Commercial Activity:	Fiberglass and Steel Marine Craft Manufacturing and Repair
Environmental Assessor:	Ms. Devin Melville
Project Number:	No. 218 - 7102
Report Date:	February 26, 2018

EXECUTIVE SUMMARY

The subject of this Phase I Environmental Site Assessment is a rectangular-shaped approximately 5.98-acre (260,470 square foot) Parcel of industrial land located on the Hylebos Waterway in Tacoma, Washington. Significant bodies of water include Commencement Bay approximately two miles northwest.

The subject Property is configured with four buildings and a small boatyard that comprise the facility for the fiberglass and steel boat manufacturer, *Modutech Marine, Inc.* Two adjoining office buildings are situated in the center of the Parcel facing northeast toward Marine View Drive. Asphalt paved parking spaces are provided northeast of the buildings. Adjacent to the east is the manufacturing and production warehouse. A fabrication and spray building is situated along the east Property border. South of the building are material storage sheds, including a metal shipping container housing shelves of petroleum products. West of the warehouse are two large canvas tents that are used for sandblasting vessels. The eastern portion of the Property houses several boats, trailers, electric hoists, metal parts and pieces, and wood products.

The contiguous office buildings comprise approximately 6,560 square feet and are configured with offices, a reception area, restrooms, and a conference room. The warehouse comprises approximately 19,136 square feet and houses the marine manufacturing, repair, and production operations. Additionally, the warehouse contains an electrical room, an employee break area, a welding shop, and an approximately 1,530 square foot mezzanine used for storage. The building along the southeast Property boundary comprises approximately 4,440 square feet and is divided into two sections; one side was used for spray applications and the other side was used for fabrication.

The marina houses 50 covered slips and is accessible via a dock in the southeast corner of the Property. There are no permanent live-on board residents.

Vehicular access onto the Property is provided by a driveway entrance on the south side of Marine View Drive.

The subject Property was first developed sometime prior to 1940 with the construction of a residence and a garage or shed. Between 1960 and 1965, the residence was vacant. By 1969, the former structures were demolished and the present-day warehouse was constructed to occupy the ship building plant, *Tide Bay Inc.* By 1975, the Property occupied *Martinolich Ship Builders*. In 1980, a two-story office building and a dock marina were constructed. By then, the boat manufacturer, *Marine Technical Services*, occupied the Property. In 1985, a material storage shed was constructed. In 2013, an additional two-story office building was constructed onto the existing structure. The subject Property has occupied the steel and fiberglass marine boat manufacturer, *Modutech Marine Inc.*, since 1986 throughout to present-day.

The subject Property is located in an industrially dominated area. To the north is Marine View Drive (Highway 509) followed by a steep bluff. To the south is the Hylebos Waterway. To the east is a storage yard. To the west is the Hylebos Waterway.

Upon completion of the Site investigation, historical research, document file review, and other tasks as stipulated in the Scope of Work, the following Recognized Environmental Conditions, potential environmental concerns, or recommended actions were identified:

■ **Recommendation: Lack of Confirmation Sampling.** During a Site Inspection conducted by the Department of Ecology on June 17, 1992, inspectors confirmed the presence of sandblast grit spread along the roads and surfaces in certain areas of the Site. Following a request by Ecology to stop contaminants from spent sandblast grit from reaching the Hylebos Waterway, Modutech Inc removed the waste sandblast grit from the subject Property. The Model Toxics Control Act requires confirmation sampling to confirm that remedial efforts have been successful at a Site. Based on the information provided, confirmatory sampling has not been completed. **Due to the lack of confirmatory sampling, Further Action is Recommended.** (For additional information, refer to Pages 37 and 38).

■ **Housekeeping Recommendation: Secondary Containment for Fuel Totes.** During the on Site Reconnaissance, several plastic fuel totes throughout the work and production areas were observed. The totes did not have any secondary containment. Since they are plastic, they have the potential to crack or leak over time. As a housekeeping recommendation, Aerotech recommends the fuel totes have secondary containment to address cracks and product leakage.

ASTM PROTOCOL CONCLUSION

We have performed a *Phase I Environmental Site Assessment* in conformance with the scope and limitations of ASTM Practice 1527 (Revision 2013) for 2218 Marine View Drive, Tacoma, Washington, the *property*. Any exceptions to, or deletions from, this practice are described in Possible Report Exceptions To All Appropriate Inquiry Rule Section¹ of this *report*.

This Assessment **has revealed** evidence of *recognized environmental conditions*² in connection with the *property*.

This Assessment has not revealed evidence of an *historical recognized environmental condition* in connection with the *property*³.

This Assessment has not revealed evidence of a *controlled recognized environmental conditions*⁴ in connection with the *property*.

¹ Refer to page 5 of this Assessment.

² *Recognized Environmental Condition* - the presence or likely presence of any *hazardous substances* or *petroleum products* in, on, or at a *property* under conditions that indicate an existing release, a past release, or a *material threat* of a release of any *hazardous substances* or *petroleum products* into structures on the *property* or into the ground, ground water, or surface water of the *property*. The term includes *hazardous substances* or *petroleum products* even under conditions in compliance with laws. The term is not intended to include *de minimis conditions* that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not *recognized environmental conditions*.

³ *Historical Recognized Environmental Condition* – a past release of any hazardous substance or petroleum product that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory agency or meeting the unrestricted residential use criteria established by a regulatory authority, without subjecting the property to any required controls such as property use restrictions, activity and use limitations, institutional controls, or engineering controls – at the time of the completion of the Environmental Site Assessment.

⁴ *Controlled Recognized Environmental Condition* – a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority with hazardous substances or petroleum products allowed by remain in place subject to the implementation of required controls. A condition identified as a Controlled Recognized Environmental Condition does not imply that the Assessment has evaluated or confirmed the adequacy, implementation, or continued effectiveness of the required control that has been, or is intended to be implemented.

This Phase I Environmental
Site Assessment was performed in
**Compliance with the
All Appropriate Inquiry (AAI)
Final Rule: 40 CFR Part 312⁵**

POTENTIAL REPORT EXCEPTIONS TO ALL APPROPRIATE INQUIRY RULE:

§ 40 CFR Part 312.25 Searches for recorded environmental cleanup liens. (a) All appropriate inquiry must include a search for the existence of environmental cleanup liens against the subject property that are filed or recorded under federal, tribal, state, or local law.

§ 40 CFR Part 312.28 Specialized knowledge or experience on the part of the defendant. (a) Persons to whom this part is applicable per § 312.1(b)⁶ must take into account, their specialized knowledge of the subject property, the area surrounding the subject property, the conditions of adjoining properties, and any other experience relevant to the inquiry, for the purpose of identifying conditions indicative of releases or threatened releases at the subject property, as defined in § 312.1(c).

§ 40 CFR Part 312.29 The relationship of the purchase price to the value of the property, if the property were not contaminated. (a) Persons to whom this part is applicable per § 312.1(b) must consider whether the purchase price of the subject property reasonably reflects to fair market value of the property, if the property were not contaminated.

⁵ A copy of excerpts from the *Standards and Practices for All Appropriate Inquiries; Final Rule* U.S. EPA, 40 CFR Part 312, 70 FR 66070, November 1, 2005, is included in the Appendix of this Report, in the Section entitled Supplemental Documents.

⁶ § 312.1(b). *Applicability.* The requirements of this part are applicable to: (1) Persons seeking to establish: (i) The innocent landowner defense pursuant to CERCLA sections 101(35) and 197(b)(3); (ii) The bona fide prospective purchaser liability protection pursuant to CERCLA sections 101(40) and 107(r); (iii) The contiguous property owner liability protection pursuant to CERCLA section 107(q); and (2) persons conducting site characterization and assessments with the use of a grant awarded under CERCLA section 104(k)(2)(B).

ASSESSMENT OVERVIEW

Purpose:

The purpose of this Assessment is to comply with selected sections of the standards and practices for “all appropriate inquiry” for the purposes of CERCLA sections 101(35)(B)(i)(I) and 101(35)(B)(ii) and (iii), as defined in *Standards and Practices for All Appropriate Inquiries; Final Rule*, U.S. EPA, 40 CFR Part 312 (70 FR 66070). Some of the requires contained in Part 312 are excluded from this Assessment, as delineated in the preceding Section entitled “Report Exceptions to All Appropriate Inquiry Rule.”

The business purpose of this Phase I Environmental Site Assessment was to investigate, review, assess, and evaluate – through historical research, document and record review, generally available environmental data, visual or physical observations, and inspection by a trained assessor – the presence or likely existence of:

- Contamination by hazardous materials, generally recognized environmental contaminants, visible pollutants, underground contaminants, and asbestos-containing materials.
- The possibility that these materials are or may have been introduced – by internal generation, external introduction, or unknown sources – into the structure or subject Property.
- A brief overview, evaluation, and assessment of the severity of the current potential environmental risk based upon known standards or applicable regulations.

Unless specifically noted within the text of this Report, this Phase I Environmental Site Assessment does not include or address groundwater, soil, or extraneous material contamination upon or under the surface soils, with respect to testing, coring, or sampling analysis.

Protocol:

The procedure for this Environmental Site Assessment was to perform in practical and reasonable steps-- employing currently available technology, existing regulations, and generally acceptable engineering practices – an investigation to ascertain the possibility, presence, or absence of environmental releases, threatened releases, or Recognized Environmental Conditions, as limited by the Scope of Work. As such, this Assessment was performed in substantial compliance with the ASTM Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (Designation E 1527-13).

Objectives:

- To attempt to accomplish all appropriate inquiry into ownership and uses of the Property consistent with good commercial or customary practice, in an effort to minimize liability.
- To conduct an investigation of the Property that will assist ownership's positioning within the "safe harbor" section of the Federal Superfund liability in 42 U.S.C. §9601(35), the Lender Liability Final Rule, and the CERCLA amendments enacted as part of the 2002 Brownfields Act.
- To provide environmental information that will assist in evaluating ownership's risk of potential loss or value impairment of the security interest due to environmental defects; and information for decisions and operational limitations concerning the National Pollution Contingency Plan.

While this Phase I Assessment cannot absolutely quantify and qualify every possible past and present environmental risk, the Assessment does provide a partial information basis for reasonable decision making regarding the potential for environmental liabilities and risk, based upon the current Site-specific situation, Assessment limitations, and methods of evaluation.

GENERAL SITE RECONNAISSANCE OVERVIEW

Ms. Antoinette Marasigan of Craft3 engaged Aerotech Environmental Consulting, Inc. ("Aerotech") to perform a Phase I Environmental Site Assessment on the subject Property. This Assessment was additionally performed as required by the U.S. Small Business Administration ("SBA") Environmental Policy Guidelines for Phase I Environmental Site Assessments, and the "All Appropriate Inquiry" standard as promulgated by the U.S. Environmental Protection Agency in 40 CFR Part 312.

This Site consists of a rectangular-shaped approximately 5.98-acre (260,470 square foot) Parcel of industrial land located on the Hylebos Waterway in Tacoma, Washington, occupied by *Modutech Marine Inc.* The Property Owner, Mr. Carl Swindahl, was identified as the Key Site Manager. The *Key Site Manager* is the person identified by the Client or the Owner of the Property as a person having the most reliable knowledge as to the previous uses and current condition of the subject Property and is in a position to provide reasonably accurate information for the Environmental Questionnaire. The Assessors performed the on-Site Reconnaissance on the afternoon of January 25, 2018.

According to the information provided verbally by the Key Site Manager, Mr. Carl Swindahl, *The Riley Group, Inc* performed a Phase I and Phase II Site Assessment in 2009. According to the Focused Phase II Subsurface Investigation report, "select soil samples were submitted for laboratory analyses of Client-specified contaminants of concern". Analytical laboratory data were compared to Model Toxics Control Act ("MTCA") Method A for Unrestricted Land Use. Soil samples were analyzed for: carcinogenic polycyclic aromatic hydrocarbons ("cPAHs"), polychlorinated biPhenyls ("PCBs"), and MTCA Regulated Metals. No PAHs, PCBs, arsenic, cadmium, lead, or silver were detected in the samples. (RGI Project No. 2009-236b, Pages 2 through 4).

The Model Toxics Control Act requires confirmation sampling to confirm that remedial efforts have been successful at a Site. Based on the information provided, confirmatory sampling has not been completed at the subject Property. The *Riley Group's* Focused Phase II Subsurface Investigation does not constitute confirmation sampling as four test probe locations are not sufficient in defining the extent of the former sandblast grit area previously identified by the Department of Ecology in 1992. Due to the lack of confirmatory sampling, Further Action is Recommended. Refer to Pages 37 and 38 for additional information.

SUBJECT PROPERTY SITE DESCRIPTION

Visual Description:

The subject of this Phase I Environmental Site Assessment is a rectangular-shaped approximately 5.98-acre (260,470 square foot) Parcel of industrial land located within the City of Tacoma, Washington.

Adjoining and adjacent properties and landmarks include Marine View Drive (Highway 509) adjoining to the north; the Hylebos Waterway to the south; Norpoint Way Northeast adjacent to the north; Interstate Five approximately 2½ miles south; Highway 167 approximately three miles south; Interstate 705 approximately three miles southwest; Highway 7 approximately four miles southwest; and Highway 16 approximately five miles southwest. Significant bodies of water include Commencement Bay approximately two miles northwest.

The subject Property is configured with four buildings and a small boatyard that comprise the facility for the fiberglass and steel boat manufacturer, *Modutech Marine, Inc.* Two adjoining office buildings are situated in the center of the Parcel facing northeast toward Marine View Drive. Asphalt paved parking spaces are provided northeast of the buildings. Adjacent to the east is the manufacturing, repair, and production warehouse. A fabrication and spray building is situated along the east Property border. South of the building are material storage sheds, including a metal shipping container housing shelves of petroleum products. West of the warehouse are two large canvas tents that are used for sandblasting vessels. The northwest corner of the Property is used for heavy equipment storage. The eastern portion of the Property houses several boats, trailers, electric hoists, metal parts and pieces, and wood products.

The contiguous office buildings comprise approximately 6,560 square feet and are configured with offices, a reception area, restrooms, and a conference room. The warehouse comprises approximately 19,136 square feet and houses the marine manufacturing and production operations. Additionally, the warehouse contains an electrical room, an employee break area, a welding shop, and an approximately 1,530 square foot mezzanine used for storage. The building along the southeast Property boundary comprises approximately 4,440 square feet and is divided into two sections; one side was used for spray applications and the other side was used for fabrication.

The marina houses 50 covered slips and is accessible via a dock in the southeast corner of the Property. There are no permanent live-on board residents.

Vehicular access onto the Property is provided by a driveway entrance on the south side of Marine View Drive.

During the on Site Reconnaissance, there were no readily observed visual indicators of active underground storage tanks, stained soils, stressed vegetation, oily sheens, or discolorations on standing water surfaces. There was no evidence of foul odors. Additionally, the Site Reconnaissance did not reveal the presence of discarded drums, barrels, or containers, construction debris, damaged or discarded containers of chemicals, paints, or pesticides. There are no waste storage or treatment lagoons, pits, ponds, or surface impoundments on the Site, or the adjoining properties.

The subject Property was first developed sometime prior to 1940 with the construction of a residence and a garage or shed. Between 1960 and 1965, the residence was vacant. By 1969, the former structures were demolished and the present-day warehouse was constructed to occupy the ship building plant, *Tide Bay Inc.* By 1975, the Property occupied *Martinolich Ship Builders*. In 1980, a two-story office building and a dock marina were constructed. By then, the boat manufacturer, *Marine Technical Services*, occupied the Property. In 1985, a material storage shed was constructed. In 2013, an additional two-story office building was constructed onto the existing structure. The subject Property has occupied the steel and fiberglass marine boat manufacturer, *Modutech Marine Inc.*, since 1986 throughout to present-day.

The subject Property is located in an industrially dominated area. To the north is Marine

View Drive (Highway 509) followed by a steep bluff. To the south is the Hylebos Waterway. To the east is a storage yard. To the west is the Hylebos Waterway.

Physical Setting Source:

In order to ascertain the physical setting of the subject Property, a review was conducted of the appropriate current United States Geological Survey ("USGS") 7.5 Minute Topographic Quadrangle (quad) Map. The USGS 7.5 minute quad map has an approximate scale of 1" to 2,000 feet, shows physical features such as wetlands, water bodies, roadways, mines, and buildings. These physical and natural features shown should be the areas of visual emphasis, when conducting the on-site inspection of the subject Property. The USGS 7.5 quad map is considered to be the only Standard Physical Setting Source, and is sufficient as a single reference. The applicable USGS 7.5 minute topo map is the Quadrangle 6005511 - *Tacoma North, WA.*, photo revised in 2014.

Surface Characteristics:

The precise Property location is N 47° 16' 25.71" / W 122° 22' 44.61" as determined by DeLorme mapping data. The Site is located within Universal Transverse Mercator Zone No.10. The Site elevation is approximately 13 feet above mean sea level. As observed during the Site visit and confirmed on the USGS topographic map, the subject Property exhibits a surficial drainage towards the southwest, based upon overall Site topography. Additionally, the assumed general groundwater flow is to the southwest.

During the course of the on-site observations, particular attention was directed towards (i) pools of liquid; (ii) roads and paths that might be used for unauthorized entry; (iii) drains and sumps; (iv) stressed vegetation; (v) pits, ponds, or lagoons; (vi) surface or soil staining; (vii) ditches, catch basins, or dry wells; (viii) unidentified substance containers; (ix) location of manholes, sewer grates, sewer outfalls; and (x) other subterranean accesses. All roads, driveways, paths, and other vehicular access areas were identified and evaluated for suspected use as an avenue for transport or disposal of hazardous materials, regulated substances, or petroleum products. Railroad tracks and previous right-of-ways are also identified if present on the subject Property. Potential wetland area indicators were considered during the on-site activities. These indicators include (i) wetland characteristic soil types; (ii) areas that appear permanently wet during most of the year; (iii) the presence of wetlands-related submergent or emergent plants; and (iv) wetland indicative wildlife.

Subsurface Soils Characteristics:

The surficial soils are *Pilchuck*, a loamy sandy soil, comprised of sands and silty sand to depths of approximately 20 inches, mixed with stone fragments and gravel. From 20 to 38 inches, the soil composition changes to primarily poorly graded sand, and finally to gravelly - sand from 38 to 60 inches in depth. From 60 to 70 inches, the layer is fine sandy loam, with silt-clay materials with fines and silty sands. Throughout this range, the soil is generally coarse grained sands, and sands with fines. Below the upper boundary layer, the unified soil is stratified with coarse-grained sands with fines and silty-sand. The soil texture is fine sandy loam, composed of silt-clay materials, with more than 35% passing No. 200 sizing.

These soils are a hydrologic group Class C, and exhibit very slow infiltration rates, with high hydraulic conductivity, and low water holding capacity, due to the multiple layers or fine textures, impeding downward movement of water. As such, the soil has a high hydraulic conductivity and low water holding capacity. This soil type does not meet the requirements for a hydric soil as soil drainage is somewhat excessive. As a result, the depth to water table is generally more than six feet below ground surface. These descriptions have been provide by the U.S. Department of Agriculture Soil Conservation Service, soil survey STATSGO map data, and represent generalized subsurface soil conditions based upon observable landscape. The information is contained in the *Soil Survey of Pierce County Area, Washington* as published by the United States Department of Agriculture Soil Conservation Service, dated 1974.

Subsurface and Hydrological Characteristics:

The subsurface of the Property may have been modified by cuts and fills for building foundations and underground construction. However, no obvious visual evidence of non-native fill or backfill was observed around the structures. This was confirmed by Site interviews.

Based upon the USGS map and surface topography, groundwater is inferred to flow generally towards the southwest. However, topography is not always a reliable basis for predicting groundwater flow direction. Local gradient under the subject Property may be influenced naturally by zones of higher or lower permeability, or artificially by nearby pumping or recharge, and may deviate in any particular location for the overall regional trend. These observations are consistent with the historical research and review of historical aerial photographs.

The principal aquifers in the Puget Sound Region occur in glacial drift, that along with finer grained interglacial sediments, underlies the basin lowland to depths of more than 1,000 feet. The sand and gravel units in the glacial drift form the principle aquifers. These aquifers receive ample recharge from the typically heavy precipitation characteristic of western Washington. The glacial drift in the Puget Sound region varies greatly in composition and water yielding capacity. Typically, wells in glacial drift that tap silt, clay, or till in the Region at approximately 75 to 100 feet below ground surface may have yields of 100 gallons or more per minute. Deeper wells tapping thick, saturated layers of highly permeable gravel and coarse sand, typically at depths greater than 250 feet below ground surface, can yield more than 1,000 gallons per minute.

HISTORICAL USAGE STANDARD INFORMATION SOURCES: LOCAL AND STATE

The Historical Usage Information Section research is considered satisfied when both the Fifty-Year Complete Source and Developmental Complete Source have been researched and identified. These historical research requirements are satisfied by two separate sources with respect to the milestone or time constraints. A single source cannot simultaneously fulfill both source requirements.

The *Historical Site milestones* can include (i) construction activities that involve structural, renovation, or remodeling at any location within the subject Property; (ii) major changes in the topography or grade of the Site; (iii) installation

or construction of roads, utilities, water or sewer systems; (iv) installation, removal, or modification of permanent equipment; or (v) installation, removal, or modification of above or below ground tanks.

Standard Historical Sources are categorized as either Fifty-Year Complete or Developmental Complete. A *Fifty-Year Complete* source is a Standard Historical Source that provides the required information through and back to the 1945 cutoff date in either reasonable time intervals or Property milestone events. A *Developmental Complete* source is a Standard Historical Source which provides the required information from the point that the Property exhibited development (other than agricultural use) or structure construction continuously to the present in either reasonable time intervals or Property milestone events.

Fifty-Year Complete Standard Historical Source Summary:

The subject Property was first developed sometime prior to 1940 with the construction of a residence and a garage or shed. Between 1960 and 1965, the residence was vacant. By 1969, the former structures were demolished and the present-day warehouse was constructed to occupy the ship building plant, *Tide Bay Inc.* By 1975, the Property occupied *Martinolich Ship Builders*. In 1980, a two-story office building and a dock marina were constructed. By then, the boat manufacturer, *Marine Technical Services*, occupied the Property. In 1985, a material storage shed was constructed. In 2013, an additional two-story office building was constructed onto the existing structure. The subject Property has occupied the steel and fiberglass marine boat manufacturer, *Modutech Marine Inc.*, since 1986 throughout to present-day.

Historical Research Data Gaps:

As defined in the Standards and Practices for All Appropriate Inquiries; Final Rule (70 FR 66070) promulgated November 1, 2005, and effective November 1, 2006,

“*Data gap* means: a lack or inability to obtain information required by the standards and practices listed in subpart C of this part despite good faith efforts by the environmental professional or persons identified under § 312.1(b), as appropriate, to gather such information pursuant to §§ 312.20(e)(1) and 312.20(e)(2).” [§ 312.10 *Definitions*].

Such Data Gaps result from insufficient information – as delineated in standards and practices – relative to the historical development of the subject Property.

“To the extent there are data gaps (as defined in § 312.10) in the information developed as part of the inquiries in paragraph (e) of this section that affect the ability of persons (including the environmental professional) conducting the all appropriate inquiries to identify conditions indicative of releases or threatened releases in each area of inquiry under each standard and practice such persons should identify the sources of information consulted to address such data gaps, and comment upon the significance of such data gaps with regard to the ability to identify conditions indicative of releases or threatened releases of hazardous substances [and in the case of persons identified in § 312.1(b)(2), hazardous substances,

pollutants, contaminants, petroleum and petroleum products, and controlled substances (as defined in 21 U.S.C. 802)] on, at, in, or to the subject property.” [§ 312.20(g)].

In the opinion of the preparer of this Assessment and the Environmental Professional, no such Data Gaps as defined above, were identified during the preparation of this Assessment. No further investigation is necessary relative to issues resulting from Data Gaps.

Aerial Photograph Review:

Originally performed under government contracts, aerial photographs of the general area are available beginning with the 1930s. The scales for these aerials can range from 1"=1667' to 1"=2500'; aerials taken by private contractors were generally taken at lower altitudes and provide a larger scale. Depending upon the resolution, the photographs can provide valuable information on land use and site development of both the subject and adjoining properties. Ultimately, the scale, clarity, and resolution serves as the limitations on visual interpretation. Historic aerial photographs were reviewed using the Nationwide Environmental Title Research online database. The following aerials were available for review:

<i>Date:</i>	<i>Observations:</i>
1940	The subject Property is vacant land; the northwest portion of the Property is part of the Hylebos Waterway and contains floating logs. The property to the north is forested land. To the south is the Hylebos Waterway. The south adjacent property is used for log storage. The property to the east is forested land. To the west is the Hylebos Waterway. The west adjacent property is used for log storage. Properties west of the waterway are heavily developed with log treatment and processing facilities.
1964	The subject Property is occupied by two structures on the northwest portion; the structures appear to be situated on inner tidelands. The property to the north is forested land. The northwest adjacent property is occupied by a structure. The property to the south is vacant tidal land. The property to the east is occupied by a structure. Properties west of the Hybelos Waterway appear used for log treatment and transportation.
1969	The subject Property is occupied by the present-day warehouse, situated diagonally across the Property; the previous two structures have been demolished. The Hylebos Waterway appears to have been widened; consuming the northwest and southern portions of the Property. To the south is the Hylebos Waterway. The property to the east is occupied by a small structure. The property to the southeast is forested land. The properties southwest of the waterway are used for lumber storage.
1980	The subject Property is occupied by the present-day warehouse; three docks have been constructed along the waterway west of the warehouse. The property to the north is forested land. Docks have been constructed along the waterway to the southeast. The property to the east is occupied by a

rectangular structure.

1990	The subject Property is occupied by the present-day warehouse; an adjacent building has been constructed to the northwest; and a building has been constructed to the east. The former docks are no longer present. A dock has been constructed to the south. Several large ships are docked in the waterway to the west.
1998	The subject Property is occupied by the present-day structures; another structure has been constructed west of the warehouse; the northern portion appears used for storage. To the north is a loop drive connecting Marine View Drive and Norpoint Way Northeast. Three covered docks have been constructed to the west on the Hylebos Waterway. The properties southwest of the waterway are occupied by warehouses and shipping containers.
2002	The subject Property is occupied by the present-day structures; another building has been constructed south of the easternmost structure. A housing community has been developed northeast of Norpoint Way Northeast. The property to the east appears to be used as a storage yard.
2006	No changes have been made since 2002.
2009	The subject Property is occupied by the present-day structures; a canvas tent has been placed west of the warehouse.
2011	The subject Property is occupied by the present-day structures; two structures, possibly canvas tents, have been constructed west of the warehouse, south of the office building.
2013	The subject Property is occupied by the present-day structures; another building has been constructed west of the office building.

City of Tacoma Building Permit/Inspection Department - Permit Review:

The Property is located within the City of Tacoma. Information concerning Site development was obtained from the Department of Planning and Community Development Services. Due the time required to obtain building department records via Freedom of Information requests ("FOIA"), this method of research was initially deemed to be reasonably ascertainable¹. The following substantive information was observed:

<i>Date:</i>	<i>Permit No.</i>	<i>Substantive Information:</i>
02/21/96	PWS96-00159	Pave parking area
06/18/99	BLD99-01003	Reroof industrial building
08/10/99	BLD99-01337	Reroof to commercial building (marina)

07/30/12	BLD2012	Replace siding on boat factory building
11/15/12	BLD2012	Construct two-story office addition
07/01/13	MEC2013	Mechanical for new addition at Modutech Marine
07/31/13	SWR2013	New sanitary side sewer connection to existing side sewer for office addition

City and Telephone Directories:

Local directories based upon physical surveys of residents have been compiled since the late 1880's for use as city planning and marketing database tools. Commonly referred to as "reverse directories" or "city directories," these directories are generally maintained at public libraries. The following directories were available for review:

Sanborn Fire Insurance Maps:

In 1867 the Sanborn Map Company began preparing detailed street maps of densely populated areas throughout the United States. The purpose of the mapping process was to assist insurance agents in rating the degree of fire hazard for a particular area or property. The maps drawn by the Sanborn Mapping Company indicate the type of building construction, the nature of land use, the configuration of buildings and the surrounding land, as well as identifying the location of above and below ground storage tanks.

The recent purchase by Environmental Data Resources (“EDR”) of the Sanborn Map Company included the acquisition of all copyrights associated with the Sanborn Maps. The Sanborn copyright prohibits the photocopying of the maps without the prior written permission of EDR².

This investigation has relied upon the collection of Sanborn maps previously owned by the Sanborn Mapping and Geological Information Service Company, known as the “Sanborn Library.” No Sanborns were available for review due to the subject Property being located just outside of the City Limits.

Recorded Land Title Records:

Recorded land titles are records usually maintained by the municipal clerk or county recorder of deeds which detail ownership fees, leases, land contracts, easements, liens, deficiencies, and other encumbrances attached to or recorded against the subject Property in the local jurisdiction having control for or reporting responsibility to the subject Property. Due to state land trust regulations and laws, land title records will often only provide trust names, bank trust numbers, owners' names, or easement holders, and not information concerning previous uses or occupants of the subject Property. Additionally, environmental liens recorded against the subject Property are considered outside the scope of recorded land title records. For these reasons, this Environmental Site Assessment has relied upon other standard historical information sources assumed to be either more accurate or informative than recorded land titles. Review of historical Pierce County Tax Parcel maps revealed the following information:

<i>Date:</i>	<i>Assessor Comments:</i>
1969	Construction of 19,136 square foot, wood-framed, light industrial warehouse
1980	Construction of 3,060 square foot, two-story office building
1985	Construction of 4,440 square foot, wood-framed material storage shed

2013

Construction of 3,500 square foot, two-story, wood-framed office building

Washington State Business Registrations:

The State of Washington Business Licensing Service maintains records of all business licenses issued within the State of Washington. In an attempt to identify potential environment issues, a search of business licenses issued through the Washington State Business Licensing Service was completed for the Site and revealed that the following businesses were issued licenses to operate on the subject Property.

<i>Issued Date:</i>	<i>Business Name:</i>
06/13/91	Modutech Marine, Inc

CURRENT USAGE INFORMATION SOURCES: LOCAL AND STATE

City of Tacoma - Emergency Release Reports/SARA§304:

The Property is located within the City of Tacoma, Washington. According to City Fire Department Personnel, the Site reported an Emergency Release incidents to local authorities on June 2, 1999. This information is consistent with the State of Washington ERNS records. For additional information, refer to Page 37 of this report.

Local/State Waste Disposal Compliance:

According to supplied information, the Site is not required to file, submit, or operate under any environmental permits, approvals, or notifications that were previously in place, or are known to be required in the future. Moreover, according the same supplied information and statements, the Site is not received prior notification of environmental violations, litigation, citations, claims, complaints, administrative actions, or environmental clean up or remedial actions pertaining to the Property or the operations conducted on the Property. This is consistent with the information reported in the EDR Environmental Database prepared for the subject Site.

VISUAL AND PHYSICAL OBSERVATIONS AND INFORMATION: STRUCTURAL AND BUSINESS OPERATIONAL

The Property Owner, Mr. Carl Swindahl, was identified as the Key Site Manager. The *Key Site Manager* is the person identified by the Client or the Owner of the Property as a person having the most reliable knowledge as to the previous uses and current condition of the subject Property and is in a position to provide reasonably accurate information for the Environmental Questionnaire. The Aerotech Site Assessors performed the on-site Reconnaissance on January 25, 2018.

Site Reconnaissance: Personal Interviews / Site Document Review:

The Aerotech Assessors, Ms. Devin Melville and Mr. Nick Gerkin, performed the Site Reconnaissance on January 25, 2018, accompanied by Property Owner, Mr. Carl Swindahl. Mr. Swindahl was interviewed during the Site Reconnaissance regarding the current Site operations, required environmental operating permits, his knowledge of current and historical environmental issues, past uses of the Property, and possible environmental concerns.

If an adjoining property represented an obvious Recognized Environmental Condition or a visual reconnaissance of the site indicated a potential environmental concern, the owner or operator of that site was also contacted regarding the type, nature, and potential impact of the environmental concern.

The information obtained and conclusions reached during the course of these interviews and document review has been incorporated in this Assessment; while the specific source of the information may not be identified in the text of the Assessment Report.

Key Site Manager Interviews & Questionnaire:

The Client identified the *Key Site Manager* for the performance of this Phase I Environmental Site Assessment. As defined by the ASTM⁷ *Phase I Environmental Site Assessment Standard Practice* (ASTM E 1527-13) the *Key Site Manager* is the person identified by the Client or the Owner of the Property as having the most reliable knowledge as to the previous uses and current condition of the subject Property, and is in a position to provide reasonably accurate information to the Environmental Assessor and for the Environmental Questionnaire. Additionally, the information obtained from the Key Site Manager is recognized by the ASTM as a *Standard Historical Source* which can be utilized to satisfy the *Fifty-Year Complete* or *Developmental Complete* Historical Source requirements.

A Field Screen Questionnaire was completed Property Owner, Mr. Carl Swindahl, on January 22, 2018. (A copy of same can be found in the Appendix of this report, Section IV).

Washington Commercial Real Estate Disclosure:

On February 28, 2010, the State of Washington Legislature passed Substitute Senate Bill No.6749, concerning the transfer of commercial real estate – commonly known as the *Commercial Real Estate Disclosure Act*.

As required in the Act, a seller of commercial real estate must provide a buyer with a Disclosure Statement about the land – whether improved or unimproved – unless the buyer waives the right to receive it. The Disclosure for commercial real estate concerns title, water, sewer and on-site sewage, structure, systems, fixtures, and environmental.

The Disclosure Statement must be provided within five business days, or as otherwise agreed to, after mutual acceptance of a written purchase agreement between a buyer and a seller. Within three business days of receiving the Disclosure Statement, the buyer has the right to approve and

⁷ ASTM: formerly the American Society for Testing and Materials.

accept the Statement or rescind the Agreement for purchase. If the seller fails to provide the Disclosure Statement, the buyer may rescind the transaction until the transfer has closed. If the Disclosure Statement is delivered late, the buyer's right to rescind expires three days after receipt of the Disclosure Statement.

A completed Commercial Real Estate Disclosure Statement was not provided prior to the completion of the Phase I Environmental Site Assessment.

Site Exterior Observations:

This Phase I Environmental Site Assessment is an environmentally-based risk assessment of a rectangular-shaped approximately 5.98-acre (260,470 square foot) Parcel of industrial land located in Tacoma, Washington, occupied by *Modutech Marine Inc.*

The Property is configured with two adjoining office buildings situated in the center of the Parcel facing northeast toward Marine View Drive. Asphalt paved parking spaces are provided northeast of the buildings. Adjacent to the east is the manufacturing and production warehouse. A fabrication and spray building is situated along the east Property border. South of the building are material storage sheds, including a metal shipping container housing shelves of petroleum products. A metal awning extends north and south off of the container. The south side houses used boat-size refrigerators and other appliances, small propane tanks, spools of metal wiring, metal pipes, and other miscellaneous items. The north side houses tarps, plastic barrels, a plastic fuel tote, a metal tote labeled diesel, and 55 gallon drums labeled *Hetron FR 650 T-20 Resin*.

To the south is a tarped canopy housing a large plastic container labeled "used oil only" that contained five gallon buckets, oil funnels, and used filters. Several propane tanks were stored behind the container. A wooden shelf was located along the northern wall of the canopy. Next to the shelf were 55 gallon drums and plastic barrels labeled *Chevron Rando HD ISO*; "Bad gas", dated December 1, 2016; and "power cool 50/50". The items are situated atop a concrete slab, however, no secondary containment was present.

Situated along the northeast corner of the warehouse is a shipping container used as an employee break area. To the south is a small metal awning that covers a fuel tank and associated piping. A 500 gallon above ground storage tank and a fuel tote are located at the southeast corner of the warehouse. Several large boats are parked along the eastern side of the warehouse. West of the warehouse are two large canvas tents that are used for sandblasting vessels. Plastic sheets covered the gravel under the tents. A fuel tote was stored on a concrete slab inside one of the tents.

The northwest corner of the Property stores heavy equipment such as cranes and hydraulic lifts. Additionally, there are two shipping containers. The eastern portion of the Property houses several boats, trailers, electric lifts, metal parts and pieces, and wood products. The southern portion of the Property consists primarily of concrete slabs up to the edge of the waterway, but contains some gravel areas as well.

In the southeast corner of the Property is a metal ramp that extends into the marina. The north portion of the ramp is used as a pressure wash station that contains a catch basin that filters to the warehouse where the water is reused. Adjacent east of the wash station is an electric hoist and a small shed. Behind the shed is an *Aquip* stormwater filtration system that was implemented in 2012. According to the Property Owner, Mr. Carl Swindahl, the water is disposed of by *Clean*

Harbors approximately every five months.

The marina houses 50 covered slips and is accessible via dock in the southeast corner of the Property. There are no permanent live-on board residents.

Vehicular access onto the Property is provided by a driveway entrance on the south side of Marine View Drive.

As observed and notated by the Aerotech Environmental Assessor during the on Site Reconnaissance activities, there were no readily observed visual indicators of active underground storage tanks, stained soils, stressed vegetation, oily sheens, or discolorations on standing water surfaces. There was no evidence of foul odors. Additionally, the Site Reconnaissance did not reveal the presence of discarded drums, barrels, or containers, construction debris, damaged or discarded containers of chemicals, paints, or pesticides. There are no waste storage or treatment lagoons, pits, ponds, or surface impoundments on the Site, or the adjoining properties.

Site Interior Observations:

The contiguous office buildings comprise approximately 6,560 square feet and are configured with offices, a reception area, restrooms, and a conference room. An exterior staircase is located on the south side of the buildings.

The warehouse comprises approximately 19,136 square feet and houses the marine manufacturing and production operations. Within the warehouse is an electric crane that runs along the ceiling; a fork lift; steel tug boat parts, batteries, and other heavy machine equipment. The southeast corner of the warehouse is used for manufacturing fiberglass boats. Several 55 gallon drums labeled *Hydrex 100 33350-15* were stored along the wall next to an air compressor. Additionally, the warehouse contains an electrical room, an employee break area, a welding shop, and an approximately 1,530 square foot mezzanine used for storage. The warehouse contains concrete flooring. Product staining was observed during the Site Inspection.

The building along the southeast Property boundary comprises approximately 4,440 square feet and is divided into two sections. One side was used for spray applications and the other side was used for fabrication. The building contains concrete flooring. Metal shards were observed covering the floor in the fabrication area. Several five gallon buckets of *Pyrotek* vibration damping compound were stored on wooden pallets.

Sensitive Receptors

Sensitive receptors are those receptors that would be especially or adversely affected by a release of hazardous substances on the Property. Sensitive receptors would include: exposed soil, surface water bodies and watercourses (including streams, washes, lakes, drainage ditches, or swales), impoundments (including lagoons, recharge basins, and detention basins), swamps, or wetlands, on-site groundwater monitoring or production wells, on-site hospitals or health care facilities, child daycare facilities, or parks and natural reserves. No such receptors were observed on the subject Property.

The sensitive receptor in closest proximity is identified as the Hylebos Waterway to the southwest.

Wetland Area Indicators:

Potential wetland area indicators were considered during the on-site activities. These indicators include (i) wetland characteristic soil types; (ii) areas that appear permanently wet during most of the year; (iii) the presence of wetlands-related submergent or emergent plants; and (iv) wetland indicative wildlife. No such potential wetlands indicators were observed on the subject or adjoining properties.

Business Operations Description:

The subject Property was first developed sometime prior to 1940 with the construction of a residence and a garage or shed. Between 1960 and 1965, the residence was vacant. By 1969, the former structures were demolished and the present-day warehouse was constructed to occupy the ship building plant, *Tide Bay Inc.* By 1975, the Property occupied *Martinolich Ship Builders*. In 1980, a two-story office building and a dock marina were constructed. By then, the boat manufacturer, *Marine Technical Services*, occupied the Property. In 1985, a material storage shed was constructed. In 2013, an additional two-story office building was constructed onto the existing structure. The subject Property has occupied the steel and fiberglass marine boat manufacturer, *Modutech Marine Inc.*, since 1986 throughout to present-day.

This type of historical Property usage can be known and/or identified as the type of business usage that is in the classification of industries with a higher probability of environmental risk. This "higher risk" classification is based upon the SIC codes³ reported by the business as applicable to their operation. Had the Site operations been in the general category of business operations identified by the EPA as a higher risk industry, particular attention would have been paid to those activities that presented an elevated potential for environmental impact.

MATERIAL, PRODUCT, AND WASTE-STREAM HANDLING AND PROCESSING

Materials/Products Handling and Storage:

No improper storage of materials or products was observed at the Site. Reporting under the Spill Prevention, Control and Countermeasures program to address accidental chemical spills (40 CFR §§109-114) is not required. Additionally, no activities were observed that could be interpreted to be indicative of improper classification of waste material⁴.

Medical Waste Discharges:

For the purposes of this Assessment, medical waste is defined in the *Medical Waste Tracking Act* ("MWTa") 42 U.S.C. §§ 6992-92k, "as waste materials produced in the diagnosis, treatment, or immunization of human beings or animals, in research pertaining thereto, or in the production or testing of biologicals. Specifically covered are cultures and stocks of infectious agents and associated biologicals, human pathological wastes, human blood and blood products, sharps (both

used and unused), animal waste, and isolation waste." For the purposes of this Assessment, bloodborne pathogen waste material is defined in paragraph (b) of the *Occupational Exposure to Bloodborne Pathogens; Final Rule*, 29 CFR § 1910.1030 as "blood" and "other potentially infectious materials." No improper medical waste storage or discharge was observed.

Storage Tanks - Above and Below Ground:

During the course of on-site activities, particular attention was directed toward indicators of above or below ground storage tanks, including (i) fill pipes, overflow pipes, vent pipes; (ii) areas of abnormal or heavy staining; (iii) man ways, manholes, or access covers; (iv) abandoned concrete saddles or gravity racks; (v) abandoned pumping equipment or gasoline pumps; (vi) concrete pads not homogeneous with surrounding surfaces; (vii) concrete build-up areas potentially pump islands or non-homogeneous patching; or (viii) new fill areas or piles of fill.

There are two above ground storage tanks and associated piping located along the southeast side of the warehouse; one 500 gallon tank and one smaller sized tank. Additionally, there are several plastic fuel totes; the totes did not have any secondary containment. Since they are plastic, they have the potential to crack or leak over time. As a housekeeping recommendation, Aerotech recommends the fuel totes have secondary containment to address cracks and product leakage.

Secondary Underground Storage Tank Indicators:

In addition to the primary UST visual indicators usually observed on the exterior of the property, secondary UST indicators were considered. These secondary – and usually interior – indicators included (i) interior product feed lines; (ii) remote tank fuel level gauges connected via flex tubes; (iii) unexplained pipe access routes through exterior walls; (iv) areas of surficial staining; (v) furnace or boiler identification labels; or (vi) visual indicators of burner unit changeover. No secondary UST indicators were observed during the on-site investigation.

Waste Stream Processing and Disposal:

During the on-site observations, particular attention was directed toward activities or situations that could be considered contamination indicators by a regulated substance⁵. Potential indicators of contamination or violation can include: (1) stained or discolored sinks, drains, catch basins, drip pads, or sumps; (2) spills around loading docks, fueling areas, catch basins, or surface drains; (3) waste disposal areas, dumpsters, and other storage containers--evidence of spills or staining should be recorded; (4) pipes, gutters, spouts, or tubes protruding into potential bodies of water; or (5) waste stored on-site over 90 days that may require a RCRA Part B permit. No areas of potential concern were observed.

In the southeast corner of the Property is a metal ramp that extends into the marina. The north portion of the ramp is used as a pressure wash station that contains a catch basin that filters to the warehouse where the water is recycled.

Hazardous Waste Processing and Disposal:

In addition to solid waste disposal⁶, the on-site observations considered the potential existence of hazardous waste, defined as a solid waste which, due to quantity, concentration, or other characteristics, may cause an increase in mortality or illness, or may pose a hazard to human health or the environment, under RCRA 42 USC §6903(5). The Assessor did not observe any improper waste processing or disposal activities at the Site.

The subject Property is identified as a Large Quantity Hazardous Waste Generator for the years 1993 and 1994, and a Conditionally Exempt Small Quantity Generator for the years 2010 through 2012. During that time, seven violations were reported by the Department of Ecology. The violations were followed by on Site Compliance Evaluation Inspections. In each instance, *Modutech* submitted documentation including photographs demonstrating compliance.

According to the Property Owner, Mr. Carl Swindahl, the primary hazardous waste generated at the Property is fiberglass waste paint. *Safety Clean* picks up and disposes of the hazardous waste when appropriate. The subject Property has not generated hazardous waste in recent years.

Wastewater, Storm Water Discharges:

All point source discharges regulated by the Clean Water Act (“CWA”) are subject to the applicable water quality-based standards as established in the National Pollutant Discharge Elimination System (“NPDES”) codification 40 CFR Subpart D §131.36. Additionally, CWA Sections 402 (p)(1) and (p)(2) have created categories of storm water discharges within Permit Issuance and Permit Compliance Deadlines for Phase I Storm water Discharges effective October 1, 1993, that may also be applicable to the subject Property (as detailed in the Federal Register, Volume 57, Number 244). Any significant change in the usage of the subject Property could require the submittal of an NPDES initial storm water discharge permit under 40 CFR §122.26 or 40 CFR Chapter I - Preamble Appendix A.

The subject Property was issued NPDES permit No. WAG-031016 on August 8, 2016. This coverage is valid through July 31, 2021. Permit requirements include: testing for biochemical oxygen demand (“BOD”), nitrate and nitrite as Nitrogen, and fecal coliform once between the months of November and December; testing for total lead, copper, and zinc during the months of January, April, May, October, and November. Additionally, if an oil sheen is visible, a sample must be collected once per week.

An *Aquip* stormwater filtration system is located along the waterway in the southeast corner of the Property. According to the Property Owner, Mr. Carl Swindahl, the system was implemented in 2012 and is tested five times per year. The water is picked up and disposed of by *Clean Harbors* approximately every five months.

A copy of the most recent testing was provided by the Property Owner, Mr. Carl Swindahl, for review. The stormwater was sampled on January 5, 2018, and tested on January 12, 2018, by *Spectra Laboratories* in Tacoma. The sample was analyzed for copper, lead, and zinc, under EPA Method 200.8. All three metals were significantly under the benchmark values.

VISUAL AND PHYSICAL OBSERVATIONS AND INFORMATION: ADJACENT AND ADJOINING PROPERTIES

For the Scope of this Assessment, properties are defined and categorized based upon their physical proximity to the subject Property. An *adjacent* property is any real property located within 0.25 mile of the subject Property's border. An *adjoining* property is any real property whose border is contiguous or partially contiguous with the subject Property, or that would be if the properties were not separated by a roadway, street, public thoroughfare, river, or stream.

Adjacent Properties Overview:

The subject Property is located in an industrially dominated area. To the north is Marine View Drive (Highway 509) followed by a steep bluff. To the south is the Hylebos Waterway. To the east is a storage yard. To the west is the Hylebos Waterway.

Adjoining Properties Description:

Limited visual observation of the adjoining properties was performed by the Assessor. There were no observed materials or storage practices or other visual indicators of potential environmental impact on the adjoining properties which could affect the subject Property.

Adjoining Property - north:	To the north is Marine View Drive (Highway 509) followed by a steep bluff.
Adjoining Property - south:	To the south is the Hylebos Waterway.
Adjoining Property - east:	To the east is a storage yard.
Adjoining Property - west:	To the west is the Hylebos Waterway.

Adjoining and adjacent properties and landmarks include Marine View Drive (Highway 509) adjoining to the north; the Hylebos Waterway to the south; Norpoint Way Northeast adjacent to the north; Interstate Five approximately 2½ miles south; Highway 167 approximately three miles south; Interstate 705 approximately three miles southwest; Highway 7 approximately four miles southwest; and Highway 16 approximately five miles southwest. Significant bodies of water include Commencement Bay approximately two miles northwest.

POTENTIAL ON-SITE CONTAMINATION SOURCES

Current Business Operations:

The Site is occupied by the fiberglass and steel marine craft manufacturer, *Modutech Marine*,

Inc. Based upon the on-site Reconnaissance, this type of occupancy can be known to environmentally impact the subject Property.

Presumed Asbestos-Containing Building Materials:

During the on-site investigation presumed asbestos-containing materials were observed, including but not limited to gypsum wall and ceiling surfacing materials, acoustic ceiling tiles, thermal insulation, floor tiles and associated mastic, and roofing materials. As defined in NESHAP §61.141, the observed materials may be classified as suspect regulated asbestos-containing materials. As defined in application OSHA regulations, the observed materials may also be classified as Presumed Asbestos-Containing Materials (“PACM”). Federal regulation requires that prior to demolition, renovation, or any other activity that may disturb these materials, either an inspection should be performed by an accredited building inspector or the materials should be handled as asbestos-containing. Moreover, the Site owner and operator should comply with the applicable regulations pursuant to the designation of PACM. Based upon the age of the building, the presence of asbestos is possible in the warehouse.

Formaldehyde:

Formaldehyde is an extremely popular chemical used in a variety of both building materials and furnishing products. Currently national usage is estimated in the billions of pounds per year. EPA has now classified formaldehyde as a "probable human carcinogen" suspected of inducing cancer in humans. Studies have shown that after installation, indoor formaldehyde levels require years of decline and reach residual background levels. During the off-gassing process, the indoor levels can be a significant source of irritation to hypersensitive individuals. The formaldehyde product investigated within the scope of this Assessment is urea-formaldehyde foam insulation (“UFFI”), used in the 1970's primarily as wall cavity insulation. The release potential of UFFI from wall cavities is dependent upon factors such as; water-damaged walls, unpainted wall surfaces, or cracked paint or wall covering. While interior air sampling and analysis is the only conclusive method to delineate formaldehyde concentrations, visual and physical inspection of the subject Property indicate a virtually non-existent potential for UFFI contamination.

Lead-Based Paint:

In 1978 the Federal Government banned the use of lead-based paint in residential applications, however use in general industry continued at a decreased rate to the present. Lead-based paint presents a hazard through inhalation or ingestion of paint chips or vapor fumes. The greatest cumulative health threat is to young children, and for this reason the Department of Housing and Urban Development (“HUD”) has promulgated lead standards and survey requirements for buildings affected by HUD funding. This HUD regulation represents the only Federal requirement for lead-based paint management applicable to privately owned structures. Based upon the age of construction, the presence of lead-based paint is possible in the warehouse.

Lead-Based Paint Disclosure:

The *Lead-Based Paint Hazard Reduction Disclosure Act*⁷ is effective as of December 6, 1996. The Act applies, with limited exceptions, to all residential dwellings built before January 1, 1978⁸. The Act defines lead-based paint as "paint or other surface coatings that contain lead equal to or in excess of 1.0 milligrams per square centimeter or 0.5% by weight⁹." Under the Act, (i) sellers and lessors of most residential housing built before 1978 must disclose the presence of known lead-based paint and/or lead-based paint hazards in the housing; (ii) sellers and lessors must provide purchasers and lessees with any available records or reports pertaining to the presence of lead-based paint and/or lead-based paint hazards; (iii) sellers and lessors must provide purchasers and lessees with a federally approved lead hazard information pamphlet¹⁰; (iv) sellers must provide purchasers with a ten day opportunity to conduct a risk assessment or inspection for the presence of lead-based paint and/or lead-based paint hazards before the purchaser is obligated under the contract; (v) sales and leasing contracts must include certain disclosure and acknowledgment language; and (vi) agents must ensure compliance with these requirements. The determination of the applicability of the *Disclosure Act* to the subject Property is outside the Scope of this Assessment.

Lead-Based Paint OSHA §1926.62 Regulations:

During the Site observations, no suspected lead-based paint ("LBP") surfaces were identified, with paint in poor or delaminated condition. As defined in the OSHA *Lead Standard in Construction and General Industry*, and applicable State regulations, prior to any other activity that may disturb these suspect surfaces, either an inspection should be performed by an appropriately qualified Inspector, or the materials should be handled as lead-containing. Additionally, as required by 29 CFR §1926.62, (i) a limited response action should be initiated where necessary, and (ii) potentially impacted employees and occupants should be provided training.

PCB-Containing Exterior Electrical Transformers:

The Assessor did not observed any leaking pole-mounted electrical transformers on the subject Property. All transformers are owned by the utility company, and not the responsibility of the Property owner.

Micro Biological Contaminants:

The presence of micro biological organisms and their byproducts is ubiquitous throughout the indoor and outdoor environments. Mold, also known as fungi, are a species of micro biological organisms can detrimentally effect buildings via the presence of their spores, off gassing, and airborne suspension of the organisms themselves. In the presence of both excess moisture and a nutrient supply, molds can grow rapidly to produce larger colonies with potentially adverse consequences.

While it is generally accepted that in particular environments, molds can be allergenic, and occasionally infectious or toxic, there is both no clear scientific evidence to support the conclusions

that the mere presence of micro organisms is in itself a recognized environmental condition, or that any threshold level exists of airborne organisms or byproducts above which a negative impact to human health will likely result ¹¹. In particular, the U.S. EPA has stated “no EPA or other federal limits have been set for mold or mold spores...”¹²

In spite of the lack of scientific data – in response to the growing public concern over the potential adverse health effects of mold exposure – a variety of public agencies and regulatory authorities have published recommendations and guidelines for the assessment and remediation of mold. In recognition of both the increased public awareness and scientific limitations regarding mold, the observations conducted on Site attempted to identify clearly known indicators of potential micro biological impact.

These readily observable indicators typically include: (i) obvious visual indications of micro biological organism growth in readily accessible areas; (ii) indicators of extensive or continued water intrusion or severe staining; (iii) secondary indicators such as smells and odors; and (iv) information obtained from the Key Site Manager and other knowledgeable personnel. Since the majority of micro biological growth tends to occur in enclosed, covered, and otherwise inaccessible building and interstitial spaces, the likelihood that micro organisms would not be observed even though present, is possible. As such, even though no readily visible observations or indicators of micro biological impact were observed during the Site visit, a micro biologically-based problem could be present at the Site, even though not observed. However, the Site observations did not reveal the obvious potential presence of microbial impact.

Radon:

Radon is emitted by the natural breakdown and radioactive decay of uranium in rocks and soils, which then enters buildings through cracks in the foundation, sump pumps, areas around drainage pipes and other openings. In addition, radon may enter a structure as a water contaminant, natural gas contaminant, or off-gas by-product of building materials. Once inside an enclosed space, radon can accumulate. No visual estimation technique exists that accurately predicts the potential radon risk within a building.

The radon risk is a function of site location, soils composition, building construction, foundation integrity, and previous landfill practices. Actual physical testing of a building is the only way to accurately determine the radon levels. Radon health risks can be controlled by recognizing the potential for a problem, by testing and by reduction of radon levels in the building. In response to the unknown health risks of radon, the US EPA conducted a radon survey that attempted to generalize the radon health risks by county. The EPA Radon Study has identified Pierce County, Washington, as a Radon Zone 3; the anticipated generalized level of Site radon is less than 2 pCi/L. Therefore, due to this specific usage, further investigation is not indicated at this time.

Vapor Intrusion:

The term “Vapor Intrusion” (“VI”) means the presence of likely presence of any chemicals of concern in the indoor air environment of existing or planned structures on a Property caused by the release of vapor from contaminated soils or groundwater on the Property, or within close

proximity to the Property, at a concentration that presents or may present an unacceptable health risk to occupants. The term is not intended to include de minimis conditions that do not normally represent an unacceptable health risk to occupants and that generally would not be subject of an enforcement action if brought to the attention of appropriate governmental agencies. Such a condition is not a vapor intrusion condition. In order to determine the presence of Vapor Intrusion condition, this Assessment has taken into consideration the ASTM (formerly the American Society of Testing and Materials) Standard Practice No. E2600-08, *Assessment of Vapor Intrusion into Structures on Property Involved in Real Estate Transactions*, approved by the ASTM Committee E50 on Environmental Assessment in March of 2008.

The ASTM Vapor Intrusion Standard Practice is a reasonably conservative screening process that relies upon information collected as part of the Phase I process, and gradually progresses towards a more complex and involved assessment involving the generation and use of Site specific data. If a Vapor Intrusion Condition (“VIC”) is found to exist, the ASTM Practice describes the general mitigation alternatives. The VI Assessment is a four-tiered process: the first two tiers assess the potential for a VIC to exist, and if there is potential, the third tier is designed to provide confirmation that the VIC does in fact exist, or to reduce the level of uncertainty. The fourth tier provides general mitigation alternatives to address either a potential or existing VIC.

The Tier 1 Screening Process includes: (1) determination if there are any known or suspected contaminated sites in the Area of Concern; (2) for those known or suspected contaminated sites in the Area of Concern, determination of whether or not Chemicals of Concern may be present; and (3) if Chemicals of Concern in the Contaminated Plume may be present within the nearest edge of the subject Property⁸. This Phase I Assessment has relied upon the general ASTM VI Standard Practice for a Tier 1 Screen, modified by known Site and area-wide subsurface conditions; migration characteristics of Contaminants of Concern⁹; revision of the Appropriate Minimum Search Distance of Surrounding Properties and Up-Gradient Only Properties; and distance between Contaminated Plume and the subject Property.

This Assessment has not identified the presence of a Contaminated Plume within the ASTM specific distance as delineated in E 2600-08 §§ 8.5.1 - 8.5.3. As such, no further investigation relative to potential Vapor Intrusion Conditions.

⁸ If the linear distance from the nearest edge of a Contaminated Plume to the nearest structure on the subject Property – or to the subject Property boundary if there are no structures on the subject Property – is less than 100 feet, then the condition is considered to be a potential VIC. If the Chemicals of Concern are dissolved petroleum hydrocarbons, the distance must be less than 30 feet in order for a potential VIC to exist. (For additional information, refer to the ASTM E 2600-08, § 8.5.2.

⁹ As delineated in the ASTM VI Standard Practice, petroleum hydrocarbons are distinguished from other Chemicals of Concern because petroleum hydrocarbons often undergo significant biodegradation in the vadose zone in the presence of oxygen – minimum five percent in the vadose zone soil gas.

POTENTIAL ON-SITE HISTORICAL CONTAMINATION SOURCES

The Historical Usage Information research activities included a review of Standard Historical Sources, including but not limited to: (i) aerial photographs, (ii) fire insurance maps, (iii) property tax files, (iv) recorded land title records, (v) United States Geological Services topographical maps, (vi) local street directories, (vii) building department records, (viii) zoning or land use records, and (ix) other historical sources¹⁰. The historical information contained in this Section may also include reviews of applicable Agency records, files, and database information.

Historical Site Operations Recognized Conditions:

As defined under the ASTM Phase I Standard Practice, a Historical Recognized Environmental Condition is an environmental condition which in the past would have been considered a Recognized Environmental Condition – but which may or may not be considered a Recognized Environmental Condition currently. The final determination will be influenced by the current impact of the Historical Recognized Environmental Condition (“HREC”) on the property. For example, if a past release of any hazardous substances or petroleum products has occurred in connection with the property and has been remediated, with such remediation accepted by the responsible regulatory agency, this condition shall be considered an HREC.

Additionally, trade practice occasionally identifies Controlled Recognized Environmental Conditions, which can be defined as a Recognized Environmental Condition which involves the past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory agency, subject to restrictions or conditions of use or implementation of activity and use limitations on the Property.

The prior Site activities and agency interactions, as defined above, do not represent such a Historical Recognized Environmental Condition or Controlled Recognized Environmental Condition. Had such been present, additional investigation in that regard would have been performed.

Regulatory Agency Records Information:

Where indicated, a review was conducted of the authoritative controlling agencies that previously interacted with the subject Property in a manner that indicated the presence of a potential environmental issue or Recognized Environmental Condition.

¹⁰ As defined in the *ASTM Standard Practice for Environmental Site Assessments E1527-13* (§ 8.3.4.9), “other historical sources” can include: miscellaneous maps, newspaper archives, internet sites, community organizations, local libraries, historical societies, current owners or occupants of neighboring properties, or records and files of the Property Owner or occupants.

Commencement Bay Near Shore/Tideflats National Priorities Listing:

The subject Property is located within the National Priorities List (“NPL”) and the EPA’s Comprehensive Environmental Response, Compensation, and Liability Information System (“CERCLIS”) zone identified as the Commencement Bay Near Shore/Tideflats. The properties along the Hylebos Waterway are located within the Tideflats portion of the site.

According to a review of related files by the *Riley Group*, the Department of Ecology performed limited near-surface soil sampling in 1989 and 1991. Two soil samples collected from the southeast corner of the Site in 1989 contained concentrations of carcinogenic polycyclic aromatic hydrocarbons (“cPAHs”) above the Model Toxics Control Act (“MTCA”) Method A soil cleanup level for Unrestricted Land Use, but below the Method A soil cleanup level for Industrial Properties. Four soil samples collected from the Site in 1991 contained arsenic, cadmium, lead, and cPAHs above the MTCA Method A cleanup level for Industrial Properties. Sample MOD3 reportedly contained “auto fluff” and was found to have an elevated concentration of polychlorinated biPhenyls (“PCBs”) but was below the MTCA Industrial cleanup level.

Between 1989 and 1995, the Department of Ecology inspected the Site and recommended containing sandblast grit at the Site for off-site disposal, installing a berm around the hazardous waste storage area, removing paint waste from the ramp area, discontinuing boat painting operations in the ramp area, and installing a wash water recycle system. In 1993, Ecology staff observed that the bulk of the sandblast grit material had been removed. According to an interview conducted by the *Riley Group* with then Ecology Manager, Ms. Joyce Mercuri, Ecology’s goal at the time was to remove sources of pollution from the Hylebos Waterway uplands and thus confirmation soil sampling was not requested following removal at the Site. However, confirmation sampling would be required in order to be compliant with the Model Toxics Control Act.

On September 18, 2003, the Environmental Protection Agency (“EPA”) entered into a formal consent decree agreement with Potentially Responsible Parties (“PRPs”) along the Hylebos Waterway. In 2009, Mr. Swindahl provided the *Riley Group, Inc* with copies of three letters documenting the Property Owner’s and *Modutech Marine Inc*’s settlement of liability with the EPA. These letters can be found in the Appendix of the 2009 Phase I Assessment completed by the *Riley Group, Inc*. (RGI Project No. 2009-236, Pages 8 and 9).

ERTS 504431, 1999:

On June 2, 1999, a diesel fuel spill was reported to the Department of Ecology. It was estimated that approximately 200 gallons of diesel fuel had been spilled on Site. Additional information about response or cleanup activities was not available.

Focused Phase II Subsurface Investigation, 2009:

In the fall of 2009, the *Riley Group, Inc* performed a Focused Phase II Investigation at the request of the Client, Ms. Carol Duris, of Viking Bank.

On October 21, 2009, the *Riley Group* advanced four test probes to a maximum of 6 feet below ground surface. Test probes were advanced at locations where elevated concentrations of

specified contaminants of concern were previously intercepted. A total of 8 discrete soil samples were collected. Samples were screened for volatile organic compounds (“VOCs”) using a photo ionization detector (“PID”). No elevated PID field screening results were noted. At the Client’s request, groundwater sampling was excluded from the scope of work.

According to the report, “select soil samples were submitted for laboratory analyses of Client-specified contaminants of concern”. Analytical laboratory data were compared to Model Toxics Control Act (“MTCA”) Method A for Unrestricted Land Use. Soil samples were analyzed for: carcinogenic polycyclic aromatic hydrocarbons (“cPAHs”), polychlorinated biPhenyls (“PCBs”), and MTCA Regulated Metals. No PAHs, PCBs, arsenic, cadmium, lead, or silver were detected in the samples. Chromium concentrations of 6 mg/kg and 14 mg/kg were detected within expected natural background thresholds and below MTCA Method A cleanup levels for Unrestricted Land Use. (RGI Project No. 2009-236b, Pages 2 through 4).

The Model Toxics Control Act requires confirmation sampling to confirm that remedial efforts have been successful at a Site. Based on the information provided, confirmatory sampling has not been completed at the subject Property. The *Riley Group’s* Focused Phase II Subsurface Investigation does not constitute confirmation sampling as four test probe locations are not sufficient in defining the extent of the former sandblast grit area previously identified by the Department of Ecology in 1992. Due to the lack of confirmatory sampling, Further Action is Recommended.

Activity and Use Limitations:

Activity and Use Limitations (“AUL”) include both legal and physical or engineering controls that may be required by an authoritative agency. Agencies, organizations, and jurisdictions may define or utilize these terms differently. An AUL is often recorded in land title records. AUL information may often be recorded in the restrictions of record on the title, rather than a within the chain of title.

The historical research and review has not encountered an Activity or Use Limitation that is applicable to the subject Property.

POTENTIAL OFF-SITE CONTAMINATION: SOURCES AND RECEPTORS

An adjacent property is defined as any real property located within 0.25 mile of the subject Property's border. An *adjoining property* is defined as any real property whose border is contiguous or partially contiguous with the subject Property, or that would be if the properties were not separated by a roadway, street, public thoroughfare, river, or stream.

Potential Adjacent and Adjoining Property Contamination Sources:

The northwest adjoining site, with the address: Right of Way 2222 Marine View Drive, is a paved right of way housing pump station No. 4301. This pump station is part of a sewer crossing system that extends under the Hylebos Waterway and connects to pump station No. 4102. A Geotechnical Report submitted by *Landau Associates*, dated October 26, 2006, was prepared for the proposed Hylebos Waterway Sewer Crossing and Pump Station Upgrades. Field investigations

included six subsurface soil borings and characterization of groundwater conditions. Groundwater samples were collected from two of the soil borings, B-1 and B-4P, on March 29 and March 30, 2006. A petroleum hydrocarbon sheen was observed during collection of the B-1 groundwater sample. The soil and groundwater samples were analyzed for total petroleum hydrocarbons ("TPH") and total metals (arsenic, copper, lead, mercury, and zinc). While the soil samples did not contain any contaminants above the Model Toxics Control Act Method A cleanup levels, heavy oil and copper were detected above cleanup levels in the groundwater samples.

On July 12, 2007, the City of Tacoma notified the Washington State Department of Ecology of the findings within the Geotechnical Report. In 2011, the site was placed on the Hazardous Sites List and given a rank of five on a scale of one (1) to five (5), where one represents the highest level of concern. At that time, no measures had been taken to remediate the contamination and upgrade the sewer pipeline. The current site status is listed as Awaiting Cleanup. Due to the close proximity and known presence of petroleum products and copper concentrations above the Model Toxics Control Act cleanup levels in the groundwater, this site has the potential to environmentally impact the subject Property.

Potential Adjacent and Adjoining Property Contamination Receptors:

Environmentally sensitive receptors were investigated within a thousand feet of the borders of the subject Property. The sensitive receptors are materials or structures particularly susceptible to environmental damage or stress from migrating contamination. The major receptor groups investigated were water supplies, surface water bodies, residential structures, and other public receptors. During the course of on-site visual and physical inspection, no indicators of sensitive receptor contamination from the subject Property were observed.

ENVIRONMENTAL DATABASE INFORMATION

Environmental database information was prepared and supplied by third-party vendor Environmental Data Resources, Inc. A search of all readily available environmental records was conducted to assist in compliance with the requirements of the U.S. Environmental Protection Agency regulatory requirements for *All Appropriate Inquiry* (see, 40 CFR Part 312) and the ASTM¹¹ Standard Practice for Environmental Site Assessments (E 1527-13 for Phase I Site Assessments, and E 1528-14 for Transaction Screen Site Assessments).

Review of Federally Reported Environmental Data:

The following Federally maintained environmental records were reviewed for the purposes of this Environmental Site Assessment. All of the records have been updated within 90 days from the date the controlling governmental agency made the information available to the public in an electronic format.

¹¹ Formerly known as the American Society for Testing and Materials.

National Priorities List (“NPL”) of Superfund Sites:

The NPL is the EPA's database of hazardous waste sites currently identified and targeted for priority cleanup action under the Superfund program. A search of the December 2017 National Priorities List revealed no Superfund sites within one site within one mile of the subject Property.

Superfund Enterprise Management System (“SEMS”) of 1980:

Mandated as part of the 1980 Superfund Act, the CERCLIS (Comprehensive Environmental Response, Compensation and Liability Information System) list is an EPA compilation of the sites investigated or currently being investigated for a release or potential release of a regulated hazardous substance under the CERCLA regulations. In 2015, the list was renamed as the Superfund Enterprise Management System (“SEMS”). A search of the July 2017 environmental database revealed no SEMS sites within one-eighth mile, three SEMS sites within one-quarter mile, and three sites within one-half mile of the subject Property.

The SEMS site in closest proximity is identified as *Tacoma Port of*, located on the southwest side of the Hylebos Waterway, approximately one-eighth mile south/southwest of the subject Property. Historically, the site occupied *Murray Pacific Corporation* that operated as a log sorting and processing facility. Between 1967 and 1985, log sorting operations used *Asarco* copper smelting “slag” to help support the weight of the heavy log sorting machinery. Other site operations included bark sorting and processing; and one underground storage tank (“UST”) was reportedly removed from the site. The site is located within the Commencement Bay Nearshore/Tideflats Superfund Site and was placed on the National Priorities List (“NPL”) in 1991. Following remedial activities for priority metal pollutants including arsenic, copper, lead, and zinc, and petroleum diesel confirmed to be in the groundwater, surface water, and soil, the site received a No Further Action determination by the Department of Ecology on August 15, 1997. Due to the elevation and presence of the Hylebos Waterway, this site is not reasonably anticipated to environmentally impact the subject Property.

Resource Conservation and Recovery Act (“RCRA”) Facilities:

The RCRA program identifies and tracks hazardous waste from generation source to the point of ultimate disposal. The RCRA facilities database is the composite of reporting facilities that generate, store, transport, treat, or dispose of controlled or hazardous waste. A search of the September 2017 RCRA facilities database revealed no RCRA sites within one-eighth mile and one site within one-quarter mile of the subject Property.

The subject Property is identified as a RCRA site. For additional information, refer to Page 30.

Review of State of Washington Reported Environmental Data:

This review of the existing compilation of the State environmental databases attempts to identify environment problem sites, activities, and occurrences from the records and reports of the applicable State Agencies. A detailed listing is included in the Appendix.

State of Washington - Registered Underground Storage Tank ("UST") Sites:

Underground Storage Tanks are regulated under Subtitle I of RCRA and must be registered with the appropriate State agency. The State of Washington requires registration through the Department of Ecology. A search of the November 2017 State UST database revealed one UST site within one-eighth mile and two sites within one-quarter mile of the subject Property.

The UST site in closest proximity is identified as *WA DOT B25*, located approximately one-eighth mile east of the subject Property. This site formerly occupied *Woodworth & Co Inc Hylebos* that operated four USTs that have reportedly been removed. The site is currently vacant land at the base of the bluff. To date, a petroleum release has not been reported to the Department of Ecology. Due to the groundwater flow direction and current regulatory status, this site is not reasonably anticipated to environmentally impact the subject Property.

State of Washington - Leaking Underground Storage Tank ("LUST") Incident Location Sites:

Underground Storage Tank incident releases are regulated under RCRA and must be reported within 48 hours to the State of Washington Department of Ecology. The Agency maintains a database of all reported LUST incident sites. A search of the November 2017 State LUST database revealed no LUST sites within one-eighth mile, no sites within one-quarter mile, and three sites within one-half mile of the subject Property.

The LUST site in closest proximity is identified as *Reichold Chemical*, located approximately one-quarter mile south/southwest of the subject Property. Historically, this site is part of a nine acre parcel owned by *USG* and operated as a mineral fiber production plant between 1959 to 1996. In 1996, *Thermafiber* bought the property and operated the plant throughout until 2002. The production of rock wool (an insulating and fire proofing material) is the source of site contamination. The current site status is listed as Awaiting Cleanup for metals, petroleum products, phenolic compounds, non-halogenated solvents, halogenated organics, and

dioxin/dibenzofuran compounds confirmed to be in the soil and groundwater above the Model Toxics Control Act cleanup levels. Due to the elevation and presence of the Hylebos Waterway, this site is not reasonably anticipated to environmentally impact the subject Property.

State of Washington - Confirmed and Suspected Contaminated (“CSCSL”) Sites:

The State Confirmed and Suspected Contaminated (“CSCSL”) Sites are the sites identified by the State of Washington Department of Ecology, as either confirmed or suspected, or have been confirmed as potential hazardous waste locations. Due to the wide range of included sites, the CSCSL listing should not be interpreted as a “State Superfund” sites listing. A search of the October 2017 database revealed one CSCSL site within one-eighth mile, one site within one-quarter mile, nine sites within one-half mile, and seventeen sites within one mile of the subject Property.

The CSCSL site in closest proximity is identified as *Pump STN 4103 ROW 2222 Marine View DR*, adjoining the subject Property to the northwest. This site is discussed in detail on Pages 38 and 39.

State of Washington Voluntary Cleanup (“VCP”) Sites:

The State of Washington Department of Ecology has received remedial action reports from site owners and operators for Response action that were conducted without Department approval or oversight, not under the requirements of an order or decree. A search of the October 2017 State VCP database revealed no VCP sites within one-eighth mile, no sites within one-quarter mile, and three sites within one-half mile of the subject Property.

The VCP site in closest proximity is identified as *Trident Metals*, located approximately one-quarter mile west/southwest of the subject Property. Between 1913 and 2003, the property housed *Buffelen Wood Working Door Factory*. *Trident Metals* then used the site for metals recycling until closure in 2011. The property is currently vacant land. In February of 2011, the site was placed on the Hazardous Sites List and given a rank of one, on a scale of one (1) to five (5), where one represents the highest level of concern. The site was found to have metals priority pollutants, non-halogenated solvents, petroleum products, and polychlorinated bi-Phenyls (“PCBs”) in the groundwater and soil. In 2012, approximately 318 cubic yards of petroleum contaminated soils was excavated from under the concrete slab where hazardous materials were previously stored. Following the excavation, the was issued a No Further Action determination by the Department of Ecology on April 21, 2014. Due to the elevation and presence of the Hylebos Waterway, this site is not reasonably anticipated to environmentally impact the subject Property.

State of Washington Waste Landfill Facilities:

The State Solid Waste Landfill Facilities ("LF") listing is the sites identified by the State of Washington Department of Ecology, Waste Management Division, as either currently operating or previously identified as a solid waste landfill. This classification can be a result of either RCRA Part B permitting or prior identification by the Board. A search of the December 2017 database revealed no SWLF sites within one-eighth mile, one site within one-quarter mile, and three sites within one-half mile of the subject Property.

The SWLF site in closest proximity is identified as *Schnitzer Steel*, located approximately one-quarter mile southeast of the subject Property. Historically, the site occupied the metal recycling facility, *General Metals of Tacoma* ("GMT"), from 1965 to 1995. Between 1965 and 1981, the site was used to stage logs and load timber for export in addition to the recycling of ferrous and non-ferrous materials. The operation is now run by *Schnitzer Steel Industries, Inc.* Previous site investigations identified heavy metals (including arsenic, copper, lead, and zinc) and polychlorinated biphenyls ("PCBs") contamination in the soil, surface water, and shallow groundwater. The facility operated three underground storage tanks ("USTs") that have reportedly been closed in place. In 1990, the property was placed on the Hazardous Sites List and given a rank of one, on a scale of one (1) to five (5), where one represents the highest level of concern. The site was remediated in 1991, however, some metal concentrations remain in the soil. The site is capped and a stormwater collection and treatment system is in place. According to the most recent groundwater monitoring report in June of 2015, groundwater has generally improved and the asphalt cap appears to be in good condition. Due to the current regulatory status, distance, and groundwater flow direction, this site is not reasonably anticipated to environmentally impact the subject Property.

Approximate Database Search Range:

The above referenced Federal and State databases were reviewed for an appropriate search distance from the subject Property borders approximating the following radius:

Federal Database/Search Range:

- National Priorities List (NPL) of Superfund Sites/1.0 mile

STATEMENT OF THE ENVIRONMENTAL PROFESSIONAL

Statement of Quality Assurance

I have performed this Assessment in accordance with generally accepted environmental practices and procedures, as of the date of this Report. I have employed the degree of care and skill ordinarily exercised under similar circumstances by reputable environmental technologists practicing in this area. The conclusions contained within this Assessment are based upon site conditions I observed or were reasonably ascertainable and present at the time of my inspection.

The objective of this Environmental Site Assessment was to ascertain the potential presence or absence of environmental releases or threatened releases that could impact the subject Property, as delineated by the Scope of Work. The Scope of this Assessment does not purport to encompass every report, record, or other form of documentation relevant to the Property being evaluated. Additionally, this Assessment does not include or address reasonably ascertainable Environmental Liens currently recorded against the Property.

The procedure was to perform reasonable steps in accordance with the existing regulations, currently available technology, and generally accepted engineering practices in order to accomplish the stated objective.

The conclusions and recommendations stated in this Report are based upon personal observations made by myself and other employees of Aerotech, and also upon information provided by others. I have no reason to suspect or believe that the information provided is inaccurate.

Signature of Environmental Assessor - Devin Melville:

Statement of Regulatory Compliance

I have performed this Assessment in compliance with requirements set forth in the *Standards and Practices for All Appropriate Inquiries; Final Rule* ("AAI"); U.S. EPA, 40 CFR Part 312, 70 FR 66070, November 1, 2005.

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in § 312.10 of this part. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject Property. I have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Environmental Assessment Report Limitations:

The enclosed Phase I Environmental Site Assessment has been performed for the exclusive use of the Client(s) for the transaction at issue concerning:

SWINDAHL PROPERTIES

2218 Marine View Drive
Tacoma, Washington 98422

This Assessment has been performed in accordance with generally accepted environmental practices and procedures, as of the date of the Report. All services have been performed employing that degree of care and skill ordinarily exercised under similar circumstances by reputable environmental technologists practicing in this, or similar localities. No other warranty or guarantee, expressed or implied, is made or offered.

The conclusions and recommendations stated in this Report are based upon observations made by employees of Aerotech Environmental Consulting, Inc. and also upon information provided by others. We have no reason to suspect or believe that the information provided is inaccurate. However, we cannot be held responsible for the accuracy of the information provided to us by others. The Scope of this Assessment does not purport to encompass every report, record, or other form of documentation relevant to the Property being evaluated.

This Assessment does not include or address reasonably ascertainable Environmental Liens currently recorded against the subject Property.

The observations contained within this Assessment are based upon site conditions readily visible and present at the time of our Site inspection. These site observations are unable to specifically address conditions of subsurface soil, groundwater, or underground storage tanks, unless specifically mentioned. This Phase I Environmental Site Assessment does not attempt to address the past or forecast the future Site conditions.

REFERENCES AND CITATIONS

1. For the purposes of this Assessment, information is considered reasonably ascertainable if it is (1) publicly available, (2) obtainable from its source within reasonable time and cost constraints, and (3) practically reviewable. The length of time required to obtain information from the City Building and Zoning Department is considered to be reasonable.

2. It is a violation of copyright law to photocopy Sanborn Maps regardless of their location or source. This includes maps located at local libraries, universities, historical societies, or private collections. Sanborn Maps contained on microfiche collections are included in the prohibition against photocopying.

3. SIC code information is contained in the *Standard Industrial Classification Manual 1987*, publication 87-100012 of the national Technical Information Service, Springfield Va. The Manual is available through the U.S. Government Printing Office.

4. *Solid Waste*: defined as garbage, refuse, sludge, and other discarded material including solid, semi-solid, and contained gaseous waste per RCRA 42 USC §6903(27). For visual assessment purposes, any material that is discharged is a solid waste. A majority of the regulatory exclusions do not apply to discharges made within a structure.

5. *Regulated Substance*: defined as a substance that is (i) regulated under RCRA via direct definition; or (ii) regulated under CERCLA or the Clean Air Act, that may become subject to RCRA regulations as a result of the CERCLA classification.

6. *Disposal*: defined as the discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste or hazardous waste into or on any land or water so that such solid waste of hazardous waste or constituent thereof may enter the environment or be emitted into the air or discharged into the waters, including ground waters, per RCRA 42 USC §6903(3).

7. Refer to, *Federal Register* Volume 61 Number 9064, March 6 1996, *Lead; Requirements for Disclosure of Known Lead-Based Paint and/or Lead-Based Paint Hazards in Housing*.

8. EPA and HUD consider "housing constructed before 1978" to mean housing for which a construction permit was obtained before January 1, 1978. If no permit was obtained, then housing in which construction was started before January 1, 1978.

9. See, 24 CFR §35.86 and §40 CFR 745.103.

10. This requirement may be satisfied by supplying a pamphlet issued by the U.S. Environmental Protection Agency and the U.S. Consumer Product Safety Commission entitled *Protect Your Family From Lead In Your Home*. This pamphlet is available from the National Lead Information Clearinghouse at (800)424-LEAD.

11. The American Conference of Governmental Industrial Hygienists has concluded that there are no mandatory numerical limits against which investigators can compare measurements of air or source concentrations for the majority of substances of biological origin that are associated with building-related exposures.

12. See, U.S. EPA Publication: *A Brief Guide to Mold, Moisture, and Your Home*, page 13, Publication No. EPA 402-K-02-003, 2002.

TERMS AND DEFINITIONS

Description of Terms Specific to this Report

adjacent property..... any real property located within 0.25 mile of the subject Property's border.

adjoining property..... any real property whose border is contiguous or partially contiguous with the subject Property, or it would be if the Properties were not separated by a roadway, street, public thoroughfare, river, or stream.

ASTM..... formerly the American Society for Testing and Materials.

ASTM Phase I Environmental Site Assessment..... the process described in the ASTM practice E 1527, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. The process by which a person or entity seeks to determine if a particular parcel of property including improvements is subject to recognized environmental conditions. The process does not purport to address all of the safety, environmental concerns, and regulatory compliance applicability associated with its use.

dwelling..... any structure all or part of which is designed or used for human habitation, ie.; a place of residence or abode.

field screen questionnaire..... the environmental questionnaire normally completed by the key site manager, that asks the respondent to answer all questions to the best of their actual knowledge and good faith. The answers provide further details on the appropriateness of the investigation and areas of potential environmental concern.

Key Site Manager..... a person identified by the owner of the Property as having the best reliable knowledge of the previous uses, current conditions, and physical characteristics of the Property, and in a position to provide reasonably accurate information for the Field Screen Questionnaire.

obvious..... that which is plain or evident; a condition or fact that could not be ignored or overlooked by a reasonable observer while visually or physically observing the property.

recognized environmental condition(s)..... the presence or likely presence of hazardous substances or petroleum products on the Property under conditions that indicate as existing release, a past release, or a material threat of a release of those same substances into structures on the Property or into the ground, groundwater, or surface water of the Property. The term does not include *de minimis* conditions or those that would not be subject to an enforcement action if brought to the attention of an appropriate governmental agency.

residential building..... any room, group of rooms, or other interior areas of a structure designed or used for human habitation; common areas accessible by inhabitants; and the surrounding property or structures.

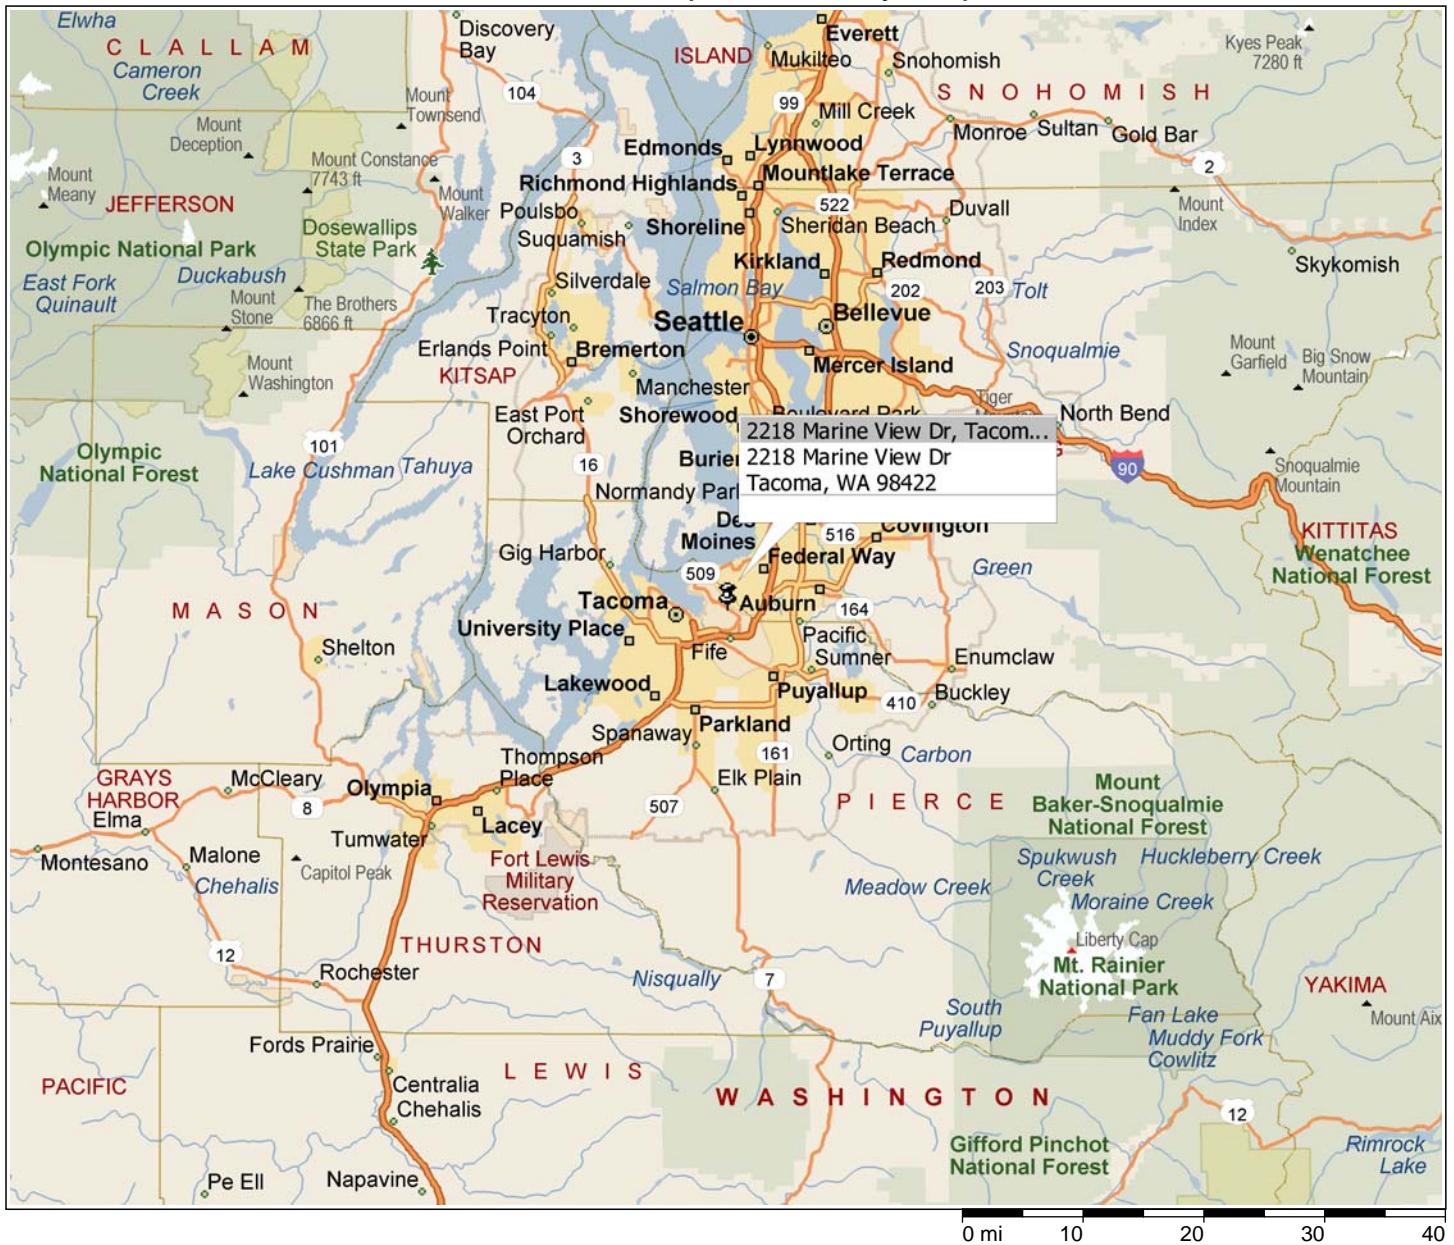

Transaction Screen Site Assessment..... the process described in the ASTM E 1528-00 standard, *Standard Practice for Environmental Site Assessments: Transaction Screen Process*.

ENVIRONMENTAL CONTRACTOR'S CERTIFICATION

SWINDAHL PROPERTIES
2218 Marine View Drive
Tacoma, Washington 98422

1. Contractor's Name: Aerotech Environmental Consulting, Inc.
2. Contractor's Address: 13925 Interurban Avenue South, Suite No. 210, Seattle, Washington 98168
3. Name and title of person completing this certification: Alan T. Blotch / President
4. Answer the following questions about each employee that contractor will have perform the assessment or prepare the report showing the results of the inspection:
 - a. Name and Title of Employee: Alan T. Blotch – Environmental Assessor
 - b. Length of experience doing environmental assessments: 37 years
 - c. Education degrees received: Masters of Business Administration
Juris Doctor – Environmental Law
 - d. Relevant training received: ASTM E50 Environmental Assessment Committee Meetings
5. Identify any certifications and approvals issued to contractor pursuant to an official Federal, State or local program or policy to conduct environmental assessments: Registered Environmental Assessor
Issued by State of California (1993-2012)
6. Describe the generally recognized standards which the contractor will use to perform the assessment.
Standard Practice for Environmental Site Assessments: Phase I Assessment (ASTM E 1527-13)
Standard Practice for Environmental Site Assessments: Transaction Screen Process (ASTM E 1528-14)
7. Disclose the nature of any previous environmental inspections contractor has ever performed for the seller of the property: SWINDAHL PROPERTIES LLC
or buyer of the property: SAME
8. Disclose the nature of any affiliation or association contractor now has, or ever had, with the above referenced seller of the property, of the above referenced buyer of the property: None
9. Describe the liability insurance carried by contractor to cover claims in the event that it fails to discover adverse environmental conditions during an environmental inspection.
Professional Errors & Omissions Coverage \$1,000,000 / claim and \$1,000,000 aggregate liability

THE UNDERSIGNED HEREBY CERTIFIES, UNDER PENALTY OF THE CRIMINAL AND/OR CIVIL PENALTIES IN 18 U.S.C. § 1001 FOR FALSE STATEMENTS TO THE UNITED STATES GOVERNMENT, THAT THE ABOVE INFORMATION IS TRUE AND CORRECT.

Statement of Assessor Qualifications:

CURRICULUM VITAE

Alan T. Blotch

Mr. Blotch was previously the Corporate General Counsel for a national industrial safety and environmental consulting firm, with offices throughout the United States. Since 2000, he has been the President of an environmental consulting firm while continuing his law practice, specializing in insurance defense litigation orientated towards construction, products liability, environmental, health, and safety matters.

Mr. Blotch has over 37 years experience in the industrial safety and environmental consulting industry, including both field assessment and management positions. For nine years he held a variety of positions with a national consulting firm, including division manager, marketing vice president, and executive vice president.

Additionally, Mr. Blotch has been involved since 1991 in the development of the ASTM E50 Committee Phase I Environmental Site Assessment Standard Practice, ASTM Standard for the Survey of Asbestos Building Materials, EPA/HUD contract NIBS Lead-Based Paint Operations Manual, and NIBS Asbestos Operations and Maintenance Guidance manual.

Education:

University of Illinois at Chicago Circle – undergraduate pre-law
Illinois Benedictine College – Masters of Business Administration
Chicago-Kent College of Law – Juris Doctor of Law
with Certificate in Environmental and Energy Law

Certifications / Licenses:

Registered Environmental Assessor – State of California (1993-2012)
Asbestos Supervisor, Project Manager – AHERA Accredited
Asbestos Building Inspector, Management Planner, Project Designer - AHERA Accredited
Attorney at Law – State of Washington and State of Oregon

Organization Memberships:

American Bar Association
– Section of Environmental, Energy, and Natural Resources, member.
American Industrial Hygiene Association
American Society of Safety Engineers
– Board of Directors, Puget Sound Chapter, member;
– Chairman, Regulatory Affairs Committee
American Society for Testing and Materials (ASTM)
– Environmental Standards Committee E50, Environmental Site Assessments, member;
– Asbestos Inspection Protocol for the Survey of Asbestos Building Materials Working Group, member;
– Environmental Standards Committee E06, Performance of Buildings, member.
Association of Trial Lawyers of America
Defense Research Institute, Inc.
National Institute of Building Sciences
– Operations Committee of Consultative Council; member, Project Committee on Lead-Based Paint O&M Work Practices Manual and Procedures Development, member;

- Project Committee on Asbestos Management, and Operations and Maintenance Manual Development, member;
- Project Committee on Asbestos Specifications and Response Actions Standards Revision, member.
- Occupational Safety and Health Administration
 - Advisory Committee on Construction Safety and Health, participant.
- Puget Sound Area Construction Safety Summit
- Washington Defense Trial Lawyers Association
 - Association magazine editorial board, member.
- Washington State Trial Lawyers Association

Professional and Standards Development:

ASTM Phase I Environmental Site Assessment Practice. Beginning in 1991, Mr. Blotch was involved in the drafting and review of the American Society for Testing and Materials (“ASTM”) Environmental Standards Committee E50, Environmental Site Assessments, charged with the responsibility of developing the ASTM Phase I Environmental Site Assessment Standard Practice. This involvement in the committee’s work continues to the present.

ASTM Survey of Asbestos in Buildings Practice. In 1993, the ASTM formed a working group to develop an Asbestos Inspection Protocol for the Survey of Asbestos Building Materials Working Group. Mr. Blotch personally performed the drafting of significant portions of the initial Survey document. His involvement continues to the present.

National Institute of Building Sciences (“NIBS”) Lead-Based Paint Work Practices Manual. In 1992, Mr. Blotch was invited to join the newly formed NIBS Operations Committee of Consultative Council, Project Committee on Lead-Based Paint O&M Work Practices Manual and Procedures Development pursuant to a NIBS contract with the EPA and HUD. For two years Mr. Blotch attended the committee meetings and discussion groups and participated in the development and review of the Manual, which was subsequently published by the EPA.

NIBS Asbestos Operations and Maintenance Manual. Beginning in 1994, Mr. Blotch was invited to join the newly formed Project Committee on Asbestos Management, and Operations and Maintenance, charged with the responsibility of developing an Asbestos O&M Manual. This work included both the attendance of working group committee meetings and document review. This project was completed within two years.

NIBS Asbestos Specifications Revision. In order to ensure compliance with the revised OSHA asbestos regulations, in 1997, NIBS formed a Project Committee on Asbestos Specifications and Response Actions Standards Revision, of which Mr. Blotch was a member. His involvement included review and comment on the draft Specification revisions to the NIBS Asbestos MASTERSPEC® Removal and Response document.

State of Washington Industrial Hygiene & Safety Title Protection Act. Instrumental in drafting the 2001 Session Washington State Industrial Hygiene and Professional Safety Title Protection Act, Chapter 18 of the Washington Revised Code. Testified before the Legislature’s combined House and Senate Committee on Commerce and Industry in support of the Title Protection Act.

CURRICULUM VITAE
Devin R. Melville
Environmental Consultant

Ms. Melville graduated with a Bachelor of Science in Environmental Resource Management from the University of Washington. She has restoration field work experience for multiple ecosystems in the Pacific Northwest. She has written and contributed to multiple technical documents including a climate change vulnerability assessment, scientific experiment reports and abstracts, restoration draft proposals, and a white paper on net-zero energy.

Education: River View High School, Finley, Washington (2010)
Columbia Basin Community College, Pasco, Washington - *Associates of Arts & Sciences* (2013)
University of Washington, Seattle, Washington - *Bachelor of Science in Environmental Resource Management* (2016)

Professional

History: Aerotech Environmental Consulting Inc., Environmental Consultant (January 2017 - Present)
Doty Plant Microbiology Lab, Undergraduate Researcher (January - July 2016)
Applied Ecology, Restoration Technician (May - July 2016)
Master Builder's Association of King and Snohomish County, Built Green Intern (March - October 2015)

Expertise: In 2015, Ms. Melville was an intern for Built Green, a non-profit green home certification company of the Master Builder's Association. She analyzed and graphed consumption data collected from a net-zero energy town home complex. The analysis was then used for a white paper written on net-zero energy. She also assisted in the coordination and planning of the Annual Built Green Conference.

During her time at the University, Ms. Melville was an undergraduate researcher in a plant microbiology lab focusing on sustainable agriculture production using endophytes. She conducted her own research trials and quantified results that will be published in the scientific community.

Additionally, Ms. Melville collaborated on a Climate Change Vulnerability Assessment for the National Park Service where she focused on researching previous assessments and summarizing findings through tables and citations.

She has been a volunteer for projects at the Washington Park Arboretum and the UW Botanic Gardens. She worked as a restoration technician along the I-5 corridor on projects for the Green Seattle Alliance and Sound Transit. Most recently she worked with the City of Seattle on the Trees for Neighborhoods Seattle reLeaf Program.

LIST OF APPENDICES

Figure 1	Site Vicinity Map
Figure 2	Site and Vicinity Sketch
Appendix A	Site Photographs
Appendix B	ASTM Definition of Terms
Appendix C	Regulatory Database Report
Appendix D	ASTM Questionnaire & Historical Research Documentation
Appendix E	Site Regulatory Documentation

1 Introduction

The Riley Group, Inc. (RGI) conducted a Phase I Environmental Site Assessment (ESA) of the Modutech Marine, Inc. property located at 2218 Marine View Drive, Tacoma, Pierce County, Washington (hereafter referred to as the Site), Figure 1. The Site currently is occupied by an industrial boat manufacturing and repair facility. Site photographs are included in Appendix A.

Ms. Carol Duris, of Viking Bank (Client), authorized the ESA on August 17, 2009. RGI understands that Client is considered the *user* of the report as defined by the American Society for Testing and Materials (ASTM), Standard Practice E 1527-05, and intends to utilize the Site as collateral on a loan, with no plans for redevelopment.

1.1 PURPOSE

The purpose of the ESA was to identify any *recognized environmental conditions* (RECs) and/or *business environmental risks* (BERs) as defined by ASTM, Standard Practice E 1527-05.

The term "recognized environmental conditions" means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with current environmental regulations. The term is not intended to include de minimus conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

The term "business environmental risks" are risks that can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated in this practice.

Definitions used herein, as defined by ASTM, are provided in Appendix B for reference.

1.2 SCOPE OF WORK

RGI's scope of work for this Phase I ESA included the following tasks:

- Performed a detailed inspection of the Site and a cursory inspection of the adjoining properties.
- Interviewed knowledgeable persons regarding Site and/or nearby properties.
- Described project area geology and Site location, Site vicinity characteristics and prepared a vicinity and Site map showing Site and nearby significant features.
- Commented on polychlorinated biphenyls (PCBs), hazardous materials, aboveground storage tanks (ASTs), and underground storage tanks (USTs). This scope of work did not include sampling and/or analysis.
- Reviewed historical building department files, property tax records, Sanborn Fire Insurance Maps, city directories, aerial photographs and plat maps, where applicable and available.
- Reviewed State and Federal environmental regulatory databases per ASTM.
- Reviewed regulatory records available at the Washington State Regional Archives Office in Olympia, Washington.
- Prepared this final report presenting our findings and conclusions.

RGI was not provided a 50-year chain of title for the subject Site and one was not reviewed as part of this Phase I ESA.

1.3 SIGNIFICANT ASSUMPTIONS

In evaluating the property, RGI has relied upon representations and information furnished by individuals and agencies noted in the report. RGI assumes that the information provided by these third party sources is accurate, and has no reason to believe otherwise.

Based on a review of regional topography and geomorphology, RGI assumes groundwater beneath the Site flows generally to the southwest, towards the Hylebos Waterway. Based on a review of well logs for the Site vicinity, depth to shallow groundwater is assumed to be approximately 5 feet below ground surface (bgs). However, the groundwater table is likely subject to tidal fluctuations.

1.4 LIMITATIONS AND EXCEPTIONS

This ESA report is based upon information obtained by RGI personnel and upon the condition of the Site and surrounding property on the dates of such visits, supplemented by readily available information and data obtained by RGI and described herein.

RGI accepts no responsibility for any deficiency, misstatements or inaccuracies contained in this report as a result of misstatements, omissions, and misrepresentations or fraudulent acts of persons interviewed. In addition, potentially important interviewees are often not available or cannot be located within a reasonable project time frame. In these instances, RGI accepts no responsibility for any environmental liability that later results from information not readily available during the assessment.

This report was prepared in a manner consistent with the level of skill and care ordinarily exercised by members of the profession currently practicing in the same locality and time, and under similar conditions. This report is intended for specific application to the existing property located at 2218 Marine View Drive, Tacoma, Washington, for the exclusive use of the Client, Viking Bank, Modutech Marine, Inc., and their authorized representative(s). No other warranty is implied or intended.

1.5 RELIANCE

No reports or other information regarding the Site or its setting were provided to RGI other than those resources specifically mentioned herein. Reports relied upon by RGI are listed in Section 9.0 of this report.

We have performed our services and prepared this Report in accordance with applicable, generally accepted engineering, environmental or appraisal consulting practices. We make no other warranties, either expressed or implied, as to the character and nature of such services and product.

2 Site Description

2.1 PHYSICAL SETTING SOURCE(S), LOCATION & LEGAL DESCRIPTION

The Site is located on the United States Geologic Survey (USGS) Tacoma North, Washington, 7.5-Minute Topographic Map (Figure 1) at an elevation of approximately 10 feet above mean sea level. The Site and immediate vicinity are generally flat. The vicinity to the northeast slopes sharply towards the Site and the Hylebos Waterway.

The Site is zoned as Shoreline Port Industrial (S10) and Heavy Industrial (M2). The Pierce County tax identification number for the Site is 0321264056. The legal description and metes and bounds of the Site are included in the current Pierce County Tax Assessor documentation, included in Appendix D.

2.2 SITE VICINITY CHARACTERISTICS

The Site is an approximately rectangular-shaped, 5.98-acre property located in the Hylebos Waterway industrial corridor. Typical property use in the Site vicinity is industrial along the waterfront and residential in the upland areas to the northeast.

2.3 SITE GEOLOGY AND HYDROGEOLOGY

The *Geologic map of the Tacoma North 7.5-Minute Quadrangle* mapped the Site as artificial fill (af). As discussed above, depth to shallow groundwater is assumed to be approximately 5 feet below ground surface (bgs). However, the groundwater table is likely subject to tidal fluctuations. Inferred groundwater flow direction is generally to the southwest, towards the Hylebos Waterway.

2.4 CURRENT USES OF THE SITE

The Site is occupied by Modutech Marine, Inc., an industrial boat building and repair facility.

2.5 DESCRIPTION OF SITE STRUCTURES

The Site is occupied by four buildings. The Site buildings are hereafter referred to as the manufacturing building, office building, work shop and spray shop.

The manufacturing building is a single-story, approximately 20,700-square-foot industrial warehouse structure with two mezzanine levels. The building is a wood-framed structure of slab-on-grade construction with a flat roof and corrugated metal siding (Photographs 1 and 2).

The office building is a two-story, approximately 1,000-square-foot structure. The building is a wood-framed structure of slab-on-grade construction with a flat roof (Photograph 1).

The work shop is a single-story, approximately 1,100-square-foot warehouse structure. The building is a wood-framed structure of slab-on-grade construction with a flat roof (Photograph 7).

The spray shop is a single-story, approximately 1,900-square-foot warehouse structure. The building is a wood-framed structure of slab-on-grade construction with a flat roof. An approximately 1,100-square-foot, wood-framed shelter is attached to the south side of the building (Photographs 3 and 10).

The Site also contains two temporary assembly tents located west of the manufacturing building (Figure 2). The tents consist of an aluminum skeleton with a polyethylene cover.

2.6 CURRENT USES OF THE ADJOINING PROPERTIES

Current uses of adjoining properties are summarized as follows:

Northeast of Site: Marine View Drive, beyond which is a vacant landscaping strip and Norpoint Way Northeast.

Southeast of Site: Hylebos Marina and construction storage yard. No active business was evident on the property.

Southwest of Site: The Hylebos waterway. The Site is connected to boat moorage docks and suites located on the waterway (Photograph 4).

Northwest of Site: A vacant right-of-way.

3 User Provided Information

3.1 TITLE RECORDS & PREVIOUS REPORTS

No title records or previous environmental reports were provided to RGI by the user for the purposes of this report. Mr. Carl Swindahl of Modutech Marine, Inc. provided three letters pertaining to a consent decree for the Site. These letters are discussed in Section 6.1 below.

3.2 ASTM USER QUESTIONNAIRE

Mr. Carl Swindahl of Modutech Marine, Inc., the Site owner since the early 1990s, completed an ASTM E 1527-05 User Questionnaire on September 1, 2009. Mr. Swindahl indicated that he was not aware of any environmental liens, USTs, ASTs, chemicals or other adverse environmental conditions associated with the Site. He did not provide any contact information for past Site owners. A copy of the completed questionnaire is provided in Appendix D.

4 Site Reconnaissance

RGI performed a Site reconnaissance on August 26, 2009. RGI was accompanied by Mr. Carl Swindahl of Modutech Marine, Inc. during the inspection. RGI did not have access to an intermodal container located west of the work shop building. Mr. Swindahl indicated that the container is utilized for miscellaneous storage and no hazardous materials are stored in the container. Site photographs are provided in Appendix A. A summary of our findings is given below.

4.1 INTERIOR OBSERVATIONS

Office Building

- The Site office building contained typical office furnishings (e.g. desks, chairs, file cabinets, etc.)

Manufacturing Building

- Fiberglass boat hulls are produced in the manufacturing building (Photographs 5 and 6). The forms are made of wood or other suitable materials. Resin (Photograph 9) is applied to the forms with sheets of fiberglass cloth in layers. The resin is hardened with methyl ethyl ketone peroxide (MEKP). Drums of resin and MEKP and sheets of fiberglass cloth were noted throughout the building. Minor resin drips were noted on some of the collection/rinse buckets and on drip-collection panels. Staining on the concrete floors appeared to be de minimus.
- Acetone is used to clean the resin application tools and equipment. The waste acetone/resin mixtures are transferred to a storage area outside, where they are filtered and processed through a still (discussed in Section 4.2 below). Five-gallon containers of acetone were noted throughout the building. No significant acetone staining was noted in the vicinity of the containers.
- The various fiberglass forms and other components are sanded and manipulated in shop areas throughout the building perimeter.
- Small quantities (e.g. pint-size) of paints and solvents/degreasers were stored in lockers at the various shop stations.

Work Shop

- The work shop contained various pneumatic tools and equipment, apparently for assembling the mechanical aspects of the boats (Photograph 7). No assembly work was being performed in the work shop at the time of the inspection.
- No evidence of improper storage or release of hazardous substances or petroleum products were observed inside the work shop building.

Spray Shop

- The spray shop contained various fiberglass forms and panels that were either being finished or spray painted (Photograph 8).
- Tarps appeared to line the entire building.
- No evidence of improper storage or release of hazardous substances or petroleum products were observed inside the work shop building.

4.2 EXTERIOR OBSERVATIONS

- The parking lot area northwest of the office building is paved with asphalt. The boat ramp southeast of the manufacturing building and the exterior yard area between the manufacturing building and the covered storage areas are all concrete paved. The remainder of the Site consists primarily of gravel cover.
- Wooden and fiberglass boat molds and miscellaneous equipment were staged in the northwest corner of the Site work yard and around the work shop building.
- Partially completed boats were being assembled within the temporary tents discussed in Section 2.5 above (Figure 2). The work appeared to consist of manual assembly and sand blasting. The sand blasting operation appeared to be contained. Mr. Swindahl indicated that sand blasting grit is contained and disposed of off-Site by Olsen Trucking.

- Boats that have been brought on-Site for repair are staged northeast of the manufacturing building (Figure 2). The boats appear to be serviced over the unpaved gravel areas. Some minor staining, at least partly due to water runoff, was noted in the staging area.
- Stormwater infiltrates into the unpaved Site surfaces, into stormwater catchbasins located along the shoreline embankment and into catchbasins located in the paved areas of the Site. The catchbasins in the concrete-paved areas are reportedly connected to a closed-loop system for wash water retention. The wash water drains to and is contained within an AST (Photograph 20) in a pump house located on the southeast corner of the Site (Figure 2), where it is reportedly recycled for later use. Dirty water is hauled away as needed for off-Site disposal.
- No evidence of disposal pits, sumps, oil/water separators or septic tanks were observed at the Site. Mr. Swindahl indicated that there are no oil/water separators on the Site (other than the baffles in the catchbasins) and was not aware of any historical septic tanks at the Site.
- No drinking water or groundwater monitoring wells were noted at the Site. Drinking water is provided to the Site by the local utility.
- 55-gallon drums of resin and biodiesel (Photograph 11) were stored in the covered shelter on the southeastern corner of the Site (Figure 2). Significant staining was not noted on the concrete beneath the drums.
- The covered storage area contains a bermed hazardous waste storage area (Photograph 13). A 15-gallon drum of waste paint thinner and 55-gallon drums of waste oil, kerosene, "bad gas," and biodiesel were located within the bermed area. According to Mr. Swindahl, hazardous wastes are picked up by Safety Kleen approximately once per month.
- Also located in the hazardous waste storage area were the resin/acetone filtering apparatus (Photograph 14) and the resin still discussed in Section 4.1 above (Photograph 15). Bulk fiberglass material is initially filtered from the acetone/resin waste mixture, which is then processed in the still. The processed acetone is re-used while the still bottoms are disposed of as hazardous waste. Some resin staining was noted on the concrete in the waste storage area. However, the drips and spills appear to be contained in the bermed, covered area. Due to the viscous nature of the resin, these small drips are not anticipated to leach through the concrete or pose a significant risk to Site soil and/or groundwater quality at this time.
- A steel intermodal container, located south of the waste storage area, serves as a hazardous chemical storage locker (Photographs 10 and 12). Containers up to 5 gallons in size, containing paints, thinners and coatings that are currently in use, were stored in the locker. Some minor staining was noted within the locker. However, no staining or signs of release was noted outside of the locker.
- New containers of lube oil and other petroleum products were being stored in another intermodal container southeast of the hazardous chemical storage locker (Figure 2). No staining or signs of release were noted in the lube oil storage locker.
- Waste oil is stored in a shelter located on the southeast corner of the Site (Figure 2). A waste oil storage AST is situated within a secondary containment unit (Photographs 18 and 19). Empty containers were situated next to the containment in the covered area.

Minor staining in the covered concrete area appeared to be de minimus. Waste oil is reportedly picked up by Arcom approximately every one to two months.

- No other staining, stressed vegetation or any other indications of improper storage or release of hazardous substances or petroleum products were observed.

4.3 POLYCHLORINATED BIPHENYLS (PCBs) SURVEY

The Environmental Protection Agency (EPA) considers PCBs to be a possible human carcinogen. The Toxic Substance Control Act of 1976 (15 USC, s/s 2601, et seq.) prohibited any manufacturing of PCBs in the United States after January 1, 1979. Under Federal Regulation (40 CFR 761.3), the mineral oil contained in untested transformers is assumed to be "PCB-contaminated" (50-499 parts per million PCB). The continued use of this equipment is authorized by the EPA.

Electricity is provided to the Site via pole-mounted transformers located along Marine View Drive. The transformers appeared to contain "No PCBs" labeling. No staining or other indications of release were noted on or around the units.

No other indications of PCBs were observed at the Site. However, Section 6.1 below discusses historical soil sampling at the Site, indicating detections of PCBs in Site fill materials.

4.4 UNDERGROUND AND ABOVEGROUND STORAGE TANK SURVEY (UST/AST)

RGI's UST and AST survey included an inspection, review of historical and regulatory documentation, and interviews with knowledgeable persons regarding the Site.

No evidence of USTs (vent pipes or fill ports) was observed during the inspection. The Site buildings are heated by electricity and natural gas.

The Site utilizes a 500-gallon diesel AST (Photograph 17) for fueling boats and equipment. The AST is portable and used where needed. No staining was noted on or around the AST.

An approximately 500-gallon diesel cubitainer/AST (Photograph 16) was located next to the hazardous waste storage area. The AST also appeared to be portable and exhibited some minor corrosion and staining. No staining was noted around the AST.

5 Interviews

RGI contacted Ms. Debbie Nelson, the Emergency Response Tracker (ERTS) for the Washington Department of Ecology (Ecology), to determine whether any ERTS listings existed for the Site. The ERTS database tracks all emergency responses and environmental complaints made to Ecology since 1990, including hazardous material responses. Ms. Nelson indicated there were no ERTS listings for the Site address. A "SPILLS" database listing for the Site (analogous to ERTS) is discussed in Section 6.1 below.

RGI interviewed Mr. Carl Swindahl of Modutech Marine, Inc., the Site owner, regarding historical Site operations. The Swindahl family has operated on the Site since approximately 1984 and owned the Site since the early 1990s. Mr. Swindahl was not aware of any USTs, environmental liens or adverse environmental conditions on the Site. He indicated that lead-based paints have not been used at the Site in more than a decade. Mr. Swindahl's remarks regarding Site history have been incorporated into the relevant sections this report.

6 Environmental Regulatory Database Review

RGI's environmental regulatory records review consisted of a standard review of Federal and State record databases in a search for properties with existing and/or potential environmental liabilities. RGI and Environmental Data Resources (EDR) of Milford, Connecticut, performed the records search. All records reviewed used search radii in accordance with ASTM parameters. A copy of the EDR database report is included in Appendix C.

6.1 SITE

Commencement Bay Nearshore/Tideflats CERCLIS/NPL

The subject Site is located within the U.S. EPA's Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) and National Priority List (NPL) zone designated as Commencement Bay Nearshore/Tideflats (CBNT). These CERCLIS/NPL areas are also referred to as "Superfund" sites. A detailed discussion of the history of the entire CBNT Superfund site is provided on pages 18 through 20 of the attached EDR report. The Hylebos Waterway properties, which include the subject Site, are located within the Tideflats portion of the CBNT.

RGI reviewed the CBNT-related files pertaining to the subject Site, available at the Washington State Department of Ecology (Ecology) and at the Washington State Archives in Olympia, WA. Based on our review, limited near-surface soil sampling was performed at the Site by Ecology in 1989 and 1991.

Two soil samples were collected from the southeast corner of the Site in 1989, between the southeast corner of the manufacturing building and the waste oil storage area. Both samples contained concentrations of carcinogenic polynuclear aromatic hydrocarbons (cPAHs) above the MTCA Method A Soil Cleanup Level for Unrestricted Land Use (0.1 mg/kg) but below the Method A Soil Cleanup Level for Industrial Properties (2.0 mg/kg).¹

Four soil samples were collected at the Site in 1991 (Mod1, Mod2A, Mod2B and Mod3). Sample Mod1 was collected from a sandblast grit area near the southwest corner of the manufacturing building. The sample was analyzed for Priority Pollutant Metals and contained concentrations of arsenic (30 mg/kg) and cadmium (13 mg/kg), above their respective MTCA Method A Soil Cleanup Levels for Industrial Properties (20 and 2.0 mg/kg, respectively).

Samples Mod2A and Mod2B were collected from the existing ramp area (previously unpaved). The samples reportedly contained a "significant" amount of paint waste due to historical painting of boats in that area. Sample Mod2A was analyzed for Priority Pollutant Metals and contained concentrations of arsenic (46 mg/kg) and cadmium (24 mg/kg), above their respective MTCA Method A Soil Cleanup Levels for Industrial Properties. Elevated lead was also detected (450 mg/kg) below the applicable Method A cleanup level of 1,000 mg/kg. Sample Mod2B was analyzed for semivolatile organic compounds and contained a total cPAH concentration of 3.71 mg/kg, above the applicable MTCA cleanup level.

Sample Mod3 was collected from the northwest corner of the Site equipment storage area. The area reportedly contained fill material, described as "car fluff." The sample was analyzed and

¹ Based on the industrial zoning for the Site and previous notation in the Ecology files, the Site likely qualifies as an "Industrial Property" under MTCA.

found to contain an elevated polychlorinated biphenyls (PCBs) concentration of 9.2 mg/kg, below the applicable MTCA cleanup level of 10 mg/kg.

From 1989 to 1995, Modutech Marine, Inc., allowed Ecology staff to inspect the Site and incorporated Ecology's recommendations into the Site operations. These recommendations included: containing sandblast grit at the Site for off-site disposal, installing a berm around the hazardous waste storage area, removing paint waste from the ramp area, discontinuing boat painting operations in the ramp area, and installation of the wash water recycling system. Sandblast grit was also excavated from the Site in the areas identified on Figure 2. Test pitting was performed at the Site in 1993 and Ecology staff visually observed that the bulk of the grit material had been removed from the former swale area and along the embankment. RGI spoke with Ms. Joyce Mercuri, the Ecology manager at the time, who indicated that the material was visually discernable from the native materials. However, since Ecology's goal at the time was to remove sources of pollution from the Hylebos Waterway uplands, confirmation soil sampling was not requested following the removal at the Site. Ms. Mercuri indicated that confirmation sampling would be required in order to be compliant with MTCA.

On September 18, 2003, EPA entered into a formal consent decree agreement with the potentially responsible parties along the Hylebos Waterway (including the Site owners). Mr. Swindahl provided RGI with copies of three letters, dated from September to October of 2003, documenting that the Site owners (both the Swindahls and Modutech, Inc.) settled their liability for the CBNT with EPA. According to Ms. Mercuri and Mr. Marv Coleman of Ecology, the 2003 consent decree does not mitigate any liability under MTCA. A copy of the consent decree-related letters is provided in Appendix E.

Based on the available information, a release has been identified at the subject Site. Currently, the Site has not yet been listed as a State cleanup site by Ecology (CSCSL site). Arsenic, cadmium and cPAHs have been identified above applicable MTCA cleanup levels. Other potential contaminants of concern identified during the limited sampling at the Site include lead and PCBs. The bulk of the identified contaminants appears to have been removed from the Site. However, MTCA requires that sampling be performed to confirm that remedial efforts have been successful at the Site. The Site's noncompliance with Washington's MTCA Cleanup Regulation is considered a REC and/or BER at this time.

RCRA-CESQG

The subject Site is listed on the Resource Conservation and Recovery Act (RCRA) Conditionally Exempt Small Quantity Generator (CESQG) database. RGI reviewed the available RCRA files from Ecology. Hazardous wastes at the Site were listed as acetone, methyl ethyl ketone (MEK) and "paint wastes." Minor violations were noted in the database and in the Ecology files. Compliance was achieved shortly after each violation notice. The RCRA listing is not considered a REC for the Site at this time.

SPILLS

The subject Site is listed on EDR's SPILLS database (analogous to the ERTS database). The database listing indicates that approximately 200 gallons of diesel fuel was spilled at the Site, resulting in a release to surface waters (the Hylebos Waterway) in 1999. No records were found at Ecology pertaining to the SPILLS listing. The Site is not currently listed on the applicable cleanup database (CSCSL) and no other enforcement action has been found associated with the former spill. Due to the nature of the off-site release (release to the Hylebos Waterway) and lack of regulatory follow-up over the last decade, this is unlikely to pose a significant risk to Site soil and/or groundwater quality at this time.

THE RILEY GROUP, INC.

6.2 ADJOINING/NEARBY PROPERTIES

6.2.1 ADJOINING AND NEARBY PROPERTIES

Pump Station 4103 ROW

The northwest-adjointing property is currently listed on Ecology's Confirmed and Suspected Contaminated Sites List (CSCSL) for groundwater contamination identified near a right-of-way pump station. The extent of the petroleum-affected groundwater is unknown at this time. The property has not yet received a Site Hazard Assessment and been ranked. Based on the regulatory status and proximity of the property to the subject Site, this is considered a REC for the Site at this time.

WA DOT Pit B25

According to the EDR database, a UST was encountered while the Washington State Department of Transportation (DOT) was excavating and grading the hillside located along Norpoint Way Northeast, northeast of the Site. The property is not listed on any of the researched site cleanup databases (e.g. LUST, CSCSL, etc.). Based on the regulatory status and the distance from the subject Site (across Marine View Drive and Norpoint Way Northeast), this is not considered a significant risk to Site soil and/or groundwater quality at this time.

6.2.2 OTHER OFF-SITE PROPERTIES

Several other properties within one mile of the Site were listed on various Federal and/or State environmental regulatory databases. However, due to the nature of the database listings, media affected, property status, distance from the Site and/or assumed groundwater flow direction relative to the Site, these off-Site properties are not considered a risk to Site soil and/or groundwater quality.

7 Historical Records Review

RGI's Site and adjoining properties historical records review included a review of the following:

- Current & Historical Pierce County Tax Assessor Records.
- Historical City of Tacoma Building Plans and Permits.
- Aerial Photographs dated 1931, 1940, 1950, 1961, 1965, 1973, 1989, 1990, 1995, 1996, 1998, 2001, 2002, 2005 and 2006.
- Polk reverse city directories dated 1933, 1937, 1942, 1947, 1951, 1957, 1962, 1967, 1972, 1977, 1982, 1986, 1992, 2001 and 2008.
- Sanborn Fire Insurance map dated 1950.
- Inspection reports from Pierce County and State regulatory agencies.
- Interviews with knowledgeable persons.

RGI also attempted to review historical Kroll and Metsker real estate plat maps. However, coverage was not available for the Site. Based on our review of available sources, the lack of information from these sources is not likely to significantly affect the conclusions of this report. Historical documentation is provided in Appendix D. Historical aerial photographs dated 1961, 1989 and 2001 are included in Appendix D as Figures D-1 through D-3.

7.1 SITE

The earliest listed occupant of the Site was a single-family residence from approximately the early 1930s until approximately 1960. The northern third of the Site may have also been occupied by small offices and/or parking areas for an adjoining logging operation during that time. Historical aerial photograph review suggests that a lumber mill building may have occupied the northern portion of the Site during the 1950s.

The Site was redeveloped with the existing manufacturing building in the mid-1960s. Marine Technical Services, a boat builder, operated on the Site until the existing occupant, Modutech Marine, Inc. occupied the Site in approximately 1984. The Site was converted from septic service (Figure 2) to sewer approximately around that time.

The remainder of the Site buildings were added in approximately the early 1980s. According to Ecology records, discussed above, the concrete pavement south of the manufacturing building and the wash water pump house were added in the early 1990s.

7.2 ADJOINING AND NEARBY PROPERTIES

7.2.1 NORTHEAST OF SITE (ACROSS MARINE VIEW DRIVE)

The property located northeast of the Site has historically been undeveloped and/or occupied by the landscaping between Marine View Drive and Norpoint Way Northeast since at least 1931.

7.2.2 SOUTHEAST OF SITE

The property located southeast of the Site was vacant prior to construction of a single-family residence in the mid-1930s. The property was redeveloped with the existing construction yard buildings and marina in approximately the early 1960s.

7.2.3 SOUTHWEST OF SITE

The Site has historically been bordered by the Hylebos waterway.

7.2.4 NORTHWEST OF SITE

The existing vacated right-of-way was occupied by a logging company from approximately the 1940s to the late 1960s. The right-of-way has been vacant since approximately the early 1970s.

8 Conclusions

RGI has performed a Phase I ESA in conformance with the scope and limitations of ASTM E 1527-05 of the Modutech Marine, Inc. property located at 2218 Marine View Drive, Tacoma, Washington. Any exceptions to, or deletions from, this practice are described in Section 1.0 of this report. This assessment has revealed no evidence of RECs in connection with the property except for the following:

- A hazardous release was previously identified on the Site in the form of sand blast grit. The grit was previously deposited in various locations throughout the Site. At Ecology request, the grit was excavated and disposed of off-Site. Visual observation was conducted by Site occupants and Ecology inspectors to determine that the bulk of the grit had been removed from the Site. However, no confirmatory soil or groundwater sampling has been performed. Contaminants of concern confirmed at the Site include arsenic, cadmium, lead, PCBs and carcinogenic PAHs. MTCA requires that sampling be performed to confirm that remedial efforts have been successful at the Site. The Site's noncompliance with Washington's MTCA Cleanup Regulation is a REC and/or BER for the Site.
- The Site has been occupied by a boat manufacturing facility since the mid-1960s. While hazardous materials and wastes appear to be currently handled in accordance with Ecology recommendations, historical chemical handling and/or waste disposal practices (particularly prior to the current ownership) are unknown. Chemicals used and wastes generated at the Site have likely historically included, but are not necessarily limited to: fiberglass resin, petroleum products, chlorinated and non-chlorinated solvents, and/or lead-based paints. Sampling would be necessary to determine whether any historical on-Site activities have adversely affected soil and/or groundwater quality.
- The northwest adjoining property is currently listed on Ecology's Confirmed and Suspected Contaminated Sites List (CSCSL) for groundwater contamination identified near a right-of-way pump station. The extent of the petroleum-affected groundwater is unknown at this time. Additional investigation would be necessary to determine if this off-Site release has adversely affected soil and/or groundwater quality at the subject Site.

10 Signatures of Environmental Professionals

Any questions regarding the work within this report, the presentation of the information, or the interpretation of the data are welcome and should be referred to the undersigned. We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professionals as defined by §312.10 of 40 CFR 312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Sincerely,
THE RILEY GROUP, INC.

Lannie Smith, CRMM
Senior Project Manager

Elizabeth Uchison, LG, LHG
Senior Hydrogeologist

Report Distribution: Ms. Carol Duris, Viking Bank (3 bound copies & 1 electronic pdf)

11.2 ELIZABETH UCHISON, L.G., L.H.G., SENIOR HYDROGEOLOGIST

Education

B.S. Geology, Michigan State University, East Lansing, Michigan, 1993

M.S. Environmental Science, Northeastern Illinois University, Chicago, Illinois, 2003

Special Training and Certifications

40 hour Hazardous Waste Operations and Emergency Response (HAZWOPER) – 1994

Illinois State Licensed Professional Geologist (License #196-001101)

Washington State Licensed Geologist and Hydrogeologist (License #2494)

Washington State Site Assessor, 2004

Professional Experience

Ms. Uchison has over fifteen years of experience in environmental regulatory compliance and assessments. Ms. Uchison's experience includes performing Phase I and Phase II site assessments, underground storage tank site assessments, soil and groundwater investigations, directing small and large-scale remedial excavation projects, environmental compliance audits, and waste management consulting both within the private and government sectors.

Representative Project Experience

Various Banks and Lending Institutions – Performing Phase I environmental site assessments and compliance audits for several properties throughout the Midwest.

Retail Drycleaners – Conducting Phase I environmental site assessment, Phase II subsurface investigation, and remediation activities at an active retail drycleaners property.

Major Airline Carrier – Performing subsurface soil investigation as well as providing environmental oversight of large-scale remedial excavations in conjunction with major project site redevelopment.

Major Retail Property Developer – Performing subsurface soil and groundwater investigation for the purpose of achieving site closure through the development of site-specific, risk-based cleanup levels.

Various Private Sector Corporations – Performing Phase II soil and groundwater sampling for properties involved in transfers of ownership.

Major Oil Company – Conducting environmental compliance auditing, data room review, and financial liability assessment for various locations across the world in conjunction with an equity transfer transaction.

THE RILEY GROUP, INC.

ASTM DEFINITIONS OF TERMS

Asbestos containing material (ACM)

Any material or product that contains more than 1% asbestos.

Adjoining properties

Any real property or properties the border of which is contiguous or partially contiguous with that of the property or that would be contiguous or partially contiguous but for a street, road, or other public thoroughfare separating them.

Business Environmental Risks (BERs)

Risks that can have a material environmental or environmentally-driven impact on the business associated with the current or planned use of a parcel of commercial real estate, not necessarily limited to those environmental issues required to be investigated pursuant to ASTM standards.

Drum

A container (typically, but not necessarily, holding 55 gal (208L) of liquid) that may be used to store hazardous substances or petroleum products.

Hazardous substance

A substance defined as a hazardous substance pursuant to CERCLA 42 USC 9601 (14), as interpreted by EPA regulations and the courts; (A) any substance designated pursuant to section 1321 (b)(2)(A) of Title 33, (B) any elements, compound, mixture, solution, or substance designated pursuant to section 9602 of this title, (C) any hazardous waste having characteristics identified under or listed pursuant to section 3001 of the Solid Waste Disposal Act (42 USC 6921) (but not including any waste the regulation of which under Solid Waste Disposal Act (42 USC 6901 et seq.) has been suspended by Act of Congress), (D) any toxic pollutant listed under section 1317(a) of Title 33, (E) any hazardous air pollutant listed under section 112 of the Clean Air Act (42 USC 7412), and (F) any imminently hazardous chemical substance or mixture with respect to which the Administrator (of EPA) has taken action pursuant to section 2606 of Title 15. The term does not include petroleum, including crude oil or any fraction thereof which is not otherwise under specifically listed or designated as a hazardous substance under subparagraphs (A) through (F) of this paragraph, and the term does not include natural gas liquids, liquefied natural gas, or synthetic gas usable for fuel (or mixtures of natural gas and such synthetic gas)." (See Appendix XI)

Landfill

A place, location, tract of land, area, or premises used for the disposal of solid wastes as defined by state solid waste regulations. The term is synonymous with the term solid waste disposal site and is also known as the garbage dump, trash dump, or similar term.

Lead-Based paint

Paint with lead levels equal to or exceeding 1.0 milligram per square centimeter (mg/cm²) or 0.5% by weight.

Lead-Containing paint

Paint containing any detectable levels of lead.

SERVING THE PACIFIC NORTHWEST

Main Office: 17522 Bothell Way NE, Bothell, WA 98011
Tel (425) 415-0551 • Fax (425) 415-0311

THE RILEY GROUP, INC.**LUST Sites**

State lists of leaking underground storage tank sites. Section 9003 (h) of Subtitle I of RCRA give EPA and states, under cooperative agreements with EPA, authority to clean up releases from UST systems or require owners and operators to do so.

Property

The real property that is the subject of the environmental site assessment described in this practice. Real property includes buildings and other fixtures and improvements located on the property and affixed to the land.

Recognized Environmental Conditions (RECs)

The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Underground Storage Tank (UST)

Any tank, including underground piping connected to the tank, that is or has been used to contain hazardous substances or petroleum products and the volume of which is 10% or more beneath the surface of the ground.

ACRONYMS

EPA-United States Environmental Protection Agency

LBP-Lead-Based Paint

LCP-Lead-Containing Paint

LUST-Leaking Underground Storage Tank

MTCA-Model Toxics Control Act

ASTM USER QUESTIONNAIRE

ASTM E 1527-05 states that in order to qualify for one of the *Landowner Liability Protections (LLPs)* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "*Brownfields Amendments*") the user must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that "*all appropriate inquiry*" is not complete. Please answer the following questions to the best of your knowledge. Please attach additional sheets/documentation as necessary.

Site Address: 2218 Marine View Drive, Tacoma, WA RGI Contact: Lannie Smith

- NO** 1) Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?
- NO** 2) Are you aware of any property use limitations such as *engineering controls*, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?
- NO** 3) As a user of this ESA do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in a similar business to the current or former occupants of the property or an adjoining property and, therefore, have knowledge of the chemicals and processes used by this type of business?
- N/A** 4) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? As the user, if you intend to address this issue separately from our Phase I Environmental Site Assessment (e.g. as part of a property appraisal) please indicate "N/A" here:
- NO** 5) Are you aware of commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example, as user:
- (a) Do you know the past uses of the property? Please include approximate dates, if possible.
Only Boat Building 1964 to 1984
- NO** (b) Do you know of specific chemicals that are present or were once present at the property?
- NO** (c) Do you know of spills or other chemical releases that have taken place at the property?
- NO** (d) Do you know of any environmental cleanups that have taken place at the property?
- NO** (e) Are you aware of any current or former: aboveground or underground storage tanks, sumps, oil/water separators, hydraulic hoists, disposal pits, drywells, other wells and/or septic tanks at the property?
- NO** 6) As a user of this ESA on your knowledge and experience related to the property, are there any obvious indicators that point to the presence or likely presence of contamination at the property? (Use separate sheet if necessary).
- NO** 7) Do you have any contact information for past owners of the property? (If so, please provide on separate sheet).

Re: Entry of Consent Decree
Hylebos Waterway Superfund Site

Dear Carl,

On September 18, 2003 Judge Burgess signed the Hylebos Waterway consent decree between EPA and the PRPs, bringing to a close one more chapter in this endless saga. Under the terms of the consent decree, the parties must make their payment within 45 days from the date the decree was entered, which would be Sunday, November 2nd. Accordingly, I recommend that you make sure the payments for Modutech and for you as the property owner are deposited with the escrow account not later than Friday, October 31st. Modutech's payment is \$24,988 and your payment is \$8,828.

As a quick reminder, pursuant to the consent decree, the PRPs set up an escrow account with KeyBank. Payment is made directly to KeyBank, to the attention of Linda Hayes, KeyBank National Association, 1101 Pacific Ave, Tacoma, WA 98402. I suggest that you tender two separate checks in the respective amounts (one corporate; one personal) and that you identify the case number (3:03-cv-05107-FDB) in the "memo" section of the check. The checks are payable to "Hylebos Waterway Problem Areas Escrow Account." Before you actually send the money, please call me so I can make sure all of the appropriate procedures are followed and notices given. Alternatively, if you want to simply give me the checks, I will prepare the necessary cover letters and notices.

Hylebos Waterway Problem Areas Escrow Account
United States vs. Mary Jane Anderson, et al.
3:03-cv-05107-FDB

Dear Ms. Hayes:

Enclosed please find a check payable to the Hylebos Waterway Problem Areas Escrow Account in the amount of \$24,988.00. This payment is tendered on behalf of Modutech Marine, Inc., a named defendant in the above-referenced matter, and it represents Modutech Marine's full settlement payment.

Please contact the undersigned if you have any questions regarding this matter.

Very truly yours,

Gregory A. Jacoby

DEPARTMENT OF ECOLOGY
URBAN BAY ACTION TEAM

MEMORANDUM

7/12/94

TO: Modutech Marine File

FROM: Joyce Mercuri

RE: Status of voluntary grit cleanup

Modutech Marine, Inc. is a boat construction and repair facility that has operated at 2218 Marine View Drive since 1983. At one time, waste sandblast grit from sand blasting of boat hulls was spread on roads and surfaces in certain areas of the site. Ecology sampled grit deposits near the shoreline and near the sandblast shed in February 1991, and detected copper, lead, zinc, mercury, LPAH, HPAH, phenol, and bis (2-ethylhexyl) phthalate. Ecology also reported detecting 9.2 ug/kg of PCBs in a sample at the northwest corner of the property in an area which appeared to contain "auto-fluff". The site is currently unpaved. Storm water from the north part of the site enters the Hylebos Waterway through a swale which discharges just south of Tacoma storm outfall No. 23. At this time there are no other stormwater structures on the site.

Ecology inspectors confirmed the presence of sandblast grit on the site during an inspection of 6/17/92. In a letter of August 28, 1992, Ecology requested Modutech to take measures to stop contaminants from spent sandblast grit from reaching the Hylebos Waterway. Modutech agreed to remove spent grit from the site, clean up residual grit on the marine railway and along the intertidal bank area of the site, and implement best management practices for grit management and boat work. Ecology also commented on a shoreline development permit for Modutech in a letter of January 6, 1992, requesting that the permit be conditioned with requirements to identify and remediate any sandblast grit which may be uncovered through site improvement activities. The shoreline development permit is for retention of covered moorage, paving the parking area, developing a stormwater swale, and developing a 3:1 slope vegetated buffer zone along the shoreline. In a January 6 letter to Modutech, Ecology asked Modutech to provide a plan of action for dealing with any grit which is discovered during bank regrading. Modutech is certain that no grit other than what has been removed was ever deposited within the bank area, and that no more grit will be discovered during bank regrading. However, if any grit is discovered, measures will be taken to remove and dispose of it appropriately.

An Ecology site inspection of December 30, 1992 showed that Modutech had removed several truckloads of grit from an old dump area at the north end of the site, from the roadway along the shore, and from around the boat prep shed and sandblast shed. The bulk of the grit, at the north end of the site, had been removed with a backhoe until clean packed sand was observed, then the area was backfilled with clean gravel. The grit along the roadway and around the sheds had been removed with an industrial vacuum. Some surface grit in

the northwest corner of the site was also vacuumed. Grit around the marine railway had also been cleaned up at the time of the December 30 inspection.

In a letter of January 6, 1993, Ecology requested Modutech to dig test pits within the proposed drainage swale and along part of the shoreline which is slated to be regraded to a 3:1 slope for the vegetated buffer zone. Ecology observed test pits within the swale area on August 26, 1993, and within the vegetated buffer zone area on September 21, 1993. No sandblast grit was observed. By the time of the August, 1993 inspection, residual sandblast grit in the intertidal zone had also been removed. In the last site inspection, of May 25, 1994, Ecology observed that the last of the sandblast grit on the site was scraped up and was awaiting removal. This area of grit was immediately behind the office, in a boat mold storage area. The boat molds had been moved and the grit removed with a vacuum. The remainder of sandblast grit on the site, which was within a boat mold storage area away from the shoreline, was cleaned up in spring of 1994.

An Ecology site inspection report from February 1991 noted that "auto fluff" had been observed in the northwest corner of the property. This was sampled and found to contain 9.2 mg/kg of PCBs. The MTCA Method A, Industrial Cleanup level is 10 mg/kg. Ecology inspectors looked for visual indications of the auto fluff during site inspections on June 17, 1992 and December 30, 1992. No auto fluff was observed. However, the area where the fluff was originally identified was covered by fiberglass boat molds, so access is difficult. Modutech reported "digging around" in that area when removing the large stockpile of sandblast grit, and did not observe any auto fluff.

STATE OF WASHINGTON
DEPARTMENT OF ECOLOGY

2222 Cleanwater Lane, LU-11 • Olympia, Washington 98504-6811 • (206) 753-2353

August 28, 1992

Mr. Carl Swindahl
Modutech Marine, Inc.
2218 Marine View Drive
Tacoma, WA 98422-4183

Dear Mr. Swindahl:

I have enclosed the report from my inspection at Modutech Marine on 6/17/92. I apologize for the delay in sending it. Ecology's task is to find and control ongoing sources of pollution to Commencement Bay waterways, to prevent recontamination of the waterway sediments after they are cleaned up.

On your site, spent sandblast grit appears to be a major problem. Spent grit can be washed from the site via stormwater or metals leached out and transported through ground water. An option may be to remove the grit from the shoreline and drainage courses and pave the yard to prevent stormwater transport of grit or leaching through ground water. Another option may be to remove the grit from the yard altogether, including scraping up the grit beneath the gravel. The sandblast grit next to the concrete slab at the marine railway is contaminated with paint residues and metals and should also be removed. Any material which designates as dangerous waste should be disposed of properly.

At this time, my primary concern is to prevent the spent grit from reaching the waterway. However, the spent sandblast grit in the soils of the site may also violate the cleanup standards of the Model Toxics Control Act (MTCA). If you do plan to leave the spent grit on site (beneath the pavement), then some assurance must be made that future activities at the site will not cause a release of toxic chemicals to the environment. An example is a deed restriction requiring appropriate controls for any future disturbance of the pavement that may re-expose the soils.

To avoid continuing problems with spent sandblast grit or other pollutants, please review the recommendations in the inspection report. It is my understanding that any work in the shoreline costing less than \$2,500.00 does not require a shoreline permit. However, in light of other outstanding shoreline permit issues at your site, I suggest you contact Peter Katich before work to remove the grit is resumed.

Mr. Carl Swindahl, President

Page 2

August 28, 1992

While I do understand that there are unresolved shoreline permit issues at your site that may prevent immediate cleanup of the sandblast grit, Ecology needs some assurance that this source of sediment contamination will be stopped. Therefore, please let me know by September 25 what your plans are for dealing with the spent sandblast grit. If you have any questions please call me at 586-4692.

Sincerely,

Joyce Mercuri
Urban Bay Inspector

Peter Katich, Tacoma Land Use Div.

MODUTECH MARINE
4/16/91

TO: Modutech Marine File

FROM: Lynn Gooding *yg*

SUBJECT: Review of Sample Analyses

Modutech Marine was inspected on February 26, 1991 by Lynn Gooding and Mary Beth Hayes of Ecology. Samples were collected in three areas of the facility and analyzed for various parameters. Sample MOD 1 was collected outside of sheds used for sandblasting and appeared to be mostly sandblast grit. MOD 1 was analyzed for priority pollutant metals. Samples MOD 2A and 2B were collected at the crane way in a tidally influenced area. The sample appeared to contain a significant amount of paint waste. MOD 2A was analyzed for priority pollutant metals and MOD 2B was analyzed for semi-volatile organics (BNA's). Sample MOD 3 was collected in the northwest corner of the property in an area which appeared to have "car fluff" deposited. MOD 3 was analyzed for PCB's. The following outlined the analyses results for the Modutech Marine samples.

MOD 1/MOD 2A- PRIORITY POLLUTANT METALS ANALYSIS (ug/g) ppm

PARAMETER	MOD 1	MOD 1/SPLIT	MOD 2A	MOD 2A/SPLIT	SED. CLNP. OBJECTIVE (ROD)
Mercury +	< 0.011	< 0.010	1.76	1.80	59
Antimony +	2.29	2.29	12.6	-	150
Lead +	6.00	5.92	450.	-	450
Selenium	0.30	0.30	3.12	-	-
Arsenic +	(30.)	(25)	(46.)	-	57
Thallium	1.75	1.98	1.42	-	-
Beryllium	<3.8	-	< 7.1	-	-
Cadmium	(13.)	-	(24)	-	5.1
Chromium	128.	-	122.	-	-
Copper +	2,800	-	23,000	-	390
Nickel +	69.	-	42.	-	140
Silver	< 0.76	-	< 1.4	-	6.1
Zinc +	304.	-	7,080.	-	410
Tin	< 15.	-	350.	-	-
Total Solids (%)	89.9	-	36.5	-	-

(Note: + = a priority chemical for the waterway segment, bold indicates that the level exceeds the sediment cleanup objectives listed in the ROD)

The high metals content in both samples are probably due to sandblast grit and anti-fouling paints. Modutech takes their used sandblast grit and spreads it around the yard and boats are hydro-blasted along the crane way area.

MOD 2B - SEMI VOLATILE ORGANIC ANALYSIS (ug/Kg)

PARAMETER	MOD 2B	Sediment SCO Cleanup Objective	Clean up standard, Method A
X Phenol +	520	420	
X Dibenzofuran	550	540

X Di-n-butyl	2,800	1,400	

(The bold figures indicate parameters which exceeded the Sediment Cleanup Objectives and are priority chemicals for the problem area)

MOD 3 - POLYCHLORINATED BIPHENYLS ANALYSIS (ug/Kg)

PCB #	MOD 3	REPLICATE 1	REPLICATE 2	STANDARD - METHOD A
1254	4,600	4,300	3,700	
1262	4,600	5,400	4,000	
TOTAL	9,200	9,700	7,700	10,000 1000

(PCBs are a priority chemical for the waterway)

RECOMMENDATION: THIS FACILITY SHOULD GO TO LIST 3

$$9200 \text{ ug/kg} = 9.2 \text{ mg/kg} = 9.2 \text{ ppm}$$

$$\text{Method 1} = 1.0 \text{ mg/kg} = 1000 \text{ ug/kg}$$

Focused Phase II Subsurface Investigation
The Riley Group, Inc
November 10, 2009
Project No. 236b

The Riley Group, Inc.

November 10, 2009

Ms. Carol Duris
Viking Bank
13613 Meridian East, Suite 160
Puyallup, WA 98373

**Re: Focused Phase II Subsurface Investigation
Modutech Marine, Inc.
2218 Marine View Drive
Tacoma, Washington
RGI Project #2009-236b**

Dear Ms. Duris:

This letter report summarizes The Riley Group, Inc.'s (RGI's) Focused Phase II Subsurface Investigation (Phase II) findings for the above-referenced property located at 2218 Marine View Drive in Tacoma, Washington (Figure 1).

The Focused Phase II investigation was performed at the request of Ms. Carol Duris of Viking Bank (Client). The scope of work for this project was performed in accordance with our *Focused Phase II Subsurface Investigation Proposal* dated October 12, 2009.

PROJECT BACKGROUND

RGI completed a Phase I Environmental Site Assessment (ESA) of the subject Site for the Client in September, 2009. Among our findings and conclusions, RGI included the following findings:

- Previous investigations were conducted at the Site by the Washington State Department of Ecology (Ecology) while assessing potential on-site sources of pollution to the adjoining Hylebos Waterway. During their investigation, Ecology encountered sandblast grit from historical on-Site operations, which was deposited at various locations throughout the Site.
- A shallow sandblast grit sample collected by Ecology near the southwest corner of the Site manufacturing building was found to contain elevated concentrations of arsenic and cadmium.
- A shallow soil sample collected by Ecology southeast of the Site manufacturing building contained elevated concentrations of carcinogenic polynuclear aromatic hydrocarbons (cPAHs).
- A shallow soil sample collected by Ecology from the northwest corner of the Site contained elevated concentrations of polychlorinated biphenyls (PCBs).

- Ecology previously noted spilled paint along the boat ramp, where hull painting and blasting reportedly occurred. A shallow soil sample collected by Ecology from the ramp area contained elevated concentrations of arsenic, lead and cadmium.

RGI's complete findings and conclusions are provided in our *Phase I Environmental Site Assessment Report*, dated September 11, 2009. On October 13, 2009, the Client authorized RGI to perform this Focused Phase II Subsurface Investigation.

SCOPE OF SERVICES

The Scope of Services performed for this project was as specified by the Client. The goal of the investigation was to sample and analyze soils at the above-mentioned locations for the specified contaminants of concern. The scope of work included the following tasks:

- Performed public and private utility locating in an attempt to identify the location(s) of buried utility lines servicing the Site.
- Advanced four direct push test probes in the suspect areas discussed above, to a maximum depth of 6 feet below ground surface (bgs).
- Collected soil samples at all test probe locations for laboratory analysis of specified contaminants of concern. At Client request, groundwater sampling was excluded from this scope of work.
- Compared analytical results to Ecology's routine Model Toxics Control Act (MTCA) Method A Soil Cleanup Levels for Unrestricted Land Use (WAC 173-340).
- Prepared this letter report presenting our findings and conclusions.

REGULATORY ANALYSIS OF SITE CONDITIONS UNDER MODEL TOXICS CONTROL ACT (MTCA)

Washington's hazardous release cleanup law, the Model Toxics Control Act (RCW 70.105D), mandates that site cleanups protect human health and the environment. The MTCA Cleanup Regulation (WAC173-340) defines the approach for establishing cleanup requirements for individual sites, including the establishment of cleanup standards and selection of cleanup actions.

The MTCA regulation provides three options for establishing generic and site-specific cleanup levels for soil and groundwater. Method A cleanup levels have been adopted for specific purposes and are intended to provide conservative cleanup levels for sites undergoing routine site characterization or cleanup actions or those sites with relatively few hazardous substances. Method B and C cleanup levels are set using a site risk assessment, which focus on the use of "reasonable maximum exposure" assumptions based on site-specific characteristics and toxicity of the contaminants of concern.

For purposes of comparison, analytical laboratory data for this project are compared to the MTCA Method A Soil Cleanup Levels for Unrestricted Land Use (considered protective of drinking water). The MTCA Method A Soil Cleanup Levels are summarized in the attached Table 1.

FOCUSED PHASE II SUBSURFACE INVESTIGATION

On October 21, 2009, RGI advanced a total of four test probes (SP1 through SP4) to a maximum depth of 6 feet bgs (Figure 2). Each test probe was advanced at the approximate four locations identified above, where elevated concentrations of the specified contaminants of concern were previously intercepted.

Test probes were advanced using a truck-mounted direct push probe rig owned and operated by Pacific Northwest Probe under subcontract to RGI. Test probe logs will be kept in our files and are available upon request.

All probing and sampling equipment were cleaned prior to commencing probing and in between sampling and boring locations. All field sampling and decontamination procedures were performed in accordance with RGI's standard sampling and decontamination protocols.

Soil Sampling

During all drilling activities, soil samples were collected, inspected, and classified by RGI's field geologist. Soil conditions encountered were described using the Unified Soil Classification System (USCS). Native soils beneath the Site generally consisted of varying depths of silty, fine- to medium-grained sand with gravel overlying a silty, fine-grained sand with trace gravel. Both layers appeared to represent different generations of fill material.

A total of 8 discrete soil samples were collected during this project. In general, samples were collected of surficial and deeper fill material, respectively. Soil samples were screened in the field for the presence of volatile organic compounds (VOCs) using a portable gas analyzer equipped with a photo-ionization detector (PID). No elevated PID field screening results were noted.

Based on our field observations, select soil samples were submitted for laboratory analyses of Client-specified contaminants of concern, listed below. Samples were selected based on the historical detections of the specified contaminants of concern. Samples SP1-1 and SP2-0.5 were collected from beneath the existing concrete pavement and selected based on the previous detection of cPAHs and metals, respectively, in shallow soils. Samples SP3-3 and SP4-3 were collected from the deeper fill layer, which was reportedly overlain by the previously excavated sandblast grit.

Analytical Laboratory Analysis

Selected soil samples collected during this project were submitted to Libby Environmental, Inc. of Olympia, Washington, for one or more of the following laboratory analyses:

- Carcinogenic PAHs by EPA Test Method 8270C.
- PCBs by EPA Test Method 8082.
- MTCA-Regulated Metals¹ by EPA Test Method 7000 Series & 7471.

¹ Arsenic, Cadmium, Chromium, Lead and/or Mercury.

Laboratory Analytical Results

Analytical results and field screening data, summarized in the attached Table 1, are discussed below. Copies of the analytical laboratory reports and associated sample chain of custody forms are included in Appendix A.

Soil Analytical Results

No PAHs, PCBs, arsenic, cadmium, lead or silver were detected in the soil samples submitted from the Site. Chromium concentrations of 6 milligrams per kilogram (mg/kg) and 14 mg/kg, within expected natural background thresholds and below the MTCA Method A Soil Cleanup Levels for Unrestricted Land Use (19 and 2,000 mg/kg, as applicable).

CONCLUSIONS

Based on our subsurface investigation findings, the specified contaminants of concern were not detected in the soils analyzed from the Site.

LIMITATIONS

This report is the property of The Riley Group, Inc., Viking Bank and its authorized representatives or affiliates and was prepared in a manner consistent with the level of skill and care ordinarily exercised by members of the profession currently practicing in the same locality and under similar conditions. This report is intended for specific application to the Modutech Marine, Inc. property located at 2218 Marine View Drive in Tacoma, Washington. No other warranty, expressed or implied, is made.

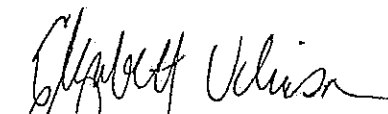

The analyses and recommendations, if any, presented in this report are based upon data obtained from our review of available information at the time of preparing this report, our test pits excavated or test borings drilled on-site, or other noted data sources. Conditional changes may occur through time by natural or man-made process on this or adjacent properties. Additional changes may occur in legislative standards, which may or may not be applicable to this report. These changes, beyond RGI's control, may render this report invalid, partially or wholly. If variations appear evident, The Riley Group, Inc. should be requested to reevaluate the recommendations in this report.

We trust that this letter report meets your current project needs and appreciate the opportunity to be of service. Please contact us if you have any questions or need additional information.

Sincerely,

THE RILEY GROUP, INC.

Lannie Smith, CHMM

Dear Mr. Smith:

Please find enclosed the analytical data report for the Modutech Project located in Washington. Soil samples were analyzed for Metals by EPA Method 7000 Series on October 21, 2009 and PCB (Polychlorinated Biphenyls) by EPA Method 8082 on October 22, 2009.

The results of the analyses are summarized in the attached tables. Applicable detection limits and QA/QC data are included. An invoice for this analytical work is also enclosed. All soil samples are reported on a dry weight basis.

Libby Environmental, Inc. appreciates the opportunity to have provided analytical services for this project. If you have any further questions about the data report, please give me a call. It was a pleasure working with you on this project, and we are looking forward to the next opportunity to work together.

Sincerely,

Sherry L. Chilcutt
President

RE: Modutech Marine
Fremont Project No: CHM091022-2

October 26th, 2009

Sherry:

Enclosed are the analytical results for the **Modutech Marine** soil sample (Sample ID: SP1-1) received by Fremont Analytical on October 22nd, 2009

Examination of this sample was conducted for the presence of the following:

- ***Polyaromatic Hydrocarbons in Soil by EPA Method 8270C***

This application was performed under Washington State Department of Ecology accreditation parameters. All appropriate Quality Assurance / Quality Control method parameters have been applied.

Please contact the laboratory if you should have any questions about the report.

Thank you for using Fremont Analytical!

Sincerely,

Michael Dee
Sr. Chemist / Principal

___ Yes ☒ No ___ Unkwn

(15) Are there currently, or to the best of your knowledge have there been previously, any flooring, drains, or walls located within the facility that are stained by substances other than water, or are emitting foul odors?

- ☒ Yes ☐ No ☐ Unkwn (16) Are there currently, or to the best of your knowledge have there been previously, any groundwater wells located on the Property?
- ☐ Yes ☒ No ☐ Unkwn (17) If the Property is served by a private well or non-public water system, have contaminants been identified in the well or system that exceed guidelines applicable to the water system or has the well been designated as contaminated by any government environmental and/or health agency?
- ☐ Yes ☒ No ☐ Unkwn (18) Does the Owner or Occupant of the Property have any knowledge of Environmental Liens or government notification relating to past or current violations of environmental laws with respect to the Property or any facility located on the Property?
- ☐ Yes ☒ No ☐ Unkwn (19) Has the Owner or Occupant of the Property been informed of the past or current existence of hazardous Substances or Petroleum Products or environmental violations with respect to the Property or any facility located on the Property?
- ☐ Yes ☒ No ☐ Unkwn (20) Does the Owner or Occupant of the Property have any knowledge of any Environmental Site Assessment of the Property or facility that indicated the presence of Hazardous Substances or Petroleum Products on, or contamination of, the Property or recommended further assessment of the Property?
- ☐ Yes ☒ No ☐ Unkwn (21) Does the Owner or Occupant of the Property know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any Hazardous Substances or Petroleum Products involving the Property by an Owner or Occupant?
- ☐ Yes ☒ No ☐ Unkwn (22) Does the Property discharge waste water other than storm water, directly to a ditch or stream on or adjacent to the Property?
- ☐ Yes ☒ No ☐ Unkwn (23) To the best of your knowledge, have any Hazardous Substances or Petroleum Products, unidentified waste materials, tires, automotive or industrial batteries or any other waste materials been dumped above grade, buried, and or burned on the Property?
- ☐ Yes ☒ No ☐ Unkwn (24) To the best of your knowledge, have any railroad ties, telephone poles, treated lumber, wooden wire or cable storage reels or spools been dumped above grade, buried, and or burned on the Property?

___ Yes ☒ No ___ Unkwn

(25) To the best of your knowledge, in the past or the present have any railroad tracks or railroad right-of-ways been located on, or adjacent to the Property?

___ Yes ☒ No ___ Unkwn

(26) Is there a transformer, capacitor or any hydraulic equipment for which there are any records indicating the presence of PCBs?

☒ Yes ___ No ___ Unkwn

(27) Are there currently, or to the best of your knowledge, has the Owner or Operator of the Property been required previously to submit, file, or maintain Material Safety Data Sheets (MSDS) or a written Hazard Communication Program?

___ Yes ☒ No ___ Unkwn

(28) Are there currently, or to the best of your knowledge, has the Owner or Operator of the Property been required previously to submit or file to Federal or State agencies a Chemical Contingency Plan, Emergency and Hazardous Chemical Inventory Form, Toxic Chemical Release Form, SARA Title III - Emergency Planning and Community Right-to-Know Act inventory, SARA Title III - Extremely Hazardous Substances inventory, or report under the Emergency Response Notification System?

___ Yes ☒ No ___ Unkwn

(29) To the best of your knowledge, does the Property currently fall within the auspices of Department of Housing and Urban Development (HUD) supplied funding, or is a source of income revenue directly derived from, supplied, or guaranteed by HUD?

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/11/2017 has revealed that there are 6 SEMS sites within approximately 0.5 miles of the target property.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2017 has revealed that there are 5 CORRACTS sites within approximately 1 mile of the target property.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

WA CSCSL: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Ecology's Confirmed & Suspected Contaminated Sites List.

A review of the WA CSCSL list, as provided by EDR, and dated 10/17/2017 has revealed that there are 28 WA CSCSL sites within approximately 1 mile of the target property.

Local Lists of Hazardous waste / Contaminated Sites

Information on facilities and sites of interest to the Department of Ecology.

A review of the WA ALLSITES list, as provided by EDR, and dated 11/02/2017 has revealed that there are 51 WA ALLSITES sites within approximately 0.5 miles of the target property.

WA CSCSL NFA: The data set contains information about sites previously on the Confirmed and Suspected Contaminated Sites list that have received a No Further Action (NFA) determination. Because it is necessary to maintain historical records of sites that have been investigated and cleaned up, sites are not deleted from the database when cleanup activities are completed. Instead a No Further Action code is entered based upon the type of NFA determination the site received.

A review of the WA CSCSL NFA list, as provided by EDR, and dated 10/17/2017 has revealed that there are 13 WA CSCSL NFA sites within approximately 0.5 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or

EXECUTIVE SUMMARY

dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 7 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

TSCA SUBMITTER

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

SUPERFUND (NON-NPL)

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This

information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Comments: low level lead-contaminated soil taken to Columbia Ridge Landfill,
treated, and disposed

Facility Site ID Number: 1227
EPA ID: WAD067166397
NAICS: 42393
SWC Desc: N/A
FWC Desc: N/A
Form Comm: CESQG - No hazardous waste generated in calendar year 2008.
Data Year: 2008
Permit by Rule: False
Treatment by Generator: False
Mixed radioactive waste: False
Importer of hazardous waste: False
Immediate recycler: False
Treatment/Storage/Disposal/Recycling Facility: False
Generator of dangerous fuel waste: False
Generator marketing to burner: False
Other marketers (i.e., blender, distributor, etc.): False
Utility boiler burner: False
Industry boiler burner: False
Industrial Furnace: False
Smelter deferral: False
Universal waste - batteries - generate: False
Universal waste - thermostats - generate: False
Universal waste - mercury - generate: False
Universal waste - lamps - generate: False
Universal waste - batteries - accumulate: False
Universal waste - thermostats - accumulate: False
Universal waste - mercury - accumulate: False
Universal waste - lamps - accumulate: False
Destination Facility for Universal Waste: False
Off-specification used oil burner - utility boiler: False
Off-specification used oil burner - industrial boiler: False
Off-specification used oil burner - industrial furnace: False
Tax Reg #: 278030532

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

HAZARDOUS AIR POLLUTANT MAJOR

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Waste Stream Comments:

Facility ID: 2776343
Data Year: 2011
Comments: Source Code G49 - remediation of historic fill layer at site as part of an Agreed Oder (DE 5940). The historic fill layer is identified as Occidental Sludge.

Facility ID: 2776343
Data Year: 2011
Comments: Source Code G49 - drummed wastes are drill cuttings from the installation of groundwater monitoring wells.

Facility ID: 2776343
Data Year: 2011
Comments: Source Code G49 - drummed waste is drill cuttings from site investigations. This drum developed settled water that had a naturally occurring pH of 12.53.

Facility ID: 2776343
Data Year: 2011
Comments: Source Code 49 - decontamination water generated during site investigations

Facility ID: 2776343
Data Year: 2011
Comments: Source Code G49 - drummed waste is drill cuttings generated from site delineation utilizing soil borings to collect subsurface samples.

Waste Stream Comments:

Facility ID: 2776343
Data Year: 2011
Comments: Source Code G49 - remediation of historic fill layer at site as part of an Agreed Oder (DE 5940). The historic fill layer is identified as Occidental Sludge.

Facility ID: 2776343
Data Year: 2011
Comments: Source Code G49 - drummed wastes are drill cuttings from the installation of groundwater monitoring wells.

Facility ID: 2776343
Data Year: 2011
Comments: Source Code G49 - drummed waste is drill cuttings from site investigations. This drum developed settled water that had a naturally occurring pH of 12.53.

Facility ID: 2776343
Data Year: 2011
Comments: Source Code 49 - decontamination water generated during site investigations

Facility ID: 2776343
Data Year: 2011
Comments: Source Code G49 - drummed waste is drill cuttings generated from site delineation utilizing soil borings to collect subsurface samples.

Waste Stream Comments:

Facility ID: 2776343
Data Year: 2011
Comments: Source Code G49 - remediation of historic fill layer at site as part of an Agreed Oder (DE 5940). The historic fill layer is identified as Occidental Sludge.

Facility ID: 2776343
Data Year: 2011
Comments: Source Code G49 - drummed wastes are drill cuttings from the installation of groundwater monitoring wells.

Facility ID: 2776343
Data Year: 2011
Comments: Source Code G49 - drummed waste is drill cuttings from site investigations. This drum developed settled water that had a naturally occurring pH of 12.53.

Facility ID: 2776343
Data Year: 2011
Comments: Source Code 49 - decontamination water generated during site investigations

Facility ID: 2776343
Data Year: 2011
Comments: Source Code G49 - drummed waste is drill cuttings generated from site delineation utilizing soil borings to collect subsurface samples.

Waste Stream Comments:

Facility ID: 68593938
Data Year: 2013
Comments: ref A-8. Inorganic solids comprised of an iron hydroxide solids mixture. Residuals removed as part of groundwater treatment system decommissioning.

Facility ID: 68593938
Data Year: 2016
Comments: Used absorbents with liquid, Solidified Polyester, Soil with PHTHALIC A

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste Stream Comments:

Facility ID: 94926135
Data Year: 2006
Comments: Corrosive Aqueous Wastewater (Treated in an on-site elementary neutralization system) A-7: Generation of alkaline wastewater that is hazardous only due to the characteristic of corrosivity.

Facility ID: 94926135
Data Year: 2008
Comments: A7: Cleanout of Sodium Hydroxide (Caustic Soda) Storage Tank.

Facility ID: 94926135
Data Year: 2008
Comments: A-7: Cleaning of brass valve components. A-8: Spent valve cleaning residue containing trace amounts of cadmium and lead.

Facility ID: 94926135
Data Year: 2008
Comments: A-7: Cleanout of chlorine vacuum containers. A-8: Ferric Chloride slurry.

Facility ID: 94926135
Data Year: 2009
Comments: A-7: Cleaning of brass valve components. A-8: Spent valve cleaning residue containing trace amounts of cadmium and lead.

Facility ID: 94926135
Data Year: 2009
Comments: A7: Cleanout of Elementary Neutralization System Tank

Facility ID: 94926135
Data Year: 2010
Comments: A-7: Cleaning of brass valve components. A-8: Spent valve cleaning residue containing trace amounts of cadmium and lead.

Facility ID: 94926135
Data Year: 2010
Comments: A-7: Removal and cleaning of elbow from process piping containing ferrous chloride solution (rust). A-8: Waste Ferrous Chloride Solution.

Facility ID: 94926135
Data Year: 2011
Comments: A-7: Cleaning of brass valve components. A-8: Spent valve cleaning residue containing trace amounts of cadmium and lead.

Waste Stream Comments:

Facility ID: 94926135
Data Year: 2006
Comments: Corrosive Aqueous Wastewater (Treated in an on-site elementary neutralization system) A-7: Generation of alkaline wastewater that is hazardous only due to the characteristic of corrosivity.

Facility ID: 94926135
Data Year: 2008
Comments: A7: Cleanout of Sodium Hydroxide (Caustic Soda) Storage Tank.

Facility ID: 94926135
Data Year: 2008
Comments: A-7: Cleaning of brass valve components. A-8: Spent valve cleaning residue containing trace amounts of cadmium and lead.

Facility ID: 94926135
Data Year: 2008
Comments: A-7: Cleanout of chlorine vacuum containers. A-8: Ferric Chloride slurry.

Facility ID: 94926135
Data Year: 2009
Comments: A-7: Cleaning of brass valve components. A-8: Spent valve cleaning residue containing trace amounts of cadmium and lead.

Facility ID: 94926135
Data Year: 2009
Comments: A7: Cleanout of Elementary Neutralization System Tank

Facility ID: 94926135
Data Year: 2010
Comments: A-7: Cleaning of brass valve components. A-8: Spent valve cleaning residue containing trace amounts of cadmium and lead.

Facility ID: 94926135
Data Year: 2010
Comments: A-7: Removal and cleaning of elbow from process piping containing ferrous chloride solution (rust). A-8: Waste Ferrous Chloride Solution.

Facility ID: 94926135
Data Year: 2011
Comments: A-7: Cleaning of brass valve components. A-8: Spent valve cleaning residue containing trace amounts of cadmium and lead.

Facility ID: 94926135
Data Year: 2012
Comments: A-7: Cleaning of brass valve components. A-8: Spent valve cleaning

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110005313516

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

[Click this hyperlink](#) while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Handler Activities Summary:

U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
Used oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

. Waste code: D001
. Waste name: IGNITABLE WASTE

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

US EPA Enforcement Criminal Records Management System (ECRM), now called the Criminal Case Reporting System (CCRS), is the Criminal Investigation Division's (CID) "official record" of all criminal investigation activities. The system maintains and tracks case-specific program and investigative information on over 8,200 active and archived criminal cases. CCRS is an EPA-only system and data entry is performed directly by CID employees. The Public is allowed to obtain only select defendant data fields for closed, convicted cases via the Freedom of Information Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NONHALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

. Waste code: F037
. Waste name: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

. Waste code: WT01

- . Waste name: SPENT PICKLE LIQUOR FROM STEEL FINISHING OPERATIONS OF PLANTS THAT PRODUCE IRON OR STEEL.

- . Waste code: K086
- . Waste name: SOLVENT WASHES AND SLUDGES, CAUSTIC WASHES AND SLUDGES, OR WATER WASHES AND SLUDGES FROM CLEANING TUBS AND EQUIPMENT USED IN THE FORMULATION OF INK FROM PIGMENTS, DRIERS, SOAPS, AND STABILIZERS CONTAINING CHROMIUM AND LEAD.

- . Waste code: WP01
- . Waste name: Washington State Extremely Hazardous Persistent Waste containing Halogenated Organic Compounds (HOC) at a total concentration level of Greater than 1.0%.

- . Waste code: WP02
- . Waste name: Washington State Dangerous Persistent Waste containing Halogenated Organic Compounds (HOC) at a total concentration level of 0.01% to 1.0%.

- . Waste code: WP03
- . Waste name: Washington State Extremely Hazardous Persistent Waste containing Polycyclic Aromatic Hydrocarbons (PAH) at a total concentration level of Greater than 1.0%.

- . Waste code: WT01
- . Waste name: Washington State Extremely Hazardous Toxic Waste with a toxic constituents concentration greater than or equal to 1.0%, determined by biological testing methods or a book designation procedure.

- . Waste code: WT02
- . Waste name: Washington State Dangerous Toxic Waste with a toxic constituents concentration greater than or equal to 0.001% and less than 1.0%, determined by biological testing methods or a book designation procedure.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

	WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs):	9685640.9
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

CAMDBS (Clean Air Markets Division Business System) is a national information system that supports the implementation of market-based air pollution control programs administered by the Clean Air Markets Division, within the Office of Air and Radiation. These programs include the Acid Rain Program, established by Title IV of the Clean Air Act Amendments of 1990, and regional programs designed reduce the transport of ozone. These emissions trading programs allows regulated facilities (primarily electric utilities) to adopt the most cost-effective strategies to reduce emissions at their units. Units that reduce their emissions below the number of allowances they hold -- each allowance is equivalent to one ton of sulfur dioxide or nitrogen oxides -- may trade allowances with other units in their system, sell them to other utilities on the open market or through EPA auctions, or bank them to cover emissions in future years. CAMDBS functions include registering responsible officials, establishing allowance accounts, reporting hourly emissions data, and transferring allowances between accounts.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are

transported off-site.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

SUPERFUND (NON-NPL)

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also

PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

- . Waste code: F007
- . Waste name: SPENT CYANIDE PLATING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS.

- . Waste code: F008
- . Waste name: PLATING BATH RESIDUES FROM THE BOTTOM OF PLATING BATHS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

- . Waste code: F009
- . Waste name: SPENT STRIPPING AND CLEANING BATH SOLUTIONS FROM ELECTROPLATING OPERATIONS IN WHICH CYANIDES ARE USED IN THE PROCESS.

- . Waste code: F019
- . Waste name: WASTEWATER TREATMENT SLUDGES FROM THE CHEMICAL CONVERSION COATING OF ALUMINUM, EXCEPT FROM ZIRCONIUM PHOSPHATING IN ALUMINUM CAN WASHING WHEN SUCH PHOSPHATING IS AN EXCLUSIVE CONVERSION COATING PROCESS.

- . Waste code: F035
- . Waste name: WASTEWATERS, PROCESS RESIDUALS, PRESERVATIVE DRIPPAGE, AND SPENT FORMULATIONS FROM WOOD PRESERVING PROCESSES GENERATED AT PLANTS THAT USE INORGANIC PRESERVATIVES CONTAINING ARSENIC OR CHROMIUM. THIS LISTING DOES NOT INCLUDE K001 BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATER FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.

- . Waste code: F037
- . Waste name: PETROLEUM REFINERY PRIMARY OIL/WATER/SOLIDS SEPARATION SLUDGE - ANY SLUDGE GENERATED FROM THE GRAVITATIONAL SEPARATION OF OIL/WATER/SOLIDS DURING THE STORAGE OR TREATMENT OF PROCESS WASTEWATERS AND OILY COOLING WASTEWATERS FROM PETROLEUM REFINERIES. SUCH SLUDGES INCLUDE, BUT ARE NOT LIMITED TO, THOSE GENERATED IN OIL/WATER/SOLIDS SEPARATORS; TANKS AND IMPOUNDMENTS; DITCHES AND OTHER CONVEYANCES; SUMPS; AND STORM WATER UNITS RECEIVING DRY WEATHER FLOW. SLUDGES GENERATED IN STORM WATER UNITS THAT DO NOT RECEIVE DRY WEATHER FLOW, SLUDGES GENERATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS AS DEFINED IN SECTION 261.31(B)(2) (INCLUDING SLUDGES GENERATED IN ONE OR MORE ADDITIONAL UNITS AFTER WASTEWATERS HAVE BEEN TREATED IN AGGRESSIVE BIOLOGICAL TREATMENT UNITS), AND K051 WASTES ARE EXEMPTED FROM THIS LISTING.

- . Waste code: K001
- . Waste name: BOTTOM SEDIMENT SLUDGE FROM THE TREATMENT OF WASTEWATERS FROM WOOD PRESERVING PROCESSES THAT USE CREOSOTE AND/OR PENTACHLOROPHENOL.

- . Waste code: K161
- . Waste name: PURIFICATION SOLIDS (INCLUDING FILTRATION, EVAPORATION, AND CENTRIFUGATION SOLIDS), BAG HOUSE DUST AND FLOOR SWEEPINGS FROM THE PRODUCTION OF DITHIOCARBAMATE ACIDS AND THEIR SALTS. (THIS LISTING DOES NOT INCLUDE K125 OR K126).

- . Waste code: P030
- . Waste name: CYANIDES (SOLUBLE CYANIDE SALTS), NOT OTHERWISE SPECIFIED

- . Waste code: P089
- . Waste name: PARATHION (OR) PHOSPHOROTHIOIC ACID, O,O-DIETHYL-O-(4-NITROPHENYL)

CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 9718895.8

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 895611.5

Waste code: D003

Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AFS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

HAZARDOUS WASTE BIENNIAL REPORTER

AIR MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance

Map ID

BURLINGTON ENVIRONMENTAL LLC TACOMA (Continued)

1000299436

information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Washington Facility / Site Identification System (WA-FSIS) provides a means to query and display data maintained by the Washington Department of Ecology. This system contains key information for each facility/site that is currently, or has been, of interest to the Air Quality, Dam Safety, Hazardous Waste, Toxics Cleanup, and Water Quality Programs.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 12/22/2017
Number of Days to Update: 14	Next Scheduled EDR Contact: 04/16/2018
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 12/22/2017

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704

Number of Days to Update: 92	Next Scheduled EDR Contact: 04/16/2018
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: 800-424-9346

	Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (206) 553-1200
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 01/19/2018
Number of Days to Update: 10	Next Scheduled EDR Contact: 04/09/2018

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (206) 553-1200
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 01/19/2018
Number of Days to Update: 10	Next Scheduled EDR Contact: 04/09/2018

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 09/13/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 09/26/2017	Telephone: (206) 553-1200
Date Made Active in Reports: 10/06/2017	Last EDR Contact: 01/19/2018
Number of Days to Update: 10	Next Scheduled EDR Contact: 04/09/2018
	Data Release Frequency: Quarterly

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

TACOMA/PIERCE COUNTY:

Closed Landfill Survey

Following numerous requests for information about closed dumpsites and landfills in Pierce County, the Tacoma-Pierce County Health Department decided to conduct a study on the matter. The aim of the study was to evaluate public health risks associated with the closed dumpsites and landfills, and to determine the need, if any, for further investigations of a more detailed nature. The sites represent all of the known dumpsites and landfills closed after 1950.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
