RE: NOVEMBER 2014 SEMIANNUAL GROUNDWATER MONITORING REPORT
BOEING DEVELOPMENTAL CENTER, TUKWILA, WASHINGTON

Dear Byung:

This letter and attached data constitutes the semiannual letter report for groundwater monitoring at The Boeing Company Developmental Center in Tukwila, Washington. The report covers the period following the May 2014 semiannual sampling event (and corresponding report) through the semiannual event in November 2014. This report provides a brief summary of the data and of remedial activities performed at the site during the reporting period. Remedial actions are underway in Solid Waste Management Unit (SWMU)-20, SWMU-17, and Area of Concern (AOC)-05. All other SWMUs and AOCs identified in the 1994 RFA have been excluded from further investigation based on determinations that they do not pose a threat to human health or the environment.

Groundwater monitoring during the reporting period was performed in August and November 2014 at SWMU-17 and AOC-05; and in November 2014 at SWMU-20 wells. Analytical data for SWMU-20, SWMU-17, and AOC-05 are enclosed for your review and include sample results summary tables and laboratory data packages. Summary figures, historical analytical summary data, and volatile organic compounds (VOCs) concentration trend charts are provided for key constituents present in SWMU-20. Included for AOC-05 are a well location figure; cumulative tables for total petroleum hydrocarbons (TPH); benzene, toluene, ethylbenzene, and xylenes (BTEX); and conventional parameters; as well as trend plots for TPH-Gasoline (TPH-G) and BTEX, and nitrate. A well location figure and tables of current data and cumulative data are provided for SWMU-17. Summary tables include proposed cleanup levels (CULs) from the May 7, 2013 *Proposed Cleanup Standards and Comparison to Site Data* document.

At SWMU-20, *in situ* anaerobic bioremediation continues for treatment of tetrachloroethene (PCE), trichloroethene (TCE), and breakdown products following the last electron donor injection performed in August 2008. Groundwater monitoring results indicate that enhanced treatment continues at and near injection wells, as indicated by the persistence of sulfate-reducing to methanogenic aquifer redox conditions, total organic carbon (TOC) levels generally above 10 milligrams per liter (mg/L), and the detection of end product ethane at several wells (see SWMU-20 Cleanup Action Summary – Source Zone table). At all source-zone wells, PCE and TCE remain below reporting limits and breakdown products cis-1,2-dichloroethene (cDCE)

and vinyl chloride (VC) are either below reporting limits or are detected at very low concentrations. cDCE concentrations are below reporting limits or less than 1 micrograms per liter (µg/L) at all locations, well below the proposed CUL (134 µg/L). VC detections at source zone wells are below the proposed CUL (2.4 µg/L) with the exception of wells MW-06A (2.7 µg/L). Following the successful source zone bioremediation that resulted from donor injection to source-zone wells, the highest PCE and TCE concentrations are now present at wells located crossgradient (north; MW-13A and MW-17A) or upgradient (east; MW-16A) of the treated source zone and the highest VC concentrations are at downgradient wells (see SWMU-20 Non-Source Zone Wells Summary table). PCE is less than the proposed CUL (5.3 µg/L) at all wells and TCE detections exceed the proposed CUL (1.4 µg/L) at only two upgradient or crossgradient wells (MW-16A and MW-17A), at 1.5 and 3.1 µg/L, respectively. The proposed CUL for VC (2.4 µg/L) is slightly exceeded at downgradient wells MW-10C and MW-15C, both at 2.5 µg/L. Semiannual monitoring will continue in SWMU-20 to evaluate potential source zone rebound and trends at crossgradient wells. Ongoing semiannual groundwater monitoring in SWMU-20 constitutes MNA with enhancement of natural attenuation due to residual effects of prior bioremediation injections. Boeing plans to perform electron donor injection at wells where concentrations remain above or near the proposed cleanup levels; a work plan will be prepared for Ecology review and the injection work is anticipated to occur later this year. Ecology approved a reduction in the monitoring program for SWMU-20 that will be implemented beginning with the April/May 2015 sampling event. Ecology noted in the sampling reduction approval that reporting limits had been elevated at some wells in the recent past. It should be noted that lower reporting limits were achieved at these wells in November 2014, as a lab issue regarding potential foaming of samples and resulting sample dilution was resolved.

At AOC-05, *in situ* anaerobic bioremediation continues for treatment of TPH-G and BTEX. The last (ninth) injection of nitrate electron acceptor solution took place (at well BDC-103 only) in November 2013. At downgradient wells BDC-101 and BDC-102, and at previously impacted well BDC-104, TPH-G and BTEX remain below reporting limits. At BDC-103, concentrations of TPH-G and BTEX were below reporting limits during both the August and November 2014 sampling events with the exception of benzene detected in August; with this exception, TPH-G and BTEX have remained below proposed CULs for all of 2014. Nitrate in November at BDC-103 (151 mg/L) remains adequate for continued biotreatment. Nitrate monitoring is also performed at the two nearest downgradient wells and at four wells located farther downgradient. Nitrate concentrations were above the 10 mg/L action level at downgradient wells BDC-101(August) and BDC-102 (August and November). Nitrate continued to be well below the action level at the four wells farther downgradient (BDC-05-04, MW-17A, MW-18A, and MW-21A). Based on these results, additional nitrate injections are not anticipated. Groundwater sampling at AOC-05 wells will continue on a quarterly basis to evaluate potential contaminant rebound. As required, semiannual monitoring for nitrate at the four wells farther downgradient will also continue until nitrate remains below 10 mg/L for two consecutive semiannual events at downgradient wells BDC-101 and BDC-102. It is anticipated that 4 quarters of monitoring results below proposed CULs will be required to complete the remedial action in AOC-05 and discontinue

monitoring. The 4 quarters of monitoring will begin when nitrate concentrations at the four AOC-05 wells are all below baseline; baseline was as high at 18 mg/L at BDC-101.

At SWMU-17, groundwater monitoring results from August and November 2014 show that *in situ* anaerobic bioremediation continues to be enhanced following the August 2011 electron donor injection. Increases in one or more breakdown or end products (cDCE, VC, and ethene) have been observed at all injection wells following injection. In November 2014, PCE, TCE, and cDCE concentrations were below proposed CULs at all wells. Final breakdown product VC was present at 12 wells above the proposed CUL (2.4 µg/L) in November; concentrations for these 12 wells ranged from 2.5 to 16 µg/L. Complete reductive dechlorination beyond VC continues to be indicated by end products ethene and/or ethane, which were detected in November at 15 of 18 wells analyzed. Non-toxic end products ethene and ethane are predominant on a molar basis over TCE, cDCE, and VC at 14 of the 15 wells. Low sulfate and elevated concentrations of methane persist at most wells, indicating occurrence of the highly reduced aquifer redox conditions required for complete dechlorination. TOC remains elevated at injection wells (7 to 52 mg/L) and adequate for continued biotreatment. Quarterly and semiannual monitoring will continue for evaluation of treatment progress. Additional donor injection within SWMU-17 is not necessary at this time.

Please call or email me if you have any questions or if you would like to discuss any of the sampling results in more detail.

nd = Not Detected.
nt = Not Tested.
J = Indicates the analyte was positively identified; the associated numerical value is the approximate approximate concentration of the analyte in the sample.
E = Estimated concentration calculated for an analyte response above the valid instruction calibration range. A dilution is required to obtain an accurate quantification of the analyte.
Bold = Detected compound.

nd = Not Detected.
nt = Not Tested.
J = Indicates the analyte was positively identified; the associated numerical value is the approximate approximate concentration of the analyte in the sample.
E = Estimated concentration calculated for an analyte response above the valid instruction calibration range. A dilution is required to obtain an accurate quantification of the analyte.
Bold = Detected compound.

nd = Not Detected.
nt = Not Tested.
J = Indicates the analyte was positively identified; the associated numerical value is the approximate approximate concentration of the analyte in the sample.
E = Estimated concentration calculated for an analyte response above the valid instruction calibration range. A dilution is required to obtain an accurate quantification of the analyte.
Bold = Detected compound.

SWMU-20 ANALYTICAL RESULTS SUMMARY
DEVELOPMENTAL CENTER GROUNDWATER MONITORING
JANUARY 1994 THROUGH PRESENT

VINYL CHLORIDE (µg/L)

nd = Not Detected.
nt = Not Tested.
J = Indicates the analyte was positively identified; the associated numerical value is the approximate approximate concentration of the analyte in the sample.
E = Estimated concentration calculated for an analyte response above the valid instruction calibration range. A dilution is required to obtain an accurate quantification of the analyte.
Bold = Detected compound.

nd = Not Detected.
nt = Not Tested.
J = Indicates the analyte was positively identified; the associated numerical value is the approximate approximate concentration of the analyte in the sample.
E = Estimated concentration calculated for an analyte response above the valid instruction calibration range. A dilution is required to obtain an accurate quantification of the analyte.
Bold = Detected compound.

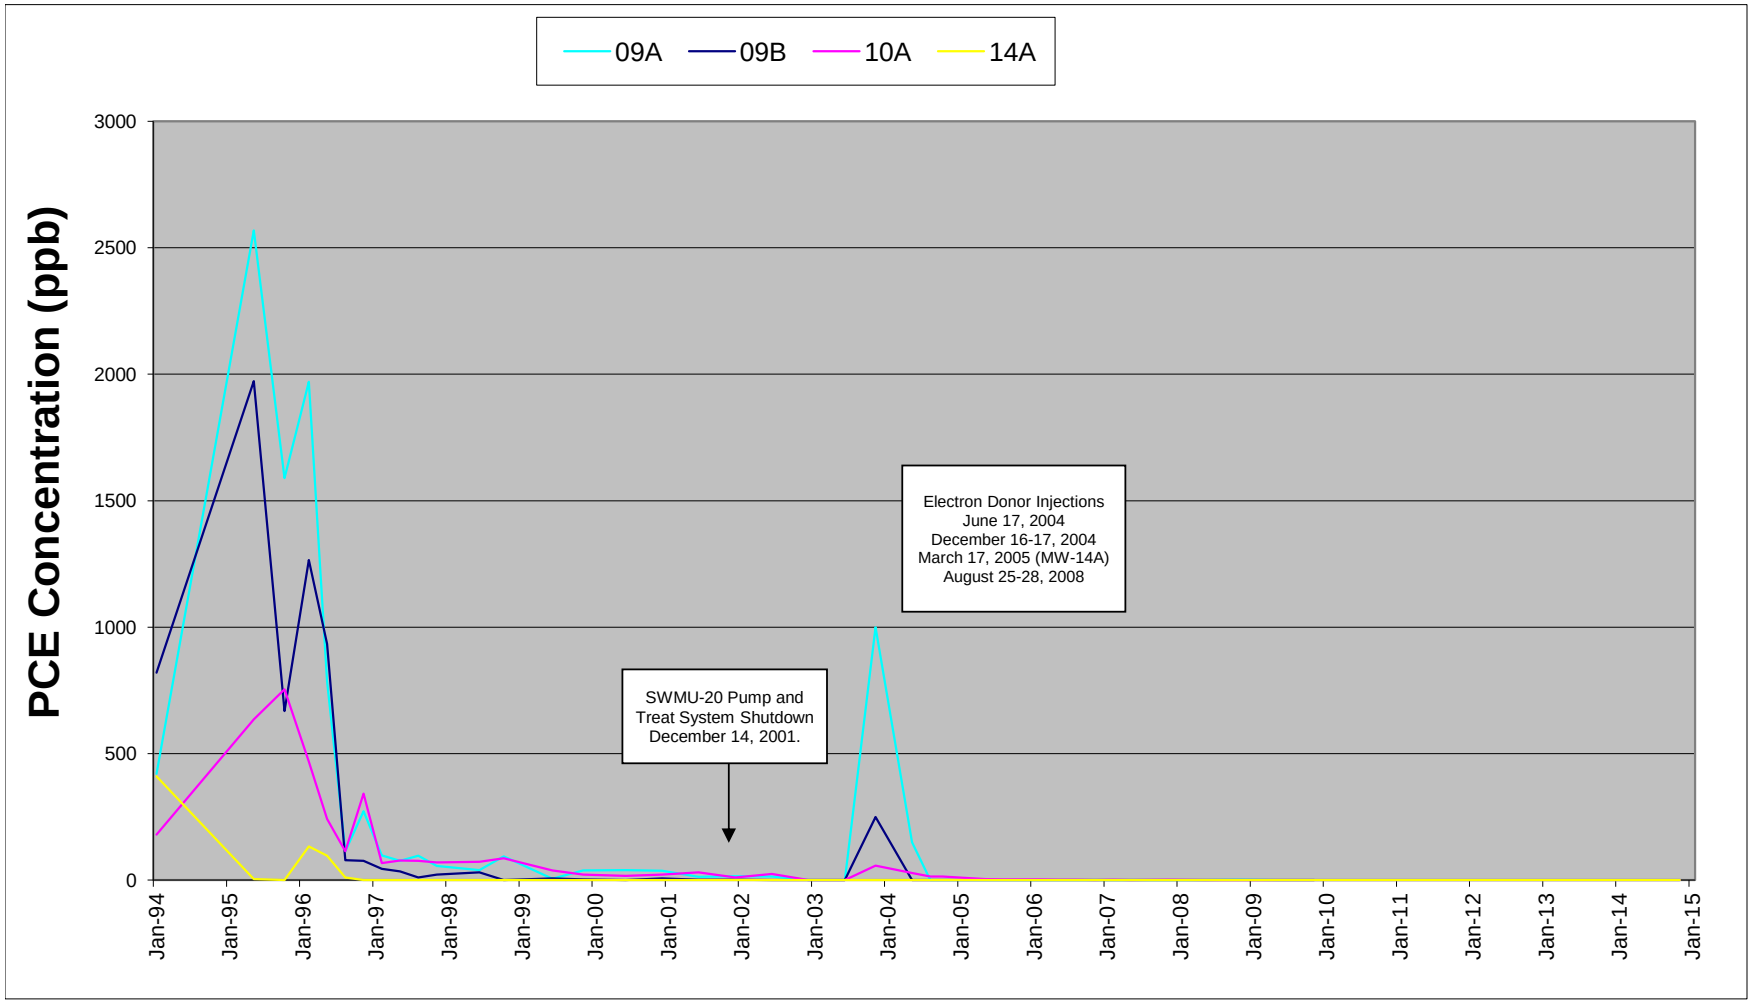
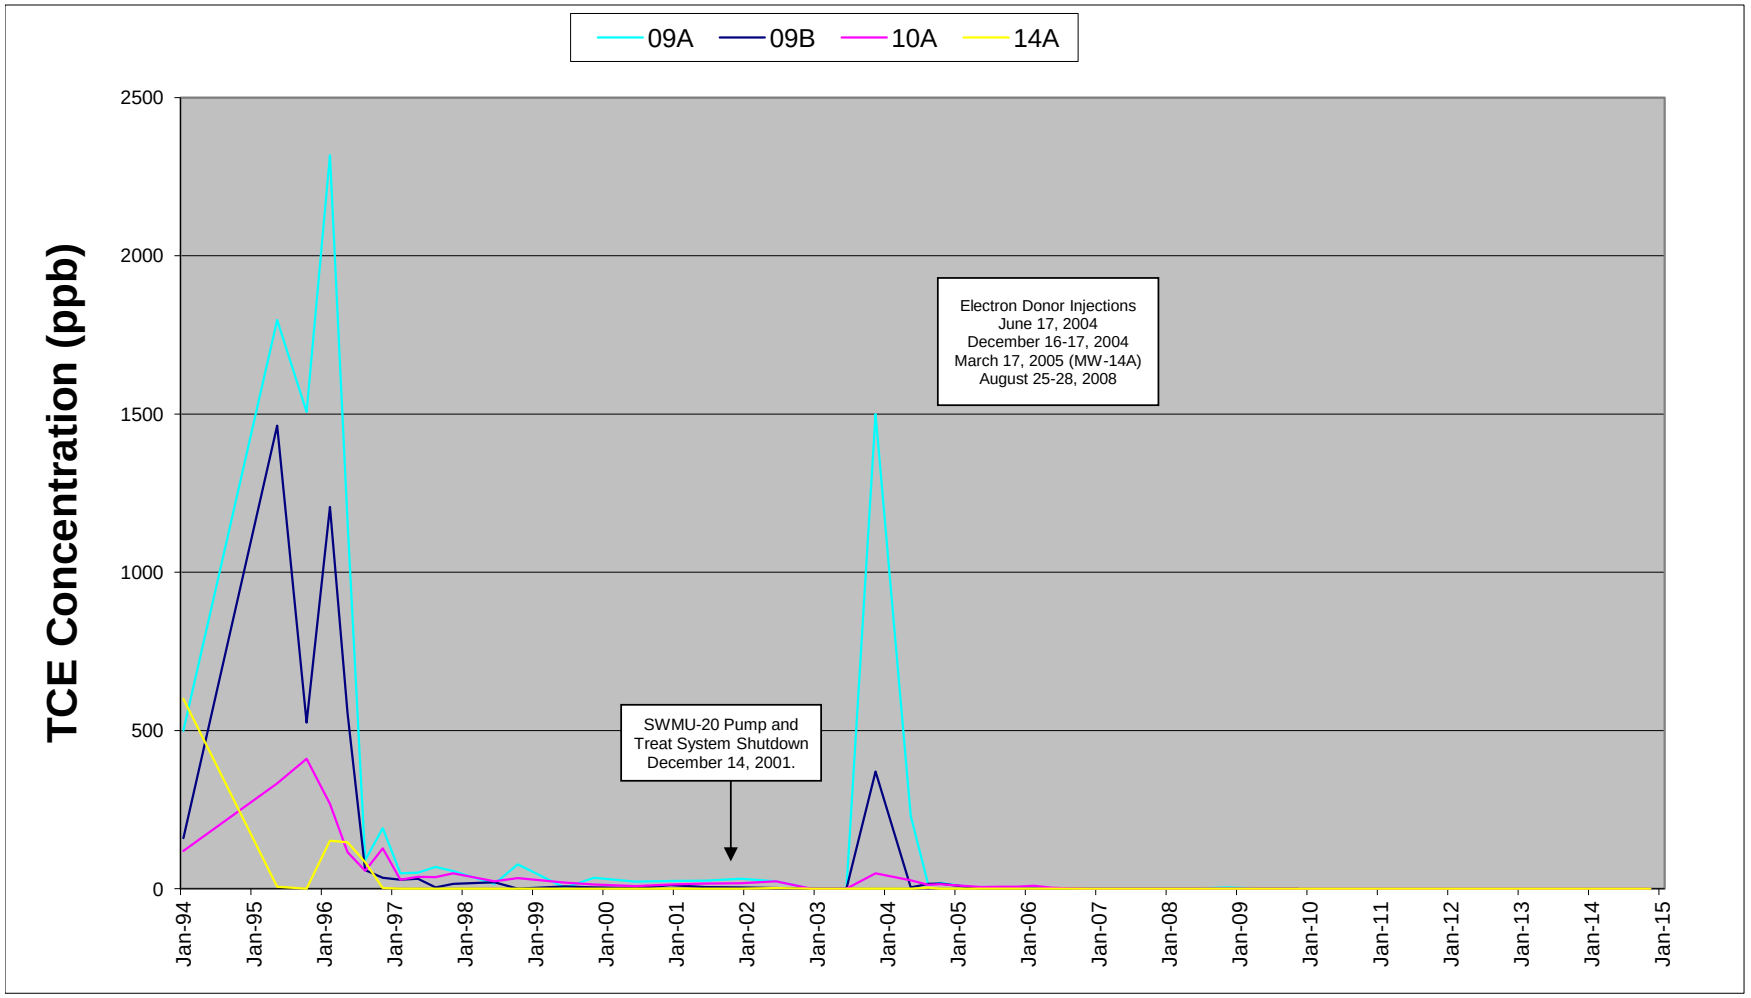
nd = Not Detected.
nt = Not Tested.
J = Indicates the analyte was positively identified; the associated numerical value is the approximate approximate concentration of the analyte in the sample.
E = Estimated concentration calculated for an analyte response above the valid instruction calibration range. A dilution is required to obtain an accurate quantification of the analyte.
Bold = Detected compound.

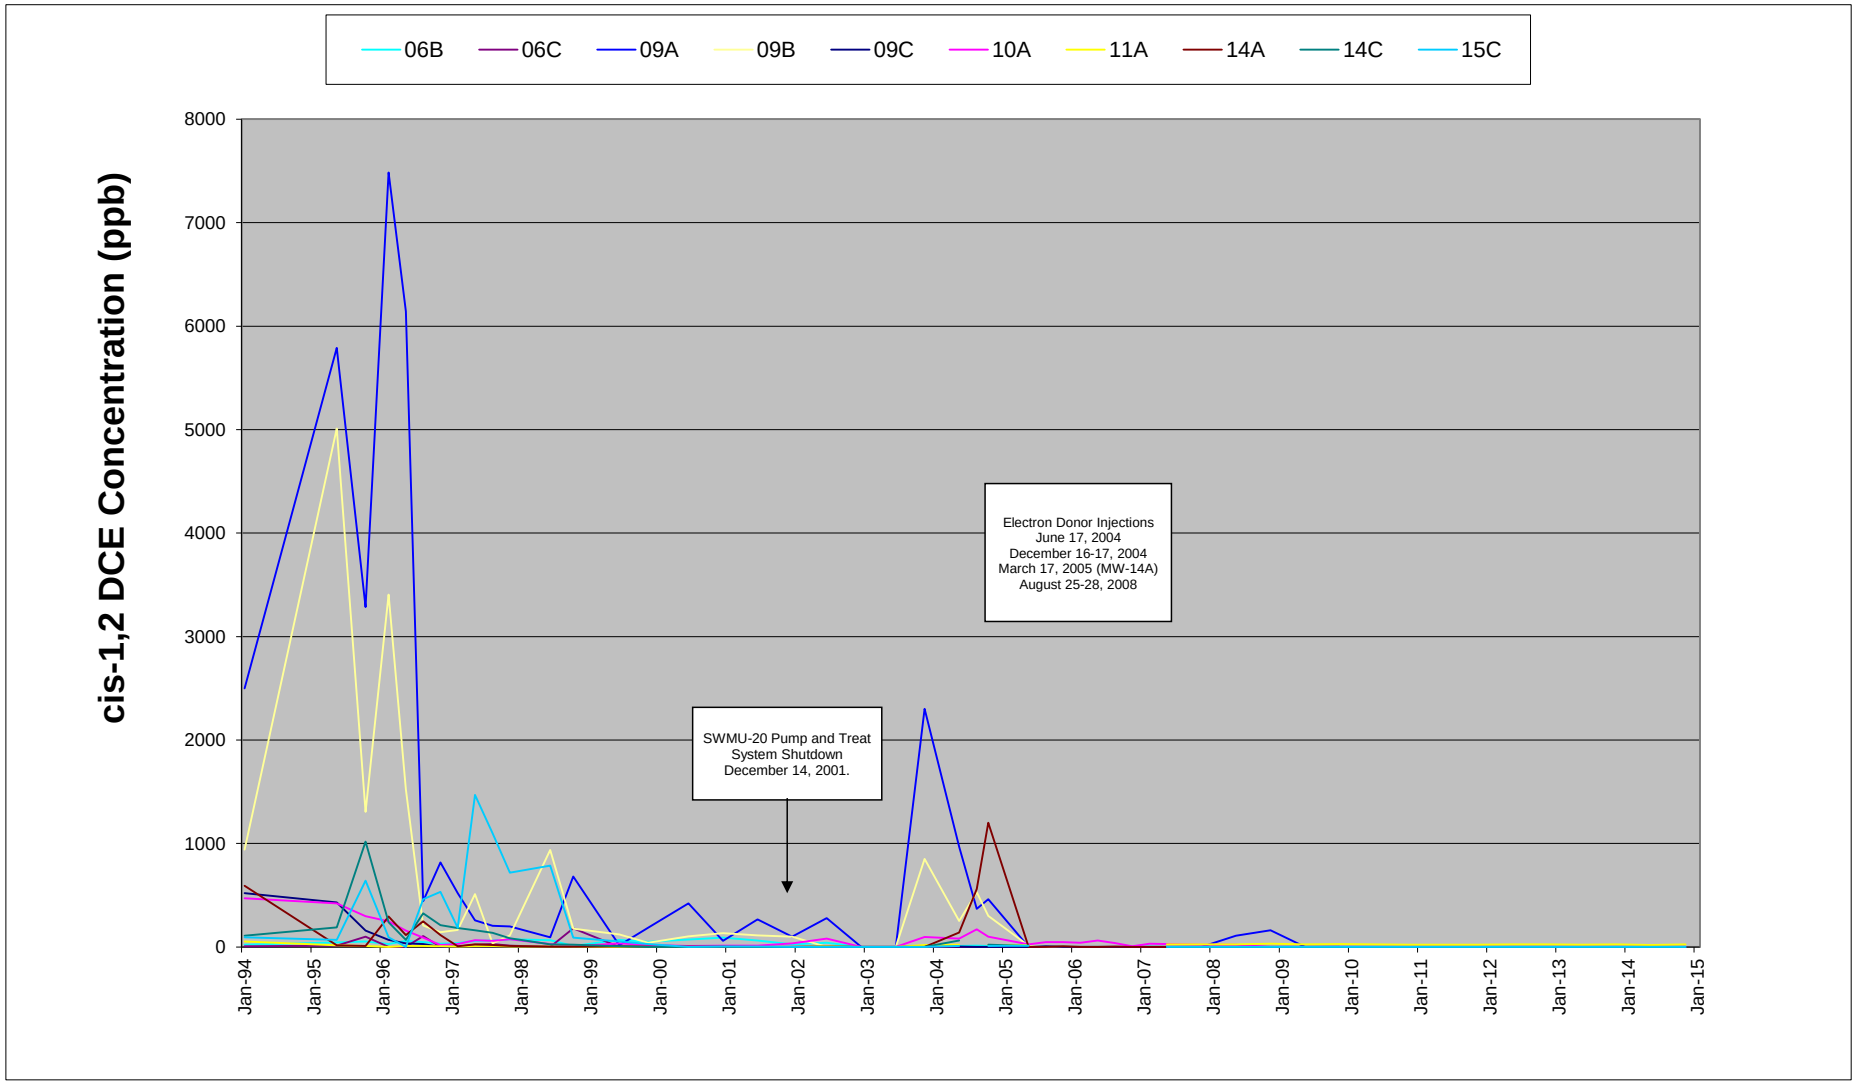
DEVELOPMENTAL CENTER WELLS
TETRACHLOROETHENE CONCENTRATIONS
(Wells with PCE Historically Detected over 50 ppb)



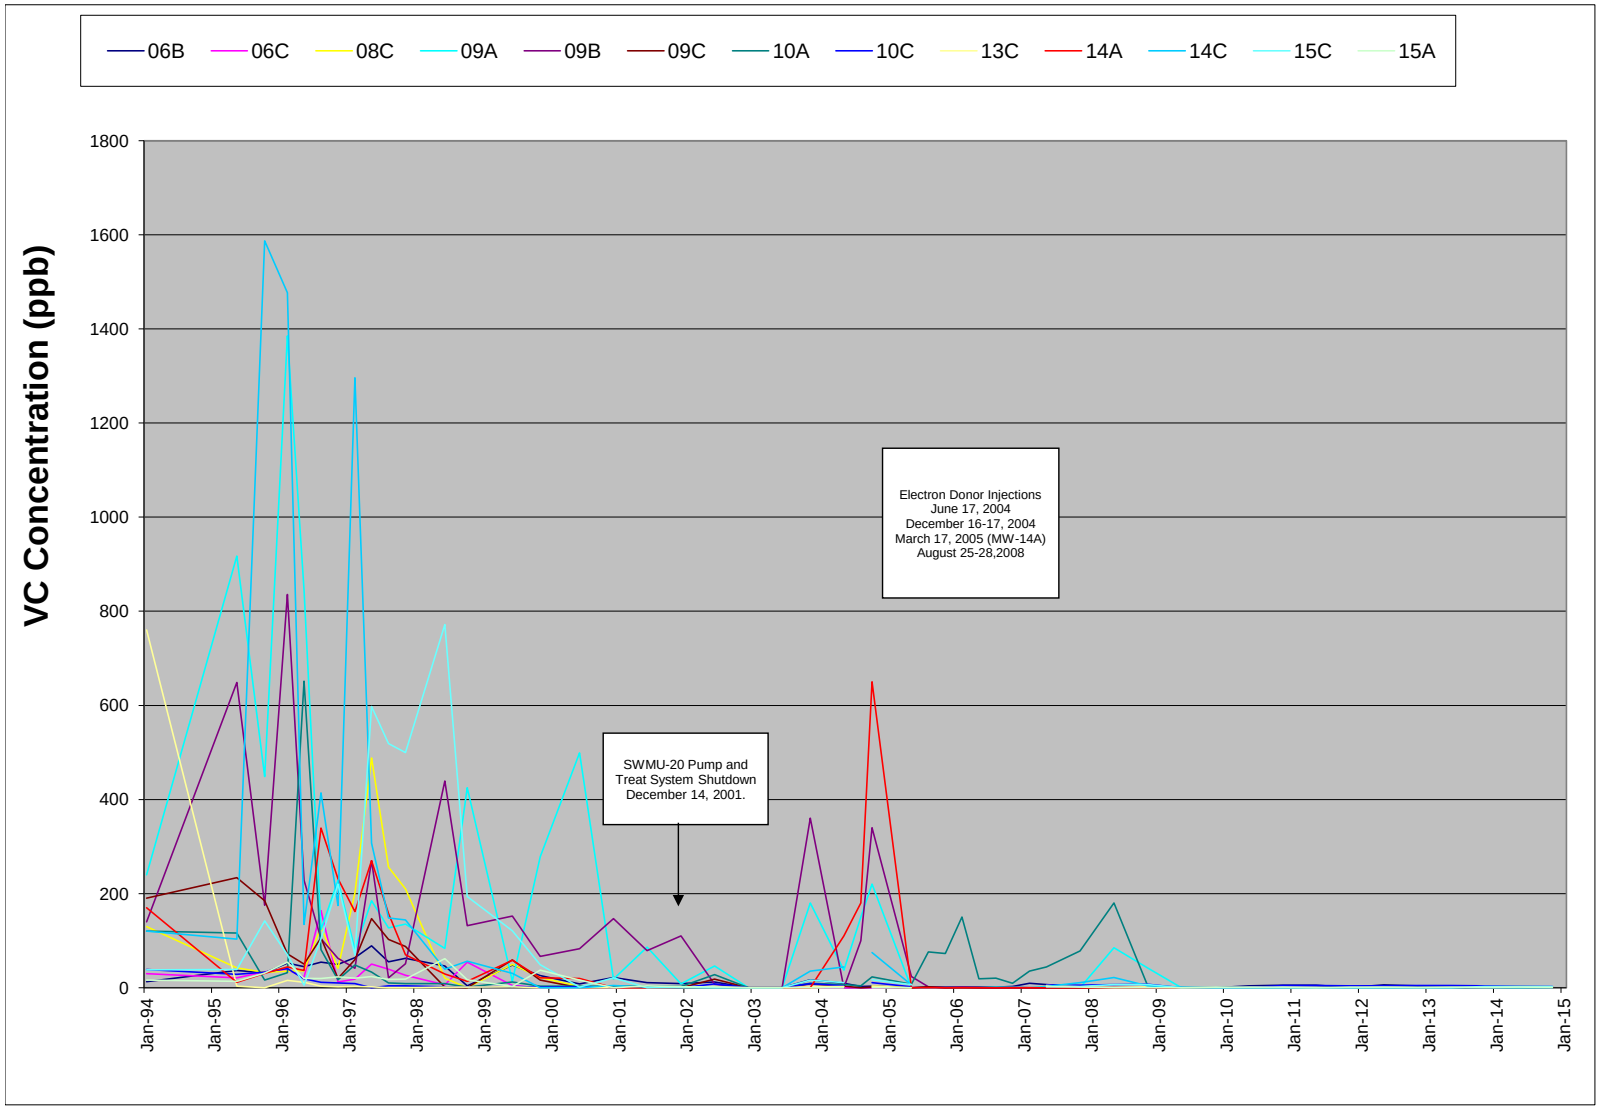
DEVELOPMENTAL CENTER WELLS
TRICHLOROETHENE CONCENTRATIONS
(Wells with TCE Historically Detected over 50 ppb)



DEVELOPMENTAL CENTER WELLS
CIS-1,2 DICHLOROETHENE CONCENTRATIONS
(Wells with cis-1,2 DCE Historically Detected over 50 ppb)



DEVELOPMENTAL CENTER WELLS
VINYL CHLORIDE CONCENTRATIONS
(Wells with VC Historically Detected over 50 ppb)



DEVELOPMENTAL CENTER WELLS
BENZENE CONCENTRATIONS
(Wells with Benzene Historically Detected over 50 ppb)

PCE = Tetrachloroethene
TCE = Trichloroethene
cDCE = cis-1,2-Dichloroethene
VC = Vinyl Chloride
DO = Dissolved Oxygen
ORP = Oxidation Reduction Potential
TOC = Total Organic Carbon

Bold = Detect
µg/L = micrograms pr liter
mg/L = milligrams per liter
mV = millivolts
NA = Not analyzed
Box = Exceedance of proposed CUL

(a) Injections occurred on:
6/17/04 (6A, B, C; 9A, B, C)
12/16-17/04 (6A, 6B;9A,9B)
3/17/05 (14A)
8/25-28/08 (6A, 9A, 10A)

6/17/2004	for elapsed time relative to injection
12/16/2004	for elapsed time relative to injection
3/17/2005	for elapsed time relative to injection
8/25/2008	for elapsed time relative to injection

(b) Conducted at Well MW-14A only.
(c) MW-06A installed June 2004.
(d) Proposed Cleanup Standards and Comparison to Site Data, Boeing Developmental Center, Tukwila,Washington (Landau Associates, 5/7/13).

PCE = Tetrachloroethene
TCE = Trichloroethene
cDCE = cis-1,2-Dichloroethene
VC = Vinyl Chloride
µg/L - micrograms per liter
Bold = Detect

(a) Injections occurred on:

6/17/04 (6A, B, C; 9A, B, C)	6/17/2004	for elapsed time relative to injection
12/16-17/04 (6A, 6B;9A,9B)	12/16/2004	for elapsed time relative to injection
3/17/05 (14A)	3/17/2005	for elapsed time relative to injection
8/25-28/08 (6A, 9A, 10A)	8/25/2008	for elapsed time relative to injection

(b) Conducted at Well MW-14A only.

(c) Proposed Cleanup Standards and Comparison to Site Data, Boeing Developmental Center, Tukwila,Washington (Landau Associates, 5/7/13).

Box = Exceedance of proposed CUL

µg/L = micrograms per liter.
mg/L = milligrams per liter.
EPA = U.S. Environmental Protection Agency
U = Indicates compound was analyzed for, but was not detected at the given detection limit.
J = Indicates the analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.

PCE = Tetrachloroethene
TCE = Trichloroethene
c DCE = cis-1,2-Dichloroethene
VC = Vinyl Chloride
As = Arsenic
Cu = Copper
Tot = Total

Dis = Dissolved
DO = Dissolved Oxygen
ORP = Oxidation Reduction Potential
TOC = Total Organic Carbon
NA = Not Applicable, not available
µg/L = micrograms pr liter
mg/L = milligrams per liter

IW = Injection Well
MW = Monitoring Well
DG = Downgradient; distance from nearest injection well
UG = Upgradient; distance from nearest injection well
XG = Crossgradient; distance from nearest injection well
not analyzed

Box = Exceedance of Proposed Cleanup Level

(a) Proposed Cleanup Standards and Comparison to Site Data, Boeing Developmental Center, Tukwila,Washington (Landau Associates, 5/7/13).

Injection Dates:
10/28/2008 Pilot Injection: BDC-05-02 only
8/18/2011 Full Injection #1: BDC-05-02, BDC-05-07, and BDC-05-09 through BDC-05-17; performed 8/15/11-8/18/11

2/19/12 = LLI 1290782, 1291166

TPH-G = Total Petroleum Hydrocarbon-Gasoline
DO = Dissolved Oxygen
ORP = Oxidation Reduction Potential
TOC = Total Organic Carbon
NA = Not Applicable, not available
µg/L = micrograms pr liter
mg/L = milligrams per liter
mV = millivolts
NA = Not Analyzed
= No sample collected or sample not analyzed for specified constituent.
Box = Exceedance of proposed CUL

(a) Proposed Cleanup Standards and Comparison to Site Data, Boeing Developmental Center, Tukwila,Washington (Landau Associates, 5/7/13).
(b) BTEX data questionable for this event. Concentrations inconsistent with TPH-G data for indicated event and BTEX data from other events.

2/19/12 = LLI 1290767, 1291164

Injection dates

5/7/2002	ORC
1/18/2007	Pilot -scale nitrate
2/26/2008	1st full scale injection
6/24/2008	2nd full scale injection
10/30/2008	3rd full scale injection
6/17/2009	4th full scale injection (start ammonium phosphate, 1/3 ammonium nitrate dose to both wells)
10/28/2009	5th full scale injection (103 full dose, 104 half dose)
9/22/2010	6th full scale injection (103 only full dose)
2/14/2012	7th full scale injection (103 only full dose)
10/23/2012	8th full scale injection (103 only 1.5x volume dose)
11/12/2013	9th full scale injection (103 only 1.5x volume dose)

Notes:
Depth to Water measurements taken from top of well casing
Top of casing elevation altered in wells MW-6B, MW-6C, MW-9A, MW-9B, and MW-9C by installation of threaded fitting on 6/19/2004.
Top of casing elevation was lowered in well MW-14A by 0.10 ft on 3/17/2005; resurveyed 9/9/05.
Top of casing elevation at wells MS-22A and MW-23A measured 9/9/05.
BDC05-02 was modifed in October 2008 for utilization as an injection well. Elevation changed from 14.37 to 14.41 ft; total depth changed from 25.35 to 25.27.
