Mr. Leonard Judd  
19 Lumm Road  
Okanogan, WA 98840

Dear Mr. Judd:

RE: Early Notice Letter Regarding the Release of Hazardous Substances on property located at the Parcel # 3325240014, B & O Road at junction of Spring Coulee Road, Washington

Under Chapter 70.105D Revised Code of Washington (RCW), upon receiving a report of a release or threatened release of a hazardous substance that may pose a threat to human health or the environment, the Department of Ecology (Ecology) is required to conduct an Initial Investigation.

An Initial Investigation was conducted by Mr. Doug Hale of the Okanogan Health Department. He found diesel contaminated soil at 32,400 mg/kg and motor oil contaminated soil at 2,740 mg/kg. The Model Toxics Control Act (MTCA) cleanup standard for either diesel or motor oil contaminated soil is 2,000 mg/kg. More recently, Mr. Hale found that nothing had been done with the excavated contaminated soil at this site.

Under the MTCA, Ecology maintains a listing of known or suspected contaminated sites. It is Ecology's decision that the above-referenced property will be added to this information system due to the presence of contamination in the soil in excess of state cleanup standards.

Ecology has also determined that a Site Hazard Assessment (SHA), described in Washington Administrative Code (WAC) 173-340-320, will be required at this site. Mr. Doug Hale of the Okanogan Health Department will be completing this SHA.

It is the policy of the Department of Ecology to work cooperatively with persons to accomplish prompt and effective site cleanups. Ecology prefers to achieve site cleanup cooperatively through independent cleanup actions (WAC 173-340-510). Cooperating with Ecology in planning or conducting remedial actions is not an admission of guilt or liability.

In proceeding with an independent cleanup, please be aware that there are requirements in state law which must be adhered to. In particular, WAC 173-340-300(4) which requires a report of

independent actions. To the extent known, the report shall include: The identification and location of the hazardous substance; circumstances of the release; the discovery and remedial actions planned, completed, or underway. More requirements of independent cleanup actions are discussed in WAC 173-340-120(8)(b). Ecology will use the appropriate requirements contained throughout this chapter in its evaluation of the adequacy of any independent remedial actions performed. In the future, Ecology may still need to conduct a more detailed inspection of this property, including testing for possible contamination. At that time we may assess the need for further action.

You are encouraged to contact Ecology for limited informal advice and assistance. For technical assistance you are advised to hire an environmental consultant with the appropriate expertise. A copy of Chapter 70.105D RCW, the Model Toxics Control Act, and the implementing regulation Chapter 173-340 WAC, which details the requirements of the Act, is enclosed.

If you have any questions regarding this letter or the requirements under the MTCA, please call me. My phone number is (509) 454-7839.

Sincerely,

Dick Bassett  
Site Manager/Initial Investigations  
Toxics Cleanup Program
