### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

**imits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by a client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**ample Retention Policy:** Unless specified by work order or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer

Project Name: Arkema FS DG Inv

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17J0430

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? YES  NO

Were custody papers properly filled out (ink, signed, etc.) YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 7.5 8.6

Time: 1540

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: D002565

Cooler Accepted by: SF

Date: 10/23/17 Time: 1540

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? YES  NO

What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? NA YES  NO

Were all bottles sealed in individual plastic bags? YES  NO

Did all bottles arrive in good condition (unbroken)? YES  NO

Were all bottle labels complete and legible? YES  NO  BF

Did the number of containers listed on COC match with the number of containers received? YES  NO  BF 10/24/17

Did all bottle labels and tags agree with custody papers? YES  NO

Were all bottles used correct for the requested analyses? YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES  NO

Were all VOC vials free of air bubbles? NA YES  NO

Was sufficient amount of sample sent in each bottle? YES  NO

Date VOC Trip Blank was made at ARI: NA

Was Sample Split by ARI : NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: BF Date: 10/24/17 Time: 915

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 23, 2017 under ARI workorder 17J0430. For details regarding sample receipt, please refer to the Cooler Receipt Form. Due to the salty nature of the samples many analysis needed dilutions, and multiple runs were reported.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Samples GW-7E9-2-102317 and GW-7E10-1-102317 were reanalyzed at higher reporting limits due to various compounds exceeding the upper calibration ranges. These compounds have been flagged with an "E" qualifier on the initial runs. No further corrective action was taken.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

Method blank BFJ0771 has Tetrachloroethene detected below the reporting limit, but above the method detection limit. This analyte has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Total and Dissolved Hg - EPA Method 7470A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-7E9-2-102317. The matrix spike percent recovery and duplicate RPD were within QC limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-7E9-2-102317-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

### Total and Dissolved Metals - EPA Method 6020A

The samples were digested and analyzed within the recommended holding times.

Pioneer Technologies Corporation  
5205 Corporate Ctr. Ct. SE, Ste A  
Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
16-Nov-2017 15:08

Initial and continuing calibrations were within method requirements.

Method blank BFJ0825 has Arsenic detected below the reporting limit, but above the method detection limit. The Arsenic has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-7E9-2-102317. The matrix spike percent recoveries were within QC limits. The duplicate has a Nickel concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to  $\pm$  the reporting limit instead of 20% of the RPD. The Nickel has been flagged with an "L" qualifier on the duplicate. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample GW-7E9-2-102317-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

#### **Dissolved Metals - EPA Method 6010C**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFJ0385 has Sodium and Iron detected below the reporting limits, but above the method detection limits. The Sodium and Iron have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-7F2-1-102317-(20). The matrix spike and duplicate have a Sodium concentration that exceeds the upper calibration limit. The Sodium has been flagged with an "E" qualifier. The duplicate has an Aluminum concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to  $\pm$  the reporting limit instead of 20% of the RPD. The Aluminum has been flagged with an "L" qualifier on the duplicate. The matrix spike has a natural concentration of Sodium that is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. The Sodium has been flagged with an "HC" qualifier on the matrix spike. This is likely due to matrix interference. No further corrective action was taken.

#### **Anions - EPA Method 300.0**

The samples were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-7E9-2-102317-(20). The matrix spike percent

Reported:  
16-Nov-2017 15:08

recovery and duplicate RPD were within QC limits.

#### **Alkalinity - Method SM2320**

The samples were prepared and analyzed within the recommended holding times.

Sample GW-7F3-1-102317-(20) was not analyzed due to pH issues with the matrix.

There were no target compounds detected in the method blanks.

The SRM percent recovery were within control limits.

A duplicate was prepared in conjunction with sampe GW-7E9-2-102317-(20). The duplicate RPD was within QC limits.

#### **Total Dissolved Solids - EPA Method 160.1**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample GW-7E9-2-102317-(20). The duplicate RPD was within QC limits.

#### **Dissolved Organic Carbon - Method SM5310**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

A matrix spike and duplicate were prepared in conjunction with sample GW-7E9-2-102317-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- L Analyte concentration is  $\leq 5$  times the reporting limit and the replicate control limit defaults to  $\pm$  RL instead of 20% RPD
- J Estimated concentration value detected below the reporting limit.
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- H Hold time violation - Hold time was exceeded.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Comments/Special Instructions: Submit EDD to PIONEER using PIONEER EDD format Bill to Port of Tacoma PO#79227

Limit of Liability: ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

Sample Retention Policy: Unless specified by work order or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under P-SDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer

Project Name: Arkeman

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17J0453

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO   
 Were custody papers included with the cooler? ..... YES  NO   
 Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO   
 Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)  
 Time: 7.8 9.3

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: 12002565

Cooler Accepted by: BF Date: 10/24/17 Time: 1600

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO   
 What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_  
 Was sufficient ice used (if appropriate)? ..... NA YES  NO   
 Were all bottles sealed in individual plastic bags? ..... YES  NO   
 Did all bottles arrive in good condition (unbroken)? ..... YES  NO   
 Were all bottle labels complete and legible? ..... YES  NO   
 Did the number of containers listed on COC match with the number of containers received? ..... YES  NO   
 Did all bottle labels and tags agree with custody papers? ..... YES  NO   
 Were all bottles used correct for the requested analyses? ..... YES  NO   
 Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES  NO

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 24, 2017 under ARI workorder 17J0453. For details regarding sample receipt, please refer to the Cooler Receipt Form. Due to the salty nature of the samples many analysis needed dilutions, and multiple runs were reported.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Samples GW-7E6-2-102417 and GW-7E8-1-102417 were reanalyzed at higher reporting limits due to compounds exceeding the upper calibration ranges. These compounds have been flagged with an "E" qualifier in the initial runs. No further corrective action was taken.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

Method blank BFJ0769 has Tetrachloroethene detected below the reporting limit, but above the method detection limit. Tetrachloroethene has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Total and Dissolved Hg - EPA Method 7470A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-7E16-2-102417-(20). The matrix spike percent recovery was within QC limits. The duplicate has a Mercury concentration  $\leq 5$  times the reporting limits, and the replicate control limit defaults to +/- the reporting limit instead of 20% of the RPD. The Mercury has been flagged with an "L" qualifier on the duplicate. This is likely due to matrix interference. The results are advisory. No further corrective action was taken.

### Total and Dissolved Metals - EPA Method 6020A

The samples were digested and analyzed within the recommended holding times.

Pioneer Technologies Corporation  
5205 Corporate Ctr. Ct. SE, Ste A  
Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
14-Nov-2017 14:41

Initial and continuing calibrations were within method requirements.

Method blank BFK0004-MB1 has Nickel detected below the reporting limit, but above the method detection limit. Method blank BFK0004-MB2 has Arsenic detected below the reporting limit, but above the method detection limit. These metals have been flagged with a "J" qualifier on the associated method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-7E16-2-102417. The matrix spike percent recoveries were within QC limits. The duplicate BFK0004-DUP2 has a high RPD for Nickel. This is likely due to matrix interference. The results are advisory. No corrective action was taken.

#### **Dissolved Metals - EPA Method 6010C**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFJ0885 has Sodium detected below the reporting limit, but above the method detection limit. The Sodium has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

#### **Anions - EPA Method 300.0**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-7E6-2-102417-(20) and its reanalysis. The matrix spike percent recoveries and duplicate RPD were within QC limits.

A Fluoride only matrix spike and duplicate were prepared in conjunction with the reanalysis of sample GW-7E3-1-102417-(20) due to the Fluoride being diluted from the QC of GW-7E6-2-102417-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

#### **Alkalinity - Method SM2320**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blanks.

Pioneer Technologies Corporation  
5205 Corporate Ctr. Ct. SE, Ste A  
Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
14-Nov-2017 14:41

The SRM percent recovery were within control limits.

**Total Dissolved Solids - EPA Method 160.1**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

**Dissolved Organic Carbon - Method SM5310**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- L Analyte concentration is  $\leq 5$  times the reporting limit and the replicate control limit defaults to  $\pm$  RL instead of 20% RPD
- J Estimated concentration value detected below the reporting limit.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: DOF

Project Name: \_\_\_\_\_

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 1750479

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO   
 Were custody papers included with the cooler? ..... YES  NO   
 Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)  
Time: 5.9 5.1

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: 2005206

Cooler Accepted by: BIF Date: 10/25/17 Time: 1545

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO   
 What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper Other: \_\_\_\_\_  
 Was sufficient ice used (if appropriate)? ..... NA YES  NO   
 Were all bottles sealed in individual plastic bags? ..... YES  NO   
 Did all bottles arrive in good condition (unbroken)? ..... YES  NO   
 Were all bottle labels complete and legible? ..... YES  NO   
 Did the number of containers listed on COC match with the number of containers received? ..... YES  NO   
 Did all bottle labels and tags agree with custody papers? ..... YES  NO   
 Were all bottles used correct for the requested analyses? ..... YES  NO   
 Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES  NO   
 Were all VOC vials free of air bubbles? ..... NA YES  NO   
 Was sufficient amount of sample sent in each bottle? ..... YES  NO   
 Date VOC Trip Blank was made at ARI ..... NA   
 Was Sample Split by ARI :  YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: BIF Date: 10/26/17 Time: 907

|                              |                              |                     |                  |

**Additional Notes, Discrepancies, & Resolutions:**  
TBs not on COC  
air bubbles  
6E9-2 - all 3 vials have pb  
7E3-2R-1 had lots of sm, 1 had lots of sm + 1 pb  
6E9-2 - all 3 had hs  
6D25-1 - 1 had a sm  
7E7-2 - all had a lg  
BFI-1R - 1 had a pb  
TB - 1 had a pb

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 25, 2017 under ARI workorder 17J0479. For details regarding sample receipt, please refer to the Cooler Receipt Form. Due to the salty nature of the samples many analysis needed dilutions, and multiple runs were reported.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Sample GW-7E7-2-102517 was reanalyzed at higher reporting limits due to compound concentrations exceeding the upper calibration limits. These compounds have been flagged with an "E" qualifier on the initial run. No further corrective action was taken.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Total and Dissolved Hg - EPA Method 7470A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

### Total and Dissolved Metals - EPA Method 6020A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank BFK0004 has Nickel and Arsenic detected below the reporting limits, but above the method detection limits. The Nickel and Arsenic have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

Reported:  
22-Nov-2017 17:44

### **Dissolved Metals - EPA Method 6010C**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFK0084 has Iron detected below the reporting limit, but above the method detection limit. The Iron has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

### **Anions - EPA Method 300.0**

The samples were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFJ0784 has Sulfate detected above the reporting limit. Associated detected results and QC have been flagged with a "B" qualifier. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-6G3-2-102517-(20). The duplicate RPD were within QC limits. The matrix spike has low spike recovery for Nitrite, Fluoride and O-Phos. This is due to high Chloride concentrations and matrix interference. No corrective action was taken.

### **Alkalinity - Method SM2320**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blanks.

The SRM percent recovery were within control limits.

### **Total Dissolved Solids - EPA Method 160.1**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

### **Dissolved Organic Carbon - Method SM5310**

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) Time: 1415 9.48

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: 1005206

Cooler Accepted by: SBW Date: 10/26/2017 Time: 1415

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES  NO

Were all VOC vials free of air bubbles? ..... NA YES  NO  BF

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI..... NA 10/23/17

Was Sample Split by ARI :  YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: BF Date: 10/27/17 Time: 9:58

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 26, 2017 under ARI workorder 17J0505. For details regarding sample receipt, please refer to the Cooler Receipt Form. Due to the salty nature of the samples many analysis needed dilutions, and multiple runs were reported.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Total and Dissolved Hg - EPA Method 7470A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-1b4-1-102617-2.9-7.9. The matrix spike percent recovery was within QC limits. The duplicate has a concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to  $\pm$  the reporting limit instead of 20% of the RPD. This is likely matrix interference. The Mercury has been flagged with an "L" qualifier on the duplicate. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample GW-1B4-1-102617-2.9-7.9-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

### Total and Dissolved Metals - EPA Method 6020A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

Pioneer Technologies Corporation  
5205 Corporate Ctr. Ct. SE, Ste A  
Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
20-Nov-2017 13:31

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-1B4-102617-2.9-7.9. The duplicate RPD were within QC limits. The matrix spike has a natural concentration of Arsenic that is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. The Arsenic has been flagged with an "HC" qualifier on the matrix spike. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample GW-1B4-102617-2.9-7.9-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

#### **Dissolved Metals - EPA Method 6010C**

The samples were digested and analyzed within the recommended holding times.

Sample GW-1B4-1-102617-2.9-7.9-(20) has a Sodium concentration that exceeds the upper calibration limit, and has been flagged with an "E" qualifier.

Initial and continuing calibrations were within method requirements.

Method blank BFK0084 has Iron detected below the reporting limit, but above the method detection limit. The Iron has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-1B4-1-102617-2.9-7.9-(20). The duplicate RPD were within QC limits. The matrix spike and duplicate have a Sodium concentration that exceeds the upper calibration range. The Sodium has been flagged with an "E" qualifier. The matrix spike has natural concentrations of Calcium and Magnesium that are so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. This is due to high salt content causing matrix interference. These metals have been flagged with an "HC" qualifier on the matrix spike. No further corrective action was taken.

#### **Anions - EPA Method 300.0**

The samples were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-1B4-1-102617-2.9-7.9-(20). The matrix spike percent recovery and duplicate RPD were within QC limits. The matrix spike has a Fluoride concentration that exceeds the upper calibration range. The Fluoride has been flagged with an "E" qualifier.

### **Alkalinity - Method SM2320**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blanks.

The SRM percent recovery were within control limits.

A duplicate was prepared in conjunction with sampe GW-1B4-1-102617-2.9-7.9-(20). The duplicate RPD was within QC limits.

### **Total Dissolved Solids - EPA Method 160.1**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sample GW-1B4-1-102617-2.9-7.9-(20). The duplicate RPD was within QC limits.

### **Dissolved Organic Carbon - Method SM5310**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

A matrix spike and duplicate were prepared in conjunction with sample GW-1B4-1-102617-2.9-7.9-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- L Analyte concentration is  $\leq 5$  times the reporting limit and the replicate control limit defaults to  $\pm$  RL instead of 20% RPD
- J Estimated concentration value detected below the reporting limit.
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

Comments/Special Instructions

Submit EDD to PIONEER using PIONEER EDD format Bill to Port of Tacoma PO#79227

Limits of Liability: ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

Sample Retention Policy: Unless specified by work order or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer

Project Name: Arkemq

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17J0529

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)  
Time: 8.3 10.9

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: 17002565

Cooler Accepted by: BF Date: 10/27/17 Time: 1540

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap  Wet Ice  Gel Packs  Baggies  Foam Block  Paper  Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES  NO

Were all VOC vials free of air bubbles? ..... NA YES  NO

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI: \_\_\_\_\_ NA

Was Sample Split by ARI:  NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: SF Date: 10/27/17 Time: 1741

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 27, 2017 under ARI workorder 17J0529. For details regarding sample receipt, please refer to the Cooler Receipt Form. Due to the salty nature of the samples many analysis needed dilutions, and multiple runs were reported.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

A matrix spike and matrix spike duplicate were prepared in conjunction with sample GW-711-1-102717. The matrix spike/matrix spike duplicate percent recoveries and RPD were within QC limits.

A matrix spike and matrix spike duplicate were prepared in conjunction with sample GW-713-2-102717. The matrix spike/matrix spike duplicate percent recoveries and RPD were within QC limits.

### Total and Dissolved Hg - EPA Method 7470A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-711-1-102717. The matrix spike/matrix spike duplicate and duplicate percent recoveries and RPD were within QC limits.

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-713-2-102717. The matrix spike/matrix spike duplicate and duplicate percent recoveries and RPD were within QC limits.

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-711-1-102717-(20). The matrix spike/matrix spike duplicate and duplicate percent recoveries and RPD were within QC limits.

Pioneer Technologies Corporation

Project Manager: Troy Bussey Jr.

Reported:  
20-Nov-2017 14:27

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-713-2-102717-(20). The matrix spike/matrix spike duplicate and duplicate percent recoveries and RPD were within QC limits.

#### **Total and Dissolved Metals - EPA Method 6020A**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFK0202 has Nickel detected below the reporting limit, but above the method detection limit. The Nickel has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-711-1-102717. The matrix spike/matrix spike duplicate and duplicate percent recoveries and RPD were within QC limits.

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-713-2-102717. The matrix spike/matrix spike duplicate percent recoveries and RPD were within QC limits. The duplicate has a Lead concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to +/- the reporting limit instead of 20% of the RPD. The Lead has been flagged with an "L" qualifier on the duplicate. No further corrective action was taken.

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-711-1-102717-(20). The matrix spike/matrix spike duplicate and duplicate percent recoveries and RPD were within QC limits.

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-713-2-102717-(20). The matrix spike/matrix spike duplicate and duplicate percent recoveries and RPD were within QC limits.

#### **Dissolved Metals - EPA Method 6010C**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFK0238 has Iron and Sodium detected below the reporting limits, but above the method detection limits. The Iron and Sodium have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

On all of the QC Sodium has a concentration that exceeds the upper calibration limit, and has been flagged with an "E" qualifier.

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-711-1-102717. The matrix spike/matrix spike duplicate and duplicate percent recoveries and RPD were within QC limits.

Pioneer Technologies Corporation

Reported:  
20-Nov-2017 14:27

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-713-2-102717. The matrix spike/matrix spike duplicate and duplicate percent recoveries and RPD were within QC limits.

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-711-1-102717-(20). The duplicate RPD were within QC limits. The matrix spike and matrix spike duplicate have natural concentrations of Calcium and Magnesium that are so much greater than the concentrations spiked that an accurate determination of spike recovery is not possible. This is due to the salt content in the samples. These metals have been flagged with an "HC" qualifier on the matrix spike/matrix spike duplicate. No further corrective action was taken.

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-713-2-102717-(20). The duplicate RPD were within QC limits. The matrix spike and matrix spike duplicate have a natural concentration of Sodium that is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. This is due to the high salt content in the samples. The Sodium has been flagged with an "HC" qualifier on the matrix spike/matrix spike duplicate. No further corrective action was taken.

#### **Anions - EPA Method 300.0**

The samples were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-711-1-102717-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-713-2-102717-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits. The matrix spike has a Bromide concentration that exceeds the upper calibration limit, and has been flagged with an "E" qualifier. No further corrective action was taken.

#### **Alkalinity - Method SM2320**

The samples were prepared and analyzed within the recommended holding times.

Due to the basic pH sample GW-8F2-2R-102717-(20) was not analyzed for Alkalinity.

There were no target compounds detected in the method blanks.

The SRM percent recovery were within control limits.

A duplicate was prepared in conjunction with sampe GW-711-1-102717-(20). The duplicate RPD was within QC limits.

A duplicate was prepared in conjunction with sampe GW-713-2-102717-(20). The duplicate RPD was within QC limits.

Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
20-Nov-2017 14:27

**Total Dissolved Solids - EPA Method 160.1**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sampe GW-711-1-102717-(20). The duplicate RPD was within QC limits.

A duplicate was prepared in conjunction with sampe GW-713-2-102717-(20). The duplicate RPD was within QC limits.

**Dissolved Organic Carbon - Method SM5310**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

A matrix spike and duplicate were prepared in conjunction with sample GW-711-1-102717-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-713-2-102717-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- L Analyte concentration is  $\leq 5$  times the reporting limit and the replicate control limit defaults to  $\pm$  RL instead of 20% RPD
- J Estimated concentration value detected below the reporting limit.
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Limit of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by work order or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSEDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

Preservation Confirmed By \_\_\_\_\_

Date \_\_\_\_\_

# Cooler Receipt Form

ARI Client: Pioneer

Project Name: Arkema FS DG Inv

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17J0562

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of cooler? YES NO

Were custody papers included with the cooler? ..... YES NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) 7.6

Time: 1725

If cooler temperature is out of compliance fill out form 00070F

Temp Gun ID#: D002565

Cooler Accepted by: SF Date: 10/30/17 Time: 1725

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA YES NO

Were all bottles sealed in individual plastic bags? ..... YES NO

Did all bottles arrive in good condition (unbroken)? ..... YES NO

Were all bottle labels complete and legible? ..... YES NO

Did the number of containers listed on COC match with the number of containers received? ..... SF YES NO

Did all bottle labels and tags agree with custody papers? ..... YES NO

Were all bottles used correct for the requested analyses? ..... YES NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES NO

Were all VOC vials free of air bubbles? ..... NA YES NO

Was sufficient amount of sample sent in each bottle? ..... YES NO

Date VOC Trip Blank was made at ARI..... NA 10/23/17

Was Sample Split by ARI : NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: SF Date: 10/30/17 Time: 1756

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 30, 2017 under ARI workorder 17J0562. For details regarding sample receipt, please refer to the Cooler Receipt Form. Due to the salty nature of the samples many analysis needed dilutions, and multiple runs were reported.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

A matrix spike and matrix spike duplicate were prepared in conjunction with sample GW -125+00-2-103017. The matrix spike/matrix spike duplicate percent recoveries and RPD were within QC limits.

### Total and Dissolved Hg - EPA Method 7470A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

### Total and Dissolved Metals - EPA Method 6020A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW -6E3-2-103017-(20). The duplicate RPD were within QC limits. The matrix spike has a natural concentration of Arsenic that is so much greater than the concentration

Reported:  
21-Nov-2017 12:51

spiked that an accurate determination of spike recovery is not possible. The Arsenic has been flagged with an "HC" qualifier on the matrix spike. No further corrective action was taken.

#### **Dissolved Metals - EPA Method 6010C**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFK0238 has Iron and Sodium detected below the reporting limits, but above the method detection limits. The Iron and Sodium have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

#### **Anions - EPA Method 300.0**

Sample GW-131+00-2-102717-(20) was received outside of the 48 hour holding time for Nitrate, Nitrite and O-Phos, and has been flagged with "H" qualifiers.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-124+00-2-103017-(20). The duplicate RPD were within QC limits. The matrix spike has low spike recovery for Nitrite. This is likely due to the Sulfate concentration in the sample. The results are advisory. No corrective action was taken.

#### **Alkalinity - Method SM2320**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blanks.

The SRM percent recovery were within control limits.

A duplicate was prepared in conjunction with sample GW-124+00-2-103017-(20). The duplicate RPD was within QC limits.

#### **Total Dissolved Solids - EPA Method 160.1**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

Reported:  
21-Nov-2017 12:51

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sampe GW-124+00-2-103017-(20). The duplicate RPD was within QC limits.

#### **Dissolved Organic Carbon - Method SM5310**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

A matrix spike and duplicate were prepared in conjunction with sample GW-124+00-2-103017-(20). The duplicate has high RPD. The matrix spike has a natural concentration of Carbon that is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. The DOC has been flagged with an "HC" qualifier on the matrix spike. The results is likely a homogeneity issue, and was reanalyzed to verify. The parent sample concentration is high compared to the matrix spike concentration. These results may be variable due to particitate formation during the analysis. The results are advisory. No further corrective action was taken.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- J Estimated concentration value detected below the reporting limit.
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- H Hold time violation - Hold time was exceeded.
- D The reported value is from a dilution
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Limits of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer Technologies

Project Name: Arkema FSDG Inv

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: \_\_\_\_\_

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of cooler? YES  NO

Were custody papers included with the cooler? YES  NO

Were custody papers properly filled out (ink, signed, etc.) SF YES  NO  2

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry) Time: 1505 13.9°C

If cooler temperature is out of compliance fill out form 00070F Temp Gun ID#: D005706

Cooler Accepted by: SBL Date: 10/31/2017 Time: 1505

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? YES  NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? NA YES  NO

Were all bottles sealed in individual plastic bags? YES  NO

Did all bottles arrive in good condition (unbroken)? YES  NO

Were all bottle labels complete and legible? YES  NO

Did the number of containers listed on COC match with the number of containers received? YES  NO  1

Did all bottle labels and tags agree with custody papers? YES  NO

Were all bottles used correct for the requested analyses? YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES  NO

Were all VOC vials free of air bubbles? NA YES  NO

Was sufficient amount of sample sent in each bottle? YES  NO

Date VOC Trip Blank was made at ARI: SF NA 10/23/17

Was Sample Split by ARI: NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: SF Date: 10/31/17 Time: 1540

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received October 31, 2017 under ARI workorder 17J0578. For details regarding sample receipt, please refer to the Cooler Receipt Form. Due to the salty nature of the samples many analysis needed dilutions, and multiple runs were reported.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The initial calibration verification (ICV) is outside of control limits high for Vinyl Chloride. Associated samples and QC have been flagged with a "Q" qualifier. No further corrective action was taken.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Anions - EPA Method 300.0

The reanalysis of O-phos was analyzed outside of the recommended holding time. The O-Phos has been flagged with an "H" qualifier.

Some samples have building Phosphate peaks, and all analysis were reported. This is likely due to matrix interference and high metals concentrations in the samples, and could have affected any associated QC.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-126+90-0-103117. The duplicate has a Nitrite concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to  $\pm$  the reporting limit instead of 20% of the RPD. The Nitrite has been flagged with an "L" qualifier on the duplicate. The matrix spike has low spike recovery for Nitrate, Nitrite and O-Phos. This is likely due to matrix interference as well as high metals concentrations in the samples. The results are advisory. No corrective action was taken.

### Alkalinity - Method SM2320

Pioneer Technologies Corporation  
5205 Corporate Ctr. Ct. SE, Ste A  
Olympia WA, 98503

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
29-Nov-2017 12:59

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blanks.

The SRM percent recovery were within control limits.

#### **Total Dissolved Solids - EPA Method 160.1**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

#### **Dissolved Organic Carbon - Method SM5310**

The samples were prepared and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- Q Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20% RSD, <20% drift or minimum RRF)
- L Analyte concentration is  $\leq 5$  times the reporting limit and the replicate control limit defaults to  $\pm$  RL instead of 20% RPD
- J Estimated concentration value detected below the reporting limit.
- H Hold time violation - Hold time was exceeded.
- D The reported value is from a dilution
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

-----

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Terms of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSD/PA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for a industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Retention Policy:** Unless specified by work order or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSDDA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Terms of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSD/PAVSEP/SMS protocol will be stored frozen for up to one year and then discarded.

Preservation Confirmed By \_\_\_\_\_

Date \_\_\_\_\_

# Cooler Receipt Form

ARI Client: Dof

Project Name: Arkema FS DG Inv

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17K0014

Tracking No: \_\_\_\_\_ (NA)

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES NO

Were custody papers included with the cooler? ..... YES NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)  
Time: 1625 7.7 7.3

Temp Gun ID#: D002565

Cooler Accepted by: SF Date: 11/1/17 Time: 1625

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA YES NO

Were all bottles sealed in individual plastic bags? ..... YES NO

Did all bottles arrive in good condition (unbroken)? ..... YES NO

Were all bottle labels complete and legible? ..... YES NO

Did the number of containers listed on COC match with the number of containers received? ..... YES NO

Did all bottle labels and tags agree with custody papers? ..... YES NO

Were all bottles used correct for the requested analyses? ..... YES NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES NO

Were all VOC vials free of air bubbles? ..... NA YES NO

Was sufficient amount of sample sent in each bottle? ..... YES NO

Date VOC Trip Blank was made at ARI ..... NA 10/23/17

Was Sample Split by ARI : NA YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: SF Date: 11/1/17 Time: 1709

| Sample ID on Bottle           | Sample ID on COC        | Sample ID on Bottle  | Sample ID on COC     |
|-------------------------------|-------------------------|----------------------|----------------------|
| 01A-C GW-129+65-1-103117      | GW-129+65-1-103017      | GW-SI1-1-110117-(20) | GW-SI2-1-110117-(20) |
| 02A-B GW-129+65-1-103117-(20) | GW-129+65-1-103017-(20) |                      |                      |
| 04A-B GW-128+30-1-103117-(20) | GW-128+30-1-103017-(20) |                      |                      |
| 19A-D GW-SI2-1-110117         | GW-SI1-1-110117         |                      |                      |

Additional Notes, Discrepancies, & Resolutions: Sample dates on 01A, 01B, 01C, 02A, 02B, 04A, and 04B say 10-30-17 COC says 10-31-17  
TB not on COC (samples GW-129+65-1-103117-(20) and GW-128+30-1-103117-(20) say 3 containers

Small → "sm" (< 2 mm) when DOC container was brought in with yesterdaye samples should say 2 containers on COC

Peabubbles → "pb" (2 to < 4 mm)

Large → "lg" (4 to < 6 mm)

Headspace → "hs" (> 6 mm)

0016F 3/2/10 (Samples GW-662-3-110117 and GW-SI1-1-110117 both say 4 containers on COC when they have 7 containers airbubbles on preservation)

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received November 1, 2017 under ARI workorder 17K0014. For details regarding sample receipt, please refer to the Cooler Receipt Form. Due to the salty nature of the samples many analysis needed dilutions, and multiple runs were reported.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The initial calibration verification (ICV) is outside of control limits high for Vinyl Chloride. Associated samples and QC have been flagged with a "Q" qualifier. No further corrective action was taken.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

A matrix spike and matrix spike duplicate were prepared in conjunction with sample GW-6G2-3-110117. The matrix spike/matrix spike duplicate percent recoveries and RPD were within QC limits.

A matrix spike and matrix spike duplicate were prepared in conjunction with sample GW-5H1-1-110117. The matrix spike/matrix spike duplicate percent recoveries and RPD were within QC limits.

### Total and Dissolved Hg - EPA Method 7470A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-6G2-3-110117. The duplicate RPD was within QC limits. The matrix spike has high spike recovery for Mercury. The results are advisory. No corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample GW-5H1-1-110117. The matrix spike percent recoveries and duplicate RPD were within QC limits.

Reported:  
10-Jan-2018 14:05

A matrix spike and duplicate were prepared in conjunction with sample GW-6G2-3-110117-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-5H1-1-110117-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-4H3-1-110117. The matrix spike percent recoveries and duplicate RPD were within QC limits.

#### **Total and Dissolved Metals - EPA Method 6020A**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-6G2-3-110117. The matrix spike/matrix spike duplicate and duplicate percent recoveries and RPD were within QC limits.

A matrix spike, matrix spike duplicate and duplicate were prepared in conjunction with sample GW-5H1-1-110117. The matrix spike/matrix spike duplicate and duplicate percent recoveries and RPD were within QC limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-6G2-3-110117-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-5H1-1-110117-(20). The matrix spike/matrix spike duplicate and duplicate percent recoveries and RPD were within QC limits.

#### **Dissolved Metals - EPA Method 6010C**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFK0416 has Iron and Sodium detected below the reporting limits, but above the method detection limits. The Iron and Sodium have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

On all of the QC Sodium has a concentration that exceeds the upper calibration limit, and has been flagged with an "E" qualifier.

Project: Port of Tacoma Arkema- FS Data Gap Investigation  
Project Number: 79227  
Project Manager: Troy Bussey Jr.

Reported:  
10-Jan-2018 14:05

A matrix spike and duplicate were prepared in conjunction with sample GW-5H1-1-110117-(20). The duplicate RPD were within QC limits. The matrix spike has a natural concentration of Sodium that is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. This is due to the high salt content of the samples. The Sodium has been flagged with an "HC" qualifier. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample GW-5H1-1-110117-(20). The duplicate has an Aluminum concentration  $\leq 5$  times the reporting limit, and the replicate control limit defaults to  $\pm$  the reporting limit instead of 20% of the RPD. The Aluminum has been flagged with an "L" qualifier on the duplicate. The matrix spike has natural concentrations of Iron and Manganese that are so much greater than the concentration spiked that an accurate determination of spike recovery is not possible. This is likely matrix interference. These metals have been flagged with an "HC" qualifier on the matrix spike. No further corrective actions were taken.

#### **Anions - EPA Method 300.0**

Various samples were reanalyzed outside of the recommended holding time after an initial run due to instrument maintenance. These samples have been flagged with an "H" qualifier.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS BFK0096 has low percent recovery for O-Phos. This is likely due to chromatographic interference and matrix interference. All other LCS percent recoveries were within control limits. No corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample GW-129+65-1-103117-(20). The duplicate RPD were within QC limits. The matrix spike has little to no spike recovery for O-Phos. The peak was not easily identifiable as O-Phos due to chromatographic interference. The QC was reanalyzed on another sample. The results are advisory. No further corrective action was taken.

A matrix spike and duplicate were prepared in conjunction with sample GW-6G2-3-110117-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-5H1-1-110117-(20). The matrix spike percent recoveries and duplicate RPD were within QC limits.

#### **Alkalinity - Method SM2320**

The samples were prepared and analyzed within the recommended holding times.

Due to pH issues sample GW-4H3-1-110117-(20) was not analyzed.

There were no target compounds detected in the method blanks.

The SRM percent recovery were within control limits.

Reported:  
10-Jan-2018 14:05

A duplicate was prepared in conjunction with sampe GW-6G2-3-110117-(20). The duplicate RPD was within QC limits.

A duplicate was prepared in conjunction with sampe GW-5H1-1-110117-(20). The duplicate RPD was within QC limits.

#### **Total Dissolved Solids - EPA Method 160.1**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sampe GW-6G2-3-110117-(20). The duplicate RPD was within QC limits.

A duplicate was prepared in conjunction with sampe GW-5H1-1-110117-(20). The duplicate RPD was within QC limits.

#### **Dissolved Organic Carbon - Method SM5310**

The samples were prepared and analyzed within the recommended holding times.

Due to matrix interference sample GW-4H3-1-110117-(20) was not analyzed.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blank.

A matrix spike and duplicate were prepared in conjunction with sample GW-6G2-3-110117-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-5H1-1-110117-(20). The matrix spike percent recovery and duplicate RPD were within QC limits.

### Notes and Definitions

- U This analyte is not detected above the applicable reporting or detection limit.
- Q Indicates a detected analyte with an initial or continuing calibration that does not meet established acceptance criteria (<20% RSD, <20% drift or minimum RRF)
- L Analyte concentration is  $\leq 5$  times the reporting limit and the replicate control limit defaults to  $\pm$  RL instead of 20% RPD
- J Estimated concentration value detected below the reporting limit.
- HC The natural concentration of the spiked analyte is so much greater than the concentration spiked that an accurate determination of spike recovery is not possible
- H Hold time violation - Hold time was exceeded.
- E The analyte concentration exceeds the upper limit of the calibration range of the instrument established by the initial calibration (ICAL)
- D The reported value is from a dilution
- B This analyte was detected in the method blank.
- \* Flagged value is not within established control limits.
- DET Analyte DETECTED
- ND Analyte NOT DETECTED at or above the reporting limit
- NR Not Reported
- dry Sample results reported on a dry weight basis
- RPD Relative Percent Difference
- [2C] Indicates this result was quantified on the second column on a dual column analysis.

RE: Port of Tacoma Arkema- FS Data Gap Investigation

Please find enclosed sample receipt documentation and analytical results for samples from the project referenced above.

Sample analyses were performed according to ARI's Quality Assurance Plan and any provided project specific Quality Assurance Plan. Each analytical section of this report has been approved and reviewed by an analytical peer, the appropriate Laboratory Supervisor or qualified substitute, and a technical reviewer.

Should you have any questions or problems, please feel free to contact us at your convenience.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed in the enclosed Narrative. ARI, an accredited laboratory, certifies that the report results for which ARI is accredited meets all the requirements of the accrediting body. A list of certified analyses, accreditations, and expiration dates is included in this report.

Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or his/her designee, as verified by the following signature.

Analytical Resources, Inc.

*The results in this report apply to the samples analyzed in accordance with the chain of custody document. This analytical report must be reproduced in its entirety.*

**Terms of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI release ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSD/PA/PSEP/SMS protocol will be stored frozen for up to one year and then discarded.

**Terms of Liability:** ARI will perform all requested services in accordance with appropriate methodology following ARI Standard Operating Procedures and the ARI Quality Assurance Program. This program meets standards for the industry. The total liability of ARI, its officers, agents, employees, or successors, arising out of or in connection with the requested services, shall not exceed the invoiced amount for said services. The acceptance by the client of a proposal for services by ARI releases ARI from any liability in excess thereof, not withstanding any provision to the contrary in any contract, purchase order or co-signed agreement between ARI and the Client.

**Sample Retention Policy:** Unless specified by workorder or contract, all water/soil samples submitted to ARI will be discarded or returned, no sooner than 90 days after receipt or 60 days after submission of hardcopy data, whichever is longer. Sediment samples submitted under PSD/DAP/SEP/SMS protocol will be stored frozen for up to one year and then discarded.

# Cooler Receipt Form

ARI Client: Pioneer Technologies

Project Name: Arkema ESDG Investigation

COC No(s): \_\_\_\_\_ NA

Delivered by: Fed-Ex UPS Courier Hand Delivered Other: \_\_\_\_\_

Assigned ARI Job No: 17K0038

Tracking No: \_\_\_\_\_ NA

**Preliminary Examination Phase:**

Were intact, properly signed and dated custody seals attached to the outside of to cooler? YES  NO

Were custody papers included with the cooler? ..... YES  NO

Were custody papers properly filled out (ink, signed, etc.) ..... YES  NO

Temperature of Cooler(s) (°C) (recommended 2.0-6.0 °C for chemistry)  
Time: 1425 9:19

Temp Gun ID#: 1005206

If cooler temperature is out of compliance fill out form 00070F

Cooler Accepted by: SBW Date: 11/2/2017 Time: 1425

*Complete custody forms and attach all shipping documents*

**Log-In Phase:**

Was a temperature blank included in the cooler? ..... YES  NO

What kind of packing material was used? ... Bubble Wrap Wet Ice Gel Packs Baggies Foam Block Paper Other: \_\_\_\_\_

Was sufficient ice used (if appropriate)? ..... NA YES  NO

Were all bottles sealed in individual plastic bags? ..... YES  NO

Did all bottles arrive in good condition (unbroken)? ..... YES  NO

Were all bottle labels complete and legible? ..... YES  NO

Did the number of containers listed on COC match with the number of containers received? ..... YES  NO

Did all bottle labels and tags agree with custody papers? ..... YES  NO

Were all bottles used correct for the requested analyses? ..... YES  NO

Do any of the analyses (bottles) require preservation? (attach preservation sheet, excluding VOCs)... NA YES  NO

Were all VOC vials free of air bubbles? ..... NA YES  NO

Was sufficient amount of sample sent in each bottle? ..... YES  NO

Date VOC Trip Blank was made at ARI ..... NA

Was Sample Split by ARI :  YES Date/Time: \_\_\_\_\_ Equipment: \_\_\_\_\_ Split by: \_\_\_\_\_

Samples Logged by: SF Date: 11/02/17 Time: 1604

## Case Narrative

### Sample receipt

Samples as listed on the preceding page were received November 2, 2017 under ARI workorder 17K0038. For details regarding sample receipt, please refer to the Cooler Receipt Form. Due to the salty nature of the samples many analysis needed dilutions, and multiple runs were reported.

### Volatiles - EPA Method SW8260C

The samples were run within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Internal standard areas were within limits.

The surrogate percent recoveries were within control limits.

There were no target compounds detected in the method blank.

The LCS/LCSD percent recoveries and RPD were within control limits.

### Total and Dissolved Hg - EPA Method 7470A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS percent recoveries were within control limits.

A matrix spike and duplicate were prepared in conjunction with sample GW-4B1-3-110217. The matrix spike percent recovery and duplicate RPD were within QC limits.

### Total and Dissolved Metals - EPA Method 6020A

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

Method blank BFK0202 has Nickel detected below the reporting limit, but above the method detection limit. The Nickel has been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

#### **Dissolved Metals - EPA Method 6010C**

The samples were digested and analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

The method blank has Iron and Sodium detected below the reporting limits, but above the method detection limits. The Iron and Sodium have been flagged with a "J" qualifier on the method blank. No further corrective action was taken.

The LCS percent recoveries were within control limits.

#### **Anions - EPA Method 300.0**

The samples were analyzed within the recommended holding times.

Initial and continuing calibrations were within method requirements.

There were no target compounds detected in the method blanks.

The LCS has low percent recovery for O-Phos. This is likely due to chromatographic interference and matrix interference. All other LCS percent recoveries were within control limits. No corrective action was taken.

#### **Alkalinity - Method SM2320**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blanks.

The SRM percent recovery were within control limits.

A duplicate was prepared in conjunction with sampe GW-122+60-2-110217-(20). The duplicate RPD was within QC limits.

#### **Total Dissolved Solids - EPA Method 160.1**

The samples were prepared and analyzed within the recommended holding times.

There were no target compounds detected in the method blank.

The LCS percent recoveries were within control limits.

A duplicate was prepared in conjunction with sampe GW-122+60-2-110217-(20). The duplicate RPD was within QC limits.

#### **Dissolved Organic Carbon - Method SM5310**
