1.0 INTRODUCTION

This report presents and evaluates the results of groundwater and landfill gas (LFG) compliance monitoring performed during 2018 at the closed Leichner Landfill located in Vancouver, Washington (Figure 1-1). The report also summarizes notable landfill maintenance, repair, and construction activities performed during 2018. SCS Engineers (SCS) performed the monitoring, maintenance, and repair activities and prepared this report on behalf of Clark County Public Health (County) and the Leichner Landfill Oversight Committee (LLOC), whose members include the County and City of Vancouver.

Compliance monitoring of groundwater and LFG is performed at Leichner Landfill to fulfill certain requirements of the 1996 Consent Decree and associated Cleanup Action Plan (CAP), as well as to concurrently fulfill the requirements of Leichner Landfill's post-closure monitoring under Minimum Functional Standards (MFS), Chapter 173-304, of the Washington Administrative Code (WAC).

Compliance monitoring is performed in accordance with the methods and procedures described in the site's Compliance Monitoring Plan (CMP) submitted to the Washington Department of Ecology (Ecology) and Clark County Public Health (CCPH) in July 2013 (SCS, 2013). The July 2013 CMP includes modifications to Leichner Landfill's monitoring programs approved by Ecology, as described in the 2013 annual report (SCS, 2014).

1.1 SITE DESCRIPTION

The Leichner Landfill is a closed, 70-acre municipal solid waste landfill located in Clark County, Washington, about 5 miles northeast of downtown Vancouver (see Figure 1-1). The landfill operated from the late 1930s until 1991. Landfill closure occurred in phases during the summer seasons of 1989, 1990, 1991, and 1992, and included an engineered composite cap, a landfill gas collection and control system (GCCS), and a stormwater collection and control system.

1.2 SITE HYDROGEOLOGY

The geology beneath the landfill site consists of about 70 to 100 feet of alluvium, underlain by the upper member of the Troutdale Formation. The site hydrogeology consists of an approximately 10-to 40-foot thick unsaturated (vadose) zone, and an unconfined alluvial water-bearing zone (WBZ) which ranges in thickness from 35 to 45 feet. The alluvium generally consists of sand, and gravelly to silty sand. Underlying the alluvial WBZ is the upper member of the Troutdale Formation aquifer. The Troutdale Formation aquifer generally consists of sandy to cobble gravel with minor amounts of silt and clay. The alluvial WBZ and Troutdale Formation aquifer are separated by a silt aquitard (sandy silt and clayey silt) east and south of the landfill. Southwest of the landfill, the silt aquitard is absent and the two aquifers are locally in hydraulic communication.

2.0 GROUNDWATER MONITORING

2.1 GROUNDWATER MONITORING NETWORK AND SCHEDULE

The groundwater monitoring network at the Leichner Landfill is comprised of monitoring wells screened in different depth-discrete zones in the alluvial WBZ and in the Troutdale Formation aquifer. The monitoring well locations are shown in Figure 2-1. The following describes the nomenclature used for monitoring well network components:

- Wells used for monitoring groundwater elevation and quality in the upper portion of the alluvial WBZ are denoted with an “S” in the well number (e.g., well LB-1S).
- Wells used for monitoring groundwater elevation and quality in the middle (or intermediate) portion of the alluvial WBZ are denoted with an “I” in the well number (e.g., LB-27I).
- Wells used for monitoring groundwater elevation and quality in the deeper Troutdale Formation aquifer are denoted with a “D” in the well number (e.g., well LB-1D).

The site groundwater monitoring wells were sampled annually or semiannually in 2018. Groundwater samples were collected from the following 18 wells during the annual monitoring event conducted in February and March 2018: LB-1S, LB-1D, LB-3S, LB-3D, LB-5S, LB-5D, LB-6S, LB-10SR, LB-10DR, LB-13I, LB-13D, LB-17I, LB-17D, LB-20S, LB-26I, LB-26D, LB-27I, and LB-27D. Groundwater samples were collected from the following seven wells during the semiannual monitoring event conducted in August 2018: LB-1S, LB-5S, LB-6S, LB-10SR, LB-13I, LB-26I, and LB-27I.

Field water-quality parameters (temperature, pH, specific conductance, dissolved oxygen) were monitored during sampling, and recorded on field sampling data sheets (FSDSs) provided in Appendix A. Historical field parameter monitoring results are provided in Appendix B (see Table B-1).

Groundwater samples collected from the site monitoring wells were submitted for laboratory analyses to TestAmerica Laboratories, Inc., (TAL) in Tacoma, Washington. The samples were analyzed for nitrate as nitrogen (nitrate), total dissolved solids (TDS), chloride (Cl), dissolved iron (Fe), dissolved manganese (Mn), and volatile organic compounds (VOCs), consistent with testing methods specified in the CMP (SCS, 2013). Laboratory analytical data reports are provided in Appendix C (included on the attached compact disk [CD]).

2.2 GROUNDWATER ELEVATIONS AND FLOW DIRECTION

Static depth-to-groundwater levels were measured on February 26 and August 13, 2018, and converted to groundwater elevations for interpreting groundwater potentiometric surface contours and groundwater flow in the alluvial WBZ and the Troutdale Formation water-bearing zones (see Figures 2-2 through 2-5). Groundwater elevation data are summarized in Appendix D, along with historical elevations.

Groundwater flow in the alluvial WBZ was generally towards the west to southwest (see Figures 2-2 and 2-4). Groundwater flow in the Troutdale Formation aquifer was generally towards the south (see Figures 2-3 and 2-5). The 2018 groundwater flow directions are consistent with historical interpretations of groundwater flow at Leichner Landfill.

Groundwater elevation hydrographs are provided in Appendix D. The 2018 groundwater elevation data are within the range of elevations measured historically and continued to show minor seasonal variations in some site wells.

Differences in groundwater elevations in adjacent well pairs screened in the alluvial WBZ and Troutdale Formation aquifer (see groundwater elevation data and hydrographs in Appendix D) appear to be influenced by the presence of the silt aquitard (sandy silt and clayey silt). Where the silt aquitard is present east and south of the landfill (e.g., at existing well pair LB-5S/LB-5D south of the landfill), groundwater elevations are about 18 to 25 feet higher in the alluvial WBZ indicating hydraulic separation exists between the two groundwater zones. Monitoring well pairs located southwest of the landfill (i.e., at wells LB-1S/LB-1D, LB-13I/LB-13D, and LB-26I/LB-26D), where the silt aquitard is thin or absent, exhibited much smaller differences in groundwater elevations indicating that the two groundwater zones exhibit some degree of hydraulic connection.

2.3 DATA QUALITY REVIEW

Groundwater monitoring field quality assurance/quality control (QA/QC) procedures included collecting field duplicate samples, field blanks, equipment blanks, and carrying trip blanks into the field. Laboratory QA/QC procedures included analyzing surrogate spikes, method blanks, matrix spikes, and matrix spike duplicates. The laboratory QA/QC results are included with the laboratory reports. TAL incorporated its laboratory data quality review comments in the Case Narrative of each laboratory report (see Appendix C).

SCS reviewed field and laboratory data and QA/QC procedures to evaluate whether the data met U.S. Environmental Protection Agency (EPA) quality control requirements (see Appendix E). The QA/QC reviews indicated that the groundwater analytical data were acceptable for their intended use.

2.4 GROUNDWATER QUALITY RESULTS

Laboratory analytical results of groundwater samples collected from site monitoring wells in 2018 continue to indicate that there are little or no adverse effects on groundwater quality from the closed Leichner Landfill. Groundwater monitoring results supporting this conclusion are discussed in this section of the report and include the following:

- No VOCs were detected at concentrations above method reporting limits (or above compliance levels).
- The concentrations of most inorganic indicator parameters in groundwater samples collected from monitoring wells located downgradient of the former waste cells (1) are below regulatory compliance levels, with only a few exceptions, and (2) have either remained generally stable or showed decreasing trends.

2.4.1 Volatile Organic Compounds

No VOCs were detected above the laboratory method reporting limits (MRLs) in the groundwater samples collected in the first and third quarters of 2018, including VOCs for which compliance levels were established in the 1996 Consent Decree and that are still part of the analytical testing program (i.e., 1,4-dichlorobenzene, tetrachloroethene, and trichloroethene) (see Appendix B, Table B-2).¹

¹ Laboratory analysis of two additional VOCs with established compliance levels (i.e., vinyl chloride and 1,1-dichloroethene) was discontinued in 2013 as approved by Ecology (Ecology, 2013) because after two years of testing for these two

The 2018 VOC analytical results continued to demonstrate that the post-closure measures implemented at the closed Leichner Landfill (i.e., maintenance of the engineered landfill cap, operation of the GCCS, and stormwater controls) have been effective at decreasing and maintaining VOC concentrations to levels below the MRLs.

2.4.2 Inorganic Parameters and Dissolved Metals

The 2018 and historical analytical data for the inorganic parameters (nitrate, Cl, and TDS) and dissolved metals (Mn and Fe) are summarized in Appendix B (see Table B-3), and time-concentration diagrams for these parameters are provided in Appendix F. The 2018 groundwater analytical results for inorganic parameters and dissolved metals were generally consistent with historical data.

The 2018 laboratory analytical results indicated that Fe and/or Mn concentrations were above their respective compliance levels in groundwater collected from (1) a few wells located downgradient and in close proximity to the landfill (i.e., LB-17I, LB-17D, and LB-20S), and (2) well LB-27I located along the southwest corner of the site (see Figure 2-1)². However, Fe and/or Mn concentrations detected above the compliance levels in groundwater collected from these wells may be attributed, in part, to localized variations in natural groundwater chemistry, as previously reported to Ecology, based on the following:

- The concentrations of other leachate indicator parameters, including TDS and Cl, have not shown increasing or elevated concentrations in groundwater collected from these wells and are significantly below compliance levels (see Table B-3).
- Fe and Mn have occasionally been detected at concentrations above the compliance levels in groundwater samples collected from cross-gradient well LB-10SR (see Figures 2-2 and 2-4) screened in the shallow alluvium WBZ (see time-concentration diagrams in Appendix F).
- Mn concentrations in groundwater samples collected from well LB-20S since 2006 have shown variability and have typically been below the compliance level (see time-concentration diagrams in Appendix F).
- Concentrations of Fe and/or Mn in monitoring wells located hydraulically downgradient of LB-17I/17D (i.e., LB-6S, LB-13I/13D, and LB-26I/26) and well LB-20S (i.e., LB-1S/1D) are either below laboratory MRLs or significantly lower than concentrations detected in groundwater samples collected from LB-17I/17D and LB-20S. Additionally, Fe and Mn concentrations in these downgradient compliance wells have remained stable throughout most of their extensive monitoring history (see time-concentration diagrams in Appendix F).

2.4.2.1 Statistical Analysis of Groundwater Analytical Data

Leichner Landfill groundwater quality data from 2014 to 2018 for inorganic parameters (nitrate, Cl, and TDS) and dissolved cations (Mn and Fe) were statistically evaluated using the MTCA Stat97 program.³ The program identifies if the data show a normal, lognormal, or non-parametric

VOCs using a low-level EPA Method 8260B, these compounds were not detected above their respective compliance levels.

² It should be noted that Fe concentrations in samples collected from well LB-27I have been historically above the compliance level but very stable since monitoring began at this well in 1996, ranging from approximately 0.1 to 0.5 milligrams per liter (mg/L).

³ MTCA Stat97 was obtained from Ecology's website: <http://www.ecy.wa.gov/programs/tcp/tools/Mtca.exe>.

distribution. For normally and lognormally distributed data, the 95th percent upper confidence limit (UCL-95) of the mean was calculated. For distributions that were non-parametric (i.e., data not distributed normally or lognormally), data values were ranked and an estimate of the UCL-95 was determined using the Van der Parren method, as described in Statistical Guidance for Ecology Site Managers (Ecology, 1992). For non-parametric data, the Van der Parren method defaults to the highest reported value. Table 2-1 provides a summary of calculated UCL-95 of the mean values, along with groundwater compliance levels established in the Consent Decree and CAP.

The MTCA Stat97 program utilizes the Land Method for calculating the UCL-95 of the mean for lognormally distributed data. The Land Method is sensitive to data distributions that deviate from lognormal. If variance or skewness is large (U.S. Environmental Protection Agency [EPA], 2002), the method may commonly yield estimated UCL-95 values that are greater than predicted for data distributions that are not truly lognormal (i.e., non-parametric data). When sample sizes are small and the variance is large, the method can be impractical. This resulted in UCL-95 values that exceeded the range of concentrations for the following inorganic parameters and monitoring wells: (1) Cl data for well LB-20S, (2) nitrate data for well LB-10DR, and (3) TDS data for wells LB-1D and LB-3D. In these cases, the highest reported values from the last 5 monitoring years (2014 to 2018) were selected (see Table 2-1).

The following summarizes the results of the statistical evaluation:

- The calculated UCL-95 values for nitrate, Cl, and TDS were pronouncedly below their respective compliance levels.
- The calculated UCL-95 values, or default highest reported values, for dissolved Fe were below the compliance of 0.3 mg/L, except the values for groundwater from well LB-17I (9.8 mg/L) and LB-20S (0.7 mg/L).
- The calculated UCL-95 values, or default highest reported values, for dissolved Mn were below the compliance level of 0.05 mg/L, except the values for groundwater from wells LB-17I (1.5 mg/L), LB-17D (4.2 mg/L), LB-20S (2.4 mg/L), and LB-27I (0.4 mg/L).

2.4.2.2 Trend Analysis of Groundwater Data

Time-series concentration plots were generated for each of the inorganic parameters tested (see Appendix F). The time-concentration plots were evaluated visually to assess whether groundwater parameter concentrations exhibit increasing, decreasing or stable trends.

Inorganic parameter concentrations in groundwater samples collected from alluvial WBZ wells and Troutdale Formation wells show either generally stable or decreasing trends, except for nitrate concentrations in samples collected from wells LB-10DR and LB-27D. Changes in nitrate concentrations detected in these wells are believed to be reflective of natural (i.e., non-landfill-impacted) groundwater conditions. It should be noted that the maximum detected nitrate concentrations in groundwater collected from these well are below the regulatory compliance level of 10 mg/L.

It is also noteworthy that Cl, TDS, Fe, and Mn concentrations in groundwater collected from wells LB-17I, LB-17D, and LB-20S, located downgradient and in close proximity to the former landfilling areas, exhibit pronounced decreasing concentration trends generally from about 1991 and 2001 (see time-concentration plots in Appendix F). These decreasing concentration trends were likely in response to the construction, operation, and maintenance of Leichner Landfill's post-closure systems, including the landfill cover system and the stormwater control and collection system, which significantly reduced the potential for leachate to be generated. The concentrations of these inorganic

parameters in groundwater samples collected from these wells have remained relatively constant since about 2001 (except for Cl in well LB-20S as noted above). Additionally, as was previously discussed, the concentrations of these inorganic parameters in groundwater collected from monitoring wells downgradient of LB-17I/17D and LB-20S are substantially lower, and have remained stable throughout their extensive monitoring history (see time-concentration diagrams in Appendix F).

3.0 STORMWATER MONITORING

The County received formal approval from Ecology to terminate Leichner Landfill's General Stormwater Permit (No. WAR005572B) as memorialized in a letter dated March 30, 2018 (Ecology, 2018). As a result, monthly stormwater inspection and quarterly monitoring are no longer required, and these activities were suspended in the first quarter of 2018. Consequently, storm water monitoring results are not required to be presented or discussed in the annual report.

SCS performed monthly visual inspections in January through March 2018 during storm events, if any occurred that could result in stormwater being potentially discharged at Outfall 1. The inspections included examining stormwater discharge at Outfall 1 (if observed) and inspecting the stormwater conveyance system (drainage ditches and culverts) and areas where equipment and materials are stored (primarily at the blower-flare station [BFS]). No issues were identified during the monthly inspections.

Monthly inspections, along with quarterly stormwater sampling and analysis, were not performed after March 30, 2018 in response to termination of Leichner Landfill's General Permit.

Consistent with Ecology's requirements noted in its March 30, 2018 letter (Ecology, 2018), the County will retain and make available upon request to Ecology or any other local government agency the facility's Stormwater Pollution Prevention Plan (SWPPP), along with all notices of intent, reports on inspections, and all other reports required by the General Permit for at least three years from the date of termination.

4.0 LANDFILL GAS MONITORING

A GCCS was initially installed at the Leichner Landfill in 1978 in response to offsite migration of LFG. The system has been modified several times over the years, including installation of a single, smaller enclosed flare station in 2007 in response to decreasing methane production. The current GCCS includes a LFG extraction well field with 102 gas extraction wells, a condensate collection system, a LFG blower and flare, and an integrated remote monitoring and control (RMC) system that monitors the operation and performance of the BFS and other components of the GCCS and stormwater collection system. The GCCS components are shown in Figure 4-1.

Compliance LFG monitoring at Leichner Landfill is performed to (1) fulfill compliance monitoring requirements for LFG monitoring probes along the perimeter of the landfill, (2) evaluate and adjust (i.e., balance) the LFG extraction well network, and (3) assess the performance and efficiency of the GCCS, including the LFG flare and blower.

4.1 COMPLIANCE LFG MONITORING PROBE NETWORK AND SCHEDULE

The LFG compliance monitoring network is comprised of 50 probes located along the perimeter of the landfill property boundary to monitor subsurface LFG migration, and in areas within the property, to more closely monitor the performance of the GCCS (see Figure 4-1). Compliance LFG monitoring probes constructed as dual-completion probes (i.e., a shallow and deep probe constructed within the same borehole) are designated with an “A” for the shallow probe and “B” for the deep probe. Compliance LFG monitoring probes with the same probe number but constructed in different boreholes are designated with an “S” for the shallow probe and “D” for the deep probe.

A new perimeter LFG probe (GP-39) was installed in early May 2018 to provide perimeter LFG migration monitoring along the western side of the landfill adjacent to the vacant Fleischer property (see Figure 4-1) in anticipation that this property will be transacted and developed in the future. The new probe was installed in accordance with a work plan (SCS, 2017b) that was approved by CCPH and the Washington State Department of Ecology (Ecology, 2017). A report documenting the installation of the new probe was submitted to Ecology and CCPH on May 30, 2018 (SCS, 2018). Probe GP-39 was incorporated into the routine (quarterly) LFG compliance monitoring program at Leichner Landfill beginning in June 2018.

Compliance LFG monitoring was performed quarterly in 2018 (March, June, September, and December).⁴

4.2 COMPLIANCE LFG MONITORING RESULTS

The quarterly, compliance LFG monitoring probe data for 2018 are provided in Appendix H (Table H-1). The data indicate that methane concentrations were below the MFS (Chapter 173-304 WAC) regulatory limit of 5 percent methane (by volume) in the site perimeter compliance probes.

⁴ Ecology approved modifying the compliance monitoring of the LFG perimeter probes from monthly to quarterly in 2011 (Ecology, 2011).

4.3 LFG EXTRACTION WELLS

The LFG extraction wells (see Figure 4-1) were monitored and adjusted (balanced) semi-monthly (twice a month) during 2018 to maintain balanced and efficient LFG extraction rates. There were no significant problems or concerns noted during monitoring and adjustment of the LFG extraction wells.

4.4 LFG FLARE MONITORING

The LFG flare system is operated pursuant to Air Discharge Permit (ADP) 07-2714 issued by the Southwest Clean Air Agency (SWCAA) on February 15, 2007. The LFG flare system was monitored regularly (typically on a weekly basis) in 2018 and continuous through the facility's RMC. The monitored parameters include LFG composition, static pressure, flow rate, and temperature measured at the flare inlet. In addition, the flare operating temperature was also measured and recorded. The flare system is equipped with a continuous monitoring system, which measures and records the flare operating temperature, inlet LFG flow rate, and inlet LFG oxygen concentration. The data are stored and periodically downloaded for permanent recordkeeping.

To meet the annual reporting requirements of the ADP, a separate 2018 annual flare emissions estimate report will be submitted to the SWCAA on or before March 15, 2019. The report will present flare monitoring data and evaluate flare performance in 2018.

As reported to Ecology and CCPH by the County in an email communication dated January 4, 2019 (County, 2019), the LFG flare stopped operating on December 21 due to electrical issues resulting from a major power surge. After extensive diagnostic evaluation of the flare control panel and associated electronics, it was determined that a series of breakers and the programmable logic control (PLC) were damaged by the power surge. The breakers and PLC were replaced and the flare began operating again on January 4, 2019. The replacement of the PLC is described further in Section 5.2.

The perimeter gas probes were monitored on January 5, 2019 to assess whether the loss of flare operation for approximately two weeks resulted in lateral migration of LFG along the perimeter of the landfill. Only two probes, GP-07 and newly-installed probe GP-39 (see Figure 4-1), showed methane concentrations above the regulatory limit of 5 percent methane (by volume). No structures are nearby, and in the case of GP-07, it is not uncommon for this probe to be show slightly elevated methane levels due to nearby in-place waste. Re-monitoring of these probes on January 7, 2019 after the flare and GCCS were operating for about three days showed methane concentrations had dropped to below the regulatory limit.

4.5 GREENHOUSE GAS MONITORING

In November 2013, SCS completed an evaluation to determine if the Leichner Landfill is required to report greenhouse gas (GHG) monitoring results (and perform future weekly GHG monitoring) pursuant to the state of Washington GHG rule based on emissions data collected in 2013. The evaluation showed that the Leichner Landfill is exempt from GHG reporting (and from future weekly monitoring) per the Washington State's GHG Rule. Consequently, weekly GHG monitoring was suspended beginning in January 2014.

4.6 EVALUATION OF GCCS PERFORMANCE AND CONCEPTUAL REDESIGN OF GCCS

The GCCS at the Leichner Landfill will continue to require future upgrades to operate efficiently. To that end, a project was initiated in 2015 and is on-going (conducted by SCS) that focuses on:

- Collecting LFG extraction well and BFS performance data to support developing options for redesigning and upgrading the GCCS.
- Assessing whether additional monitoring and performance data needed to be collected to facilitate a redesign of the system.

In general, whenever an existing system is upgraded, retrofitted, and/or replaced, the level of effort for the design is much greater than if a system is designed from scratch because of the coordination/tie-ins to the existing infrastructure.

The 2015 Annual Report (SCS, 2016) first described significant activities performed to evaluate the existing GCCS well field system and BFS. The scope of this effort involved collecting LFG flow data from 50 of the site's 102 LFG extraction wells. Deeper gas wells located in the interior of the landfill were targeted for flow monitoring because they are expected to collect more gas and have higher flow rates. The perimeter gas wells, in general, are shallower and will not collect as much landfill gas (i.e., lower flow rates) due to their proximity to native soil and potential to facilitate air intrusion. Evaluation of the GCCS using the LFG extraction well monitoring data was on-going in 2018.

In 2017, SCS prepared and submitted to the County a report dated October 26, 2017 (SCS, 2017a) presenting three design options for upgrading the GCCS; the report included preliminary engineering design drawings and construction cost estimates. To date, the LLOC is considering the advantages and disadvantages the three key design options for upgrading the GCCS which consider the following:

- Replacing the existing (25-year old) polyvinyl chloride (PVC) conveyance piping with new, more robust, thermoplastic HDPE conveyance pipe and either burying the new piping or keeping it aboveground.
- Using the existing condensate pump stations or replacing them with new sumps.
- Modifying the LFG collection well network, including decommissioning some LFG extraction wells and installing new ones, and upgrading targeted LFG well heads to improve LFG flow and monitoring. The installation of new QED well heads in 2018 is noted in Section 5.2.2.

In 2018, the attention focused on evaluating the potential to replace the existing flare at the Leichner Landfill with a micro-flare that can handle lower LFG flow rates. To facilitate the evaluation, SCS prepared a detailed cost estimate for replacing the flare at the request of the LLOC. After its review and consideration, the LLOC approved installing a new flare and allocated funds in the 2019 budget to procuring, installing and begin operating the new flare in 2019.

5.0 MAINTENANCE AND REPAIR OF LANDFILL POST-CLOSURE SYSTEMS

5.1 ROUTINE ACTIVITIES

Routine operations, maintenance, and repair of the GCCS and stormwater collection and control system performed in 2018 included the following:

- Performing checks and making adjustments to the operational settings of the LFG flare system as necessary.
- Performing maintenance and repairs (as needed) of the LFG flare system, condensate collection system, including the condensate sumps, airlines, discharge lines, and compressors.
- Performing minor maintenance and repairs (as needed) of the LFG extraction wells and conveyance piping (e.g., repair of hoses, fittings, and valves).
- Conducting semi-monthly adjustments (i.e., balancing) to the north and south LFG extraction wells field.
- Performing general maintenance of the (1) North and South Detention Pond pumps, (2) air compressor for the condensate collection and Module 2 stormwater pumping systems, and (3) Module 2 stormwater recovery system.
- Coordinating periodic pumping and disposal of condensate from the site condensate tank.
- Performing vegetation control.
- Reviewing and uploading the LFG extraction well monitoring data and compliance probe monitoring data into SCS's site-specific DataServices database for the Leichner Landfill project.

5.2 NON-ROUTINE ACTIVITIES

Notable non-routine maintenance, repair, and replacement activities related to the Leichner Landfill's post-closure systems and equipment performed in 2018 are described in this section.

5.2.1 First Quarter 2018

- Performed troubleshooting and repair of the Module 2 stormwater vault pumping system. The diaphragm pump in the stormwater vault was removed for repair, and a temporary replacement pump was installed in the stormwater vault. Cost estimates were also obtained and evaluated to repair or replace the diaphragm pump.
- Developed cost estimates to (1) install a 3-inch discharge line from the Module 2 stormwater vault pumping system, (2) install LFG well heads, and (3) replace condensate pumps.
- Prepared the 2018 Annual Flare Emission Estimate and submitted the final report to the SWCAA on March 8, 2018.

- Performed troubleshooting of the Phase 2 stormwater vault remote monitoring control system. Installed a new battery.

5.2.2 Second Quarter 2018

- Installed safety railing at the South Detention Pond pumping vault platform.
- Performed troubleshooting of the RMC system for the Module 2 stormwater vault pump.
- Prepared and submitted to the County a memorandum presenting the scope and budget to install a modified discharge pipe for the Module 2 stormwater vault pumping system.
- Performed a semianual evaluation of the GCCS performance using monthly LFG extraction well and flare monitoring data extracted from SCS' RMC system and Data Services database for the Leichner Landfill. Evaluation was performed to assess what wells should be retrofitted with the three new QED well heads purchased this year.
- Reviewed blower operations and efficiency (blower performance curves, gas recovery estimates, and historical gas recovery) and made adjustments to the blower program to achieve increased vacuum.
- Repaired silt fencing in the Module 2 area.
- Evaluated sizing and associated cost for replacing the existing LFG blowers with new ones.
- Evaluated sizing and associated costs for purchasing a flow meter for the North Detention Pond pumping system.

5.2.3 Third Quarter 2018

- Continued evaluating information related to sizing and purchasing a flow meter for the North Detention Pond pumping system. Work included submitting a draft letter to the County presenting recommendations for collecting additional information for designing and selecting the flow meter.
- Performed a subsurface utility locate in the vicinity of the planned flow meter installation area to delineate the North Pond pumping system discharge line.
- Prepared a preliminary excavation plan for installing the flow meter and conducting some limited trenching to determine the configuration/delineation of North Pond discharge line.
- Installed a new 4-inch diameter discharge line for the high-capacity pump in the Module 2 stormwater collection vault.
- Purchased and installed a new (back-up) pneumatic pump for the Module 2 stormwater collection vault.
- Installed protection bollards around new LFG monitoring probe GP-39.
- Installed “No Trespassing” signs at entrance gate.
- Placed hay and drain rock in area of gas lines by condensate sump S-1.
- Repaired silt fence along south perimeter of Module 2 adjacent to the northern property line of the Waste Connection facility.

5.2.4 Fourth Quarter 2018

- Purchased, programmed, and installed one SDI Series liquid flow sensor on the existing 20-inch, steel, discharge pipe associated with the North Detention Pond pump station. The sensor was programmed to log instantaneous and totalized flow outputs on the existing RMC system to provide data for designing new stormwater control system associated with the 99th Street extension project.
- Prepared and submitted to the County a cost estimate installing a new micro-flare. The County approved the budget in 2019 and anticipates that the new flare will get installed in the third quarter of 2019. .
- Purchased two new LFG blowers as part of the blower/flame system upgrade. The new blowers were installed in November.
- Performed annual inspection and service of the on-site air compressor associated with the LFG condensate and Module 2 stormwater pumping systems.
- Installed a backup pump in the Module 2 stormwater collection vault with a new pump with lower pumping rate capability. The stormwater vault filled with water due to pump failure and a backup pump was retained to dewater the vault.
- Performed troubleshooting of RMC system due to a power failure at the site that resulted in operational failure of the LFG flare on approximately December 21. Work performed included replacing the programmable logic card (PLC) and getting the LFG flare operational again which occurred on January 4, 2019.
- Loaded, hauled, and disposed of LFG condensate from the on-site tank.

Field Report Form

Page 1 of 1

Client: Clark Co. - Leichner	Weather: Sunny 90°F
Project: 04218030.13	
Event: 3Q18 Leichner GW	Date: 8/14/18
Prepared By: S Nilsson	Address: Battle Ground, WA
	Arrival: 0600 Departure: 1400
<ul style="list-style-type: none"> - Packed truck, departed for site, picked up ice / DI water - Arrived on site, sampled wells off site first, then sampled on-site wells. - LB-1S, LB-5S, LB-6S, LB-10SR, LB-13I (+FB), LB-26I, and LB-27I (+DUP) - Samples stored on ice, ALS Lab contacted to arrange pick up in morning - Returned to SCS Portland

APPENDIX B

Summary Tables of Historical Groundwater Field Parameter Measurements and Analytical Data

Field Parameters

Table B-1
Groundwater Chemistry, Field Parameters
1987 through 2018
Leichner Landfill

Location	Sample Number	Date	Field pH (S.U.)	Field Conductivity (umhos/cm)	Temperature (°C)	Dissolved Oxygen (mg/L)
LB-1D	LB-022718-10-1D	2/27/18	6.73	225	10.9	5.84
LB-1S	LB-022718-11-1S	2/27/18	6.69	255	11.3	4.72

SCS Engineers
15940 SW 72nd Ave
Portland, OR 97224

RE: Leichner Landfill / 04218030.13

Dear Jason,

Enclosed are the results of the sample(s) submitted to our laboratory February 27, 2018
For your reference, these analyses have been assigned our service request number **K1801827**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3364. You may also contact me via email at howard.holmes@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Howard Holmes
Project Manager

Table of Contents

- Acronyms
- Qualifiers
- State Certifications, Accreditations, And Licenses
- Case Narrative
- Chain of Custody
- General Chemistry
- Metals
- Volatile Organic Compounds

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Inorganic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

- # The control limit criteria is not applicable. See case narrative.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Kelso Laboratory Website	www.alsglobal.com	NA

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.alsglobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

Case Narrative

ALS Environmental—Kelso Laboratory
1317 South 13th Avenue, Kelso, WA 98626
Phone (360)577-7222 Fax (360)636-1068
www.alsglobal.com

Client: SCS Engineers
Project: Leichner Landfill
Sample Matrix: Ground Water

Service Request: K1801827
Date Received: 02/27/2018

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory Duplicate (DUP), Matrix Spike (MS), Matrix/Duplicate Matrix Spike (MS/DMS), Laboratory Control Sample (LCS), and Laboratory/Duplicate Laboratory Control Sample (LCS/DLCS).

Sample Receipt:

Eight ground water samples were received for analysis at ALS Environmental on 02/27/2018. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Metals:

No significant anomalies were noted with this analysis.

General Chemistry:

No significant anomalies were noted with this analysis.

Volatiles by GC/MS:

Method 8260C, 3/5/18: The ALS control criterion for the following analytes was not met in Continuing Calibration Verification (CCV) MS27\0305F004.D: Dichlorodifluoromethane and Chloromethane. In accordance with ALS standard operating procedures, an MRL check standard containing the analytes of concern was analyzed each day of analysis. The MRL check standard verifies instrument sensitivity was adequate to detect the analytes at the MRL on the day of analysis. Because the sensitivity was shown to be adequate to detect the compounds in question the data quality has not been significantly affected. No further corrective action was taken.

Method 8260C, 3/5/18: The upper control criterion was exceeded for Dibromofluoromethane in all field samples. No target analytes were detected in the sample. The error associated with an elevated recovery equated to a high bias. The quality of the sample data was not significantly affected. No further corrective action was appropriate.

Method 8260C, 3/5/18: The upper control criterion was exceeded for Dibromofluoromethane in Method Blank KWG1801267-4. No target analytes were detected in the Method Blank. Since the apparent problem equates to a high bias, the data quality was not significantly affected. No further corrective action was appropriate.

1. Samples were received via? **USPS** **Fed Ex** **UPS** **DHL** **PDX** **Courier** **Hand Delivered**
2. Samples were received in: (circle) **Cooler** **Box** **Envelope** **Other** **NA**
3. Were custody seals on coolers? **NA** **Y** N If yes, how many and where? Front
 If present, were custody seals intact? **Y** N If present, were they signed and dated? **Y** N

Raw Cooler Temp	Corrected. Cooler Temp	Raw Temp Blank	Corrected Temp Blank	Corr. Factor	Thermometer ID	Cooler/COC ID	Tracking Number
07	09	-	-	+0.0	371	NA	NA Filed

4. Packing material: **Inserts** **Baggies** **Bubble Wrap** **Gel Packs** **Wet Ice** **Dry Ice** **Sleeves**
5. Were custody papers properly filled out (ink, signed, etc.)? **NA** **Y** N
6. Were samples received in good condition (temperature, unbroken)? *Indicate in the table below.*
 If applicable, tissue samples were received: **Frozen** **Partially Thawed** **Thawed**
7. Were all sample labels complete (i.e analysis, preservation, etc.)? **NA** **Y** N
8. Did all sample labels and tags agree with custody papers? *Indicate major discrepancies in the table on page 2.* **NA** **Y** N
9. Were appropriate bottles/containers and volumes received for the tests indicated? **NA** **Y** N
10. Were the pH-preserved bottles (see SMO GEN SOP) received at the appropriate pH? *Indicate in the table below* **NA** **Y** N
11. Were VOA vials received without headspace? *Indicate in the table below.* **NA** **Y** N
12. Was C12/Res negative? **NA** **Y** N

Laboratory Results for: Leichner Lanfill, WA

Dear Jason,

Enclosed are the results of the sample(s) submitted to our laboratory February 28, 2018
For your reference, these analyses have been assigned our service request number **K1801872**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3364. You may also contact me via email at howard.holmes@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

Client: SCS Engineers
Project: Leichner Lanfill, WA
Sample Matrix: Ground Water

Service Request: K1801872
Date Received: 02/28/2018

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory Duplicate (DUP), Matrix Spike (MS), Matrix/Duplicate Matrix Spike (MS/DMS), Laboratory Control Sample (LCS), and Laboratory/Duplicate Laboratory Control Sample (LCS/DLCS).

Sample Receipt:

Seven ground water samples were received for analysis at ALS Environmental on 02/28/2018. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Metals:

No significant anomalies were noted with this analysis.

General Chemistry:

Method SM 2540 C, 03/5/2018: The Relative Percent Difference (RPD) for the replicate analysis of Total Dissolved Solids in sample LB-022718-09-10SR was outside the normal ALS control limits. The samples associated with the high RPD were reanalyzed past holding time and confirmed the original measured concentrations. The initial analysis is reported. No further corrective action was appropriate.

Volatiles by GC/MS:

Method 8260C, 3/7/18: The following analyte was flagged as outside the control criterion for Continuing Calibration Verification (CCV) MS270307F003.D: Naphthalene. In accordance with the EPA Method, 80% or more of the CCV analytes must pass within 20% of the true value. The ALS SOP allows for 40% difference for the remaining analytes. The CCV met these criteria. The quality of the sample data was not significantly affected. No further corrective action was required.

Method 8260C, 3/7/18: The upper control criterion was exceeded for Dibromofluoromethane in all field samples. No target analytes were detected in the sample. Since the apparent problem equates to a high bias, the data quality was not significantly affected. The quality of the sample data was not significantly affected. No further corrective action was appropriate.

Method 8260C, 3/7/18: The upper control criterion was exceeded for Dibromofluoromethane in Method Blank KWG1801301-5. No target analytes were detected in the Method Blank. Since the apparent problem equates to a high bias, the data quality was not significantly affected. No further corrective action was appropriate.

Method 8260C, 3/7/18: The advisory criterion was exceeded for Bromomethane in Laboratory Control Sample (LCS) K1801872. As per the ALS/Kelso Standard Operating Procedure (SOP) for this method, these compounds are not included in the subset of analytes used to control the analysis. The recovery information reported for these analytes is for advisory purposes only (i.e. to provide additional detail related to the performance of each individual compound). No further corrective action was required.

Inorganic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

- # The control limit criteria is not applicable. See case narrative.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.alsglobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LOD	Limit of Detection
LOQ	Limit of Quantitation
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

Naphthalene	ND U	7.97	10.0	80	8.68	10.0	87	52-147	9	30

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Laboratory Results for: Leichner Landfill

Dear Jason,

Enclosed are the results of the sample(s) submitted to our laboratory March 02, 2018
For your reference, these analyses have been assigned our service request number **K1801947**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3364. You may also contact me via email at howard.holmes@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory Duplicate (DUP), Matrix Spike (MS), Matrix/Duplicate Matrix Spike (MS/DMS), Laboratory Control Sample (LCS), and Laboratory/Duplicate Laboratory Control Sample (LCS/DLCS).

Sample Receipt:

Nine ground water samples were received for analysis at ALS Environmental on 03/02/2018. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Metals:

No significant anomalies were noted with this analysis.

General Chemistry:

Method 300.0, 03/02/2018: The matrix spike recoveries of Chloride and Nitrate as Nitrogen for sample LB-030118-14-20S were outside control criteria because of suspected matrix interference. As a result of the interference, the results for this analyte contained a potential low bias. No further corrective action was taken.

Volatiles by GC/MS:

Method 8260C, 3/7/18: The following analyte was flagged as outside the control criterion for Continuing Calibration Verification (CCV) MS27\0307F003.D: Naphthalene. In accordance with the EPA Method, 80% or more of the CCV analytes must pass within 20% of the true value. The ALS SOP allows for 40% difference for the remaining analytes. The CCV met these criteria. The quality of the sample data was not significantly affected. No further corrective action was required.

Method 8260C, 3/9/18: The following analytes were flagged as outside the control criterion for Continuing Calibration Verification (CCV) MS27\0309F004.D: Dichlorodifluoromethane, Chloromethane, Trichlorofluoromethane, Carbon Disulfide, Carbon Tetrachloride and 4-Isopropyltoluene. In accordance with the EPA Method, 80% or more of the CCV analytes must pass within 20% of the true value. The ALS SOP allows for 40% difference for the remaining analytes. The CCV met these criteria. The quality of the sample data was not significantly affected. No further corrective action was required.

Method 8260C, 3/7/18: The upper control criterion was exceeded for Bromomethane in Laboratory Control Sample (LCS) KWG1801301-3. The analyte in question was not detected in the associated field samples. The error associated with elevated recovery indicated a high bias. The sample data was not significantly affected. No further corrective action was appropriate.

Method 8260C, 3/7-9/18: The upper control criterion was exceeded for Dibromofluoromethane in all field samples. No target analytes were detected in the sample. The error associated with an elevated recovery equated to a high bias. The quality of the sample data was not significantly affected. No further corrective action was appropriate.

Method 8260C, 3/7-9/18: The control criteria were exceeded for Dibromofluoromethane in Method Blanks KWG1801301-5 and KWG1801341-4. The associated matrix spike recoveries of target compounds were in control, indicating the analysis was in control. The surrogate outlier was flagged accordingly. No further corrective action was appropriate.

Approved by

A handwritten signature in black ink, appearing to read "Howard Johnson".

Inorganic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

- # The control limit criteria is not applicable. See case narrative.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.alsglobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Tiffany Andrews
SCS Engineers
15940 SW 72nd Ave
Portland, OR 97224

Laboratory Results for: Leichner Landfill, WA

Dear Tiffany,

Enclosed are the results of the sample(s) submitted to our laboratory August 15, 2018
For your reference, these analyses have been assigned our service request number **K1807742**.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. The test results meet requirements of the current NELAP standards, where applicable, and except as noted in the laboratory case narrative provided. For a specific list of NELAP-accredited analytes, refer to the certifications section at www.alsglobal.com. All results are intended to be considered in their entirety, and ALS Group USA Corp. dba ALS Environmental (ALS) is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report.

Please contact me if you have any questions. My extension is 3364. You may also contact me via email at howard.holmes@alsglobal.com.

Respectfully submitted,

ALS Group USA, Corp. dba ALS Environmental

A handwritten signature in black ink that appears to read "Janet Mallach".

CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables. When appropriate to the method, method blank results have been reported with each analytical test. Surrogate recoveries have been reported for all applicable organic analyses. Additional quality control analyses reported herein include: Laboratory Duplicate (DUP), Matrix Spike (MS), Matrix/Duplicate Matrix Spike (MS/DMS), Laboratory Control Sample (LCS), and Laboratory/Duplicate Laboratory Control Sample (LCS/DLCS).

Sample Receipt:

Ten ground water samples were received for analysis at ALS Environmental on 08/15/2018. The samples were received in good condition and consistent with the accompanying chain of custody form. The samples were stored in a refrigerator at 4°C upon receipt at the laboratory.

Metals:

No significant anomalies were noted with this analysis.

General Chemistry:

No significant anomalies were noted with this analysis.

Volatiles by GC/MS:

Method 8260C, 08/22/2018: The following analytes were flagged as outside the control criterion for Continuing Calibration Verification (CCV) MS46\0822F003.D: Dichlorodifluoromethane, Chloromethane, Chloroethane and Carbon Disulfide. In accordance with the EPA Method, 80% or more of the CCV analytes must pass within 20% of the true value. The ALS SOP allows for 40% difference for the remaining analytes. The CCV met these criteria. The quality of the sample data was not significantly affected. No further corrective action was required.

Method 8260C, 08/22/2018: The matrix spike recovery of 1,2,3-Trichloropropane for sample Batch QC was outside control criteria. Recovery in the Laboratory Control Sample (LCS) was acceptable, which indicated the analytical batch was in control. The matrix spike outlier suggested a potential high bias in this matrix. No further corrective action was appropriate.

A handwritten signature in black ink, appearing to read "Howard Johnson".

Inorganic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- E The result is an estimate amount because the value exceeded the instrument calibration range.
- J The result is an estimated value.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.
- H The holding time for this test is immediately following sample collection. The samples were analyzed as soon as possible after receipt by the laboratory.

Metals Data Qualifiers

- # The control limit criteria is not applicable. See case narrative.
- J The result is an estimated value.
- E The percent difference for the serial dilution was greater than 10%, indicating a possible matrix interference in the sample.
- M The duplicate injection precision was not met.
- N The Matrix Spike sample recovery is not within control limits. See case narrative.
- S The reported value was determined by the Method of Standard Additions (MSA).
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- W The post-digestion spike for furnace AA analysis is out of control limits, while sample absorbance is less than 50% of spike absorbance.
- i The MRL/MDL or LOQ/LOD is elevated due to a matrix interference.
- X See case narrative.
- + The correlation coefficient for the MSA is less than 0.995.
- Q See case narrative. One or more quality control criteria was outside the limits.

Organic Data Qualifiers

- * The result is an outlier. See case narrative.
- # The control limit criteria is not applicable. See case narrative.
- A A tentatively identified compound, a suspected aldol-condensation product.
- B The analyte was found in the associated method blank at a level that is significant relative to the sample result as defined by the DOD or NELAC standards.
- C The analyte was qualitatively confirmed using GC/MS techniques, pattern recognition, or by comparing to historical data.
- D The reported result is from a dilution.
- E The result is an estimated value.
- J The result is an estimated value.
- N The result is presumptive. The analyte was tentatively identified, but a confirmation analysis was not performed.
- P The GC or HPLC confirmation criteria was exceeded. The relative percent difference is greater than 40% between the two analytical results.
- U The analyte was analyzed for, but was not detected ("Non-detect") at or above the MRL/MDL.
DOD-QSM 4.2 definition : Analyte was not detected and is reported as less than the LOD or as defined by the project. The detection limit is adjusted for dilution.
- i The MRL/MDL or LOQ/LOD is elevated due to a chromatographic interference.
- X See case narrative.
- Q See case narrative. One or more quality control criteria was outside the limits.

Additional Petroleum Hydrocarbon Specific Qualifiers

- F The chromatographic fingerprint of the sample matches the elution pattern of the calibration standard.
- L The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of lighter molecular weight constituents than the calibration standard.
- H The chromatographic fingerprint of the sample resembles a petroleum product, but the elution pattern indicates the presence of a greater amount of heavier molecular weight constituents than the calibration standard.
- O The chromatographic fingerprint of the sample resembles an oil, but does not match the calibration standard.
- Y The chromatographic fingerprint of the sample resembles a petroleum product eluting in approximately the correct carbon range, but the elution pattern does not match the calibration standard.
- Z The chromatographic fingerprint does not resemble a petroleum product.

Analyses were performed according to our laboratory's NELAP-approved quality assurance program. A complete listing of specific NELAP-certified analytes, can be found in the certification section at www.alsglobal.com or at the accreditation bodies web site.

Please refer to the certification and/or accreditation body's web site if samples are submitted for compliance purposes. The states highlighted above, require the analysis be listed on the state certification if used for compliance purposes and if the method/analyte is offered by that state.

Duplicate Matrix Spike Summary General Chemistry Parameters

Sample Name: LB-081418-03-1S **Units:**mg/L
Lab Code: K1807742-001 **Basis:**NA

Matrix Spike						Duplicate Matrix Spike					
K1807742-001MS						K1807742-001DMS					
Analyte Name	Method	Sample		Spike		Spike		% Rec		% Rec	RPD
		Result	Result	Amount	% Rec	Result	Amount	% Rec	Limits	RPD	Limit
Chloride	300.0	7.41	15.6	8.00	103	15.5	8.00	102	90-110	<1	20
Nitrate as Nitrogen	300.0	3.83	12.3	8.00	105	12.3	8.00	106	90-110	<1	20

Results flagged with an asterisk (*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

APPENDIX E

Quality Assurance/Quality Control Reviews of 2018 Laboratory Analytical Data

First Quarter (February) 2018 QA/QC Reviews

**SCS Engineers QA/QC Review
Groundwater - 1Q 2018 Groundwater Monitoring Event
Leichner Brothers Landfill
ALS Environmental Lab Report No. K1801827**

Samples: LB-022618-01-5D (LB-5D), LB-022618-04-13D (LB-13D), LB-022618-07-17D (LB-17D), LB-022618-06-26D (LB-13D), LB-030817-05-26D (LB-26D), LB-022618-05-FB1 (FB1/LB-26D), LB-022618-02-27D (LB-27D), and LB-022618-03-DUP1 (DUP1/LB-27D).

Sample Date: 02/26/2018

Laboratory Sample Received Date: 02/27/2018

Sample Receipt Temperature: 0.9°C

Laboratory Data Received Date: 03/22/2018

QA/QC Review Date: 07/24/2018 (SEN)

VOCs

Method Blanks	All analytes were reported as non-detect.
Surrogates	All sample surrogates were within QC limits except for dibromofluoromethane in all samples and method blanks. This is noted and qualified in the case narrative.
LCS	All % recoveries were within QC limits, and all surrogate recoveries were within control limits.
LCSD	All RPDs were within QC limits.

Dissolved Metals

Method Blanks	All analytes were reported as non-detect.
LCS	All % recoveries were within control limits.
Matrix Spikes	All % recoveries were within QC limits.
MSD	All RPDs were within QC limits.

General Chemistry

Method Blanks	All analytes were reported as non-detect.
LCS	All % recoveries within control limits.
Matrix Spikes	All % recoveries were within QC limits.
MSD	All RPDs were within QC limits.
Duplicates	All RPDs were within QC limits.

Hold Times

All analytical hold times were met.

Reporting Limit Exceedances

All project-specific reporting limits were met.

Field QA/QC

Field Duplicate

A field duplicate sample LB-022618-03-DUP1 (DUP1) was collected at monitoring well LB-27D (LB-022618-02-27D) on 02/26/2018. All calculated RPDs were within 20%.

Field Blank

A field blank sample LB022618-05-FB1 (FB1) was collected at monitoring well LB-26D (LB-022618-06-26D) on 02/26/18. All analytes were reported as nondetect except for TDS.

Trip Blank

A laboratory supplied trip blank was carried into the field on 02/26/2018 with all samples collected on the same date and returned to the lab for volatile organic compound (VOC) analysis. All trip blank analytes were reported as non-detect.

Notes

Dichlorodifluoromethane and chloromethane were flagged as outside the control criterion for Continuing Calibration Verification (CCV). In accordance with the EPA Method, 80% or more of the CCV analytes must pass within 20% of the true value. The ALS SOP allows for 40% difference for the remaining analytes. The CCV met these criteria. The quality of the sample data was not significantly affected. No further corrective action was required.

Data Validation

Upon final review of lab report K1801827 for Leichner Landfill, SCS Engineers finds the data are valid for their intended use (07/24/2018; SEN).

**SCS Engineers QA/QC Review
Groundwater - 1Q 2018 Groundwater Monitoring Event
Leichner Brothers Landfill
ALS Environmental Lab Report No. K1801872**

Samples: LB-022718-11-1S (LB-1S), LB-022718-10-1D (LB-1D), LB-022718-13-3S (LB-3S), LB-022718-12-3D (LB-3D), LB-022718-09-10SR (LB-10SR), LB-022718-08-10DR (LB-10DR), and Trip Blanks.

Sample Date: 02/27/2018

Laboratory Sample Received Date: 02/28/2018

Sample Receipt Temperature: 0.6°C

Laboratory Data Received Date: 03/30/2018

QA/QC Review Date: 07/26/2018 (SEN)

VOCs

Method Blanks	All analytes were reported as non-detect.
Surrogates	All sample surrogates were within QC limits except for dibromofluoromethane in all field samples, trip blank, and method blank. This is noted and qualified in the case narrative.
LCS	All % recoveries were within QC limits except for bromomethane in batch K1801301-5 (* flag). This is noted and qualified in the case narrative. All surrogate recoveries were within control limits.
LCSD	All RPDs were within QC limits.

Dissolved Metals

Method Blanks	All analytes were reported as non-detect.
LCS	All % recoveries were within control limits.
Matrix Spikes	All % recoveries were within QC limits.
MSD	All RPDs were within QC limits.

General Chemistry

Method Blanks	All analytes were reported as non-detect.
LCS	All % recoveries within control limits.
Matrix Spikes	All % recoveries were within QC limits.
MSD	All RPDs were within QC limits.
Duplicates	All RPDs were within QC limits except for TDS in sample LB-022718-09-10SR (LB-10SR) (* flag). This is noted and qualified in the case narrative.

Hold Times

All analytical hold times were met.

Reporting Limit Exceedances

All project-specific reporting limits were met.

Field QA/QC

Trip Blank

A laboratory supplied trip blank was carried into the field on 02/27/2018 with all samples collected on the same date and returned to the lab for volatile organic compound (VOC) analysis. All trip blank analytes were reported as non-detect.

Notes

Naphthalene was flagged as outside the control criterion for Continuing Calibration Verification (CCV). In accordance with the EPA Method, 80% or more of the CCV analytes must pass within 20% of the true value. The ALS SOP allows for 40% difference for the remaining analytes. The CCV met these criteria. The quality of the sample data was not significantly affected. No further corrective action was required.

Data Validation

Upon final review of lab report K1801872 for Leichner Landfill, SCS Engineers finds the data are valid for their intended use (07/26/2018; SEN).

Sample Receipt Temperature: 0.0°C

Laboratory Data Received Date: 03/28/2018

QA/QC Review Date: 07/26/2018 (SEN)

VOCs

Method Blanks	All analytes were reported as non-detect.
Surrogates	All sample surrogates were within QC limits except for dibromofluoromethane in all field samples, trip blank, and method blank. This is noted and qualified in the case narrative.
LCS	All % recoveries were within QC limits except for bromomethane in batch K1801301-5 (* flag). This is noted and qualified in the case narrative. All surrogate recoveries were within control limits.
LCSD	All RPDs were within QC limits.

Dissolved Metals

Method Blanks	All analytes were reported as non-detect.
LCS	All % recoveries were within control limits.
Matrix Spikes	All % recoveries were within QC limits.
MSD	All RPDs were within QC limits.

General Chemistry

Method Blanks	All analytes were reported as non-detect.
LCS	All % recoveries within control limits.
Matrix Spikes	All % recoveries were within QC limits except for chloride and Nitrate as N for sample LB-030118-14-20S. This is noted and qualified in the case narrative.
MSD	All RPDs were within QC limits.
Duplicates	All RPDs were within QC limits.

Hold Times

All analytical hold times were met.

Reporting Limit Exceedances

All project-specific reporting limits were met.

Field QA/QC

Trip Blank

A laboratory supplied trip blank was carried into the field on 03/01/2018 with all samples collected on the same date and returned to the lab for volatile organic compound (VOC) analysis. All trip blank analytes were reported as non-detect.

Field Duplicate

A field duplicate (LB-030118-18-DUP2) was collected at LB-6S on 03/01/18. All RPDs were within 20%.

Notes

Naphthalene, dichlorodifluoromethane, chloromethane, trichlorofluoromethane, carbon disulfide, carbon tetrachloride, and 4-isopropyltoluene were flagged as outside the control criterion for Continuing

Calibration Verification (CCV). In accordance with the EPA Method, 80% or more of the CCV analytes must pass within 20% of the true value. The ALS SOP allows for 40% difference for the remaining analytes. The CCV met these criteria. The quality of the sample data was not significantly affected. No further corrective action was required.

Data Validation

Upon final review of lab report K1801947 for Leichner Landfill, SCS Engineers finds the data are valid for their intended use (07/27/2018; SEN).

Third Quarter (August) 2018 QA/QC Reviews

**SCS Engineers QA/QC Review
Groundwater - 3Q 2018 Groundwater Monitoring Event
Leichner Brothers Landfill
ALS Environmental Lab Report No. K1807742**

Samples: LB-081418-03-1S, LB-081418-05-5S, LB-081418-09-6S, LB-081418-04-10SR, LB-081418-07-13I, LB-081418-06-FB, LB-081418-26I, LB-081418-01-27I, LB-081418-02-DUP, and Trip Blanks.

Sample Date: 08/14/2018

Laboratory Sample Received Date: 08/15/2018

Sample Receipt Temperature: -0.3, and 0.2°C

Laboratory Data Received Date: 08/31/2018

QA/QC Review Date: 10/30/2018 (SEN)

VOCs

Method Blanks	All analytes were reported as non-detect.
Surrogates	All sample surrogates were within QC limits.
LCS	All % recoveries were within QC limits, and all surrogate recoveries were within control limits.
Matrix Spike	All % recoveries were within QC limits except for 1,2,3-trichloropropane in batch KWG1804190-1(* flag). This is noted and qualified in the case narrative.
MSD	All RPDs were within QC limits.

Dissolved Metals

Method Blanks	All analytes were reported as non-detect.
LCS	All % recoveries were within control limits.
Matrix Spikes	All % recoveries were within QC limits.
MSD	All RPDs were within QC limits.

General Chemistry

Method Blanks	All analytes were reported as non-detect.
LCS	All % recoveries within control limits.
Matrix Spikes	All % recoveries were within QC limits.
MSD	All RPDs were within QC limits.
Duplicates	All RPDs were within QC limits.

Hold Times

All analytical hold times were met.

Reporting Limit Exceedances

All project-specific reporting limits were met.

Field QA/QC

Field Duplicate

A field duplicate sample LB-081418-02-DUP (DUP) was collected at monitoring well LB-27I (LB-081418-01-27I) on 08/14/2018. All calculated RPDs were within 20%.

Field Blank

A field blank sample LB081418-06-FB (FB) was collected at monitoring well LB-13I (LB-081418-07-13I) on 08/14/2018. All analytes were reported as non-detect except for TDS and toluene. It should be noted that toluene was also detected in the trip blanks and may be due to a laboratory artifact.

Trip Blank

A laboratory supplied trip blank was carried into the field on 08/14/2018 with all samples collected on the same date and returned to the lab for volatile organic compound (VOC) analysis. All trip blank analytes were reported as non-detect except for toluene.

Notes

Dichlorodifluoromethane, chloromethane, chloroethane, and carbon disulfide were flagged as outside the control criterion for Continuing Calibration Verification (CCV). In accordance with the EPA Method, 80% or more of the CCV analytes must pass within 20% of the true value. The ALS SOP allows for 40% difference for the remaining analytes. The CCV met these criteria. The quality of the sample data was not significantly affected. No further corrective action was required.

Data Validation

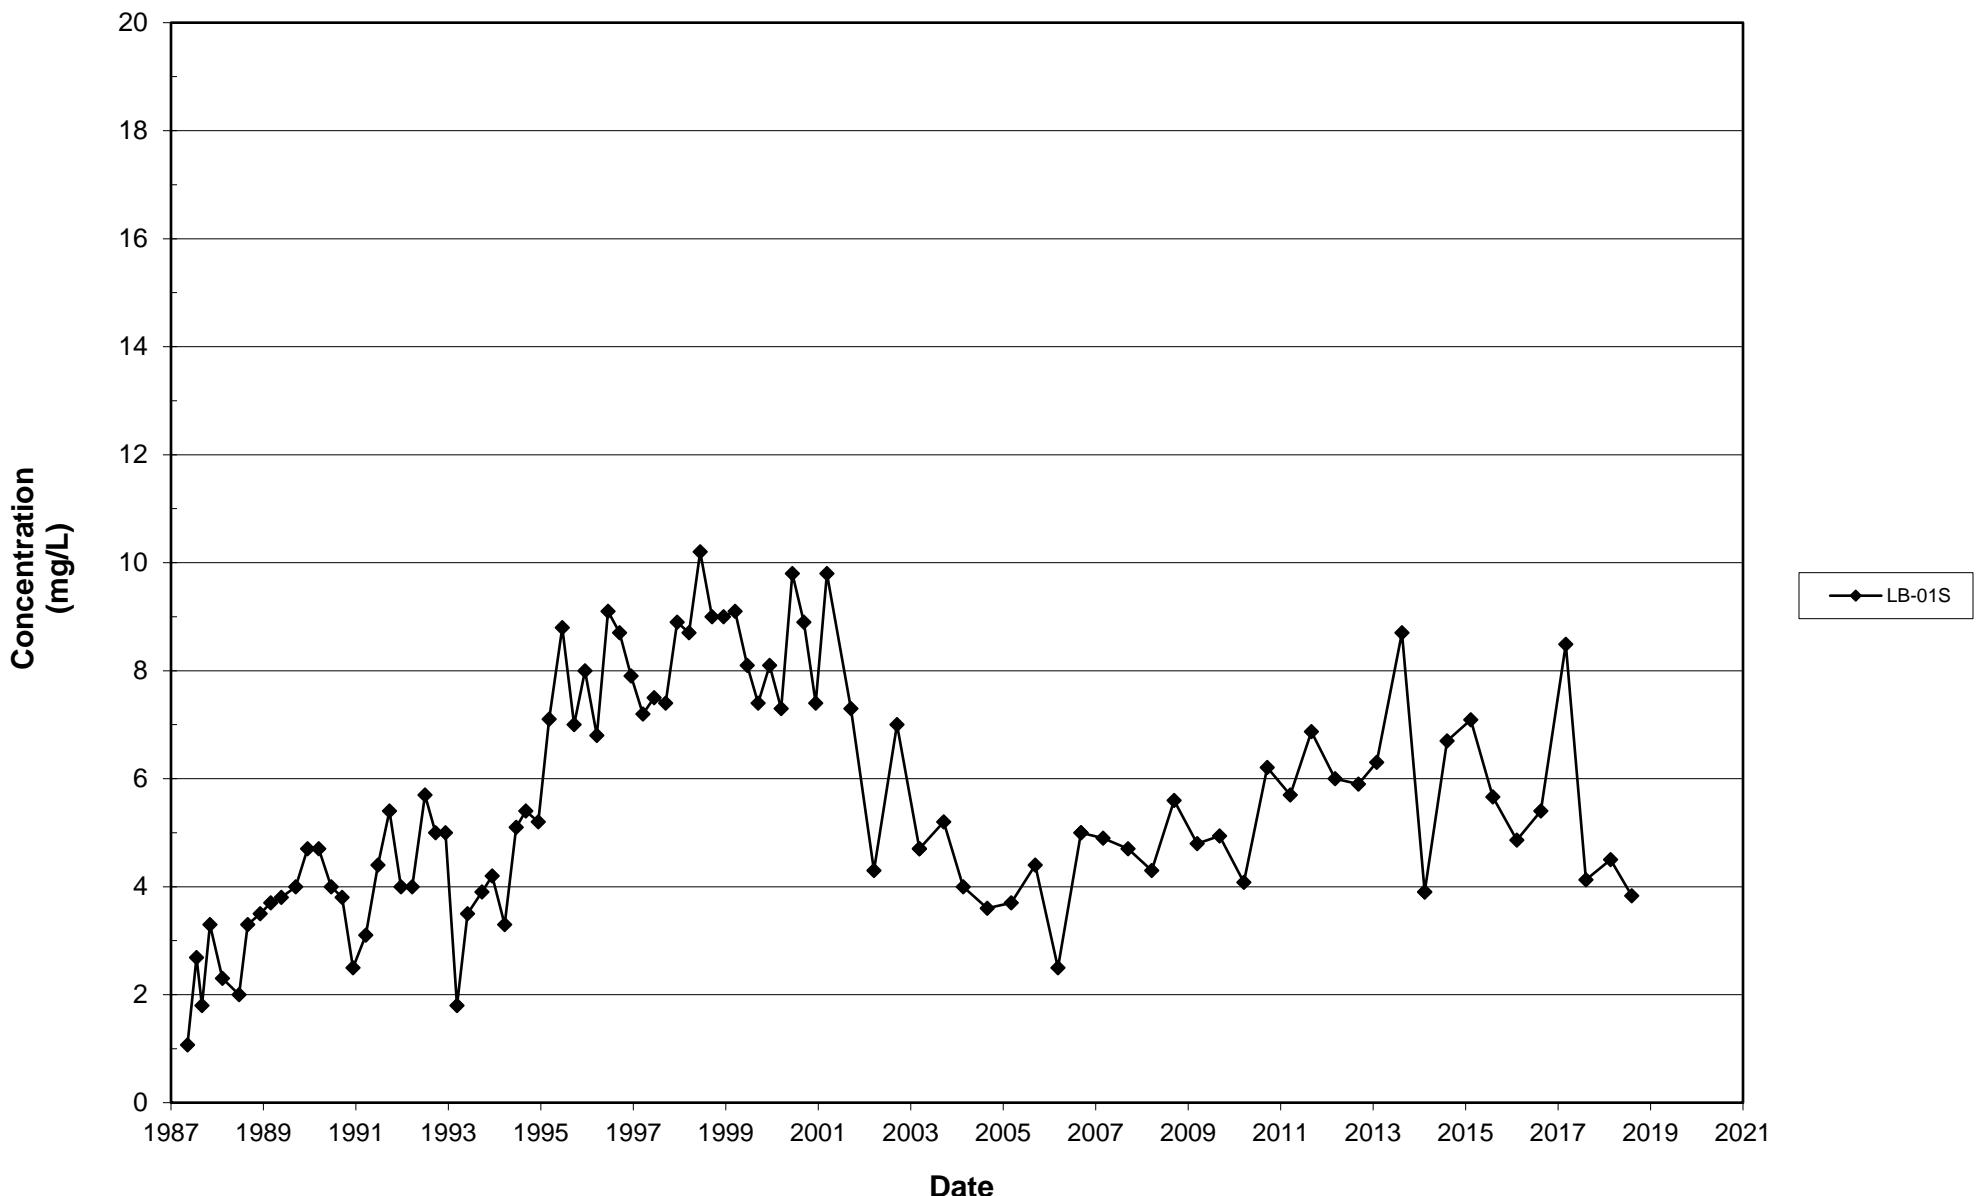

Upon final review of lab report K1807742 for Leichner Landfill, SCS Engineers finds the data are valid for their intended use (10/30/2018; SEN).

Tetrachloroethene	10	0	NC	NC	All ND	5	0	NC	NC	All ND
Trichloroethene	10	0	NC	NC	All ND	5	0	NC	NC	All ND

Notes:

mg/L = milligrams per liter; $\mu\text{g}/\text{L}$ = micrograms per liter; NC = not calculated, more than 50% samples were non-detect; Non = neither normal nor lognormal distribution;

M = default to maximum value per Statistical Guidance for Ecology Site Managers

for the following scenarios: (a) more than 50% non-detect values, (b) both normal and lognormal distributions were rejected by MTCASat,

and (c) UCL calculated using MTCASat was higher than the maximum value of the data set.

^a Distribution was determined using MTCASat 97 program and Statistical Guidance for Ecology Site Managers.

^b UCL 95 was calculated using MTCASat 97 program and Statistical Guidance for Ecology Site Managers.
