## Shipping Containers

### Cooler 1 - 1841055

**Received:** October 12, 2018 12:45  
**Tracking No:** n/a via Customer Drop-Off  
**Coolant Type:** Ice  
**Temperature:** 3.0 °C

**Description:** Cooler 1  
**Damaged in transit?** No  
**Returned to client?** No  
**Comments:** IR#15

**Custody seals present?** No  
**Custody seals intact?** No  
**COC present?** Yes

### Cooler 2 - 1841055

**Received:** October 12, 2018 12:45  
**Tracking No:** n/a via Customer Drop-Off  
**Coolant Type:** Ice  
**Temperature:** 4.8 °C

**Description:** Cooler 2  
**Damaged in transit?** No  
**Returned to client?** No  
**Comments:** IR#15

**Custody seals present?** No  
**Custody seals intact?** No  
**COC present?** Yes

# Chain-of-Custody Form

BAL Report 1841055

Ship samples to:  
18804 North Creek Parkway, Suite 100  
Bothell, WA 98011

Received by: S. Long For BAL use only Date: 10/12/18

Work Order ID: \_\_\_\_\_ Time: 12:45

Project ID: \_\_\_\_\_

Client: Port of Tacoma (PIONEER/DOF)

PO Number: 79224

Contact: Troy Bussey (PIONEER)

Phone: 360-570-1700

Client Project ID: Arkema FS DG Inv

Email: busseyt@uspioneer.com

Samples Collected By: DG Cooper (DOF) 206-660-3466

Special Instructions: Lab anoxic preservation for soil/sediment samples.  
Submit EDD to PIONEER using PIONEER EDD Format.

Mail Invoice to:

Port of Tacoma  
PO Box 1837  
Tacoma, WA 98401-1837

Mail Report to:

RE: Project PTC-OA1701

Client Project: Arkema FS Data Gap

Dear Mr. Bussey,

On October 18, 2018, Brooks Applied Labs (BAL) received eighteen (18) water samples in two sealed containers with temperatures of 22.0°C (Cooler #1) and 4.5°C (Cooler #2). The samples were logged-in for dissolved arsenic [As] analyses via digestion and subsequent analysis by modified EPA Method 1638. The samples were logged in for dissolved (copper [Cu], lead [Pb], and nickel [Ni]) analyses by modified EPA Method 1640. The samples were logged-in for the dissolved mercury [Hg] analysis by EPA Method 1631E, according to the chain-of-custody (COC) forms.

The samples submitted for dissolved analyses were filtered in the field by the client.

Typically, containers sent out for EPA 1368 analyses are different than containers provided for EPA 1640 analyses. The containers are the same material & size. However, EPA 1640 containers are lot tested to a lower MRL to support the lower MDL/MRLs boasted by EPA 1640. For the bottle order sent out to support this work order, containers from lot 18-0189 were mistakenly provided for both 1638 and 1640 sampling. The containers in lot 18-0189 were initially lot tested to 1638 criteria, not 1640. The analytical run used for the lot testing was inspected and it was determined that lot 18-0189 passes for Cu, Ni, and Pb using the lower, EPA 1640 criteria. A formal certificate of analysis has been provided for lot 18-0189, demonstrating that these containers are appropriate for EPA 1640Mod use. The use of lot 18-0189 containers should have no impact on data quality.

All samples were received, prepared, analyzed, and stored according to BAL SOPs and EPA methodology. Reagent water for dilutions and sample preservatives was monitored for contamination to account for any biases associated with the sample results.

*Dissolved Metals (As) Analysis by EPA Method 1638, Mod.*

The original bottles were preserved with 1% HNO<sub>3</sub> (v/v) and 1% HCl (v/v). All sample fractions for dissolved metals analyses were digested in the original sample containers in a laboratory oven for a minimum of 3 hours at 85°C.

Dissolved arsenic quantitation was performed by inductively coupled plasma triple quadrupole mass spectrometry (ICP-QQQ-MS). The ICP-QQQ-MS uses advanced interference removal techniques to ensure accuracy of the sample results. For more information, please visit the *Interference Reduction Technology* section on our website, [brooksapplied.com](http://brooksapplied.com).

**Batch B182855**

Arsenic results were not method blank corrected as described in the calculations section of the relevant BAL SOP and were evaluated using reporting limits adjusted to account for sample aliquot size. The MRL is set by a low calibration standard in the calibration for most analytes. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where a matrix spike/matrix spike duplicate (MS/MSD) set was spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

**Batch B183038**

Arsenic results were not method blank corrected as described in the calculations section of the relevant BAL SOP and were evaluated using reporting limits adjusted to account for sample aliquot size. The MRL is set by a low calibration standard in the calibration for most analytes. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where a matrix spike/matrix spike duplicate (MS/MSD) set was spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

*Dissolved metals (Cu, Ni, and Pb) Analysis by EPA Method 1640, Mod.*

Samples for column chelation were pH adjusted with 0.2% (v/v) nitric acid (HNO<sub>3</sub>) and then prepared according to EPA Method 1640. All sample fractions for dissolved metals analyses were digested in the original sample containers in a laboratory oven for a minimum of 3 hours at 85°C.

Aliquots of prepared sample were analyzed via inductively coupled plasma dynamic reaction cell mass spectrometry (ICP-DRC-MS). The ICP-DRC-MS uses advanced interference removal techniques to ensure accuracy of the sample results. For more information, please visit the *Interference Reduction Technology* section on our website, [brooksapplied.com](http://brooksapplied.com).

**Batch B182856**

The matrix spike recoveries for copper and nickel in B182856-MS2 were greater than upper control limit of 125%, at 130% and 129%, respectively. This matrix spike recoveries were elevated for all analytes compared to B182856-MSD2. Since it is not possible to determine if the high recoveries in B182856-MS2 were the result a spiking error or not, the copper and nickel results for the source sample 1842044-17 should be considered estimated and have been qualified "N".

The copper, nickel, and lead results for the equipment blank sample, 1842044-18, were greater than the associated MRL values. Re-analyses confirmed the results over the MRL. Results from the initial analyses are reported.

The nickel result for the closing method blank, identified as B182856-BLK4, is a statistical outlier according to the Grubb's Test. Re-analysis confirmed the elevated blank. Client sample results less than 10 times the method blank outlier are qualified "X" to indicate a potential high bias. Nickel results for the client samples 1842044-02, 1842044-06, 1842044-07, 1842044-09, 1842044-10, 1842044-17, and 1842044-18 have are impacted.

Dissolved metals results were not method blank corrected as described in the calculations section of the relevant BAL SOP and were evaluated using reporting limits adjusted to account for sample aliquot size. The MRL is set by a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where a matrix spike/matrix spike duplicate (MS/MSD) set was spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Dissolved Mercury Quantitation by EPA Method 1631E

All samples are prepared and analyzed in accordance with EPA Method 1631. Samples are oxidized with bromine monochloride (BrCl) and then analyzed with stannous chloride ( $\text{SnCl}_2$ ) reduction, dual gold amalgamation, and cold vapor atomic fluorescence spectroscopy (CVAFS) detection using a Brooks Rand Instrument's MERX-T CVAFS Mercury Automated-Analyzer.

#### **Batch B182830**

The matrix spike duplicate recovery for mercury in B182830-MSD1 was greater than upper control limit of 125%, at 132%. The mercury result for the source sample 1842044-05 should be considered estimated and has been qualified "N" to reflect the discrepancy. The mercury result for 1842044-05 has been qualified as estimated "M" due to the elevated MS/MSD RPD value.

The mercury results were method blank corrected as described in the calculations section of the relevant BAL SOPs and were evaluated using reporting limits adjusted to account for sample aliquot size. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where a matrix spike/matrix spike duplicate (MS/MSD) set was spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

BAL, an accredited laboratory, certifies that the reported results of all analyses for which BAL is NELAP accredited meet all NELAP requirements. For more information please see the *Report Information* page in your report.

Please feel free to contact me if you have any questions regarding this report.

Sincerely,

Jeremy Maute  
Senior Project Manager

## Report Information

### Laboratory Accreditation

BAL is accredited by the *National Environmental Laboratory Accreditation Program* (NELAP) through the State of Florida Department of Health, Bureau of Laboratories (E87982) and is certified to perform many environmental analyses. BAL is also certified by many other states to perform environmental analyses. For a current list of our accreditations/certifications, please visit our website at <http://www.brooksapplied.com/resources/certificates-permits/>. Results reported relate only to the samples listed in the report.

### Field Quality Control Samples

Please be notified that certain EPA methods require the collection of field quality control samples of an appropriate type and frequency; failure to do so is considered a deviation from some methods and for compliance purposes should only be done with the approval of regulatory authorities. Please see the specific EPA methods for details regarding required field quality control samples.

### Definition of Data Qualifiers

(Effective 9/23/09)

|            |   |
|------------|---|
| <b>E</b>   | An estimated value due to the presence of interferences. A full explanation is presented in the narrative.                        |
| <b>H</b>   | Holding time and/or preservation requirements not met. Please see narrative for explanation.                                      |
| <b>J</b>   | Detected by the instrument, the result is > the MDL but ≤ the MRL. Result is reported and considered an estimate.                 |
| <b>J-1</b> | Estimated value. A full explanation is presented in the narrative.  |
| <b>M</b>   | Duplicate precision (RPD) was not within acceptance criteria. Please see narrative for explanation.                               |
| <b>N</b>   | Spike recovery was not within acceptance criteria. Please see narrative for explanation.  |
| <b>R</b>   | Rejected, unusable value. A full explanation is presented in the narrative.   |
| <b>U</b>   | Result is ≤ the MDL or client requested reporting limit (CRRL). Result reported as the MDL or CRRL.                               |
| <b>X</b>   | Result is not BLK-corrected and is within 10x the absolute value of the highest detectable BLK in the batch. Result is estimated. |

These qualifiers are based on those previously utilized by Brooks Applied Labs, those found in the EPA SOW ILM03.0, Exhibit B, Section III, pg. B-18, and the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review; USEPA; January 2010. These supersede all previous qualifiers ever employed by BAL.

## Shipping Containers

### Cooler #1 - 1842044

**Received:** October 18, 2018 16:40  
**Tracking No:** n/a via Courier  
**Coolant Type:** Ice  
**Temperature:** 22.0 °C

**Description:** Cooler #1  
**Damaged in transit?** No  
**Returned to client?** No  
**Comments:** IR#15

**Custody seals present?** Yes  
**Custody seals intact?** Yes  
**COC present?** Yes

### Cooler#2 - 1842044

**Received:** October 18, 2018 16:40  
**Tracking No:** n/a via Courier  
**Coolant Type:** Ice  
**Temperature:** 4.5 °C

**Description:** Cooler #2  
**Damaged in transit?** No  
**Returned to client?** No  
**Comments:** IR#15

**Custody seals present?** Yes  
**Custody seals intact?** Yes  
**COC present?** No

# Chain-of-Custody Form

Ship samples to:  
18804 North Creek Parkway, Suite 100  
Bothell, WA 98011

# Certificate of Analysis

## Sampling Equipment

**Product Description:** 125mL HDPE Bottles

**BAL Lot Number:** 18-0189

**Date of Analysis:** October 1<sup>st</sup>, 2018 (SEQ: 1801322)

**Certified Value:** Copper < 0.045 µg/L  
Nickel < 0.030 µg/L  
Lead < 0.015 µg/L

**Certified Acceptable For:** Trace Metals by EPA 1638, EPA 1640, EPA 200.8, and EPA 6020

**Approved By:** Coila Craig  
Sr. QA Associate, BAL

A handwritten signature in black ink, appearing to read "Coila Craig", is written over a horizontal line.

Subject: Feasibility Study Data Gap Investigation, Former Arkema Manufacturing Site, Tacoma, WA;  
Analytical Resources, Inc. 2018 Water and Soil Sample Data Validation Review Summary  
Client Project No.: Not Specified  
QA/QC Solutions, LLC Project No.: 091018.1

Dear Troy:

This letter documents the results of the data validation review of dissolved arsenic analyses completed on water samples collected in October 2018 and for total arsenic, toxicity characteristic leaching procedure (TCLP) metals (elements), and pH analyses completed on soil samples collected in September 2018. The data is associated with Feasibility Study Data Gap Investigation completed at the Former Arkema Manufacturing Site located in Tacoma, Washington. Details of the investigation completed are provided in the Feasibility Study Data Gap Investigation Work Plan, Former Arkema Manufacturing Site. (Pioneer 2017).

The water and soil data reported were validated to verify the laboratory quality assurance and quality control (QA/QC) procedures were documented and that the overall quality of the data reported is sufficient to support its intended purposes. A summary of the overall assessment of data quality, the data set, a summary of the analytical methods used to complete the chemical analyses, a summary of the data validation procedures used, and a summary of the reasons why data were qualified (including other items noted during data validation) is presented below.

### Overall Assessment of Data Quality

Overall, the data reported are of good quality and the results for the applicable QA/QC procedures that were used by the laboratory during the analysis of the samples were generally acceptable. Selected sample results required qualification during data validation because method-specific QA/QC criteria were not met; results maybe qualified for more than one reason. During data validation, the following actions were taken:

- A total of 67 results reported as detected were qualified as estimated (assigned a *J* qualifier).
- A total of 77 results reported as detected were restated as undetected (assigned a *U* qualifier).
- A total of 7 metal results were reported as undetected (*U*) at a concentration lower than the concentration found in the associated method blank and were subsequently restated as undetected (*U*) at the concentration of the method blank.
- No results required restatement as undetected and estimated (*UJ*) or rejection (*R*).

Analytical data that did not meet method- and/or laboratory-established control limits for applicable quality control measurements were qualified as estimated (*J*) by the laboratory or during data validation. These qualified data are usable and represent data of good quality and reasonable confidence and have an acceptable degree of uncertainty (i.e., may be less precise or less accurate than unqualified data). Analytical data that were reported as undetected (*U*) by the laboratory or that were restated as undetected (*U*) during data validation are usable. A summary of the qualified data and reasons for qualification are in Table 2.

## Data Set

For the water samples, the data set consisted of a total of 42 samples (includes natural, field duplicate, and equipment rinsate blank samples). All water samples were field filtered (0.45 µm) and were collected in October 2018. A summary of the water samples collected and the analyses completed is presented in Table 1.

For the soil samples, the data set consisted of 53 samples (includes natural, field duplicate, and equipment rinsate blank samples). The soil samples and equipment rinsate blanks were collected in September 2018. A summary of the soil samples collected and the analyses completed is presented in Table 1.

Analyses were completed by Analytical Resources, Inc. (ARI) located in Tukwila, Washington. ARI submitted 6 work orders (see Table 1 for reference) summarizing the results of the samples and associated quality control data.

## Analytical Methods

The analytical methods that were used to complete the chemical analyses included the following:

- Water samples were analyzed for dissolved arsenic by field filtration through 0.45µm filter and analyzed by inductively coupled plasma-mass spectrometry (ICP-MS) using U.S. EPA SW-846 Method 6020A (U.S. EPA 2018).
- Soil samples were analyzed for total arsenic by digestion and inductively coupled plasma-atomic emission spectrometry (ICP-AES) using SW-846 Method 6010C (U.S. EPA 2018).
- The pH of the soil samples was determined by electrometric measurement using U.S. EPA SW-846 Method 9045D (U.S. EPA 2018).
- Soil samples were prepared using the Toxicity Characteristic Leaching Procedure (TCLP) by SW-846 Method 1311 (U.S. EPA 2018) and the leachates were analyzed for arsenic, barium, cadmium, chromium, lead, selenium and silver by (ICP-AES) using SW-846 Method 6010C (U.S. EPA 2018) and mercury by cold vapor atomic absorption (CVAA) using SW-846 Method 7470A (U.S. EPA 2018)

## Data Validation Procedures

Data validation procedures included evaluating a summary of the sample results and applicable quality control results that were reported by the laboratory; this level of validation is also referred to as an abbreviated data review (equivalent to “Stage 2B” review per U.S. EPA 2009, which is equivalent to “Level EPA2B” for use with the Washington Department of Ecology EIMS database). The analytical data were validated generally following the applicable guidance and requirements:

- *Guidance on Environmental Data Verification and Validation* (U.S. EPA 2002)
- *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use*. OSWER No. 9200.1-85. EPA 540-R-08-005. (U.S. EPA 2009).

- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Superfund Data Review*. Final. OSWER 9240.1-51. EPA 540-R-10-011 (U.S. EPA 2010).
- Method-specific and laboratory-established quality control requirements, as applicable.

Data validation procedures were modified to accommodate QA/QC requirements for methods (e.g., conventional parameters) that are not specifically addressed by the USEPA functional guidelines. In this situation, method-specific and laboratory-established control limits were used, as necessary, to determine if qualification of the data was necessary. The laboratory data deliverables that were validated, if present, included the following:

- Case narratives discussing analytical problems (if any) and procedures.
- Chain-of-custody documentation to verify completeness of the data set.
- Sample preparation logs or laboratory summary result forms to verify analytical holding times were met.
- Results for applicable method blanks and field blanks to determine whether an analyte that was reported as detected in any sample was the result of possible contamination introduced at the laboratory or during field sampling, respectively.
- Results for applicable standard reference material (SRM), laboratory control sample (LCS) (i.e., blank spike), duplicate LCS, matrix spike (MS), and/or matrix spike duplicate (MSD) recoveries to assess analytical accuracy
- Results for applicable laboratory duplicate sample, duplicate LCS, and/or MSD analyses to assess analytical precision.
- Results for the field duplicate samples to provide additional information in support of the quality assurance review.
- Laboratory summaries of analytical results.

Verification of 100-percent of all applicable laboratory calculations, transcriptions, review of instrument printouts, and review of bench sheets was not completed during the data validation review. There may be analytical problems that could only be identified by reviewing every instrument printouts and associated analytical quality control results. Confirmation of all possible factors that could result in the degradation of data quality was not completed nor should be inferred at this time. The laboratory case narratives did not indicate any significant problems with data that were not reviewed during data validation. The adequacy of the sampling procedures was not completed during the data validation.

Performance based control limits established by the laboratory and applicable control limits specified in the analytical methods were used to evaluate data quality and to determine if specific data required qualification. Data qualifiers were assigned during data validation following guidance specified by U.S. EPA (2002 and 2010) to the EDD when applicable QC measurement criteria were not met and qualification of the data was warranted.

## Reasons for Data Qualification

The reasons for data qualification and a summary of the qualified data are summarized in Table 2 and include the following:

- A total of 67 results reported as detected at a concentration above the method detection limit (MDL), but less than the reporting limit (RL) were qualified as estimated (*J*).
- A total of 77 metal results reported as detected were restated as undetected (assigned a *U* qualifier).
- A total of 7 metal results were reported as undetected (*U*) at a concentration lower than the concentration found in the associated method blank and were subsequently restated as undetected (*U*) at the concentration of the method blank.

## General Comments

In some instances, matrix spike recoveries could not be reliably calculated because the concentration of the affected element in the native sample was significantly greater than the spike concentration added. In one instance the recovery of mercury in on MS was above the upper control limit; however, no sample results required qualification for this reason because mercury was not reported as detected in the associated samples. The RPD between a replicate laboratory sample analysis could not be reliably calculated in some instances because the concentrations were below the associated reporting limit.

This concludes the data validation review summary. Should you have any questions regarding the information presented herein, please contact me by telephone at 503.763.6948 or by e-mail at [jjmcaeter@msn.com](mailto:jjmcaeter@msn.com).

Cordially,

QA/QC Solutions, LLC

| Sample Number*              | Laboratory Sample Number | Chemical           | Concentration | Units | MDL   | RL   | Laboratory Data Flag | Validation n Qualifier | Quality Control Reason     | Quality Control Result | Possible Bias <sup>b,c,d</sup> |
|-----------------------------|--------------------------|--------------------|---------------|-------|-------|------|----------------------|------------------------|----------------------------|------------------------|--------------------------------|
| <b>Soil Samples</b>         |                          |                    |               |       |       |      |                      |                        |                            |                        |                                |
| SO-PTC-125-091718-12.0-13.0 | 1810270-15               | Arsenic, Inorganic | 6.86          | mg/kg | 0.792 | 8.42 | J                    | J                      | Concentration is >MDL, <RL | NA                     | Low or high                    |

Notes:  
 B- analyte detected in method blank per lab specific criteria only  
 D- reported value is from a dilution  
 J - estimated  
 MDL - method detection limit  
 R - rejected  
 RL - reporting limit  
 TCLP - toxicity characteristic leaching procedure  
 U - undetected at detection limit shown

|                                |    |
|--------------------------------|----|
| Total results qualified "J" =  | 67 |
| Total results qualified "U" =  | 84 |
| Total results qualified "UJ" = | 0  |
| Total results qualified "R" =  | 0  |

<sup>a</sup> Summary of qualified data is for natural and field quality control samples only  
<sup>b</sup>Low bias - concentration reported is exhibits low bias and the actual reporting limit or concentration may be greater than reported  
<sup>c</sup>High bias - result reported exhibits high bias and the actual reporting limit or concentration may be lower than reported  
<sup>d</sup>False positive - compound is likely not present

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Associated Work Order(s)

----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received September 18, 2018 under ARI work order 1810270. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Total Arsenic - EPA Method 6010C

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank was clean at the reporting limits.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-122-091818-2.0-3.0. The matrix spike percent recovery and duplicate RPD were within QC limits.

### TCLP Metals

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank BGI0663 has Barium, Cadmium and Chromium detected below the reporting limits, but above the method detection limits. Method blank BGI0782 has Cadmium detected below the reporting limit, but above the method detection limit. These metals have been flagged with "J" qualifiers on the method blanks. There were no target metals detected above the reporting limits in the method blanks. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-122-091818-2.0-3.0-(10). The duplicate has Barium, Cadmium and Chromium concentrations  $\leq 5$  times reporting limits, and the replicate control limits default to  $\pm$  the reporting limit instead of 20% of the RPD. These metals have been flagged with "L" qualifiers on the duplicate. The results are advisory. All other matrix spike percent recoveries and duplicate RPD were within QC limits. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-125-091718-12.0-13.0-(10). The duplicate has a Chromium concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to  $\pm$  the reporting limit instead of 20% of the RPD. The Chromium has been flagged with an "L" qualifier on the duplicate. The results are advisory. All other matrix spike percent recoveries and duplicate RPD were within QC limits. No further corrective action was taken.

### TCLP Hg

The samples were digested and analyzed within the recommended holding times.

Reported:  
03-Oct-2018 14:28

Initial and continuing calibrations were within method requirements.

The method blanks were clean at the reporting limits.

A matrix spike and duplicate were prepared in conjunction with samples SO-PTC-122-091818-9.5-10.5-(10) and SO-PTC-127-091818-7.0-7.5-(10). The matrix spike percent recoveries and duplicate RPD were within QC limits.

#### **pH - EPA Method 9045A**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample SO-PTC-122-091818-2.0-3.0. The duplicate RPD was within QC limits.

# Cooler Receipt Form

ARI Client: DOF Pioneer Tech.

Project Name: Arkema FSDG Inv

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 1870270

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 2.30C

Time: 1657

Temp Gun ID#: 0005206

If cooler temperature is out of compliance fill out form 00070F

Cooler Accepted by: HB Date: 9/18/18 Time: 1657

**Complete custody forms and attach all shipping documents**

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA  YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)...  NA  YES  NO

Were all VOC vials free of air bubbles? .....  NA  YES  NO

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI .....  NA

Was Sample Split by ARI :  NA  YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: ISW Date: 09/18/18 Time: 0750

### Notes and Definitions

- D The reported value is from a dilution
- J Estimated concentration value detected below the reporting limit.
- L Analyte concentration is  $\leq 5$  times the reporting limit and the replicate control limit defaults to  $\pm$  RL instead of 20% RPD
- U This analyte is not detected above the applicable reporting or detection limit.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received September 20, 2018 under ARI work order 18I0318. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Total Arsenic - EPA Method 6010C

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank BGI0755 has Arsenic detected below the reporting limit, but above the method detection limit. The Arsenic has been flagged with a "J" qualifier on the method blank. There were no Arsenic detections above the reporting limits in the method blanks. No further corrective action was taken.

The LCS percent recoveries were within control limits.

### TCLP Metals

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank BGI0168 has Barium detected above the reporting limit. Associated detected results and QC have been flagged with "B" qualifiers. This is due to the filter used during prep. The method blanks have various metals detected below the reporting limits, but above the method detection limits. These metals have been flagged with "J" qualifiers on the method blanks. There were no other target metals detected above the reporting limits in the method blanks. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-115-091918-7.5-8.0-(10). The duplicate has a Cadmium concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to +/- the reporting limit instead of 20% of the RPD. The Cadmium has been flagged with an "L" qualifier on the duplicate. The results are advisory. All other matrix spike percent recoveries and duplicate RPD were within QC limits. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-114-092018-7.0-7.5-(10). The matrix spike percent recoveries and duplicate RPD were within QC limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-118-092018-10.5-11.0-(10). The duplicate has Barium and Selenium concentrations  $\leq 5$  times the reporting limits, and the replicate control limits default to +/- the reporting limits instead of 20% of the RPD. These metals have been flagged with "L" qualifiers on the duplicate. The results are advisory. All other matrix spike percent recoveries and duplicate RPD were within QC limits. No further corrective action was taken.

### TCLP Hg

Pioneer Technologies Corporation

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
09-Oct-2018 11:47

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blanks were clean at the reporting limits.

Matrix spikes and duplicates were prepared in conjunction with samples SO-PTC-115-091918-14.5-15.0-(10), SO-PTC-114-092018-13.3-13.8-(10) and SO-PTC-117-092018-6.4-6.9-(10). The matrix spike percent recoveries and duplicate RPD were within QC limits.

#### **pH - EPA Method 9045D**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample SO-PTC-130-091918-9.5-10.0. The duplicate RPD was within QC limits.

# Cooler Receipt Form

ARI Client: DDP Pioneer Tech.  
COC No(s): \_\_\_\_\_ NA  
Assigned ARI Job No: 1870318

Project Name: Arkema FS DG In-  
Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_  
Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES NO  
 Were custody papers included with the cooler? YES NO  
 Were custody papers properly filled out (ink, signed, etc.) YES NO  
 Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)  
 Time: 1730 19 \_\_\_\_\_  
 If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D005206  
 Cooler Accepted by: JES Date: 9/10/18 Time: 1730

**Complete custody forms and attach all shipping documents**

**Log-In Phase:**

Was a temperature blank included in the cooler? YES NO  
 What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_  
 Was sufficient ice used (if appropriate)? NA YES NO  
 Were all bottles sealed in individual plastic bags? YES NO  
 Did all bottles arrive in good condition (unbroken)? YES NO  
 Were all bottle labels complete and legible? YES NO  
 Did the number of containers listed on COC match with the number of containers received? YES NO  
 Did all bottle labels and tags agree with custody papers? YES NO  
 Were all bottles used correct for the requested analyses? YES NO  
 Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES NO  
 Were all VOC vials free of air bubbles? NA YES NO  
 Was sufficient amount of sample sent in each bottle? YES NO  
 Date VOC Trip Blank was made at ARI: NA \_\_\_\_\_  
 Was Sample Split by ARI: NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: JES Date: 9/21/18 Time: 1400

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

**Reported:**  
09-Oct-2018 11:47

### Notes and Definitions

- B This analyte was detected in the method blank.
- D The reported value is from a dilution
- J Estimated concentration value detected below the reporting limit.
- L Analyte concentration is  $\leq 5$  times the reporting limit and the replicate control limit defaults to  $\pm$  RL instead of 20% RPD
- U This analyte is not detected above the applicable reporting or detection limit.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

15 October 2018

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received September 21, 2018 under ARI work order 1810334. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Total Arsenic - EPA Method 6010C

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank was clean at the reporting limits.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-120-092118-9.0-10.0. The matrix spike has a natural Arsenic concentration that is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. The Arsenic has been flagged with an "HC" qualifier on the matrix spike. The results are advisory. The duplicate RPD was within QC limits. No further corrective action was taken.

### TCLP Metals

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank has Barium detected above the reporting limit. This is caused by the filter used for prep. Associated detected results and QC have been flagged with "B" qualifiers. There were no other target metals detected above the reporting limits in the method blanks. The method blank also has Cadmium detected below the reporting limit, but above the method detection limit. The Cadmium has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-120-092118-9.0-10.0-(10). The duplicate has Barium and Cadmium concentrations  $\leq 5$  times the reporting limits, the replicate control limit defaults to  $\pm$  the reporting limit instead of 20% of the RPD. These metals have been flagged with "L" qualifiers on the duplicate. The results are advisory. All other matrix spike percent recoveries and duplicate RPD were within QC limits. No further corrective action was taken.

### TCLP Hg

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank was clean at the reporting limits.

**Reported:**  
15-Oct-2018 17:05

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-120-092118-9.0-10.0-(10). The matrix spike has high spike recovery. The results are advisory. The duplicate RPD was within QC limits. No corrective action was taken.

**pH - EPA Method 9045D**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample SO-PTC-120-092118-9.0-10.0. The duplicate RPD was within QC limits.

# Cooler Receipt Form

ARI Client: Pioneer I DOF  
 COC No(s): \_\_\_\_\_ NA  
 Assigned ARI Job No: 18I0334

Project Name: Arkema  
 Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_  
 Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES NO  
 Were custody papers included with the cooler? YES NO  
 Were custody papers properly filled out (ink, signed, etc.) YES NO  
 Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)  
 Time: 1537 17  
 If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D002565  
 Cooler Accepted by: Self Date: 9-21-18 Time: 1537

**Complete custody forms and attach all shipping documents**

**Log-In Phase:**

Was a temperature blank included in the cooler? YES NO  
 What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_  
 Was sufficient ice used (if appropriate)? NA YES NO  
 Were all bottles sealed in individual plastic bags? YES NO  
 Did all bottles arrive in good condition (unbroken)? YES NO  
 Were all bottle labels complete and legible? YES NO  
 Did the number of containers listed on COC match with the number of containers received? YES NO  
 Did all bottle labels and tags agree with custody papers? YES NO  
 Were all bottles used correct for the requested analyses? YES NO  
 Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES NO  
 Were all VOC vials free of air bubbles? NA YES NO  
 Was sufficient amount of sample sent in each bottle? YES NO  
 Date VOC Trip Blank was made at ARI: NA  
 Was Sample Split by ARI: NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_  
 Samples Logged by: JSW Date: 09/22/18 Time: 1155

### Notes and Definitions

- \* Flagged value is not within established control limits.
- B This analyte was detected in the method blank.
- D The reported value is from a dilution
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- J Estimated concentration value detected below the reporting limit.
- L Analyte concentration is  $\leq 5$  times the reporting limit and the replicate control limit defaults to  $\pm$  RL instead of 20% RPD
- U This analyte is not detected above the applicable reporting or detection limit.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received September 24, 2018 under ARI work order 1810353. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Total Arsenic - EPA Method 6010C

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank was clean at the reporting limits.

The LCS percent recoveries were within control limits.

### TCLP Metals

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank has Barium detected above the reporting limit. This is caused by the filter used for prep. Associated detected results and QC have been flagged with "B" qualifiers. There were no other target metals detected above the reporting limits in the method blanks. The method blank also has Cadmium detected below the reporting limit, but above the method detection limit. The Cadmium has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

### TCLP Hg

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank was clean at the reporting limits.

### pH - EPA Method 9045D

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The LCS percent recoveries were within control limits.

# Cooler Receipt Form

ARI Client: Dof/pioneer  
 COC No(s): \_\_\_\_\_ (NA)  
 Assigned ARI Job No: B10353

Project Name: Arkema  
 Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_  
 Tracking No: \_\_\_\_\_ (NA)

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 8.1  
 Time: 1630

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: Danses

Cooler Accepted by: Set Date: 01-24-18 Time: 1630

**Complete custody forms and attach all shipping documents**

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES  NO

Were all VOC vials free of air bubbles? ..... NA YES  NO

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI..... NA

Was Sample Split by ARI:  NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: JCS Date: 9/25/18 Time: 0742

Tracking No: \_\_\_\_\_ (NA)

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES NO  
Were custody papers included with the cooler? YES NO  
Were custody papers properly filled out (ink, signed, etc.) YES NO  
Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 8.1  
Time: 1630  
If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: DAN565  
Cooler Accepted by: Set Date: 01-24-18 Time: 1630

**Complete custody forms and attach all shipping documents**

**Log-In Phase:**

Was a temperature blank included in the cooler? YES NO  
What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_  
Was sufficient ice used (if appropriate)? NA YES NO  
Were all bottles sealed in individual plastic bags? YES NO  
Did all bottles arrive in good condition (unbroken)? YES NO  
Were all bottle labels complete and legible? YES NO  
Did the number of containers listed on COC match with the number of containers received? YES NO  
Did all bottle labels and tags agree with custody papers? YES NO  
Were all bottles used correct for the requested analyses? YES NO  
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES NO  
Were all VOC vials free of air bubbles? NA YES NO  
Was sufficient amount of sample sent in each bottle? YES NO  
Date VOC Trip Blank was made at ARI: NA  
Was Sample Split by ARI: NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_  
Samples Logged by: JCS Date: 9/25/18 Time: 0742

### Notes and Definitions

- B This analyte was detected in the method blank.
- D The reported value is from a dilution
- J Estimated concentration value detected below the reporting limit.
- U This analyte is not detected above the applicable reporting or detection limit.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gaps 2018

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

-----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

## Work Order Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 5, 2018 under ARI work order 18J0149. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Dissolved Arsenic - EPA Method 6020A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank BGJ0543 has Arsenic detected below the reporting limit, but above the method detection limit. The Arsenic has been flagged with a "J" qualifier on this method blank. There were no results detected above the reporting limits in the method blanks. No further corrective action was taken.

The LCS percent recoveries were within control limits.

Matrix spikes and duplicates were prepared in conjunction with samples GW-EB-EB-100518-(20) and GW-5D7-1R-10052018-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

# Cooler Receipt Form

ARI Client: Pioneer Technologies

Project Name: \_\_\_\_\_

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 18J0149

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? YES  NO

Were custody papers properly filled out (ink, signed, etc.) YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 0.8°C

Time: 1500

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: D005206

Cooler Accepted by: JTB Date: 10/5/18 Time: 1500

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? YES  NO

What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? NA  YES  NO

Were all bottles sealed in individual plastic bags? YES  NO

Did all bottles arrive in good condition (unbroken)? YES  NO

Were all bottle labels complete and legible? YES  NO

Did the number of containers listed on COC match with the number of containers received? YES  NO

Did all bottle labels and tags agree with custody papers? JTB YES  NO

Were all bottles used correct for the requested analyses? YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA  YES  NO

Were all VOC vials free of air bubbles? NA  YES  NO

Was sufficient amount of sample sent in each bottle? YES  NO

Date VOC Trip Blank was made at ARI: \_\_\_\_\_

Was Sample Split by ARI:  NA YES  Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: JTB Date: 10/6/18 Time: 1233

### Notes and Definitions

- B This analyte was detected in the method blank.
- D The reported value is from a dilution
- J Estimated concentration value detected below the reporting limit.
- U This analyte is not detected above the applicable reporting or detection limit.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the Invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, notwithstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

## Work Order Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 16, 2018 under ARI work order 18J0293. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Dissolved Arsenic - EPA Method 6020A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank BGJ0543 has Arsenic detected below the reporting limit, but above the method detection limit. The Arsenic has been flagged with a "J" qualifier on the method blank. There were no detected results above the reporting limits in the method blanks. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-5E8-1-101518-(20). The matrix spike has a natural concentration of Arsenic that is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. The Arsenic has been flagged with an "HC" qualifier on the matrix spike. The results are advisory. The duplicate RPD was within QC limits. No further corrective action was taken.

# Cooler Receipt Form

ARI Client: Pioneer Technologies

Project Name: Arkema FS 06 Inv

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 18J0293

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? .....  YES  NO

Were custody papers properly filled out (ink, signed, etc.) .....  YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 0.6°C

Time: 1330

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D005206

Cooler Accepted by: SSW Date: 10/16/18 Time: 1330

**Complete custody forms and attach all shipping documents**

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA  YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? .....  YES  NO

Were all bottle labels complete and legible? .....  YES  NO

Did the number of containers listed on COC match with the number of containers received? .....  YES  NO

Did all bottle labels and tags agree with custody papers? .....  YES  NO

Were all bottles used correct for the requested analyses? .....  YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA  YES  NO

Were all VOC vials free of air bubbles? .....  NA  YES  NO

Was sufficient amount of sample sent in each bottle? .....  YES  NO

Date VOC Trip Blank was made at ARI: .....  NA  YES

Was Sample Split by ARI:  NA  YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: SSW Date: 10/16/18 Time: 1635

### Notes and Definitions

- B This analyte was detected in the method blank.
- D The reported value is from a dilution
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- J Estimated concentration value detected below the reporting limit.
- U This analyte is not detected above the applicable reporting or detection limit.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

Subject: Feasibility Study Data Gap Investigation, Former Arkema Manufacturing Site, Tacoma, WA;  
Soil Sample Data Validation Review Summary  
Client Project No.: Not Specified  
QA/QC Solutions, LLC Project No.: 092317.1

Dear Troy:

This letter documents the results of the data validation review of the conventional parameter and metal analyses completed on soil samples associated with Feasibility Study Data Gap Investigation completed at the Former Arkema Manufacturing Site located in Tacoma, Washington. Details of the investigation completed are provided in the FS Data Gap Investigation Work Plan, Former Arkema Manufacturing Site. (Pioneer 2017).

The data reported were validated to verify the laboratory quality assurance and quality control (QA/QC) procedures were documented and that the overall quality of the data reported is sufficient to support its intended purposes. A summary of the data set, the analytical methods used to complete the chemical analyses, the data validation procedures used, and the overall assessment of data quality is presented below.

### Data Set

The data set consisted of 62 soil samples, two field duplicates, and one equipment rinsate blank that were submitted to the laboratory. Samples were collected during the month of September 2017. A summary of the samples collected and the analyses completed is presented in Table 1.

*\* Data users must note that only data considered reportable during data validation has been reported. In several instances, multiple reanalysis were completed.*

Analyses were completed by Analytical Resources, Inc. (ARI) located in Tukwila, Washington under the following six (6) work orders: 17I0138, 17I0167, 17I0187, 17I0208, 17I0247, and 17I0272. ARI submitted a electronic data deliverables (EDDs that included only a summary of sample and QC-related results and a data file summarizing the results of the data reported.

### Analytical Methods

The analytical methods that were used to complete the chemical analyses included the following:

- Total solids by desiccation and gravimetric determination using Standard Method SM 2540 G-97 (APHA 2012) and PSEP 1986 (for samples analyzed for sulfide).
- Total Aluminum, arsenic, iron, and manganese on soil samples by digestion and analysis by inductively coupled plasma-atomic emission spectrometry (ICP-AES) using on soil samples SW-846 methods 3050B and 6010C (SW-846 2017), respectively.
- Total arsenic by digestion and analysis by ICP-AES using SW-846 methods 3050B and 6010C (SW-846 2017), respectively.
- Total Aluminum, arsenic, iron, and manganese on the equipment rinsate blank by digestion and analysis by ICP-AES using SW-846 methods 3010A and 6010C (SW-846 2017), respectively.
- Toxicity characteristic leaching procedure (TCLP) metals (i.e., arsenic, barium, cadmium, chromium, lead, mercury, selenium, and silver) on soil samples using SW-846 Method 1311 (U.S. EPA 2017) to generate a leachate (extraction fluid). The aqueous leachate was then acid digested using U.S. EPA SW-846 Method 3010A (U.S. EPA 2017), and analysis completed by ICP-AES using U.S. EPA SW-846 Method 6010C for most metals and Method 7470A for mercury (U.S. EPA 2017), respectively.
- Orthophosphorus and sulfate on soil samples and the equipment rinsate blank by ion chromatography using EPA Method 300.0 (U.S. EPA 1993).
- pH by electrochemical determination using SW-846 Method 9045D (U.S. EPA 2017) on soil samples and SW-846 Method 9040C (U.S. EPA 2017) on the equipment rinsate blank.
- Total carbon, total organic carbon, and total inorganic carbon on sediment samples by catalytic combustion using infrared detection using a modified version of SW-846 Method 9060A (U.S. EPA 2017) per the laboratory standard operating procedure; SW-846 Method 9060A was without modification for the analysis of the equipment rinsate blank.
- Total sulfide on soil samples and the equipment rinsate blank with sample preparation by distillation (Plumb 1981) and analysis by spectrophotometry using SM 4500-S2 D-00 (APHA 2012).

## Data Validation Procedures

Data validation procedures included evaluating a summary of the sample results and applicable quality control results that were reported by the laboratory; this level of validation is also referred to as an abbreviated data review (equivalent to “Stage 2B” review per U.S. EPA 2009, which is equivalent to “Level EPA2B” for use with the Washington Department of Ecology EIMS database). The analytical data were validated generally following the applicable guidance and requirements:

- *Guidance on Environmental Data Verification and Validation* (U.S. EPA 2002)
- *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use*. OSWER No. 9200.1-85. EPA 540-R-08-005. (U.S. EPA 2009).

- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Superfund Data Review*. Final. OSWER 9240.1-51. EPA 540-R-10-011 (U.S. EPA 2010).
- Method-specific and laboratory-established quality control requirements, as applicable.

Data validation procedures were modified to accommodate QA/QC requirements for methods (e.g., conventional parameters) that are not specifically addressed by the USEPA functional guidelines. In this situation, method-specific and laboratory-established control limits were used, as necessary, to determine if qualification of the data was necessary. The laboratory data deliverables that were validated, if present, included the following:

- Case narratives discussing analytical problems (if any) and procedures.
- Chain-of-custody documentation to verify completeness of the data set.
- Results for applicable method blanks and field blanks to determine whether an analyte that was reported as detected in any sample was the result of possible contamination introduced at the laboratory or during field sampling, respectively.
- Results for applicable standard reference material (SRM), laboratory control sample (LCS) (i.e., blank spike), duplicate LCS, matrix spike (MS), and/or matrix spike duplicate (MSD) recoveries to assess analytical accuracy.
- Results for applicable laboratory duplicate sample, duplicate LCS, and/or MSD analyses to assess analytical precision.
- Results for the field duplicate samples to provide additional information in support of the quality assurance review.
- Laboratory summaries of analytical results.

Verification applicable laboratory calculations, transcriptions, review of instrument printouts, and review of bench sheets were not completed during data validation effort per the requirements specified in the work plan (Pioneer 2017). All data subjected to the abbreviated data validation review completed may have analytical problems that can only be identified by completing a 100-percent review of all original instrument printouts and associated analytical quality control results. Verification of all possible factors that could result in the degradation of data quality cannot be made nor should be inferred based on the results of an abbreviated validation effort. The adequacy of the sampling procedures will not be completed during data validation. *QA/QC Solutions, LLC* will not be responsible for any qualitative and quantitative errors that may be reported by the laboratory.

Performance based control limits established by the laboratory and control limits provided in the method protocols will be used to evaluate data quality and determine the need for data qualification. Applicable laboratory control limits for surrogate compound recoveries, LCSs and LCS duplicate recoveries, and MS/MSD recoveries will be used during data validation. Data qualifiers will be assigned during data validation to the EDD when applicable QA/QC limits are not met and qualification of the data is warranted. Data qualifiers will be assigned following guidance specified by U.S. EPA (2002, 2009, and 2010) and using professional judgment.

## Overall Assessment of Data Quality

Overall, the data reported are of good quality and the results for the applicable QA/QC procedures that were used by the laboratory during the analysis of the samples were generally acceptable. Selected sample results required qualification during data validation because method-specific QA/QC criteria were not met; results maybe qualified for more than one reason. During data validation, the following actions were taken:

- A total of 127 results reported as detected were qualified as estimated (assigned a *J* qualifier).
- A total of 16 results reported as undetected (*U*) were qualified as undetected and estimated (assigned a *UJ* qualifier).
- A total of 13 results reported as detected were restated as undetected (assigned a *U* qualifier).
- No results required rejection (*R*).

Analytical data that did not meet method- and/or laboratory-established control limits for applicable quality control measurements were qualified as estimated (*J* or *UJ*) by the laboratory or during data validation. These qualified data usable and represent data of good quality and reasonable confidence and have an acceptable degree of uncertainty (i.e., may be less precise or less accurate than unqualified data). Analytical data that were reported as undetected (*U*) by the laboratory or that were restated as undetected (*U*) during data validation are usable. A summary of the qualified sample data and the reason(s) for qualification is presented in Table 2; results may be qualified for more than one reason).

In some instances, selected samples required dilution prior to analysis (as is required by the analytical methods) to obtain concentrations that were within the linear range of the instrument or to minimize the effects of matrix interferences to obtain reportable results.

This concludes the data validation review summary. Should you have any questions regarding the information presented herein, please contact me by telephone at 503.763.6948 or by e-mail at [jjmcaateer@msn.com](mailto:jjmcaateer@msn.com).

Cordially,

Sample result restated undetected at this concentration | False positive                 |

**Notes:**

- B - analyte was detected in the method blank
- D - reported value is from a dilution
- H - holding time not met
- J - estimated
- MDL - method detection limit
- RL - reporting limit
- RPDs - relative percent differences
- SRM - standard reference material
- U - undetected at detection limit shown

|                                |     |
|--------------------------------|-----|
| Total results qualified "J" =  | 127 |
| Total results qualified "U" =  | 13  |
| Total results qualified "UJ" = | 16  |
| Total results qualified "R" =  | 0   |

\* Summary of qualified data is for natural and field quality control samples only

<sup>b</sup>Low bias - concentration reported is exhibits low bias and the actual reporting limit or concentration may be greater than reported

<sup>c</sup>High bias - result reported exhibits high bias and the actual reporting limit or concentration may be lower than reported

<sup>d</sup>False positive - compound is likely not present

\* Data users must note that only data considered reportable during data validation has been reported. In several instances, multiple reanalysis were completed.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: DOF  
 COC No(s): \_\_\_\_\_ NA  
 Assigned ARI Job No: 17I0138

Project Name: \_\_\_\_\_  
 Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_  
 Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO   
 Were custody papers included with the cooler? ..... YES  NO   
 Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO   
 Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 4.6  
 Time: \_\_\_\_\_  
 If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D005206  
 Cooler Accepted by: pm Date: 9/13/2017 Time: 16:13

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO   
 What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_  
 Was sufficient ice used (if appropriate)? ..... NA  YES  NO   
 Were all bottles sealed in individual plastic bags? ..... YES  NO   
 Did all bottles arrive in good condition (unbroken)? ..... YES  NO   
 Were all bottle labels complete and legible? ..... YES  NO   
 Did the number of containers listed on COC match with the number of containers received? ..... YES  NO   
 Did all bottle labels and tags agree with custody papers? ..... YES  NO   
 Were all bottles used correct for the requested analyses? ..... YES  NO   
 Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)...  NA YES NO  
 Were all VOC vials free of air bubbles? .....  NA YES NO  
 Was sufficient amount of sample sent in each bottle? ..... YES  NO   
 Date VOC Trip Blank was made at ARI.....  NA  
 Was Sample Split by ARI :  NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_  
 Samples Logged by: pm Date: 9/13/2017 Time: 11:14

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received September 14, 2017 under ARI workorder 1710138. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Total and TCLP Metals - EPA Method 6010C

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFI0326 (total) has Aluminum and Iron detected below the reporting limits, but above the method detection limits. Method blank BFI0396 (TCLP) has Cadmium detected below the reporting limit, but above the method detection limit. These metals have been flagged with "J" qualifiers on their associated method blanks. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-002-091317-2.0-4.0. The duplicate has an Arsenic concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to  $\pm$  the reporting limit instead of 20% of the RPD. The Arsenic has been flagged with an "L" qualifier on the duplicate. The matrix spike has natural concentrations of Aluminum and Iron that are so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. These metals have been flagged with an "HC" qualifier on the matrix spike. No further corrective action was taken.

### Anions - EPA 300.0

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFI0284-BLK2 has Sulfate detected above the reporting limit. Associated detected results and QC have been flagged with a "B" qualifier. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-002-091317-2.0-4.0. The matrix spike percent recoveries were within QC limits. The duplicate has a high RPD for Orthophosphorus. The results are advisory. No corrective action was taken.

### pH - EPA Method 9045A

The samples were prepared and analyzed within the recommended holding times.

Pioneer Technologies Corporation  
5205 Corporate Ctr. Ct. SE, Ste A  
Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
06-Oct-2017 10:29

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample SO-PTC-002-091314-2.0-4.0. The duplicate RPD was within QC limits.

#### **Total Organic and Inorganic Carbon - EPA Method 9060A**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFI0307 has Total Carbon detected above the reporting limit. Associated detected results and QC have been flagged with an "B" qualifier. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-002-091317-2.0-4.0. The duplicate has a high RPD for Total Carbon. The matrix spike has high spike recovery for Total Carbon. The results are advisory. No corrective action was taken.

The SRM percent recoveries were within control limits.

#### **Sulfide - Method SM4500**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- L Analyte concentration is  $\leq 5$  times the reporting limit and the replicate control limit defaults to  $\pm$  RL instead of 20% RPD
- J Estimated concentration value detected below the reporting limit.
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

**Terms of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer Technology

Project Name: Arkema FSDS Inv

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17I0167

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)  
Time: 1700 11.6

If cooler temperature is out of compliance fill out form-00070F

Temp Gun ID#: D005206

Cooler Accepted by: [Signature] Date: 9/14/17 Time: 1700

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA  YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA  YES  NO

Were all VOC vials free of air bubbles? ..... NA  YES  NO

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI..... NA

Was Sample Split by ARI : NA  YES  Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: B.H. Date: 9/15/17 Time: 10:02

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received September 14, 2017 under ARI workorder 1710167. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Total and TCLP Metals - EPA Methods 6010C and 7471B

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFI0326 (total) has Aluminum and Iron detected below the reporting limits, but above the method detection limits. Method blank BFI0396 (TCLP) has Cadmium detected below the reporting limit, but above the method detection limit. These metals have been flagged with "J" qualifiers on their associated method blanks. No further corrective action was taken.

The LCS percent recoveries were within control limits.

### Anions - EPA 300.0

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFI0324 has Sulfate detected above the reporting limit. Associated detected results and QC have been flagged with a "B" qualifier. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-101-091417-8.2-10.2. The matrix spike percent recoveries were within QC limits. The duplicate has a high RPD for Orthophosphorus. The results are advisory. No corrective action was taken.

### pH - EPA Method 9045A

The samples were prepared and analyzed within the recommended holding times.

The LCS percent recoveries were within control limits.

### Total Organic and Inorganic Carbon - EPA Method 9060A

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Reported:  
06-Oct-2017 13:14

Method blank BFI0307 has Total Carbon detected above the reporting limit. Associated detected results and QC have been flagged with an "B" qualifier. No further corrective action was taken.

The SRM percent recoveries were within control limits.

#### **Sulfide - Method SM4500**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

**Terms of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI/release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer Technologies

Project Name: Arkema FS DG

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17I0187

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time: \_\_\_\_\_ 5.8 \_\_\_\_\_

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D005206

Cooler Accepted by: PM Date: 9/15/17 Time: 17:20

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA  YES  NO

Were all bottles sealed in individual plastic bags? ..... B.H.  YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA  YES  NO

Were all VOC vials free of air bubbles? ..... NA  YES  NO

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI..... NA

Was Sample Split by ARI :  NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

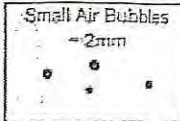

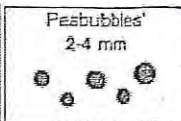

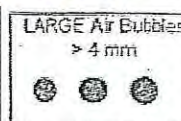

Samples Logged by: B.H. Date: 9/18/17 Time: 9:01

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received September 15, 2017 under ARI workorder 1710187. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Total and TCLP Metals - EPA Methods 6010C and 7471B

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFI0501 (total) has Iron detected below the reporting limits, but above the method detection limits. Method blank BFI0396 (TCLP) has Cadmium detected below the reporting limit, but above the method detection limit. These metals have been flagged with "J" qualifiers on their associated method blanks. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-001-091517-23.0-25.0 (total). The duplicate RPD were within QC limits. The matrix spike has a natural concentration of Iron that is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. The Iron has been flagged with an "HC" qualifier on the matrix spike. No further corrective action was taken.

### Anions - EPA 300.0

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-101-091417-8.2-10.2. The matrix spike percent recoveries and duplicate RPD were within QC limits.

### pH - EPA Method 9045A

The samples were prepared and analyzed within the recommended holding times.

The LCS percent recoveries were within control limits.

### Total Organic and Inorganic Carbon - EPA Method 9060A

The samples were prepared and analyzed within the recommended holding times.

Reported:  
06-Oct-2017 14:20

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The SRM percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-001-091517-23.0-25.0. The matrix spike has high spike recovery for Total Carbon. The duplicates all have high RPD for Total Carbon. The results are advisory. No corrective action was taken.

#### **Sulfide - Method SM4500**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-001-091517-23.0-25.0. The matrix spike percent recovery and duplicate RPD were within QC limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- D The reported value is from a dilution
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

Limits of Liability: ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.  
 Sample Retention Policy: Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer/DOF

Project Name: \_\_\_\_\_

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17I0208

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) Time: 1620 5.4

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D005206

Cooler Accepted by: [Signature] Date: 9/18/17 Time: 1620

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA  YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA  YES  NO  BF 9/19

Were all VOC vials free of air bubbles? ..... NA  YES  NO

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI ..... NA

Was Sample Split by ARI :  YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: BF Date: 9/19/17 Time: 832

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received September 18, 2017 under ARI workorder 1710208. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Total and TCLP Metals - EPA Methods 6010C and 7471B

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFI0501 (total) has Iron detected below the reporting limits, but above the method detection limits. The Iron has been flagged with a "J" qualifier on the associated method blank. No further corrective action was taken. Method blank BFI0756 (tclp) has Mercury detected below the reporting limit, but above the method detection limit. The Mercury has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-111-091817-6.0-8.0-(10) (tclp). The matrix spike percent recoveries were within QC limits. The duplicate has a Chromium concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to  $\pm$  the reporting limit instead of 20% of the RPD. The Chromium has been flagged with an "L" qualifier on the duplicate. No further corrective action was taken.

### Anions - EPA 300.0

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFI0395 has Sulfate detected above the reporting limit. Associated detected results and QC have been flagged with a "B" qualifier. no further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-121-091817-11.0-13.0, and the reanalysis. The duplicate RPD were within QC limits. The matrix spike has no spike recovery for orthophosphorus. This is likely due to matrix interference. A post spike digest was prepared with orthophosphorus within QC limits, and was not spike for Sulfate. No further corrective action was taken.

### pH - EPA Method 9045A

The samples were prepared and analyzed within the recommended holding times.

The LCS percent recoveries were within control limits.

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
09-Oct-2017 13:59

A duplicate was prepared in conjunction with sample SO-PTC-121-091817-11.0-13.0. The duplicate RPD was within QC limits.

#### **Total Organic and Inorganic Carbon - EPA Method 9060A**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The SRM percent recoveries were within control limits.

#### **Sulfide - Method SM4500**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- L Analyte concentration is  $\leq 5$  times the reporting limit and the replicate control limit defaults to  $\pm$  RL instead of 20% RPD
- J Estimated concentration value detected below the reporting limit.
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer Technologies  
COC No(s): \_\_\_\_\_ NA  
Assigned ARI Job No: 17I0247

Project Name: \_\_\_\_\_  
Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_  
Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO   
Were custody papers included with the cooler? ..... YES  NO   
Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO   
Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 0.9  
Time: \_\_\_\_\_

If cooler temperature is out of compliance fill out form 00070F  
Cooler Accepted by: PM Date: 9/19/17 Time: 16:45 Temp Gun ID#: D005206

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO   
What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_  
Was sufficient ice used (if appropriate)? ..... NA  YES  NO   
Were all bottles sealed in individual plastic bags? ..... YES  NO   
Did all bottles arrive in good condition (unbroken)? ..... YES  NO   
Were all bottle labels complete and legible? ..... YES  NO   
Did the number of containers listed on COC match with the number of containers received? ..... YES  NO   
Did all bottle labels and tags agree with custody papers? ..... YES  NO   
Were all bottles used correct for the requested analyses? ..... YES  NO   
Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA  YES  NO   
Were all VOC vials free of air bubbles? ..... NA  YES  NO   
Was sufficient amount of sample sent in each bottle? ..... YES  NO   
Date VOC Trip Blank was made at ARI ..... NA   
Was Sample Split by ARI : NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: \_\_\_\_\_ Date: \_\_\_\_\_ Time: \_\_\_\_\_

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received September 19, 2017 under ARI workorder 1710247. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Total and TCLP Metals - EPA Methods 6010C and 7471B

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFI0757 (total) has Aluminum detected above the reporting limit. Associated detected results and QC have been flagged with a "B" qualifier. The method blank also has Iron and Manganese detected below the reporting limits, but above the method detection limits. These metals have been flagged with "J" qualifiers on the method blank. Method blank BFI0755 (tclp) has Chromium detected below the reporting limit, but above the method detection limit. Method blank BFI0756 has Mercury detected below the reporting limit, but above the method detection limit. These metals have been flagged with "J" qualifiers on the associated method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

### Anions - EPA 300.0

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

### pH - EPA Method 9045A

The samples were prepared and analyzed within the recommended holding times.

The LCS percent recoveries were within control limits.

### Total Organic and Inorganic Carbon - EPA Method 9060A

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
09-Oct-2017 17:23

The SRM percent recoveries were within control limits.

**Sulfide - Method SM4500**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Terms of Liability: ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

Sample Retention Policy: Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** All samples submitted to ARI will be appropriately discarded no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer, unless alternate retention schedules have been established by work-order or contract.

# Cooler Receipt Form

ARI Client: Pioneer Technologies

Project Name: Arkema

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17I0272

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) Time: 3.8

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D005206

Cooler Accepted by: PM Date: 9/20/2017 Time: 16:50

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap  Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES  NO

Were all VOC vials free of air bubbles? ..... NA YES  NO

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI ..... NA

Was Sample Split by ARI :  NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: B.H. Date: 9/21/17 Time: 7:47

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received September 20, 2017 under ARI workorder 1710272. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Total and TCLP Metals - EPA Methods 6010C and 7471B

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFI0757 (total) has Aluminum detected above the reporting limit. Associated detected results and QC have been flagged with a "B" qualifier. The method blank also has Iron and Manganese detected below the reporting limits, but above the method detection limits. Method blank BFI0573 (water) has Iron detected below the reporting limit, but above the method detection limit. These metals have been flagged with "J" qualifiers on the method blank. Method blank BFI0755 (tclp) has Chromium detected below the reporting limit, but above the method detection limit. Method blank BFI0756 has Mercury detected below the reporting limit, but above the method detection limit. These metals have been flagged with "J" qualifiers on the associated method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike/matrix spike duplicate and duplicate were prepared in conjunction with sample SO-PTC-113-092017-7.5-10.0. The duplicate RPD were within QC limits. The matrix spike/matrix spike duplicate has natural concentrations of Aluminum and Iron that are so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. These metals have been flagged with an "HC" qualifier on the matrix spike and matrix spike duplicate. No further corrective action was taken.

### Anions - EPA 300.0

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFI0514 has Sulfate detected above the reporting limit. Associated detected results and QC have been flagged with a "B" qualifier. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SO-PTC-113-092017-7.5-10.0. The duplicate has high RPD for Sulfate. The matrix spike has low spike recovery for Orthophosphorus. This is likely due to matrix interference. The results are advisory. No corrective action was taken.

### pH - EPA Method 9045A

The pH for sample EB-EB-01-092017 was received outside of the fifteen minute recommended holding time, and has been

Reported:  
09-Nov-2017 13:58

flagged with an "H" qualifier.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with samples SO-PTC-113-092017-7.5-10.0 and EB-EB-01-092017. The duplicate RPD was within QC limits.

#### **Total Organic and Inorganic Carbon - EPA Method 9060A**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The SRM percent recoveries were within control limits.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with samples SO-PTC-113-092017-7.5-10.0 and EB-EB-01-092017. The water matrix spike percent recovery and duplicate were within QC limits. The soil duplicates Dup3 and Dup5 have high Total Carbon RPD. The matrix spikes MS2 and MS3 have high spike recovery for Total Carbon. This is likely due to matrix interference. No corrective action was taken.

#### **Sulfide - Method SM4500**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with samples SO-PTC-113-092017-7.5-10.0 and EB-EB-01-092017. The water matrix spike percent recovery and duplicate RPD were within QC limits. The soil duplicate RPD was within QC limits. The soil matrix spike has high spike recovery. This is likely due to matrix interference. No corrective action was taken.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- H Hold time violation - Hold time was exceeded.
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

Subject: Feasibility Study Data Gap Investigation, Former Arkema Manufacturing Site, Tacoma, WA;  
Sediment Sample Data Validation Review Summary  
Client Project No.: Not Specified  
QA/QC Solutions, LLC Project No.: 092317.1

Dear Troy:

This letter documents the results of the data validation review of the conventional parameter and metal analyses completed on sediment samples associated with Feasibility Study Data Gap Investigation completed at the Former Arkema Manufacturing Site located in Tacoma, Washington. Details of the investigation completed are provided in the FS Data Gap Investigation Work Plan, Former Arkema Manufacturing Site. (Pioneer 2017).

The data reported were validated to verify the laboratory quality assurance and quality control (QA/QC) procedures were documented and that the overall quality of the data reported is sufficient to support its intended purposes. A summary of the data set, the analytical methods used to complete the chemical analyses, the data validation procedures used, and the overall assessment of data quality is presented below.

### **Data Set**

The data set consisted of 8 sediment samples, one field duplicate, and one equipment rinsate blank that were submitted to the laboratory. Samples were collected during the month of October 2017. A summary of the samples collected and the analyses completed is presented in Table 1.

*\* Data users must note that only data considered reportable during data validation has been reported. In several instances, multiple reanalysis were completed.*

Analyses were completed by Analytical Resources, Inc. (ARI) located in Tukwila, Washington under the following two (2) work orders: 17J0037, and 17J0062. ARI submitted a electronic data deliverables (EDDs that included only a summary of sample and QC-related results and a data file summarizing the results of the data reported.

### **Analytical Methods**

The analytical methods that were used to complete the chemical analyses included the following:

- Total solids by desiccation and gravimetric determination using Standard Method SM 2540 G-97 (APHA 2012) and PSEP 1986 (for samples analyzed for sulfide).
- Total Aluminum, arsenic, iron, and manganese on sediment samples by digestion and analysis by inductively coupled plasma-atomic emission spectrometry (ICP-AES) using on sediment samples SW-846 methods 3050B and 6010C (SW-846 2017), respectively.
- Total Aluminum, arsenic, iron, and manganese on the equipment rinsate blank by digestion and analysis by ICP-AES using SW-846 methods 3010A and 6010C (SW-846 2017), respectively.
- Orthophosphorus and sulfate on sediment samples and the equipment rinsate blank by ion chromatography using EPA Method 300.0 (U.S. EPA 1993).
- pH by electrochemical determination using SW-846 Method 9045D (U.S. EPA 2017) on sediment samples and SW-846 Method 9040C (U.S. EPA 2017) on the equipment rinsate blank.
- Total carbon, total organic carbon, and total inorganic carbon on sediment samples by catalytic combustion using infrared detection using a modified version of SW-846 Method 9060A (U.S. EPA 2017) per the laboratory standard operating procedure; SW-846 Method 9060A was without modification for the analysis of the equipment rinsate blank.
- Total sulfide on sediment samples and the equipment rinsate blank with sample preparation by distillation (Plumb 1981) and analysis by spectrophotometry using SM 4500-S2 D-00 (APHA 2012).

## Data Validation Procedures

Data validation procedures included evaluating a summary of the sample results and applicable quality control results that were reported by the laboratory; this level of validation is also referred to as an abbreviated data review (equivalent to “Stage 2B” review per U.S. EPA 2009, which is equivalent to “Level EPA2B” for use with the Washington Department of Ecology EIMS database). The analytical data were validated generally following the applicable guidance and requirements:

- *Guidance on Environmental Data Verification and Validation* (U.S. EPA 2002)
- *Guidance for Labeling Externally Validated Laboratory Analytical Data for Superfund Use*. OSWER No. 9200.1-85. EPA 540-R-08-005. (U.S. EPA 2009).
- *USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Superfund Data Review*. Final. OSWER 9240.1-51. EPA 540-R-10-011 (U.S. EPA 2010).
- Method-specific and laboratory-established quality control requirements, as applicable.

Data validation procedures were modified to accommodate QA/QC requirements for methods (e.g., conventional parameters) that are not specifically addressed by the USEPA functional guidelines. In this situation, method-specific and laboratory-established control limits were used, as necessary, to determine if qualification of the data was necessary. The laboratory data deliverables that were validated, if present, included the following:

- Case narratives discussing analytical problems (if any) and procedures.
- Chain-of-custody documentation to verify completeness of the data set.
- Results for applicable method blanks and field blanks to determine whether an analyte that was reported as detected in any sample was the result of possible contamination introduced at the laboratory or during field sampling, respectively.
- Results for applicable standard reference material (SRM), laboratory control sample (LCS) (i.e., blank spike), duplicate LCS, matrix spike (MS), and/or matrix spike duplicate (MSD) recoveries to assess analytical accuracy.
- Results for applicable laboratory duplicate sample, duplicate LCS, and/or MSD analyses to assess analytical precision.
- Results for the field duplicate samples to provide additional information in support of the quality assurance review.
- Laboratory summaries of analytical results.

Verification applicable laboratory calculations, transcriptions, review of instrument printouts, and review of bench sheets were not completed during data validation effort per the requirements specified in the work plan (Pioneer 2017). All data subjected to the abbreviated data validation review completed may have analytical problems that can only be identified by completing a 100-percent review of all original instrument printouts and associated analytical quality control results. Verification of all possible factors that could result in the degradation of data quality cannot be made nor should be inferred based on the results of an abbreviated validation effort. The adequacy of the sampling procedures will not be completed during data validation. *QA/QC Solutions, LLC* will not be responsible for any qualitative and quantitative errors that may be reported by the laboratory.

Performance based control limits established by the laboratory and control limits provided in the method protocols will be used to evaluate data quality and determine the need for data qualification. Applicable laboratory control limits for surrogate compound recoveries, LCSs and LCS duplicate recoveries, and MS/MSD recoveries will be used during data validation. Data qualifiers will be assigned during data validation to the EDD when applicable QA/QC limits are not met and qualification of the data is warranted. Data qualifiers will be assigned following guidance specified by U.S. EPA (2002, 2009, and 2010) and using professional judgment.

## Overall Assessment of Data Quality

Overall, the data reported are of good quality and the results for the applicable QA/QC procedures that were used by the laboratory during the analysis of the samples were generally acceptable. Selected sample results required qualification during data validation because method-specific QA/QC criteria were not met; results maybe qualified for more than one reason. During data validation, the following actions were taken:

- A total of 40 results reported as detected were qualified as estimated (assigned a *J* qualifier).
- No results were qualified as undetected and estimated (assigned a *UJ* qualifier).
- No results were restated as undetected (assigned a *U* qualifier).

- No results required rejection (*R*).

Analytical data that did not meet method- and/or laboratory-established control limits for applicable quality control measurements were qualified as estimated (*J or UJ*) by the laboratory or during data validation. These qualified data usable and represent data of good quality and reasonable confidence and have an acceptable degree of uncertainty (i.e., may be less precise or less accurate than unqualified data). Analytical data that were reported as undetected (*U*) by the laboratory or that were restated as undetected (*U*) during data validation are usable. A summary of the qualified sample data and the reason(s) for qualification is presented in Table 2; results may be qualified for more than one reason).

In some instances, selected samples required dilution prior to analysis (as is required by the analytical methods) to obtain concentrations that were within the linear range of the instrument or to minimize the effects of matrix interferences to obtain reportable results.

This concludes the data validation review summary. Should you have any questions regarding the information presented herein, please contact me by telephone at 503.763.6948 or by e-mail at [jjmcateer@msn.com](mailto:jjmcateer@msn.com).

Cordially,

*QA/QC Solutions, LLC*

James J. Mc Ateer, Jr., Managing Member

**Notes:**

- E - concentration exceeded calibration range
- H - holding time not met
- J - estimated
- MDL - method detection limit
- RL - reporting limit
- RPDs - relative percent differences
- U - undetected at detection limit shown

| Total results qualified "UJ" = | 0  |
| Total results qualified "R" =  | 0  |

\* Summary of qualified data is for natural and field quality control samples only

<sup>b</sup>Low bias - concentration reported is exhibits low bias and the actual reporting limit or concentration may be greater than reported

<sup>c</sup>High bias - result reported exhibits high bias and the actual reporting limit or concentration may be lower than reported

<sup>d</sup>False positive - compound is likely not present

\* Data users must note that only data considered reportable during data validation has been reported. In several instances, multiple reanalysis were completed.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Terms of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer

Project Name: Former Arkema Manufacturing Site

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 1750037

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)

Time: 1258 11.3

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: D002565

Cooler Accepted by: SF Date: 10/3/17 Time: 1258

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA  YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES  NO

Were all VOC vials free of air bubbles? ..... NA YES  NO

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI..... NA

Was Sample Split by ARI : NA YES  Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: B.H. Date: 10/4/17 Time: 16:27

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 3, 2017 under ARI workorder 17J0037. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Total Metals - EPA Method 6010C

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank has Aluminum detected above the reporting limit. Associated detected results and QC have been flagged with a "B" qualifier. The method blank also has Iron detected below the reporting limit, but above the method detection limit. The Iron has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

### Anions - EPA Method 300.0

The samples were prepared and analyzed within the recommended holding times.

The method blank has Sulfate detected above the reporting limit. Associated detected results and QC have been flagged with a "B" qualifier. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SD-122+60-0-SED-100317-0-0.33. The matrix spike has low spike recovery for Sulfate, and the duplicate has a high RPD for Sulfate. This is likely due to matrix interference. The results are advisory. No corrective action was taken.

### Total Organic Carbon/Total Carbon - EPA Method 9060A

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The SRM percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with the re-analysis of sample SD-122+60-0-SED-100317-0-0.33. The duplicate has a high RPD for TOC. The matrix spike percent recoveries were within QC limits. The results are advisory. No corrective action was taken.

#### **Sulfide - Method SM4500**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample SD-122+60-0-SED-100317-0-0.33. The duplicate has high RPD for Sulfide. The matrix spike has low spike recovery. This is likely due to matrix interference. The results are advisory. No corrective action was taken.

#### **pH - EPA Method 9045**

The samples were prepared and analyzed within the recommended holding times.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample SD-122+60-0-SED-100317-0-0.33. The duplicate RPD was within QC limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by work order or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: PIONEER

Project Name: Former Arkema

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17J0062

Tracking No: \_\_\_\_\_ (NA)

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 7.4

Time: 1700

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: D002565

Cooler Accepted by: SLF Date: 10/4/17 Time: 1700

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA  YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA  YES  NO

Were all VOC vials free of air bubbles? ..... NA  YES  NO

Was sufficient amount of sample sent in each bottle? ..... NA  YES  NO

Date VOC Trip Blank was made at ARI ..... NA

Was Sample Split by ARI :  NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: B.H. Date: 10/5/17 Time: 6:34

**\*\* Notify Project Manager of discrepancies or concerns \*\***

| Sample ID on Bottle | Sample ID on COC | Sample ID on Bottle | Sample ID on COC |
|---------------------|------------------|---------------------|------------------|
|                     |                  |                     |                  |
|                     |                  |                     |                  |
|                     |                  |                     |                  |

**Additional Notes, Discrepancies, & Resolutions:**

Two labels on 16oz jars had illegible sample IDs. Samples identified by writing on lid. One label of 5D-128 + 50-STI-SED-100417-0-0-33-(01) missing sampling date and time.

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 4, 2017 under ARI workorder 17J0062. For details regarding sample receipt, please refer to the Cooler Receipt Form.

### Total Metals - EPA Method 6010C

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank BFJ0222 has Aluminum detected above the reporting limit. Associated detected results and QC have been flagged with a "B" qualifier. The method blank also has Iron detected below the reporting limit, but above the method detection limit. The Iron has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

Method blank BFJ0167 has Aluminum and Iron detected below the reporting limits, but above the method detection limits. These metals have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

### Anions - EPA Method 300.0

The samples were prepared and analyzed within the recommended holding times.

The method blank BFJ0129 has Sulfate detected above the reporting limit. Associated detected results and QC have been flagged with a "B" qualifier. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate BFJ0129 were prepared in conjunction with the re-analysis of sample SD-128+50-STI-SED-100417-0-0.33-(01). The matrix spike has low spike recovery for O-phos and a natural concentration of Sulfate that is so much greater than the concentration spike that an accurate determination of spike recovery is not possible. The Sulfate has been flagged with an "HC" qualifier on the matrix spike. This is likely due to matrix interference. The duplicate has high RPD for Sulfate. The results are advisory. No further corrective action was taken.

### Total Organic Carbon/Total Carbon - EPA Method 9060A

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

The SRM percent recoveries were within control limits.

Pioneer Technologies Corporation  
5205 Corporate Ctr. Ct. SE, Ste A  
Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: [none]  
Project Manager: Troy Bussey Jr.

Reported:  
13-Nov-2017 12:19

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with the re-analysis of sample EB-EB-2-100417. The matrix spike percent recoveries and duplicate RPD were within QC limits.

#### **Sulfide - Method SM4500**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

#### **pH - EPA Method 9045**

Sample EB-EB-2-100417 was received outside of the fifteen minute recommended holding time, and has been flagged with an "H" qualifier.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample EB-EB-2-100417. The duplicate RPD was within QC limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- H Hold time violation - Hold time was exceeded.
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Project PTC-OA1701

Client Project: Arkema FS Data Gap

Mr. Troy Bussey,

On September 13<sup>th</sup> through September 21<sup>st</sup>, 2017, Brooks Applied Labs (BAL) received fourteen (14) soil/sediment samples. A five-step selective sequential extraction (SSE) method, based on *Wenzel et al.*, was employed for correlation between metals (aluminum [Al], arsenic [As], iron [Fe], manganese [Mn], and silicon [Si]) and different substrate properties. Other analyses were requested (i.e. total recoverable arsenic). This report describes the Wenzel SSE results for the soil/sediment samples only. Results for total recoverable arsenic are included in a separate report.

All samples were stored and prepped anoxically in an oxygen free glove box. All samples were received, prepared, analyzed, and stored according to BAL SOPs and EPA methodology.

Shortly after receipt, all submitted core samples were unpacked in a glove box maintained under anoxic conditions, split into appropriate sample containers, and then stored according to BAL SOPs. All samples were received, prepared, analyzed, and stored according to BAL SOPs and EPA methodology.

### **Total Solids Analysis**

#### **Batch B180177**

A known mass of each soil sample was placed into a pre-weighed pan, then the combined mass of the sample and pan was recorded. All samples were placed into a convection oven maintained at a temperature of 105°C. After drying for a minimum of forty-eight (48) hours, all samples were briefly cooled and reweighed. The total solids percentage of each sample was calculated by dividing the weight of the dried sample by the weight of the original sample.

### **Al, As, Fe, Mn, and Si (Five Step SSE (Wenzel et al.)) Quantitation by ICP-QQQ-MS**

Metals quantitation ([Al], [As], [Fe], [Mn], and [Si]) was performed by inductively coupled plasma triple quadrupole mass spectrometry (ICP-QQQ-MS). Prior to the analyses, a sequential extraction method, based on *Wenzel et al.*, was employed. The applied extraction solutions are designed to target the different substrate components. The following table provides details on the various fractions in the Five Step SSE (*Wenzel et al.*). At the request of the client, step one Five Step SSE (*Wenzel et al.*) of the extraction is not used in for this project. Consequently, the table begins with step two of the SSE.

**Five Step SSE (Wenzel et al.)**

| SSE Extraction Step | Analyte Code | Extraction Liquid Identity  | Volume Extraction Liquid (mL) | Target Fraction/Substrate Description |
|---------------------|--------------|---|-------------------------------|---------------------------------------|
| 2                   | xx(WEN2)     | 0.05 M (NH <sub>4</sub> ) H <sub>2</sub> PO <sub>4</sub>                | 25                            | Specifically-sorbed metals            |
| 3                   | xx(WEN3)     | 0.2M ammonium oxalate buffer (pH=3.25)                                  | 25                            | Amorphous metal oxyhydroxides         |
| 4                   | xx(WEN4)     | 0.2M ammonium oxalate buffer + 0.1M Ascorbic Acid                       | 25                            | Crystalline metal oxyhydroxides       |
| 5                   | xx(WEN5)     | concentrated HNO <sub>3</sub> , H <sub>2</sub> O <sub>2</sub> , and HCl | 50                            | Residual, Total Recoverable           |
| 6                   | xx(WEN6)     | concentrated HNO <sub>3</sub> , HCl, and HF                             | 50                            | Residual, Total digest                |

Approximately 1g of each soil sample was transferred to a 50mL polypropylene vial and exactly 25mL of 0.05 M NH<sub>4</sub>H<sub>2</sub>PO<sub>4</sub> was added to each vial. Each vial was capped and shaken on an inverting shaker for 16 hours at room temperature at 30 RPM.

The samples were removed from the shaker and centrifuged for 20 minutes at 3000RPM. After the supernatant was decanted into a separate vial for trace metals analysis and labeled "WEN2", the WEN2 fraction was preserved (1% HNO<sub>3</sub> vol/vol). A total of 20mL of reagent water was added to each vial. The vials were shaken vigorously and centrifuged for 20 minutes at 3000RPM. The supernatant was decanted and discarded.

All sample vials were wrapped in aluminum foil to prevent photo-oxidation and exactly 25mL of 0.2M ammonium oxalate buffer (pH=3.25) was added to each vial. Each vial was capped and shaken on an inverting shaker for 4 hours at room temperature at 30 RPM.

The samples were removed from the shaker and centrifuged for 20 minutes at 3000RPM. After the supernatant was decanted into a separate vial for trace metals analysis and labeled "WEN3", the WEN3 fraction was preserved (1% HNO<sub>3</sub> vol/vol). A total of 12.5mL of ammonium oxalate buffer was added to each vial. The vials were shaken vigorously and centrifuged for 20 minutes at 3000RPM. The supernatant was decanted and discarded.

Exactly 25mL of 0.2M ammonium oxalate buffer with 0.1M ascorbic acid was added to each vial. The vials were then placed in a hotblock digestion apparatus at 96°C for 30 minutes.

The samples were removed from the shaker and centrifuged for 20 minutes at 3000RPM. After the supernatant was decanted into a separate vial for trace metals analysis and labeled "WEN4", the WEN4 fraction was preserved (1% HNO<sub>3</sub> vol/vol). A total of 12.5mL of 0.2M ammonium oxalate buffer with 0.1M

ascorbic acid was added to each vial. The vials were shaken vigorously and centrifuged for 20 minutes at 3000RPM. The supernatant was decanted and discarded.

The residual solid pellets remaining in the vials were then digested with aliquots of concentrated HNO<sub>3</sub>, HCl, and H<sub>2</sub>O<sub>2</sub> (in accordance with a modified EPA Method 3050B). The samples were removed from the hot block apparatus and allowed to cool. The samples were centrifuged for 20 minutes at 3000RPM. Afterward, the supernatant was decanted into a separate vial for trace metals analysis and labeled "WEN5".

The residual solid pellets remaining in the vials were then digested in a closed vessel (bomb) with concentrated nitric, hydrochloric, and hydrofluoric acids, in accordance with a modified EPA Method 3052. The resulting digests were labeled "WEN6".

All samples were stored and prepped anoxically in an oxygen free glove box. Degassed reagent water was used to prepare extraction solutions for each step, except for steps 5 and 6 (i.e. residual metals fractions). For each fraction requiring an inverting rotator, the tumbling step took place in an anoxic environment (glovebox).

Total recoverable metals quantitation on individual fractions was performed by inductively coupled plasma triple quadrupole mass spectrometry (ICP-QQQ-MS). The ICP-QQQ-MS uses advanced interference removal techniques to ensure accuracy of the sample results. For more information, please visit the *Interference Reduction Technology* section on our website, [brooksapplied.com](http://brooksapplied.com).

#### Batch B180106 (WEN2 analyses)

The relative percent difference (RPD) value for manganese in the laboratory duplicate sample, B180106-DUP2, was greater than the control limit of 30%, at 35%. Re-analysis confirmed the result. The manganese result for the source sample, 1803009-13, should be considered estimated due to poor precision, and has been qualified "M".

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is typically set by the value of a low calibration standard in the calibration. BAL requires that the MRL is at least 2 times the values of the MDL. Due to elevated MDLs, it was necessary to raise the MRL to 2 times the value of the MDL for arsenic results. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

The counts per second (CPS) value for iron in the third method blank sample, B180106-BLK1, was elevated, indicating a possible error in sampling by the autosampler. The iron value for this sample (0.574 mg/kg) was omitted from calculations used to determine the MDLs associated with iron results.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were ≤ 25% of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B180269 (WEN2 analyses)

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to

account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B180107 (WEN3 analyses)

The RPD value for manganese in the laboratory duplicate sample, B180106-DUP2, was greater than the control limit of 30%, at 52%. Re-analysis confirmed the result. The manganese result for the source sample, 1803009-13, should be considered estimated due to poor precision, and has been qualified "M".

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is typically set by the value of a low calibration standard in the calibration. BAL requires that the MRL is at least 2 times the values of the MDL. Due to elevated MDLs, it was necessary to raise the MRL to 2 times the value of the MDL for iron, manganese, and silicon results. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B180270 (WEN3 analyses)

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is typically set by the value of a low calibration standard in the calibration. BAL requires that the MRL is at least 2 times the values of the MDL. Due to elevated MDLs, it was necessary to raise the MRL to 2 times the value of the MDL for arsenic results. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B180108 (WEN4 analyses)

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is typically set by the value of a low calibration standard in the calibration. BAL requires that the MRL is at least 2 times the values of the MDL. Due to elevated MDLs, it was necessary to raise the MRL to 2 times the value of the MDL for aluminum, arsenic, iron, manganese, and silicon results. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B180109 (WEN5 analyses)

The blank spike sample (B180109-BS1) and the reference material sample (B180109-SRM2) were switched at analytical prep. Re-analyses of these samples confirmed. The QC samples B180109-BS1 and B180109-SRM2 were re-named to reflect the correct designations, yielding acceptable recoveries for all target analytes.

All client samples and associated QC samples were re-analyzed for confirmation. Re-analyses confirmed the results. Arsenic results are reported from this batch due to good agreement between analytical runs and lower MDL/MRLs in Batch B180109.

The RPD value for arsenic in the laboratory duplicate sample, B180109-DUP2, is greater than the control limit of 30%, at 33%. Re-analyses confirmed the results. The arsenic result for the source sample, 1803009-13, should be considered estimated due to poor precision, and has been qualified "M".

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is typically set by the value of a low calibration standard in the calibration. BAL requires that the MRL is at least 2 times the values of the MDL. Due to elevated MDLs, it was necessary to raise the MRL to 2 times the value of the MDL for arsenic results. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B180272 (WEN5 analyses)

The arsenic spike recovery for the reference material sample, B180272-SRM2, is greater than the upper control limit of 125% (at 135%). However, the results meet secondary criteria (i.e. *results < 5 X the MRL*

and the difference between results  $< 2X$  the MRL). A blank spike sample (B180272-BS1) was also employed in the total metals digest. The B180272-BS1 recovery for total arsenic is acceptable at 110%, demonstrating that the applied digest stabilizes arsenic in solution. The total arsenic matrix spike and matrix spike duplicate (MS/MSD) recoveries are acceptable at 97% and 107%, respectively. Since the arsenic recoveries in the blank spike sample, the MS, and the MSD were acceptable, the reference material recoveries is deemed unrepresentative of digest performance. No corrective actions were required, and no qualification of data was necessary.

The blank spike sample (B180272-BS2) was not spiked with silicon; the silicon recovery for the blank spike sample is not included in this report. The reference material sample, B180272-SRM2, is certified for silicon and the silicon recovery in B180272-SRM2 is acceptable, at 92%.

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is typically set by the value of a low calibration standard in the calibration. BAL requires that the MRL is at least 2 times the values of the MDL. Due to elevated MDLs, it was necessary to raise the MRL to 2 times the value of the MDL for aluminum, arsenic, and iron results. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B180110 (WEN6 analyses)

The aluminum spike recovery for the reference material sample, B180110-SRM2, is less than the lower control limit of 75% (at 68%). Re-analyses confirmed the results. All aluminum results in Batch B180110 should be considered estimated and have been qualified "J-1" to indicate a potential low bias.

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is typically set by the value of a low calibration standard in the calibration. BAL requires that the MRL is at least 2 times the values of the MDL. Due to elevated MDLs, it was necessary to raise the MRL to 2 times the value of the MDL for aluminum and iron results. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B180273 (WEN6 analyses)

A blank spike sample (B180273-BS1) and two reference material samples (B180273-SRM2 and B180273-SRM3) were used in the digest for batch B180273. All recoveries were within acceptable ranges, demonstrating that the applied digest stabilizes arsenic in solution.

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is typically set by the value of a low calibration standard in the calibration. BAL requires that the MRL is at least 2 times the values of the MDL. Due to an elevated MDL, it was necessary to raise the MRL to 2 times the value of the MDL for arsenic results. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B180230 (WEN6 analyses)

A blank spike sample (B180230-BS2) and two reference material samples (B180230-SRM3 and B180230-SRM6) were used in the digest for batch B180230. All recoveries were within acceptable ranges, demonstrating that the applied digest stabilizes silicon in solution.

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is typically set by the value of a low calibration standard in the calibration. BAL requires that the MRL is at least 2 times the values of the MDL. Due to an elevated MDL, it was necessary to raise the MRL to 2 times the value of the MDL for silicon results. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

With the exceptions noted above, all associated quality control sample results met the acceptance criteria. BAL, an accredited laboratory, certifies that the reported results of all analyses for which BAL is NELAP accredited meet all NELAP requirements. For more information please see the *Report Information* page in your report.

Please feel free to contact me if you have any questions regarding this report.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jeremy Maute', with a stylized flourish at the end.

Jeremy Maute

Brooks Applied Labs

## Report Information

### Laboratory Accreditation

BAL is accredited by the *National Environmental Laboratory Accreditation Program* (NELAP) through the State of Florida Department of Health, Bureau of Laboratories (E87982) and is certified to perform many environmental analyses. BAL is also certified by many other states to perform environmental analyses. For a current list of our accreditations/certifications, please visit our website at <http://www.brooksapplied.com/resources/certificates-permits/>. Results reported relate only to the samples listed in the report.

### Field Quality Control Samples

Please be notified that certain EPA methods require the collection of field quality control samples of an appropriate type and frequency; failure to do so is considered a deviation from some methods and for compliance purposes should only be done with the approval of regulatory authorities. Please see the specific EPA methods for details regarding required field quality control samples.

### Definition of Data Qualifiers

(Effective 9/23/09)

|            |   |
|------------|---|
| <b>E</b>   | An estimated value due to the presence of interferences. A full explanation is presented in the narrative.                        |
| <b>H</b>   | Holding time and/or preservation requirements not met. Result is estimated.   |
| <b>J</b>   | Detected by the instrument, the result is > the MDL but ≤ the MRL. Result is reported and considered an estimate.                 |
| <b>J-1</b> | Estimated value. A full explanation is presented in the narrative.  |
| <b>J-M</b> | Duplicate precision (RPD) for associated QC sample was not within acceptance criteria. Result is estimated.                       |
| <b>J-N</b> | Spike recovery for associated QC sample was not within acceptance criteria. Result is estimated.                                  |
| <b>M</b>   | Duplicate precision (RPD) was not within acceptance criteria. Result is estimated.  |
| <b>N</b>   | Spike recovery was not within acceptance criteria. Result is estimated.   |
| <b>R</b>   | Rejected, unusable value. A full explanation is presented in the narrative.   |
| <b>U</b>   | Result is ≤ the MDL or client requested reporting limit (CRRL). Result reported as the MDL or CRRL.                               |
| <b>X</b>   | Result is not BLK-corrected and is within 10x the absolute value of the highest detectable BLK in the batch. Result is estimated. |

These qualifiers are based on those previously utilized by Brooks Applied Labs, those found in the EPA SOW ILM03.0, Exhibit B, Section III, pg. B-18, and the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review; USEPA; January 2010. These supersede all previous qualifiers ever employed by BAL.

## Sample Information

| <b>Sample</b>               | <b>Lab ID</b> | <b>Report Matrix</b> | <b>Type</b> | <b>Sampled</b> | <b>Received</b> |

## Shipping Containers

### Cooler - 1803009

Received: September 14, 2017 15:30  
Tracking No: none via Courier  
Coolant Type: Dry Ice  
Temperature: -11.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #13

Custody seals present? No  
Custody seals intact? No  
COC present? Yes

### Cooler 2 - 1803009

Received: September 15, 2017 16:30  
Tracking No: none via Courier  
Coolant Type: Dry Ice  
Temperature: -11.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #13

Custody seals present? Yes  
Custody seals intact? Yes  
COC present? Yes

### Cooler 3 - 1803009

Received: September 18, 2017 15:00  
Tracking No: none via Courier  
Coolant Type: Dry Ice  
Temperature: -1.5 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #14

Custody seals present? Yes  
Custody seals intact? Yes  
COC present? Yes

### Cooler 4 - 1803009

Received: September 19, 2017 15:45  
Tracking No: none via Courier  
Coolant Type: Dry Ice  
Temperature: -15.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #15

Custody seals present? Yes  
Custody seals intact? Yes  
COC present? Yes

### Cooler 5 - 1803009

Received: September 19, 2017 15:45  
Tracking No: none via Courier  
Coolant Type: Dry Ice  
Temperature: -5.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #15

Custody seals present? Yes  
Custody seals intact? Yes  
COC present? Yes

### Cooler 6 - 1803009

Received: September 20, 2017 15:40  
Tracking No: none via Courier  
Coolant Type: Dry Ice  
Temperature: 1.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #13

Custody seals present? Yes  
Custody seals intact? Yes  
COC present? Yes

### Cooler 7 - 1803009

Received: September 21, 2017 9:10  
Tracking No: none via Courier  
Coolant Type: Dry Ice  
Temperature: -19.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #13

Custody seals present? No  
Custody seals intact? No  
COC present? Yes

RE: Project PTC-OA1701

Client Project: Arkema FS Data Gap

Revision 1: Following the submission of the original report, the client observed a typo in the chain of custody (COC) form describing the samples collected on September 12, 2018. For the sample collected (09/12/18 13:00), the field ID should have been listed as **SD-125+50-0-SED-091218-0-0.33** rather than **SD-125+00-0-SED-091218-0-0.33**. In this revised report the sample ID for 1837061-02 has been corrected from **SD-125+00-0-SED-091218-0-0.33** to **SD-125+50-0-SED-091218-0-0.33**. No other changes have been made, with respect to the initial report issued on November 9, 2018.

Mr. Troy Bussey,

On September 14<sup>th</sup> through September 21<sup>st</sup>, 2018, Brooks Applied Labs (BAL) received eight (8) soil/sediment samples. The samples were logged-in for %TS and total recoverable arsenic [As] analysis, according to the chain-of-custody forms. A five-step selective sequential extraction (SSE) method, based on *Wenzel et al.*, was employed for correlation between metals (aluminum [Al], arsenic [As], iron [Fe], manganese [Mn], and silicon [Si]) and different substrate properties.

All samples were stored and prepped anoxically in an oxygen free glove box. All samples were received, prepared, analyzed, and stored according to BAL SOPs and EPA methodology.

Shortly after receipt, all submitted core samples were unpacked in a glove box maintained under anoxic conditions, split into appropriate sample containers, and then stored according to BAL SOPs. All samples were received, prepared, analyzed, and stored according to BAL SOPs and EPA methodology.

### **Total Solids Analysis**

#### **Batch B182921**

A known mass of each soil sample was placed into a pre-weighed pan, then the combined mass of the sample and pan was recorded. All samples were placed into a convection oven maintained at a temperature of 105°C. After drying for a minimum of forty-eight (48) hours, all samples were briefly cooled and reweighed. The total solids percentage of each sample was calculated by dividing the weight of the dried sample by the weight of the original sample.

### **Total Recoverable Arsenic Quantitation by ICP-QQQ-MS**

Total recoverable arsenic quantitation was performed by inductively coupled plasma triple quadrupole mass spectrometry (ICP-QQQ-MS). Prior to analysis a known mass of each sample was digested with

aliquots of concentrated HNO<sub>3</sub> and H<sub>2</sub>O<sub>2</sub> in a hot block apparatus, in accordance with a modified EPA Method 3050B.

#### Batch B182466

The total metals results were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values and MRL values are determined by MDL studies. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where a matrix spike/matrix spike duplicate (MS/MSD) set was spiked at a level less than the native sample concentration, the recoveries and the relative percent difference (RPD) are not considered valid indicators of data quality. In such instances, the recoveries of the laboratory fortified blanks (BS) and/or standard reference materials (SRM) demonstrate the accuracy of the applied methods. When the spiking level was less than 25% of the native sample concentration, the spike recovery was not reported (NR) and the relative percent difference (RPD) of the MS/MSD set was not calculated (N/C).

#### **Al, As, Fe, Mn, and Si (Five Step SSE (Wenzel et al.)) Quantitation by ICP-QQQ-MS**

Metals quantitation ([Al], [As], [Fe], [Mn], and [Si]) was performed by inductively coupled plasma triple quadrupole mass spectrometry (ICP-QQQ-MS). Prior to the analyses, a sequential extraction method, based on Wenzel et al., was employed. The applied extraction solutions are designed to target the different substrate components. The following table provides details on the various fractions in the Five Step SSE (Wenzel et al.). At the request of the client, step one Five Step SSE (Wenzel et al.) of the extraction is not used in for this project. Consequently, the table begins with step two of the SSE.

#### **Five Step SSE (Wenzel et al.)**

| <b>SSE Extraction Step</b> | <b>Analyte Code</b> | <b>Extraction Liquid Identity</b>                                       | <b>Volume Extraction Liquid (mL)</b> | <b>Target Fraction/Substrate Description</b> |
|----------------------------|---------------------|---|--------------------------------------|--|
| 2                          | xx(WEN2)            | 0.05 M (NH <sub>4</sub> ) H <sub>2</sub> PO <sub>4</sub>                | 25                                   | Specifically-sorbed metals                   |
| 3                          | xx(WEN3)            | 0.2M ammonium oxalate buffer (pH=3.25)                                  | 25                                   | Amorphous metal oxyhydroxides                |
| 4                          | xx(WEN4)            | 0.2M ammonium oxalate buffer + 0.1M Ascorbic Acid                       | 25                                   | Crystalline metal oxyhydroxides              |
| 5                          | xx(WEN5)            | concentrated HNO <sub>3</sub> , H <sub>2</sub> O <sub>2</sub> , and HCl | 50                                   | Residual, Total Recoverable                  |
| 6                          | xx(WEN6)            | concentrated HNO <sub>3</sub> , HCl, and HF                             | 50                                   | Residual, Total digest                       |

Approximately 1g of each soil sample was transferred to a 50mL polypropylene vial and exactly 25mL of 0.05 M NH<sub>4</sub>H<sub>2</sub>PO<sub>4</sub> was added to each vial. Each vial was capped and shaken on an inverting shaker for 16 hours at room temperature at 30 RPM.

The samples were removed from the shaker and centrifuged for 20 minutes at 3000RPM. After the supernatant was decanted into a separate vial for trace metals analysis and labeled "WEN2", the WEN2 fraction was preserved (1% HNO<sub>3</sub> vol/vol). A total of 20mL of reagent water was added to each vial. The vials were shaken vigorously and centrifuged for 20 minutes at 3000RPM. The supernatant was decanted and discarded.

All sample vials were wrapped in aluminum foil to prevent photo-oxidation and exactly 25mL of 0.2M ammonium oxalate buffer (pH=3.25) was added to each vial. Each vial was capped and shaken on an inverting shaker for 4 hours at room temperature at 30 RPM.

The samples were removed from the shaker and centrifuged for 20 minutes at 3000RPM. After the supernatant was decanted into a separate vial for trace metals analysis and labeled "WEN3", the WEN3 fraction was preserved (1% HNO<sub>3</sub> vol/vol). A total of 12.5mL of ammonium oxalate buffer was added to each vial. The vials were shaken vigorously and centrifuged for 20 minutes at 3000RPM. The supernatant was decanted and discarded.

Exactly 25mL of 0.2M ammonium oxalate buffer with 0.1M ascorbic acid was added to each vial. The vials were then placed in a hotblock digestion apparatus at 96°C for 30 minutes.

The samples were removed from the shaker and centrifuged for 20 minutes at 3000RPM. After the supernatant was decanted into a separate vial for trace metals analysis and labeled "WEN4", the WEN4 fraction was preserved (1% HNO<sub>3</sub> vol/vol). A total of 12.5mL of 0.2M ammonium oxalate buffer with 0.1M ascorbic acid was added to each vial. The vials were shaken vigorously and centrifuged for 20 minutes at 3000RPM. The supernatant was decanted and discarded.

The residual solid pellets remaining in the vials were then digested with aliquots of concentrated HNO<sub>3</sub>, HCl, and H<sub>2</sub>O<sub>2</sub> (in accordance with a modified EPA Method 3050B). The samples were removed from the hot block apparatus and allowed to cool. The samples were centrifuged for 20 minutes at 3000RPM. Afterward, the supernatant was decanted into a separate vial for trace metals analysis and labeled "WEN5".

The residual solid pellets remaining in the vials were then digested in a closed vessel (bomb) with concentrated nitric, hydrochloric, and hydrofluoric acids, in accordance with a modified EPA Method 3052. The resulting digests were labeled "WEN6".

All samples were stored and prepped anoxically in an oxygen free glove box. Degassed reagent water was used to prepare extraction solutions for each step, except for steps 5 and 6 (i.e. residual metals fractions). For each fraction requiring an inverting rotator, the tumbling step took place in an anoxic environment (glovebox).

Total recoverable metals quantitation on individual fractions was performed by inductively coupled plasma triple quadrupole mass spectrometry (ICP-QQQ-MS). The ICP-QQQ-MS uses advanced interference removal techniques to ensure accuracy of the sample results. For more information, please visit the *Interference Reduction Technology* section on our website, [brooksapplied.com](http://brooksapplied.com).

#### Batch B180106 (WEN2 analyses)

The relative percent difference (RPD) value for manganese in the laboratory duplicate sample, B180106-DUP2, was greater than the control limit of 30%, at 35%. Re-analysis confirmed the result. The manganese result for the source sample, 1803009-13, should be considered estimated due to poor precision, and has been qualified "M".

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of

the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is typically set by the value of a low calibration standard in the calibration. BAL requires that the MRL is at least 2 times the values of the MDL. Due to elevated MDLs, it was necessary to raise the MRL to 2 times the value of the MDL for arsenic results. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

The counts per second (CPS) value for iron in the third method blank sample, B180106-BLK1, was elevated, indicating a possible error in sampling by the autosampler. The iron value for this sample (0.574 mg/kg) was omitted from calculations used to determine the MDLs associated with iron results.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182472 (WEN2 analyses)

The analyst noted some precipitate in the extracts from the Wenzel step two. An additional step was employed at the instrument, where the analyst added concentrated HNO<sub>3</sub> to the extracts prior to adding the diluent. The samples were allowed to sit for a few minutes before adding the diluent. Any precipitates observed were solubilized upon the addition of the concentrated acid.

The relative percent difference (RPD) value for aluminum in the laboratory duplicate sample, B182472-DUP1, was greater than the control limit of 25%, at 51%. Re-analysis confirmed the result. The aluminum result for the source sample, 1837061-02, should be considered estimated due to poor precision, and has been qualified "M".

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182810 (WEN2 analyses)

The analyst noted some precipitate in the extracts from the Wenzel step two. An additional step was employed at the instrument, where the analyst added concentrated HNO<sub>3</sub> to the extracts prior to adding the diluent. The samples were allowed to sit for a few minutes before adding the diluent. Any precipitates observed were solubilized upon the addition of the concentrated acid.

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of

the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182473 (WEN3 analyses)

The RPD value for iron in the laboratory duplicate sample, B182473-DUP1, was greater than the control limit of 25%, at 43%. Re-analysis confirmed the result. The iron result for the source sample, 1837061-02, should be considered estimated due to poor precision, and has been qualified "M".

The RPD value for manganese in the laboratory duplicate sample, B182473-DUP3, was greater than the control limit of 25%, at 82%. Re-analysis confirmed the result. The manganese result for the source sample, 1837061-02, should be considered estimated due to poor precision, and has been qualified "M".

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182811 (WEN3 analyses)

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182474 (WEN4 analyses)

The RPD values for iron, manganese, and silicon in the laboratory duplicate sample, B182474-DUP1, were greater than the control limit of 25%, at 26%, 43%, and 98%, respectively. Re-analysis confirmed the results. The iron, manganese, and silicon results for the source sample, 1837061-02, should be considered estimated due to poor precision, and have been qualified "M".

The analyst determined that B182474-PS2 was not spiked with silicon. Consequently, the silicon result for B182474-PS2 is not reported.

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182812 (WEN4 analyses)

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182475 (WEN5 analyses)

The aluminum result for the third method blank, identified as B182475-BLK3, is a statistical outlier according to the Grubb's Test. The value for this sample was omitted from calculations used to determine the MDL associated with aluminum results. All results associated with the aluminum method blank outlier were greater than ten times the elevated method blank value. The method blank outlier should have no impact on data quality. No data were qualified based on the elevated aluminum result in B182475-BLK3.

The silicon spike recovery for the reference material sample, B182475-SRM2, is less than the lower control limit of 75% (at 33%). Re-analyses confirmed the result. All silicon results in Batch B182475 should be considered estimated and have been qualified "J-1" to indicate a potential low bias.

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of

the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182813 (WEN5 analyses)

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182476 (WEN6 analyses)

The aluminum spike recovery for the reference material sample, B182476-SRM2, is less than the lower control limit of 45% (at 68%). Re-analyses confirmed the result. All aluminum results in Batch B182476 should be considered estimated and have been qualified "J-1" to indicate a potential low bias.

The iron result for the first method blank, identified as B182476-BLK1, is a statistical outlier according to the Grubb's Test. The value for this sample was omitted from calculations used to determine the MDL associated with aluminum results. All results associated with the iron method blank outlier were greater than ten times the elevated method blank value. The method blank outlier should have no impact on data quality. No data were qualified based on the elevated iron result in B182476-BLK1.

The RPD values for aluminum, iron, and manganese in the laboratory duplicate sample, B182476-DUP3, were greater than the control limit of 25%, at 47%, 44%, and 71%, respectively. Re-analysis confirmed the results. The aluminum, iron, and manganese results for the source sample, 1837061-02, should be considered estimated due to poor precision, and have been qualified "M".

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

Batch B182923 (WEN6 analyses)

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**NC**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

With the exceptions noted above, all associated quality control sample results met the acceptance criteria. BAL, an accredited laboratory, certifies that the reported results of all analyses for which BAL is NELAP accredited meet all NELAP requirements. For more information please see the *Report Information* page in your report.

Please feel free to contact me if you have any questions regarding this report.

Sincerely,

Jeremy Maute  
Senior Project Manager  
Brooks Applied Labs

## Report Information

### Laboratory Accreditation

BAL is accredited by the *National Environmental Laboratory Accreditation Program* (NELAP) through the State of Florida Department of Health, Bureau of Laboratories (E87982) and is certified to perform many environmental analyses. BAL is also certified by many other states to perform environmental analyses. For a current list of our accreditations/certifications, please visit our website at <http://www.brooksapplied.com/resources/certificates-permits/>. Results reported relate only to the samples listed in the report.

### Field Quality Control Samples

Please be notified that certain EPA methods require the collection of field quality control samples of an appropriate type and frequency; failure to do so is considered a deviation from some methods and for compliance purposes should only be done with the approval of regulatory authorities. Please see the specific EPA methods for details regarding required field quality control samples.

### Definition of Data Qualifiers

(Effective 9/23/09)

|            |   |
|------------|---|
| <b>E</b>   | An estimated value due to the presence of interferences. A full explanation is presented in the narrative.                        |
| <b>H</b>   | Holding time and/or preservation requirements not met. Please see narrative for explanation.                                      |
| <b>J</b>   | Detected by the instrument, the result is > the MDL but ≤ the MRL. Result is reported and considered an estimate.                 |
| <b>J-1</b> | Estimated value. A full explanation is presented in the narrative.  |
| <b>M</b>   | Duplicate precision (RPD) was not within acceptance criteria. Please see narrative for explanation.                               |
| <b>N</b>   | Spike recovery was not within acceptance criteria. Please see narrative for explanation.  |
| <b>R</b>   | Rejected, unusable value. A full explanation is presented in the narrative.   |
| <b>U</b>   | Result is ≤ the MDL or client requested reporting limit (CRRL). Result reported as the MDL or CRRL.                               |
| <b>X</b>   | Result is not BLK-corrected and is within 10x the absolute value of the highest detectable BLK in the batch. Result is estimated. |

These qualifiers are based on those previously utilized by Brooks Applied Labs, those found in the EPA SOW ILM03.0, Exhibit B, Section III, pg. B-18, and the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review; USEPA; January 2010. These supersede all previous qualifiers ever employed by BAL.

## Shipping Containers

### Cooler - 1837061

**Received:** September 14, 2018 13:35  
**Tracking No:** n/a via Customer Drop-Off  
**Coolant Type:** Dry Ice  
**Temperature:** -1.7 °C

**Description:** Cooler  
**Damaged in transit?** No  
**Returned to client?** No  
**Comments:** IR#17

**Custody seals present?** No  
**Custody seals intact?** No  
**COC present?** Yes

### Cooler #2 - 1837061

**Received:** September 18, 2018 15:20  
**Tracking No:** n/a via Customer Drop-Off  
**Coolant Type:** Dry Ice  
**Temperature:** -22.0 °C

**Description:** Cooler  
**Damaged in transit?** No  
**Returned to client?** No  
**Comments:** IR#15

**Custody seals present?** No  
**Custody seals intact?** No  
**COC present?** Yes

### Cooler #3 - 1837061

**Received:** September 21, 2018 15:00  
**Tracking No:** n/a via Customer Drop-Off  
**Coolant Type:** Dry Ice  
**Temperature:** 2.3 °C

**Description:** Cooler #3  
**Damaged in transit?** No  
**Returned to client?** No  
**Comments:** IR#18

**Custody seals present?** Yes  
**Custody seals intact?** Yes  
**COC present?** Yes

RE: Project PTC-OA1701

Client Project: Arkema FS Data Gap

Mr. Troy Bussey,

On September 21, 2017 through October 6, 2017, Brooks Applied Labs (BAL) received thirteen (13) soil samples. At the request of the client, three (3) soil samples were removed from storage and logged in for %TS and total recoverable arsenic [As] analysis. Additionally, a five-step selective sequential extraction (SSE) method, based on *Wenzel et al.*, was employed for correlation between metals (aluminum [Al], arsenic [As], iron [Fe], manganese [Mn], and silicon [Si]) and different substrate properties. This report only contains the results for the three samples selected for these analyses.

All samples were stored and prepped anoxically in an oxygen free glove box. All samples were received, prepared, analyzed, and stored according to BAL SOPs and EPA methodology.

Shortly after receipt, all submitted core samples were unpacked in a glove box maintained under anoxic conditions, split into appropriate sample containers, and then stored according to BAL SOPs. All samples were received, prepared, analyzed, and stored according to BAL SOPs and EPA methodology.

### **Total Solids Analysis**

#### **Batch B182467**

A known mass of each soil sample was placed into a pre-weighed pan, then the combined mass of the sample and pan was recorded. All samples were placed into a convection oven maintained at a temperature of 105°C. After drying for a minimum of forty-eight (48) hours, all samples were briefly cooled and reweighed. The total solids percentage of each sample was calculated by dividing the weight of the dried sample by the weight of the original sample.

### **Total Recoverable Arsenic Quantitation by ICP-QQQ-MS**

Total recoverable arsenic quantitation was performed by inductively coupled plasma triple quadrupole mass spectrometry (ICP-QQQ-MS). Prior to analysis a known mass of each sample was digested with aliquots of concentrated HNO<sub>3</sub> and H<sub>2</sub>O<sub>2</sub> in a hot block apparatus, in accordance with a modified EPA Method 3050B.

#### **Batch B182466**

The method for total recoverable arsenic (EPA 6020B Mod) requires that samples are digested within one (1) year from the date of sample collection. The samples in this sample delivery group were collected between the dates of September 15, 2017 and October 4, 2017. The samples were digested on October

11, 2018, violating the holding time criteria. Consequently, all total recoverable arsenic results (EPA 6020B Mod) should be considered estimated and have been qualified “H” due to holding time violations.

The total metals results were *not* method blank corrected as described in the calculations section of the relevant BAL SOPs and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values and MRL values are determined by MDL studies. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where a matrix spike/matrix spike duplicate (MS/MSD) set was spiked at a level less than the native sample concentration, the recoveries and the relative percent difference (RPD) are not considered valid indicators of data quality. In such instances, the recoveries of the laboratory fortified blanks (BS) and/or standard reference materials (SRM) demonstrate the accuracy of the applied methods. When the spiking level was less than 25% of the native sample concentration, the spike recovery was not reported (NR) and the relative percent difference (RPD) of the MS/MSD set was not calculated (N/C).

### **Al, As, Fe, Mn, and Si (Five Step SSE (Wenzel et al.)) Quantitation by ICP-QQQ-MS**

Metals quantitation ([Al], [As], [Fe], [Mn], and [Si]) was performed by inductively coupled plasma triple quadrupole mass spectrometry (ICP-QQQ-MS). Prior to the analyses, a sequential extraction method, based on *Wenzel et al.*, was employed. The applied extraction solutions are designed to target the different substrate components. The following table provides details on the various fractions in the Five Step SSE (*Wenzel et al.*). At the request of the client, step one Five Step SSE (*Wenzel et al.*) of the extraction is not used in for this project. Consequently, the table begins with step two of the SSE.

#### **Five Step SSE (Wenzel et al.)**

| <b>SSE Extraction Step</b> | <b>Analyte Code</b> | <b>Extraction Liquid Identity</b>                                       | <b>Volume Extraction Liquid (mL)</b> | <b>Target Fraction/Substrate Description</b> |
|----------------------------|---------------------|---|--------------------------------------|--|
| 2                          | xx(WEN2)            | 0.05 M (NH <sub>4</sub> ) H <sub>2</sub> PO <sub>4</sub>                | 25                                   | Specifically-sorbed metals                   |
| 3                          | xx(WEN3)            | 0.2M ammonium oxalate buffer (pH=3.25)                                  | 25                                   | Amorphous metal oxyhydroxides                |
| 4                          | xx(WEN4)            | 0.2M ammonium oxalate buffer + 0.1M Ascorbic Acid                       | 25                                   | Crystalline metal oxyhydroxides              |
| 5                          | xx(WEN5)            | concentrated HNO <sub>3</sub> , H <sub>2</sub> O <sub>2</sub> , and HCl | 50                                   | Residual, Total Recoverable                  |
| 6                          | xx(WEN6)            | concentrated HNO <sub>3</sub> , HCl, and HF                             | 50                                   | Residual, Total digest                       |

Approximately 1g of each soil sample was transferred to a 50mL polypropylene vial and exactly 25mL of 0.05 M NH<sub>4</sub>H<sub>2</sub>PO<sub>4</sub> was added to each vial. Each vial was capped and shaken on an inverting shaker for 16 hours at room temperature at 30 RPM.

The samples were removed from the shaker and centrifuged for 20 minutes at 3000RPM. After the supernatant was decanted into a separate vial for trace metals analysis and labeled "WEN2", the WEN2 fraction was preserved (1% HNO<sub>3</sub> vol/vol). A total of 20mL of reagent water was added to each vial. The vials were shaken vigorously and centrifuged for 20 minutes at 3000RPM. The supernatant was decanted and discarded.

All sample vials were wrapped in aluminum foil to prevent photo-oxidation and exactly 25mL of 0.2M ammonium oxalate buffer (pH=3.25) was added to each vial. Each vial was capped and shaken on an inverting shaker for 4 hours at room temperature at 30 RPM.

The samples were removed from the shaker and centrifuged for 20 minutes at 3000RPM. After the supernatant was decanted into a separate vial for trace metals analysis and labeled "WEN3", the WEN3 fraction was preserved (1% HNO<sub>3</sub> vol/vol). A total of 12.5mL of ammonium oxalate buffer was added to each vial. The vials were shaken vigorously and centrifuged for 20 minutes at 3000RPM. The supernatant was decanted and discarded.

Exactly 25mL of 0.2M ammonium oxalate buffer with 0.1M ascorbic acid was added to each vial. The vials were then placed in a hotblock digestion apparatus at 96°C for 30 minutes.

The samples were removed from the shaker and centrifuged for 20 minutes at 3000RPM. After the supernatant was decanted into a separate vial for trace metals analysis and labeled "WEN4", the WEN4 fraction was preserved (1% HNO<sub>3</sub> vol/vol). A total of 12.5mL of 0.2M ammonium oxalate buffer with 0.1M ascorbic acid was added to each vial. The vials were shaken vigorously and centrifuged for 20 minutes at 3000RPM. The supernatant was decanted and discarded.

The residual solid pellets remaining in the vials were then digested with aliquots of concentrated HNO<sub>3</sub>, HCl, and H<sub>2</sub>O<sub>2</sub> (in accordance with a modified EPA Method 3050B). The samples were removed from the hot block apparatus and allowed to cool. The samples were centrifuged for 20 minutes at 3000RPM. Afterward, the supernatant was decanted into a separate vial for trace metals analysis and labeled "WEN5".

The residual solid pellets remaining in the vials were then digested in a closed vessel (bomb) with concentrated nitric, hydrochloric, and hydrofluoric acids, in accordance with a modified EPA Method 3052. The resulting digests were labeled "WEN6".

All samples were stored and prepped anoxically in an oxygen free glove box. Degassed reagent water was used to prepare extraction solutions for each step, except for steps 5 and 6 (i.e. residual metals fractions). For each fraction requiring an inverting rotator, the tumbling step took place in an anoxic environment (glovebox).

Total recoverable metals quantitation on individual fractions was performed by inductively coupled plasma triple quadrupole mass spectrometry (ICP-QQQ-MS). The ICP-QQQ-MS uses advanced interference removal techniques to ensure accuracy of the sample results. For more information, please visit the *Interference Reduction Technology* section on our website, [brooksapplied.com](http://brooksapplied.com).

#### Batch B182472 (WEN2 analyses)

The analyst noted some precipitate in the extracts from the Wenzel step two. An additional step was employed at the instrument, where the analyst added concentrated HNO<sub>3</sub> to the extracts prior to adding the diluent. The samples were allowed to sit for a few minutes before adding the diluent. Any precipitates observed were solubilized upon the addition of the concentrated acid.

The relative percent difference (RPD) value for aluminum in the laboratory duplicate sample, B182472-DUP1, was greater than the control limit of 25%, at 51%. Re-analysis confirmed the result. The aluminum result for the source sample, 1837061-02, should be considered estimated due to poor precision, and

has been qualified "M". The source sample for this QC sample is from a separate work order (Batch QC). No data from this work order were qualified based on the RPD outlier.

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182810 (WEN2 analyses)

The analyst noted some precipitate in the extracts from the Wenzel step two. An additional step was employed at the instrument, where the analyst added concentrated HNO<sub>3</sub> to the extracts prior to adding the diluent. The samples were allowed to sit for a few minutes before adding the diluent. Any precipitates observed were solubilized upon the addition of the concentrated acid.

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182473 (WEN3 analyses)

The RPD value for iron in the laboratory duplicate sample, B182473-DUP1, was greater than the control limit of 25%, at 43%. The RPD value for manganese in the laboratory duplicate sample, B182473-DUP3, was greater than the control limit of 25%, at 82%. Re-analyses confirmed the results. The iron and manganese results for the source sample, 1837061-02, should be considered estimated due to poor precision, and has been qualified "M". The source sample for this QC sample is from a separate work order (Batch QC). No data from this work order were qualified based on the RPD outlier

However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182811 (WEN3 analyses)

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182474 (WEN4 analyses)

The RPD values for iron, manganese, and silicon in the laboratory duplicate sample, B182474-DUP1, were greater than the control limit of 25%, at 26%, 43%, and 98%, respectively. Re-analysis confirmed the results. The iron, manganese, and silicon results for the source sample, 1837061-02, should be considered estimated due to poor precision, and have been qualified "M". The source sample for this QC sample is from a separate work order (Batch QC). No data from this work order were qualified based on the RPD outlier

The analyst determined that B182474-PS2 was not spiked at the instrument. Consequently, results for B182474-PS2 are not reported.

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOP(s) and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182812 (WEN4 analyses)

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOPs and were evaluated using reporting limits adjusted to

account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182475 (WEN5 analyses)

The aluminum result for the third method blank, identified as B182475-BLK3, is a statistical outlier according to the Grubb's Test. The value for this sample was omitted from calculations used to determine the MDL associated with aluminum results. All results associated with the aluminum method blank outlier were greater than ten times the elevated method blank value. The method blank outlier should have no impact on data quality. No data were qualified based on the elevated aluminum result in B182475-BLK3.

The silicon spike recovery for the reference material sample, B182475-SRM4, is less than the lower control limit of 75% (at 44%). Re-analyses confirmed the result. All silicon results in Batch B182475 should be considered estimated and have been qualified "J-1" to indicate a potential low bias.

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOPs and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182813 (WEN5 analyses)

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOPs and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a

demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182476 (WEN6 analyses)

The aluminum spike recovery for the reference material sample, B182476-SRM2, is less than the lower control limit of 45% (at 68%). Re-analyses confirmed the result. All aluminum results in Batch B182476 should be considered estimated and have been qualified "J-1" to indicate a potential low bias.

The iron result for the first method blank, identified as B182476-BLK1, is a statistical outlier according to the Grubb's Test. The value for this sample was omitted from calculations used to determine the MDL associated with aluminum results. All results associated with the iron method blank outlier were greater than ten times the elevated method blank value. The method blank outlier should have no impact on data quality. No data were qualified based on the elevated iron result in B182476-BLK1.

The RPD values for aluminum, iron, and manganese in the laboratory duplicate sample, B182476-DUP3, were greater than the control limit of 25%, at 47%, 44%, and 71%, respectively. Re-analysis confirmed the results. The aluminum, iron, and manganese results for the source sample, 1837061-02, should be considered estimated due to poor precision, and have been qualified "M". The source sample for this QC sample is from a separate work order (Batch QC). No data from this work order were qualified based on the RPD outlier

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOPs and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

#### Batch B182923 (WEN6 analyses)

The metals results (Five Step SSE (Wenzel)) were *not* method blank corrected as described in the calculations section of the relevant BAL SOPs and were evaluated using reporting limits adjusted to account for sample aliquot size. The MDL values have been calculated using the standard deviation of the method blanks prepared and analyzed concurrently with the submitted samples. The MRL is set by the value of a low calibration standard in the calibration. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where the native sample result and/or the associated duplicate (DUP) result were below the MDL the RPD was not calculated (**N/C**).

In instances where post spike samples are spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

With the exceptions noted above, all associated quality control sample results met the acceptance criteria. BAL, an accredited laboratory, certifies that the reported results of all analyses for which BAL is NELAP accredited meet all NELAP requirements. For more information please see the *Report Information* page in your report.

Please feel free to contact me if you have any questions regarding this report.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jeremy Maute', written in a cursive style.

## Report Information

### Laboratory Accreditation

BAL is accredited by the *National Environmental Laboratory Accreditation Program* (NELAP) through the State of Florida Department of Health, Bureau of Laboratories (E87982) and is certified to perform many environmental analyses. BAL is also certified by many other states to perform environmental analyses. For a current list of our accreditations/certifications, please visit our website at <http://www.brooksapplied.com/resources/certificates-permits/>. Results reported relate only to the samples listed in the report.

### Field Quality Control Samples

Please be notified that certain EPA methods require the collection of field quality control samples of an appropriate type and frequency; failure to do so is considered a deviation from some methods and for compliance purposes should only be done with the approval of regulatory authorities. Please see the specific EPA methods for details regarding required field quality control samples.

### Definition of Data Qualifiers

(Effective 9/23/09)

|            |   |
|------------|---|
| <b>E</b>   | An estimated value due to the presence of interferences. A full explanation is presented in the narrative.                        |
| <b>H</b>   | Holding time and/or preservation requirements not met. Please see narrative for explanation.                                      |
| <b>J</b>   | Detected by the instrument, the result is > the MDL but ≤ the MRL. Result is reported and considered an estimate.                 |
| <b>J-1</b> | Estimated value. A full explanation is presented in the narrative.  |
| <b>M</b>   | Duplicate precision (RPD) was not within acceptance criteria. Please see narrative for explanation.                               |
| <b>N</b>   | Spike recovery was not within acceptance criteria. Please see narrative for explanation.  |
| <b>R</b>   | Rejected, unusable value. A full explanation is presented in the narrative.   |
| <b>U</b>   | Result is ≤ the MDL or client requested reporting limit (CRRL). Result reported as the MDL or CRRL.                               |
| <b>X</b>   | Result is not BLK-corrected and is within 10x the absolute value of the highest detectable BLK in the batch. Result is estimated. |

These qualifiers are based on those previously utilized by Brooks Applied Labs, those found in the EPA SOW ILM03.0, Exhibit B, Section III, pg. B-18, and the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review; USEPA; January 2010. These supersede all previous qualifiers ever employed by BAL.

## Shipping Containers

### Cooler 10 - 1839006

**Received:** September 15, 2017 16:30  
**Tracking No:** n/a via Courier  
**Coolant Type:** Blue ice  
**Temperature:** 11.3 °C

**Description:** Cooler  
**Damaged in transit?** No  
**Returned to client?** No  
**Comments:** IR #8

**Custody seals present?** No  
**Custody seals intact?** No  
**COC present?** Yes

### Cooler 10 - 1839006

**Received:** September 21, 2017 9:10  
**Tracking No:** n/a via Courier  
**Coolant Type:** Blue ice  
**Temperature:** 11.3 °C

**Description:** Cooler  
**Damaged in transit?** No  
**Returned to client?** No  
**Comments:** IR #8

**Custody seals present?** No  
**Custody seals intact?** No  
**COC present?** Yes

### Cooler 10 - 1839006

**Received:** October 6, 2017 14:30  
**Tracking No:** n/a via Courier  
**Coolant Type:** Blue ice  
**Temperature:** 11.3 °C

**Description:** Cooler  
**Damaged in transit?** No  
**Returned to client?** No  
**Comments:** IR #8

**Custody seals present?** No  
**Custody seals intact?** No  
**COC present?** Yes

Revision 1: Some of the sample collection dates and receipt dates were incorrect in the initial report issued on March 21, 2018. The dates have been corrected in this revised report and associated revised EDD. No other changes have been made with respect to the original report.

RE: Project PTC-OA1701

Client Project: Arkema FS Data Gap

Mr. Troy Bussey,

On September 13<sup>th</sup> through October 3<sup>rd</sup>, 2017, Brooks Applied Labs (BAL) received seventeen (17) soil/sediment samples. All samples were received and stored according to BAL SOPs and EPA methodology.

All samples were stored and prepped anoxically in an oxygen free glove box. All samples were received, prepared, analyzed, and stored according to BAL SOPs and EPA methodology.

Shortly after receipt, all submitted core samples were unpacked in a glove box maintained under anoxic conditions, split into appropriate sample containers, and then stored according to BAL SOPs. All sample fractions designated for batch adsorption testing (BAT) were frozen pending the client's decision on which samples to analyze. The client notified BAL that the client sample SO-PTC-001-091517-23.0-25.0 should undergo Batch Adsorption Testing (BAT), in accordance with the procedure submitted by the client. This report only contains the BAT results for SO-PTC-001-091517-23.0-25.0.

#### Batch Adsorption Testing (BAT)

Prior to the BAT, the soil sample was dried in a glove box maintained under anoxic conditions and then sieved using a 2mm mesh size. An aliquot of each sieved sample was then taken for dry weight determination; in accordance with the BAT protocol, the resulting dry weights were used to calculate the appropriate sample masses required for the testing. All subsequent testing was performed on the original sieved sample portions.

In accordance with the client instructions, sixteen (16) separate synthetic groundwaters were prepared for the BAT. Reagent solutions were degassed with an N<sub>2</sub> purge prior to use. All solutions were initially prepared as NaCl solutions with a total dissolved solids (TDS) = 4030. A carbonate buffer was added to half of the solutions. The resulting solutions were spiked with As(III) and As(V) spikes according to the following table.

**Spiked GW Solutions**

| Associated Client Sample ID                          | Synthetic GW pH Control   | Soil: Solution Ratio, Equilibration Time           | Arsenic Spikes Used in Synthetic GW                                       |

An aliquot of each spiked synthetic groundwater solution was split into a separate container, acidified to a pH < 2 with nitric acid, and then analyzed for determination of the initial arsenic concentration. These fractions are identified as blank spike samples in the attached *Accuracy and Precision* tables.

Aliquots of the spiked synthetic groundwater were also added to empty sample containers and extracted alongside the client samples to monitor for potential losses during the extraction procedure. These fractions are identified as method blank samples in the attached *Accuracy and Precision* tables.

Aliquots of the remaining spiked synthetic groundwater were added to an appropriate mass of each sample to achieve the requested soil: solution ratio of 1:10. For each type of spiked synthetic groundwater, a matrix duplicate sample has been prepped with SO-PTC-001-091517-23.0-25.0 at the

same soil: solution ratio. The following table describes the associated QC samples, and the source sample each QC sample is associated with.

**QC Sample ID Cross Reference Table**

| Sample ID  | Associated Duplicate Sample | Method Blank Sample* | Blank Spike Sample** |

\*Method Blank Sample = Spiked Synthetic GW (method blank sample subjected to tumbling step - same as client samples).

\*\* Blank Spike Sample = Spiked Synthetic GW (not subjected to tumbling step).

All prepared samples were then placed on a rotary tumbler (kept inside the glove box) and allowed to tumble for 72 hours. After the designed equilibration time had elapsed an aliquot of each resulting extract was filtered (0.45µm), acidified to a pH < 2 with nitric acid, and then reserved for dissolved As analysis. The remaining extract for each sample was evaluated for pH and temperature.

#### pH and Temperature Measurements

The pH of all extracts was measured via a modified SM2540B using a calibrated pH electrode.

The measured values for pH and temperature are included in the results section of the report.

#### Total Metals Quantitation of the BAT Extracts

An aliquot of each extract was directly analyzed for As using inductively coupled plasma triple quadrupole mass spectrometry (ICP-QQQ-MS). The ICP-QQQ-MS uses advanced interference removal techniques to ensure accuracy of the sample results. For more information, please visit the *Interference Reduction Technology* section on our website.

A matrix duplicate (MD) was performed for each designated spiked synthetic groundwater. Due to the nature of the BAT, no matrix spikes could be performed during the extraction procedure. Instead,

analytical spikes (designated as B18xxx-PSx) were prepared at the time of analysis to demonstrate the accuracy of the analyses.

The results are reported using a BAT (Solids) basis, where the masses and volumes used in the batch absorption tumbling step are factored into the final results (Batch B180696). The results are also reported by BAT (Aqueous) basis, where the final results are reported using the values obtained by direct analysis of the filtered aqueous fractions from the batch absorption test (Batch B180558).

Arsenic recoveries for all method blanks and blank spike samples were within acceptable ranges.

Several continuous calibration blank (CCB) samples yielded arsenic results greater than the associated MRLs. In all cases the bracketed samples were greater than 10x the elevated CCB result; the elevated CCBs should have minimal impact on data quality. Consequently, no qualification of data is required.

The results were *not* method blank corrected, as described in the calculations section of the relevant BAL SOPs and were evaluated using reporting limits adjusted to account for sample aliquot size. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

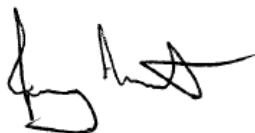

In instances where a matrix spike/matrix spike duplicate (MS/MSD) set was spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

All data was reported without qualification and all associated quality control sample results met the acceptance criteria.

BAL, an accredited laboratory, certifies that the reported results of all analyses for which BAL is NELAP accredited meet all NELAP requirements. For more information please see the *Report Information* page in your report.

Please feel free to contact me if you have any questions regarding this report.

Sincerely,

A handwritten signature in black ink, appearing to read 'Jeremy Maute', with a stylized flourish at the end.

Brooks Applied Labs

## Report Information

### Laboratory Accreditation

BAL is accredited by the *National Environmental Laboratory Accreditation Program* (NELAP) through the State of Florida Department of Health, Bureau of Laboratories (E87982) and is certified to perform many environmental analyses. BAL is also certified by many other states to perform environmental analyses. For a current list of our accreditations/certifications, please visit our website at <http://www.brooksapplied.com/resources/certificates-permits/>. Results reported relate only to the samples listed in the report.

### Field Quality Control Samples

Please be notified that certain EPA methods require the collection of field quality control samples of an appropriate type and frequency; failure to do so is considered a deviation from some methods and for compliance purposes should only be done with the approval of regulatory authorities. Please see the specific EPA methods for details regarding required field quality control samples.

### Definition of Data Qualifiers

(Effective 9/23/09)

|            |   |
|------------|---|
| <b>E</b>   | An estimated value due to the presence of interferences. A full explanation is presented in the narrative.                        |
| <b>H</b>   | Holding time and/or preservation requirements not met. Please see narrative for explanation.                                      |
| <b>J</b>   | Detected by the instrument, the result is > the MDL but ≤ the MRL. Result is reported and considered an estimate.                 |
| <b>J-1</b> | Estimated value. A full explanation is presented in the narrative.  |
| <b>M</b>   | Duplicate precision (RPD) was not within acceptance criteria. Please see narrative for explanation.                               |
| <b>N</b>   | Spike recovery was not within acceptance criteria. Please see narrative for explanation.  |
| <b>R</b>   | Rejected, unusable value. A full explanation is presented in the narrative.   |
| <b>U</b>   | Result is ≤ the MDL or client requested reporting limit (CRRL). Result reported as the MDL or CRRL.                               |
| <b>X</b>   | Result is not BLK-corrected and is within 10x the absolute value of the highest detectable BLK in the batch. Result is estimated. |

These qualifiers are based on those previously utilized by Brooks Applied Labs, those found in the EPA SOW ILM03.0, Exhibit B, Section III, pg. B-18, and the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review; USEPA; January 2010. These supersede all previous qualifiers ever employed by BAL.

## Shipping Containers

### Cooler 2 - 1809005

Received: September 15, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Dry Ice  
Temperature: -11.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #13

Custody seals present? Yes  
Custody seals intact? Yes  
COC present? Yes

### Cooler 3 - 1809005

Received: September 21, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Dry Ice  
Temperature: -19.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #13

Custody seals present? No  
Custody seals intact? No  
COC present? Yes

### Cooler 4 - 1809005

Received: September 21, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Ice  
Temperature: 15.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #10

Custody seals present? No  
Custody seals intact? No  
COC present? Yes

### Cooler 5 - 1809005

Received: September 21, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Ice  
Temperature: 14.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #10

Custody seals present? No  
Custody seals intact? No  
COC present? Yes

### Cooler 6 - 1809005

Received: October 3, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Dry Ice  
Temperature: 1.0 °C

Description: Cooler 6  
Damaged in transit? No  
Returned to client? No  
Comments: IR #14

Custody seals present? No  
Custody seals intact? No  
COC present? Yes

### Cooler 7 - 1809005

Received: September 15, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Dry Ice  
Temperature: 2.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #14

Custody seals present? No  
Custody seals intact? No  
COC present? Yes

RE: Project PTC-OA1701-4

Client Project: Arkema FS Data Gap

Mr. Troy Bussey,

On September 13<sup>th</sup> through October 3<sup>rd</sup>, 2017, Brooks Applied Labs (BAL) received seventeen (17) soil/sediment samples.

Shortly after receipt, all submitted core samples were unpacked in a glove box maintained under anoxic conditions, split into appropriate sample containers, and then stored according to BAL SOPs. All sample fractions designated for batch adsorption testing (BAT) were frozen pending the client's decision on which samples to analyze. The client notified BAL that the client samples SO-PTC-001-091517-23.0-25.0, SO-PTC-002-091317-23.0-25.0, SO-PTC-001-091517-2.5-4.5, and SO-PTC-001-091517-11.5-13.5 should undergo Batch Adsorption Testing (BAT), in accordance with the procedure submitted by the client titled **Design for Arkema BAT Round 4\_032818**. This report only contains the BAT results for the client samples SO-PTC-001-091517-23.0-25.0, SO-PTC-002-091317-23.0-25.0, SO-PTC-001-091517-2.5-4.5, and SO-PTC-001-091517-11.5-13.5 processed according to the document **Design for Arkema BAT Round 4\_032818**.

All samples were stored and prepped anoxically in an oxygen free glove box. All samples were received, prepared, analyzed, and stored according to BAL SOPs and EPA methodology.

#### Batch Adsorption Testing (BAT)

Prior to the BAT, the soil samples were dried in a glove box maintained under anoxic conditions and then sieved using a 2mm mesh size. An aliquot of each sieved sample was then taken for dry weight determination; in accordance with the BAT protocol, the resulting dry weights were used to calculate the appropriate sample masses required for the testing. All subsequent testing was performed on the original sieved sample portions.

In accordance with client instructions, eight (8) separate synthetic groundwater solutions were prepared for the BAT. Reagent solutions were degassed with an N<sub>2</sub> purge prior to use. All solutions were initially prepared as NaCl solutions with a total dissolved solids (TDS) = 4030 mg/L. A carbonate buffer was added to half of the solutions. The resulting solutions were spiked with As(III) and As(V) spikes according to the following table.

**Spiked GW Solutions**

| Sample ID  | Sample ID | Synthetic GW pH Control  | Soil:Solution Ratio, Equilibration Time         | Arsenic Spikes Used in Synthetic GW |
|------------|-----------|--|---|-------------------------------------|
| BLK1/BLK9  | BS1/BS9   | 0.01 M Na <sub>2</sub> CO <sub>3</sub> / 0.01 M NaHCO <sub>3</sub> Buffer Used in Synthetic GW | 1:10 Solution Ratio, 72 hrs. Equilibration Time | 20 mg/L As (III)                    |
| BLK2       | BS2       |  |   | 0.4 mg/L As(III)                    |
| BLK3       | BS3       |  |   | 1 mg/L As(III)                      |
| BLK4       | BS4       |  |   | 5 mg/L As (III)                     |
| BLK5       | BS5       |  |   | 0.4 mg/L As(V)                      |
| BLK6       | BS6       |  |   | 1 mg/L As(V)                        |
| BLK7/ BLKA | BS7/BSA   |  |   | 5 mg/L As (V)                       |
| BLK8/ BLKB | BS8/BSB   |  |   | 20 mg/L As (V)                      |

\*Method Blank Sample = Spiked Synthetic GW (method blank sample subjected to tumbling step - same as client samples).

\*\* Blank Spike Sample = Spiked Synthetic GW (not subjected to tumbling step).

An aliquot of each spiked synthetic groundwater solution was split into a separate container, acidified to a pH < 2 with nitric acid, and then analyzed for determination of the initial arsenic concentration. These fractions are identified as blank spike samples in the attached *Accuracy and Precision* tables.

Aliquots of the spiked synthetic groundwater were also added to empty sample containers and tumbled alongside the client samples to monitor for potential losses during the extraction procedure. These fractions are identified as method blank samples in the attached *Accuracy and Precision* tables.

Aliquots of the remaining spiked synthetic groundwater were added to an appropriate mass of each sample to achieve the requested soil: solution ratio of 1:10. For each client sample, a matrix duplicate sample has been prepped with the client samples. The following table describes the source sample each Matrix QC sample is associated with.

**M/MD Sample ID Cross Reference Table**

| Sample ID  | Associated Matrix QC Sample | Synthetic GW pH Control   | Soil:Solution Ratio, Equilibration Time         | Arsenic Spikes Used in Synthetic GW |
|------------|-----------------------------|---|---|-------------------------------------|
| 1809005-35 | B180807-DUP1                | 0.01 M Na <sub>2</sub> CO <sub>3</sub> /<br>0.01 M NaHCO <sub>3</sub><br>Buffer<br>Used in Synthetic GW | 1:10 Solution Ratio, 72 hrs. Equilibration Time | 20 mg/L As (III)                    |
| 1809005-36 | B180807-DUP2                |   |   | 0.4 mg/L As(III)                    |

| 1809005-52 | B180807-DUPI                |   |   | 0.4 mg/L As(V)                      |
| 1809005-53 | B180807-DUPJ                |   |   | 1 mg/L As(V)                        |
| 1809005-54 | B180807-DUPK                |   |   | 5 mg/L As (V)                       |
| 1809005-55 | B180807-DUPL                | 20 mg/L As (V)  |   |                                     |

All prepared samples were then placed on a rotary tumbler (kept inside the glove box) and allowed to tumble for 72 hours. After the designed equilibration time had elapsed an aliquot of each resulting extract was filtered (0.45µm), acidified to a pH < 2 with nitric acid, and then reserved for dissolved As analysis. The remaining extract for each sample was evaluated for pH and temperature.

#### pH and Temperature Measurements

The pH of all extracts was measured via a modified SM2540B using a calibrated pH electrode.

The measured values for pH and temperature are included in the results section of the report.

#### Total Metals Quantitation of the BAT Extracts

An aliquot of each extract was directly analyzed for As using inductively coupled plasma triple quadrupole mass spectrometry (ICP-QQQ-MS). The ICP-QQQ-MS uses advanced interference removal techniques to ensure accuracy of the sample results. For more information, please visit the *Interference Reduction Technology* section on our website.

A matrix duplicate (MD) was performed for each designated spiked synthetic groundwater. Due to the nature of the BAT, no matrix spikes could be performed during the extraction procedure. Instead, analytical spikes (designated as B18xxx-PSx) were prepared at the time of analysis to demonstrate the accuracy of the analyses.

The results are reported using a BAT (Solids) basis, where the masses and volumes used in the batch absorption tumbling step are factored into the final results (Batch B180959). The results are also reported by BAT (Aqueous) basis, where the final results are reported using the values obtained by direct analysis of the filtered aqueous fractions from the batch absorption test (Batch B180960).

Arsenic recoveries for all method blanks and blank spike samples were within acceptable ranges.

Several continuous calibration blank (CCB) samples yielded arsenic results greater than the associated MRLs. In all cases the bracketed samples were greater than 10x the elevated CCB result; the elevated CCBs should have minimal impact on data quality. Consequently, no qualification of data is required.

The arsenic relative percent difference (RPD) values for the laboratory duplicate samples, B180960-DUPE and B180960-DUPG, were greater than the control limit of 20%, at 35% and 22%, respectively. Re-analyses confirmed the RPD outliers. Results from the initial analyses are reported. The arsenic results for the source samples, 1809005-48 and 1809005-50, should be considered estimated due to poor precision, and has been qualified "M".

The results were *not* method blank corrected, as described in the calculations section of the relevant BAL SOPs and were evaluated using reporting limits adjusted to account for sample aliquot size. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where a post spike sample was spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

With the exceptions noted above, all data was reported without qualification and all associated quality control sample results met the acceptance criteria.

BAL, an accredited laboratory, certifies that the reported results of all analyses for which BAL is NELAP accredited meet all NELAP requirements. For more information please see the *Report Information* page in your report.

Please feel free to contact me if you have any questions regarding this report.

Sincerely,

Jeremy Maute  
Senior Project Manager  
Brooks Applied Labs

## Report Information

### Laboratory Accreditation

BAL is accredited by the *National Environmental Laboratory Accreditation Program* (NELAP) through the State of Florida Department of Health, Bureau of Laboratories (E87982) and is certified to perform many environmental analyses. BAL is also certified by many other states to perform environmental analyses. For a current list of our accreditations/certifications, please visit our website at <http://www.brooksapplied.com/resources/certificates-permits/>. Results reported relate only to the samples listed in the report.

### Field Quality Control Samples

Please be notified that certain EPA methods require the collection of field quality control samples of an appropriate type and frequency; failure to do so is considered a deviation from some methods and for compliance purposes should only be done with the approval of regulatory authorities. Please see the specific EPA methods for details regarding required field quality control samples.

### Definition of Data Qualifiers

(Effective 9/23/09)

|            |   |
|------------|---|
| <b>E</b>   | An estimated value due to the presence of interferences. A full explanation is presented in the narrative.                        |
| <b>H</b>   | Holding time and/or preservation requirements not met. Please see narrative for explanation.                                      |
| <b>J</b>   | Detected by the instrument, the result is > the MDL but ≤ the MRL. Result is reported and considered an estimate.                 |
| <b>J-1</b> | Estimated value. A full explanation is presented in the narrative.  |
| <b>M</b>   | Duplicate precision (RPD) was not within acceptance criteria. Please see narrative for explanation.                               |
| <b>N</b>   | Spike recovery was not within acceptance criteria. Please see narrative for explanation.  |
| <b>R</b>   | Rejected, unusable value. A full explanation is presented in the narrative.   |
| <b>U</b>   | Result is ≤ the MDL or client requested reporting limit (CRRL). Result reported as the MDL or CRRL.                               |
| <b>X</b>   | Result is not BLK-corrected and is within 10x the absolute value of the highest detectable BLK in the batch. Result is estimated. |

These qualifiers are based on those previously utilized by Brooks Applied Labs, those found in the EPA SOW ILM03.0, Exhibit B, Section III, pg. B-18, and the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review; USEPA; January 2010. These supersede all previous qualifiers ever employed by BAL.

BAT = Batch Absorption Testing

B180960: BAT results in terms of ug/L (*i.e.. direct analysis of BAT fractions*).

B180959: BAT Results in terms of mg/kg-dry (*i.e.. mass, final volumes, and %TS used to calculate results*).]

## Shipping Containers

### Cooler 2 - 1809005

Received: September 15, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Dry Ice  
Temperature: -11.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #13

Custody seals present? Yes  
Custody seals intact? Yes  
COC present? Yes

### Cooler 3 - 1809005

Received: September 21, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Dry Ice  
Temperature: -19.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #13

Custody seals present? No  
Custody seals intact? No  
COC present? Yes

### Cooler 4 - 1809005

Received: September 21, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Ice  
Temperature: 15.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #10

Custody seals present? No  
Custody seals intact? No  
COC present? Yes

### Cooler 5 - 1809005

Received: September 21, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Ice  
Temperature: 14.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #10

Custody seals present? No  
Custody seals intact? No  
COC present? Yes

### Cooler 6 - 1809005

Received: October 3, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Dry Ice  
Temperature: 1.0 °C

Description: Cooler 6  
Damaged in transit? No  
Returned to client? No  
Comments: IR #14

Custody seals present? No  
Custody seals intact? No  
COC present? Yes

### Cooler 7 - 1809005

Received: September 15, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Dry Ice  
Temperature: 2.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #14

Custody seals present? No

RE: Project PTC-OA1701-4

Client Project: Arkema FS Data Gap

Mr. Troy Bussey,

On September 13<sup>th</sup> through October 3<sup>rd</sup>, 2017, Brooks Applied Labs (BAL) received seventeen (17) soil/sediment samples.

Shortly after receipt, all submitted core samples were unpacked in a glove box maintained under anoxic conditions, split into appropriate sample containers, and then stored according to BAL SOPs. All sample fractions designated for batch adsorption testing (BAT) were frozen pending the client's decision on which samples to analyze. The client notified BAL that the client samples SO-122+60-0-SED-100317-0-0.33 and SO-125+00-ST1-SED-100417-0-0.33 should undergo Batch Adsorption Testing (BAT), in accordance with the procedure submitted by the client titled **Design for Arkema BAT Round 4\_032818**. This report only contains the BAT results for the client samples SO-122+60-0-SED-100317-0-0.33 and SO-125+00-ST1-SED-100417-0-0.33 processed according to the document **Design for Arkema BAT Round 4\_032818**.

All samples were stored and prepped anoxically in an oxygen free glove box. All samples were received, prepared, analyzed, and stored according to BAL SOPs and EPA methodology.

#### Batch Adsorption Testing (BAT)

Prior to the BAT, the soil samples were dried in a glove box maintained under anoxic conditions and then sieved using a 2mm mesh size. An aliquot of each sieved sample was then taken for dry weight determination; in accordance with the BAT protocol, the resulting dry weights were used to calculate the appropriate sample masses required for the testing. All subsequent testing was performed on the original sieved sample portions.

In accordance with client instructions, eight (8) separate synthetic groundwater solutions were prepared for the BAT. Reagent solutions were degassed with an N<sub>2</sub> purge prior to use. All solutions were initially prepared as NaCl solutions with a total dissolved solids (TDS) = 23,000 mg/L. The resulting solutions were spiked with As(III) and As(V) spikes according to the following table.

**Spiked GW Solutions**

| Sample ID* | Sample ID** | Synthetic GW pH Control                                   | Soil:Solution Ratio, Equilibration Time         | Arsenic Spikes Used in Synthetic GW |
|------------|-------------|---|---|-------------------------------------|
| BLK1       | BS1         | No Buffer Used in Synthetic GW, TDS $\approx$ 23,000 mg/L | 1:10 Solution Ratio, 72 hrs. Equilibration Time | 0.4 mg/L As(III)                    |
| BLK2       | BS2         |   |   | 1 mg/L As(III)                      |
| BLK3       | BS3         |   |   | 5 mg/L As (III)                     |
| BLK4       | BS4         |   |   | 20 mg/L As (III)                    |
| BLK5       | BS5         |   |   | 0.4 mg/L As(V)                      |
| BLK6       | BS6         |   |   | 1 mg/L As(V)                        |
| BLK7       | BS7         |   |   | 5 mg/L As (V)                       |
| BLK8       | BS8         |   |   | 20 mg/L As (V)                      |

\*Method Blank Sample = Spiked Synthetic GW (method blank sample subjected to tumbling step - same as client samples).

\*\* Blank Spike Sample = Spiked Synthetic GW (not subjected to tumbling step).

An aliquot of each spiked synthetic groundwater solution was split into a separate container, acidified to a pH < 2 with nitric acid, and then analyzed for determination of the initial arsenic concentration. These fractions are identified as blank spike samples in the attached *Accuracy and Precision* tables.

Aliquots of the spiked synthetic groundwater were also added to empty sample containers and tumbled alongside the client samples to monitor for potential losses during the extraction procedure. These fractions are identified as method blank samples in the attached *Accuracy and Precision* tables.

Aliquots of the remaining spiked synthetic groundwater were added to an appropriate mass of each sample to achieve the requested soil: solution ratio of 1:10. For each client sample, a matrix duplicate sample has been prepped with the client samples. The following table describes the source sample each Matrix QC sample is associated with.

**M/MD Sample ID Cross Reference Table**

| Sample ID  | Associated Matrix QC Sample | Synthetic GW pH Control                                   | Soil:Solution Ratio, Equilibration Time         | Arsenic Spikes Used in Synthetic GW |
|------------|-----------------------------|---|---|-------------------------------------|
| 1809005-56 | DUP1                        | No Buffer Used in Synthetic GW, TDS $\approx$ 23,000 mg/L | 1:10 Solution Ratio, 72 hrs. Equilibration Time | 0.4 mg/L As(III)                    |
| 1809005-57 | DUP2                        |   |   | 1 mg/L As(III)                      |
| 1809005-58 | DUP3                        |   |   | 5 mg/L As (III)                     |
| 1809005-59 | DUP4                        |   |   | 20 mg/L As (III)                    |
| 1809005-60 | DUP5                        |   |   | 0.4 mg/L As(V)                      |
| 1809005-61 | DUP6                        |   |   | 1 mg/L As(V)                        |
| 1809005-62 | DUP7                        |   |   | 5 mg/L As (V)                       |
| 1809005-63 | DUP8                        |   |   | 20 mg/L As (V)                      |
| 1809005-64 | DUP9                        |   |   | 0.4 mg/L As(III)                    |
| 1809005-65 | DUPA                        |   |   | 1 mg/L As(III)                      |
| 1809005-66 | DUPB                        |   |   | 5 mg/L As (III)                     |
| 1809005-67 | DUPC                        |   |   | 20 mg/L As (III)                    |
| 1809005-68 | DUPD                        |   |   | 0.4 mg/L As(V)                      |
| 1809005-69 | DUPE                        |   |   | 1 mg/L As(V)                        |
| 1809005-70 | DUPF                        | 5 mg/L As (V)   |   |                                     |
| 1809005-71 | DUPG                        | 20 mg/L As (V)  |   |                                     |

All prepared samples were then placed on a rotary tumbler (kept inside the glove box) and tumbled for 72 hours. After the designed equilibration time had elapsed an aliquot of each resulting extract was filtered (0.45 $\mu$ m), acidified to a pH < 2 with nitric acid, and then reserved for dissolved As analysis. The remaining extract for each sample was evaluated for pH and temperature.

#### pH and Temperature Measurements

The pH of all extracts was measured via a modified SM2540B using a calibrated pH electrode.

The measured values for pH and temperature are included in the results section of the report.

### Total Metals Quantitation of the BAT Extracts

An aliquot of each extract was directly analyzed for As using inductively coupled plasma triple quadrupole mass spectrometry (ICP-QQQ-MS). The ICP-QQQ-MS uses advanced interference removal techniques to ensure accuracy of the sample results. For more information, please visit the *Interference Reduction Technology* section on our website.

A matrix duplicate (MD) was performed for each designated spiked synthetic groundwater. Due to the nature of the BAT, no matrix spikes could be performed during the extraction procedure. Instead, analytical spikes (designated as B18xxx-PSx) were prepared at the time of analysis to demonstrate the accuracy of the analyses.

The results are reported using a BAT (Solids) basis, where the masses and volumes used in the batch absorption tumbling step are factored into the final results (Batch B180925). The results are also reported by BAT (Aqueous) basis, where the final results are reported using the values obtained by direct analysis of the filtered aqueous fractions from the batch absorption test (Batch B181065).

Arsenic recoveries for all method blanks and blank spike samples were within acceptable ranges.

Several continuous calibration blank (CCB) samples yielded arsenic results greater than the associated MRLs. In all cases the bracketed samples were greater than 10x the elevated CCB result; the elevated CCBs should have minimal impact on data quality. Consequently, no qualification of data is required.

Internal standard recoveries for the client samples 1809005-67 (126%) and 1809005-71 (130%) were greater than the upper control limit of 125%. The internal standard recoveries for the QC samples B180925-DUPC (127%), B180925-PS3 (127%), B180925-DUPF (126%), and B180925-DUPG (134%) were greater than 125%. The arsenic recovery for B180925-PS3 is acceptable, at 94%. All laboratory duplicate samples in this batch demonstrated acceptable precision, including the laboratory duplicate samples with elevated internal standard recoveries. All samples with internal standard recovery outliers were re-analyzed, confirming the original results. Since the passing QC and the good agreement between separate analytical runs demonstrated that the internal standards appropriately corrected for variability in sensitivity within the analytical platform, no corrective action was necessary. The client sample results and QC results from the initial run were reported without qualification.

The results were *not* method blank corrected, as described in the calculations section of the relevant BAL SOPs and were evaluated using reporting limits adjusted to account for sample aliquot size. Please refer to the *Sample Results* page for sample-specific MDLs, MRLs, and other details.

In instances where a post spike sample was spiked at a level less than the native sample, the recoveries are not considered valid indicators of data quality. However, these results are reported as a demonstration of precision. When the spiking levels were  $\leq 25\%$  of the native sample concentrations, the recoveries were not reported (**NR**).

All data was reported without qualification and all associated quality control sample results met the acceptance criteria.

BAL, an accredited laboratory, certifies that the reported results of all analyses for which BAL is NELAP accredited meet all NELAP requirements. For more information please see the *Report Information* page in your report.

Please feel free to contact me if you have any questions regarding this report.

Sincerely,

## Report Information

### Laboratory Accreditation

BAL is accredited by the *National Environmental Laboratory Accreditation Program* (NELAP) through the State of Florida Department of Health, Bureau of Laboratories (E87982) and is certified to perform many environmental analyses. BAL is also certified by many other states to perform environmental analyses. For a current list of our accreditations/certifications, please visit our website at <http://www.brooksapplied.com/resources/certificates-permits/>. Results reported relate only to the samples listed in the report.

### Field Quality Control Samples

Please be notified that certain EPA methods require the collection of field quality control samples of an appropriate type and frequency; failure to do so is considered a deviation from some methods and for compliance purposes should only be done with the approval of regulatory authorities. Please see the specific EPA methods for details regarding required field quality control samples.

| <b>ICV</b> | initial calibration verification    | <b>T</b>   | total fraction                     |
| <b>MDL</b> | method detection limit              | <b>TR</b>  | total recoverable fraction         |
| <b>MRL</b> | method reporting limit              |            |                                    |

### Definition of Data Qualifiers

(Effective 9/23/09)

|            |   |
|------------|---|
| <b>E</b>   | An estimated value due to the presence of interferences. A full explanation is presented in the narrative.                        |
| <b>H</b>   | Holding time and/or preservation requirements not met. Please see narrative for explanation.                                      |
| <b>J</b>   | Detected by the instrument, the result is > the MDL but ≤ the MRL. Result is reported and considered an estimate.                 |
| <b>J-1</b> | Estimated value. A full explanation is presented in the narrative.  |
| <b>M</b>   | Duplicate precision (RPD) was not within acceptance criteria. Please see narrative for explanation.                               |
| <b>N</b>   | Spike recovery was not within acceptance criteria. Please see narrative for explanation.  |
| <b>R</b>   | Rejected, unusable value. A full explanation is presented in the narrative.   |
| <b>U</b>   | Result is ≤ the MDL or client requested reporting limit (CRRL). Result reported as the MDL or CRRL.                               |
| <b>X</b>   | Result is not BLK-corrected and is within 10x the absolute value of the highest detectable BLK in the batch. Result is estimated. |

These qualifiers are based on those previously utilized by Brooks Applied Labs, those found in the EPA SOW ILM03.0, Exhibit B, Section III, pg. B-18, and the USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Superfund Data Review; USEPA; January 2010. These supersede all previous qualifiers ever employed by BAL.

## Sample Information

## Batch Summary

| Analyte | Lab Matrix    | Method        | Prepared   | Analyzed   | Batch   | Sequence |
|---------|---------------|---------------|------------|------------|---------|----------|
| %TS     | Soil/Sediment | SM 2540G      | 04/16/2018 | 04/25/2018 | B180926 | N/A      |
| As(BAT) | Soil/Sediment | EPA 6020B Mod | 04/20/2018 | 04/27/2018 | B180925 | 1800575  |
| As(BAT) | Water         | EPA 1638 Mod  | 04/20/2018 | 04/27/2018 | B181065 | 1800575  |
| pH      | Water         | EPA 150.1     | 04/20/2018 | 05/02/2018 | B181075 | N/A      |

BAT = Batch Absorption Testing

B181065: BAT results in terms of ug/L (*i.e.* direct analysis of BAT fractions).

B180925: BAT Results in terms of mg/kg-dry (*i.e.* mass, final volumes, and %TS used to calculate results).|

## Sample Results

## Shipping Containers

### Cooler 2 - 1809005

Received: September 15, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Dry Ice  
Temperature: -11.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #13

Custody seals present? Yes  
Custody seals intact? Yes  
COC present? Yes

### Cooler 3 - 1809005

Received: September 21, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Dry Ice  
Temperature: -19.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #13

Custody seals present? No  
Custody seals intact? No  
COC present? Yes

### Cooler 4 - 1809005

Received: September 21, 2017 14:00  
Tracking No: n/a via Courier  
Coolant Type: Ice  
Temperature: 15.0 °C

Description: Cooler  
Damaged in transit? No  
Returned to client? No  
Comments: IR #10

Custody seals present? No  
Custody seals intact? No  
COC present? Yes
