)

255 S King Street

Parcel ID#: 7666204878 *(Optional)*

Type of Construction Activity (*check all that apply*):
- ☐ Residential
- ☒ Commercial
- ☐ Industrial
- ☐ Highway or Road (city ,county, state)
- ☒ Utilities (specify): water/sewer, gas, power, phone cables, storm drainage
- ☐ Other (specify):

**Site Acreage**
Total size of your site/project (that you own/control): 1.476 acres.

Total area of soil disturbance (grading and/or excavating) for your site/project over the life of the project: 1.476 acres. *(Note: 1 acre = 43,560 ft².)*

Concrete / Engineered Soils
How many yards of concrete will be poured over the life of the project? 33,000 yd³ (estimate)

How many yards of recycled concrete will be used over the life of the project? 0 yd³ (estimate)

Will any engineered soils be used? (For example: cement treated base, cement kiln dust, etc.)
☐ Yes ☒ No

City (or nearest city): Seattle
County: King

Zip Code: 98104

Estimated project start-up date (mm/dd/yy): 04/01/14

Estimated project completion date (mm/dd/yy): 04/01/17

Record the latitude and longitude of the *main entrance* to the site or the approximate center of site.

Latitude: 47.59783 °N

Longitude: -122.33103 °W

*For assistance with latitude and longitude, refer to the following website:* **http://www.getlatlon.com.** *Convert all latitude and longitude coordinates into degrees, minutes, seconds format. For help with this process go to:* **http://transition.fcc.gov/mb/audio/bickel/DDDMMSS-decimal.html**

## VI. Existing Site Conditions

1. Are you aware of contaminated soils present on the site? ☒ Yes ☐ No

2. Are you aware of groundwater contamination located within the site boundary? ☒ Yes ☐ No

3. If you answered yes to questions 1 or 2, will any contaminated soils be disturbed or will any contaminated groundwater be discharged due to the proposed construction activity? ☒ Yes ☐ No

["Contaminated" and "contamination" here mean containing any hazardous substance (as defined in WAC 173-340-200) that does not occur naturally or occurs at greater than natural background levels.]

If you answered yes to Question 3, please explain below or on a separate paper in detail the locations, contaminants, and concentrations, and pollution prevention and/or treatment BMPs proposed to control the discharge of soil/groundwater contaminants. Ecology may request a copy of your SWPPP.

*See supplemental pages 5 and 6.*

## VII. Stormwater Pollution Prevention Plan (SWPPP)

You must develop a SWPPP prior to starting construction. Do **not** submit your SWPPP with your application. The exception is that Ecology may request a copy of your SWPPP if you answered yes to the questions in Part VI.

## VIII. Best Management Practices (BMPs)

You must use the BMPs listed in the Stormwater Management Manual for Western Washington or the Stormwater Management Manual for Eastern Washington or other manuals approved by Ecology. Alternatively, you may use demonstrably equivalent BMPs on the basis of permit condition S9.C.4. If you intend to use a BMP at your site that is not included in these manuals, but that you believe meets the definition of a *demonstrably equivalent* BMP, you must notify the appropriate regional office. (See Definitions in the Construction Stormwater General Permit).*

http://www.ecy.wa.gov/programs/wq/stormwater/construction/contacts.html

**Note that if you receive permit coverage without indicating the preference for a demonstrably equivalent BMP and later decide to use one, you must provide Ecology with notice of the selection of an equivalent BMP no less than 60 days before the intended use of the equivalent BMP.*

## IX. Discharge/Receiving Water Information

Indicate whether your site's stormwater and/or dewatering water could enter surface waters, **directly** and/or **indirectly**:

☒ Water will discharge directly or indirectly (through a storm drain system or roadside ditch) into one or more surface waterbodies (wetlands, creeks, lakes, and all other surface waters and water courses).

If your discharge is to a storm sewer system, provide the name of the operator of the storm sewer system:

(e.g., City of Tacoma): Seattle Public Utilities

(NOTE: If your stormwater discharges to a storm sewer system operated by the City of Seattle, King County, Snohomish County, City of Tacoma, Pierce County, or Clark County, you must **also** submit a copy of this NOI to the appropriate jurisdiction.)

☐ Water will discharge to ground with 100% infiltration, with no potential to reach surface waters under any conditions.

If your project includes dewatering, you **must** include dewatering plans and discharge locations in your site Stormwater Pollution Prevention Plan.

**Location of Discharge into Surface Waterbody**

Enter the waterbody name and latitude/longitude of the point(s) where the site has the potential to discharge into a waterbody (enter all locations).

- Include the names and locations of both direct and indirect discharges to surface waterbodies, even if the risk of discharge is low or limited to periods of extreme weather.
- Some large construction projects (for example, subdivisions, roads, or pipelines) may discharge into several waterbodies.
- If the creek or tributary is unnamed, use a format such as "unnamed tributary to Deschutes River."
- **Attach a separate list if necessary.**

| Surface Waterbody Name | Latitude Decimal Degrees | Longitude Decimal Degrees |
|---|---|---|
| Puget Sound | 47.58948° N | -122.34279° W |
| | ° N | ° W |
| | ° N | ° W |
| | ° N | ° W |

*If your site discharges to a waterbody that is on the impaired waterbodies list (i.e., 303[d] list) for turbidity, fine sediment, high pH, or phosphorus, Ecology will require additional documentation before issuing permit coverage and these sites will be subject to additional sampling and numeric effluent limits (per Permit Condition S8). Ecology will notify you if any additional sampling requirements apply. Information on impaired waterbodies is available online at http://www.ecy.wa.gov/programs/wq/303d/2008/index.html.*

## X. State Environmental Policy Act (SEPA)

This Notice of Intent (NOI) is incomplete and cannot be approved until the applicable SEPA requirements under Chapter 197-11 WAC are met.

**Who is the SEPA lead agency on your site?** Seattle .

**Has the SEPA lead agency issued a final decision on your checklist?** ☐ **No** ☒ **Yes** ☐ **Exempt***

**If No: The NOI is incomplete.** Ecology will hold the application until a final SEPA decision is made or the Construction Stormwater NOI public comment period ends, whichever is later. **You must notify Ecology once the lead agency has issued a determination.**

**If Yes:** Type of SEPA decision issued: ☐ Determination of Non-Significance (DNS) ☐ Mitigated DNS (MDNS) ☐ Determination of Significance (DS) ☒ Final Environmental Impact Statement (EIS) ☐ Other:

- Date of final SEPA decision: _____.
- If a supplemental EIS, SEPA addendum, or some other type of additional SEPA review was required, please attach and submit with this form.
- Date when all SEPA-related comment & appeal periods are exhausted: _____.

***If Exempt:** Attach written documentation, check type of exemption below, and proceed to Section VII.

☐ Watershed Restoration & Fish Habitat Enhancement Exemption (RCW 43.21C.0382).

☐ Infill Development Exemption (RCW 43.21C.229).

☐ Planned Action Exemption (RCW 43.21C.031).

☐ Categorical Exemption. Under what section of the SEPA Rule (WAC 197-11-800) is it exempt? _____ (for example, WAC 197-11-800(1) Minor New Construction)

*More SEPA information is available at: http://www.ecy.wa.gov/programs/sea/sepa/e-review.html.*

## XI. Public Notice

You must publish a public notice at least **once** a week for **two** consecutive weeks with **seven days** between publications, in at least a **single** newspaper of general circulation in the county in which the construction is to take place. Ecology cannot grant permit coverage sooner than the end of the 30-day public comment period, which begins on the date of the **second** public notice.

Mail or fax (360-407-6426) the NOI to Ecology on or **before** the **first** public notice date. If you fax the public notice to Ecology, you must also mail a hard copy. Failure to do so may delay the issuance of your permit.

Provide the **exact** dates (mm/dd/yy) that the first and second public notices will appear in the newspaper(s):

First notice: 03/03/14

Second notice: 03/10/14 (Begins 30-day public comment period.)

For example: First notice: 01/01/10

Second notice: 01/08/10

Name of the newspaper(s) publishing the notices: Daily Journal of Commerce

## PUBLIC NOTICE TEMPLATE

Complete this template using project-specific information and submit to a local newspaper with general circulation within the county where the project is located. The **bold** language is required by WAC 173-226-130 and must be included in its entirety. (Either use the fill-in template below or **attach on a separate sheet of paper, if necessary.**)

*(Note: This section is unprotected so you can delete text in parentheses)*

**255 South King Street L.P., *270 South Hanford Street Suite 100, Seattle, WA 98134,* is seeking coverage under the Washington State Department of Ecology's Construction Stormwater NPDES and State Waste Discharge General Permit.**

**The proposed project, North Lot Development, is located at 255 South King Street in Seattle, in King County.**

**This project involves 1.708 acres of soil disturbance for commercial and utility construction activities.**

*(List all construction activities, for example, residential, commercial, industrial, highway, utility).*

**Stormwater will be discharged to Puget Sound, indirectly.**

**Any persons desiring to present their views to the Washington State Department of Ecology regarding this application, or interested in Ecology's action on this application, may notify Ecology in writing no later than 30 days of the last date of publication of this notice. Ecology reviews public comments and considers whether discharges from this project would cause a measurable change in receiving water quality, and, if so, whether the project is necessary and in the overriding public interest according to Tier II antidegradation requirements under WAC 173-201A-320.**

**Comments can be submitted to:**
**Department of Ecology**
**Attn: Water Quality Program, Construction Stormwater**
**P.O. Box 47696, Olympia, WA 98504-7696**

## XII. Certification of Permittees

*"I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system or those directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations."*

Patrick Nickerson / Sodo Builders, LLC
Printed Name / Company (operator/permittee only)

Vice President
Title

Signature of Operator/Permittee*

9/17/13
Date

*** Federal regulations require this application is signed by one of the following:**

A. For a corporation: By a principal executive officer of at least the level of vice president.
B. For a partnership or sole proprietorship: By a general partner or the proprietor, respectively.
C. For a municipality, state, federal, or other public facility: By either a principal executive officer or ranking elected official.

Please sign and return this document to the following address:

Washington Department of Ecology - Stormwater
P.O. Box 47696
Olympia, WA 98504-7696

## VI. Existing Site Conditions, continued from page 2

i. Are you aware of contaminated soils present on the site? ☒ Yes ☐ No

ii. Are you aware of groundwater contamination located within the site boundary? ☒ Yes ☐ No

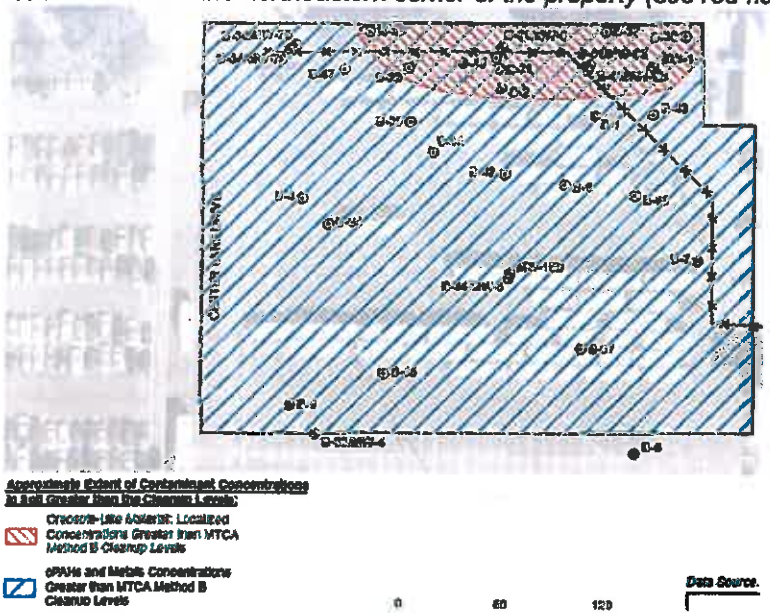

iii. If you answered yes to questions 1 or 2, will any contaminated soils be disturbed or will any contaminated groundwater be discharged due to the proposed construction activity? ☒ Yes ☐ No

["Contaminated" and "contamination" here mean containing any hazardous substance (as defined in WAC 173-340-200) that does not occur naturally or occurs at greater than natural background levels.]

If you answered yes to Question 3, please explain below or on a separate paper in detail the locations, contaminants, and concentrations, and pollution prevention and/or treatment BMPs proposed to control the discharge of soil/groundwater contaminants. Ecology may request a copy of your SWPPP.

***Locations, Contaminants, & Concentrations:***

*iv. The soil contamination on the site includes one distinct, localized area of creosote-like material present at the base of the fill in the northeastern corner of the property (see red hatching).*

*Within this localized (red hatching) area, the contaminant concentrations are above the MTCA Method B cleanup levels due to the creosote-like material, which is a remnant of historical operations. Diesel, motor oil, gasoline, and benzene constituents were found in soil above cleanup levels (at concentrations as high as 8,600 mg/kg and 2,300 mg/kg, 2,000 mg/kg, and 5,200 µg/kg, respectively) in soil near the creosote-like material at depths ranging from 16.5 to 22 ft below ground surface (BGS).*

*v. Property-wide concentrations of polycyclic aromatic hydrocarbons (PAHs) and arsenic that are associated with the heterogeneous fill material are above the MTCA Method B cleanup levels. PAHs have been detected in shallow and deep soil samples ranging from 1 to 26 ft BGS. Excavation is planned to extend to 17.5 ft BGS within the proposed building footprint.*

*vi. Contamination in groundwater does not pose a threat to human health or the environment; therefore, groundwater remediation is not required. Depth to groundwater in the proposed construction area was found to be within a range of 8 to11 ft BGS. Groundwater will be encountered during site excavation, which is planned to be from 0 to 17.5 ft BGS within the proposed building footprint. Detected contaminants in groundwater include:*

- *i. diesel (ranging from 0.77 to 310 mg/L),*
- *ii. motor oil (at 150 mg/L), arsenic (ranging from 29 to 58 µg/L),*
- *iii. cPAHs (ranging from 0.21 to 7 µg/L),*
- *iv. benzene (ranging from 5.3-120 µg/L), and*
- *v. gasoline (ranging from 0.54 to 50 mg/L).*

***Pollution Prevention and/or Treatment BMPs:***

*vii.* *All excavated soil from construction activities will be dewatered and disposed of offsite under an appropriate material management plan.*

- *a. Contaminated soils will be excavated directly into trucks and hauled to an approved disposal facility.*
- *b. Stockpiling of contaminated soils is not planned.*

*viii.* *Groundwater and water drained from soil dewatering bins/tanks will be pre-treated onsite as necessary and then discharged under authorization to the local sanitary sewer and/or will be shipped offsite to a licensed facility for proper treatment/disposal.*

- *a. A Storm water Pollution Prevention Plan (SWPPP) permit and plan will be available onsite prior to earthwork operations.*

King County

# Industrial Waste Program
# Construction Dewatering Request Form

Submit to the King County Industrial Waste Program
130 Nickerson Street, Suite 200, Seattle, WA 98109-1658
Phone: 206-263-3000
Fax: 206-263-3001

- Submit one application for each construction site.
- Answer all questions and include ALL required exhibits. **Incomplete applications will be returned to you.**
- If you do not have an answer for the requested information, indicate so and explain why.
- Indicate "NA" if a section does not apply to your site.
- Use additional pages, if needed.
- Discharge approval will be issued to the owner of the site. As such, this form must be signed by the site owner, or their authorized representative, as defined by King County Code (KCC) 28.82.050. A King County Delegation of Signature Authority form can be completed to delegate signature authority and can be found at:

www.kingcounty.gov/environment/wastewater/IndustrialWaste/~/media/environment/wastewater/IndustrialWasteProgram/docs/Forms/OtherForms/sigauth.ashx

| **E-mail Address** | greg@americanlifeinc.com | patn@sodobuilders.net |
| **Primary person to be contacted about this application** | Patrick Nickerson | |

| | | | |
|---|---|---|---|
| **Provide detailed project description** | Construction of 23-story hotel and 18-story office towers will require excavation and disposal of soil from approximately 0' - 17.5' below ground surface (BGS) within the building footprint. Groundwater is anticipated 8'-10' BGS, with dewatering expected within the footprint and within the 40' tall permanent steel sheet pile shoring walls. | | |
| **Start Date of Dewatering** | 9/1/14 | **End Date of Dewatering** | 8/1/15 |
| **Size of Area** | 1.48 acres | **Environmental Permits Issued for Applicant Site (example: NPDES permit)** | WAR301510 |

**List construction processes and activities generating wastewater**

- *Process/Activity Generating Wastewater: Enter a brief description and assign a process number for each process and activity (e.g., well dewatering, wheel wash, equipment cleaning, concrete curing, jet grouting, contaminated stormwater runoff)*
- *Substances and/or Pollutants: List all substances contained in these wastewaters (e.g., sediment/solids, caustic and/or acidic, oil and grease, other contaminants if groundwater or soil is contaminated).*
- *Type of Pretreatment: Identify the type of wastewater pretreatment provided for each wastestream (e.g., filtration, chemical precipitation, settling, pH neutralization, electrocoagulation, chitosan). King County policy requires that, at a minimum, an appropriately sized settling tank (weir-tank preferred) must be installed to provide gravity separation.*
- *Frequency of Discharge: Indicate the frequency of discharge. Enter "continuous" if you discharge wastewater continuously to the sewer as the wastewater is generated, or "batch" if you store wastewater and discharge it to the sewer in batches.*
- *Daily Quantity Discharged: Calculate the projected daily average and maximum discharge volume. In the space provided directly below the table, provide thorough documentation of the information, methods, and assumptions used to calculate the discharge volume values provided in this table.*

| Process Number | Process or Activity that Generates Wastewater | Substances and/or Pollutants in Wastewater | Type of Pretreatment | Frequency of Discharge (continuous or batch) | Daily Quantity Discharged in Gallons | |
|---|---|---|---|---|---|---|
| | | | | | Average | Maximum |
| 01 | Excavation Dewatering | TPH, metals, BTEX, PAHs | Settling tank | continuous | 25k GPD | 75k GPD |
| | | | | | | |
| | | | | | | |
| | | | | | | |
| | | | | | | |

**Documentation of Water Balance Calculations**

*For each process listed in the table above, provide thorough documentation of the information, methods, and assumptions used to calculate your site's water quantity balance. For the purpose of calculating the maximum daily stormwater runoff volume, use a rainstorm event of two inches per 24 hours.*

See Jacobs Associates Water Balance Calculations dated 5/8/14; attached as Exhibit C2.

**If you are requesting to discharge greater than 25,000 gallons per day during November through April, you must submit a detailed explanation for why discharge to surface water is not feasible.**

Joseph Berentsen with DPD (206-684-8613) is allowing a daily discharge rate of 75,000 gallons per day for DPD permit #6435615.

**Is there known groundwater or soil contamination on site?**

Yes.

**If yes, provide a summary of the contamination and site history clarifying source of contamination.**

*(If known groundwater or soil contamination is present on site, additional exhibits must be submitted. (See Exhibit D below in the EXHIBITS section of this application form.)*

See Exhibit D.

**Describe the site's temporary erosion and sediment control (TESC) best management practices (BMPs) that will be implemented at the site.**

To prevent erosion and sediment transport from the site, the following shall be implemented onsite:

- sediment trap, straw wattles, compost socks, and/or compost berms, water bars
- street sweeping and vacuuming, cleaning inlets and catch basins

clear plastic covering, storm drain inlet and outlet protection

**You must contact the local sewer agency (city or sewer district) to receive instructions on discharge conditions such as maximum discharge rate, discharge point, and discharge volume reporting procedures for assessment of sewer fees. Maps of King County's wastewater treatment service area and local sewer agency contact information can be found at:**
www.kingcounty.gov/environment/wtd/About/SewerAgencies.aspx

**Provide the name and phone number of the local city or sewer district personnel you contacted.**

Lan Chau, 206-733-9795

**Provide the maximum discharge rate (gallons per minute [gpm]) specified by the local city or sewer district contact.**

50 gpm has been confirmed by Joseph Berentsen of DPD (206-684-8613)

**Provide sewer account number or billing method that will be used by the local city or sewer district to assess sewer fees.**

Account set up confirmed via Daniela Schwedas at 206-684-7817 on 5/20/14

*Discharge to the sanitary sewer will require a temporary sewer connection that must be approved by the local city or sewer district. The approved temporary sewer connection (point of discharge) must be clearly indicated in your facility site plan. (See Exhibit A in the EXHIBITS section of this application form.)*

# EXHIBITS

**Required exhibits for all sites:**

A. Site Plan – Provide a site plan indicating location of activities and processes generating wastewater, settling ponds/tanks, or other wastewater treatment system components, wastewater conveyance lines, point(s) of discharge (as approved by the local city or sewer utility), groundwater and/or sediment sampling locations, streets, and public sewer and storm drainage utilities.

B. Wastewater Treatment System – Description of proposed wastewater treatment facilities including:

1. Diagrams/specification sheets and basic design data for wastewater treatment system components (for example, pumps, tanks, mixers).
2. Schematic flow diagram of the treatment process, illustrating the system piping, tanks, and control features.
3. Maximum flow rate for wastewater treatment system.

Please note that King County may require that you provide engineering justification and/or other evidence demonstrating that the discharge from the site will meet applicable permit effluent limitations.

**Required exhibit for sites requesting discharge approval for longer than six months:**

C. Dewatering Schedule – Provide a wastewater discharge schedule indicating when each process can be expected to generate wastewater for the duration of the project. For each process and discharge period, indicate the projected maximum daily discharge volume.

| Project Name: | 255 S King St | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | Project Timeline | | | | | | | | |
| Process Generating | Start Date | | | | | | | | End Date |
| Wastewater | Sep-14 | Oct-14 | Nov-14 | Dec-14 | Jan-15 | Feb-15 | Mar-15 | Apr-15 | May-15 |
| Excavation dewatering | max 75k gpd | | | | | | | | |

**Required exhibit for sites where known groundwater or sediment contamination is present:**

D. Description of contamination source(s) and chemical characteristics: Submit a summary (preferably table form) of all available groundwater and/or sediment quality data. Indicate groundwater and/or sediment sample locations on the site plan.

*I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.*

Erin Rothman, Principal
Rothman & Associates
1814A 16th Ave
Seattle, WA 98122

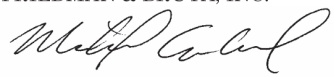

Dear Ms. Rothman:

Included are the results from the testing of material submitted on November 6, 2014 from the North Lot, F&BI 411091 project. There are 46 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on November 6, 2014 by Friedman & Bruya, Inc. from the Rothman & Associates North Lot, F&BI 411091 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Rothman & Associates |
|---|---|
| 411091 -01 | E12-1 |
| 411091 -02 | E12-5 |
| 411091 -03 | E11-1 |
| 411091 -04 | E11-5 |
| 411091 -05 | F11-1 |
| 411091 -06 | F11-5 |
| 411091 -07 | F12-1 |
| 411091 -08 | F12-5 |
| 411091 -09 | G11-1 |
| 411091 -10 | G11-5 |
| 411091 -11 | E8-1 |
| 411091 -12 | E8-5 |
| 411091 -13 | E6-1 |
| 411091 -14 | E6-5 |
| 411091 -15 | E7-1 |
| 411091 -16 | E7-5 |
| 411091 -17 | D8-1 |
| 411091 -18 | D8-5 |
| 411091 -19 | D6-1 |
| 411091 -20 | D6-5 |
| 411091 -21 | D7-1 |
| 411091 -22 | D7-5 |
| 411091 -23 | C7-1 |
| 411091 -24 | C7-5 |
| 411091 -25 | C8-1 |
| 411091 -26 | C8-5 |
| 411091 -27 | F4-1 |
| 411091 -28 | F4-5 |
| 411091 -29 | G-12-1 |
| 411091 -30 | G-12-5 |

The 8270D matrix spike and matrix spike duplicate failed the relative percent difference for several compounds. The laboratory control samples passed the acceptance criteria, therefore the data were acceptable.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

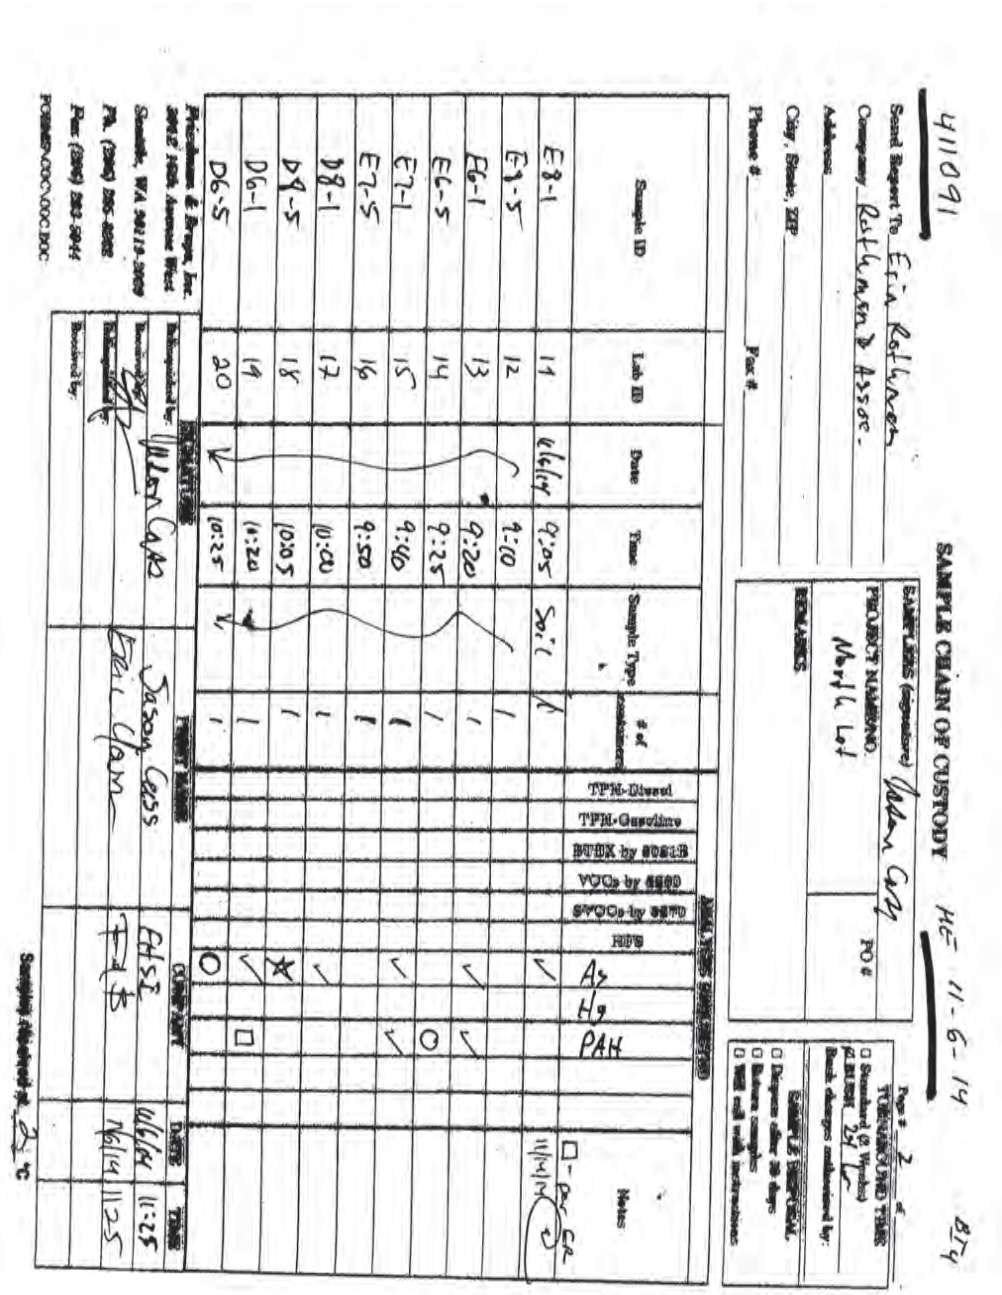

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Erin Rothman, Principal
Rothman & Associates
1814A 16th Ave
Seattle, WA 98122

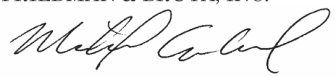

Dear Ms. Rothman:

Included are the results from the testing of material submitted on November 6, 2014 from the North Lot, F&BI 411102 project. There are 41 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on November 6, 2014 by Friedman & Bruya, Inc. from the Rothman & Associates North Lot, F&BI 411102 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Rothman & Associates |
|---|---|
| 411102 -01 | F5-1 |
| 411102 -02 | F5-5 |
| 411102 -03 | F6-1 |
| 411102 -04 | F6-5 |
| 411102 -05 | G4-1 |
| 411102 -06 | G4-5 |
| 411102 -07 | G5-1 |
| 411102 -08 | G5-5 |
| 411102 -09 | G6-1 |
| 411102 -10 | G6-5 |
| 411102 -11 | H4-1 |
| 411102 -12 | H4-5 |
| 411102 -13 | H5-1 |
| 411102 -14 | H5-5 |
| 411102 -15 | H6-1 |
| 411102 -16 | H6-5 |
| 411102 -17 | J11-1 |
| 411102 -18 | J11-5 |
| 411102 -19 | J10-1 |
| 411102 -20 | J10-5 |
| 411102 -21 | K11-1 |
| 411102 -22 | K11-5 |
| 411102 -23 | K10-1 |
| 411102 -24 | K10-5 |
| 411102 -25 | L11-1 |
| 411102 -26 | L11-5 |
| 411102 -27 | L10-1 |
| 411102 -28 | L10-5 |
| 411102 -29 | L7-1 |
| 411102 -30 | L7-5 |
| 411102 -31 | L6-1 |
| 411102 -32 | L6-5 |
| 411102 -33 | L5-1 |
| 411102 -34 | L5-5 |

The 8270D matrix spike and matrix spike duplicate failed the relative percent difference for several compounds. The laboratory control sample passed the acceptance criteria, therefore the data were acceptable.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Erin Rothman, Principal
Rothman & Associates
1814A 16th Ave
Seattle, WA 98122

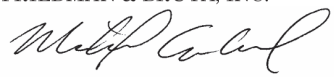

Dear Ms. Rothman:

Included are the results from the testing of material submitted on November 7, 2014 from the North Lot, F&BI 411129 project. There are 48 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

| 411129 -33 | E5-1 |
| 411129 -34 | E5-5 |
| 411129 -35 | E4-1 |
| 411129 -36 | E4-5 |

CASE NARRATIVE (continued)

| Laboratory ID | Rothman & Associates |
|---|---|
| 411129 -37 | E3-1 |
| 411129 -38 | E3-5 |
| 411129 -39 | F3-1 |
| 411129 -40 | F3-5 |
| 411129 -41 | G3-1 |
| 411129 -42 | G3-5 |
| 411129 -43 | H3-1 |
| 411129 -44 | H3-5 |
| 411129 -45 | G7-1 |
| 411129 -46 | G7-5 |
| 411129 -47 | I4-1 |
| 411129 -48 | I4-5 |
| 411129 -49 | I5-1 |
| 411129 -50 | I5-5 |
| 411129 -51 | I6-1 |
| 411129 -52 | I6-5 |
| 411129 -53 | I7-1 |
| 411129 -54 | I9-1 |
| 411129 -55 | I9-5 |
| 411129 -56 | I10-5 |
| 411129 -57 | I10-1 |
| 411129 -58 | I11-1 |
| 411129 -59 | I11-5 |

An 8270D internal standard failed the acceptance criteria for sample I5-1 due to matrix interferences. The data were flagged accordingly. The sample was diluted and reanalyzed.

The 8270D matrix spike and matrix spike duplicate failed the relative percent difference for several compounds. The laboratory control samples passed the acceptance criteria, therefore the data were acceptable.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

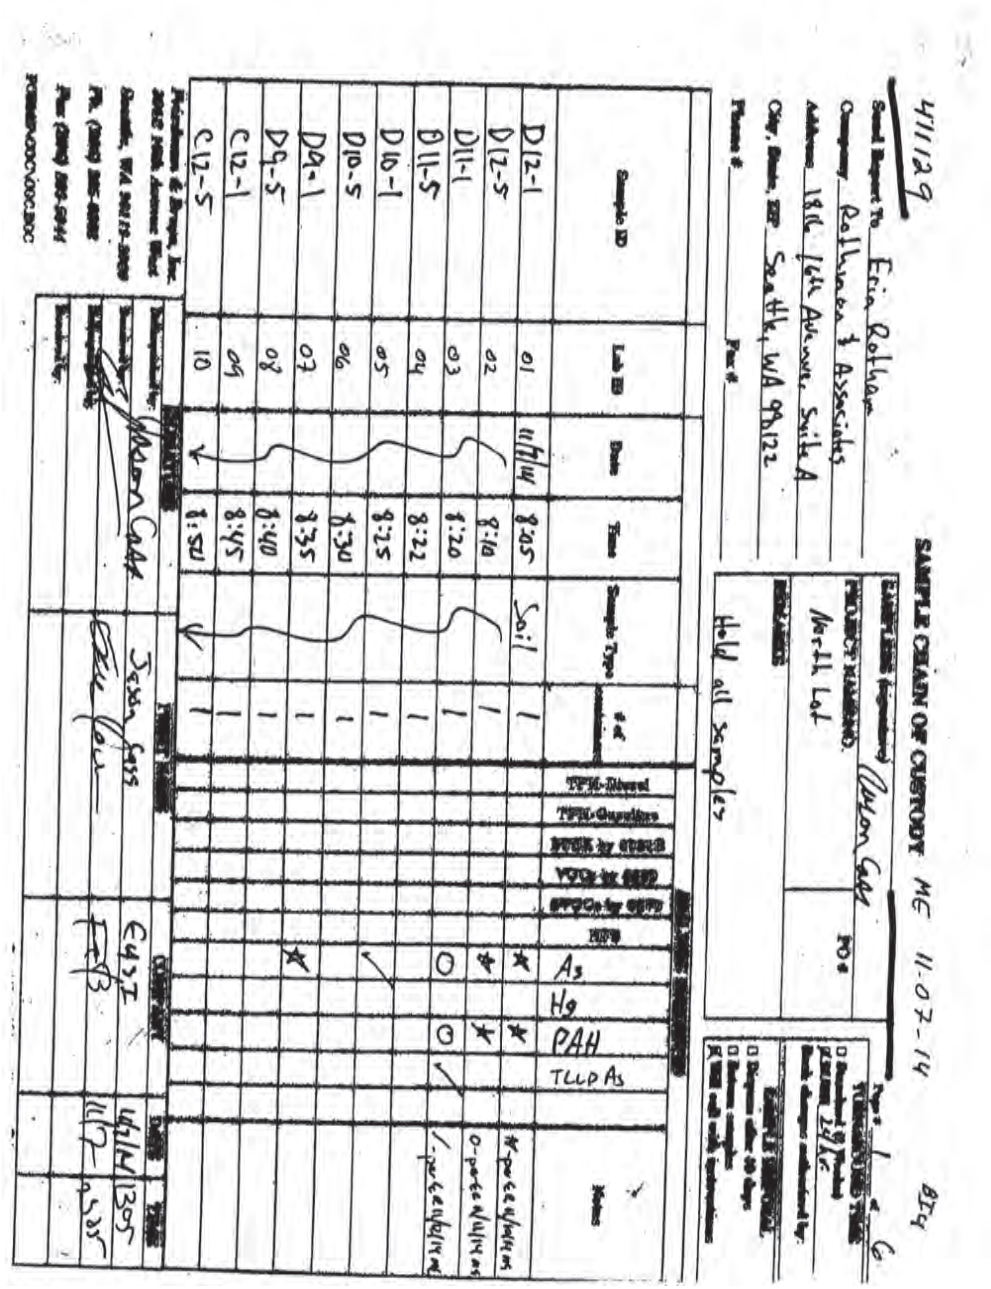

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

1814A 16th Ave
Seattle, WA 98122

Dear Ms. Rothman:

Included are the results from the testing of material submitted on November 7, 2014 from the North Lot, F&BI 411132 project. There are 21 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl

FORMSCOCCOC.DOC

CASE NARRATIVE

This case narrative encompasses samples received on November 7, 2014 by Friedman & Bruya, Inc. from the Rothman & Associates North Lot, F&BI 411132 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Rothman & Associates |
|---|---|
| 411132 -01 | I12-1 |
| 411132 -02 | I12-5 |
| 411132 -03 | J12-1 |
| 411132 -04 | J12-5 |
| 411132 -05 | J9-1 |
| 411132 -06 | J9-5 |
| 411132 -07 | K9-1 |
| 411132 -08 | K9-5 |
| 411132 -09 | K8-1 |
| 411132 -10 | K8-5 |
| 411132 -11 | K7-1 |
| 411132 -12 | K7-5 |
| 411132 -13 | K5-1 |
| 411132 -14 | K5-5 |
| 411132 -15 | K4-1 |
| 411132 -16 | K4-5 |
| 411132 -17 | B7-1 |
| 411132 -18 | B7-5 |
| 411132 -19 | B8-1 |
| 411132 -20 | B8-5 |
| 411132 -21 | B9-1 |
| 411132 -22 | B9-5 |
| 411132 -23 | K12-1 |
| 411132 -24 | K12-5 |
| 411132 -25 | L9-1 |
| 411132 -26 | L9-5 |
| 411132 -27 | L8-1 |
| 411132 -28 | L8-5 |
| 411132 -29 | L12-1 |
| 411132 -30 | L12-5 |

An 8270D internal standard failed the acceptance criteria for samples J9-1, K8-1, K5-1, and L12-1 due to matrix interferences. The data were flagged accordingly. The sample was diluted and reanalyzed.

FRIEDMAN & BRUYA, INC.
ENVIRONMENTAL CHEMISTS

CASE NARRATIVE (continued)

The 8270D matrix spike and matrix spike duplicate failed the relative percent difference for several compounds. The laboratory control sample passed the acceptance criteria, therefore the data were acceptable.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

1815 E Thomas St, Suite B
Seattle, WA 98112

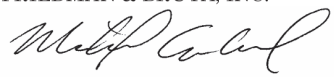

Dear Ms. Rothman:

Included are the results from the testing of material submitted on February 25, 2015 from the North Lot, F&BI 502390 project. There are 11 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on February 25, 2015 by Friedman & Bruya, Inc. from the Rothman & Associates North Lot, F&BI 502390 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Rothman & Associates |
|---|---|
| 502390 -01 | M2-5 |
| 502390 -02 | L2-5 |
| 502390 -03 | K2-5 |
| 502390 -04 | J2-5 |
| 502390 -05 | I2-5 |
| 502390 -06 | H2-5 |
| 502390 -07 | G2-5 |

Benzo(b)fluoranthene in the 8270D laboratory control sample exceeded the acceptance criteria. The data were flagged accordingly.

All other quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

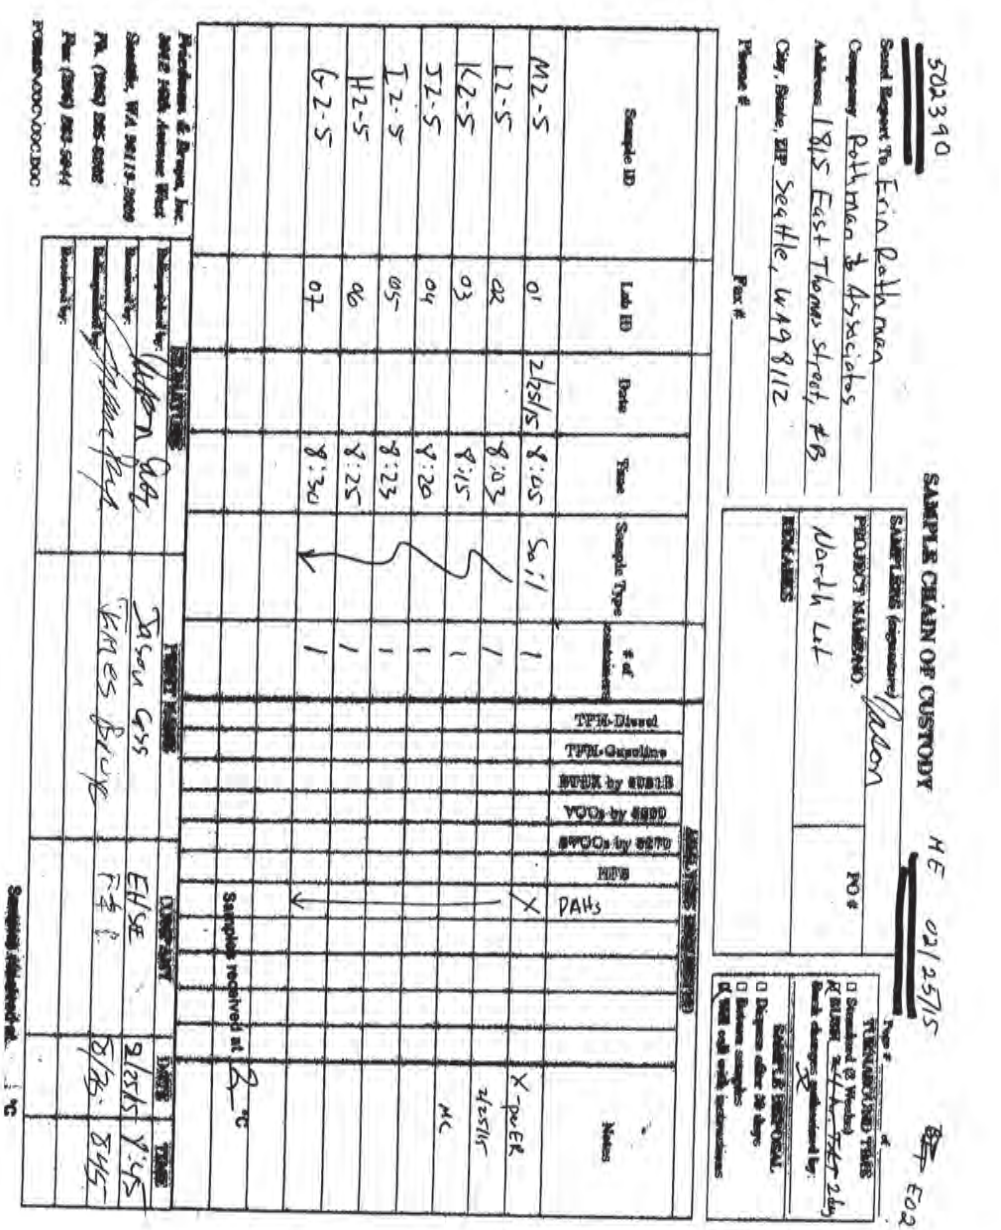

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Seattle, WA 98112

Dear Ms. Rothman:

Included are the results from the testing of material submitted on February 25, 2015 from the North Lot, F&BI 502411 project. There are 9 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

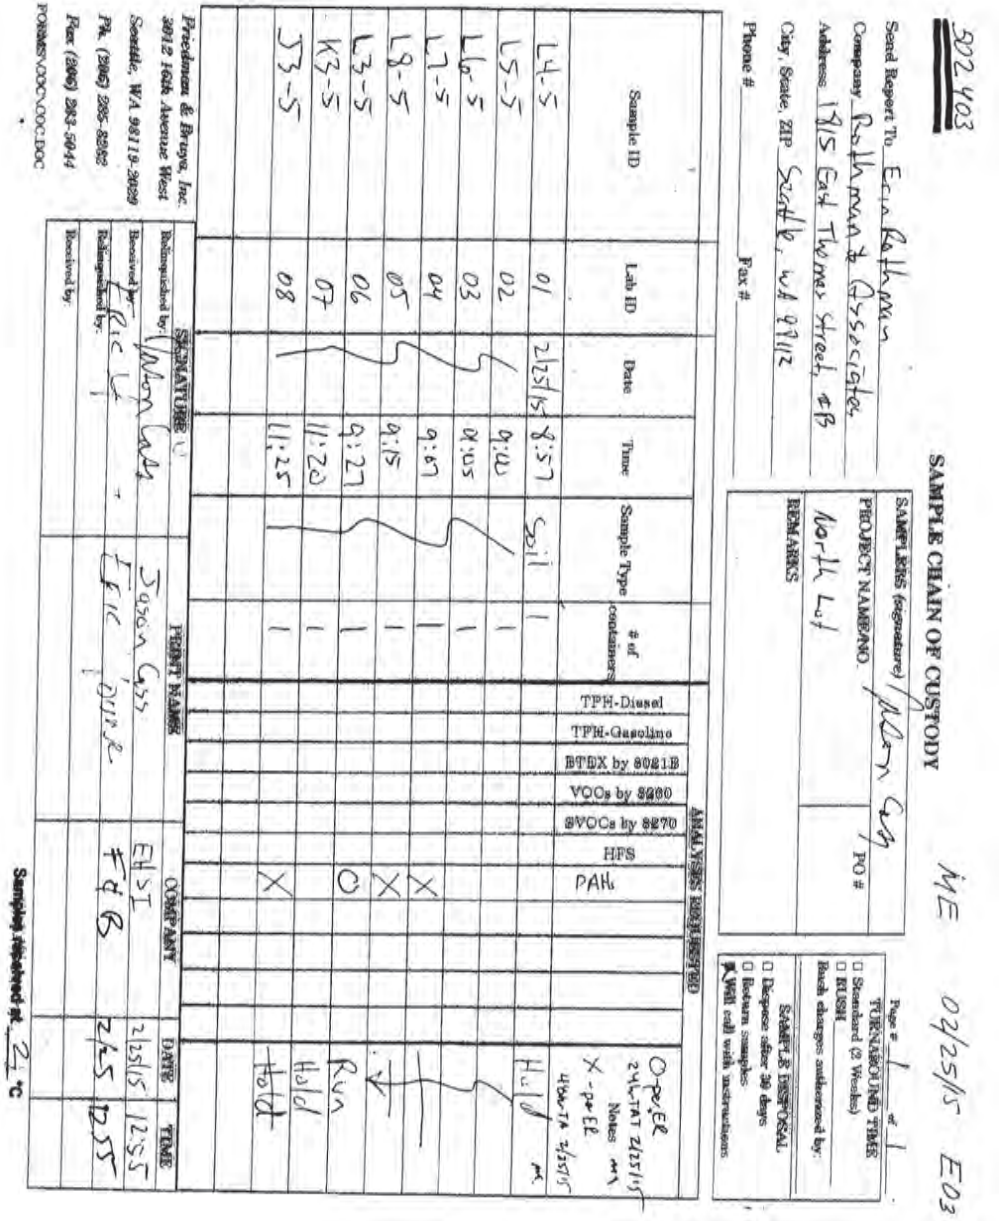

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on February 25, 2015 by Friedman & Bruya, Inc. from the Rothman & Associates North Lot, F&BI 502411 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Rothman & Associates |
|---|---|
| 502411 -01 | F2-5 |
| 502411 -02 | E2-5 |
| 502411 -03 | D2-5 |
| 502411 -04 | C2-5 |
| 502411 -05 | B2-5 |

All quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

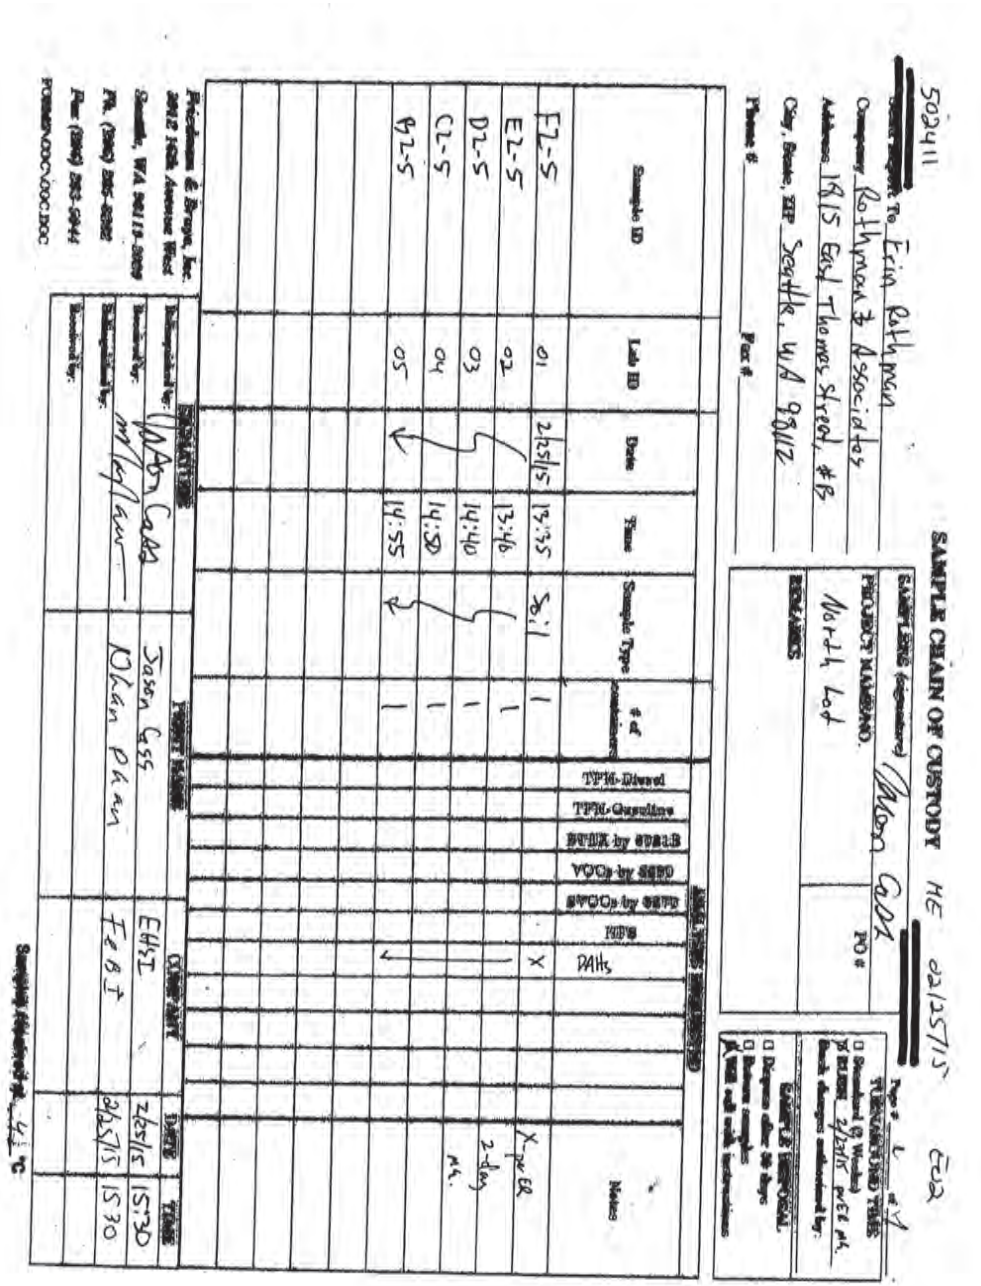

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Dear Ms. Rothman:

Included are the results from the testing of material submitted on February 26, 2015 from the North Lot, F&BI 502441 project. There are 20 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

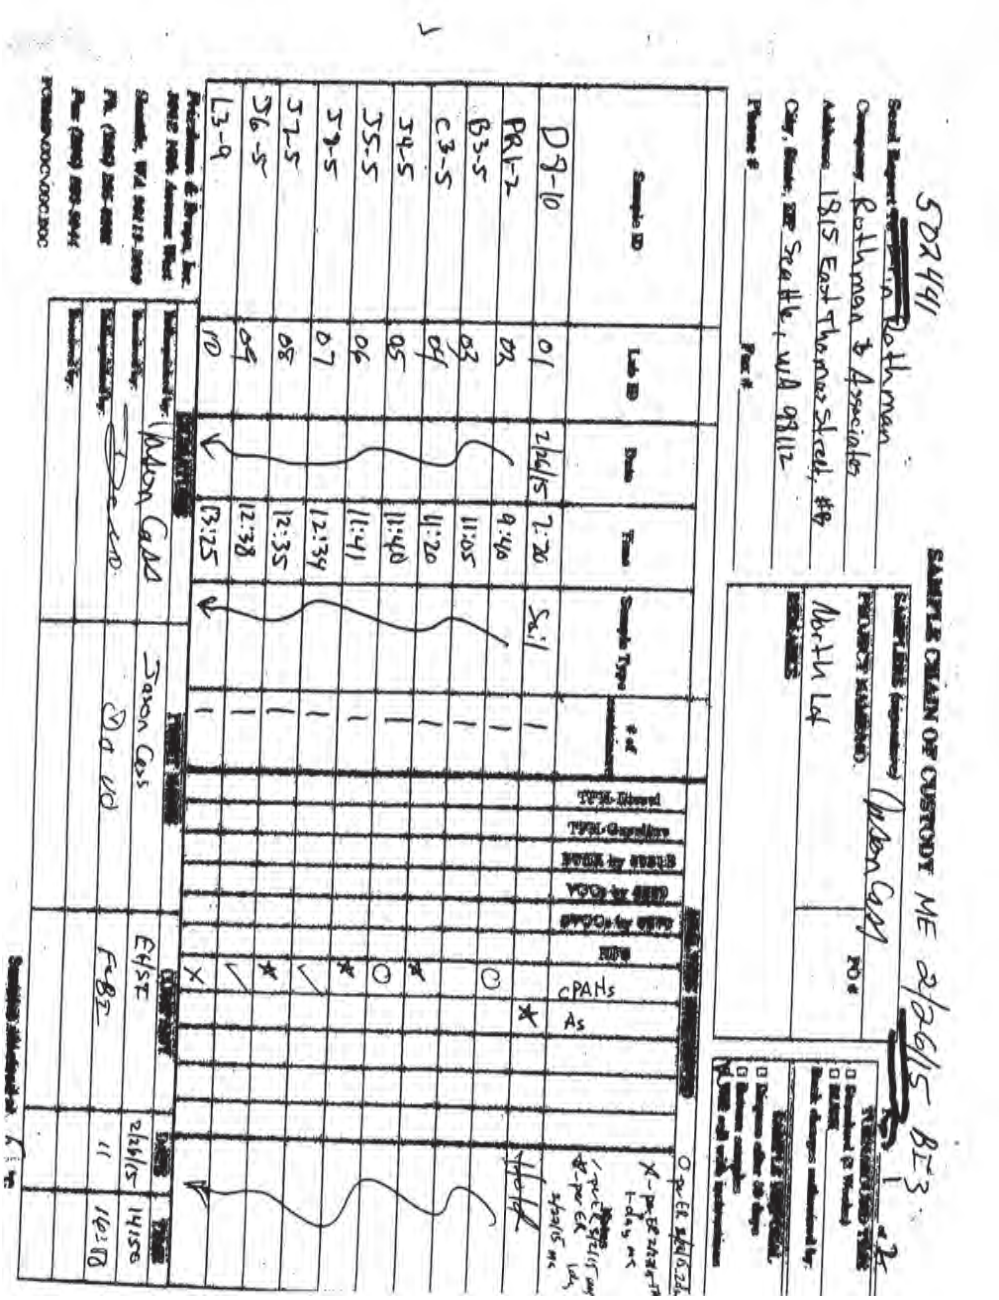

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

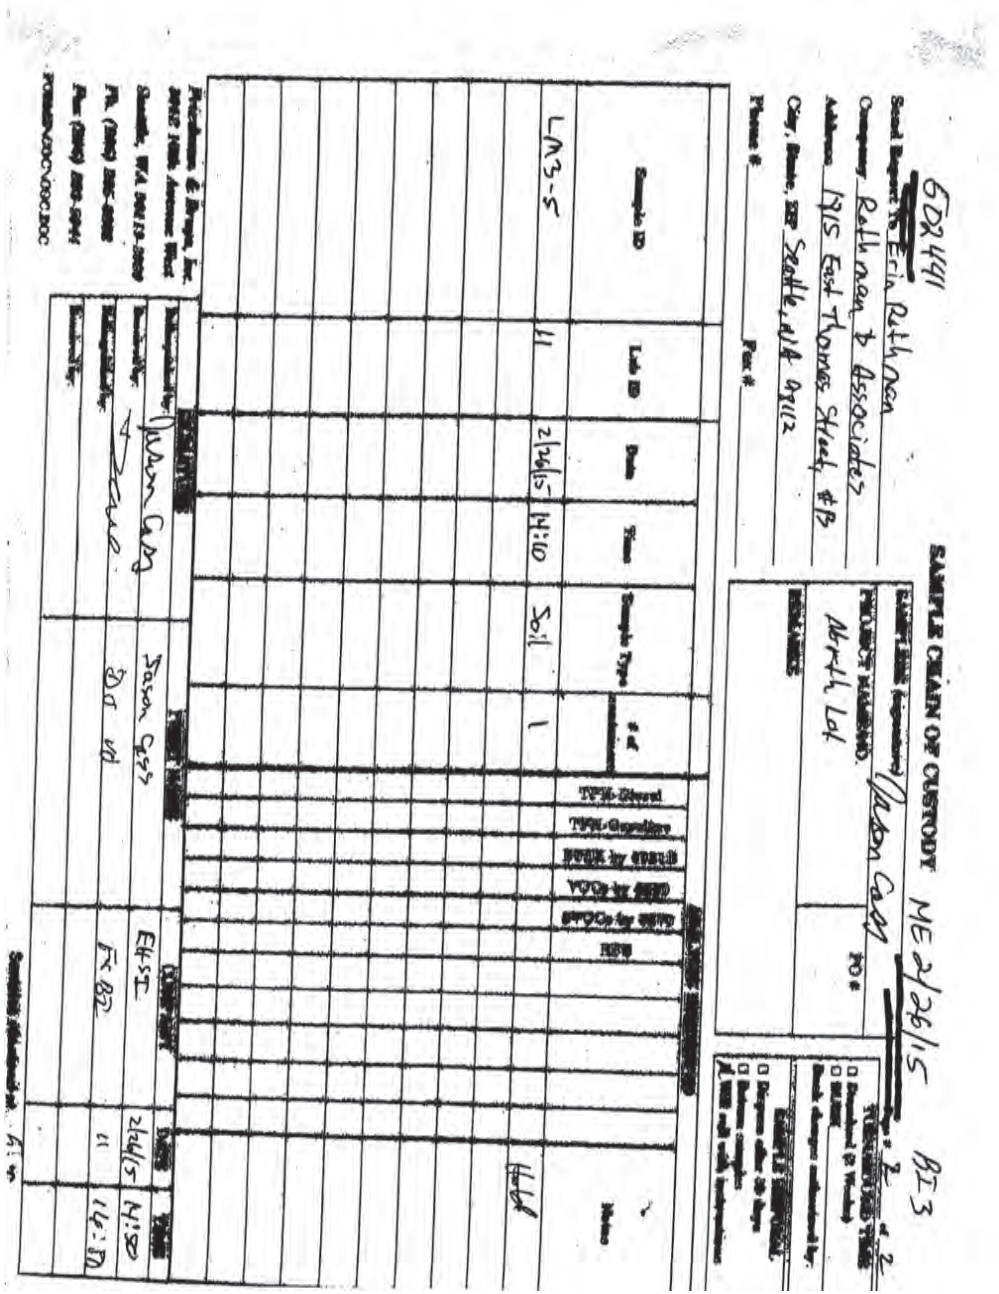

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Dear Ms. Rothman:

Included are the results from the testing of material submitted on February 27, 2015 from the North Lot, F&BI 502462 project. There are 13 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

CASE NARRATIVE

This case narrative encompasses samples received on February 27, 2015 by Friedman & Bruya, Inc. from the Rothman & Associates North Lot, F&BI 502462 project. Samples were logged in under the laboratory ID's listed below.

| Laboratory ID | Rothman & Associates |
|---|---|
| 502462 -01 | UST1-BOT-1 |
| 502462 -02 | UST1-ESW-1 |
| 502462 -03 | UST1-WSW-1 |
| 502462 -04 | UST1-SSW-1 |
| 502462 -05 | UST1-NSW-1 |

All quality control requirements were acceptable.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

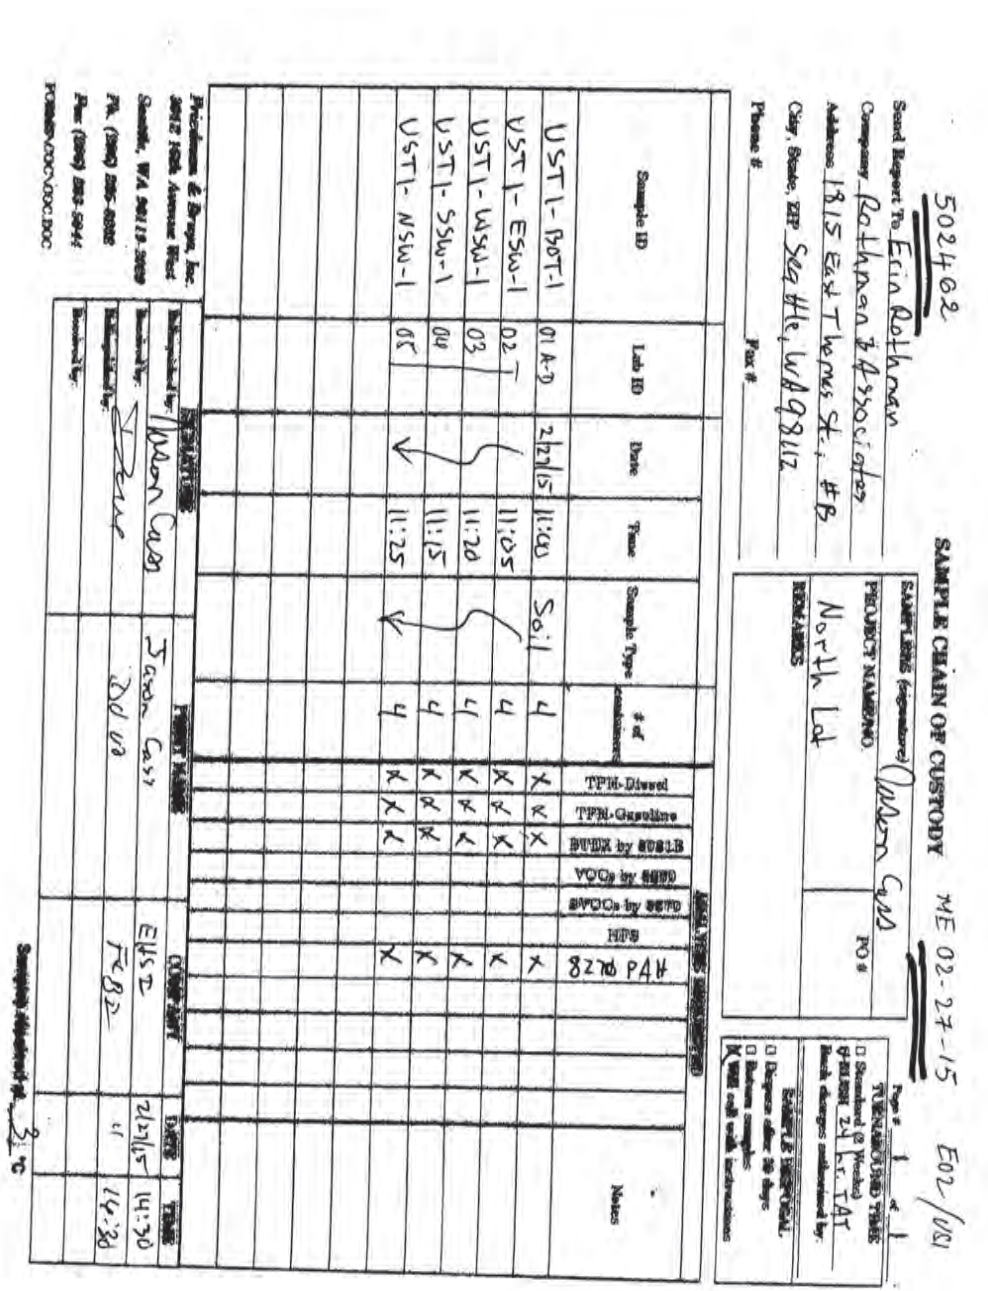

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

The 8270D matrix spike and matrix spike duplicate failed the relative percent difference for dibenz(a,h)anthracene. The laboratory control sample passed the acceptance criteria, therefore the data were likely due to matrix effect.

All other quality control requirements were acceptable.

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

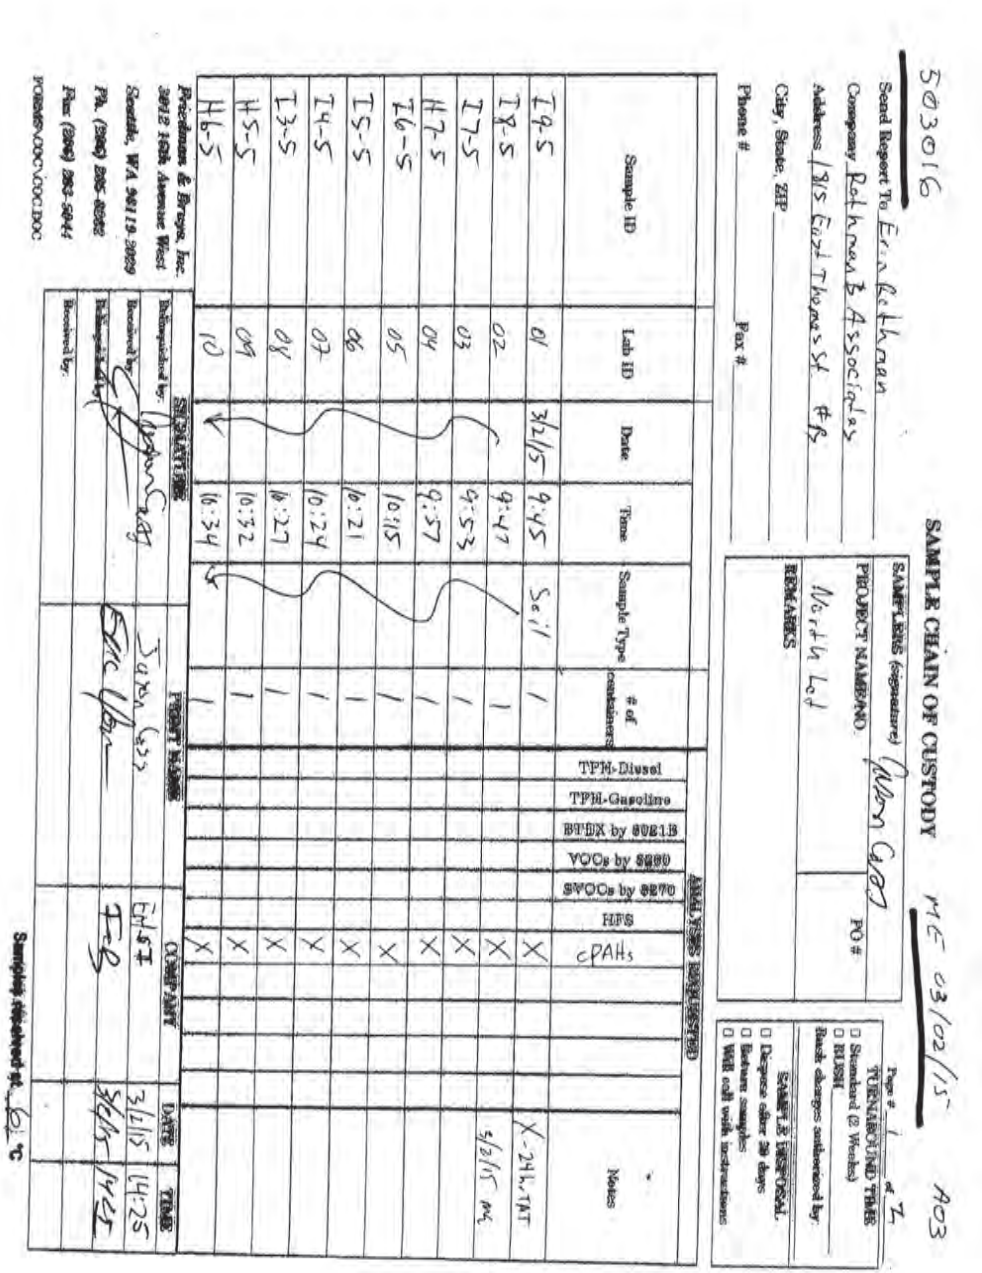

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Erin Rothman, Principal
Rothman & Associates
1815 E Thomas St, Suite B
Seattle, WA 98112

Dear Ms. Rothman:

Included are the results from the testing of material submitted on March 3, 2015 from the North Lot, F&BI 503041 project. There are 7 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

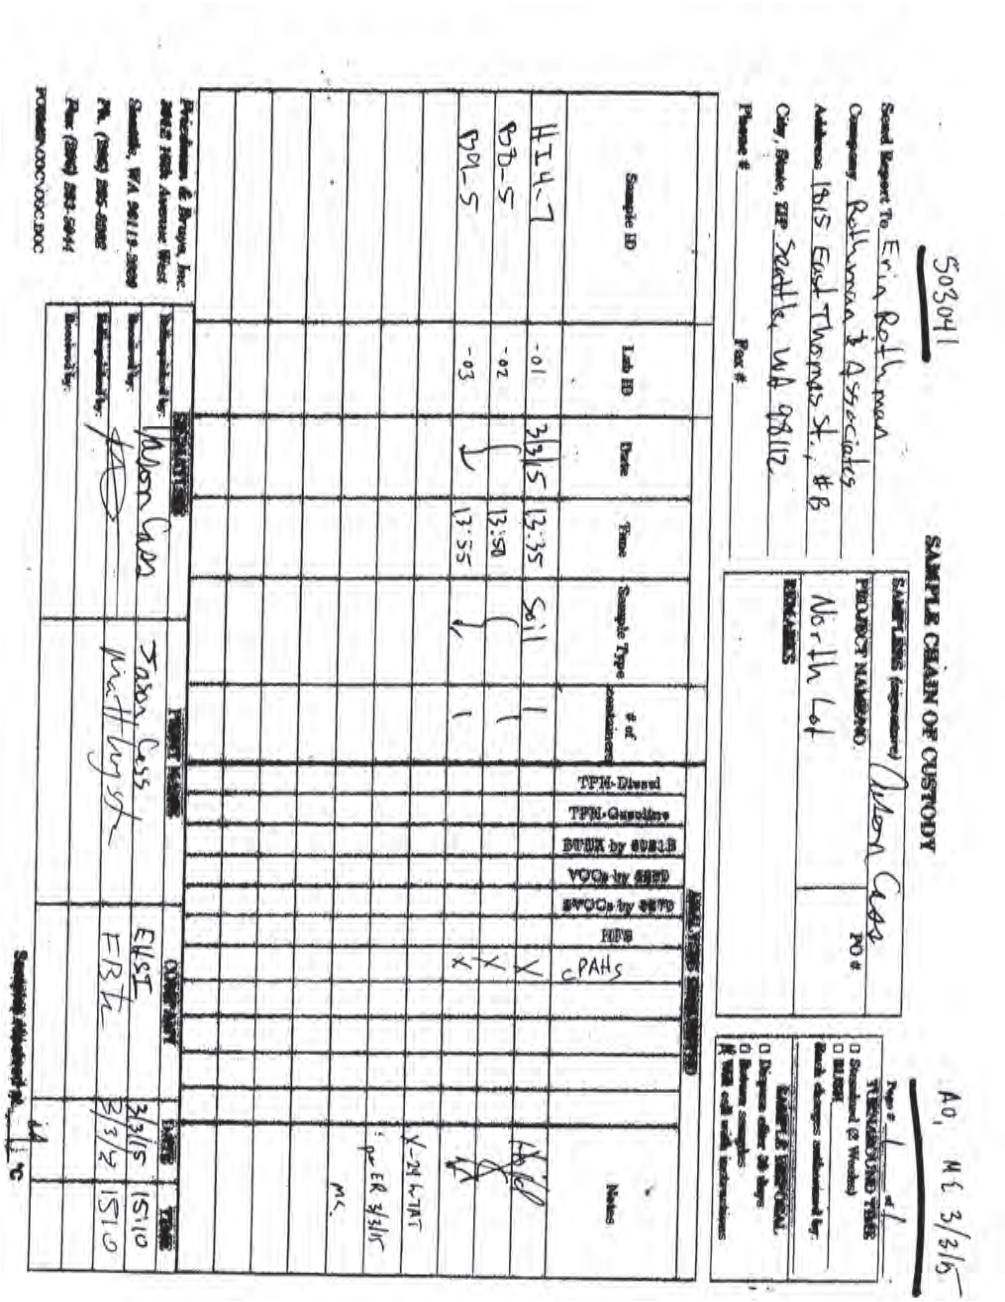

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

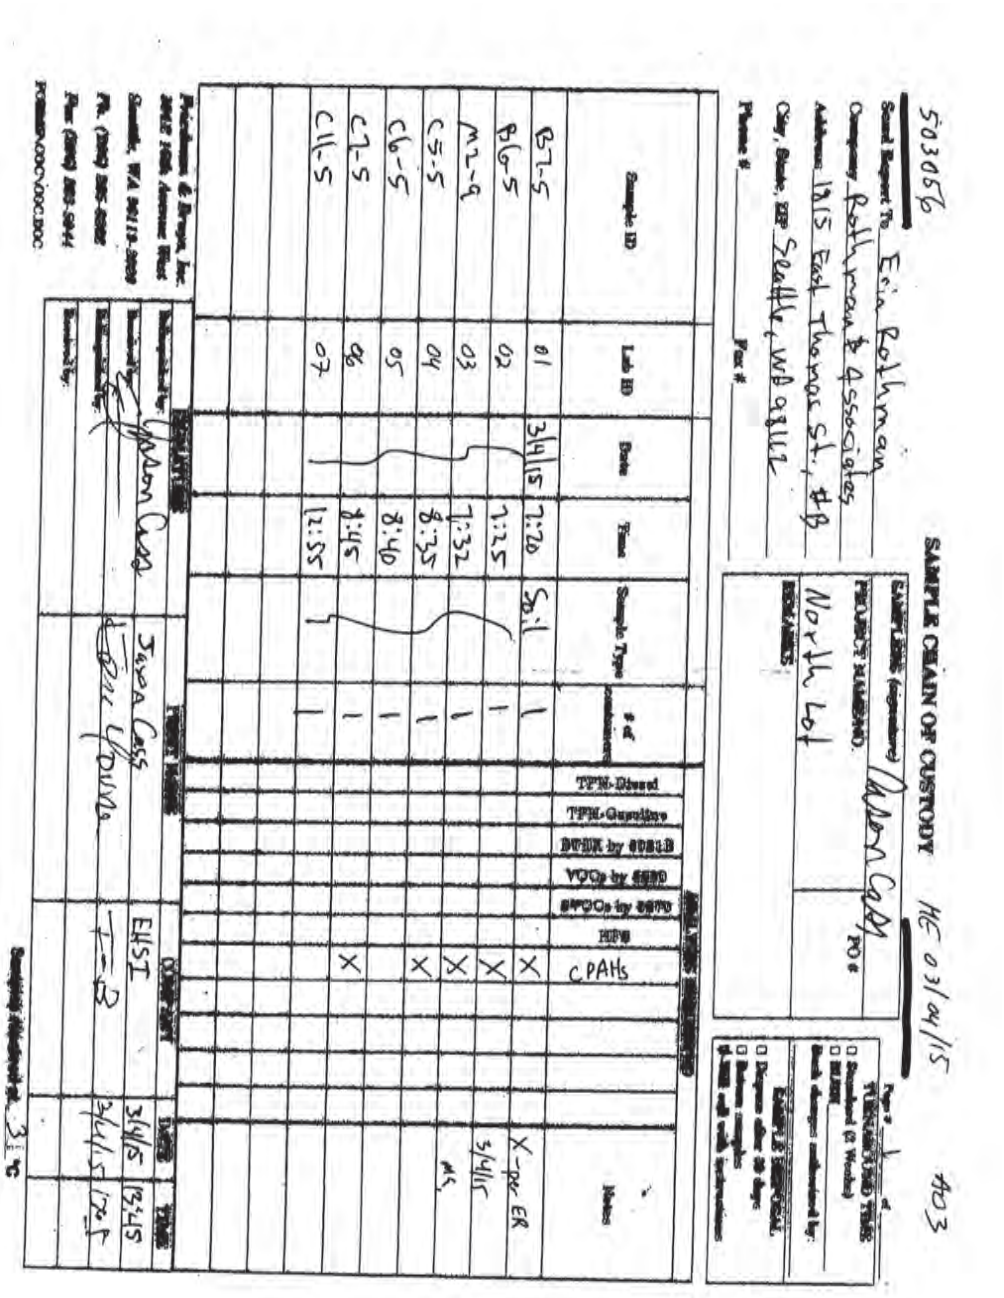

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Dear Ms. Rothman:

Included are the results from the testing of material submitted on March 5, 2015 from the North Lot, F&BI 503083 project. There are 8 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

Dear Ms. Rothman:

Included are the results from the testing of material submitted on March 10, 2015 from the North Lot, F&BI 503152 project. There are 8 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

## FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

### Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

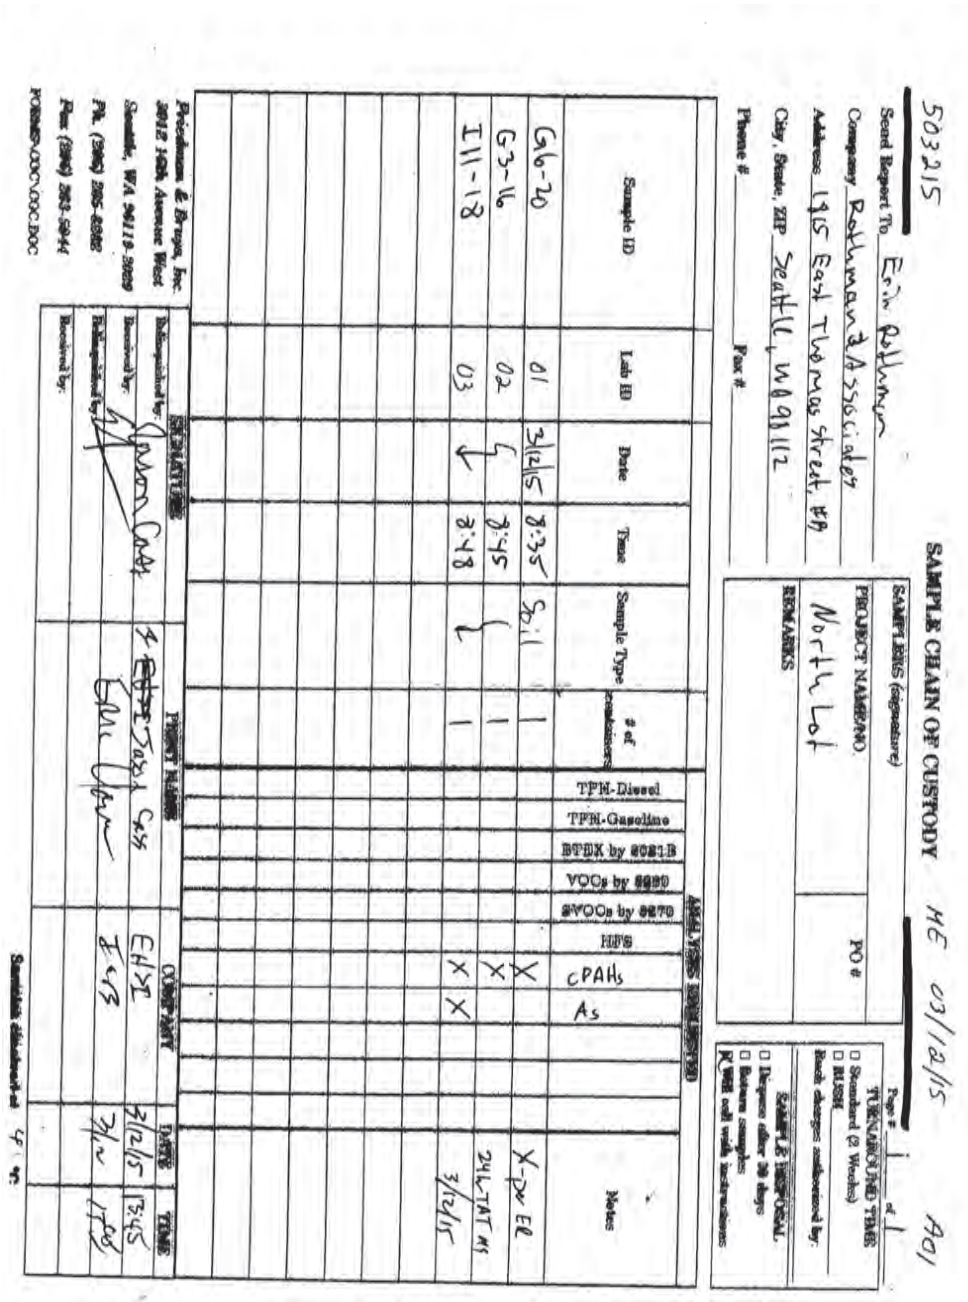

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

Dear Ms. Rothman:

Included are the results from the testing of material submitted on March 17, 2015 from the North Lot, F&BI 503309 project. There are 6 pages included in this report. Any samples that may remain are currently scheduled for disposal in 30 days. If you would like us to return your samples or arrange for long term storage at our offices, please contact us as soon as possible.

We appreciate this opportunity to be of service to you and hope you will call if you should have any questions.

Sincerely,

FRIEDMAN & BRUYA, INC.

Michael Erdahl
Project Manager

FRIEDMAN & BRUYA, INC.

ENVIRONMENTAL CHEMISTS

## Data Qualifiers & Definitions

a - The analyte was detected at a level less than five times the reporting limit. The RPD results may not provide reliable information on the variability of the analysis.

b - The analyte was spiked at a level that was less than five times that present in the sample. Matrix spike recoveries may not be meaningful.

ca - The calibration results for the analyte were outside of acceptance criteria. The value reported is an estimate.

c - The presence of the analyte may be due to carryover from previous sample injections.

cf - The sample was centrifuged prior to analysis.

d - The sample was diluted. Detection limits were raised and surrogate recoveries may not be meaningful.

dv - Insufficient sample volume was available to achieve normal reporting limits.

f - The sample was laboratory filtered prior to analysis.

fb - The analyte was detected in the method blank.

fc - The compound is a common laboratory and field contaminant.

hr - The sample and duplicate were reextracted and reanalyzed. RPD results were still outside of control limits. Variability is attributed to sample inhomogeneity.

hs - Headspace was present in the container used for analysis.

ht – The analysis was performed outside the method or client-specified holding time requirement.

ip - Recovery fell outside of control limits. Compounds in the sample matrix interfered with the quantitation of the analyte.

j - The analyte concentration is reported below the lowest calibration standard. The value reported is an estimate.

J - The internal standard associated with the analyte is out of control limits. The reported concentration is an estimate.

jl - The laboratory control sample(s) percent recovery and/or RPD were out of control limits. The reported concentration should be considered an estimate.

js - The surrogate associated with the analyte is out of control limits. The reported concentration should be considered an estimate.

lc - The presence of the analyte is likely due to laboratory contamination.

L - The reported concentration was generated from a library search.

nm - The analyte was not detected in one or more of the duplicate analyses. Therefore, calculation of the RPD is not applicable.

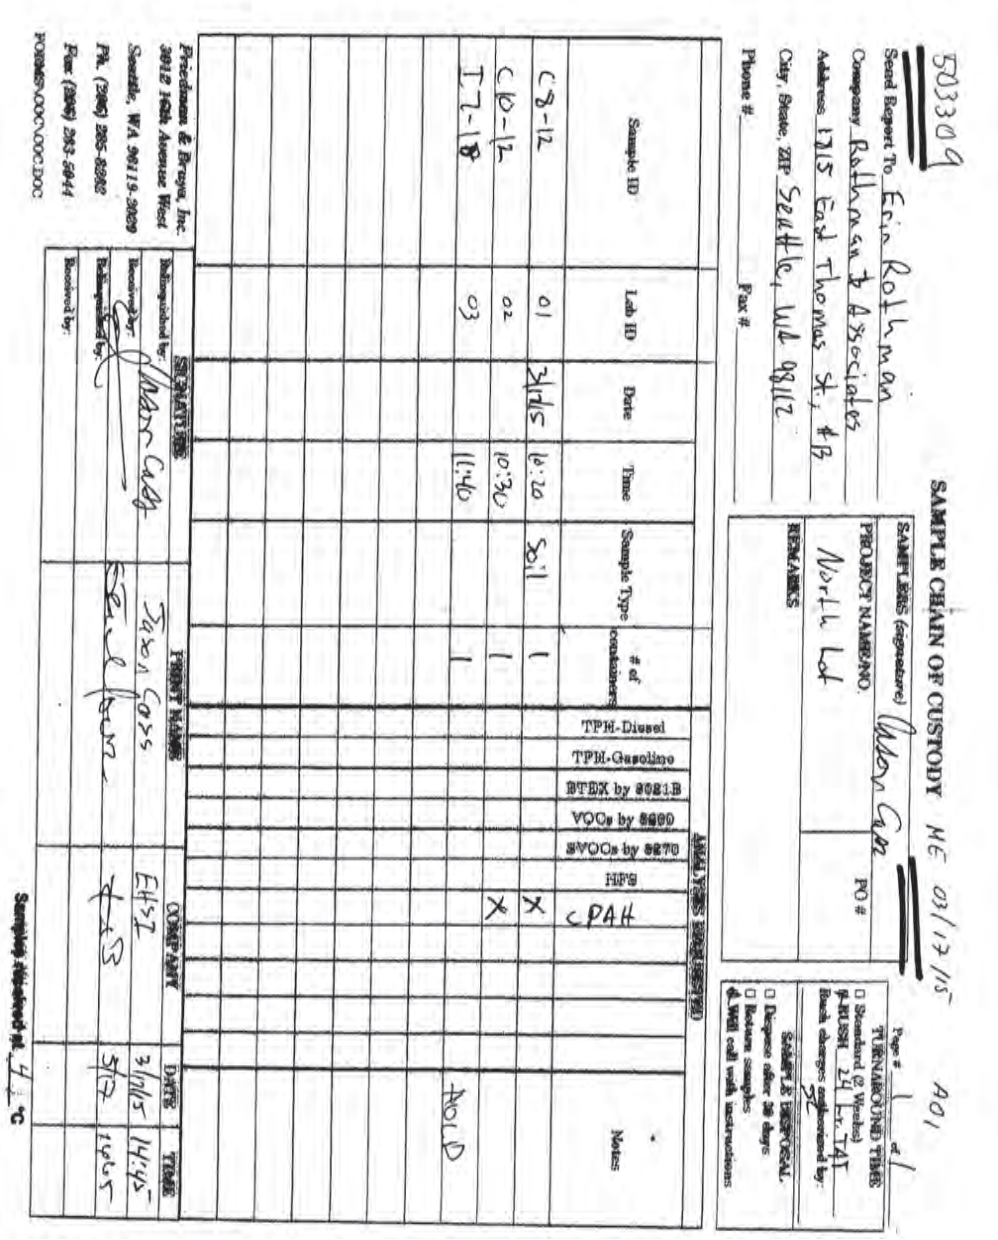

pc - The sample was received with incorrect preservation or in a container not approved by the method. The value reported should be considered an estimate.

ve - The analyte response exceeded the valid instrument calibration range. The value reported is an estimate.

vo - The value reported fell outside the control limits established for this analyte.

x - The sample chromatographic pattern does not resemble the fuel standard used for quantitation.

In the event of physical or atmospheric changes affecting the STANDARD SAFETY DESIGNATIONS assigned to any of the above spaces, this certificate is voided; spaces not listed on the Certificate are not to be entered unless authorized on another Certificate and/or maintained in accordance with OSHA 29 CFR 1915; or if in any doubt, immediately stop all work and contact the undersigned Marine Chemist. Unless otherwise stated on the Certificate, all spaces and affected adjacent spaces are to be reinspected daily or more often as necessary by the competent person in support of work prior to entry or recommencement of work.

**QUALIFICATIONS:** Transfer of ballast, cargo, fuel, or manipulation of valves or closure equipment tending to alter conditions in pipelines, tanks, or compartments subject to gas accumulation, unless specifically approved on this Certificate, requires inspection and a new Certificate for spaces so affected. All lines, vents, heating coils, valves, and similar enclosed appurtenances shall be considered "not safe" unless otherwise specifically designated. Movement of the vessel from its specific location voids the Certificate unless shifting of the vessel within the facility has been specifically authorized on this Certificate.

**STANDARD SAFETY DESIGNATIONS:** (partial list, paraphrased from NFPA 306, Subsections 4.3.1 through 4.3.6).

**ATMOSPHERE SAFE FOR WORKERS:** In the compartment or space so designated (a) the oxygen content of the atmosphere is at least 19.5 percent and not greater than 22 percent by volume; (b) the concentration of flammable materials is below 10 percent of the lower explosive limit; (c) any toxic materials in the atmosphere associated with cargo, fuel, tank coatings, inerting mediums, or fumigants are within permissible concentrations at the time of the inspection.

**NOT SAFE FOR WORKERS:** In the compartment or space so designated, entry is not permitted.

**ENTER WITH RESTRICTIONS:** In the compartment or space so designated, entry for work is permitted only if conditions of proper protective equipment, or clothing, or time, or all of the aforementioned, as appropriate, are as specified.

**SAFE FOR HOT WORK:** In the compartment or space so designated (a) the oxygen content of the atmosphere is not greater than 22 percent by volume; (b) the concentration of flammable materials in the atmosphere is less than 10 percent of the lower explosive limit; (c) the residues, scale, or preservative coatings are cleaned sufficiently to prevent the spread of fire and are not capable of producing a higher concentration than permitted by (a) or (b); (d) all adjacent spaces, containing or having contained flammable or combustible materials shall be sufficiently cleaned of residues, scale, or preservative coatings to prevent the spread of fire, or they are inerted. Ship's fuel tanks, lube tanks, or engine room or fire room bilges, or other machinery spaces, are treated in accordance with the Marine Chemist's requirements.

**SAFE FOR LIMITED HOT WORK:** In the compartment or space so designated (a) portions of the space meet the requirements for Safe for Hot Work and Partial Cleaning, as applicable, or (b) the space is inerted, adjacent spaces meet the requirements for Safe for Hot Work, and hot work is restricted to specific locations; (c) portions of the space shall meet the requirements for Safe for Hot Work, as applicable, and the nature or type of hot work is limited or restricted.

**NOT SAFE FOR HOT WORK:** In the compartment or space so designated, hot work is not permitted.

**CHEMISTS ENDORSEMENT.** This is to certify that I have personally determined that all spaces in the foregoing list are in accordance with NFPA 306 Control of Gas Hazards on Vessels and have found the condition of each to be in accordance with its assigned designation.

"The undersigned acknowledges receipt of this Certificate under NFPA 306 and understands conditions and limitations under which it was issued, and the requirements for maintaining its validity."

This Certificate is based on conditions existing at the time the inpection herein set forth was completed and is issued subject to compliance with all qualifications and instructions.

# UST TANK DECOMMISSIONING CERTIFICATE

RE: DECOMMISSION UNDERGROUND HEATING OIL STORAGE TANK (BUNKER C) AT: *255 South King Street, Seattle, Washington*

This is to certify that Diane's Tank Removal Services, LLC, decommissioned one 1,750 gallon underground bunker C heating oil storage tank on February 26, 2015. The tank was pumped, triple rinsed, and removed from site. The tank was properly decommissioned pursuant to the codes, rules and guidelines established by local and state law.

Dated: March 10, 2015

# 255 KINGS STREET
# HYCRETE DETAILS

OCT 30, 2014

# GENERAL NOTES

*Depth of Dowels, bolts, etc. to be drilled into the Hycrete Concrete*

- Slab on grade/Mat slab – Maximum depth NOT more than half the section thickness.

*Installation of CMU, Air Duct, Electrical Panel, or any Mechanical Equipment on Hycrete Concrete*

Hycrete Inc. must be notified 3 weeks prior to installation to check if there are leaks that need to be fixed on areas where the above mentioned will be installed.

*SOG Pour*

- The surface of the Hycrete concrete must be smooth by the use of steel trowel where the waterstop will be installed specifically where the perimeter wall will be cast.

- Curing Compound must be applied on all Hycrete concrete as soon as the concrete can withstand mans' weight without leaving any mark.

*Wall Pour (if any)*

Curing Compound must be applied on all Hycrete concrete immediately after stripping the form.

NOTE: The hycrete top slab has #6Top @18" oc. Please verify that this is adequate for the hycrete top slab.
-DCI

MH 2014-12-19:
A specification section for this submittal is not identified, we have assumed that it is for 03 0512.

In general, the submitted information appears to be consistent with the system specified in section 03 0512; however, please note the following that is not clear:

- There is no product data for the Hycrete admixture itself.
- No indication of the system to be used (W, W1000, or W500? System type that is installed will govern the warranty that is provided)
- No indication of extent of Hycrete. Although, we can infer that this is for the below-grade.

We recommend that the GC provide this information for confirmation.

Additionally, although it is not required in the specifications, our experience has shown that Hycrete waterproofing will often require Hycrete to employ chemical injections to maintain system water tightness. We recommend that Hycrete submit the intended products and details for any necessary chemical injections.

# WATER STOP JOINING INSTRUCTIONS

Water stops are the most important segment for 100 % hydrophobic concrete system. Waterstops are used to make watertight joints around penetrations and construction joints.

Due to site requirements and different application, some time we can come across joining of waterstop ends.

**Fig (A), Fig (B), Fig (C) shows the most common wrong ways to join the water stop**

**Figure A**

**Figure B**

**Figure C**

**For proper joining, cut ends with sharp tool at 45 degree angle, and then place ends over one another, as shown in Fig (D),Fig (E), Fig (F)**

**Figure D**

**Figure E**

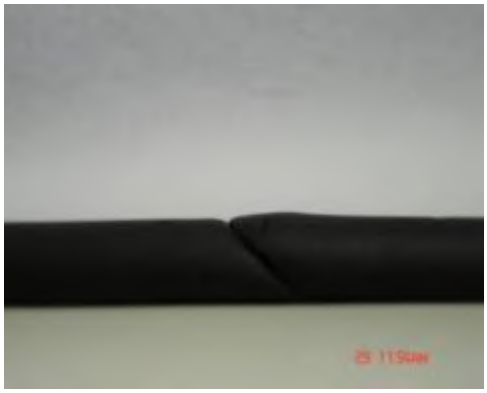

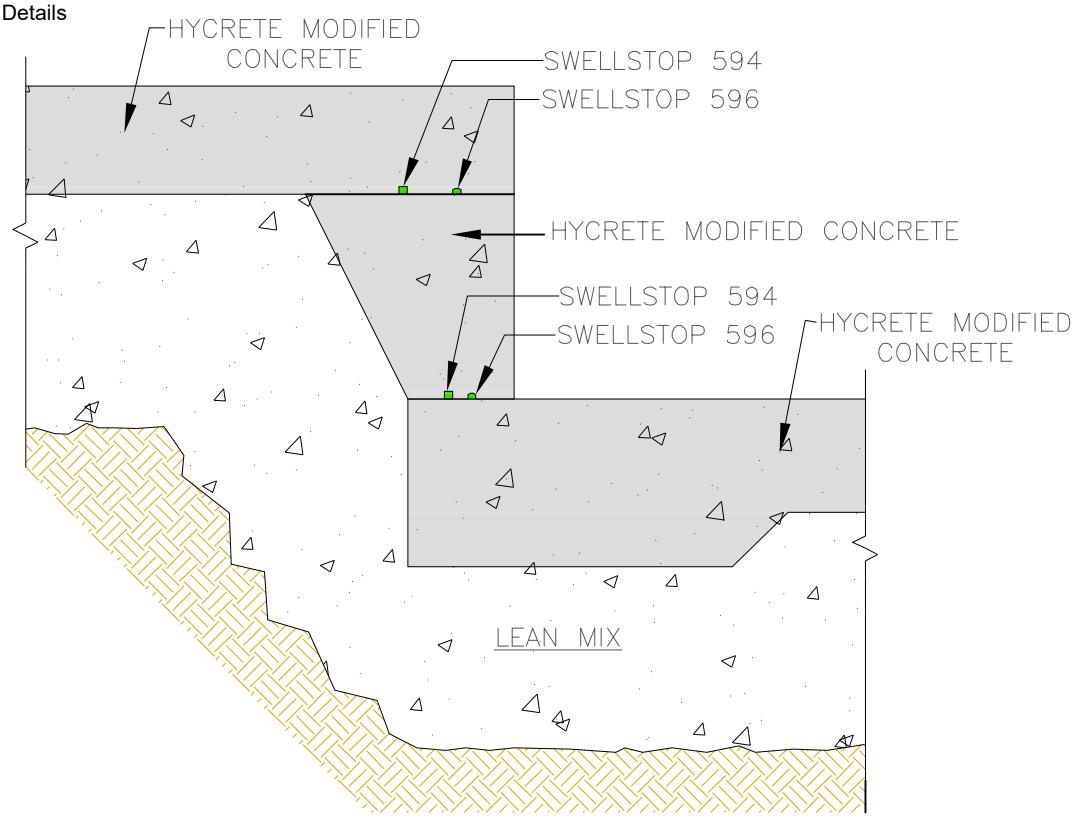

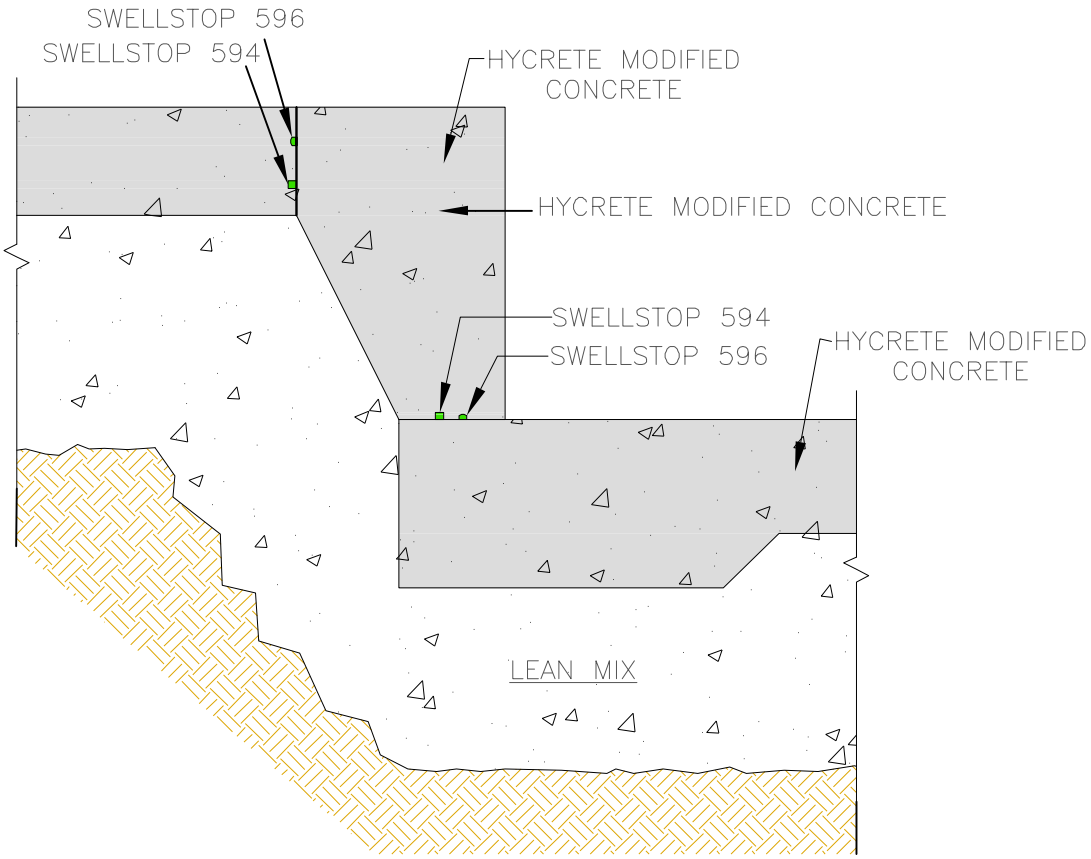

**Figure F**

# SWELLSTOP™

## CONTROLLED EXPANSION WATERSTOP

- **Manholes**
- **Box culverts**
- **Concrete pipes**
- **Storage tanks**
- **Slabs**
- **Parking garages**
- **Retaining walls**
- **Tunnels**

**SWELLSTOP is for use in NON-MOVING joints only.**

**Swellstop** is a multiple use waterstop, which is formulated to encapsulate hydrophilic materials into a rubber base creating a controlled, moisture-activated sealant. **Swellstop** has the structural integrity of a rubber-base sealant, conforming well to the underlying substrate and exhibiting self-healing properties when needed.

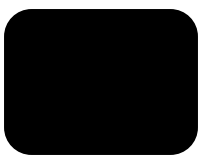

Unlike many of the traditional clay-based products, **Swellstop** will not expand to a point that the waterstop itself is destroyed. In-field experience has proven that products, which continually expand, lose much of their structural integrity and begin to wash away when subjected to a constant flow of water.

The controlled expansion properties engineered into **Swellstop** reduce the internal pressures created in cast-in-place applications. Internal pressures can cause spalling in foundations and wall structures.

**Swellstop Primer Adhesive** is required to assure proper installation. Additional mechanical fasteners may be required for vertical or overhead applications.

| PHYSICAL PROPERTIES | | |
|---|---|---|
| **Description** | **Method** | **Result** |
| Color | | Black |
| Specific Gravity | ASTM D-71 | 1.55 ± 5% |
| Volatile Matter | ASTM D-6 | 1% max. |
| Penetration, cone at 77°F, 150 gm; 5 sec. | ASTM D-217 | 40 ± 5% |
| Application Temperature | | -10°F to 125°F |
| Service Temperature | | -30°F to 180°F |

## Swellstop is available in two sizes:

**3/4" X 1" X 16'8" rolls**
6 rolls (100 lft.) per carton

**3/8" X 3/4" X 25' rolls**
6 rolls (150 lft.) per carton

# 255 S King St Redevelopment
# Vapor Intrusion Study and Mitigation
## for Ecology June 7, 2013

Pat Nickerson – Vice President, SODO Builders (255 South King Street LP's Agent and General Contractor)

Lily Iftner, PE – SODO Builders

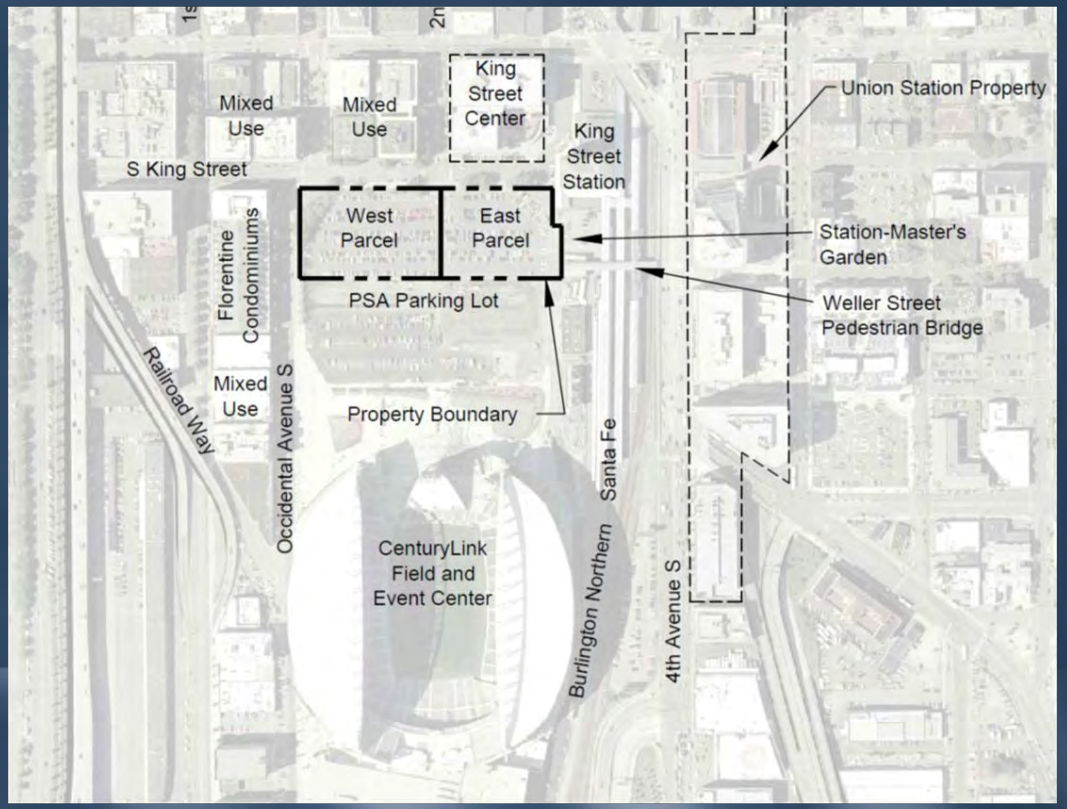

Tony Orme, PE and Dave Cook, LG, CPG – GeoEngineers Inc.

# Talking Points

- Previous Site Assessment Data Indicates Limited Soil and Groundwater Contamination on East Side of Property
- Contaminated Soil was Encountered Only at Depths Below the Water Table Level
- Landau Assessment Calculations Indicated No Vapor Intrusion Risk
- Welded Sheet Pile Walls and Hycrete Foundation with Bentonite Seals Function as a Vapor Mitigation Measure
- Indoor Air will be Monitored for Vapor Intrusion After Construction Is Completed

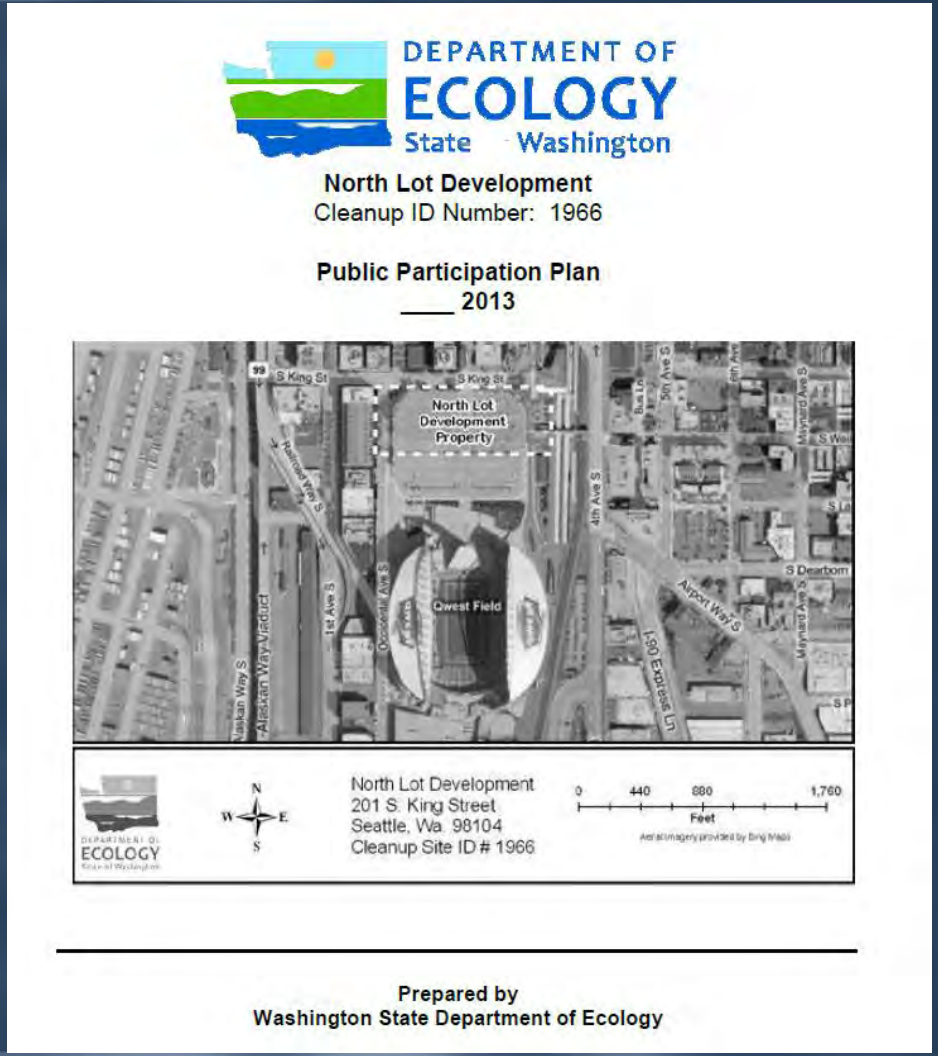

# Today's Talk

- Redevelopment Overview
- Petroleum Vapor Intrusion Risk on East Parcel?
- Mitigation as Part of Redevelopment
- Next Steps

# Redevelopment Plan

- North Lot Development and 255 S King St – Different Plans
- COCs primary to West Parcel, not East Parcel, yet remedy the same for both parcels.
- "Install vapor intrusion prevention measures on the East Parcel, with associated indoor air sampling to confirm effectiveness."
- Excavation down to 17.5ft; protective cover; institutional controls

# Redevelopment Plan

SCHEMATIC DESIGN - SCHEME 15 SW PERSPECTIVE A1.15

| Location ID | |
|---|---|
| Date | Depth (ft) |
| Gasoline | Result mg/kg |
| Benzene | Result µg/kg |

**Notes**

1. Gray symbol indicates sample was not analyzed for the constituent at this depth.
2. Depths are in feet below ground surface.
3. Gasoline soil cleanup level is 30 mg/kg, Benzene soil cleaup level is 4.5 µg/kg.
4. **Bold** values indicate compound was detected at the reported concentration. Orange highlight indicates compound exceeds cleanup level.
5. <1.00 = The analyte was not detected at the reported concentration.
6. Refer to Figure 3 for Historical Property Features Legend.
7. NA = Not Analyzed.
8. Black and white reproduction of this color original may reduce its effectiveness and lead to incorrect interpretation.

# Vapor Risk –
## Worst Case Analysis Shows Limited Threat

# Construction Methods Mitigate Vapors

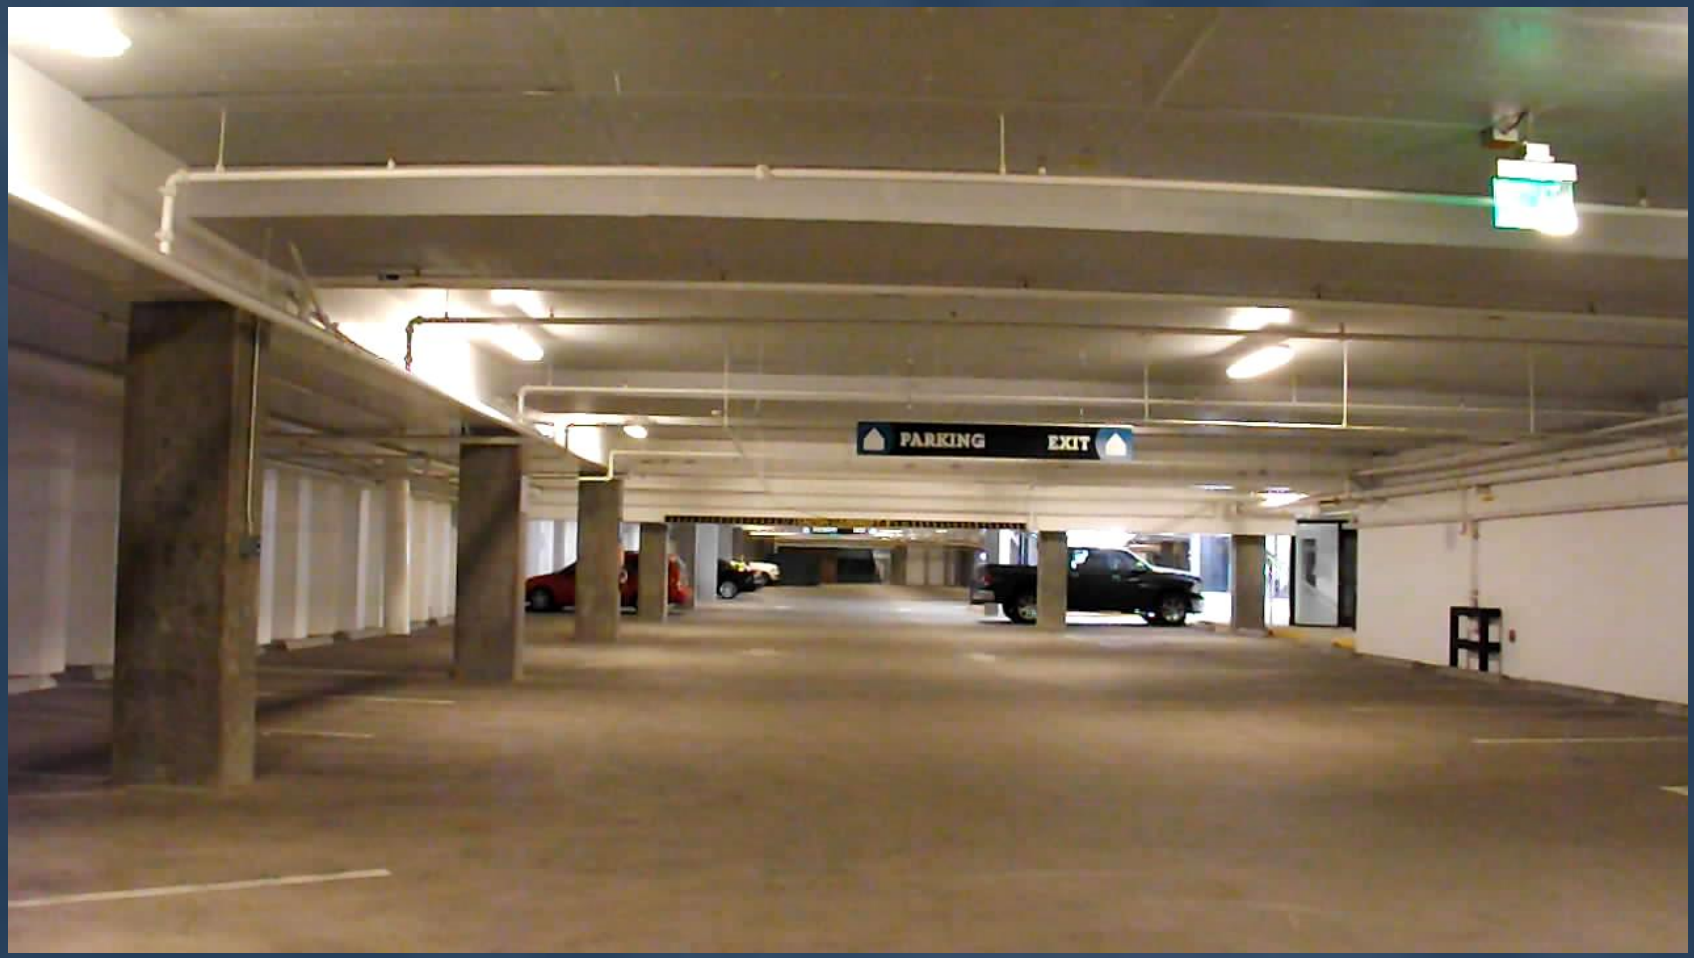

Sheet pile is welded along each joint from interior

# Construction Methods Mitigate Vapors

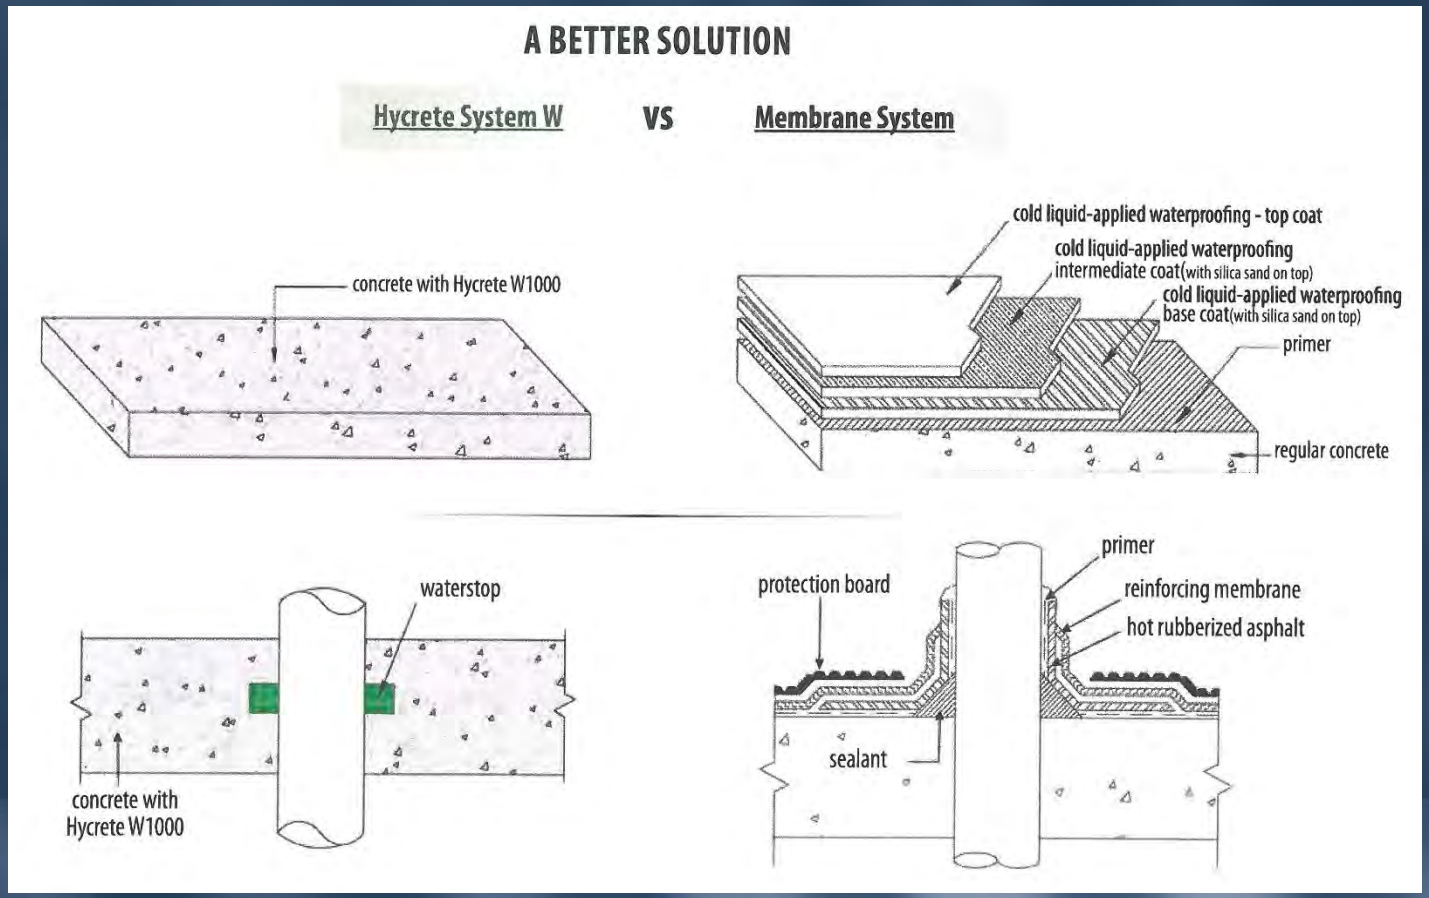

# Construction Methods Mitigate Vapors

- The Hycrete Seal Slab System is an integral waterproof concrete system. It's a system with multiple redundancies, involving:
  - the concrete foundation,
  - all pipe and other penetrations,
  - all concrete joints,
  - and beyond.

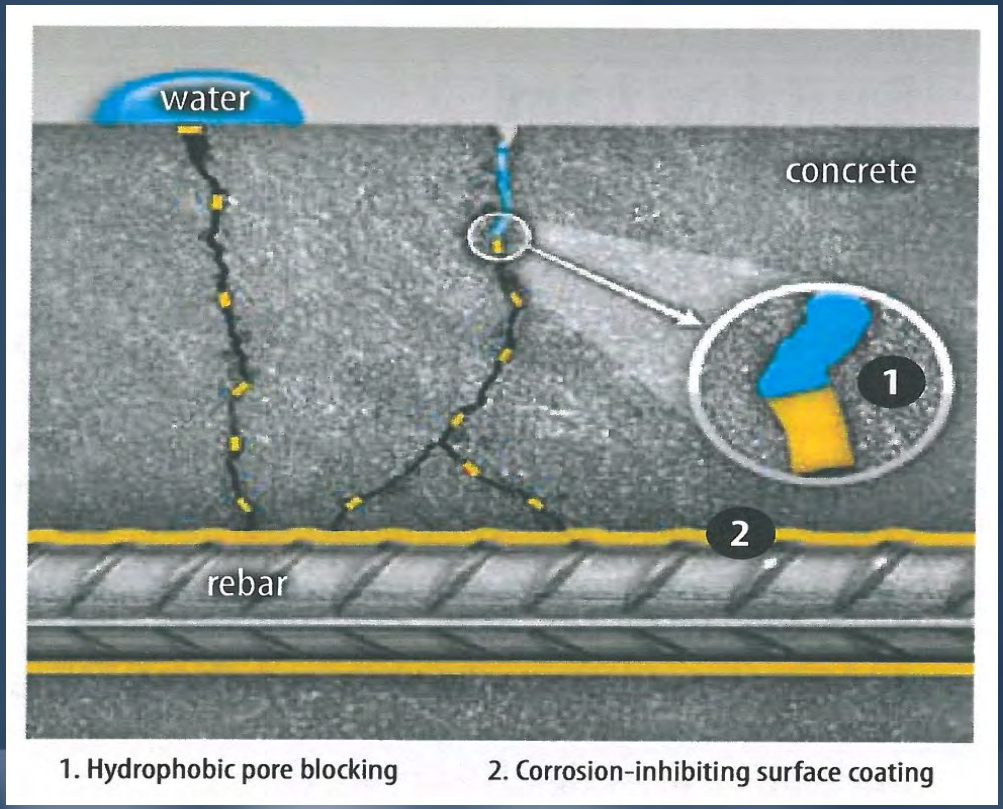

# Construction Methods Mitigate Vapors

- The Hycrete Seal Slab System has proven to effectively replace the traditional membrane system.

# Construction Methods Mitigate Vapors

- Foremost, the seal slab system is waterproof/hydrophobic, making it the ideal system in a hydrostatic environment.

# Construction Methods Mitigate Vapors

- The multiple redundancies start with the use of a waterstop which is a hydrophilic bentonite band that is used at every joint and penetration.
- The waterstop works by swelling to over twice its size in the event of moisture penetration, damming the water from further access.

Figure D

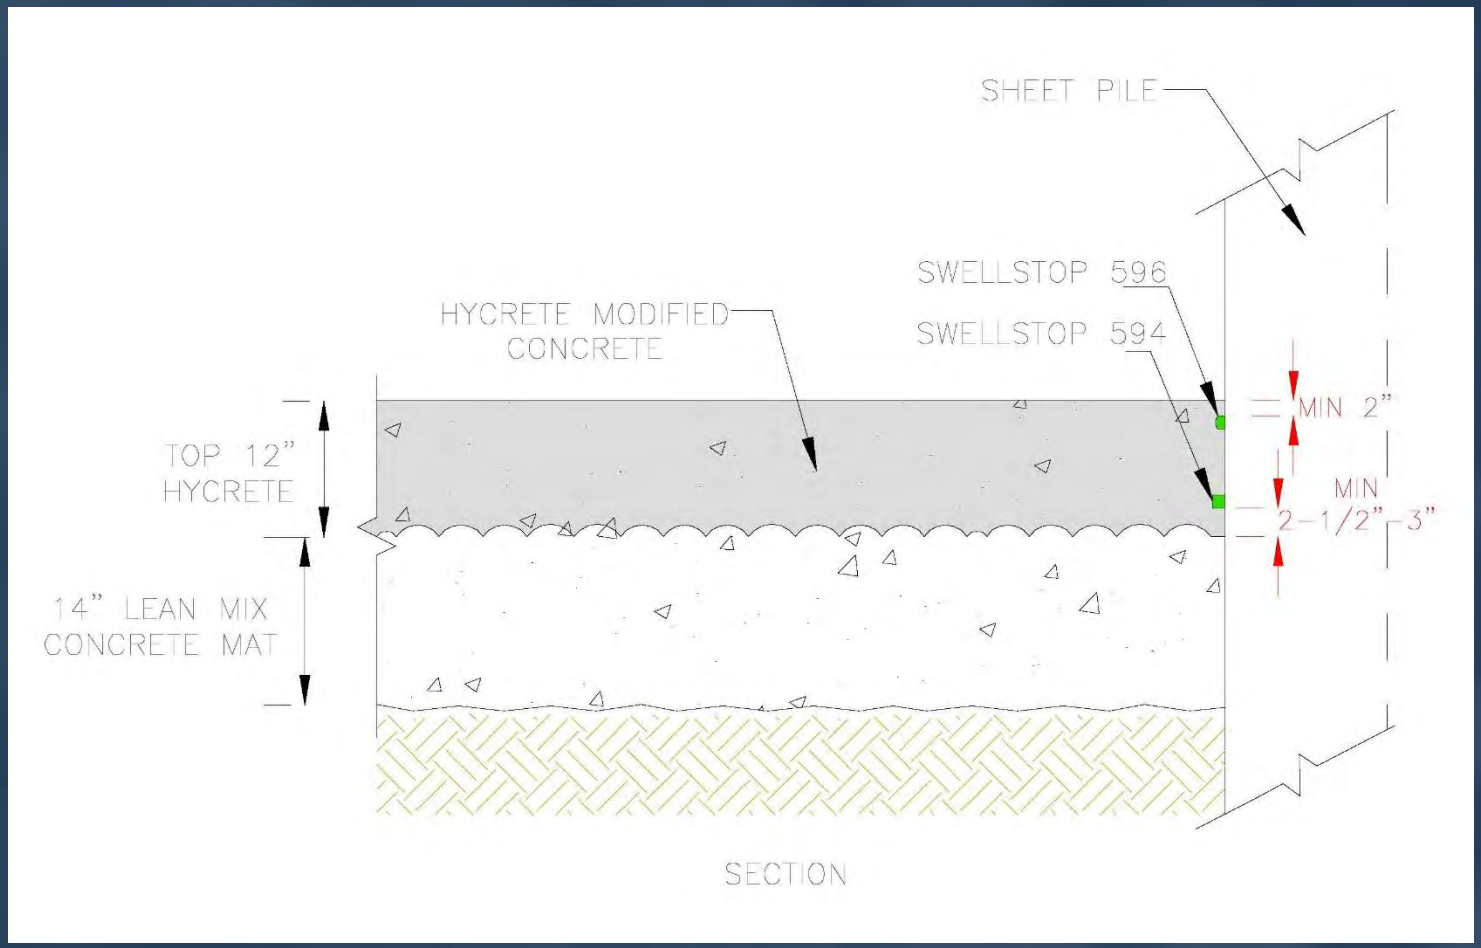

Figure E

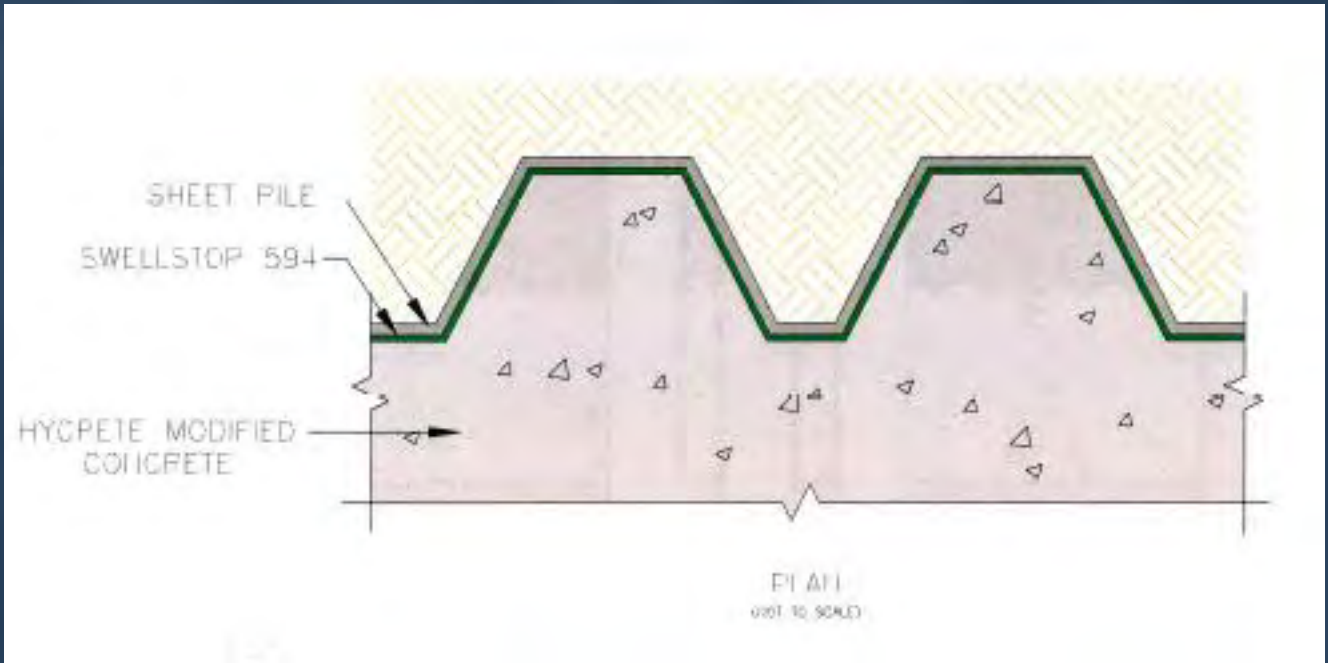

Figure F

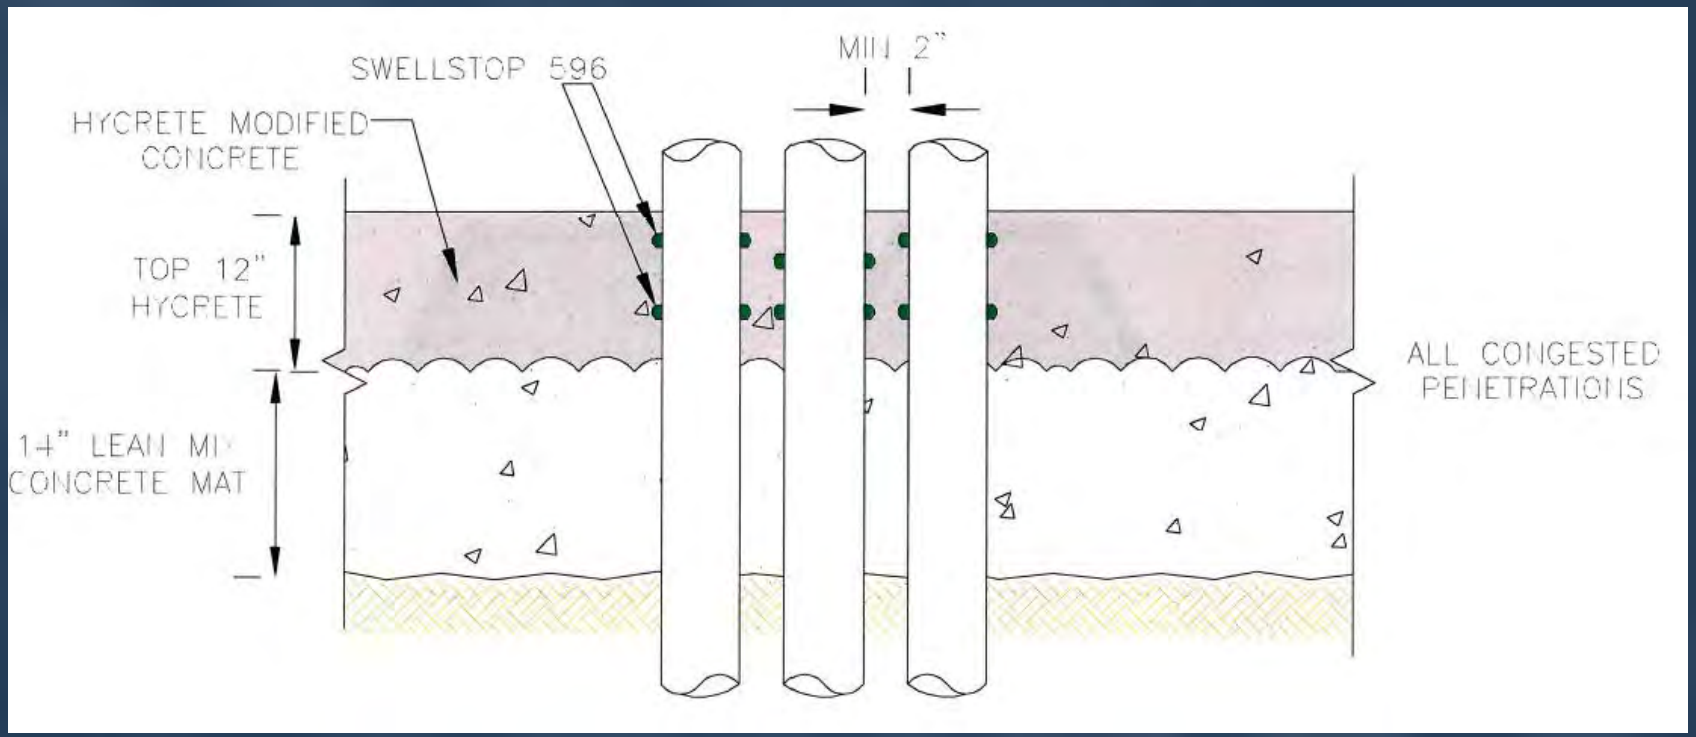

# Construction Methods Mitigate Vapors

# Construction Methods Mitigate Vapors

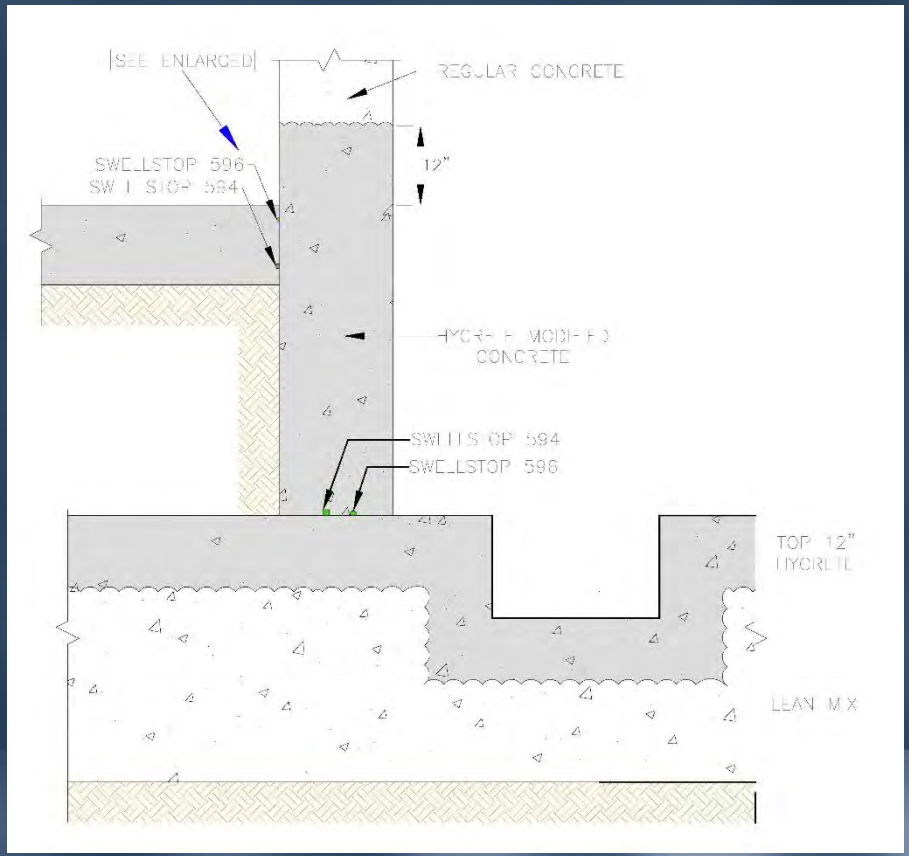

# Construction Methods Mitigate Vapors

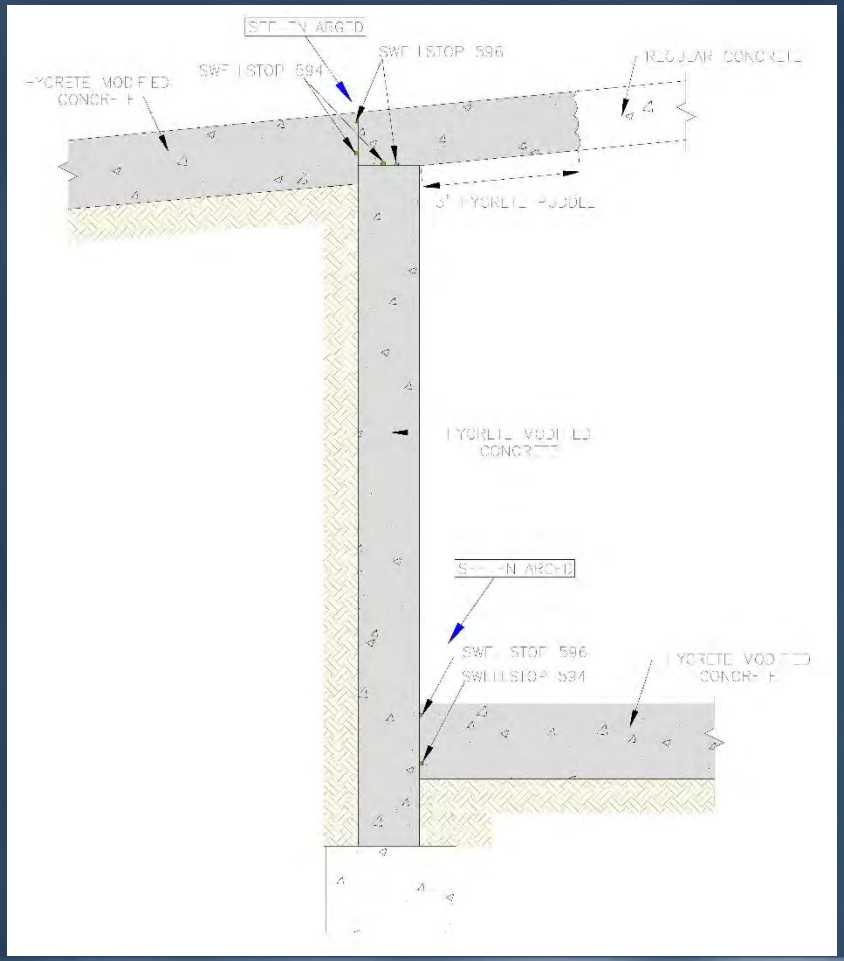

# Construction Methods Mitigate Vapors

- Multiple redundancies includes concrete puddling at adjacent walls, columns, and slabs, eliminating the potential for wicking of water.

# Construction Methods Mitigate Vapors

# Next Steps

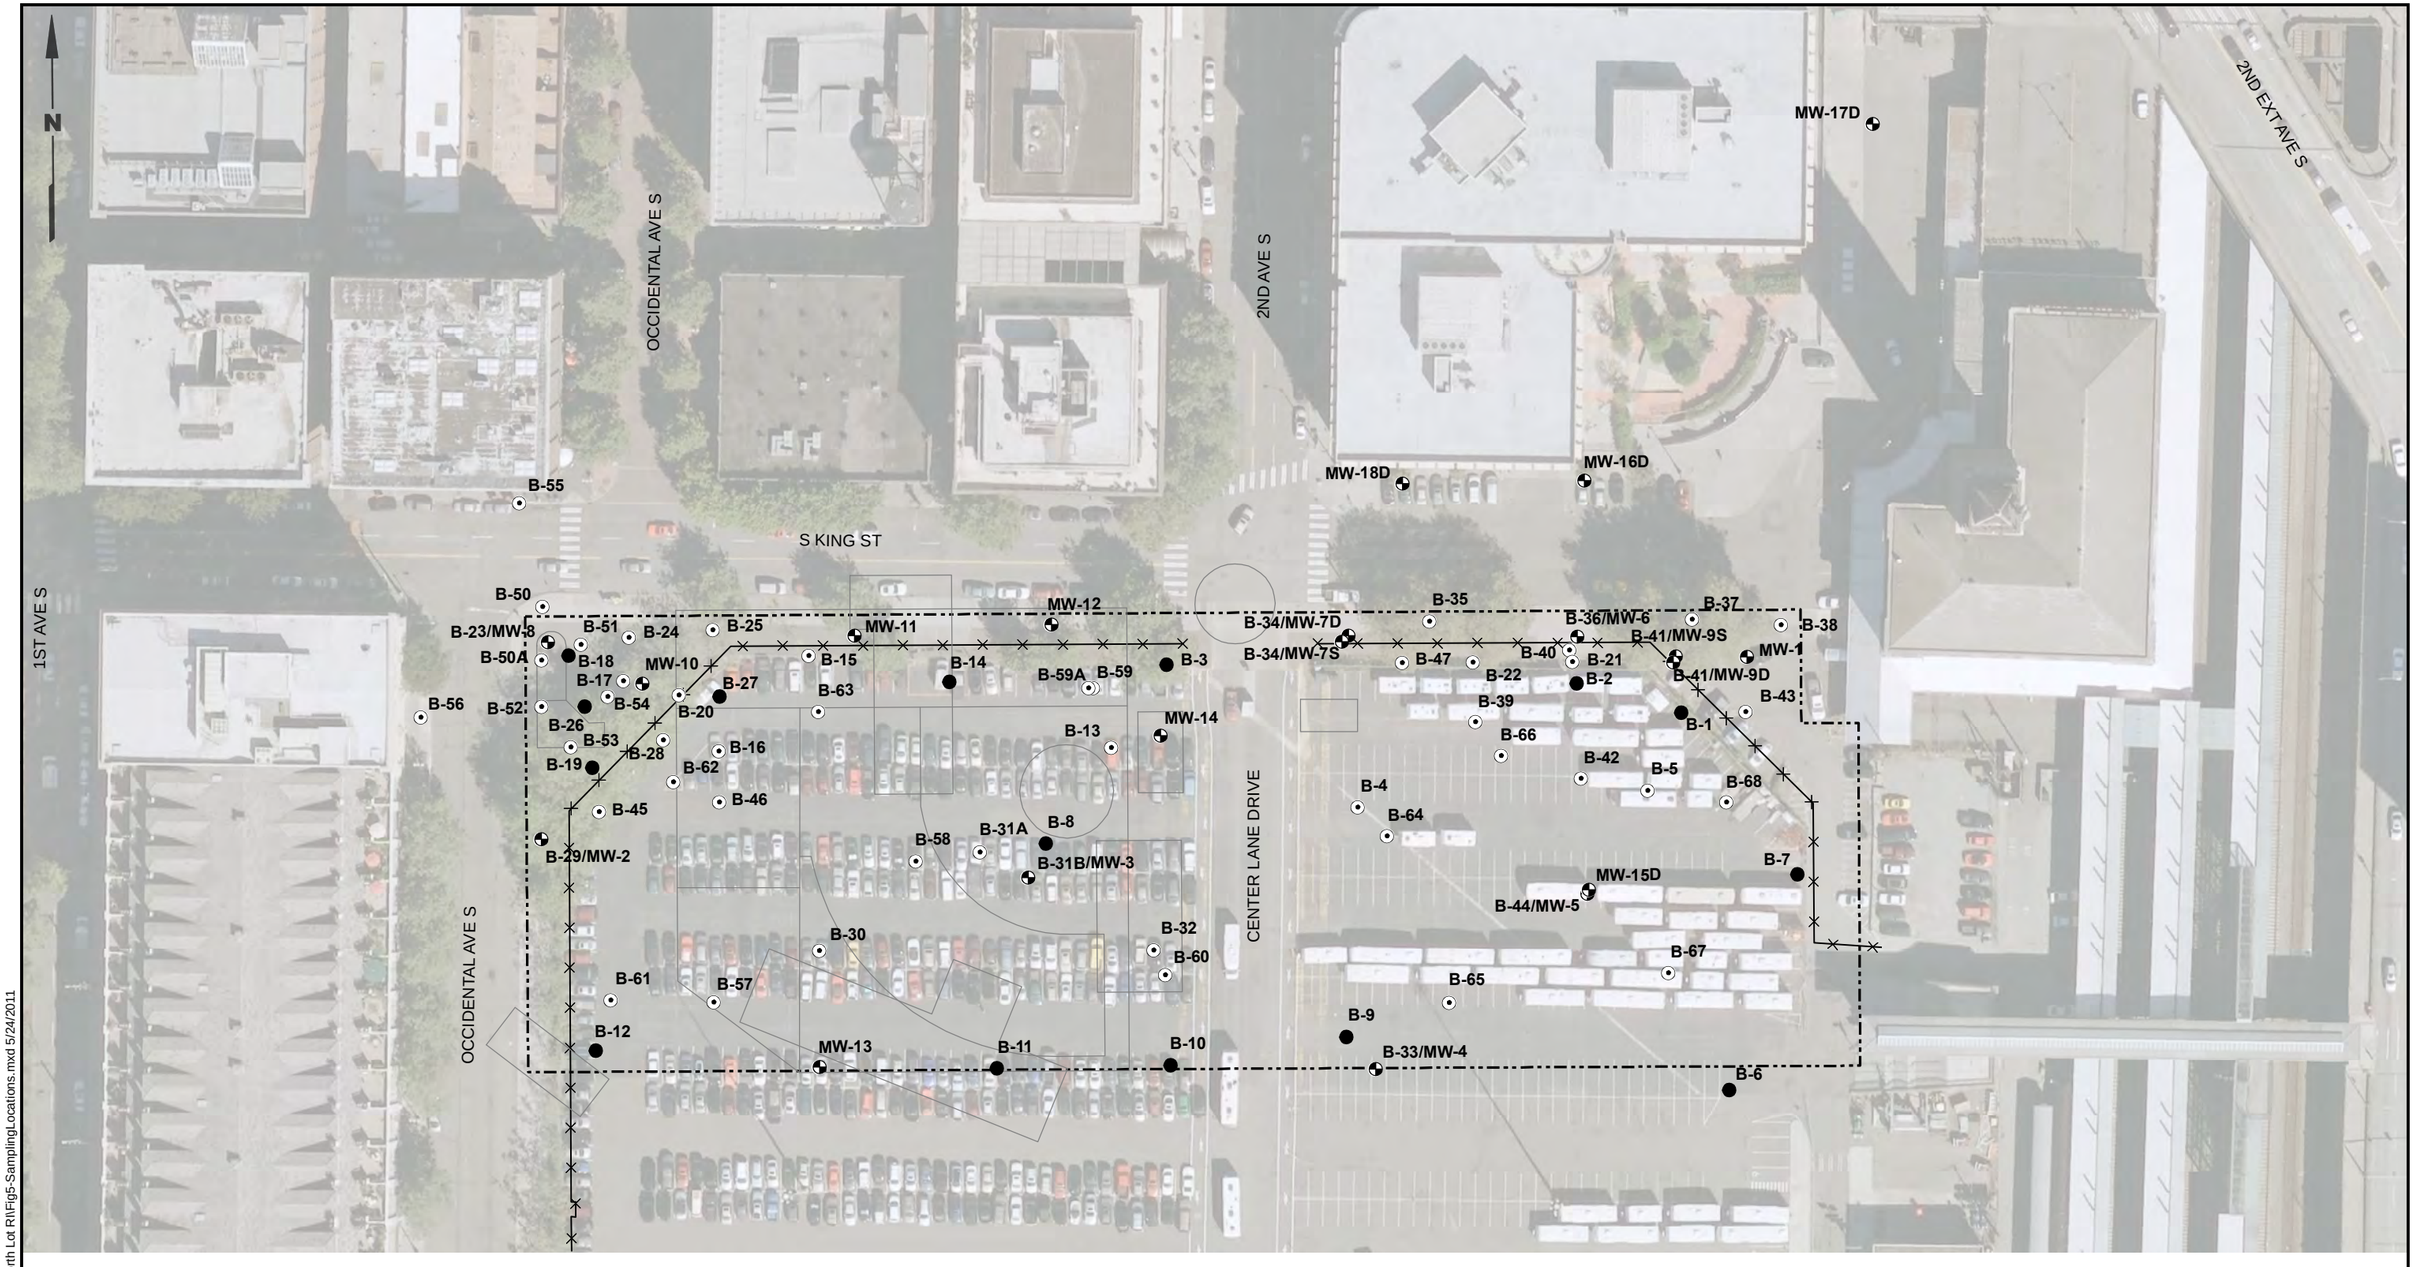

- Landau to complete draft FS Addendum and Revised CAP for Ecology Comment
- GeoEngineers to include appendix to Revised CAP to include summary of vapor intrusion methods through seal slab system.
- GeoEngineers to prepare Engineering Design Report for the vapor mitigation portion and Indoor Air Testing program.
- Ecology to provide opinion so that construction can proceed.
- Construction Start 1st Quarter 2014
- Document elements of cleanup action (Landau; except for vapor mitigation which will be overseen by GeoEngineers).
- Submit final cleanup action report to Ecology.
- Integrate East Parcel groundwater monitoring into current West Parcel testing program.

# Questions?

- Pat Nickerson, VP, SODO Builders
- Lily Iftner, PE,  SODO Builders
- Tony Orme, PE, GeoEngineers
- Nelson Macalintal, Hycrete, Inc.

# TABLE 2
## SUMMARY OF SUBSURFACE CONDITIONS ENCOUNTERED DURING DRILLING
## NORTH LOT DEVELOPMENT
## SEATTLE, WASHINGTON

| Boring ID (alternate IDs) | Boring Depth (ft) | Native Soil Encountered (ft) | Native Material at Contact | Creosote-Like Material Encountered? (depth in ft) | Highest PID Reading in ppm (depth in ft) | Notes/Observations |
|---|---|---|---|---|---|---|
| B-31B | 28 | Not Encountered | | No | N/A | |
| B-31C (MW-3)(B-5 Terra Associates) | 45.5 | 22.75 - 28.75 | SILT | No | N/A | |
| B-32 | 12 | Not Encountered | | No | 0 | |
| B-33 | 20 | Not Encountered | | No | 0 | |
| B-33B (MW-4)(B-4 Terra Associates) | 65.5 | 30.75 - 40.8 | SILT | No | N/A | |
| B-34 (MW-7) | 26 | 24-25 | SILT | No | 0 | |
| B-34B (B-2 Terra Associates) | 50.1 | 24-25 | SILT | No | N/A | |
| B-35 | 24 | 21.5- 24 | SILT | Yes (18.5-21.5) | 0 | Creosote sample attempt unsuccessful, depth estimated |
| B-36 (MW-6) | 20 | 19.5-20 | SILT | No | N/A | Creosote-like material present in fill, with strong sheen and creosote odor |
| B-37 | 24 | Not Encountered | | Yes (21-24) | 21.2 (22) | Creosote sample attempt unsuccessful |
| B-38 (MW-1) | 24 | 22.5 - 24 | SILT | Yes (21.5-22.5) | N/A | |
| B-38B (B-1 Terra Associates) | 46.5 | 25.5 - 33 | SILT | Yes (20-21.5) | N/A | |
| B-39 | 24 | 22 - 24 | SILT | No | N/A | |
| B-40 | 32 | 25 - 32 | Silty SAND with shells | Yes (23-25) | 68.6 (25) | Boring overdriven from 24-32 ft, poor recovery, contacts estimated; creosote-like material thickness estimated |
| B-41 | 24 | 20 - 24 | SILT | Yes (19-21) | 0 | Creosote-like material saturated silt, creososte layer estimated |
| B-42 | 20 | 18.5 - 20 | SILT | No | 0 | |
| B-43 | 28 | Not Encountered | | No | 0 | |
| B-44 (MW-5) | 24 | 22 - 24 | SILT | No | N/A | |
| B-44B (B-3 Terra Associates) | 80.5 | 23.25 - 33 | SILT | No | N/A | |
| B-45 | 24 | 22 - 24 | Silty GRAVEL with sand & shells | No | 6.2 (9.5) | |
| B-46 | 24 | Not Encountered | | No | 0 | |
| B-47 | 24 | 21.5 - 24 | SILT | No | 0 | |
| B-50 | 6 | Not Encountered | | No | 1.7 | |
| B-50A | 25 | Not Encountered | | No | 219 | |

(a) See Table 5 for criteria used to develop preliminary cleanup levels.
(b) Samples collected from boring B-31A; no samples were collected from boring B-31B (see Table 1).
U = Indicates the compound was undetected at the reported concentration.
J = Indicates the analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
E = The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate.
Bold = Detected compound.
Box = Exceedance of preliminary cleanup level.
mg/kg = Milligrams per kilogram
µg/kg = Micrograms per kilogram

# TABLE 5
# PRELIMINARY SOIL CLEANUP LEVELS
# NORTH LOT DEVELOPMENT
# SEATTLE, WASHINGTON

**Notes:**

Screening level based on lowest of soil concentrations for protection of groundwater and protection of human direct contact (Method B standard formula values for carcinogens and non-carcinogens).

Cleanup levels are developed for all constituents detected above laboratory reporting limits in soil.
Shading indicates basis for cleanup level.
--- = No screening criteria available.
mg/kg = Milligrams per kilogram.
µg/kg = Micrograms per kilogram.
ng/kg = Nanograms per kilogram.

(a) Values for $K_{oc}$ and Henry's Law Constant are not available; therefore, cleanup levels protec ive of groundwater can not be calculated using the three-phase partitioning model.
(b) MTCA Method A soil cleanup levels are used for gasoline-range, diesel-range, motor oil-range petroleum hydrocarbons, and lead.
(c) For gasoline-range petroleum hydrocarbons, if benzene is present. If benzene is not present, screening level is 100 mg/kg.
(d) Value is for chromium III. Based on site history, chormium VI is not expected to be present.
(e) Value is for total chromium.
(f) If toxicity equivalency factors (TEFs) are considered, cleanup levels protective of groundwater for other cPAHs are less than the value for benzo(a)pyrene.
(g) Evaluated using toxicity equivalency quotient (TEQ) based on benzo(a)pyrene.
(h) Based on an empirical demonstration (Appendix H), the existing concentrations of copper and zinc in soil are protective of groundwater. Therefore, Me hod B soil standard formula values for unrestricted land use will be used as the preliminary soil cleanup levels for copper and zinc at the Property.

(a) See Table 5 for criteria used to develop preliminary cleanup levels.
(b) Samples collected from boring B-31A; no samples were collected from boring B-31B (see Table 1).
U = Indicates he compound was undetected at the reported concentration.
J = Indicates the analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
E = The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an es imate.
Bold = Detected compound.
Box = Exceedance of preliminary cleanup level.

(a) See Table 8 for criteria used to develop preliminary cleanup levels
(b) Calculated background concentration.
U = Indicates the compound was undetected at the reported concentration
E = The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate
Bold = Detected compound.
Box = Exceedance of preliminary cleanup level.
mg/L = Milligrams per liter.
µg/L = Micrograms per liter.

**Notes:**

Preliminary cleanup level is based on lowest of federal or state MCL, state secondary MCL, and Method B standard formula values, for carcinogens without federal or state MCLs on the Method B standard formula value, and for carcinogens with federal or state MCLs.

Preliminary cleanup levels are developed for all constituents detected in groundwater or soil.

Shading indicates basis for preliminary cleanup level.

--- = No cleanup level available.

mg/L = Milligrams per liter.

µg/L = Micrograms per liter.

pg/L = Picograms per liter.

(a) Ambient water quality criteria for protection of aquatic life from WAC 173-201A-240.

(b) Ambient water quality criteria for protection of human health from 40 CFR Part 131d (National Toxics Rule).

(c) National Recommended Water Quality Criteria (EPA website 2006).

(d) MTCA Method A groundwater cleanup levels are used for gasoline-range, diesel-range, oil-range petroleum hydrocarbons, and lead.

(e) For gasoline-range petroleum hydrocarbons, if benzene is present. If benzene is not present, screening level is 1,000 µg/L (1.0 mg/L).

(f) Screening level is for total xylenes.

(g) Evaluated using toxicity equivalency quotient (TEQ) based on benzo(a)pyrene.

(h) Value is for chromium III. Based on site history, chromium VI is not expected to be present.

(i) Calculated background concentration.

(a) See Table 9 for criteria used to develop preliminary cleanup levels
(b) Calculated background concentration
U = Indicates the compound was undetected at the reported concentration
E = The concentration indicated for this analyte is an estimated value above the calibration range of the instrument. This value is considered an estimate
Bold = Detected compound.
Box = Exceedance of preliminary cleanup level
mg/L = Milligrams per liter.
µg/L = Micrograms per liter.

# TABLE 11
## MAINLINE SEWER/STORM DRAIN ELEVATIONS COMPARED TO GROUNDWATER ELEVATIONS
## NORTH LOT DEVELOPMENT
## SEATTLE, WASHINGTON

| Diameter (inches) | Type | Rim Elevation (a) (ft) | Corrected Rim Elevation (b) (ft) | Invert Elevation (a) (ft) | Corrected Invert Elevation (b) (ft) | Corrected Top of Pipe Elevation (c) (ft) | Above Average GW Elevation? (d) |
|---|---|---|---|---|---|---|---|
| 18 | Combined Mainline | 8.2 | 17.9 | 1.7 | 11.4 | 12.9 | yes |
| 18 | Combined Mainline | 8 | 17.7 | 0.94 | 10.64 | 12.14 | yes |
| 18 | Combined Mainline | 8.9 | 18.6 | 0.62 | 10.32 | 11.82 | yes |
| 18 | Combined Mainline | 8.6 | 18.3 | -0.09 | 9.61 | 11.11 | yes |
| 18 | Combined Mainline | 8.93 | 18.63 | 1.96 | 11.66 | 13.16 | yes |
| 102 | Metro Mainline | --- | --- | -12.02 | -2.32 | 6.18 | no |
| 102 | Metro Mainline | --- | --- | -12.77 | -3.07 | 5.43 | no |
| 102 | Metro Mainline | --- | --- | -12.79 | -3.09 | 5.41 | no |
| 102 | Metro Mainline | --- | --- | -12.75 | -3.05 | 5.45 | no |

**Notes:**

(a) Elevations are Rim and Invert elevations based on City of Seattle Datum given on side sewer cards.

(b) Corrected elevations were determined by adding 9.7 ft to City of Seattle datum to convert to NAVD88 datum.

(c) Corrected Top of Pipe Elevation was calculated by adding the diameter of the line in feet to the corrected invert elevation.

(d) Average GW elevation is 8.34 ft. Average was calculated across all groundwater elevations measured during each event Property-wide.
